When freshly pptd., is insol. in acetone + Aq. even on warming, but easily sol. if liquid is made alkaline by NaOH . Insol. in acetophenone even after long warming at 100° . Sol. in acetaldehyde and much H_2O and a little NaOH . (Auld and Hantzsch, B. 1905, 38. 2680.)

Sol. in formamide. (Fischer, Arch. Pharm. 1894, 232. 329.)

Very sol. in ethylene diamine. For 1 mol.

HgO , 7-10 mols. ethylene diamine are necessary. (Traube and Lowe, B. 1914, 47. 1910.)

Easily sol. in benzamide. (Dessaigues, A. ch. 1852, (3) 34. 146)

When freshly pptd., is sol. in picric acid + Aq. (Varet, C. R. 1894, 119. 560.)

Sol. in alkaline solution of phenol disulphonic acid. (Lumière and Chevrotier, C. R. 1901, 132. 145.)

Sol. in nucleic acid + Aq. when freshly pptd. (Schweckerath, Pat. 1899.)

Sol. in gum arabic + Aq. (Peschier, J. Pharm. 1896, (6) 3. 509.)

Mercuric oxybromide, HgBr_2 , HgO .

(André, A. ch. (6) 3. 123.)

$\text{HgBr}_2 \cdot 2\text{HgO}$. (André.)

$\text{HgBr}_2 \cdot 3\text{HgO}$. (a) Yellow. Insol. in cold, sl. sol. in hot H_2O . Easily sol. in alcohol. (Löwig.)

(b) Brown. Insol. in alcohol. (Rammelsberg, Pogg. 55. 248.)

$\text{HgBr}_2 \cdot 4\text{HgO}$. (André.)

Insol. in ord solvents. Decomp. by alkalis and acids. (Fischer and von Wartenburg, Ch. Z. 1902, 26. 894)

$2\text{HgBr}_2 \cdot 7\text{HgO}$. Readily decomp. by acids and alkalis. (Fischer and von Wartenburg.)

Mercurous oxychloride, Hg_2O , 2HgCl .

Min. *Eglestonite*.

Decomp. by hot HCl and by HNO_3 . (Moses, Am. J. Sci. 1903, (4) 16. 253.)

Mercuric oxychloride,

HgO , HgCl_2 . Less sol. than HgCl_2 , but not isolated. (Thummel.) Decomp. by cold H_2O . (André, A. ch. (6) 3. 118.)

HgO , 2HgCl_2 . Decomp. by warm H_2O or cold alcohol into 2HgO , HgCl_2 . (Thummel, Arch. Pharm. (3) 27. 589.)

Decomp. by H_2O . Not decomp. by alcohol. (Arcetowski, Z. anorg. 1895, 9. 178.)

2HgO , HgCl_2 . *Two modifications.*

A. Red. Insol. in H_2O ; decomp. by alkali carbonates, or chlorides + Aq. into 4HgO , HgCl_2 .

Acted upon by cold alkali carbonates and alkali chlorides + Aq. (Schoch, Am. Ch. J. 1903, 29. 335.)

Not decomp. by H_2O at ord. temp. (Thummel.)

Very sl. sol. in cold, completely sol. in hot H_2O . (Haack, A. 1891, 262. 189.)

A small amt. of HNO_3 converts it into a white powder; more HNO_3 dissolves it. (Haack, A. 1891, 262. 189.)

B. Black. Not decomp. by alkali chlorides, or carbonates + Aq. (Thummel.)

Not affected by boiling alkali carbonates or alkali chlorides + Aq. (Schoch, Am. Ch. J. 1901, 29. 335.)

Insol. in cold and hot H_2O and alcohol.

Sol. in acid. (Van Nest, Dissert. 1909.)

Not changed by H_2O . (Blaas, Miner. Mitt. (2) 2. 177.)

Sol. in HNO_3 or $\text{HCl} + \text{Aq.}$ (Blaas.)
 Not changed by alcohol (Blaas.)
 $+ \frac{1}{2} \text{H}_2\text{O.}$ (Raj, A. 1901, 316. 255.)
 $3\text{HgO, HgCl}_2.$ Decomp. by warm $\text{H}_2\text{O.}$
 (Thummel.)
 Not attacked by cold $\text{H}_2\text{O.}$ (André.)
 Ppt. (Tarugi, Gazz. ch. it. 1901, 31. 313.)
 Decomp. by $\text{H}_2\text{O.}$ Not decomp. by alcohol. (Arcetowski, Z. anorg. 1895, 9. 178.)

Three modifications.

- Prisms. Decomp. by boiling $\text{H}_2\text{O.}$
- Brick-red, amorphous.
- Yellow plates.

(Schoch, Am. Ch. J. 1903, 29. 337)

Yellow plates.

Decomp. by hot $\text{H}_2\text{O, Na}_2\text{CO}_3$ or $\text{NaOH} + \text{Aq.}$ Sol. in $\text{KHCO}_3 + \text{Aq.}$ Insol. in cold dil. $\text{HNO}_3.$ (Tarugi.)

$4\text{HgO, HgCl}_2.$ Decomp. by $\text{H}_2\text{O.}$ Not decomp. by alcohol. (Arcetowski, Z. anorg. 1895, 9. 178.)

Two modifications.

- Yellow plates.

Easily sol. in acids. Insol. in alcohol and ether. Decomp. by KOH. (Dukelski, Z. anorg. 1906, 49. 336.)

- Brown, amorphous.

Easily sol. in acids. Decomp. by KOH. Insol. in alcohol and ether. (Dukelski, Z. anorg. 1906, 49. 336.)

$5\text{HgO, HgCl}_2.$ (Millon.)

Does not exist. (Thummel.)

$6\text{HgO, HgCl}_2.$ Does not exist. (T.)

$+ \text{H}_2\text{O.}$ Insol. in cold $\text{H}_2\text{O.}$ (Roucher, A. ch. (3) 27. 353.)

Does not exist. (T.)

$7\text{HgO, 4HgCl}_2.$ (Roucher.)

Does not exist. (T.)

Mercuriomercuric oxychloride, Hg_2OCl .

Min. *Terlinguate.*

Decomp. by HCl and $\text{HNO}_3.$

Slowly decomp. by cold acetic acid when powdered. (Hillebrand and Schaller, J. Am. Chem. Soc. 1907, 29. 1190.)

Mercuric strontium oxychloride, $\text{HgO, SrCl}_2 + 6\text{H}_2\text{O.}$

Decomp. by $\text{H}_2\text{O.}$ (André, C. R. 104. 431.)

Mercuric oxyfluoride, $\text{HgO, HgF}_2 + \text{H}_2\text{O.}$

Decomp. by $\text{H}_2\text{O.}$ Sol. in dil. $\text{HNO}_3 + \text{Aq.}$ (Finkener.)

Mercuric oxyiodide, $3\text{HgO, HgI}_2.$

Decomp. by $\text{H}_2\text{O.}$ Sol. in $\text{HI} + \text{Aq.}$ (Weyl, Pogg. 131. 524.)

Mercuric oxyphosphide, $\text{Hg}_3\text{P}_2\text{O}_4.$

Decomp. by $\text{H}_2\text{O.}$ (Partheil and van Haaren, Arch. Pharm. 1900, 238. 35.)

Mercuric oxyselenide, 2HgSe, HgO.

Easily sol. in aqua regia. (Uelsmann, A. 116. 122.)

Mercury phosphide, $\text{Hg}_3\text{P}_2.$

Insol. in $\text{H}_2\text{O, HNO}_3$, or $\text{HCl} + \text{Aq.}$ Easily sol. in aqua regia. (Granger, C. R. 115. 229.)
 $\text{Hg}_3\text{P}_4.$ (Granger, C. N. 1898, 77. 229.)

Mercury phosphochloride, $\text{P}_2\text{Hg}_3, 3\text{HgCl}_2 + 3\text{H}_2\text{O.}$

See *Dimercuriphosponium mercuric chloride.*

Mercury phosphosulphide, $2\text{HgS, P}_2\text{S.}$

$\text{HgS, P}_2\text{S.}$

$2\text{HgS, P}_2\text{S}_3$ (Berzelius.)

$3\text{HgS, P}_2\text{S}_3.$ (Baudrimont, C. R. 55. 323.)

$2\text{HgS, P}_2\text{S}_5.$ (Berzelius, A. 47. 256)

Mercuric selenide, HgSe.

Sol. in cold aqua regia when crystalline. When precipitated shows the same properties towards solvents as mercuric sulphide. (Reeb J. Pharm. (4) 9. 173.)

Min. *Tilmounite.* Sol. only in aqua regia.

Mercuric selenochloride, $2\text{HgSe, HgCl}_2.$

Insol. in boiling HCl, HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq.}$ Easily sol. in aqua regia and a mixture of H_2SO_4 and conc. $\text{HNO}_3 + \text{Aq.}$ (Uelsmann, J. B. 1860. 92.)

Mercurous sulphide, $\text{Hg}_2\text{S.}$

Insol. in $\text{H}_2\text{O, dil. HNO}_3$, hot NH_4OH , or $(\text{NH}_4)_2\text{S} + \text{Aq.}$ Sol. in $\text{KOH} + \text{Aq}$ with separation of Hg. (Rose.)

Does not exist; only mixtures of Hg and HgS are formed. (Barfoed, J. pr. 93. 230.)

See also Baskerville, J. Am. Chem. Soc. 1903, 25. 799.)

Not attacked by HNO_3 below 0° , but attacked by dil. HNO_3 and $\text{HCl} + \text{Aq}$ when temp. is increased. Sol. in Na_2S or K_2S but Hg soon ppts. (Antony and Sestini, Gazz. ch. it. 1894, 24, (1) 194.)

Mercuric sulphide, HgS.

Insol. in $\text{H}_2\text{O.}$

Pptd. as a brown coloration in presence of 20,000 pts. $\text{H}_2\text{O,}$ and as a green coloration in presence of 40,000 pts. $\text{H}_2\text{O.}$ (Lassaigne.)

Much less sol. in H_2O than Ag_2S or $\text{Cu}_2\text{S.}$ (Bodländer, Z. phys. Ch. 1898, 27. 64.)

1 l. H_2O dissolves 0.05×10^{-6} mols HgS at $18^\circ.$ (Weigel, Z. phys. Ch. 1907, 58. 294.)

Sol. in cold conc., and in hot dil. $\text{HI} + \text{Aq}$ or $\text{HBr} + \text{Aq.}$ (Kekulé, A. Suppl. 2. 101.) Very sl. decomp. by hot conc. $\text{HCl} + \text{Aq.}$ Not attacked by hot $\text{HNO}_3 + \text{Aq.}$ Sol. in cold aqua regia.

Not attacked by 4-N HNO_3 or 4-N $\text{HNO}_3 + 4\text{-N H}_2\text{SO}_4$ at ord temp. even after many days. By action of a mixture of equal volumes of 4-N HNO_3 and conc. H_2SO_4 , there was slight action on pptd. HgS after 14, more action after 62 days. If HgS is boiled with the 4-N acids, oxidation takes place most rapidly with 4-N HNO_3 , then the mixture 66.7% 4-N $\text{H}_2\text{SO}_4 + 33.3\%$ 4-N HNO_3 , then

33.3% 4-N H_2SO_4 +66.7% 4-N HNO_3 , and lastly 4-N H_2SO_4 alone. (Moore, J. Am. Chem. Soc. 1911, **33**, 1094.)

Cold conc. H_2SO_4 does not attack red or black HgS , but they are attacked by hot acid. (Berthelot, A. ch. 1898, (7) **14**, 198.)

Freshly pptd. HgS is insol. in dil. KCN +Aq. (Berthelot.)

Sol. in K_2S +Aq, but readily only in presence of free alkali. (Brunner, Pogg. **15**, 596.) Insol. in boiling KOH +Aq.

Sol. in KSH or NaSH +Aq. Very sl. sol. in cold yellow $(\text{NH}_4)_2\text{S}$ +Aq. Insol. in KCN or $\text{Na}_2\text{S}_2\text{O}_3$ +Aq. (Fresenius)

Easily sol. in conc. Na_2S or K_2S +Aq, even in absence of KOH or NaOH . Insol. in $(\text{NH}_4)_2\text{S}$ +Aq. Sol. in CaS , BaS , or SrS +Aq. Insol. in NaSH or KSH +Aq. (de Koninck, Z. angew. Ch. **1891**, 51.)

Solubility in NaSH is very small in comparison with that in Na_2S +Aq. (Knox, Trans. Faraday Soc. 1908, **4**, 30.)

Solubility in BaS is practically equal to that in Na_2S . (Knox.)

All cryst. modifications are sol. in conc. K_2S and in conc. Na_2S +Aq. (Allen and Crenshaw, Am. J. Sci. 1912, (4) **34**, 368.)

Sol. in potassium thiocarbonate+Aq. (Rosenblatt, Z. anal. **26**, 15.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates. (Storch, B. **16**, 2015.)

1 l. BaS_2H_2 +Aq containing 50 g. Ba dissolves no HgS in the cold, but 50–60 g. at 40–50°.

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 829.)

Insol. in acetone. (Eidmann, C. C. **1899**, II, 1014.)

Insol. in pyridine. (Schroeder, Dissert. **1901**.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Exists in a colloidal state, sol. in H_2O . (Winnsinger, Bull. Soc. (2) **49**, 452.)

Min. *Cinnabar*. Insol. in H_2O , alcohol, dil. acids, or alkaline solutions.

Decomp. by hot dil. HNO_3 +Aq. Not decomp. by HCl +Aq, but easily by hot H_2SO_4 or aqua regia. Easily sol. in CuCl_2 +Aq. (Karsten.)

Sol. in a mixture of Na_2S and NaOH when present in the proportion of $\text{HgS} : 2\text{Na}_2\text{S}$.

Sol. in pure Na_2S +Aq or in mixtures of Na_2S and NaSH +Aq. Insol. in cold NaSH +Aq, but sol. on warming with evolution of H_2S . (Becker, Sill Am. J. (3) **33**, 199.)

Insol. in acetone. (Krug and M'Elroy.) *Cinnabar* is easily sol. in 20% HBr +Aq. (Rising and Lenher, J. Am. Chem. Soc. 1896, **18**, 96.)

Sol. in S_2Cl_2 . (Smith, J. Am. Chem. Soc. 1898, **20**, 291.)

Mercuric platinum sulphide.

See Sulphoplatinate, mercuric.

Mercuric potassium sulphide, K_2S , 2HgS .

Decomp. into its constituents by H_2O ; decomp. by HCl and HNO_3 +Aq, and by hot KOH , and NH_4OH +Aq. (Schneider, Pogg. **127**, 488.)

K_2S , HgS + $5\text{H}_2\text{O}$. Decomp. by H_2O or alkalis. (Weber, Pogg. **97**, 76.)

+ H_2O . (Ditte.)

+ $7\text{H}_2\text{O}$. Sol. in K_2S +Aq. (Ditte, C. R. **98**, 1271.)

K_2S , 5HgS + $5\text{H}_2\text{O}$. Easily decomp. by H_2O . (Ditte.)

Mercuric sodium sulphide, HgS , Na_2S + $8\text{H}_2\text{O}$.

Decomp. by H_2O or alkalis.

5HgS , $2\text{Na}_2\text{S}$ + $3\text{H}_2\text{O}$. Decomp. by H_2O . (Knox, Trans. Faraday Soc. 1908, **4**, 36.)

Mercuric sulphobromide, 2HgS , HgBr_2 .

Insol. in H_2O . Not attacked by boiling HNO_3 or H_2SO_4 . (Rose.)

Mercuric sulphochloride, 2HgS , HgCl_2 .

Insol. in H_2O , cold or hot, dil. or conc. HNO_3 , H_2SO_4 , or HCl +Aq. (Rose, Pogg. **13**, 59.)

Decomp. by hot aqua regia.

By boiling with dil. HNO_3 , H_2SO_4 and HCl , Hg and Cl go into solution. (Hamers, Dissert. **1906**.)

Insol. in H_2O and H_2SO_4 . Partly sol. in HCl and HNO_3 ; easily sol. in aqua regia. (Alexander, Dissert. **1899**.)

Sol. in aqua regia. (Denigès, Bull. Soc. 1915, (4) **17**, 356.)

3HgS , HgCl_2 . Properties as the above comp. (Polek and Goercki, B. **21**, 2415.)

4HgS , HgCl_2 . As above. (P. and G.)

5HgS , HgCl_2 . As above. (P. and G.)

Insol. in alkali sulphides and in fuming HNO_3 ; decomp. by NaOBr +Aq and by KOH . (Bodroux, C. R. 1900, **130**, 1399.)

Sl. sol. in solutions of alkali sulphides unless heated. (Berzelius.)

Easily sol. in alkali sulphides+Aq; slowly sol. in alkalis or alkali hydrosulphides+Aq. (Atterberg, J. B. **1873**, 258.)

Mercurous sulphotetrachloride, Hg_2SCl_4 .

Decomp. by H_2O with separation of S , HgCl_2 going into solution. (Capitaine, J. Pharm. **25**, 525.)

Mercuric sulphofluoride, 2HgS , HgF_2 .

Decomp. by boiling H_2O . Not decomp. by hot HCl or HNO_3 +Aq, but gives HF with hot H_2SO_4 +Aq. (Rose, Pogg. **13**, 66.)

Mercury sulphoamide, HgN_2S , NH_3 .

Ppt. (Ruff, B. 1904, **37**, 1585.)

Mercuric sulphiodide, HgS , HgI_2 .

Ppt. (Rammelsberg, Pogg. **48**, 175.)

2HgS , HgI_2 . (Palm, C. C. **1863**, 121.)

Insol. in min. acids with exception of aqua regia. Hamers, Dissert. 1906.)

Mercuric sulphiodide ammonia, $2\text{HgS} \cdot \text{HgI}_2 \cdot \text{NH}_3$.

(Foerster, Ch. Z. 1895, 19. 1895.)

Mercuric telluride, HgTe .

Min. *Colora-tio*te. Sol in boiling HNO_3 + Aq with separation of H_2TeO_3 .

Metastannic acid.

See Stannic acid.

Molybdatoiodic acid.

See Molybdoiodic acid.

Molybdenum, Mo

Not attacked by HCl , HF , or dil. H_2SO_4 + Aq. Sol. in conc. H_2SO_4 . Very easily sol. in aqua regia. Oxidised by HNO_3 + Aq either to molybdenum oxide, which dissolves in HNO_3 , or, if HNO_3 is in excess, to molybdic acid, which remains undissolved.

Attacked by HNO_3 + Aq containing 3-70% HNO_3 , but only slowly by 70% acid, with formation of insol. white powder; much more vigorously by 50% acid, in which case a clear solution is formed. (Montemartini, Gazz. ch. it. 22. 384.)

Not attacked by alkalis + Aq. (Bucholz, Seher. J. 9. 485.)

With a sp. gr. 9.01, the metal is malleable and sol. in a mixture of HF and HNO_3 ; sol. in fused KClO_3 . (Moissan, Bull. Soc. 1895, (3) 13. 966.)

Ductile Mo is moderately quickly attacked by HNO_3 , H_2SO_4 , and HCl . (Fink, Met. Chem. Eng. 1910, 8. 341.)

Not immediately attacked by cold dil. HNO_3 . Not attacked by dil. and conc. H_2SO_4 . Boiling dil. HCl + Aq does not attack; conc. dissolves traces by long heating. Sol. in aqua regia. (Lederer, Dissert. 1911.)

Dil. HCl dissolves 20.3% Mo at 110° in 18 hrs. More slowly sol. in HCl (sp. gr. 1.15).

Insol. in dil. H_2SO_4 at 110° . Slowly sol. in conc. H_2SO_4 (sp. gr. 1.82) at 110° , rapidly sol. at 200° - 250° .

Slowly sol. in conc. HNO_3 (sp. gr. 1.40), rapidly sol. in dil. HNO_3 (sp. gr. 1.15).

Rapidly sol. in hot aqua regia. Insol. in hot or cold HF . (Ruder, J. Am. Chem. Soc. 1912, 34. 388.)

Insol. in KOH + Aq. Sol. in fused KOH . (Ruder, J. Am. Chem. Soc. 1912, 34. 389.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1893, 20. 828.)

Molybdenum acichloride.

See Molybdenyl chloride.

Molybdenum amide, $\text{OH} \cdot \text{MoO}_2 \cdot \text{NH}_3$.

Very unstable. Insol. in abs. alcohol. (Fleck, Z. anorg. 1894, 7. 353.)

Molybdenum amide nitride, $\text{Mo}_5\text{N}_{15}\text{H}_4 = 4\text{MoN}_2 \cdot \text{Mo}(\text{NH}_2)_2$.

Not attacked by HCl , or dil. HNO_3 + Aq. (Uhrlaub.)

Molybdenum amidochloride, $\text{Mo}_2(\text{NH}_2)_3\text{Cl}_3$.

Insol. in H_2O and dil. acids. (Rosenheim, Z. anorg. 1905, 46. 317.)

Molybdenum amidochloride ammonia,

$\text{Mo}_2(\text{NH}_2)_3\text{Cl}_3 \cdot 10\text{NH}_3$.

Unstable in the air. (Rosenheim, Z. anorg. 1905, 46. 319.)

Molybdenum boride, Mo_3B_4 .

Moderately attacked by hot conc. acids and vigorously by hot aqua regia. (Tucker and Moody, Chem. Soc. 1902, 81. 17.)

Molybdenum dibromide, $\text{MoBr}_2 = \text{Mo}_3\text{Br}_4\text{Br}_2$.

See Bromomolybdenum bromide.

Molybdenum tribromide, MoBr_3 .

Not decomp. by H_2O . Boiling conc. HCl , and cold dil. HNO_3 + Aq do not attack appreciably. Dil. alkalis act slowly, but decomp. with separation of Mo_2O_3 on boiling. (Blomstrand, J. pr. 82. 435.)

Molybdenum tetrabromide, MoBr_4 .

Rapidly deliquescent, and easily sol. in H_2O . (Blomstrand, J. pr. 82. 433.)

Molybdenum bromochloride, etc.

See Bromomolybdenum chloride, etc.

Molybdenum bronze.

See Molybdate molybdenum oxide, sodium.

Molybdenum carbide, Mo_3C .

Insol. in HNO_3 . (Moissan, Bull. Soc. 1895, (3) 13. 967.)

MoC . Does not decomp. H_2O even at 500° - 600° . Slowly attacked by hot HCl , HF and hot conc. H_2SO_4 . Easily decomp. by HNO_3 . Not attacked by NaOH + Aq or KOH + Aq. (Moissan and Hoffmann, C. R. 1904, 138. 1559.)

Molybdenum carbonyl, $\text{Mo}(\text{CO})_6$.

Quickly attacked by bromine. Sol. in ether or benzene. (Mond, Hirtz and Cowap, Chem. Soc. 1910, 97. 808.)

Molybdenum dichloride, $\text{MoCl}_2 = \text{Mo}_3\text{Cl}_4\text{Cl}_2$.

See Chloromolybdenum chloride.

Molybdenum trichloride, MoCl_3 .

Insol. in H_2O or boiling conc. $\text{HCl} + \text{Aq}$. Easily sol., especially when heated, in $\text{HNO}_3 + \text{Aq}$. Sol. in H_2SO_4 . Decomp. by NH_4OH , KOH , or $\text{NaOH} + \text{Aq}$.

Sl. sol. in alcohol. (Leichti and Kempe.)

Practically insol. in alcohol and ether. (Hampe, Ch. Z. 1888, 12. 5)

Molybdenum tetrachloride, MoCl_4 .

Deliquescent. Hisses with little H_2O , but only partly sol. in more H_2O . Only sl. sol. in conc. $\text{HCl} + \text{Aq}$. Sol. in H_2SO_4 or $\text{HNO}_3 + \text{Aq}$. Partly sol. in alcohol and ether. (Liechti and Kempe.)

Molybdenum pentachloride, MoCl_5 .

Very deliquescent. Sol. in H_2O with extreme evolution of heat. Sol. in HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$.

When freshly prepared, is incompletely sol. in H_2O , but after standing is easily sol. with hissing. (Kalischer, Dissert. 1902.)

Sol. in a small amt. of conc. HCl . (Hampe, Ch. Z. 1888, 12. 5)

Sol. in absolute alcohol or ether. (Liechti and Kempe.)

Sol. in CHCl_3 and in CCl_4 . Sol. with hissing in many organic solvents (ethers, alcohols, ketones, aldehydes, acids, acid esters, acid anhydrides, amines). Sol. in cinnamic aldehyde (Kalischer, Dissert. 1902.)

Molybdenum hydroxyl chloride, $\text{Mo}(\text{OH})_2\text{Cl}_2$.

Easily sol. in H_2O . (Debray, C. R. 46. 1101.)

Molybdenum tetrachloride phosphorus pentachloride, $\text{MoCl}_4, \text{PCl}_5$.

Sol. in H_2O .

$\text{MoCl}_4, 2\text{PCl}_5$. Sol. in H_2O . (Cronander, Bull. Soc. (2) 19. 500.)

Molybdenum phosphorus pentachloride, $\text{MoCl}_5, \text{PCl}_5$.

Easily decomp. (Smith and Sargent, Z. anorg. 1894, 6. 385.)

Molybdenum phosphoryl chloride, $\text{MoCl}_5, \text{POCl}_3$.

Decomp. by H_2O ; insol. in CS_2 ; sol. in C_6H_6 and CHCl_3 .

Molybdenum trichloride potassium chloride.

Efflorescent. Decomp. with H_2O . (Berzelius.)

$\text{MoCl}_3, 3\text{KCl}$. Very sol. in H_2O . Nearly insol. in alcohol and ether. (Chilesotti, C. C. 1903, II. 652.)

$+2\text{H}_2\text{O}$. Fairly easily sol. in cold H_2O without any apparent decomp. Decomp. in aqueous solution, slowly in the cold but rapidly on boiling. This decomp. is prevented by the presence of HCl .

Sl. sol. in conc. HCl (Henderson, Proc. Chem. Soc. 1903, 19. 245)

Molybdenum rubidium chloride, $\text{Rb}_2\text{MoCl}_5 + \text{H}_2\text{O}$.

Sol. in H_2O . Nearly insol. in alcohol and ether (Chilesotti, C. C. 1903, II. 652.)

Molybdenum pentachloride nitrogen sulfide, $\text{MoCl}_5, \text{N}_4\text{S}_4$.

Decomp. in moist air. (Davis, Chem. Soc. 1906, 89, (2) 1575.)

Molybdenum hexafluoride, MoF_6 .

Decomp. by a little H_2O with separation of blue oxide. Sol. in large amount of H_2O forming a colorless solution.

Absorbed by alkalis and $\text{NH}_4\text{OH} + \text{Aq}$. (Ruff, B. 1907, 40. 2930)

Molybdenum fluoride with MF .

See Fluomolybdate, M.

Molybdenum potassium trifluoride (?).

Precipitate. Sol. in $\text{HCl} + \text{Aq}$.

Molybdenum potassium tetrafluoride (?).

Sl. sol. in H_2O . (Berzelius.)

Molybdenum sesquihydroxide, $\text{Mo}_2\text{O}_5\text{H}_6$.

Difficultly sol. in acids. Insol. in KOH , NaOH , NH_4OH , or $\text{K}_2\text{CO}_3 + \text{Aq}$. Somewhat sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, but pptd. on boiling. (Berzelius.)

Molybdenum hydroxide, $\text{Mo}_2\text{O}_5, 5\text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in CaCl_2 , NH_4Cl , or $\text{NaCl} + \text{Aq}$. Sl. sol. in alcohol. (Berzelius.)

Molybdenum dihydroxide, $\text{MoO}_3, x\text{H}_2\text{O}$.

Slowly and not abundantly sol. in H_2O , from which it is precipitated by NH_4Cl and other salts. Gelatinises by standing in closed vessels or by evaporating on the air. Sol. in the ordinary acids. Insol. in KOH , or $\text{NaOH} + \text{Aq}$. Sol. in alkali carbonates $+ \text{Aq}$.

Molybdenum diiodide, MoI_2 .

Insol. in H_2O and alcohol. Sl. attacked by cold H_2SO_4 or HNO_3 . (Guichard, A. ch. 1901, (7) 23. 567.)

Sl. decomp. H_2O at ordinary temp. Slowly sol. in H_2SO_4 and HNO_3 . (Guichard, C. R. 1896, 123. 822.)

Molybdenum triiodide (?).

Completely sol. in water. (Berzelius.)

Molybdenum nitride, Mo_5N_3 , and Mo_5N_4 .

(Uhrlaub.)

See Molybdenum amide.

Mo_5N_2 . (Rosenheim, Z. anorg. 1905, 46. 317.)

Molybdenum monoxide, MoO.

Known only as hydroxide (Blomstrand, J. pr. 77. 90.)

Molybdenum sesquioxide, Mo₂O₃.

Insol in acids or alkalis

See **Molybdenum sesquihydroxide.**

Molybdenum dioxide, MoO₂.

Insol in HCl or HF + Aq. Sl. sol. in conc H₂SO₄. HNO₃ oxidises to MoO₃. Not attacked by KOH + Aq. (Ullik, A. 144. 227.)

Sl. sol. in KHC₄H₄O₆ + Aq.

Molybdenum trioxide, MoO₃.

Sol. in 500 pts. cold, and much less hot H₂O. (Bucholz.)

Sol. in 960 pts. hot H₂O. (Hatchett.)

Sol. in 570 pts. cold, and much less hot H₂O. (Dumas.)

Sol. in acids before ignition. Insol. in acids, but sl. sol. in acid potassium tartrate + Aq after ignition. Sol. in alkalis or alkali carbonates + Aq.

Sol. in NH₄OH + Aq.

See also **Molybdic acid.**

Min. *Molybdite*. Sol. in HCl + Aq.

Molybdenum oxide, Mo₂O₅.

Sol. in H₂SO₄ and HCl; only sl. sol. in H₂SO₄. (Klason, B. 1901, 34. 151.)

+ 3H₂O. Sl. sol. in H₂O (2 g in 1 l.)

Insol. in NH₄Cl + Aq. Insol. in caustic alkalis, somewhat sol. in NH₄OH. Much more sol. in M₂CO₃ + Aq and in (NH₄)₂CO₃ + Aq. (Klason, B. 1901, 34. 150.)

Mo₂O₁₀ + 3H₂O. (Smith and Oberholtzer, Z. anorg. 1893, 4. 243.)

Mo₂O₁₁ + 6H₂O. Sol. in H₂O. (Bailhache, C. R. 1901, 133. 1212.)

Mo₂O₁₄ + 6H₂O. Very sol. in H₂O. (Guichard, C. R. 1900, 131. 419.)

Mo₇O₂₀. Sol. in H₂O. (Junius, Z. anorg. 1905, 46. 447.)

Mo₂₀O₄₁ + 21H₂O = Mo₂O₅, 18MoO₂ + 21H₂O. Easily sol. in H₂O. Insol. in NH₄Cl + Aq. (Klason, B. 1901, 34. 160.)

Mo₂₆O₇₇ + 24H₂O = Mo₂O₅, 24MoO₂ + 24H₂O. (Klason, B. 1901, 34. 159.)

3Mo₂O₃, 2Mo₇O₂₄ + 18H₂O. Sol. in H₂O. (B.)

It is probable that the five blue oxides of molybdenum described by Klason (B. 34, 148, 158) and Bailhache are either the blue oxide Mo₅O₁₄ prepared by the author or mixtures of this compd. with molybdenum trioxide. (Guichard, C. R. 1902, 134. 173.)

Mo₅O₁₂. Not attacked by ammonia; easily oxidised by HNO₃ + Aq. Not attacked by HCl or H₂SO₄ + Aq. (Wöhler, A. 110. 275.)

Formula is Mo₅O₈, according to Wöhler, but Muthmann (A. 238. 108) has shown that correct formula is Mo₅O₁₂.

Not attacked by boiling alkalis, HCl, or dil. H₂SO₄ + Aq. Sol. in conc. H₂SO₄, with

subsequent decomp. Sol. in aqua regia, and Cl₂ + Aq. (Muthmann.)

Mo₃O₈. Sol. in H₂O. (Muthmann, A. 238. 108.)

Min. *Isenmannite* (?)

+ 5H₂O. Moderately sol. in H₂O. (Marchetti, Z. anorg. 1899, 19. 393.)

Mo₅O₇. (v. d. Pfordten, B. 15. 1925.)

Molybdenum trioxide ammonia, MoO₃, 3NH₃.

Unstable in air. Very sol. in H₂O with evolution of ammonia. (Rosenheim, Z. anorg. 1906, 50. 303.)

3MoO₃, NH₃ + 1/2 H₂O. True composition of commercial molybdic acid. (Klason, B. 1901, 34. 156.)

NH₄H₃Mo₃O₁₂. Very sl. sol. in cold, easily sol. in hot H₂O with partial decomp. (Klason, B. 1901, 34. 156.)

3MoO₃, 3NH₃ + 7H₂O = (NH₄)₃H₃Mo₃O₁₂ + 4H₂O. True composition of Rammelsberg's 3(NH₄)₂O, 7MoO₃ + 12H₂O. (Klason, B. 1901, 34. 155.)

4MoO₃, NH₃ + 6H₂O. Very sl. sol. in cold, very easily sol. in hot H₂O. An insol. modification with less H₂O gradually cryst out. (Mylus, B. 1903, 36. 639.)

4MoO₃, 2NH₃ + 3H₂O. (Klason, B. 1901, 34. 156.)

6MoO₃, 3NH₃ + 5H₂O. Very sl. sol. in cold, more easily sol. in hot H₂O, with partial decomp. (Klason, B. 1901, 34. 156.)

12MoO₃, 3NH₃ + 12H₂O. (Klason, B. 1901, 34. 155.)

12MoO₃, 3NH₃, 12H₂O + 3MoO₃, 8H₂O. Moderately sol. in boiling H₂O. (Klason.)

15MoO₃, 3NH₃ + 6H₂O. Insol. in H₂O. (Klason.)

4MoO₃, MoO₂, 2NH₃ + 7H₂O. Slowly sol. in H₂O; fairly stable, gradually decomp. by dil. acids. (Hofmann, Z. anorg. 1896, 12. 280.)

Molybdenum trioxide ammonia hydrogen peroxide, 18MoO₃, 14NH₃, 3H₂O₂ + 18H₂O.

Sol. in H₂O. Sp. gr. of sat. solution = 1.486 at 17.4°. (Baerwald, B. 1884, 17. 1206.)

Molybdenum oxybromide.

See **Molybdenyl bromide.**

Molybdenum oxychloride.

See **Molybdenyl chloride.**

Molybdenum oxyfluoride.

See **Molybdenyl fluoride.**

Molybdenum oxyfluoride with MF.

See **Fluoxymolybdate, M, and Fluoxyhypomolybdate, M.**

Molybdenum phosphide, Mo₂P₂.

Gradually sol. in hot HNO₃ + Aq. (Wöhler and Rautenberg, A. 109. 374.)

Molybdenum selenide, MoSe_3 .

Not obtained pure. (Uelsmann, A. 116. 125.)

Molybdenum silicide.

Sol. in HF; only very sl sol in other acids. (Warren, C. N. 1898, 78. 319.)

MoSi_2 . Insol. in all min acids; sol. in a warm mixture of HF+ HNO_3 . (Defacqz, C. R. 1907, 144. 1425.)

Insol. in min. acids; sol. in HF+ HNO_3 . Unattacked by 10–20% KOH+Aq. Decomp. by fused NaOH. (Honigschmid, M. 1907, 28. 1020.)

Not attacked by boiling HNO_3 , aqua regia or HF. (Watts, Trans. Am. Electrochem. Soc. 1906, 9. 106.)

Mo_2Si_3 . (Vigouroux, C. R. 129. 1238.)

Molybdenum disulphide, MoS_2 .

Insol. in H_2O . Easily sol. in aqua regia. Easily oxidised by HNO_3 . Sol. in boiling H_2SO_4 . Sl. attacked by KOH+Aq. (Berzelius.)

Min. *Molybdenite*. Sol. in HNO_3 +Aq, with separation of MoO_3 ; sol. in aqua regia; very sl. sol. in H_2SO_4 .

Molybdenum trisulphide, MoS_3 .

Somewhat sol. in H_2O , especially if hot, but pptd. by an acid. Difficultly sol. except when boiled with KOH+Aq. Sl. sol. in solutions of alkali sulphides unless heated. (Berzelius.)

Easily sol. in alkali sulphides+Aq; slowly sol. in alkalies or alkali hydrosulphides+Aq. (Atterberg, J. B. 1873. 258.)

Molybdenum tetrasulphide, MoS_4 .

Not decomp. by hot H_2O or acids.

Sl. sol. in cold alkali sulphides+Aq, but easily by boiling. (Berzelius.)

Insol in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Molybdenum sesquisulphide, Mo_2S_3 .

Insol in HCl and H_2SO_4 ; sol. in hot conc. HNO_3 and aqua regia. (Guichard, C. R. 1900, 130. 138.)

Molybdenum sulphide with MS.

See Sulphomolybdate, M.

Molybdenum sulphochloride, $\text{Mo}_2\text{S}_2\text{Cl}_2$.

Insol. in H_2O and alkalies. Slowly sol in conc. HNO_3 . (Smith and Oberholtzer, Z. anorg. 1894, 5. 67.)

Molybdenyl monamide, NH_4MoO_4 or

(Rosenheim, Z. anorg. 1905, 46. 318.)

Molybdenyl bromide, MoO_2Br_2 .

Deliquescent, and sol. in H_2O with slight evolution of heat.

$\text{Mo}_2\text{O}_3\text{Br}_4$. Unstable in air. (Smith and Oberholtzer, Z. anorg. 4. 236.)

Molybdenyl potassium bromide, MoOBr_3 , 2KBr .

(Weinland, Z. anorg. 1905, 44. 109.)

$\text{MoOBr}_3 \cdot \text{KBr} + 2\text{H}_2\text{O}$. (Weinland, Z. anorg. 1905, 44. 110.)

Molybdenyl rubidium bromide, MoOBr_3 , 2RbBr .

(Weinland, Z. anorg. 1905, 44. 108.)

Molybdenyl chloride, MoO_2Cl_2 .

Sol. in H_2O and alcohol.

Abundantly sol. in abs. alcohol. Not very sol. in abs. ether. (Hampe, Ch. Z. 1888, 12. 23.)

+ H_2O . Composition settled by mol. wt. determinations. Dissociates in alcohol and in H_2O . (Vaudenberghe, Z. anorg. 1895, 10. 52.)

Very hygroscopic. Sol. in acetone, ether and alcohol. (Vaudenberghe, l. c.)

MoOCl_4 . Deliquescent. Sol. in little H_2O with violent action. More H_2O decomposes. (Puttbach, A. 201. 123.)

Formula is $\text{Mo}_2\text{O}_3\text{Cl}_2$, according to Blomstrand (J. pr. 71. 460).

$\text{Mo}_2\text{O}_3\text{Cl}_4$. (Puttbach, l. c.)

$\text{Mo}_2\text{O}_3\text{Cl}_6$. Deliquescent. Sol. in H_2O with very slight evolution of heat and subsequent formation of precipitate. (Blomstrand.)

Sol. in acids (Puttbach, A. 201. 129.)

$\text{Mo}_2\text{O}_3\text{Cl}_8$. Deliquescent, and sol. in H_2O . (Blomstrand.)

$\text{Mo}_2\text{O}_3\text{Cl}_2$. Insol. in HCl and cold H_2SO_4 . Sol. in hot H_2SO_4 and HNO_3 . (Puttbach, A. 201. 123.)

$\text{Mo}_2\text{O}_3\text{Cl}_7$. Difficultly sol. in HCl. Easily sol. in HNO_3 , and alkalies+Aq. (Puttbach.)

Molybdenyl potassium chloride, MoO_2Cl_2 , $\text{KCl} + \text{H}_2\text{O}$.

(Weinland, Z. anorg. 1905, 44. 97.)

+ $2\text{H}_2\text{O}$. (Weinland, Z. anorg. 1905, 44. 96.)

$6\text{MoO}_2\text{Cl}_2 \cdot 2\text{KCl} + 6\text{H}_2\text{O}$. (Weinland, Z. anorg. 1905, 44. 97.)

$\text{MoOCl}_3 \cdot 2\text{KCl} + 2\text{H}_2\text{O}$. Sol. in H_2O . (Nordenskjöld, B. 1901, 34. 1573.)

Ppt. (Henderson, Proc. Chem. Soc. 1903, 19. 245.)

Molybdenyl rubidium chloride, MoO_2Cl_2 , $\text{RbCl} + \text{H}_2\text{O}$.

$\text{MoO}_2\text{Cl}_2 \cdot 2\text{RbCl}$. (Weinland, Z. anorg. 1905, 44. 95.)

$\text{MoOCl}_3 \cdot 2\text{RbCl}$. Sl. sol. in H_2O . Less sol. than K salt. (Nordenskjöld, B. 1901, 34. 1573.)

Molybdenyl fluoride, MoO_2F_2

Decomp. rapidly in moist air. (Schulze, J. pr. 2) 21. 442.)

Very hygroscopic. Sol. in a little H_2O giving a blue solution, in more H_2O giving a colorless solution.

Sol. in AsCl_3 , SiCl_4 , SO_2Cl_2 and PCl_3 . On warming these solutions, gas is evolved.

Insol. in toluene. Nearly insol. in ether, CHCl_3 , CCl_4 , and CS_2 . Sol. in warm pyridine and in ethyl and methyl alcohol. (Ruff, B. 1907, 40. 2934.)

MoOF_4 . Very hygroscopic. Decomp. by H_2O and conc. H_2SO_4 . Decomp. by alcohol. Sol. in ether and CHCl_3 with evolution of gas. Insol. in toluene. Very sl. sol. in benzene and CS_2 . (Ruff, B. 1907, 40. 2932.)

$\text{Mo}_2\text{O}_3\text{F}_4$. Deliquescent. Easily sol. in HF + Aq , not in H_2O . (Smith and Oberholtzer.)

Molybdenyl fluoride with MF.

See Fluoxymolybdate, M, and Fluoxyhypomolybdate, M.

Molybdenyl hydroxide, $\text{MoO}(\text{OH})_3$.

2 g. are sol. in 1000 cc. H_2O ; insol. in H_2O + NH_4Cl ; only sl. sol. in NH_4OH and alkali carbonates + Aq . (Klason, B. 1901, 34. 151.)

Molybdic acid, H_2MoO_4 .

(Ullik, A. 144. 217.)

Nearly insol. in H_2O . (Vivier, C. R. 106. 601.)

Very sparingly sol. in cold H_2O , more sol. in hot H_2O . (Rosenheim and Bertheim, Z. anorg. 1903, 34. 435.)

 α -modification.

Solubility of MoO_3 , H_2O (α -modification) in H_2O at t° .

1000 g. H_2O dissolve g. MoO_3 .

t°	G MoO_3	t°	G. MoO_3
14.8	2.117	42.0	3.446
15.2	2.131	45.0	3.661
24.6	2.619	52.0	4.184
25.6	2.689	60.0	4.685
30.3	2.973	70.0	4.231
36.0	3.085	80.0	5.212
36.8	3.295

(Rosenheim and Davidsohn, Z. anorg. 1903, 37. 318.)

(β modification), MoO_3 , H_2O . From MoO_3 , $2\text{H}_2\text{O}$ at 60° – 70° . (Rosenheim and Davidsohn.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Easily sol. in H_2SO_4 . (Ruegenberg and Smith, J. Am. Chem. Soc. 1900, 22. 772.)

H_2MoO_4 . Sol. in H_2O and acids. (Millingk.)

Very sol. in H_2O (Mylius, B. 1903, 36. 638.)

Solubility of MoO_3 , $2\text{H}_2\text{O}$ in H_2O .

1000 g. H_2O dissolve g. MoO_3 at t° .

t°	G MoO_3	t°	G MoO_3
18	1.066	59	11.258
23	1.856	60	12.057
30	2.638	66	17.274
40	4.761	70	20.550
48	6.360	74.4	20.904
50.2	6.873	75	20.920
54	7.855	79	21.064

(Rosenheim and Bertheim, Z. anorg. 1903, 34. 430.)

Solubility of MoO_3 , $2\text{H}_2\text{O}$ in ammonium salts + Aq at t° .

1000 g. of the solvent dissolve g. MoO_3 .

Solvent	t°	G MoO_3
10% $(\text{NH}_4)_2\text{SO}_4$	29.6	19.27
10% NH_4HSO_4	31.5	27.53
"	41.8	34.36
"	49.7	37.69

(Rosenheim and Davidsohn, Z. anorg. 1903, 37. 315.)

H_2MoO_6 (?). Known only in solution.

$\text{H}_2\text{Mo}_2\text{O}_7$. Easily sol. in H_2O . (Ullik.)

$\text{H}_2\text{Mo}_4\text{O}_{13}$. Easily sol. in H_2O . (U.)

$\text{H}_2\text{Mo}_8\text{O}_{25}$. Easily sol. in H_2O . (U.)

Molybdic acid also exists in a colloidal modification, sol. in H_2O . (Graham, C. R. 59. 174.)

Molybdates.

The normal molybdates of the alkali metals are easily sol. in H_2O , while the others are sl. sol. or insol. therein.

The trimolybdates are sl. sol. in cold, but very easily sol. in hot H_2O .

The tetramolybdates are easily sol. in H_2O .

Aluminum molybdate, $\text{Al}_{10}\text{Mo}_2\text{O}_{21}$.

Precipitate. (Gentile, J. pr. 81. 414.)

Contains aluminum hydroxide and sulphate. (Struve, J. pr. 61. 441.)

Aluminum ammonium molybdate.

See Aluminicomolybdate, ammonium.

Aluminum barium molybdate.

See Aluminicomolybdate, barium.

Ammonium molybdate, $(\text{NH}_4)_2\text{MoO}_4$.

Efflorescent through loss of NH_3 ; decomp. by H_2O into acid salt (Svanberg and Struve.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)

$(\text{NH}_4)_2\text{Mo}_2\text{O}_7$. Sol. in H_2O .
 $+ \text{H}_2\text{O} = \text{NH}_4\text{HMoO}_4$. Sol. in H_2O . Sol
 in 2-3 pts. H_2O . (Brandes; Mauro, Gazz.
 ch. 1t. 18. 120.)

$(\text{NH}_4)_6\text{Mo}_7\text{O}_{24} + 4\text{H}_2\text{O}$. (Commercial am-
 monium molybdate.)

Not efflorescent. Sol. in H_2O . (Delafont-
 taine, N. Arch. Sc. ph. nat. 23. 17.)

According to Struve and Berlin =

$(\text{NH}_4)_4\text{Mo}_8\text{O}_{17} + 3\text{H}_2\text{O}$.

According to Marignac and Delffs =
 $(\text{NH}_4)\text{HMoO}_4$. The true composition of
 commercial ammonium molybdate is
 $(\text{NH}_4)_{10}\text{Mo}_{12}\text{O}_{41}$. (Junius, Z. anorg. 1905,
 46. 428.)

$+ 12\text{H}_2\text{O}$. More sol. than the above.
 (Rammelsberg, Pogg. 127. 298.)

Insol. in acetone. (Krug and M'Elroy, J.
 Anal. Appl. Ch. 6. 184.)

$(\text{NH}_4)_{10}\text{Mo}_{12}\text{O}_{41}$. True formula for com-
 mercial ammonium molybdate (Sand and
 Eisenlohr, Z. anorg. 1907, 52. 68.)

$+ 7\text{H}_2\text{O}$. (Junius, Z. anorg. 1905, 46. 428.)

$(\text{NH}_4)_4\text{Mo}_8\text{O}_{17} + \text{H}_2\text{O}$. (Jean, C. R. 78.
 436.)

$(\text{NH}_4)_2\text{Mo}_2\text{O}_7 + \text{H}_2\text{O}$. Very difficultly sol.
 in cold, easily sol. in hot H_2O . (Berlin, J. pr.
 49. 445.)

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Kammerer,
 J. pr. (2) 6. 358.)

$(\text{NH}_4)_2\text{O}$, 4MoO_3 . Practically insol. in
 cold, sl. sol. in hot H_2O . (Westphal, Dissert.
 1895.)

$+ 2\text{H}_2\text{O}$. Very difficultly sol. in cold,
 rather easily sol. in hot H_2O . (Berlin.)

100 cc. H_2O dissolve 3.5200 g. at 15° ; sp.
 gr. = 1.03; 3.6711 g. at 18° ; sp. gr. = 1.04;
 4.5961 g. at 32° ; sp. gr. = 1.05. (Wempe, Z.
 anorg. 1912, 78. 258.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$. (Junius, Z. anorg. 1905, 46.
 440.)

$(\text{NH}_4)_2\text{O}$, $8\text{MoO}_3 + 13\text{H}_2\text{O}$. (Rosenheim,
 Z. anorg. 1897, 15. 188.)

$(\text{NH}_4)_2\text{O}$, $9\text{MoO}_3 + 17\text{H}_2\text{O}$. (Westphal,
 Dissert. 1895.)

See also Molybdenum trioxide ammonia.

Ammonium barium molybdate,
 $3(\text{NH}_4)_2\text{O}$, 3BaO , $14\text{MoO}_3 + 12\text{H}_2\text{O}$.
 (Westphal, Dissert. 1895.)

Ammonium bismuth molybdate,
 $\text{NH}_4\text{Bi}(\text{MoO}_4)_2$.

(Riederer, J. Am. Chem. Soc. 1903, 25.
 914.)

Ammonium cadmium molybdate ammonia,
 $(\text{NH}_4)_2\text{Cd}(\text{MoO}_4)_2$, 2NH_3 .

Decomp. by H_2O .

Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Briggs, Chem.
 Soc. 1904, 85. 674.)

Ammonium cerium molybdate,

$(\text{NH}_4)_6\text{CeMo}_{14}\text{O}_{48} + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Barbieri, C. A. 1909. 293.)

Ammonium chromic molybdate.

See Chromicomolybdate, ammonium.

Ammonium cobaltous molybdate,

$3(\text{NH}_4)_2\text{O}$, 7MoO_3 , 3CoO , $7\text{MoO}_3 + x\text{H}_2\text{O}$.

$5[3(\text{NH}_4)_2\text{O}$, $7\text{MoO}_3]$, $7[3\text{CoO}$, $7\text{MoO}_3] +$
 $x\text{H}_2\text{O}$.

$2[3(\text{NH}_4)_2\text{O}$, $7\text{MoO}_3]$, $3[3\text{CoO}$, $7\text{MoO}_3] +$
 $x\text{H}_2\text{O}$.

$3[3(\text{NH}_4)_2\text{O}$, $7\text{MoO}_3]$, $5[3\text{CoO}$, $7\text{MoO}_3] +$
 $x\text{H}_2\text{O}$.

$3(\text{NH}_4)_2\text{O}$, 7MoO_3 , $5[3\text{CoO}$, $7\text{MoO}_3] +$
 $x\text{H}_2\text{O}$.

$9[2(\text{NH}_4)_2\text{O}$, $5\text{MoO}_3]$, $5[2\text{CoO}$, $5\text{MoO}_3] +$
 $118\text{H}_2\text{O}$.

$4(\text{NH}_4)_2\text{O}$, 2CoO , $15\text{MoO}_3 + 20\text{H}_2\text{O}$.
 (Marckwald, Dissert. 1895.)

Ammonium cobaltous molybdate ammonia,

$(\text{NH}_4)_2\text{Co}(\text{MoO}_4)_2$, 2NH_3 .

Decomp. by H_2O .

Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Briggs, Chem.
 Soc. 1904, 85. 674.)

Ammonium cobaltic molybdate.

See Cobaltimolybdate, ammonium.

Ammonium cupric molybdate, $(\text{NH}_4)_2\text{O}$, CuO ,
 $5\text{MoO}_3 + 9\text{H}_2\text{O}$.

Sl. sol. in cold, sol. in boiling H_2O without
 decomp. (Struve.)

Ammonium cupric molybdate ammonia,

$(\text{NH}_4)_2\text{Cu}(\text{MoO}_4)_2$, 2NH_3 .

Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$.

Decomp. by H_2O . (Briggs, Chem. Soc.
 1904, 85. 673.)

Ammonium ferric molybdate, $3(\text{NH}_4)_2\text{Mo}_2\text{O}_7$,
 $\text{Fe}_2(\text{MoO}_4)_3 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Struve.)

See also Ferricomolybdate, ammonium.

Ammonium lanthanum molybdate,

$(\text{NH}_4)_8\text{La}_2\text{Mo}_{14}\text{O}_{48} + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Barbieri, C. A. 1909. 293.)

Ammonium lithium molybdate, $\text{NH}_4\text{LiMoO}_4$,
 $+ \text{H}_2\text{O}$.

(Traube, N. Jahrb. Miner. 1894, I. 194.)

Ammonium magnesium molybdate, $(\text{NH}_4)_2\text{O}$,
 MgO , $2\text{MoO}_3 + 2\text{H}_2\text{O} = (\text{NH}_4)_2\text{MoO}_4$,

$\text{MgMoO}_4 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O . (Ullik, A. 144. 344.)

Ammonium manganous molybdate,

$2(\text{NH}_4)_2\text{O}$, MnO , $3\text{MoO}_3 + 5\text{H}_2\text{O}$.

Decomp. by boiling H_2O . (Marckwald,
 Dissert. 1895.)

$(\text{NH}_4)_2\text{O}$, 2MnO , $6\text{MoO}_3 + 16\text{H}_2\text{O}$. De-
 comp. by boiling H_2O . (Marckwald, Dissert.
 1895.)

$(\text{NH}_4)_2\text{O}$, 3MnO , $6\text{MoO}_3 + 16\text{H}_2\text{O}$. Decomp. by boiling H_2O . (Marckwald, Dissert. 1895.)

$\frac{3}{2}(\text{NH}_4)_2\text{O}$, 2MnO , $12\text{MoO}_3 + 22\text{H}_2\text{O}$. (Marckwald, Dissert. 1895.)

Ammonium manganic molybdate.

See Permanganomolybdate ammonium.

Ammonium mercuric molybdate.

Sol. in $\text{HCl} + \text{Aq}$. Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$, separating out on cooling. Sol. in hot $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$. (Hirzel.)

Ammonium molybdenum molybdate,

$(\text{NH}_4)_2\text{O}$, 2MoO_3 , $4\text{MoO}_3 + 9\text{H}_2\text{O}$.

Easily sol. in H_2O , but the solution soon becomes cloudy. (Rammelsberg, Pogg. 127. 291.)

Ammonium neodymium molybdate,

$(\text{NH}_4)_3\text{NdMoO}_{24} + 12\text{H}_2\text{O}$.

Ppt. (Barbieri, C. C. 1911, I. 1043.)

Ammonium nickel molybdate,

$(\text{NH}_4)_2\text{O}$, 3NiO , $9\text{MoO}_3 + 25\text{H}_2\text{O}$.

Very sl. sol. in cold, sol. in hot H_2O without decomp. (Marckwald, Dissert. 1895.)

$3(\text{NH}_4)_2\text{O}$, 2NiO , $10\text{MoO}_3 + 14\text{H}_2\text{O}$. Very sl. sol. in cold, sol. in hot H_2O without decomp. (Marckwald, Dissert. 1895.)

$5(\text{NH}_4)_2\text{O}$, 3NiO , $16\text{MoO}_3 + 16\text{H}_2\text{O}$. (Hall, J. Am. Chem. Soc. 1907, 29, 702.)

$6(\text{NH}_4)_2\text{O}$, 3NiO , $16\text{MoO}_3 + 29\text{H}_2\text{O}$. Very sl. sol. in cold, sol. in hot H_2O without decomp. (Marckwald, Dissert. 1895.)

$8(\text{NH}_4)_2\text{O}$, 6NiO , $31\text{MoO}_3 + 63\text{H}_2\text{O}$. Very sl. sol. in cold, sol. in hot H_2O without decomp. (Marckwald, Dissert. 1895.)

$3(\text{NH}_4)_2\text{O}$, 9NiO , $34\text{MoO}_3 + 120\text{H}_2\text{O}$. Very sl. sol. in cold, easily sol. in hot H_2O without decomp. (Marckwald, Dissert. 1895.)

Ammonium nickelic molybdate.

See Nickelomolybdate, ammonium.

Ammonium nickel hydrogen molybdate,

$(\text{NH}_4)_4\text{H}_6[\text{Ni}(\text{MoO}_4)_6] + 5\text{H}_2\text{O}$.

See Nickelomolybdate, ammonium hydrogen.

Ammonium praseodymium molybdate,

$(\text{NH}_4)_3\text{PrMoO}_{24} + 12\text{H}_2\text{O}$.

Ppt. (Barbieri, C. A. 1911. 1884.)

Ammonium samarium molybdate,

$(\text{NH}_4)_3\text{SmMoO}_{24} + 12\text{H}_2\text{O}$.

Ppt. (Barbieri, C. A. 1911. 1884.)

Ammonium sodium molybdate, $7(\text{NH}_4)_2\text{O}$, $2\text{Na}_2\text{O}$, $21\text{MoO}_3 + 15\text{H}_2\text{O}$ (?).

Easily sol. in H_2O . (Delafontaine, J. pr. 95. 136.)

$7(\text{NH}_4)_2\text{O}$, $3\text{Na}_2\text{O}$, $25\text{MoO}_3 + 30\text{H}_2\text{O}$ (?). (Delafontaine.)

$(\text{NH}_4, \text{Na})_2\text{O}$, $3\text{MoO}_3 + \text{H}_2\text{O}$. Sol. in H_2O . (Mauro, Gazz. ch. it 11. 214.)

Ammonium thorium molybdate.

See Thoromolybdate, ammonium.

Ammonium titanium molybdate.

See Titanomolybdate, ammonium.

Ammonium vanadium molybdate.

See Vanadiomolybdate, ammonium.

Ammonium zinc molybdate.

Sol. in H_2O . (Berzelius.)

Ammonium zirconium molybdate.

See Zirconomolybdate, ammonium.

Ammonium molybdate hydrogen dioxide,

18MoO_3 , $7(\text{NH}_4)_2\text{O}$, $3\text{H}_2\text{O}_2 + 11\text{H}_2\text{O}$.

Sol. in H_2O . (Barwald, B. 17. 1206.)

Barium molybdate, basic, 2BaO , $\text{MoO}_3 + \text{H}_2\text{O}$ (?).

Insol. in H_2O . Sol. in dil. $\text{HCl} + \text{Aq}$ or $\text{HNO}_3 + \text{Aq}$. (Heine, J. pr. 9. 204.)

Barium molybdate, BaMoO_4 .

Difficultly sol. in H_2O ; sol. in dil. HCl , and $\text{HNO}_3 + \text{Aq}$. (Svanberg and Struve.)

Sol. in 17,200 pts H_2O at 23° . More sol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$ than in H_2O . (Smith and Bradbury, B. 24. 2930.)

$+ 3\text{H}_2\text{O}$. (Westphal, Dissert. 1895.)

$\text{BaMoO}_4 \cdot 3\text{H}_2\text{O}$. Sl. sol. in H_2O .

$\text{Ba}_3\text{MoO}_{24} + 9\text{H}_2\text{O}$. Appreciably sol. in H_2O . (Jorgensen.)

According to Svanberg and Struve = $\text{Ba}_2\text{Mo}_6\text{O}_{21} + 6\text{H}_2\text{O}$.

$+ 12\text{H}_2\text{O}$ or 5BaO , $12\text{MoO}_3 + 20\text{H}_2\text{O}$. (Junius, Z. anorg. 1905, 46. 433.)

$+ 22\text{H}_2\text{O}$. Ppt. (Westphal, Dissert. 1895.)

BaO , $4\text{MoO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$. Ppt. (Wempe, Z. anorg. 1912, 78. 320.)

$+ 12\text{H}_2\text{O}$. Ppt. (Rosenheim, Z. anorg. 1913, 79. 299.)

$\text{BaMoO}_4 \cdot 4\text{H}_2\text{O}$. Insol. in cold or hot H_2O or $\text{HNO}_3 + \text{Aq}$. Extremely slightly decomp. by H_2SO_4 , or $\text{H}_2\text{SO}_4 + \text{HNO}_3$, or $\text{HCl} + \text{Aq}$. (Svanberg and Struve.)

Barium paramolybdate, 5BaO , $12\text{MoO}_3 + 10\text{H}_2\text{O}$.

Ppt. Sol. in excess of $\text{BaCl}_2 + \text{Aq}$. (Junius, Z. anorg. 1905, 46. 433.)

Barium tetramolybdate, $\text{BaH}_2(\text{Mo}_4\text{O}_{13})_2 + 17\text{H}_2\text{O}$.

Insol. in cold, apparently decomp. by hot H_2O , a small part dissolving, and the rest forming an insol. residue. (Ullik, A. 144. 336.)

+14H₂O. Insol. in cold and hot H₂O.
(Wempe, Z. anorg. 1912, 78. 320.)
BaO, 8MoO₃+17H₂O. (Felix, Dissert 1912.)

Barium chromic molybdate.

See Chromicomolybdate, barium.

Barium cobaltic molybdate.

See Cobaltimolybdate, barium.

Barium manganic molybdate.

See Permanganomolybdate, barium.

Barium nickelic molybdate.

See Nickelimolybdate, barium.

Barium nickel hydrogen molybdate,

Ba₂H₆[Ni(MoO₄)₆]+10H₂O.

See Nickelomolybdate, barium hydrogen.

Barium vanadium molybdate.

See Vanadiomolybdate, barium.

Barium molybdate hydrogen dioxide, 8BaO,
19MoO₃, 2H₂O₂+13H₂O.

Precipitate. (Barwald.)

Bismuth molybdate, Bi₂O₃, 3MoO₃.

Somewhat sol. in H₂O. Sol. in 500 pts. H₂O and in the stronger acids. (Richter.)

Bromomolybdenum molybdate.

See under Bromomolybdenum comps.

Cadmium molybdate, CdMoO₄.

Insol. in H₂O; sol. in NH₄OH+Aq, KCN+Aq, or acids. (Smith and Bradbury, B. 24. 2390.)

CdO, H₂O, 8MoO₃+6H₂O. Decomp. by boiling with H₂O. (Wempe, Z. anorg. 1912, 78. 323.)

Cæsium molybdate, Cs₂O, 3MoO₃+H₂O.

(Ephraim and Herschfinkel, Z. anorg. 1909, 64. 270.)

Cs₂O, 5MoO₃+3H₂O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 270.)

+3½H₂O. Very sl. sol. in cold, easily sol. in hot H₂O. (Wempe, Dissert. 1911.)

2Cs₂O, 5MoO₃+5H₂O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

3Cs₂O, 10MoO₃+3H₂O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

Cs₂O, 16MoO₃+8H₂O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

3Cs₂O, 10MoO₃+3H₂O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

Cæsium tetramolybdate, Cs₂O, 4MoO₃.

Only sl. sol. in H₂O. (Muthmann, B. 1898, 31. 1841.)

+2H₂O. Sl. sol. in H₂O. (Muthmann, B. 1898, 31. 1841.)

+3H₂O. Easily sol. in cold or hot H₂O. (Wempe, Z. anorg. 1912, 78. 317.)

+5H₂O. Very sol. in cold and hot H₂O. (Wempe, Dissert. 1911.)

Cs₂O, MoO₃, Cs₂O, 3MoO₃+4.5H₂O. Sol. in H₂O. (Wempe, Z. anorg. 1912, 78. 317.)

Cæsium paramolybdate, 5Cs₂O, 12MoO₃+11H₂O.

Efflorescent. Easily sol. in H₂O. (Wempe, Z. anorg. 1912, 78. 317.)

Calcium molybdate, CaMoO₄.

Insol. precipitate. (Ullik.)

Sl. sol. in H₂O; insol. in alcohol. (Smith and Bradbury, B. 24. 2930.)

+H₂O. (Westphal, Dissert. 1895.)

+2H₂O. (Westphal, Dissert. 1895.)

+6H₂O. Difficultly sol. in cold, easily in hot H₂O. (Ullik, A. 144. 231.)

CaMo₂O₁₃+9H₂O. Easily sol. in cold H₂O.

CaO, 2H₂O, 12MoO₃+21H₂O. Efflorescent. Sl. sol. in cold, easily sol. in hot H₂O. (Wempe)

Calcium hydrogen tetramolybdate,

CaH₂(Mo₄O₁₃)₂+17H₂O.

Sl. sol. in cold, easily sol. in hot H₂O with decomp. (Ullik.)

+16H₂O. Insol. in cold, difficultly sol. in hot H₂O. (Wempe, Z. anorg. 1912, 78. 318.)

Cerium molybdate, Ce₂(MoO₄)₃.

Precipitate. Insol. in H₂O; sol. in acids. (Cossa, B. 19. 536 R.)

Chromic molybdate.

Insol. in H₂O, but sol. in acids Sol. in NH₄ molybdate+Aq. (Berzelius.)

See also Chromicomolybdic acid.

Chromic molybdate, with M. molybdate.

See Chromicomolybdate. M.

Cobaltous molybdate, CoMoO₄.

Decomp. by alkalis and strong acids. (Berzelius.)

+H₂O. Sl. sol. in pure, easily sol. in acidified H₂O. (Coloriano, Bull. Soc. (2) 50. 451.)

CoO, 2MoO₃+2H₂O. (Marckwald, Dissert. 1895.)

6½H₂O. Sl. sol. in H₂O. (Marckwald.)

CoMo₂O₁₀+10H₂O. Very sl. sol. in cold, but very easily sol. in hot H₂O. (Ullik, W. A. B. 55, 2. 767.)

Cobaltic potassium molybdate.

See Cobaltimolybdate, potassium.

Cobaltous sodium molybdate,

Na₂O, 2CoO, 6MoO₃+18H₂O.

-(Marckwald, Dissert. 1895.)

2Na₂O, CoO, 7MoO₃+20H₂O. Sol. in cold H₂O without decomp. Decomp. on heating. (Marckwald.)

- $3\text{Na}_2\text{O}, 2\text{CoO}, 12\text{MoO}_3 + 27\text{H}_2\text{O}$. (Marckwald.)
 $3\text{Na}_2\text{O}, 3\text{CoO}, 14\text{MoO}_3 + 50\text{H}_2\text{O}$. Sol in much cold H_2O . (Marckwald.)
 $4\text{Na}_2\text{O}, 6\text{CoO}, 25\text{MoO}_3 + 68\text{H}_2\text{O}$. (Marckwald.)
- Cobaltous molybdate ammonia**, $\text{CoMoO}_4, 2\text{NH}_3 + \text{H}_2\text{O}$.
 Sol. in H_2O . (Sonnenschein, J. pr. 53. 340.)
- Cupric molybdate, basic**, $4\text{CuO}, 3\text{MoO}_3 + 5\text{H}_2\text{O}$.
 Insol. in H_2O . (Struve, J. B. 1854. 350.)
- Cupric molybdate**, CuMoO_4 .
 Sl sol. in H_2O ; decomp. by acids and alkaline solutions.
 $\text{CuMo}_2\text{O}_7 + 6\frac{1}{2}\text{H}_2\text{O}$. Easily sol. in cold H_2O . (Ullik, A. 144. 233.)
 $+9\text{H}_2\text{O}$. Very sl. sol. in cold, and extraordinarily easily sol. in hot H_2O . (Ullik.)
- Cupric molybdate ammonia**,
 $\text{CuMoO}_4, 2\text{NH}_3 + \text{H}_2\text{O}$.
 Gives off NH_3 at ord. temp. Decomp. by H_2O .
 Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$ from which it can be cryst. (Briggs, Chem. Soc. 1904. 85. 674.)
 $\text{CuMoO}_4, 4\text{NH}_3$. Decomp. by H_2O . Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Jørgensen, Ch. Z. Repert. 1896, 20. 225.)
- Didymium molybdate**, $\text{Di}_2(\text{MoO}_4)_3$.
 Ppt. Insol. in H_2O . (Cossa, B. 19. 536R.)
 $\text{Di}_2\text{O}_3, 6\text{MoO}_3 + 3\text{H}_2\text{O} (?)$. Precipitate. (Smith.)
- Glucinum molybdate, basic**, $2\text{GfO}, \text{MoO}_3 + 3\text{H}_2\text{O}$.
 Nearly insol. in H_2O . (Atterberg, J. B. 1873. 25S.)
- Glucinum molybdate**, $\text{GfO}, \text{MoO}_3 + 2\text{H}_2\text{O}$.
 Sol. in H_2O with decomp. (Rosenheim, Z. anorg. 1897, 15. 307.)
 $\text{GfMoO}_4, \text{MoO}_3 + r\text{H}_2\text{O}$. Easily sol. in H_2O . (Atterberg.)
- Gold (auric) molybdate (?)**.
 Sl. sol. in H_2O . Sol. in HCl , and $\text{HNO}_3 + \text{Aq}$. (Richter.)
- Hydroxylamine potassium molybdate**.
 $\text{MoO}_4\text{H}_2(\text{NH}_2\text{O})_3(\text{NH}_2\text{OK})$.
 Easily sol. in H_2O ; pptd. by alcohol. (Hofmann, A. 1899, 309. 324.)
- Indium molybdate**, $\text{In}_2(\text{MoO}_4)_3 + 2\text{H}_2\text{O}$.
 Ppt. Insol. in H_2O .
 Easily sol. in HCl . (Renz, B. 1901, 34. 2765.)
- Iron (ferrous) molybdate**, FeMoO_4 .
 Insol. in H_2O (Schultze, A. 126. 55.)
- Iron (ferric) molybdate**, $\text{Fe}_2\text{O}_3, 4\text{MoO}_3 + 7\text{H}_2\text{O}$.
 Nearly insol. in H_2O . Slowly sol. in cold, easily in hot HCl , or $\text{HNO}_3 + \text{Aq}$. Dil. acids gradually dissolve out Fe_2O_3 in the cold. When ignited, difficultly sol. in all solvents. (Steinacker.)
 $\text{Fe}_2\text{O}_3, 5\text{MoO}_3 + 16\text{H}_2\text{O}$. Very sl. sol. in H_2O (Struve, J. B. 1854. 346.)
 $2\text{Fe}_2\text{O}_3, 7\text{MoO}_3 + 34\text{H}_2\text{O}$. Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 704.)
- Ferric potassium molybdate**, $\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 12\text{MoO}_3 + 20\text{H}_2\text{O} = 3\text{K}_2\text{Mo}_2\text{O}_7, \text{Fe}_2(\text{Mo}_2\text{O}_7)_3 + 20\text{H}_2\text{O}$.
 Sol in H_2O . (Struve.)
- Lanthanum molybdate**, $\text{LaH}_3(\text{MoO}_4)_3 = \text{La}_2\text{O}_3, \text{MoO}_3 + 3\text{H}_2\text{O} (?)$
 Precipitate. (Smith.)
- Lead molybdate**, PbMoO_4 .
 Insol. in H_2O . Sol. in warm $\text{HNO}_3 + \text{Aq}$; decomp. by H_2SO_4 ; sol. in conc. $\text{HCl} + \text{Aq}$, or $\text{KOH} + \text{Aq}$.
 Min. *Wulfenite*. As above.
- Lithium molybdate**, Li_2MoO_4 .
 Moderately sol. in cold, and only sl. more sol. in hot H_2O . (Ephraim, Z. anorg. 1909, 64. 259.)
 $+ \frac{2}{3}\text{H}_2\text{O}$. Easily sol. in H_2O .
 $5\text{Li}_2\text{O}, 5\text{MoO}_3 + 2\text{H}_2\text{O}$. 46.13 g. are present in 100 ccm. of the aqueous solution at 20° , and sp. gr. of the solution = 1.44. (Wempe, Z. anorg. 1912, 78. 309.)
 $\text{Li}_2\text{O}, 2\text{MoO}_3 + 5\text{H}_2\text{O}$. Sol. in cold, easily sol. in hot H_2O . (Ephraim, Z. anorg. 1909, 64. 258.)
 $\text{Li}_2\text{O}, 3\text{MoO}_3 + \text{H}_2\text{O}$. Easily sol. in warm H_2O . (Wempe, Dissert. 1911.)
 $+ 4\text{H}_2\text{O}$. (Wempe.)
 $+ 4\frac{1}{2}\text{H}_2\text{O}$. (Wempe.)
 $+ 7\text{H}_2\text{O}$. Nearly insol. in cold, sol. in hot H_2O . (Ephraim, Z. anorg. 1909, 64. 258.)
 $2\text{Li}_2\text{O}, 3\text{MoO}_3$. Sl. sol. in H_2O . (Ephraim, Z. anorg. 1909, 64. 258.)
- Lithium paramolybdate**, $3\text{Li}_2\text{O}, 7\text{MoO}_3 + 12\text{H}_2\text{O}$.
 Sol. in H_2O . (Rosenheim, Z. anorg. 1897, 15. 181.)
 $+ 28\text{H}_2\text{O}$. Easily sol. in cold and hot H_2O . (Ephraim, Z. anorg. 1909, 64. 258.)
- Lithium tetramolybdate**, $\text{Li}_2\text{O}, 4\text{MoO}_3 + 7\text{H}_2\text{O}$.
 Sol. in cold H_2O . (Ephraim, Z. anorg. 1909, 64. 258.)
 $\text{Li}_2\text{O}, \text{H}_2\text{O}, 8\text{MoO}_3 + 10\text{H}_2\text{O}$. Easily sol.

in hot H_2O . (Wempe, Z. anorg. 1912, **78**, 308.)

Li_2O , $3\text{H}_2\text{O}$, $16\text{MoO}_3 + 6\frac{1}{2}\text{H}_2\text{O}$. Easily sol. in warm H_2O . (Wempe, Z. anorg. 1912, **78**, 308.)

Lithium potassium molybdate, $\text{KLiMoO}_4 + \text{H}_2\text{O}$.

(Traube, N Jahrb. Miner, 1894, I. 194.)

Magnesium molybdate, MgMoO_4 .

Min. *Belonesia*.

Insol. in $\text{HCl} + \text{Aq}$. (Scacchi, Zeit. Kryst. 1888, **14**, 523.)

$+5\text{H}_2\text{O}$. Easily sol. in cold, but still more sol. in hot H_2O . (Delafontaine.)

Sol. in 12-15 pts. cold H_2O . (Brandes.)

$+7\text{H}_2\text{O}$. Easily sol. in hot or cold H_2O . (Ullik.)

$\text{MgMo}_3\text{O}_{13} + 10\text{H}_2\text{O}$. Difficultly sol. in cold, very easily in hot H_2O . (Ullik.)

Magnesium paramolybdate, $\text{Mg}_3\text{Mo}_7\text{O}_{24} + 20\text{H}_2\text{O}$.

Quite sol. in cold, more easily in hot H_2O . (Ullik.)

Magnesium tetramolybdate,
 MgO , H_2O , $8\text{MoO}_3 + 19\text{H}_2\text{O}$.

Magnesium hydrogen tetramolybdate,
 $\text{MgH}_2(\text{Mo}_4\text{O}_{13})_2 + 19\text{H}_2\text{O}$.

Easily sol. in cold H_2O . (Ullik, A. 144, 335.)

Sl. sol. in cold, easily sol. in hot H_2O . (Wempe, Dissert. 1911.)

$+20\text{H}_2\text{O}$. Ppt. (Wempe, Z. anorg. 1912, **78**, 323.)

Magnesium hydrogen octomolybdate,
 $\text{MgH}_2(\text{Mo}_8\text{O}_{25})_2 + 29\text{H}_2\text{O}$.

Very difficultly sol. in cold, very easily sol. in hot H_2O . (Ullik, W. A. B. **60**, 2, 314.)

Magnesium potassium molybdate, MgMoO_4 ,
 $\text{K}_2\text{MoO}_4 + 2\text{H}_2\text{O}$.

Slowly sol. in cold, easily in hot H_2O . (Ullik, A. 144, 343.)

Manganous molybdate, $\text{MnMoO}_4 + \text{H}_2\text{O}$.

Insol. in H_2O . Sl. sol. in pure, easily sol. in acidified H_2O . Decomp. by alkalis or alkali carbonates + Aq . (Coloriano, Bull. Soc. (2) **50**, 451.)

$+ \frac{5}{2}\text{H}_2\text{O}$. (Marckwald, Dissert. 1895.)

$+ 10\text{H}_2\text{O}$. (Marckwald.)

Manganic potassium molybdate.

See Permanganomolybdate, potassium.

Manganic silver molybdate.

See Permanganomolybdate, silver.

Mercurous molybdate, $\text{Hg}_2\text{Mo}_2\text{O}_7$.

Decomp. by H_2O . (Struve, J. B. 1754, 350.)

Sol. in 500-600 pts H_2O ; decomp. by $\text{HNO}_3 + \text{Aq}$. (Hatchett.)

Molybdenum molybdate.

See Molybdenum oxides, Mo_3O_7 , Mo_4O_{10} , etc.

Neodymium molybdate, $\text{Nd}_2(\text{MoO}_4)_3$.

Very sl. sol. in H_2O .

1 pt is sol. in 53790 pts H_2O at 28° .

1 " " " 32466 " H_2O " 75° .

(Hitchcock, J. Am. Chem. Soc. 1895, **17**, 532.)

Nickel molybdate, $\text{NiMoO}_4 + \frac{2}{3}\text{H}_2\text{O}$, $+ \frac{3}{4}\text{H}_2\text{O}$ and $+5\text{H}_2\text{O}$.

(Marckwald, Dissert. 1895.)

NiO , $3\text{MoO}_3 + 18\text{H}_2\text{O}$. Sl. sol. in cold; easily sol. in hot H_2O . (Marckwald.)

5NiO , $14\text{MoO}_3 + 57\text{H}_2\text{O}$, and $+70\text{H}_2\text{O}$.

Sl. sol. in cold; easily sol. in hot H_2O . (Marckwald.)

Nickel potassium molybdate, 3NiO , $5\text{K}_2\text{O}$,
 $16\text{MoO}_3 + 21\text{H}_2\text{O}$.

Can be cryst. from H_2O . (Hall, J. Am. Chem. Soc. 1907, **29**, 701.)

Nickelic potassium molybdate.

See Nickelimolybdate, potassium.

Nickel potassium hydrogen molybdate,

$\text{K}_4\text{H}_6[\text{Ni}(\text{MoO}_4)_6] + 5\text{H}_2\text{O}$.

See Nickelomolybdate, potassium hydrogen.

Nickel sodium molybdate, 2NiO , Na_2O ,
 $6\text{MoO}_3 + 17\text{H}_2\text{O}$.

Sol. in cold H_2O without decomp. but decomp. on warming. (Marckwald, Dissert. 1895.)

Nickel molybdate ammonia, NiMoO_4 , 2NH_3 ,
 $+ \text{H}_2\text{O}$.

Decomp. by H_2O . (Sonnenschein, J. pr. **53**, 341.)

Potassium molybdate, K_2MoO_4 .

Deliquescent in moist air. Very sol. in H_2O . Insol. in alcohol. (Svanberg and Struve, J. pr. **44**, 265.)

184.6 grams are sol. in 100 grams H_2O at 25° . (Amadori, C. A. 1912, 2878.)

Solubility of $\text{K}_2\text{MoO}_4 + \text{K}_2\text{SO}_4$ at 25° .

G. per 100 g. H_2O		G. per 100 g. H_2O	
K_2SO_4	K_2MoO_4	K_2SO_4	K_2MoO_4
0	184.6	1.50	99.49
0.46	180.7	2.13	45.89
0.72	177.	3.95	17.48
0.98	127.2	8.55	4.73
1.27	107.5	12.10	0

(Amadori, Att. acc. Linc. 1912, **21**, I. 467, 667.)

+ $3\frac{1}{2}$ H₂O. Easily sol. in H₂O. (Wempe, Dissert. 1911.)

K₂O, 8MoO₃+13H₂O. Easily sol. in warm H₂O. (Wempe, Dissert. 1911.)

K₂O, 10MoO₃+9H₂O. Nearly insol in hot and cold H₂O. 100 g. H₂O dissolve 0.682 g at 100°. (Felix, Dissert. 1912.)

+15H₂O. Sol. in H₂O. (Felix)

5K₂O, 12MoO₃+8H₂O. Sl sol in cold H₂O. (Junius, Z. anorg. 1905, 46. 439)

Potassium trimolybdate, K₂Mo₃O₁₀.

Difficultly sol. in cold, but much more easily in hot H₂O. When ignited is absolutely insol in H₂O. (Svanberg and Struve)

+2H₂O. (Junius, Z. anorg. 1905, 46. 439.)

Sl. sol. in cold, easily sol. in hot H₂O. (Wempe, Dissert. 1911.)

+2 $\frac{3}{4}$ H₂O. Easily sol. in H₂O (Wempe, Dissert. 1911.)

+3H₂O. Very sl. sol. in cold, more easily sol. in hot H₂O. (Wempe, Dissert. 1911.)

+11H₂O. Practically insol in H₂O (Westphal, Dissert. 1895.)

Potassium hydrogen tetramolybdate,

Sl. sol. in cold H₂O. Decomp. by boiling H₂O. (Rosenheim, Z. anorg. 1913, 79. 298.)

KHMo₄O₁₃+6H₂O. Decomp. by H₂O (Ullik.)

Potassium paramolybdate, K₆Mo₇O₂₄+4H₂O.

Decomp. even by cold H₂O. (Delafontaine.)

Formula is K₆Mo₉O₃₁+6H₂O, according to Svanberg and Struve (?).

Potassium selenium molybdate.

See Selenomolybdate, potassium.

Potassium sodium molybdate, K₂MoO₄, 2Na₂MoO₄+14H₂O.

Very easily sol. in cold, still more easily in hot H₂O. (Delafontaine.)

Potassium vanadium molybdate.

See Vanadiomolybdate, potassium.

Potassium zinc molybdate.

Sol. in H₂O. (Berzelius.)

Potassium molybdate hydrogen dioxide, 6K₂O, 16MoO₃, 4H₂O₂+13H₂O.

Sol. in H₂O. (Bärwald, C. C. 1885. 424.)

Potassium molybdate sulphocyanide, KSCN, K₂Mo₃O₁₀+4H₂O.

Decomp. by H₂O. Sol. in dil. HCl+Ac. (Péchar, C. R. 1894, 118. 806.)

Praseodymium molybdate, Pr₂(MoO₄)₃

Very sl sol in H₂O

1 pt. is sol. in 65820 pts. H₂O at 23°.

1 " " " " 69800 " " " 75°.

(Hitchcock, J. Am. Chem. Soc. 1895, 17. 530.)

Rubidium molybdate, Rb₂O, MoO₃.

Hygroscopic (Ephraim, Z. anorg 1909, 64. 263.)

Rb₂O, 2MoO₃+2H₂O. Easily sol in H₂O. (Ephraim, Z. anorg. 1909, 64. 263.)

Rb₂Mo₇O₂₄+4H₂O. Very sl. sol. in cold, much more easily sol. in hot H₂O. (Delafontaine, N. Arch. Sc. phys. nat. 30. 233)

(Ephraim, Z. anorg. 1909, 64. 263.)

+1 $\frac{3}{4}$ H₂O. (Wempe, Dissert. 1911.)

2Rb₂O, 7MoO₃+5H₂O. Very sl. sol. in cold, very easily sol. in hot H₂O. (Wempe.)

5Rb₂O, 7MoO₃+14H₂O. (Ephraim and Herschinkel, Z. anorg. 1909, 64. 268.)

3Rb₂O, 8MoO₃+6H₂O. (Ephraim and Herschinkel, Z. anorg. 1909, 64. 269.)

5Rb₂O, 12MoO₃+H₂O. 100 cc. H₂O dissolve 1.941 g. at 24°. (Wempe, Z. anorg. 1912, 78. 258)

Rb₂O, 3MoO₃. Insol. in H₂O. (Muthmann, B. 1898, 31. 1839.)

+H₂O. (Muthmann, B. 1898, 31. 1839.)

+3H₂O. Sl sol in cold, easily sol. in hot H₂O. (Wempe, Dissert. 1911.)

6 $\frac{1}{2}$ H₂O. (Ephraim and Herschinkel, Z. anorg. 1909, 64. 269.)

2Rb₂O, 3MoO₃+4H₂O. Sl. sol. in cold, easily in hot H₂O. (Wempe, Dissert. 1911.)

Rb₂O, 4MoO₃. Difficultly sol. in cold, easily in hot H₂O. (Wempe, Z. anorg. 1912, 78. 312.)

+ $\frac{1}{2}$ H₂O. Practically insol in H₂O. Very sol. by addition of NH₃. (Ephraim and Herschinkel, Z. anorg. 1909, 64. 266.)

+2.5H₂O. Insol. in H₂O. (Ephraim, Z. anorg. 1909, 64. 263.)

+4H₂O. Sol. in cold, more easily sol. in hot H₂O. (Wempe, Z. anorg. 1912, 78. 312.)

Rb₂O, MoO₃, Rb₂O, 3MoO₃+5H₂O. Sol. in cold or hot H₂O. (Wempe, Z. anorg. 1912, 78. 312.)

Rb₂O, H₂O, 8MoO₃+3H₂O. Difficultly sol in cold, easily in hot H₂O. (Wempe, Z. anorg. 1912, 78. 312.)

Rb₂O, 11MoO₃+5.5H₂O. Ppt. (Ephraim, Z. anorg. 1909, 64. 263)

Rb₂O, 13MoO₃+4H₂O. Ppt. (Ephraim.)

Rb₂O, 18MoO₃. Ppt. (Ephraim.)

Samarium molybdate, Sm₂(MoO₄)₃.

Insol. in H₂O. (Cleve.)

Samarium sodium molybdate,

Insol. in H₂O. Easily sol. in warm dil. HNO₃+Aq. (Cleve.)

Silver (argentous) molybdate, Ag_4O , 2MoO_3 .
Sol. in $\text{HNO}_3 + \text{Aq. KOH} + \text{Aq.}$ dissolves MoO_3 and Ag_2O separates out. Not decomp by dil. $\text{NH}_4\text{OH} + \text{Aq.}$ (Wohler and Rautenberg, A. 114. 119)

Does not exist. (Muthmann, B. 20. 983)

Silver (argentic) molybdate, Ag_2MoO_4 .

Somewhat sol. in H_2O ; less when HNO_3 is present. (Richter.)

Very sl. sol. in pure H_2O ; easily sol. in H_2O acidulated with HNO_3 . (Struve and Svanberg.)

Sol. in KCN or $\text{NaOH} + \text{Aq.}$ (Smith and Bradbury.)

Ag_2O , 2MoO_3 . Sl. sol. in H_2O . Sol. in $\text{KCN} + \text{Aq.}$ (Junius, Dissert. 1905.)

$2\text{Ag}_2\text{O}$, 5MoO_3 . Somewhat sol. in H_2O . (Svanberg and Struve, J. B. 1847-48. 412.)

Ag_2O , $4\text{MoO}_3 + 6\text{H}_2\text{O}$. Sl. sol. in H_2O with decomp. (Wempe, Z. anorg. 1912, 78. 322.)

Silver thorium molybdate.

See Thoromolybdate, silver.

Silver molybdate ammonia, Ag_2MoO_4 , 4NH_3 .

Sol. in H_2O with rapid decomposition. (Widmann, Bull. Soc. (2) 20. 64)

Silver molybdate hydrogen dioxide, $13\text{Ag}_2\text{O}$, $2\text{H}_2\text{O}_2$, 32MoO_3 .

Ppt. (Barwald, B. 17. 1206.)

Sodium molybdate, Na_2MoO_4 .

Anhydrous. Easily and completely sol. in H_2O .

+ $2\text{H}_2\text{O}$. Sol. in H_2O .

+ $10\text{H}_2\text{O}$. Efflorescent

Solubility in H_2O at t° .

Solid phase	t°	Per cent of anhydrous salt	Mols. H_2O to 1 mol. of anhydrous salt	Mols of anhydrous salt to 100 mols H_2O
Na_2MoO_4 , $10\text{H}_2\text{O}$	0	30.63	25.92	3.86
"	4	33.83	22.38	4.47
"	6	35.58	20.72	4.83
"	90	38.16	18.54	5.39
Na_2MoO_4 , $2\text{H}_2\text{O}$	10	39.28	17.70	5.65
"	15.5	39.27	17.70	5.65
"	32.	39.82	17.30	5.78
"	51.5	41.27	16.28	6.14
"	100	45.57	13.67	7.32

(Funk, B. 1900, 33. 3699.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

$\text{Na}_2\text{Mo}_2\text{O}_7$. After ignition, very difficultly sol. in cold, and very slowly sol. in hot H_2O . (Svanberg and Struve.)

+ H_2O . Easily sol. in H_2O .

+ $3\frac{1}{2}\text{H}_2\text{O}$. Easily sol. in cold or hot H_2O (Wempe, Dissert. 1911.)

+ $4\text{H}_2\text{O}$. Easily and completely sol. in cold H_2O . (Ullik.)

+ $6\frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in cold, very easily sol. in hot H_2O . (Wempe, Dissert. 1911.)

+ $7\text{H}_2\text{O}$. Difficultly sol. in cold H_2O , but more easily than the corresponding K salt. 100 pts. H_2O dissolve 3.878 pts. at 20° and 13.7 pts. at 100° . (Ullik, A. 144. 244.)

+ $9\text{H}_2\text{O}$. Easily sol. in cold, very easily sol. in hot H_2O . (Wempe.)

+ $11\text{H}_2\text{O}$. (Junius, Z. anorg. 1905, 46. 437.)

$3\text{Na}_2\text{O}$, 7MoO_3 . Easily sol. in cold, very easily sol. in hot H_2O . (Ött, Dissert. 1911.)

+ $20\text{H}_2\text{O}$. (Westphal, Dissert. 1895.)

+ $22\text{H}_2\text{O}$. Efflorescent. Easily sol. in H_2O (Ullik, A. 144. 219.)

Na_2O , $8\text{MoO}_3 + \frac{1}{2}\text{H}_2\text{O}$. Very sol. in cold or hot H_2O . (Wempe, Dissert. 1911.)

+ $4\text{H}_2\text{O}$. Insol. in H_2O . (Ullik, W. A. B. 60, 2. 312)

+ $15\text{H}_2\text{O}$. (Rosenheim, Z. anorg. 1897, 15. 188.)

Na_2O , $10\text{MoO}_3 + 6\text{H}_2\text{O}$. Very sl. sol. in H_2O . 100 g. H_2O dissolve 0.842 g. at 100° . (Felix, Dissert. 1912.)

+ $7\text{H}_2\text{O}$. (Felix.) Nearly insol. in hot and cold H_2O . (Rosenheim, Z. anorg. 1903, 37. 323.)

+ $12\text{H}_2\text{O}$. Difficultly sol. in H_2O .

+ $21\text{H}_2\text{O}$. Abundantly but slowly sol. in cold H_2O . = $\text{NaHN}_2\text{O}_{11} + 10\text{H}_2\text{O}$. (Ullik.)

$5\text{Na}_2\text{O}$, $12\text{MoO}_3 + 8\text{H}_2\text{O}$. Sl. sol. in cold, easily sol. in hot H_2O . (Wempe, Dissert. 1911.)

+ $20\text{H}_2\text{O}$. Sl. sol. in cold, easily sol. in hot H_2O . (Wempe, Dissert. 1911.)

+ $36\text{H}_2\text{O}$. (Junius, Z. anorg. 1905, 46. 436.)

+ $44\text{H}_2\text{O}$. Sl. sol. in cold, easily sol. in hot H_2O . (Wempe, Dissert. 1911.)

Sodium tetramolybdate, $\text{Na}_2\text{Mo}_4\text{O}_{13} + 6\text{H}_2\text{O}$.

Difficultly sol. in cold, easily in hot H_2O . (Ullik.)

100 cc. H_2O dissolve at 21° , 28.39 g. of the salt. Sp. gr. of the solution = 1.47. (Wempe, Z. anorg. 1912, 78. 306.)

+ $17\text{H}_2\text{O}$. (Felix, Dissert. 1912.)

$\text{Na}_2\text{H}_4[\text{H}_2(\text{Mo}_2\text{O}_7)_3] + 21\text{H}_2\text{O}$. Slowly sol. in cold, easily sol. in hot H_2O . (Rosenheim, Z. anorg. 1913, 79. 298.)

$\text{NaHM}_4\text{O}_{13} + 8\text{H}_2\text{O}$. Very sol. in hot or cold H_2O . (Ullik, A. 144. 333.)

$\text{NaHM}_3\text{O}_{25} + 4\text{H}_2\text{O}$. Insol. in H_2O . (Ullik.)

Sodium manganous molybdate, $2\text{Na}_2\text{O}$, MnO ,

$6\text{MoO}_3 + 19\text{H}_2\text{O}$.

(Marckwald, Dissert. 1895.)

Sodium molybdate molybdenum oxide,

$\text{Na}_2\text{Mo}_2\text{O}_{15}$.

Insol. in H_2O . Sol. in HNO_3 and aqua regia. Insol. in HCl and in H_2SO_4 . Sol. in

alkalies. (Stavenhagen and Engels, B. 1895, 28. 2280.)

Strontium molybdate, SrMoO_4 .

Sl. sol. in H_2O . (Schultze)
Sol. in 9600 pts H_2O at 17° . (Smith and Bradbury, B. 24. 2930.)

SrO , $3\text{MoO}_3 + \frac{1}{2}\text{H}_2\text{O}$. Scarcely sol. in cold, easily in hot H_2O . (Wempe, Dissert. 1911.)

SrO , H_2O , $8\text{MoO}_3 + 6\text{H}_2\text{O}$. Scarcely sol. in cold, easily in hot H_2O . (Wempe, Dissert. 1911.)

2SrO , $3\text{H}_2\text{O}$, $20\text{MoO}_3 + 21\text{H}_2\text{O}$. Ppt. (Wempe, Z. anorg. 1912, 78. 321.)

Thallous molybdate, Tl_2MoO_4

Insol. in H_2O . Sol. in alkalies. Insol. in alcohol. (Oettinger, J. B. 1864, 254.)

Sl. sol. in hot or cold H_2O . (Ullik, J. B. 1867, 234.)

$8\text{Tl}_2\text{O}$, 11MoO_3 . Sol. in hot H_2O . (Fleming, J. B. 1868, 250.)

$3\text{Tl}_2\text{O}$, 8MoO_3 . (Fleming.)

Thallous tetramolybdate, Tl_2O , $4\text{MoO}_3 + \text{H}_2\text{O}$.

Sl. sol. in H_2O with decomp. (Wempe, Z. anorg. 1912, 78. 322.)

Thallous paramolybdate, $5\text{Tl}_2\text{O}$, 12MoO_3 .

Insol. in H_2O . Easily sol. in mineral acids and in alkali hydroxides and carbonates. (Junius, Z. anorg. 1905, 46. 432.)

Tin (stannic) molybdate.

Insol. in H_2O . Sol. in dil. or conc. $\text{HCl} + \text{Aq.}$ or in $\text{KOH} + \text{Aq.}$ Not decomp. by $\text{HNO}_3 + \text{Aq.}$ (Berzelius.)

Uranous molybdate.

Precipitate. Sol. in $\text{HCl} + \text{Aq.}$ Decomp. by $\text{KOH} + \text{Aq.}$

$\text{U}(\text{MoO}_4)_2$. (Lancien, C. C. 1908, I. 1763.)

Uranyl molybdate, $(\text{UO}_2)\text{MoO}_4$.

Insol. in H_2O , methyl and ethyl alcohol, ether, acetic acid, CHCl_3 , C_6H_6 and C_7H_8 . Sol. in mineral acids. (Lancien, C. C. 1907, I. 784.)

2UO_3 , 3MoO_3 (?). Insol. in H_2O . Sol. in strong acids and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ (Berzelius.)

3UO_3 , 7MoO_3 . Insol. in hot and cold H_2O . Insol. in NaOH , KOH , and $\text{NH}_4\text{OH} + \text{Aq.}$ Sol. in all min. acids and decomp. by an excess of H_2O . Insol. in acetic acid. (Lancien, C. C. 1908, I. 1763.)

UO_3 , 8MoO_3 . (Lancien.)

$+13\text{H}_2\text{O}$. Insol. in HNO_3 . (Lancien.)

Ytterbium molybdate, Yb_2O_3 , $7\text{MoO}_3 + 6\text{H}_2\text{O}$.

Insol. in hot H_2O . (Cleve, Z. anorg. 1902, 32. 152.)

$2\text{Yb}_2\text{O}_3$, MoO_3 . Ppt. (Cleve.)

Yttrium molybdate.

Insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq.}$ (Berlin.)

Zinc molybdate, ZnMoO_4 .

Difficultly sol. in H_2O ; easily in acids. (Schultze, A. 126. 49.)

$+ \text{H}_2\text{O}$. Sl. sol. in H_2O . Easily sol. in dil. acids. (Coloriano, Bull. Soc. (2) 50. 451.)

$\text{ZnMo}_2\text{O}_7 + 10\text{H}_2\text{O}$. Very difficultly sol. in cold, but extraordinarily easily sol. in hot H_2O . (Ullik, W. A. B. 55, 2. 767.)

Zinc tetramolybdate, $\text{ZnMo}_4\text{O}_{13} + 8\text{H}_2\text{O}$.

Easily sol. in cold H_2O . (Ullik.)

ZnO , H_2O , $8\text{MoO}_3 + 14\text{H}_2\text{O}$. Ppt. (Wempe, Z. anorg. 1912, 78. 324.)

Zinc molybdate ammonia, ZnMoO_4 , $2\text{NH}_3 + \text{H}_2\text{O}$.

(Sonnenschein, J. pr. 53. 339.)

Permolybdic acid.

See Permolybdic acid.

Molybdic sulphuric acid, MoO_3 , SO_3 .

Deliquescent. (Schultz-Sellack, B. 4. 14.)

Very deliquescent. Very sol. in H_2O . (Muthmann, A. 1886, 238. 126.)

MoO_3 , $3\text{SO}_3 + 2\text{H}_2\text{O}$ (?).

Molybdocyanhydric acid, $\text{H}_4\text{Mo}(\text{CN})_8 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O and abs. alcohol. Solutions are stable at ord. temp. (Rosenheim and Garfunkel, Z. anorg. 1910, 65. 168.)

Cadmium molybdocyanide, $\text{Cd}_2\text{Mo}(\text{CN})_8 + 8\text{H}_2\text{O}$.

Insol. in H_2O . (Rosenheim.)

Cadmium molybdocyanide ammonia,

$\text{Cd}_2\text{Mo}(\text{CN})_8$, $4\text{NH}_3 + 2\text{H}_2\text{O}$.

(Rosenheim.)

Cupric molybdocyanide ammonia,

$\text{Cu}_2\text{Mo}(\text{CN})_8$, $4\text{NH}_3 + 7\text{H}_2\text{O}$.

(Rosenheim.)

Potassium molybdocyanide, $\text{K}_4\text{Mo}(\text{CN})_8 + 2\text{H}_2\text{O}$.

Very sol. in H_2O . (Rosenheim.)

Thallous molybdocyanide, $\text{Tl}_4\text{Mo}(\text{CN})_8$.

Very sl. sol. in H_2O . (Rosenheim.)

Molybdoiodic acid, HIO_3 , $\text{H}_2\text{MoO}_4 + \text{H}_2\text{O}$.

Easily sol. in H_2O . (Blomstrand, J. pr. (2) 40. 320.)

I_2O_5 , $2\text{MoO}_3 + 2\text{H}_2\text{O}$. Very sol. in H_2O . Insol. in cold, sol. in hot HNO_3 . Sol. in alcohol. (Chrétien, A. ch. 1898, (7) 15. 402.)

Ammonium molybdoiodate, NH_4IO_3 , H_2MoO_4

Somewhat more sol. than K salt. (Blomstrand.)

$(\text{NH}_4)_2\text{O}$, I_2O_5 , 2MoO_3 . Very sl. sol. in cold H_2O . More sol. in hot H_2O . (Rosenheim and Liebknecht, A. 1899, 308. 50.)

+ H_2O . 1 l. H_2O dissolves 5.39 g. salt at 15° ; 30.94 g. at 100° . More sol. in dil. HNO_3 + Aq. (Chrétien, A. ch. 1898, (7) 15. 409.)

$3(\text{NH}_4)_2\text{O}$, $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $6\text{H}_2\text{O}$. (Chrétien.)

Barium molybdoiodate, BaO , I_2O_5 , 2MoO_3 + $2\text{H}_2\text{O}$

4.23 g. are sol. in 1 l. H_2O at ord. temp. (Chrétien.)

Cadmium molybdoiodate, acid, 3CdO , $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $16\text{H}_2\text{O}$

Sl. sol. in H_2O . (Chrétien.)

Calcium molybdoiodate, CaO , I_2O_5 , 2MoO_3 + $6\text{H}_2\text{O}$

1 l. H_2O dissolves 7.8 g. of the salt at 15° ; 20.89 g. at 90° . (Chrétien.)

Cobaltous molybdoiodate, CoO , I_2O_5 , 2MoO_3 + $6\text{H}_2\text{O}$

5.11 g. are sol. in 1 l. H_2O at 15° ; 22.27 g. at 100° . (Chrétien.)

Cobaltous molybdoiodate acid, CoO , $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $18\text{H}_2\text{O}$

Very sol. in H_2O . (Chrétien.)

Cupric molybdoiodate, CuO , I_2O_5 , 2MoO_3 + $3\text{H}_2\text{O}$

1 l. H_2O dissolves 10.63 g. of the salt at 15° ; 25.55 g. at 100° . (Chrétien.)

Lithium molybdoiodate, Li_2O , I_2O_5 , 2MoO_3 + $2\frac{1}{2}\text{H}_2\text{O}$

197.83 g. are sol. in 1 l. H_2O at 15° . Sol. in dil. HNO_3 + Aq. (Chrétien.)

Magnesium molybdoiodate, MgO , I_2O_5 , 2MoO_3 + $6\text{H}_2\text{O}$

1 l. H_2O dissolves 3.85 g. of the salt at 15° ; 18.2 g. at 100° . (Chrétien.)

Manganous molybdoiodate, 3MnO , $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $9\text{H}_2\text{O}$

1 l. H_2O dissolves 17.05 g. of the salt at 15° ; 55.05 g. at 100° . (Chrétien.)

Nickel molybdoiodate, NiO , I_2O_5 , 2MoO_3 + $6\text{H}_2\text{O}$

5.43 g. are sol. in 1 l. H_2O at 15° ; 21.8 g. at 100° . (Chrétien.)

2NiO , $2\text{I}_2\text{O}_5$, 3MoO_3 + $23\text{H}_2\text{O}$. Easily sol. in H_2O . Not decomp. by acids. (Maass, Dissert. 1901.)

Nickel molybdoiodate, acid, 2NiO , $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $15\text{H}_2\text{O}$

Very sol. in H_2O . (Chrétien.)

Potassium molybdoiodate, $\text{KHO}_2\text{IO}_2\text{MoO}_3\text{OH}$, or KIO_3 , MoO_3 + $2\text{H}_2\text{O}$

Ppt. Sl. sol. in H_2O . (Blomstrand, J. pr. (2) 40. 320)

K_2O , I_2O_5 , 2MoO_3 . Only sl. sol in cold H_2O ; sol. on long boiling. 4.48 grs. are sol. in 1 l. H_2O at 12° . (Compare Blomstrand: not identical.) (Rosenheim, A. 1899, 308. 50.)

+ H_2O . Sl. sol. in H_2O . 3.45 g. are sol. in 1 l. H_2O at 15° ; 28.38 g. at 100° . More sol. in dil. HNO_3 + Aq. (Chrétien, A. ch. 1898, (7) 15. 404.)

Potassium molybdoiodate, acid.

$(\text{I}_2\text{O}_5)_2$, 2MoO_3 , $4\text{K}_2\text{O}$ + $7\text{H}_2\text{O}$.

$(\text{I}_2\text{O}_5)_2$, 2MoO_3 , $2\text{K}_2\text{O}$ + $13\text{H}_2\text{O}$.

$(\text{I}_2\text{O}_5)_2$, 2MoO_3 , K_2O + $4\text{H}_2\text{O}$.

$(\text{I}_2\text{O}_5)_2$, 2MoO_3 , K_2O + $7\text{H}_2\text{O}$.

$(\text{I}_2\text{O}_5)_2$, 2MoO_3 , K_2O + $5\text{H}_2\text{O}$.

(Chrétien.)

Silver molybdoiodate, Ag_2O , I_2O_5 , 2MoO_3 + $1\frac{1}{2}\text{H}_2\text{O}$

Insol. in H_2O .

$4\text{Ag}_2\text{O}$, $4\text{I}_2\text{O}_5$, 3MoO_3 . Sol. in H_2O containing HNO_3 . (Chrétien.)

Sodium molybdoiodate, Na_2O , I_2O_5 , 2MoO_3 + H_2O

Sl. sol. in H_2O . Sol. in HNO_3 with decomp. (Chrétien, C. R. 1896, 123. 178.)

1 l. H_2O dissolves 6.97 g. of the salt at 15° ; 22.75 g. at 90° .

1 l. HNO_3 + Aq (1 : 10) dissolves 23.78 g. of the salt at ord. temp. (Chrétien, A. ch. 1898, (7) 15. 410.)

+ $2\text{H}_2\text{O}$. Only sl. sol. in cold H_2O ; sol. on long boiling. 3.35 grams are sol. in 1 l. H_2O at 12° . (Rosenheim, A. 1899, 308. 50.)

Strontium molybdoiodate, SrO , I_2O_5 , 2MoO_3 + $3\text{H}_2\text{O}$

Very sol. in H_2O . (Chrétien, A. ch. 1898, (7) 15. 415.)

Strontium molybdoiodate, acid, 3SrO , $(\text{I}_2\text{O}_5)_2$, 2MoO_3 + $15\text{H}_2\text{O}$

1 l. H_2O dissolves 2.94 g. of the salt at 15° ; 13.64 g. at 100° . (Chrétien.)

Uranyl molybdoiodate, 2UO_3 , $4\text{I}_2\text{O}_5$, 3MoO_3 + $3\text{H}_2\text{O}$

(Chrétien.)

Zinc molybdoiodate, ZnO , I_2O_5 , 2MoO_3 + $5\text{H}_2\text{O}$

1 l. H_2O dissolves 4.08 g. of the salt at 15° ; 16.25 g. at 100° . (Chrétien.)

Zinc molybdiodate acid, ZnO , $(\text{I}_2\text{O}_5, 2\text{MoO}_3)_3 + 16\text{H}_2\text{O}$.

Very sol in H_2O (Chrétien.)

Molybdoperiodic acid.

Ammonium molybdoperiodate, $5(\text{NH}_4)_2\text{O}$, I_2O_7 , $12\text{MoO}_3 + 12\text{H}_2\text{O}$

Sol. in H_2O (Blomstrand, Sv. V. A. H. Bih 1892. No. 6)

$4(\text{NH}_4)_2\text{O}$, I_2O_7 , $8\text{MoO}_3 + 7\text{H}_2\text{O}$ Very sl. sol. in cold H_2O . (Blomstrand)

Ammonium sodium —, $2(\text{NH}_4)_2\text{O}$, Na_2O , I_2O_7 , $2\text{MoO}_3 + 10\text{H}_2\text{O}$.

Very sl. sol in H_2O . (B.)

Barium sodium —, 9BaO , Na_2O , $2\text{I}_2\text{O}_7$, $24\text{MoO}_3 + 28\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (B.)

Calcium —, 5CaO , I_2O_7 , $12\text{MoO}_3 + 26\text{H}_2\text{O}$.

Extremely sol. in H_2O . (Blomstrand.)

4CaO , I_2O_7 , $12\text{MoO}_3 + 21\text{H}_2\text{O}$. Less sol. in H_2O than above salt.

Lithium —, $5\text{Li}_2\text{O}$, I_2O_7 , $12\text{MoO}_3 + 30\text{H}_2\text{O}$.

Not so efflorescent as Na salt. Sol in H_2O . (B.)
 $+ 18\text{H}_2\text{O}$. (B.)

Manganous sodium —, 2MnO , $3\text{Na}_2\text{O}$, I_2O_7 , $12\text{MoO}_3 + 32\text{H}_2\text{O}$.

Sol. in H_2O . (B.)

Potassium —, $5\text{K}_2\text{O}$, I_2O_7 , $12\text{MoO}_3 + 12\text{H}_2\text{O}$.

Not efflorescent. (Blomstrand.)

Sodium —, $5\text{Na}_2\text{O}$, I_2O_7 , $12\text{MoO}_3 + 34\text{H}_2\text{O}$.

Efflorescent. Very sol in H_2O . (Blomstrand, Sv. V. A. H. Bih 1892. No. 6. 24.)

$+ 26\text{H}_2\text{O}$. Not efflorescent. Very sol in H_2O . (Blomstrand)

Sodium strontium —, Na_2O , 4SrO , I_2O_7 , $12\text{MoO}_3 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (B.)

Molybdophosphoric acid.

See Phosphomolybdic acid.

Molybdosubphosphoric acid.

Sodium molybdosubphosphate,

$\text{Na}_2[\text{P}(\text{Mo}_2\text{O}_7)_3] + 8\text{H}_2\text{O}$.

Ppt. (Rosenheim, Z. anorg. 1913, 84. 222.)

Molybdophosphorous acid.

Potassium molybdophosphite,

$\text{K}_2[\text{HP}(\text{Mo}_2\text{O}_7)_3] + 11\text{H}_2\text{O}$.

Difficultly sol. in cold H_2O . (Rosenheim, Z. anorg. 1913, 84. 219.)

Sodium molybdophosphite,

$\text{Na}_2[\text{HP}(\text{Mo}_2\text{O}_7)_3] + 11\text{H}_2\text{O}$.

Sl. sol in H_2O . (Rosenheim, Z. anorg. 1913, 84. 218.)

Molybdophosphovanadic acid.

See Phosphovanadiomolybdic acid.

Molybdoselenious acid.

Ammonium molybdoselenite, $4(\text{NH}_4)_2\text{O}$, 3SeO_2 , $10\text{MoO}_3 + 4\text{H}_2\text{O}$

More sol. in hot than cold H_2O ; insol. in alcohol. (Péchar, A. ch. (6) 30. 403.)

Ammonium potassium molybdoselenite, $2(\text{NH}_4)_2\text{O}$, $2\text{K}_2\text{O}$, 3SeO_2 , $10\text{MoO}_3 + 5\text{H}_2\text{O}$.

Very sol. in H_2O ; insol. in alcohol. (Péchar.)

Barium molybdoselenite, 4BaO , 3SeO_2 , $10\text{MoO}_3 + 3\text{H}_2\text{O}$.

Sl. sol in cold, easily in warm H_2O . (Péchar.)

Potassium molybdoselenite, $4\text{K}_2\text{O}$, 3SeO_2 , $10\text{MoO}_3 + 5\text{H}_2\text{O}$

Very sol. in H_2O ; insol. in alcohol. (Péchar.)

Sodium molybdoselenite, $4\text{Na}_2\text{O}$, 3SeO_2 , $10\text{MoO}_3 + 15\text{H}_2\text{O}$.

Very efflorescent, and sol. in H_2O ; insol. in alcohol. (Péchar.)

Molybdosilicic acid.

See Silicomolybdic acid.

Molybdosilicovanadic acid.

See Silicovanadiomolybdic acid.

Molybdosulphuric acid.

Appreciably sol in H_2O (Hoffmann, Dissert. 1903.)

Ammonium molybdosulphate, $(\text{NH}_4)_2\text{O}$, 2MoO_3 , $\text{SO}_3 + 4\text{H}_2\text{O}$, and $+ 9\text{H}_2\text{O}$.

Decomp. by H_2O . (Weinland, Z. anorg. 1907, 54. 261.)

$(\text{NH}_4)_2\text{O}$, 2MoO_3 , $3\text{SO}_3 + 10\text{H}_2\text{O}$. (Weinland.)

Ammonium molybdenyl molybdosulphate, $(\text{NH}_4)_2\text{O}$, MoO_3 , 7MoO_3 , $\text{SO}_3 + x\text{H}_2\text{O}$.

$1\frac{1}{2}(\text{NH}_4)_2\text{O}$, MoO_3 , 7MoO_3 , $\text{SO}_3 + 5\text{H}_2\text{O}$.

$2(\text{NH}_4)_2\text{O}$, MoO_3 , 7MoO_3 , $\text{SO}_3 + 14\text{H}_2\text{O}$. (Hoffmann, Dissert. 1903.)

3NH_3 , MoO_3 , 7MoO_3 , $\text{SO}_3 + 10\text{H}_2\text{O}$. Very sol. in H_2O . Very sl. sol. in NH_4 salts + Aq. Very stable toward alkali + Aq. (Péchar, C. R. 1893, 116. 1441.)

5NH_3 , MoO_3 , 7MoO_3 , $\text{SO}_3+8\text{H}_2\text{O}$. (Pé-
chard, C. R. 1893, 116. 1441.)

Potassium molybdosulphate, K_2O , 2MoO_3 ,
 $\text{SO}_3+2\text{H}_2\text{O}$.

K_2O , 2MoO_3 , $\text{SO}_3+6\text{H}_2\text{O}$.
 K_2O , 2MoO_3 , $3\text{SO}_3+6\text{H}_2\text{O}$. (Weinland, Z.
anorg. 1907, 54. 260.)

Potassium molybdenyl molybdosulphate,
 K_2O , MoO_3 , 7MoO_3 , $\text{SO}_3+8\text{H}_2\text{O}$.
(Hoffmann, Dissert. 1903.)

Molybdosulphurous acid.

Ammonium molybdosulphite, $4(\text{NH}_4)_2\text{O}$,
 3SO_2 , $10\text{MoO}_3+6\text{H}_2\text{O}$.

Sl. sol. in cold, more easily in hot H_2O .
Insol in alcohol. (Péchard, A. ch. (6) 30.
396.)

$3(\text{NH}_4)_2\text{O}$, 8MoO_3 , $2\text{SO}_2+5\text{H}_2\text{O}$. Sl. sol.
in cold, easily sol in warm H_2O . Easily de-
comp. by H_2O , and can be recryst. only in
presence of an excess of sulphurous acid.
(Rosenheim, Z. anorg. 1894, 7. 177.)

Ammonium potassium molybdosulphite,
 $2(\text{NH}_4)_2\text{O}$, $2\text{K}_2\text{O}$, 3SO_2 , $10\text{MoO}_3+9\text{H}_2\text{O}$
Sl sol in cold H_2O . Decomp on warming.
(Péchard.)

Barium molybdosulphite, 2BaO , 5MoO_3 ,
 $2\text{SO}_2+10\text{H}_2\text{O}$.
(Rosenheim, Z. anorg. 1897, 15. 185.)

Cæsium molybdosulphite, $2\text{Cs}_2\text{O}$, 5MoO_3 ,
 $2\text{SO}_2+6\text{H}_2\text{O}$.
Unstable. As K salt. (Rosenheim.)

Potassium molybdosulphite, $4\text{K}_2\text{O}$, 3SO_2 ,
 $10\text{MoO}_3+10\text{H}_2\text{O}$.

Very sl. sol. in H_2O , but decomp. on warm-
ing. (Péchard.)
 $2\text{K}_2\text{O}$, 5MoO_3 , $2\text{SO}_2+\text{H}_2\text{O}$. (Rosenheim.)

Rubidium molybdosulphite, $2\text{Rb}_2\text{O}$, 5MoO_3 ,
 $2\text{SO}_2+\frac{1}{2}\text{H}_2\text{O}$.
As K salt. (Rosenheim.)

Sodium molybdosulphite, $4\text{Na}_2\text{O}$, 3SO_2 ,
 $10\text{MoO}_3+12\text{H}_2\text{O}$.

Very sol. in cold H_2O ; insol. in alcohol.
(Péchard.)
 $+16\text{H}_2\text{O}$. Very efflorescent. (Péchard.)
 $2\text{Na}_2\text{O}$, 5MoO_3 , $2\text{SO}_2+8\text{H}_2\text{O}$. In dry state
it gradually gives off SO_2 and soon effloresces.
(Rosenheim.)

Strontium molybdosulphite, 2SrO , 5MoO_3 ,
 $2\text{SO}_2+12\text{H}_2\text{O}$.
(Rosenheim.)

Molybdotitanic acid.

See Titanomolybdic acid.

Molybdous acid.

Magnesium molybdite, $\text{Mg}_2\text{Mo}_3\text{O}_8=2\text{MgO}$,
 3MoO_3 .

Not attacked by KOH , and $\text{HCl}+\text{Aq}$.
(Muthmann, A. 238. 108.)

Zinc molybdite, $\text{Zn}_2\text{Mo}_3\text{O}_8=2\text{ZnO}$, 3MoO_3 .

Easily sol. in aqua regia. (Muthmann, A.
238. 108.)

Molybdovanadates.

See Vanadiomolybdates.

Neodymicotungstic acid.

Ammonium neodymicotungstate, $3(\text{NH}_4)_2\text{O}$,
 Nd_2O_3 , $16\text{WO}_3+20\text{H}_2\text{O}$.

Difficultly sol. in H_2O . (E. F. Smith, J.
Am. Chem Soc 1904, 26. 1480.)

Barium neodymicotungstate, 6BaO , Nd_2O_3 ,
 $16\text{WO}_3+17\text{H}_2\text{O}$.

Insol in H_2O . (E. F. Smith.)

Neodymium.

See also under Didymium.

Neodymium bromide, NdBr_3 .

(Matignon, C. R. 1905, 140. 1638.)

Neodymium carbide, NdC_2 .

Decomp. by H_2O ; insol. in conc. HNO_3 ;
decomp. by dil. HNO_3 . (Moissan, C. R.
1900, 131. 597.)

Neodymium chloride, NdCl_3

100 g. H_2O dissolve 98.68 g. NdCl_3 at 13° ;
140.4 g. at 100° .

Sp. gr. at $15^\circ/4^\circ$ of the solution sat. at 13° =
1.74 (Matignon, A. ch. 1906, (8) 8. 249.)

44.5 g. are sol. in 100 g. abs. alcohol at 20° .
1.8 g. " " " pyridine at 15° .

Insol. in ether, CHCl_3 , quinoline, toluidine,
etc. Sl. sol. in aniline and in phenylhydra-
zine. (Matignon, A. ch. 1906, (8) 8. 266.)
 $+6\text{H}_2\text{O}$. Deliquescent.

At 13° , 100 pts. H_2O dissolve 246.2 pts. of
the hydrated salt.

At 100° , 100 pts. H_2O dissolve 511 pts. of
hydrated salt.

Sat. solution at 13° has a sp. gr. $15^\circ/4^\circ$ =
1.741. (Matignon, C. R. 1901, 133. 289.)

Neodymium chloride ammonia, NdCl_3 ,
 12NH_3 .

Decomposes on heating into $\text{NdCl}_3+\text{NH}_3$;
 $+2\text{NH}_3$; $+4\text{NH}_3$; $+5\text{NH}_3$; $+8\text{NH}_3$; and
 $+11\text{NH}_3$. (Matignon, C. R. 1906, 142. 1043.)

Neodymium hydroxide.

Sol. in citric acid. (Baskerville, J. Am.
Chem. Soc. 1904, 26. 49.)

Solubility in glycerine+Aq containing about 60% by vol. of glycerine. 100 cem. of the solution contain 4.5 g. neodymium oxide. (Muller, Z. anorg 1905, **43**. 322.)

Neodymium hydride, NdH₂ (?).

Slowly attacked by boiling H₂O. Sol. in acids with violent evolution of H₂. (Muthmann, A. 1904, **331**. 58.)

Neodymium iodide, NdI₃

(Matignon, C. R. 1905, **140**. 1638.)

Neodymium nitride, NdN.

Decomp. in moist air with evolution of NH₃. (Muthmann, A. 1904, **331**. 59.)

Neodymium oxide, Nd₂O₃.

Easily sol. in acids. (v. Welsbach, M. 6. 477.)

Neodymium oxychloride, NdOCl.

(Matignon, C. R. 1905, **140**. 1638.)

Neon, Ne.

Less sol. than argon in H₂O; sol. in liquid oxygen. (Ramsay, B. 1898, **31**. 3118.)

Absorption by H₂O at t°.

t°	Coefficient of absorption
0	0.0114
10	0.0118
20	0.0147
30	0.0158
40	0.0203
50	0.0317

(Antropoff, Roy. Soc. Proc. 1910, **83**. A, 480.)

Nickel, Ni.

Not attacked by H₂O. Very slowly sol. in dilute H₃PO₄, H₂SO₄, or HCl+Aq. (Tupputi, A. ch. **78**. 133.)

Very easily attacked by HNO₃+Aq, and difficultly by hot H₂SO₄. When pure, is converted into passive condition by conc. HNO₃. (Nicklès, C. R. **38**. 284.)

Very sl. attacked by cold acids, except HNO₃+Aq. (Tissier, C. R. **50**. 106.)

Not attacked by NaOH+Aq. (Venator, Dingl. **261**. 133.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, **20**. 828.)

Nickel amide, Ni(NH₂)₂.

Decomp. by H₂O; slowly sol. in min. acids. Insol. in liquid NH₃. (Bohart, J. phys. Chem. 1915, **19**. 560.)

Nickel antimonide, NiSb.

Insol. in HCl+Aq; easily sol. in HNO₃+Aq. (Christofle, 1863.)

Min. *Breithauptite*. Insol in acids; easily sol. in aqua regia

Ni₃Sb₂. (Christofle.)

Nickel antimonide sulphide, NiSb₂, NiS₂=NiSbS.

Min. *Nickel glance*, *Ullmannite*.

Decomp. by HNO₃+Aq; completely sol. in aqua regia with separation of S.

Nickel arsenide, NiAs.

Min. *Niccolite*. Sol. in conc. HNO₃+Aq with separation of As₂O₃; more easily sol. in aqua regia.

NiAs₂. Min. *Chloanthite*, *Rammelsbergite*. Sol. in HNO₃+Aq.

Ni₃As₂. Sol. in HNO₃ and in aqua regia. Readily attacked by fused alkali. (Granger, C. R. 1900, **130**. 915.)

Nickel arsenide sulphide, NiAs₂, NiS₂.

Min. *Gersdorffite*. Partly sol. in HNO₃+Aq with separation of S and As₂O₃; not attacked by KOH+Aq.

Nickel azoimide, basic, Ni(OH)N₃

Insol. in H₂O. (Curtius, J. pr. 1898, (2) **58**. 300.)

Nickel azoimide, NiN₃+H₂O.

Sol. in H₂O; insol. in alcohol and ether. (Curtius, J. pr. 1900, (2) **61**. 418.)

Nickel potassium azoimide, Ni(N₃)₂, KN₃ (?).

Sol. in H₂O. (Curtius, J. pr. 1898, (2) **58**. 302.)

Nickel boride, Ni₂B.

Attacked by HNO₃. Slowly sol. in hot HCl. (Jassoneix, C. R. 1907, **145**. 240.)

NiB. Decomp. by moist air and by alkali nitrates, chlorates, hydroxides and carbonates; decomp. by steam at red heat. Not attacked by HCl. Easily attacked by HNO₃ and aqua regia; by H₂SO₄ only on heating. (Moissan, C. R. 1896, **122**. 425.)

NiB₂. (Jassoneix, C. R. 1907, **145**. 241.)

Nickel bromide, NiBr₂.

Deliquescent. Slowly sol. in H₂O.

Sat. NiBr₂+Aq contains at:

-21°	-6°	+19°	38°	
47.1	51.7	56.6	58.9%	NiBr ₂ ,
58°	77°	98°	100°	140°
60.5	60.3	61.0	61.0	60.7% NiBr ₂ .

(Étard, A. ch. 1894, (7) **2**. 542.)

Somewhat hygroscopic. Nearly insol. in cold H₂O but begins to dissolve appreciably at 50°, and somewhat more rapidly at 90°, but even at that temp. 1 g. requires 1-2 hours for solution. HNO₃ does not appreciably hasten solution. (Richards and Cushman, Z. anorg. 1898, **16**. 169.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

+3H₂O. Deliquescent. Very sol. in H₂O, HCl+Aq, NH₄OH+Aq, alcohol, and ether (Berthelot, A. ch. 44. 389.)

+6H₂O. (Bolschakoff, C. C. 1897, II. 331 and 726.)

+9H₂O. (Bolschakoff, C. C. 1897, II. 726 and 331.)

Nickel stannic bromide.

See Bromostannate, nickel.

Nickel bromide ammonia, NiBr₂, 6NH₃.

Sol. in little H₂O, but decomp. by more. (Rammelsberg, Pogg. 55. 243.)

Sol. in warm conc. NH₄OH+Aq; insol. in cold. (Richards and Cushmann, Z. anorg. 1898, 16. 175.)

Nickel bromide cupric oxide, NiBr₂, 3CuO+4H₂O.

Not decomp. by H₂O. (Mailhe, A. ch. 1902, (7) 27. 377.)

Nickel bromide hydrazine, NiBr₂, 2N₂H₄.

Easily sol. in dil. acids and NH₄OH+Aq.

NiBr₂, 3N₂H₄. Sol. in dil. acids. (Franzen, Z. anorg. 1908, 60. 263-4)

Nickel carbonyl, Ni(CO)₄.

Insol. in H₂O; not attacked by dil. acids or alkalis or conc. HCl+Aq. Easily sol. in conc. HNO₃+Aq and in aqua regia. Sol. in alcohol, benzene, and chloroform. (Mond, Langer, and Quincke, Chem. Soc. 57. 749.)

Sol. in hydrocarbons, especially oil of turpentine. (Berthelot, C. R. 1891, 112. 1346.)

Sol. in acetone, toluene, methyl and ethyl alcohol, etc. (Lenher and Loos, J. Am. Chem. Soc. 1900, 22. 114.)

Nickel chloride, NiCl₂.

Anhydrous. Not immediately sol. in H₂O, but gradually dissolves on boiling or by addition of HCl+Aq. Deliquesces on air, and is then easily sol. in H₂O. Sol. in NH₄OH+Aq. Sol. in alcohol. Sol. in hot HCl+Aq only slowly.

Sp. gr. of NiCl₂+Aq containing:

	5	10	15	20	25% NiCl ₂ .
	1.0493	1.0995	1.1578	1.2245	1.3000

(B. Franz, J. pr. (2) 5. 285.)

Sp. gr. of NiCl₂+Aq containing, in 1000 grms. H₂O, g. NiCl₂+7H₂O at 23.1°:

	128 g. (= 1/2 mol.)	256	384	512
	1.057	1.107	1.149	1.187
	640	768	896	1024
	1.220	1.249	1.276	1.301

Containing g. NiCl₂ (anhydrous):

65 g. (= 1/2 mol)	130	195	260	325	390
1.061	1.119	1.176	1.230	1.284	1.335

(Gerlach, Z. anal. 28. 468.)

Sp. gr. of NiCl₂+Aq at room temp. containing

	11.449	22.69	30	40% NiCl ₂ .
	1.1093	1.2264	1.3371	

(Wagner, W. Ann. 1883, 18. 269.)

Sp. gr. of NiCl₂+Aq at 25°.

Concentration of NiCl ₂ +Aq	Sp gr
1-normal	1.0591
1/2- "	1.0308
1/4- "	1.0144
1/8- "	1.0067

(Wagner, Z. phys. Ch. 1890, 5. 39.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 828.)

100 pts. absolute alcohol dissolve at room temperature 10.05 pts. NiCl₂. (Bodtker, Z. phys. Ch. 1897, 22. 511.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Solubility in glycol=16.1-16.3%. (de Coninck, C. C. 1905, II. 1234.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Anhydrous NiCl₂ is insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

+H₂O. (Baubigny.)

1 l. sat. HCl+Aq at 12° contains 40 g. NiCl₂ dissolved from NiCl₂, H₂O. (Ditte.)

+2H₂O. (Sabatier, Bull. Soc. (3) 1. 88.)

+6H₂O. Deliquescent in moist, efflorescent in dry air; sol. in H₂O with evolution of heat. Sol. in 1.5 to 2 pts. H₂O. Easily sol. in alcohol. (Tupputi.)

1 l. H₂O dissolves 600 g. NiCl₂+6H₂O. (Ditte, A. ch. 1879, (5) 22. 551.)

Sat. aq. solution contains at:

-17°	-16°	+10°	18°
29.7	31.0	37.3	38.5% NiCl ₂ ,

38°	59°	78°	96°
41.9	45.0	46.6	46.7% NiCl ₂ .

(Étard, A. ch. 1894, (7) 2. 539.)

Solubility of NiCl₂+6H₂O=37.53% NiCl₂ at 25°. (Foote, J. Am. Chem. Soc. 1912, 34. 882.)

100 pts. absolute alcohol dissolve at room temperature 53.71 pts. NiCl₂+6H₂O. (Bodtker, Z. phys. Ch. 1897, 22. 511.)

$-7\text{H}_2\text{O}$ 100 g. absolute alcohol dissolve 2.16 g. $\text{NiCl}_2 \cdot 7\text{H}_2\text{O}$ at 17° and 1.4 g. at 3° . (de Bruyn, R. t. c. 1892, 11. 156.)

Nickel hydrogen chloride, $3\text{NiCl}_2 \cdot 2\text{HCl} + 11\frac{1}{2}\text{H}_2\text{O}$.

(Reitzenstein, Z. anorg. 1898, 18. 270.)

Nickel rubidium chloride, $\text{NiCl}_2 \cdot 2\text{RbCl}$.

Easily sol. in H_2O and $\text{HCl} + \text{Aq}$. (Goddefroy, B. 8. 9.)

Nickel thallic chloride, $\text{NiCl}_2 \cdot 2\text{TiCl}_3 + 8\text{H}_2\text{O}$.

Deliquescent. Can be cryst. from H_2O . (Gewecke, A. 1909, 366. 221.)

Nickel tin (stannous) chloride, $\text{NiCl}_2 \cdot \text{SnCl}_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Jorgensen.)

Nickel tin (stannic) chloride.

See Chlorostannate, nickel.

Nickel chloride ammonia, $\text{NiCl}_2 \cdot 2\text{NH}_3$.

Sol. in H_2O , decomp. on boiling, insol. in alcohol.

$\text{NiCl}_2 \cdot 3\text{NH}_3 + 3\text{H}_2\text{O}$ (André, C. R. 1888. 106. 937.)

$\text{NiCl}_2 \cdot 6\text{NH}_3$ Sol. in cold H_2O without decomp. Insol. in alcohol. Very sl. sol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$.

Nearly insol. in a sat. solution of NH_4Cl in $\text{NH}_4\text{OH} + \text{Aq}$. (Sorensen, Z. anorg. 1894, 5. 363.)

Nickel chloride cupric oxide, $\text{NiCl}_2 \cdot 3\text{CuO} + 4\text{H}_2\text{O}$.

Not decomp. by H_2O . (Mailhe, A. ch. 1902, (7) 27. 377.)

Nickel chloride hydrazine, $\text{NiCl}_2 \cdot 2\text{N}_2\text{H}_4$.

Sol. in dil. acids and $\text{NH}_3 + \text{Aq}$. (Franzen, Z. anorg. 1908, 60. 262.)

$\text{NiCl}_2 \cdot 3\text{N}_2\text{H}_4$. Sol. in dil. acids. (F.)

Nickel fluoride, NiF_2 .

Sol. in about 5000 pts. H_2O ; insol. in alcohol and ether. Not attacked by HCl , HNO_3 , or H_2SO_4 even when hot. (Poulenc, C. R. 114. 1426.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

$+2\text{H}_2\text{O}$. Decomp. by pure H_2O . Sol. in H_2O acidulated with HF . (Berzelius.)

$+3\text{H}_2\text{O}$. (Clarke, Sil. Am. J. (3) 13. 291.)

Nickel hydrogen fluoride, $\text{NiF}_2 \cdot 5\text{HF} + 6\text{H}_2\text{O}$.

Easily sol. in H_2O and dil. acids. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. (Bohm, Z. anorg. 1905, 43. 330.)

Nickel potassium fluoride, $\text{NiF}_2 \cdot \text{KF}$.

$+ \text{H}_2\text{O}$. Sol. in H_2O . (Wagner, B. 19. 896.)

$\text{NiF}_2 \cdot 2\text{KF}$ Sl. sol. in H_2O . Scarcely sol. in methyl or ethyl alcohol or benzene. (Poulenc, C. R. 114. 747.)

Nickel potassium zirconium fluoride.

See Fluozirconate, nickel potassium.

Nickel manganic fluoride.

See Fluomanganate, nickel.

Nickel sodium fluoride, $\text{NiF}_2 \cdot \text{NaF} + \text{H}_2\text{O}$.

Sol. in H_2O . (Wagner, B. 19. 896.)

Nickel stannic fluoride.

See Fluostannate, nickel.

Nickel titanium fluoride.

See Fluotitanate, nickel.

Nickel tungstyl fluoride.

See Fluoxytungstate, nickel.

Nickel vanadium fluoride.

See Fluovanadate, nickel.

Nickel zirconium fluoride.

See Fluozirconate, nickel.

Nickel fluoride ammonia, $5\text{NiF}_2 \cdot 6\text{NH}_3 + 8\text{H}_2\text{O}$.

Insol. in cold H_2O . Decomp. by hot H_2O . Easily sol. in dil. acids. (Bohm, Z. anorg. 1905, 43. 334.)

Nickelous hydroxide, $4\text{NiO}_2\text{H}_2 \cdot \text{H}_2\text{O}$.

Very sl. sol. in H_2O . Sol. in acids. Insol. in KOH or $\text{NaOH} + \text{Aq}$. Somewhat difficultly sol. in $(\text{NH}_4)_2\text{CO}_3$ or $\text{NH}_4\text{OH} + \text{Aq}$, but easily sol. in presence of NH_4 salts. Sol. in NH_4 salts $+ \text{Aq}$. Sol. in $\text{KCN} + \text{Aq}$. (Rodgers, 1834.)

Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$.

NiO_2H_2 .

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° .

NH_3 norm	G Ni per l	G NiO_2H_2 per l.
1	0.084	0.00287
2	0.170	0.00579
3	0.257	0.00875
4	0.360	0.01227
4.911	2.580	0.0879
3.900	1.780	0.0607
2.101	0.835	0.0284
0.602	0.153	0.0054

The non-agreement of the results is due to the formation of different modifications of NiO_2H_2 .

(Bonsdorff, Z. anorg. 1904, 41. 185.)

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$

Conc. of $\text{Ni} = 0.014\text{N}$ in $1\text{N } \text{NH}_4\text{OH} + \text{Aq}$.

" " = 0.036N " $2\text{N } \text{NH}_4\text{OH} + \text{Aq}$

(Starck, B. 1903, **36**, 3840)

Sol in hot $\text{NH}_4\text{F} + \text{Aq}$ (von Helmholtz, Z. anorg. 1893, **3**, 133.)

Insol. in methyl or amyl amine. (Wurtz)

Not pptd. in presence of Na citrate (Spiller)

Not pptd. in presence of a large number of non-volatile organic substances, particularly $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$. (Rose.)

Nickelonicelic hydroxide, $\text{Ni}_3\text{O}_4, 2\text{H}_2\text{O}$.

Sol. in acids; insol. in H_2O and alkalies. (Dudley, J. Am. Chem. Soc 1896, **18**, 901.)

Nickelic hydroxide, $\text{Ni}_2\text{O}_3, 2\text{H}_2\text{O}$ (?).

(Wernicke, Pogg. **141**, 122)

$\text{Ni}_2\text{O}_3, 3\text{H}_2\text{O}$ (?). Sol. in acids as nickelous salts. Not attacked by boiling KOH or $\text{NaOH} + \text{Aq}$. Slowly sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in NH_4OH , and NH_4 salts + Aq (Odling.)

Nickel iodide, NiI_2 .

Deliquescent and sol. in H_2O . (Erdmann, J. pr. **7**, 254)

Sat. $\text{NiI}_2 + \text{Aq}$ contains at

-23°	-6°	$+11^\circ$	16°
51.8	54.3	57.8	59.0% NiI_2

43°	80°	85°	90°
64.1	65.0	65.2	65.7% NiI_2

(Étard, A. ch. 1894, (7) **2**, 546.)

+ $6\text{H}_2\text{O}$. Deliquescent. Easily sol. in H_2O . (Erdmann.)

Nickel iodide ammonia, $\text{NiI}_2, 4\text{NH}_3$.

(Rammelsberg, Pogg. **48**, 119.)

$\text{NiI}_2, 6\text{NH}_3$. Decomp. by H_2O . Sol. in warm dil. $\text{NH}_4\text{OH} + \text{Aq}$. Very sl. sol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Erdmann)

Nickel iodide hydrazine, $\text{NiI}_2(\text{N}_2\text{H}_4)_2$.

Insol. in H_2O . Sol. in acids. (Franzen, Z. anorg. 1911, **70**, 150.)

Nickel suboxide, $\text{Ni}_3\text{O}_2 + \text{H}_2\text{O}$.

Insol. in H_2O ; sol. in HCl and H_2SO_4 and HNO_3 ; also in $\text{KCN} + \text{Aq}$. (Moore, C. N. 1895, **71**, 81.)

Nickelous oxide, NiO .

Insol. in H_2O . Sol. in conc. acids, except when crystalline, when it is scarcely attacked by acids. (Ebelmen, C. R. **33**, 256.)

Very sl. sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$. (De-marcay.)

Very slowly sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in KOH , and $\text{NaOH} + \text{Aq}$.

Sol. in min. acids, especially $\text{HCl} + \text{Aq}$, when warmed; insol. in $\text{HC}_2\text{H}_3\text{O}_2$, NH_4Cl ,

and $\text{NH}_4\text{SCN} + \text{Aq}$. Insol. in conc. $\text{NaOH} + \text{Aq}$ (Zimmerman, A. **232**, 324)

1 l. solution containing 418 g. sugar and 343 g. CaO dissolves 0.29 g. NiO . (Bodenbender, J. B. **1865**, 600.)

Min. *Bunsenite*.

Nickelonicelic oxide, Ni_3O_4 .

Sol. in acids. (Baubigny, C. R. **87**, 1082.) + $2\text{H}_2\text{O}$. Insol. in H_2O , and in alkalies + Aq . Sol. in acids. (Dudley, J. Am. Chem. Soc. 1896, **18**, 901.)

$6\text{NiO}, \text{Ni}_2\text{O}_3 + \text{H}_2\text{O}$. (Schonbein, J. pr. **93**, 35.)

Nickelic oxide, Ni_2O_3 .

Sol. in HNO_3 , H_2SO_4 , or $\text{HCl} + \text{Aq}$ with decomp., also in NH_4OH and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Winkelblech, A. **13**, 259)

Nickel peroxide, Ni_2O_5 (?).

(Bayley, C. N. **39**, 81.)

Correct composition is Ni_2O_3 . (Carnot, C. R. **108**, 610)

Ni_4O_7 (?). (Wicke, Zeit. Ch. **1865**, 303.)

NiO_4 (Hollard, C. R. 1903, **136**, 230.)

Nickel oxychloride.

Sl sol in H_2O . (Berzelius.)

$\text{NiCl}_2, 8\text{NiO} + 13\text{H}_2\text{O}$. (Raoult, C. R. **69**, 826.)

Nickel oxyiodide, $\text{NiI}_2, 9\text{NiO} + 15\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$ or acetic acid. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Alcohol dissolves out NiI_2 . (Erdmann.)

Nickel oxyselenide.

Almost insol. in boiling HCl ; decomp. by HNO_3 . (Fonze-Diacon, C. R. 1900, **131**, 557.)

Nickel phosphide, Ni_3P .

Sol. in $\text{HNO}_3 + \text{Aq}$ and aqua regia; insol. in $\text{HCl} + \text{Aq}$. (Struve, J. pr. **79**, 321.)

Sol. in aqua regia and in HNO_3 ; sol. in fused alkali. (Granger, Bull. Soc. 1896, (3) **15**, 1089.)

Easily sol. in HNO_3 . (Granger, C. N. 1898, **77**, 229.)

When prepared by heating phosphorus, copper and nickel in electric furnace, is insol. in all acids except a mixture of HNO_3 and HF . (Maronneau, C. R. 1900, **130**, 657.)

NiP_2 . Sol. in HNO_3 ; decomp. by fused NaOH . (Jolibois, C. R. 1910, **150**, 107.)

NiP_3 . Sol. in HNO_3 ; decomp. by fused NaOH . (J.)

Ni_2P_3 . Insol. in HNO_3 , HCl and aqua regia; stable in the air even when heated (Granger, Bull. Soc 1896, (3) **15**, 1086.)

Ni_3P_2 . Not attacked by HCl . Easily attacked by HNO_3 . (Rose, Pogg. 1832, **24**, 232.)

Ni_3P_2 . Sol. in HNO_3 , aqua regia and in fused alkali. (Granger, C. R. 1896, **123**. 177.)

Nickel phosphosulphide, Ni_3PS_2 .

Decomp. by hot H_2O or by aqua regia. Sl. attacked by HNO_3 . (Ferrand, A. ch. 1899, (7) **17**. 417.)

Nickel semiselenide, Ni_3Se .

Almost insol. in boiling HCl , decomp. by HNO_3 . (Fonzes-Diacon, C. R. 1900, **131**. 557.)

Nickel selenide, NiSe

Insol. in H_2O , dil. or conc. $\text{HCl} + \text{Aq}$; slowly sol. in $\text{HNO}_3 + \text{Aq}$; easily in aqua regia. (Little, A. **112**. 211.)

Almost insol. in boiling HCl ; decomp. by HNO_3 . (Fonzes-Diacon, C. R. 1900, **131**. 557.)

NiSe_2 . (Fonzes-Diacon.)

Ni_2Se_3 : Almost insol. in boiling HCl ;

Ni_3Se_4 : decomp. by HNO_3 . (Fonzes-Diacon.)

Nickel silicide, Ni_2Si .

Sol. in HF and aqua regia; insol. in cold H_2O ; decomp. by steam at red heat; sol. in fused alkali carbonates. (Vigouroux, C. R. 1895, **121**. 687.)

Nickel semisulphide, Ni_2S .

Sol. in $\text{HNO}_3 + \text{Aq}$, with residue of S. Difficultly sol. in conc. $\text{HCl} + \text{Aq}$; insol. in dil. $\text{HCl} + \text{Aq}$. (Arfvedson, Pogg. **1**. 65; Gautier, C. R. **108**. 1111.)

Does not exist. (Bornemann, C. A. 1908. 1686.)

Nickel monosulphide, NiS .

Anhydrous. Insol. in H_2O , HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in $\text{HNO}_3 + \text{Aq}$ or aqua regia.

Min. *Millerite*.

$+x\text{H}_2\text{O}$. Insol. in H_2O , but decomp. by H_2O in contact with the air (Clermont and Guiot, C. R. **84**. 714), or by boiling with H_2O . (Geitner, A. **139**. 354.)

When pptd. with $(\text{NH}_4)_2\text{S}$, is somewhat sol. in H_2O . 1 l. H_2O dissolves 39.87×10^{-6} moles NiS at 18° . (Weigel, Z. phys. Ch. 1907, **58**. 294.)

Very sl. sol. in dil. $\text{HCl} + \text{Aq}$, and still less in $\text{HCl}_2\text{H}_2\text{O}_2 + \text{Aq}$. (Fresenius.)

More sol. in $\text{HNO}_3 + \text{Aq}$, and easily in aqua regia.

Somewhat sol. in $\text{NH}_4\text{OH} + \text{Aq}$ or solutions of alkali sulphides. Insol. in $\text{NH}_4\text{SH} + \text{Aq}$. (Fresenius.)

Sol. at moment of formation in Na_2S but not in $(\text{NH}_4)_2\text{S} + \text{Aq}$. (Villiers, C. R. 1894, **119**. 1264.)

Sol. while yet moist in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Berthier.)

When recently pptd., sol. in $\text{KCN} + \text{Aq}$. (Haidlen.)

Pptd. in presence of non-volatile organic substances as tartaric acid, etc (Rose)

Sol. in potassium thiocarbonate + Aq .

(Rosenblatt, Z. anal **26**. 15)

Exists in a colloidal form in a very dil. solution (Winnsinger, Bull. Soc. (2) **49**. 452.)

α modification:

Very sol. in $2\text{N-HCl} + \text{Aq}$ sat. with H_2S .

β modification:

0.033 g is sol in 1 l. $2\text{N-HCl} + \text{Aq}$ sat. with H_2S ; very sol in $2\text{N-HCl} + \text{Aq}$

γ modification:

Insol. in $2\text{N-HCl} + \text{Aq}$ sat. with H_2S . 0.013 g. is sol. in $2\text{N-HCl} + \text{Aq}$ (Thiel, C. C. **1914**, **1**. 19.)

Nickel sulphide, Ni_3S_2 .

(Bornemann, C. A. 1908. 1686.)

Ni_3S_4 . (Bornemann.)

Ni_6S_5 . (Bornemann)

Ni_4S_5 Min. *Polydymite*. Insol. in $\text{HCl} + \text{Aq}$. Sol. in $\text{HNO}_3 + \text{Aq}$ with separation of S.

Ni_5S_7 . Min. *Beyrichite*. Sol in $\text{HCl} + \text{Aq}$.

Nickel disulphide, NiS_2 .

(Fellenberg, Pogg. **50**. 75.)

Does not exist. (Bellucci, C. A. 1909. 293.)

Nickel potassium sulphide, $3\text{NiS}, \text{K}_2\text{S}$.

Insol. in H_2O . (Schneider, J. pr. (2) **9**. 209)

$\text{K}_2\text{Ni}_{11}\text{S}_{10}$. Not attacked by hot $(\text{NH}_4)_2\text{S}$; slowly attacked by HCl or cold aqua regia; quickly by hot aqua regia. HF and H_2SO_4 dissolve only on heating. Insol. in organic acids, alkalies and 12% HCl , also in KCN , AgNO_3 or $\text{CuSO}_4 + \text{Aq}$. (Milbauer, Z. anorg. **1904**, **42**. 447.)

Nickel telluride, Ni_2Te_3 .

Min. *Melonite*. Sol. in $\text{HNO}_3 + \text{Aq}$.

NiTe . (Fabre, C. R. **105**. 277.)

Nickelicotungstic acid.

Ammonium nickelicotungstate, $2(\text{NH}_4)_2\text{O}$, $2\text{Ni}_2\text{O}_3$, $8\text{WO}_3 + 14\text{H}_2\text{O}$.

(Rogers and Smith, J. Am. Chem. Soc. **1904**, **26**. 1476.)

$3(\text{NH}_4)_2\text{O}$; Ni_2O_3 , $16\text{WO}_3 + 22\text{H}_2\text{O}$. Very sl. sol. in H_2O . (Rogers and Smith.)

Barium nickelicotungstate, 19BaO , Ni_2O_3 , 16WO_3 .

Ppt. Very insol. in H_2O . (E. F. Smith.)

Nickelimosybdic acid.

Barium nickelimosybdate, 3BaO , NiO_2 , $9\text{MoO}_3 + 12\text{H}_2\text{O}$.

Ppt. (Hall, J. Am. Chem. Soc. **1907**, **29**. 702.)

Potassium nickelomolybdate, $3K_2O, NiO_2, 9MoO_3 + 6\frac{1}{2}H_2O$.

Very insol. even in hot H_2O . (Hall.)

Nickelomolybdic acid.

Ammonium hydrogen nickelomolybdate, $(NH_4)_4H_6[Ni(MoO_4)_6] + 5H_2O$.

Sl. sol. in H_2O , easily in dil. acids. (Barbieri, C. A. 1916. 897.)

Barium hydrogen nickelomolybdate, $Ba_2H_6[Ni(MoO_4)_6] + 10H_2O$.

Ppt. (Barbieri.)

Potassium hydrogen nickelomolybdate, $K_4H_6[Ni(MoO_4)_6] + 5H_2O$.

Sl. sol. in H_2O , easily in acids (Barbieri.)

Silver hydrogen nickelomolybdate, $Ag_4H_6[Ni(MoO_4)_6] + 3H_2O$.

Insol. in H_2O ; sol. in NH_4OH , or $HNO_3 + Aq$. (Barbieri.)

Nickelonickelous acid.

Potassium nickelonickelite, $K_2Ni_2O_4$ or K_2O, NiO, NiO_2 .

(Hofmann and Hiendlmaier, B. 1906, 39. 3186.)

Sodium nickelonickelite, $Na_2Ni_2O_6 = Na_2O, NiO, 2NiO_2$.

(Bellucci and Rubegni, C. C. 1907, I. 794.)

Nickelous acid.

Barium dinickelite, $BaO, 2NiO_2$.

Unstable; decomp. by cold H_2O ; slowly and very rapidly by hot H_2O . (Dufau, C. R. 1896, 123. 496.)

Niobium, Nb.

For niobium and its compounds, see columbium, Cb, and the corresponding compounds

Nitramide, NH_2NO_2 .

Decomp. by conc. H_2SO_4 . Easily sol. in H_2O , alcohol, ether and acetone. Less sol. in benzol. Almost insol. in ligroin. (Thiele and Lachman, A. 1895, 288. 297.)

Sol. in ether, insol. in petroleum ether. Very unstable; decomp. by hot H_2O . (Thiele and Lachman, B. 1894, 27. 1909.)

Nitratochloroplatinamine comps.

See Chloronitratoptatinamine comps.

Nitratocobalt octamine comps.

See Nitratooctamine cobaltic comps.

Nitratooctamine cobaltic carbonate,

$(NO_3)_2Co_2(NH_3)_8(CO_3)_2 + H_2O$.

Less sol. than other octamine carbonates. (Vortmann and Blasberg, B. 22. 2650)

— **chloride**, $(NO_3)_2Co_2(NH_3)_8Cl_4 + 4H_2O$. (Vortmann and Blasberg, B. 22. 2652.)

— **iodide**, $(NO_3)_2Co_2(NH_3)_8I_4 + 2H_2O$. (Vortmann and Blasberg.)

— **nitrate**.

See Octamine cobaltic nitrate.

— **sulphate**, $(NO_3)_2Co_2(NH_3)_8(SO_4)_2 + 2H_2O$.

+ $4H_2O$. (Vortmann and Blasberg, B. 22. 2652.)

Nitratoptatinamine nitrate,

$(NO_3)_2Pt(NH_3NO_2)_2$.

Sl. sol. in cold, more easily in hot H_2O ; easily sol. in dil $HNO_3 + Aq$. (Cleve)

— **nitrite**, $(NO_3)_2Pt(NH_3NO_2)_2$.

Easily sol. in H_2O . (Cleve.)

Nitratoptatindiamine chloride,

$(NO_3)_2Pt(N_2H_5Cl)_2 + H_2O$.

Moderately sol. in cold, very easily in hot H_2O .

— **chloroplatinate**, $(NO_3)_2Pt(N_2H_5Cl)_2, PtCl_4 + 2H_2O$.

Ppt.

— **chromate**, $(NO_3)_2Pt(N_2H_5)_2CrO_4$.

Nearly insol in H_2O . (Cleve.)

— **dichromate**, $(NO_3)_2Pt(N_2H_5)_2Cr_2O_7$.

Sl. sol. in H_2O .

— **nitrate**, $(NO_3)_2Pt(N_2H_5NO_3)_2$.

Sol. in H_2O . Insol. in $HNO_3 + Aq$.

— **phosphate**, $NO_3Pt(N_2H_5)_2 + H_2O$.

Very sl. sol. in H_2O . (Cleve.)

Nitratoptatindiamine nitrate,

$(NO_3)_2Pt_2(N_2H_5)_4(NO_3)_4$.

Sol. in H_2O with decomp.

Nitratopurpleocobaltic bromide,

$Co(NO_3)(NH_3)_5Br_2$.

Resembles the chloride in its properties. (Jorgensen, J. pr. (2) 23. 227.)

Nitratopurpureocobaltic carbonate,
 $\text{Co}(\text{NO}_3)(\text{NH}_3)_5(\text{CO}_3) + \text{H}_2\text{O}.$

Less sol. in H_2O than other purpureocarbonates. (Vortmann and Blasberg, B. 22. 2648.)

— **chloride,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2.$

Sl. sol. in cold H_2O , but more than nitrate; more easily sol. in hot H_2O , but is converted into roseo salt. Insol. in $\text{HCl} + \text{Aq}$ or alcohol (Jorgensen, J. pr. (2) 23. 227.)

— **mercuric chloride,**
 $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2, \text{HgCl}_2.$

Not wholly insol. in H_2O . (Jorgensen.)

— **chloroplatinate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2,$
 $\text{PtCl}_4.$

Ppt. Nearly insol. in cold H_2O . (Jorgensen.)

— **chromate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{CrO}_4.$

Nearly insol. in H_2O (Jorgensen.)

— **dichromate.**

Sl. sol. in H_2O , but more easily than the neutral salt (Jorgensen.)

— **dithionate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{S}_2\text{O}_6.$

Very sl. sol. in cold, more easily in hot H_2O . (Jorgensen.)

— **nitrate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5(\text{NO}_3)_2.$

Sol. in 273 pts. H_2O at 16° . Much more sol. in hot H_2O containing HNO_3 . (Jorgensen, J. pr. (2) 23. 227.)

— **cobaltic nitrite,** $3\text{Co}(\text{NO}_3)(\text{NH}_3)_5,$
 $2\text{Co}(\text{NO}_2)_5 + 2\text{H}_2\text{O}.$

Very sl. sol. in H_2O . (Jorgensen, Z. anorg. 5. 176.)

— **diamine cobaltic nitrite,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5$
 $(\text{NO}_2)_4\text{Co}(\text{NH}_3)_2.$

Ppt. (Jorgensen.)

— **oxalate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{C}_2\text{O}_4.$

Ppt.

— **sulphate,** $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{SO}_4 + \text{H}_2\text{O}.$

Rather difficultly sol. in cold H_2O . (Jorgensen.)

Nitratopurpureorhodium chloride,
 $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5\text{Cl}_2.$

Sl. sol. in cold H_2O , but more easily than the nitrate. (Jorgensen, J. pr. (2) 34. 394.)

— **dithionate,** $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5\text{S}_2\text{O}_6 + \text{H}_2\text{O}.$

Nearly insol. in cold H_2O . (Jorgensen.)

Nitratopurpureorhodium nitrate,
 $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5(\text{NO}_3)_2.$

Very sl. sol. in cold H_2O . Insol. in alcohol. (Jorgensen.)

Nitric acid, HNO_3 .

Miscible with H_2O . When $\text{HNO}_3 + \text{Aq}$ is distilled at 760 mm. pressure, an acid containing 68% HNO_3 is formed, which boils at 120.5° under 735 mm. pressure. By distilling at 150 mm. pressure the acid contains 67.6% HNO_3 ; at 70 mm. (b.-pt. $65-70^\circ$) the acid contains 66.7% HNO_3 . The percentage of HNO_3 in the liquid obtained by passing dry air into $\text{HNO}_3 + \text{Aq}$ containing 64–68% HNO_3 varies with the temp.; the higher the temp. the greater the percentage of HNO_3 . (Roscoe, Chem. Soc. 13. 150.)

$\text{HNO}_3 + \text{Aq}$ of 1	51	sp	gr	contains	67%	N_2O_5
"	1	42	"	"	54	"
"	1	35	"	"	44	4
"	1	315	"	"	38	6

(Dalton)

$\text{HNO}_3 + \text{Aq}$ of 1	52	sp	gr	contains	88	82%	N_2O_5
"	1	322	"	"	86	17%	"
"	1	4	"	"	41	"	"

(Mitscherlich)

$\text{HNO}_3 + \text{Aq}$ of 1 298 sp. gr. contains 36.75% N_2O_5 (Kirwan)

$\text{HNO}_3 + \text{Aq}$ of 1 298 sp. gr. contains 18% (Davy)

$\text{HNO}_3 + \text{Aq}$ of 1 298 sp. gr. contains 32–33%. (Berthollet)

For Ure's table of sp. gr. of $\text{HNO}_3 + \text{Aq}$, see Watt's Dict., 1st ed.

Sp. gr. of $\text{HNO}_3 + \text{Aq}$ at 0° and 15° .

(Jones and Pearce, Am. Ch. J. 1907, 38. 732.)

For sp. gr. of $\text{HNO}_3 + \text{H}_2\text{SO}_4$, see under
 H_2SO_4 .Partition coefficient for HNO_3 between
ether and H_2O is increased by the addition
of nitrates. (Tanret, C. R. 1897, 124. 464.)The hydrates described by Erdmann do
not exist. There are only two authentic hy-
drates, the mono- and the tri-hydrate.
(Küster, Ch. Z. 1904, 28. 132.)The composition of the hydrates formed
by HNO_3 at different dilutions is calculated
from determinations of the lowering of the
fr.-pt. produced by HNO_3 and of the con-
ductivity and sp. gr. of $\text{HNO}_3 + \text{Aq}$. (Jones,
Am. Ch. J. 1905, 34. 328.)Dinitric acid, $\text{H}_2\text{N}_4\text{O}_{11} = 2\text{N}_2\text{O}_5, \text{H}_2\text{O}$.Fumes on air. Miscible with H_2O , with
evolution of much heat. (Weber, J. pr. (2)
6. 342.)

Nitrates.

All nitrates are sol. in H_2O except a few
basic compounds. Most nitrates are insol. in

conc. $\text{HNO}_3 + \text{Aq}$; many are sol. in alcohol; some are sol. in glycerine.

Aluminum nitrate, basic, $2\text{Al}_2\text{O}_3, 3\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Ordway, Sill. Am. J. (2) 26. 203.)

Basic aluminum nitrates containing 2 mols. or less of Al_2O_3 to one of N_2O_5 may be obtained sol. in H_2O , but the compounds containing more than 2 mols. Al_2O_3 are insol. in H_2O . (Ordway, l. c.)

$2\text{Al}_2\text{O}_3, \text{N}_2\text{O}_5 + 10\text{H}_2\text{O}$. (Ditte, C. R. 110. 782.)

$\text{Al}_6\text{O}_{14}\text{H}_{10}, \text{HNO}_3$. Sol. in H_2O . (Schlumberger, Bull. Soc. 1895, (3) 13. 59.)

Aluminum nitrate, $\text{Al}(\text{NO}_3)_3 + 9\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O , $\text{HNO}_3 + \text{Aq}$, or alcohol. (Berzelius.)

Melts in its crystal H_2O at 72.7° . (Ordway.)

Sol. in 1 pt. strong alcohol. (Wenzel.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Ammonium nitrate, NH_4NO_3 .

Deliquescent.

Sol. in 0.502 pt H_2O at 18° (Karsten.)

Sol. in 0.54 pt H_2O at 10° . (Harris, C. R. 24. 816.)

Much more sol. is hot than cold H_2O . (Harris.)

Sol. in 2 pts. H_2O at 15.5° and 0.5 pt. boiling H_2O . (Fourcroy.)

Sol. in 1 pt. cold, and 0.5 pt. boiling H_2O (Fourcroy.)

Sol. in 0.5 pt. H_2O at 18° (Berzelius.)

Sol. in 2 pts. H_2O at 18° (Abl.)

Decomp. by boiling H_2O .

Solubility in 100 pts. H_2O at t° .

(de Waal, Dissert. Leiden, 1910.)

70.19 g NH_4NO_3 are contained in 100 g $\text{NH}_4\text{NO}_3 + \text{Aq}$ sat. at 30° . (Schreinemakers and de Baat, Arch. neer. Sc. 1911, (2) 15. 415.)

60 pts. NH_4NO_3 mixed with 100 pts. H_2O lower the temperature from 13.6° to -13.6° , that is 27.2° , but if the initial temperature is 0° it will fall only to -16.7° , the freezing-point of the mixture. (Rüdorff, B. 2. 68.)

Sp. gr. of $\text{NH}_4\text{NO}_3 + \text{Aq}$ at 18° .

(Kuriloff, Z. phys. Ch. 1898, 25. 109.)

$\text{NH}_4\text{NO}_3 + \text{NH}_4\text{Cl}$.

100 pts. H_2O dissolve 29.1 pts. NH_4Cl and 173.8 pts. NH_4NO_3 . (Rüdorff, B. 6. 484.)

Sol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$ with pptn. of NH_4Cl until a state of equilibrium is reached. (Karsten.)

Addition of KClO_3 to $\text{NH}_4\text{Cl} + \text{Aq}$ prevents pptn. of NH_4Cl , and dissolves any NH_4Cl that may have been pptd. (Margueritte, C. R. 38. 306.)

See also under Ammonium chloride.

$\text{NH}_4\text{NO}_3 + \text{KNO}_3$

100 pts. H_2O dissolve

	At 9° (1)	At 11° (2)	At 11° (3)	At 15° (4)	At 15° (5)	At 15° (6)
KNO_3	20.2	40.6		26.0	46.2	
NH_4NO_3		88.8	143		130.4	161

2, sat. at 11° with NH_4NO_3 and then at 9° with KNO_3 ; 5, sat. at 11° with NH_4NO_3 and then at 15° with KNO_3 . (Mulder.)

Sol. in sat. $\text{HNO}_3 + \text{Aq}$ without causing ppt. (Karsten); with separation of KNO_3 (Rudorff). Composition of solution is dependent on the relative excess of the salts present. (Rudorff.)

100 pts. H_2O dissolve 77.1 pts. NaNO_3 and 162.9 pts. NH_4NO_3 at 16°. (Rudorff, B. 6. 484.)

If a sat. solution of $\text{NH}_4\text{NO}_3 + \text{Aq}$ at 11° is sat. with $\text{Ba}(\text{NO}_3)_2$ at 9°, 100 pts. H_2O dissolve:

	At 11°		At 9°
NH_4NO_3	143	101.3	
$\text{Ba}(\text{NO}_3)_2$.		6.2	6.8

(Mulder)

(de Waal. Dissert. Leiden. 1910.)

Very easily sol. in liquid NH_3 . (Franklin, *Am. Ch. J.* 1898, 20. 826.)

1 pt. NH_4NO_3 dissolves in 2.29 pts. alcohol of 66.8% at 25° (Pohl, *W. A. B.* 6. 399)
1 pt. NH_4NO_3 dissolves in 1.1 pt. boiling alcohol (Weizel)

100 pts. absolute methyl alcohol dissolve 17.1 pts. at 20.5°. (de Bruyn, *Z. phys. Ch.* 10. 783.)

100 g. absolute methyl alcohol dissolve 14.6 g. NH_4NO_3 at 14° and 16.3 g. at 18.5°. (Schiiff and Monsacchi, *Z. phys. Ch.* 1896, 21. 277.)

100 pts. absolute ethyl alcohol dissolve 3.8 pts. at 20.5°. (de Bruyn, *Z. phys. Ch.* 10. 783.)

100 g. absolute ethyl alcohol dissolve 4.6 g. at 14°. (Schiiff and Monsacchi, *Z. phys. Ch.* 1896, 21. 277)

Solubility of NH_4NO_3 in H_2O is decreased by presence of ethyl alcohol but increased by presence of methyl alcohol. NH_4NO_3 is only very sl. sol. in abs. ethyl alcohol and the solubility increases slowly with rise in temp.; it is more sol. in abs. methyl alcohol and the solubility increases rapidly with rise in temp. (Fleckenstein, *Phys. Zeit.* 1905, 6. 419.)

(de Waal, *Dissert. Leiden*, 1910.)

Sp. gr. of alcoholic solution of NH_4NO_3 at 15°.

Pts. NH_4NO_3	Pts. alcohol	Sp. gr.
0	100	0.83904
2	98	0.84746
4	96	0.85604
6	94	0.86524

(Gerlach, *Z. anal.* 28. 521.)

Insol. in benzonitrile. (Naumann, *B.* 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, *B.* 1909, 42. 3790.)

Very sl. sol. in acetone. (Krug and M'Elroy, *J. Anal. Ch.* 6. 184.)

Sol. in acetone. (Eidmann, *C. C.* 1899, II. 1014.)

Ammonium hydrogen nitrate, $\text{NH}_4\text{H}(\text{NO}_3)_2$.

Sol. in H_2O . (Ditte, *C. R.* 89. 576, 641.)

Decomp. by H_2O . (Groschuff, *B.* 1904, 37. 1487.)

Ammonium dihydrogen nitrate, $\text{NH}_4\text{H}_2(\text{NO}_3)_3$.

Sol. in H_2O . (Ditte.)

Solubility in H_2O .

Solution temp.	% by wt. NH_4NO_3	% by wt. HNO_3
-8.0	34.2	53.9
-2.5	34.8	54.8
+3.0	35.4	55.8
3.5	36.0	56.8
19.5	37.4	58.9
25.0	38.1	60.0
29.5 mpt.	38.8	61.2

(Groschuff, *Z. anorg.* 1904, 40. 7.)

Ammonium cerous nitrate, $3\text{NH}_4\text{NO}_3$, $2\text{Ce}(\text{NO}_3)_3 + 12\text{H}_2\text{O}$.

Very deliquescent. Very sol. in H_2O and alcohol. (Holzmann, J. pr. **84**. 78.)
 $+10\text{H}_2\text{O}$. Hygroscopic. Sol. in H_2O . (Drossbach, B. 1900, **33**. 3507.)
 $2\text{NH}_4\text{NO}_3$, $\text{Ce}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$. As above. (Marignac, A. ch. (4) **30**. 64.)

Solubility in H_2O .

100 g. H_2O dissolve at:

8.75° 25° 45°
 235.5 296.8 410.2 g. anhydrous salt,

60° 65.06°
 681.2 817.4 g. anhydrous salt.

(Wolff, Z. anorg. 1905, **45**. 98)

Ammonium ceric nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Ce}(\text{NO}_3)_4$.

Very sol. in H_2O without decomp. Sol. in HNO_3 . (Meyer, B. 1900, **33**. 2137.)

Sol. in alcohol. (Meyer, Z. anorg. 1901, **27**. 369.)

Solubility in H_2O .

100 g. H_2O dissolve at t°:

25° 35.2° 45.3°
 140.9 161.7 174.9 g. anhydrous salt,

64.5° 85.60° 122°
 201.6 226.8 735.4 g. anhydrous salt.

(Wolff, Z. anorg. 1905, **45**. 94.)

$+1\frac{1}{2}\text{H}_2\text{O}$. Very deliquescent. (Holzmann, J. pr. **84**. 78.)

Ammonium cobalt nitrate.

Permanent. Sol. in H_2O . (Thenard.)

Ammonium copper nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Cu}(\text{NO}_3)_2$.

Very sol. in H_2O .

Ammonium didymium nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Di}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$.

Somewhat deliquescent.

Ammonium gadolinium nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Gd}(\text{NO}_3)_3$.

Deliquesces in the air. (Benedicks, Z. anorg. 1900, **22**. 407.)

Ammonium gold (auric) nitrate (Ammonium auronitrate), $\text{NH}_4\text{Au}(\text{NO}_3)_4$.

Extremely deliquescent.

$\text{H}(\text{NH}_4)_2\text{Au}(\text{NO}_3)_3$. (Schottländer, A. **217**. 312.)

Ammonium lanthanum nitrate, $2\text{NH}_4\text{NO}_3$, $\text{La}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$.

Not deliquescent. Sol. in H_2O . (Marignac.)

Ammonium magnesium nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Mg}(\text{NO}_3)_2$.

Slowly deliquescent. Sol. in 10 pts. H_2O at 12.5°, and much less hot H_2O . (Foureroy.)

Ammonium mercurous nitrate, $4\text{NH}_4\text{NO}_3$, $\text{Hg}_2(\text{NO}_3)_2 + 5\text{H}_2\text{O}$.

Sol. in H_2O . (Pagenstecher, Repert. **14**. 188.)

Ammonium nickel nitrate.

Sol. in 3 pts. cold H_2O . (Thénard, Scher. J. **10**. 428.)

Ammonium praseodymium nitrate, $2\text{NH}_4\text{NO}_3$, $\text{Pr}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$.

Sol. in H_2O . (von Scheele, Z. anorg. 1898, **18**. 356.)

Ammonium silver nitrate, NH_4NO_3 , AgNO_3 .

Very sol. in H_2O . (Russell and Maskelyne, Roy. Soc. Proc. **26**. 357.)

Sol. in H_2O without decomp. (Schreinemakers and de Baat, Chem. Weekbl. 1910, **7**. 6.)

See also solubility of $\text{NH}_4\text{NO}_3 + \text{AgNO}_3$ under NH_4NO_3 .

Ammonium thorium nitrate, $(\text{NH}_4)_2\text{Th}(\text{NO}_3)_6$.

Sol. in strong HNO_3 . (Meyer, Z. anorg. 1901, **27**. 383.)

$\text{NH}_4\text{Th}(\text{NO}_3)_5 + 5\text{H}_2\text{O}$. Sol. in HNO_3 of sp. gr. 1.25. (Meyer, Z. anorg. 1901, **27**. 382.)

Ammonium uranyl nitrate, NH_4NO_3 , $\text{UO}_2(\text{NO}_3)_2$.

Decomp. by H_2O . Sol. in conc. HNO_3 . (Meyer, B. 1903, **36**. 4057.)

Solubility in H_2O at t°.

t°	In 100 pts. by wt. of the solution			Solid phase
	Pts. by wt. UO_2	Pts. by wt. NH_4	Pts. by wt. total salt	
0 5	29 71	2 92		Double salt $+ \text{UO}_2(\text{NO}_3)_2$
13 5	32 35	3 42		"
24 9 a	36 40	3 54	68 72	"
b	36 53	3 54	68 97	"
35 0	42 07	3 44		"
59 0	44 37	2 90		"
80.7 a	44 90	2 98	78 76	Double salt
b	45 01	2 98	78 79	"

Ammonium uranyl nitrate is decomp. by H_2O at temp. below 60°: above 60° it is sol. in H_2O without decomp. (Rimbach, B. 1904, **37**. 475.)

Ammonium nitrate ammonia, $2\text{NH}_4\text{NO}_3$, 3NH_3 .

Known only as a solution of NH_3 in $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Troost, C. R. **94**. 789.)
 NH_4NO_3 , 3NH_3 . As above.

Ammonium nitrate mercuric chloride,

Insol. in H_2O . Ether dissolves out HgCl_2 (Kosmann, A. ch. (3) 27. 240.)

$2\text{NH}_4\text{NO}_3, \text{HgCl}_2$. Sol. in H_2O . (Hofmann and Marburg, A. 1899, 305. 199.)

Ammonium nitrate sulphate, $2(\text{NH}_4)_2\text{O}$,

Very hygroscopic and sol. in H_2O . (Friedheim, Z. anorg. 1894, 6. 297.)

$2\text{NH}_4\text{NO}_3, (\text{NH}_4)_2\text{SO}_4$. (de Waal, Dissert. 1910.)

$3\text{NH}_4\text{NO}_3, (\text{NH}_4)_2\text{SO}_4$. (de Waal.)

See also solubility of $\text{NH}_4\text{NO}_3 + (\text{NH}_4)_2\text{SO}_4$ under NH_4NO_3 .

Ammonium nitrate melatungstate, NH_4NO_3 ,

Decomposes by recrystallising out of H_2O . (Marignac, A. ch. (3) 69. 61.)

Antimony nitrate, $\text{Sb}_4\text{O}_6, \text{N}_2\text{O}_5$.

Decomp. by cold H_2O (Buchholz)

Aqueous solution sat. at 10° contains 30.4% salt. (Eller.)

Sol. in strong, less sol. in dil. $\text{HNO}_3 + \text{Aq}$.

(Peligot, A. ch. (3) 20. 288.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Barium nitrate, $\text{Ba}(\text{NO}_3)_2$.

Sol. in H_2O with absorption of heat.

100 pts. H_2O at 0° dissolve 5.0 parts

$\text{Ba}(\text{NO}_3)_2$. (Gay-Lussac, A. ch. 11. 313.)

100 pts. H_2O at 0° dissolve 5.2 parts

$\text{Ba}(\text{NO}_3)_2$. (Mulder.)

$\text{Ba}(\text{NO}_3)_2 + \text{Aq}$ sat. at 20° contains 8.57 pts.

$\text{Ba}(\text{NO}_3)_2$ to 100 pts. H_2O , and has 1.0679 sp. gr. (Karsten); sat. at 20° has 1.064 sp. gr.,

and contains 7.94 pts. $\text{Ba}(\text{NO}_3)_2$ to 100 pts. H_2O . (Michel and Krafft.)

100 pts. H_2O dissolve pts. $\text{Ba}(\text{NO}_3)_2$ at t° .

t°	Pts. $\text{Ba}(\text{NO}_3)_2$	t°	Pts. $\text{Ba}(\text{NO}_3)_2$
0	5.00	52.11	17.97
14.95	8.18	73.75	25.01

(Étard, A. ch. 1894, (7) 2. 528.)

100 g. H_2O dissolve 8.54 g. $\text{Ba}(\text{NO}_3)_2$ at 17° . (Gmelin-Kraut, Handbuch der anorg. Chemie.)

100 g. H_2O dissolve 7.87 g. $\text{Ba}(\text{NO}_3)_2$ at 15° , 8.32 g at 17° . (Euler, Z. phys. Ch. 1904, 49. 315.)

1000 g. H_2O dissolve 0.72 gram-equivalents $\text{Ba}(\text{NO}_3)_2$ at 21.5° (Euler, Z. phys. Ch. 1904, 49. 312.)

10.30 g. anhydrous $\text{Ba}(\text{NO}_3)_2$ are sol. in 100 g. H_2O at 25° . (Parsons and Colson, J. Am. Chem. Soc. 1910, 32. 1385.)

4.74 g. $\text{Ba}(\text{NO}_3)_2$ are contained in 100 g. $\text{Ba}(\text{NO}_3)_2$ sat. at 0° . (Coppadoro, Gazz. ch. it. 1911, 42, I. 233.)

Solubility of $\text{Ba}(\text{NO}_3)_2$ in $\text{H}_2\text{O} = 0.427$ mol l. at 30° . (Masson, Chem. Soc. 1911, 99. 1136.)

Solubility of $\text{Ba}(\text{NO}_3)_2$ in H_2O at $30^\circ = 10.33\%$. (Coppadoro, Gazz. ch. it. 1913, 43. I. 240.)

Solubility in H_2O .

100 g. of the sat. solution contain at:

9.1°	21.1°	35°
6.25	8.46	11.39 g. $\text{Ba}(\text{NO}_3)_2$.

(Findlay, Chem. Soc. 1914, 105. 780.)

Sp. gr. of $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$ at 19.5° .

% $\text{Ba}(\text{NO}_3)_2$	Sp. gr.	% $\text{Ba}(\text{NO}_3)_2$	Sp. gr.

1.1645	5 012	0.0147

(Masson, Chem. Soc. 1911, 99. 1136.)

Less sol in dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ than in dil. $\text{HCl} + \text{Aq}$.

Solubility in $\text{NH}_4\text{Cl} + \text{Aq}$ is the same as in H_2O .

Less sol. in $\text{NH}_4\text{OH} + \text{Aq}$, $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$, or $\text{NH}_4\text{NO}_3 + \text{Aq}$ than in H_2O . (Pearson, Zeit. Ch. (2) 5. 662.)

$\text{Ba}(\text{NO}_3)_2$ is sol. in about:

13.33 pts. H_2O at ord. temp., and 4.67 pts. at 100° .

14.67 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (conc.) at ord. temp., and 5.67 pts. at 100° .

16.50 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 vol. conc. + 3 vols. H_2O) at ord. temp.

28.00 pts. $\text{HCl} + \text{Aq}$ (1 vol. conc. $\text{HCl} + 4$ vols. H_2O) at ord. temp.

29.00 pts. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (1 vol. commercial $\text{HC}_2\text{H}_3\text{O}_2 + 1$ vol. H_2O) at ord. temp.

13.67 pts. $\text{NH}_4\text{Cl} + \text{Aq}$ (1 pt. $\text{NH}_4\text{Cl} + 10$ pts. H_2O) at ord. temp., and 4.67 pts. at 100° .

24.00 pts. $\text{NH}_4\text{NO}_3 + \text{Aq}$ (1 pt. $\text{NH}_4\text{NO}_3 + 10$ pts. H_2O) at ord. temp.

17.33 pts. $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ (dil. NH_4OH neutralised by dil. $\text{HC}_2\text{H}_3\text{O}_2$) at ord. temp., and 4.33 pts. at 100° .

14.67 pts. $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (dil. $\text{HC}_2\text{H}_3\text{O}_2$ neutralised by Na_2CO_3 and dil. with 4 vols. H_2O) at ord. temp., and 5.33 pts. at 100° .

17.33 pts. $\text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ (see Stolba, Z. anal. 2. 390) at ord. temp., and 6.00 pts. at 100° .

18.67 pts. grape sugar (1 pt. grape sugar + 10 pts. H_2O) at ord. temp. (Pearson, Zeit. Ch. 1869. 662.)

Sol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$ without pptn. at first, but finally NH_4Cl is pptd. until a certain state of equilibrium is reached. (Karsten.)

Solubility in BaO_2H_2 , $8\text{H}_2\text{O} + \text{Aq}$ at 25° .

(Rothmund and Wilsmore, Z. phys. Ch. 1902, 40. 620.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Barium mercurous nitrate, 2BaO , $2\text{Hg}_2\text{O}$, $3\text{N}_2\text{O}_5$

Decomp. by H_2O . Sol. in hot dil. HNO_3 + Aq and hot $\text{Hg}_2(\text{NO}_3)_2$ + Aq, from which it crystallises on cooling (Stadeler, A. 87. 129)

Barium potassium nitrate, $\text{Ba}(\text{NO}_3)_2$, 2KNO_3 .

Ppt. (Wallbridge, Am. Ch. J. 1903, 30. 154.)

Solubility determinations show that the only double salt formed by barium and potassium nitrates at 25° is $\text{Ba}(\text{NO}_3)_2 \cdot 2\text{KNO}_3$.

See $\text{Ba}(\text{NO}_3)_2 + \text{KNO}_3$ under $\text{Ba}(\text{NO}_3)_2$. (Foote, Am. Ch. J. 1904, 32. 252.)

Barium nitrate metatungstate, $2\text{Ba}(\text{NO}_3)_2$, $\text{BaW}_4\text{O}_{13} + 6\text{H}_2\text{O}$.

Efflorescent. Sol. in warm H_2O . (Péchar, A. ch. (6) 22. 198.)

Bismuth nitrate, basic, Bi_2O_3 , $\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Sol. in a large amount of H_2O . Sol. in HNO_3 + Aq. (Heintz.)

Sol. in 135 pts H_2O at $90-93^\circ$. (Ruge, J. B. 1862. 163)

+ $\frac{1}{2}\text{H}_2\text{O}$. Sol. in much H_2O . (Yvon, C. R. 84. 1161.)

+ H_2O . (Ruge.)

$2\text{Bi}_2\text{O}_3$, N_2O_5 . Not acted upon by H_2O . (Ditte, C. R. 84. 1317)

+ H_2O . (Yvon.)

Bi_2O_3 , $2\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. (Ruge.)

$11\text{Bi}_2\text{O}_3$, $5\text{N}_2\text{O}_5 + 16\text{H}_2\text{O}$. Not decomp. by H_2O (Yvon)

$5\text{Bi}_2\text{O}_3$, $4\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$. Ppt. Not attacked by H_2O . (Schulten, Bull. Soc. 1903, (3) 29. 722)

$5\text{Bi}_2\text{O}_3$, $5\text{N}_2\text{O}_5 + 9\text{H}_2\text{O}$. Sol. in H_2O with decomp. (Schulten.)

$6\text{Bi}_2\text{O}_3$, $5\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$, and + $9\text{H}_2\text{O}$. (Rutten, Z. anorg. 1902, 30. 368.)

At 25° the salt $\text{Bi}_{12}\text{O}_{13}(\text{NO}_3)_{10}$, $9\text{H}_2\text{O}$ is in equilibrium with HNO_3 + Aq from 0.03-0.32-N; the salt $\text{BiO}(\text{NO}_3)$, H_2O is in equilibrium with HNO_3 + Aq from 0.425-0.72-N.

At 50° the salt $\text{Bi}_4\text{O}_5(\text{NO}_3)_2$, H_2O is in equilibrium with HNO_3 + Aq from 0.057-0.285-N; the salt $\text{Bi}_{12}\text{O}_{13}(\text{NO}_3)_{10}$, $9\text{H}_2\text{O}$ is in equilibrium with HNO_3 + Aq from 0.285-0.446-N

At 75° the salt $\text{Bi}_4\text{O}_5(\text{NO}_3)_2$, H_2O is in equilibrium with HNO_3 + Aq from 0.109-0.314-N. (Allan, Am. Ch. J. 1901, 25. 314.)

Bismuth nitrate, $\text{Bi}(\text{NO}_3)_3$.

Permanent. Decomp. by little H_2O with separation of a basic salt. This decomposition is prevented by slight excess of HNO_3 , and then the salt is completely sol. in a large amount of H_2O . (Rose.)

Sol. in dil. HNO_3 + Aq. Not decomp. by H_2O in presence of $\text{HC}_2\text{H}_3\text{O}_2$ or $\frac{1}{10}$ pt. NH_4NO_3 . (Löwe, J. pr. 74. 341.)

Completely sol. in HNO_3 + Aq containing 83 g. HNO_3 per liter. (Ditte.)

Solubility of $\text{Bi}(\text{NO}_3)_3$ in $2.3\text{N}-\text{HNO}_3$ + Aq. = 2.04 g. at Bi per l; in $0.922\text{N}-\text{HNO}_3$ + Aq. = 2.23 g. at Bi per l. (Dubrisay, C. R. 1911, 153. 1077.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol in acetone (Krug and M'Elroy.)

Solubility of $\text{Bi}(\text{NO}_3)_3$ in 6.67% acetone + $2.3\text{N}-\text{HNO}_3$ + Aq = 1.89 g. at Bi per l.; in 6.67% acetone + $0.922\text{N}-\text{HNO}_3$ + Aq. = 2.17 g. at Bi per l.; in 13.33% acetone + $0.922\text{N}-\text{HNO}_3$ + Aq. = 2.08 g. at Bi per l. (Dubrisay, C. R. 1911, 153. 1077.)

When $\text{Bi}(\text{NO}_3)_3$ is mixed with mannite (dulcitate, sorbite) in proportion to the mol. wts and H_2O is added, a clear solution is obtained which is not pptd by addition of much H_2O . These solutions are more stable than the greater the proportion of mannitol. (Vanino and Hunser, Z. anorg. 1901, 28. 211) + $\frac{1}{2}\text{H}_2\text{O}$. (Ditte.)

+ $5\text{H}_2\text{O}$. If treated with increasing amts. of H_2O , the amt. of Bi which dissolves decreases, and when 1 pt is treated with 50,000 pts H_2O , no Bi goes into solution. (Antony and Gagli, Gazz. ch. it 1893, 28. 245.)

48.66 pts. are sol. in 100 pts. acetone at 0° .
41.70 " " " " 100 " " " 19°.

(Laszczynski, B. 1894, 27. 2287.)

+ $5\frac{1}{2}\text{H}_2\text{O}$. (Yvon, C. R. 84. 1161.)

+ $10\text{H}_2\text{O}$. Melts in crystal H_2O with decomp. at 74° . (Ordway.)

Bismuth caesium nitrate, $\text{Bi}(\text{NO}_3)_3$, 2CsNO_3 .

Ppt. (Wells, Am. Ch. J. 1901, 26. 277.)

Bismuth cobalt nitrate, $2\text{Bi}(\text{NO}_3)_3$, $3\text{Co}(\text{NO}_3)_2$ + $24\text{H}_2\text{O}$.

100 cc. sat. solution in HNO_3 + Aq (sp. gr. 1.325) contain 54.67 g. hydrated salt. (Jantsch Z. anorg. 1912, 76. 321.)

Bismuth magnesium nitrate, $2\text{Bi}(\text{NO}_3)_3$, $3\text{Mg}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

Deliquescent. Effloresces in dry air. Decomp. by H_2O . (Urbain and Lacombe, C. R. 1903, 137. 569.)

100 cc. sat. solution in HNO_3 + Aq (sp. gr. 1.325) contain 41.69 g. hydrated salt. (Jantsch Z. anorg. 1912, 76. 321.)

Bismuth manganous nitrate, $2\text{Bi}(\text{NO}_3)_3$, $3\text{Mn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

Deliquescent. Effloresces in dry air. Decomp. by H_2O . (Urbain and Lacombe, C. R. 1903, 137. 569.)

100 cc. sat. solution in HNO_3 + Aq (sp. gr. 1.325) contain 65.77 g. hydrated salt. (Jantsch Z. anorg. 1912, 76. 321.)

Bismuth nickel nitrate, $2\text{Bi}(\text{NO}_3)_3, 3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

Deliquescent. Effloresces in dry air. Decomp. by H_2O . (Urban and Lacombe, C. R. 1903, 37. 569.)

100 cc sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contain 46.20 g. hydrated salt at 16° . (Jantsch.)

Bismuth zinc nitrate, $2\text{Bi}(\text{NO}_3)_3, 3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

Deliquescent. Decomp. by H_2O . (Urban and Lacombe, C. R. 1903, 137. 569.)

100 cc. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contain 57.51 g. hydrated salt at 16° . (Jantsch.)

Cadmium nitrate, basic, $\text{Cd}(\text{OH})\text{NO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O , or ordinary alcohol. (Klinger, B. 16. 997.)

$12\text{CdO}, \text{N}_2\text{O}_5 + 11\text{H}_2\text{O}$. Sl. sol. in H_2O , more sol. in H_2O than basic sulphate. (Habermann, 5. 432.)

$5\text{CdO}, 2\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$ Decomp. by cold H_2O . (Rousseau and Tite, C. R. 114. 1184.)

Cadmium nitrate, $\text{Cd}(\text{NO}_3)_2$.

Deliquescent, and very sol. in H_2O .

See +4, and $9\text{H}_2\text{O}$.

Sp. gr. of aqueous solution containing:

5 10 15 20 25% $\text{Cd}(\text{NO}_3)_2$,

$\text{Cd}(\text{NO}_3)_2 + \text{Aq}$ containing 7.89% $\text{Cd}(\text{NO}_3)_2$ has sp. gr. $20^\circ/20^\circ = 1.0673$.

$\text{Cd}(\text{NO}_3)_2 + \text{Aq}$ containing 12.14% $\text{Cd}(\text{NO}_3)_2$ has sp. gr. $20^\circ/20^\circ = 1.1070$.

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 282.)

Sat. $\text{Cd}(\text{NO}_3)_2 + \text{Aq}$ boils at 132° .

Almost entirely insol. in conc. $\text{HNO}_3 + \text{Aq}$. (Wurtz.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol in alcohol.

Sol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

$+4\text{H}_2\text{O}$. M.-pt. of $\text{Cd}(\text{NO}_3)_2 + 4\text{H}_2\text{O} = 59.5^\circ$. (Ordway; Tilden, Chem. Soc. 45. 409.)

Solubility in H_2O .

Solubility in H_2O at t° .

t°	% $\text{Cd}(\text{NO}_3)_2$ in the solution	Mols H_2O to 1 mol. $\text{Cd}(\text{NO}_3)_2$

40	61.42	8.24
59.5 mpt.	76.54	4.00

(Funk, B. 1899, 32. 105.)

Sat. solution of $\text{Cd}(\text{NO}_3)_2 + 4\text{H}_2\text{O}$ in H_2O at 0° contains 52.3% $\text{Cd}(\text{NO}_3)_2$; at 18° , 55.9% $\text{Cd}(\text{NO}_3)_2$. (Mylius, Z. anorg. 1912, 74. 411.)

Sol. in liquid NH_3 . (Johnson and Wilsmore, Elektroch. Z. 1908, 14. 227.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

$+9\text{H}_2\text{O}$. Solubility in H_2O .

Sat. solution contains at:

-13° -1° $+1^\circ$
37.37 47.33 52.73% $\text{Cd}(\text{NO}_3)_2$.

Cryohydrate is formed at -16° . (Funk, Z. anorg. 1899, **20**, 416.)

The composition of the hydrates formed by $\text{Cd}(\text{NO}_3)_2$ at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by $\text{Cd}(\text{NO}_3)_2$ and of the conductivity and sp. gr. of $\text{Cd}(\text{NO}_3)_2 + \text{Aq.}$ (Jones, Am. Ch. J. 1905, **34**, 308.)

Cadmium uranyl nitrate, $\text{Cd}(\text{NO}_3)_2 \cdot (\text{UO}_2)(\text{NO}_3)_2 + 30\text{H}_2\text{O}$.

Sol. in H_2O and acids. Insol. in alcohol and alkalis + Aq. (Lancien, C. C. 1912, **1**, 208.)

Cadmium nitrate ammonia, $\text{Cd}(\text{NO}_3)_2 \cdot 6\text{NH}_3 + \text{H}_2\text{O}$.

(André, C. R. 104, 987.)

Cadmium nitrate cupric oxide, $\text{Cd}(\text{NO}_3)_2 \cdot \text{CuO} + 5\text{H}_2\text{O}$.

Ppt. (Mailhe, C. R. 1902, **134**, 235.)

Cadmium nitrate cupric oxide, $\text{Cd}(\text{NO}_3)_2 \cdot 3\text{CuO} + 5\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) **27**, 383.)

Cadmium nitrate hydrazine, $\text{Cd}(\text{NO}_3)_2 \cdot 3\text{N}_2\text{H}_4$.

Decomp. by hot H_2O . Sol. in warm NH_4OH . (Franzen, Z. anorg. 1908, **60**, 282.)

Cæsium nitrate, CsNO_3 .

100 pts. H_2O dissolve 10.58 pts. CsNO_3 at 3.2° . Sl. sol. in absolute alcohol. (Bunsen.)

Solubility of CsNO_3 in H_2O at t° .

t°	G CsNO_3 per 100 g		t°	G CsNO_3 per 100 g	
	Solu- tion	Water		Solu- tion	Water

(Berkeley, Trans. Roy. Soc. 1904, **203**, A, 213.)

100 g. H_2O dissolve 26.945 g. CsNO_3 at 25° . (Haigh, J. Am. Chem. Soc. 1912, **34**, 1148.)

Sp. gr. $20^{\circ}/4^{\circ}$ of a normal solution of $\text{CsNO}_3 = 1.140905$; of a 0.5 normal solution = 1.07001. (Haigh.)

Sol. in acetone. (Eidmann, C. C. 1899, **II**, 1014; Naumann, B. 1904, **37**, 4328.)

Solubility in glycol = 8% at ord. temp. (de Coninck, Belg. Acad. Bull. 1905, 359.)

Cæsium hydrogen nitrate.

$\text{CsNO}_3 \cdot \text{HNO}_3$. Sol. in H_2O (Wells, Am. Ch. J. 1901, **26**, 273.)

$\text{CsNO}_3 \cdot 2\text{HNO}_3$. (W.)

Cæsium cerium nitrate, $\text{Cs}_2\text{Ce}(\text{NO}_3)_6$.

Sol. in H_2O ; very sl. sol. in HNO_3 . (Meyer, Z. anorg. 1901, **27**, 371.)

Sol. in HNO_3 . (Meyer, B. 1900, **33**, 2137.)

Cæsium ferric nitrate, $\text{CsNO}_3 \cdot \text{Fe}(\text{NO}_3)_3 + 7\text{H}_2\text{O}$.

Deliquescent. (Wells, Am. Ch. J. 1901, **26**, 276.)

Cæsium silver nitrate, $\text{CsNO}_3 \cdot \text{AgNO}_3$.

Sol. in H_2O . (Russell and Maskelyne, Roy. Soc. Proc. **26**, 357.)

Cæsium thorium nitrate, $\text{Cs}_2\text{Th}(\text{NO}_3)_8$.

Decomp. by H_2O ; sl. sol. in HNO_3 . (Meyer, Z. anorg. 1901, **27**, 384.)

Cæsium uranyl nitrate, $\text{Cs}(\text{UO}_2)(\text{NO}_3)_3$.

Decomp. by H_2O . Sol. in conc. HNO_3 . (Meyer, B. 1903, **36**, 4057.)

Decomp. by H_2O at low temp., so that the solid phase in contact with the solution consists of the double salt and CsNO_3 . At 16.1° 100 pts. by wt. of the solution in H_2O contain 31.39 pts. UO_2 and 6.59 pts. Cs. (Rimbach, B. 1904, **37**, 477.)

Calcium nitrate, basic, $\text{Ca}(\text{NO}_3)_2 \cdot \text{CaO}_2\text{H}_2 + 2\frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O . (Werner, A. ch. (6) **27**, 570.)

+ H_2O . As above. (Rousseau and Tite, C. R. **114**, 1184.)

Calcium nitrate, $\text{Ca}(\text{NO}_3)_2$.

Deliquescent. Very sol. in H_2O with evolution of much heat.

100 pts. H_2O at 0° dissolve 84.2 pts.

$\text{Ca}(\text{NO}_3)_2$. (Poggiale.)

100 pts. H_2O at 0° dissolve 93.1 pts.

$\text{Ca}(\text{NO}_3)_2$. (Mulder.)

Sol. in 0.25 pt. cold H_2O with reduction of temp.

Sol. in all proportions in boiling H_2O . (Berzelius.)

Sol. in 2 pts. cold, and 0.6687 pt. boiling H_2O (Fourcroy.)

Sat. $\text{Ca}(\text{NO}_3)_2 + \text{Aq.}$ at 12.5° contains 33.8%. (Has-

senfratz, A. ch. **25**, 29.)

Solubility in H_2O .

100 g. of the solution contain at:

55° 80° 90° 100°
78.16 78.20 78.37 78.43 g. $\text{Ca}(\text{NO}_3)_2$,

125° 147.5° 151° (bpt. of sat. solution at 760 mm.)

78.57 78.80 79.00 g. $\text{Ca}(\text{NO}_3)_2$.

The anhydrous salt is the stable solid phase above 51.3° . (Bassett and Taylor, Chem. Soc. 1912, **101**, 580.)

100 g. sat. $\text{Ca}(\text{NO}_3)_2 + \text{Aq}$ contain 77.3 g $\text{Ca}(\text{NO}_3)_2$ at 25° (Taylor and Henderson, J. Am. Chem. Soc. 1915, **37**, 1692)

See also 2, 3, and 4H₂O.

0 01 (about)	90 90					
0.00	96.86					

(Kremann and Rothmund, Z. anorg. 1914, 86. 373.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol. in 0.8 pt. alcohol (Macquer); 1 pt. boiling alcohol. (Bergmann.)

Dry $\text{Ca}(\text{NO}_3)_2$ is sol. in 7 pts. alcohol at 15° and 1 pt. boiling alcohol. (Bergmann.)

These results show that the hydrates of $\text{Ca}(\text{NO}_3)_2$ which are stable at 25° in contact with $\text{HNO}_3 + \text{Aq}$ are $\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$, $+3\text{H}_2\text{O}$ and $+2\text{H}_2\text{O}$.

(Bassett and Taylor, Chem. Soc. 1912, 101. 582.)

Sol. in glacial $\text{HC}_2\text{H}_3\text{O}_2$. (Persoz.)

Sol. in sat. $\text{KNO}_3 + \text{Aq}$ with elevation of temp. and pptn. of a portion of KNO_3 . (Fourcroy and Vauquelin, A. ch. 11. 135.)

Solubility of $\text{Ca}(\text{NO}_3)_2 + \text{NaNO}_3$ at t° .

t°	% $\text{Ca}(\text{NO}_3)_2$	% NaNO_3	Solid phase
9	47.51	9.51	$\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$

(D'Ans and Siegler, Z. phys. Ch. 1913, 82. 42.)

Calcium nitrate hydrazine, Ca(NO₃)₂, 2N₂H₄ + H₂O.

Ppt. (Franzen, Z. anorg. 1908, 60. 288.)

Calcium nitrate tungstosilicate, Ca₂W₁₂SiO₄₀, Ca(NO₃)₂.+ 13H₂O and + 15H₂O. Decomp. by H₂O. (Wyrouboff, Chem. Soc. 1897, 72. (2) 176.)**Cerous nitrate**, Ce(NO₃)₃ + 6H₂O.

Not very deliquescent. (Jolin.)

Very sol. in H₂O; sol. in 2 pts. alcohol. (Vauquelin.)

Sol. in acetone. (Eidmann, C. C. 1899. II. 1014; Naumann, B. 1904, 37. 4328.)

Ceric nitrate, Ce(NO₃)₄.Deliquescent. Decomp. by hot H₂O. (Berzelius.)

Sol. in alcohol. (Dumas.)

Basic compounds containing 12 mols. or less CeO₂ to 1 mol. N₂O₅ may be obtained, which are sol. in H₂O. (Ordway.)**Cerous cobaltous nitrate**, 2Ce(NO₃)₃, 3Co(NO₃)₂ + 24H₂O.

Deliquescent. Easily forms supersaturated solutions. (Lange, J. pr. 82. 129.)

1 l. sat. solution in HNO₃ + Aq (sp. gr. 1.325) contains 103.3 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76. 321.)**Ceric cobaltous nitrate**, CeCo(NO₃)₆ + 8H₂O.Decomp. by H₂O when heated; sol. in cold H₂O; sl. sol. in HNO₃. (Meyer, Z. anorg. 1901, 27. 376.)**Cerous magnesium nitrate**, 2Ce(NO₃)₃, 3Mg(NO₃)₂ + 24H₂O.Slightly deliquescent. Easily sol. in H₂O or alcohol, and easily forms supersaturated solutions. (Holzmann, J. pr. 75. 330.)1 l. sat. solution in HNO₃ + Aq (sp. gr. 1.325) contains 63.8 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76. 321.)**Ceric magnesium nitrate**, CeMg(NO₃)₆ + 8H₂O.Decomp. by H₂O; sol. in HNO₃ + Aq without decomp. (Meyer, Z. anorg. 1901, 27. 373.)**Cerous manganous nitrate**, 2Ce(NO₃)₃, 3Mn(NO₃)₂ + 24H₂O.Sol. in H₂O. (Lange, J. pr. 82. 129.)1 l. sat. solution in HNO₃ + Aq (sp. gr. 1.325) contains 193.1 g. hydrous salt at 16°. (Jantsch.)**Ceric manganous nitrate**, CeMn(NO₃)₆ + 8H₂O.Decomp. by H₂O and dil. HNO₃; sol. in conc. HNO₃ without decomp. (Meyer, Z. anorg. 1901, 27. 377.)**Cerous nickel nitrate**, 2Ce(NO₃)₃, 3Ni(NO₃)₂ + 24H₂O.Easily sol. in H₂O. (Holzmann, J. pr. 75. 321.)1 l. sat. solution in HNO₃ + Aq (sp. gr. 1.325) contains 80.3 g. hydrous salt at 16°. (Jantsch.)**Ceric nickel nitrate**, CeNi(NO₃)₆ + 8H₂O.Decomp. by H₂O when heated; sol. in H₂O in the cold; sl. sol. in HNO₃. (Meyer, Z. anorg. 1901, 27. 375.)**Cerous potassium nitrate**, Ce(NO₃)₃, 2KNO₃ + 2H₂O.Sol. in H₂O. (Lange, J. pr. 82. 136.)**Ceric potassium nitrate**, CeK₂(NO₃)₆.Sol. in H₂O with decomp. (Meyer, Z. anorg. 1901, 27. 370.)+ 1½H₂O. Efflorescent. (Holzmann, J. pr. 75. 324.)**Ceric rubidium nitrate**, CeRu₂(NO₃)₆.Very sol. in H₂O; sl. sol. in HNO₃. (Meyer.)**Ceric sodium nitrate**.

Deliquescent. Decomp. by recrystallization. (Holzmann.)

Cerous thalious nitrate, [Ce(NO₃)₃]Tl₂ + 4H₂O.Very hygroscopic. Decomp. by H₂O. (Jantsch, Z. anorg. 1911, 69. 229.)**Cerous zinc nitrate**, 2Ce(NO₃)₃, 3Zn(NO₃)₂ + 24H₂O.Sol. in H₂O. Easily forms supersat. solutions. (Lange, J. pr. 82. 129.)1 l. sat. solution in HNO₃ + Aq (sp. gr. 1.325) contains 124.1 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76. 321.)**Ceric zinc nitrate**, ZnCe(NO₃)₆ + 8H₂O.Decomp. by H₂O; sol. in HNO₃ + Aq. (Meyer, Z. anorg. 1901, 27. 374.)

Ceroceric zinc nitrate (?), $\text{Ce}_2\text{O}_3 \cdot 2\text{ZnO}$, $6\text{N}_2\text{O}_5 + 18\text{H}_2\text{O}$ (?).

Easily sol. in H_2O . (Holzmann, J. pr. **75**, 321.)

Chromic nitrate, basic, $\text{Cr}_2\text{O}(\text{NO}_3)_4$.

Sol. in H_2O . (Lowel.)

+ $12\text{H}_2\text{O}$. Sol. in H_2O . (Ordway.)

Chromic nitrate, $\text{Cr}(\text{NO}_3)_3 + 9\text{H}_2\text{O}$.

Very sol. in H_2O and alcohol. (Lowel.)

Melts in its crystal H_2O at 36.5° . Sat. $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$ boils at 125.6° . (Ordway.)

Sp. gr. of $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$.

M = concentration of solution in gram. mols.

W = wt. of 25 cc. of solution.

W 30.0668 30.8464 31.6327 33.3379

(Jones and Getman, Z. phys. Ch. 1904, **49**, 426.)

Sol. in acetone. (Naumann, B. 1904, **37**, 4328; Eidmann, C. C. 1899, II. 1014.)

Chromic nitrate chloride, $\text{CrCl}_2(\text{NO}_3)$.

Sol. in H_2O and alcohol. (Schiff, A. 124, 177.)

$\text{Cr}(\text{NO}_3)_2\text{Cl}$. (Schiff.)

Chromic nitrate sulphate, $\text{Cr}_2(\text{SO}_4)(\text{NO}_3)_4$.

Hygroscopic. Completely sol. in H_2O .

$\text{Cr}_2(\text{SO}_4)_2(\text{NO}_3)_2$. Sol. in H_2O . (Schiff, A. 124, 174.)

Cobaltous nitrate, basic, $6\text{CoO} \cdot \text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$.

Ppt. Gradually sol. in H_2O with deposition of CoO . (Winkelblech, A. 13, 155.)

Sol. in cold HCl and $\text{HNO}_3 + \text{Aq}$. Decomp. by hot $\text{KOH} + \text{Aq}$.

$4\text{CoO} \cdot \text{N}_2\text{O}_5 + 6\text{H}_2\text{O}$. Ppt. (Habermann, M. 5, 432.)

Cobaltous nitrate, $\text{Co}(\text{NO}_3)_2$.

Deliquescent in moist air. Very sol. in H_2O .

See +3, 6, and $9\text{H}_2\text{O}$.

(Funk, Z. anorg. 1899, **20**, 408.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 827.)

Easily sol. in alcohol. Sol. in 1 pt. strong alcohol at 12.5° . (Wenzel.)

Easily sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6, 184.)

Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

+ $9\text{H}_2\text{O}$. Solubility in H_2O .

Sat. solution contains at:

-26° -23.5° -20.5°
39.45 40.40 42.77% $\text{Co}(\text{NO}_3)_2$.

Cryohydrate is formed at -29° . (Funk, Z. anorg. 1899, **20**, 409.)

Cobaltous didymium nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{D}(\text{NO}_3)_3 + 48\text{H}_2\text{O}$.

Very deliquescent. (Frerichs and Smith, A. 191. 331.)

Cobaltous gadolinium nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{Gd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in HNO_3 (sp. gr. 1.325) contains 451.4 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 303.)

Cobaltous lanthanum nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{La}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 109.2 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 303.)

Cobaltous neodymium nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{Nd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 151.6 hydrous salt at 16° . (Jantsch.)

Cobaltous praseodymium nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{Pr}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 12.99 g. hydrous salt at 16° . (Jantsch.)

Cobaltous samarium nitrate, $3\text{Co}(\text{NO}_3)_2$, $2\text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 34.27 g. hydrous salt at 16° . (Jantsch.)

Cobaltous thorium nitrate, $\text{CoTh}(\text{NO}_3)_6 + 8\text{H}_2\text{O}$.

Hydrosopic; sol. in $\text{HNO}_3 + \text{Aq}$. (Meyer, Z. anorg. 1901, 27. 387.)

Cobaltous nitrate ammonia, $\text{Co}(\text{NO}_3)_2$, $6\text{NH}_3 + 2\text{H}_2\text{O}$.

Decomp. by H_2O with separation of basic nitrate. (Fremy.)

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Hess.)

Cobaltous nitrate cupric oxide, $\text{Co}(\text{NO}_3)_2$, $3\text{CuO} + 3\text{H}_2\text{O}$.

Ppt. (Mailhe, C. R. 1902, 134. 234.)

Cobaltous nitrate hydrazine, $\text{Co}(\text{NO}_3)_2$, $3\text{N}_2\text{H}_4$.

Decomp. by hot H_2O . (Franzen, Z. anorg. 1908, 60. 274.)

Cupric nitrate, basic, 2CuO , N_2O_5 .

(Ditte, A. ch. 1879, (5) 18. 339.)

4CuO , $\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$. Insol. in H_2O . Easily sol. in acids. (Graham, A. 29. 13.)

Insol. in H_2O ; easily sol. in acids. (Athanasesco, Bull. Soc. 1895, (3) 11. 1113.)

$+3\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O , and decomp. by heat. (Casselman, Z. anal. 4. 24.)

Cupric nitrate, $\text{Cu}(\text{NO}_3)_2$

Deliquescent. Very easily sol. in H_2O or alcohol; also in moderately conc. $\text{HNO}_3 + \text{Aq}$, but is precipitated from conc. aqueous solution by $\text{HNO}_3 + \text{Aq}$ of 1.522 sp. gr. (Mitscherlich, Pogg. 18. 159.)

Sat. $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$ contains at:

-10° -3° $+3^\circ$
38.8 41.6 44.5% $\text{Cu}(\text{NO}_3)_2$,

8° 20° 32°
48.5 54.1 61.2% $\text{Cu}(\text{NO}_3)_2$.

(Étard, A. ch. 1894, (7) 2. 528.)

See $+3$, 6 , and $9\text{H}_2\text{O}$.

64.17 65.79 67.51 77.59% $\text{Cu}(\text{NO}_3)_2$.

(Funk, *Z. anorg.* 1899, **20**, 413.)

100 pts. HNO_3 dissolve 2 pts. at 13°, considerably more on heating. (Ditte, *A. ch.* 1879, (5) **18**, 339.)

Sol. in 1 pt. strong alcohol at 12.5°. (Wenzel.)

Insol. in methyl acetate. (Naumann, *B.* 1909, **42**, 3790.)

+6 H_2O . Efflorescent. Melts in crystal H_2O at 38°. (Ordway.)

Solubility in H_2O .

Sat. solution contains at:

−21° −10° 0° +10°
39.52 42.08 45.00 48.79% $\text{Cu}(\text{NO}_3)_2$,

18° 20° 26.4° mpt.
53.86 55.58 63.39% $\text{Cu}(\text{NO}_3)_2$.

(Funk, *Z. anorg.* 1899, **20**, 413.)

Sat. solution of $\text{Cu}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$ in H_2O at 20° contains 5.04 g. mol. per l. Sp. gr. of sat. solution = 1.688. (Fedotieff, *Z. anorg.* 1911, **73**, 78.)

Sat. solution of $\text{Cu}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$ in H_2O contains 45.0 g. $\text{Cu}(\text{NO}_3)_2$ in 100 g solution at 0°; 53.9 g. at 18°. (Mylus, *Z. anorg.* 1912, **74**, 411.)

+9 H_2O .

Solubility in H_2O .

Sat. solution contains at:

−23° −21° −20°
36.08 37.38 40.92% $\text{Cu}(\text{NO}_3)_2$.

Cryohydrate is formed at −24°. (Funk, *Z. anorg.* 1899, **20**, 414.)

Cupric nitrate ammonia (Cuprammonium nitrate), $\text{Cu}(\text{NO}_3)_2 \cdot 4\text{NH}_3$.

Easily sol. in H_2O , from which it can be recrystallized. Sol. in alcohol. (Berzelius.)

Sol. in 1 pt. liquid NH_3 . (Horn, *Am. Ch. J.* 1908, **39**, 216.)

$\text{Cu}(\text{NO}_3)_2 \cdot 5\text{NH}_3$. (Horn, *Am. Ch. J.* 1907, **37**, 620.)

4 $\text{Cu}(\text{NO}_3)_2 \cdot 23\text{NH}_3$. (Horn.)

Cupric nitrate hydrazine, $\text{Cu}(\text{NO}_3)_2 \cdot \text{N}_2\text{H}_4$.

Decomp. by H_2O . (Hofmann and Marburg, *A.* 1899, **305**, 221.)

Cupric nitrate mercuric oxide, $\text{Cu}(\text{NO}_3)_2 \cdot \text{HgO} + 3\text{H}_2\text{O}$.

Sol. in HCl , HNO_3 and H_2SO_4 . (Finzi, *Gazz. ch. it.* 1913, **43**, (2) 709.)

Didymium nitrate, basic, $4\text{D}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 + 15\text{H}_2\text{O}$.

Insol. in H_2O . (Marignac.)

2 $\text{D}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5$. (Becquerel, *A. ch.* (6) **14**, 257.)

Didymium nitrate, $\text{Di}(\text{NO}_3)_3$.

Anhydrous. Very sol. in H_2O . As sol. in 96% alcohol as in H_2O , and the solution is not precipitated by much ether. Insol. in pure ether. (Marignac, *A. ch.* (3) **36**, 161.)

Moderately sol. in liquid NH_3 . (Franklin, *Am. Ch. J.* 1898, **20**, 827.)

Sol. in acetone. (Naumann, *B.* 1904, **37**, 4328; Eidmann, *C. C.* 1899, **II**, 1014.)

+6 H_2O . Very deliquescent. (Cleve, *Bull. Soc.* (2) **43**, 361.)

Didymium nickel nitrate, $2\text{Di}(\text{NO}_3)_3 \cdot 3\text{Ni}(\text{NO}_3)_2 + 36\text{H}_2\text{O}$.

Very deliquescent. (Frerichs and Smith, A. 191. 355.)

See Neodymium and praseodymium.

Didymium zinc nitrate, $2\text{Di}(\text{NO}_3)_3 \cdot 3\text{Zn}(\text{NO}_3)_2 + 69\text{H}_2\text{O}$.

Very deliquescent. (F. and S.)

See Neodymium and praseodymium.

Dysprosium nitrate, $\text{Dy}(\text{NO}_3)_3 + 5\text{H}_2\text{O}$.

Very sol. in H_2O ; less sol. in $\text{H}_2\text{O} + \text{HNO}_3$. Sol. in alcohol. (Urbain, C. R. 1908, 146. 129.)

Erbium nitrate, basic, $2\text{Er}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 + 9\text{H}_2\text{O}$.

Decomp. by H_2O . Sl. sol. in HNO_3 . (Bahr and Bunsen.)

$3\text{Er}_2\text{O}_3 \cdot 4\text{N}_2\text{O}_5 + 20\text{H}_2\text{O}$. (Cleve, Bull. Soc. (2) 21. 344.)

Erbium nitrate, $\text{Er}(\text{NO}_3)_3 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O , alcohol, and ether. (Hoglund.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Gadolinium nitrate, $\text{Gd}(\text{NO}_3)_3 + 6\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (Benedicks, Z. anorg. 1900, 22. 406.)

+ $5\text{H}_2\text{O}$. Sol. in HNO_3 . (B.)

Gadolinium magnesium nitrate, $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Mg}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 352.3 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 303.)

Gadolinium nickel nitrate, $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 400.8 g. hydrous salt at 16° . (Jantsch.)

Gadolinium zinc nitrate, $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 472.7 g. hydrous salt at 16° . (Jantsch.)

Gallium nitrate, $\text{Ga}(\text{NO}_3)_3$.

Very deliquescent, and sol. in H_2O . (Dupré.)

Glucinum nitrate, basic, $2\text{GhO} \cdot \text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$ (?).

Sol. in H_2O .

$3\text{GhO} \cdot \text{N}_2\text{O}_5$. Sol. in H_2O . (Ordway, Sill. Am. J. (2) 26. 205.)

Compounds more basic than this are insol. in H_2O . (Ordway.)

Glucinum nitrate, $\text{Gh}(\text{NO}_3)_2 + 3\text{H}_2\text{O}$.

Very deliquescent. (Joy, Sill. Am. J. (2) 36. 90.)

Easily sol. in H_2O and alcohol. (Vauquelin.) Melts in its crystal H_2O at 29.4° . (Ordway.)

Sat. $\text{Gh}(\text{NO}_3)_2 + \text{Aq}$ boils at 140.5° . (Ordway.)

Gold (auric) nitrate, basic, $\text{Au}_2\text{O}_3 \cdot \text{N}_2\text{O}_5 + \frac{2}{3}\text{H}_2\text{O}$, or **Auryl nitrate**, $(\text{AuO})\text{NO}_3 + \frac{1}{3}\text{H}_2\text{O}$.

(Schottlander, A. 217. 364.)

$2\text{Au}_2\text{O}_3 \cdot \text{N}_2\text{O}_5 + 2\text{H}_2\text{O} = \text{Au}_4\text{O}_5(\text{NO}_3)_2 + 2\text{H}_2\text{O}$. Slowly sol. in $\text{HNO}_3 + \text{Aq}$ at 100° . (Schottlander, A. 217. 356.)

Gold (auric) nitrate, $\text{Au}(\text{NO}_3)_3 + x\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in acetone. (Hanriot and Raoult, C. R. 1912, 155. 1086.)

Gold (auric) hydrogen nitrate, $\text{Au}(\text{NO}_3)_3 \cdot \text{HNO}_3 + 3\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$. (Schottlander, A. 217. 356.)

Gold (auric) potassium nitrate, $\text{KAu}(\text{NO}_3)_4$.

Easily sol. in H_2O

$\text{HK}_2\text{Au}(\text{NO}_3)_6$. Decomp. immediately by H_2O .

$2\text{KAu}(\text{NO}_3)_4 \cdot \text{K}_2\text{HAu}(\text{NO}_3)_6$. (Schottlander, J. B. 1884. 453.)

Gold (auric) rubidium nitrate, $\text{RbAu}(\text{NO}_3)_4$.

Easily sol. in H_2O .

$\text{HRb}_2\text{Au}(\text{NO}_3)_6$. As above. (Schottlander.)

Gold (auric) thallium nitrate, $\text{TlAu}(\text{NO}_3)_4$.

Easily sol. in H_2O .

$6\text{Au}_2\text{O}_3 \cdot 2\text{Tl}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 + 15\text{H}_2\text{O}$. Ppt. (Schottlander.)

Indium nitrate, $\text{In}(\text{NO}_3)_3 + 4\frac{1}{2}\text{H}_2\text{O}$.

Very deliquescent. Easily sol. in H_2O and absolute alcohol. (Winkler.)

+ $1\frac{1}{2}\text{H}_2\text{O}$.

Iron (ferrous) nitrate, $\text{Fe}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$.

100 pts. of crystals dissolve in 50 pts. H_2O at 0° , sp. gr. of solution = 1.44; 40.8 pts. H_2O at 15° , sp. gr. of solution = 1.48; 33.3 pts. H_2O at 25° , sp. gr. of solution = 1.50. (Ordway, Sill. Am. J. (2) 40. 325.)

Sat. solution contains at:

-9° 0° $+18^\circ$ 24° 60.5° Mpt.
 39.68 41.53 45.14 46.51 62.50% $\text{Fe}(\text{NO}_3)_2$.
 (Funk, Z. anorg. 1899, 20. 406.)

Sat. solution of $\text{Fe}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$ in H_2O contains 41.5% $\text{Fe}(\text{NO}_3)_2$ at 0° ; 45.1% at 18° . (Mylius, Z. anorg. 1912, 74. 411.)

+9H₂O. Solubility in H₂O.
Sat. solution contains at:
—27° —21.5° —19° —15.5°
35.66 36.10 36.50 37.17% Fe(NO₃)₂
Cryohydrate is formed at —28°. (Funk, Z. anorg. 1899, 20. 407.)
Fe(NO₃)₂+Aq decomposes on heating; less rapidly when dil., more readily in presence of excess of acid. (Ordway.)

Iron (ferric) nitrate, basic, 36Fe₂O₃, N₂O₅+48H₂O (?)
Easily sol. in H₂O. Sl. sol. in dil. HNO₃+Aq; very sl. sol. in alcohol. (Hausmann, A. 89. 111.)
8Fe₂O₃, N₂O₅+12H₂O. Sl. sol. in H₂O; very sl. sol. in cold or warm dil. HNO₃+Aq; more slowly sol. in hot HCl+Aq. (Hausmann.)
+zH₂O. Sol. in H₂O; completely pptd. from aqueous solution by NaCl, NH₄Cl, KI, KClO₄, Na₂SO₄, CaSO₄, ZnSO₄, CuSO₄, KNO₃, NaNO₃, Ba(C₂H₃O₂)₂, or Zn(C₂H₃O₂)₂+Aq. More slowly pptd. by NH₄NO₃, Mg(NO₃)₂, Ba(NO₃)₂, or Pb(NO₃)₂+Aq. Not pptd. by alcohol, Pb(C₂H₃O₂)₂, Cu(C₂H₃O₂)₂, Hg(CN)₂, AgNO₃, or As₂O₃+Aq. (Ordway, Sill. Am. J. (2) 9. 30.)
4Fe₂O₃, N₂O₅+1½H₂O. Easily sol. in H₂O; sl. sol. in dil. HNO₃+Aq, and in alcohol. (Hausmann.)
+3H₂O. Insol. in H₂O or HNO₃+Aq; sol. in HCl+Aq. (Scheurer-Kestner, C. R. 87. 927.)
+9H₂O. Not deliquescent; easily sol. in H₂O. (Ordway.)
3Fe₂O₃, N₂O₅+2H₂O. Insol. in H₂O. (Scheurer-Kestner.)
2Fe₂O₃, N₂O₅+H₂O. Decomp. by H₂O. (Scheurer-Kestner.)
+8H₂O. (S.-K.)
Fe₂O₃, N₂O₅. Decomp. by H₂O. (S.-K.)
Fe₂O₃, 2N₂O₅. Sol. in H₂O or alcohol in all proportions. Insol. in HNO₃+Aq.
N₂O₅ with 1, 2, 3, 4, 5, 6, and 8Fe₂O₃ forms compounds, sol. in H₂O. (Ordway.)
Solubility determinations show that there are no definite basic nitrates of iron formed from solutions at 25°, and that the solid phase under these conditions is a solid solution of Fe₂O₃, HNO₃ and H₂O. The normal salt, Fe₂O₃, 3N₂O₅, 18H₂O is stable in solutions containing about 30–45% N₂O₅. In higher concentrations of nitric acid it appears to be metastable and a new salt, Fe₂O₃, 4N₂O₅, 18(?)H₂O is the stable form. (Cameron, J. phys. Chem. 1909, 13. 252.)

Iron (ferric) nitrate, Fe(NO₃)₃.
+H₂O. (Scheurer-Kestner, A. ch. (3) 65. 113.)
+6H₂O. Deliquescent, and sol. in any amount of H₂O. (Schönbein, Pogg. 39. 141.)
Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+9H₂O. Deliquescent. Sol. in H₂O and alcohol. Sl. sol. in HNO₃+Aq. 2 pts. salt with 1 pt. H₂O lower the temperature 18.5°. (Scheurer-Kestner.)

Sp. gr. of solution at 17.5° containing:
5 10 15 20 25% Fe(NO₃)₃,
1.0398 1.0770 1.1182 1.1612 1.2110

30 35 40 45 50% Fe(NO₃)₃,
1.2622 1.3164 1.3746 1.4338 1.4972
55 60 65% Fe(NO₃)₃
1.5722 1.6572 1.7532

(Franz, J. pr. (2) 5. 274.)

Nearly insol. in conc. HNO₃+Aq at temp. below 15.5°.

Easily sol. in alcohol.

Melts in crystal H₂O at 47.2°. (Ordway.)

Sat. Fe(NO₃)₃+Aq boils at 125°. (Ordway.)

Lanthanum nitrate, La(NO₃)₃+6H₂O.

Very deliquescent; easily sol. in H₂O and alcohol. (Mosander.) Melts in its crystal H₂O at 40°; boils at 124.5°. (Ordway.)

La(NO₃)₃+Aq sat. at 25° contains 60.17% La(NO₃)₃, or 100 g. H₂O dissolve 151.1 g. La(NO₃)₃ at 25°. (James and Whittemore, J. Am. Chem. Soc. 1912, 34. 1169.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Lanthanum magnesium nitrate, 2La(NO₃)₃, 3Mg(NO₃)₂+24H₂O.

Deliquescent in moist air. (Holzmann, J. pr. 75. 350.)

1 l. sat. solution in HNO₃+Aq (sp. gr. 1.325) contains 63.8 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76. 321.)

Lanthanum manganous nitrate, 2La(NO₃)₃, 3Mn(NO₃)₂+24H₂O.

Sol. in H₂O. (Damour and Deville.)

1 l. sat. solution in HNO₃+Aq (sp. gr. 1.325) contains 193.1 g. hydrous salt at 16°. (Jantsch.)

Lanthanum nickel nitrate, 2La(NO₃)₃, 3Ni(NO₃)₂+36H₂O.

Very sol. in H₂O. (Frerichs and Smith, A. 191. 355.)

+24H₂O. 1 l. sat. solution in HNO₃+Aq (sp. gr. 1.325) contains 80.3 g. hydrous salt at 16°. (Jantsch.)

Lanthanum rubidium hydrogen nitrate, [La(NO₃)₃]₄Rb, HNO₃+6H₂O.

Sol. in H₂O and HNO₃. (Jantsch, Z. anorg. 1911, 69. 225.)

Lanthanum thallous nitrate, [La(NO₃)₃]₃Tl₂+4H₂O.

Hydroscopic. (Jantsch, Z. anorg. 1911, 69. 228.)

Lanthanum zinc nitrate, $2\text{La}(\text{NO}_3)_3$,
 $3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

Very sol. in H_2O . (Damour and Deville, J. B. 1858. 135.)

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 124.1 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 321.)
+ $69\text{H}_2\text{O}$. (Frerichs and Smith, A. 191. 355.)

Lead nitrate, basic, 2PbO , $\text{N}_2\text{O}_5 + \text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$.

Sol. in 5.15 pts. H_2O at 19.2° . (Pohl, W. A. B. 6. 597.) Very sl. sol. in cold, much more in hot H_2O . (Berzelius.) Sol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. (Guignet, C. R. 56. 358.)
Insol. in H_2O ; sol. in acids. (Athanescio, Bull. Soc. 1895, (3) 13. 178.)

+ $2\text{H}_2\text{O}$. (André, C. R. 100. 639.)
 3PbO , $\text{N}_2\text{O}_5 + 1\frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in pure H_2O . Insol. in H_2O containing HCl . (Berzelius.)
+ $3\text{H}_2\text{O}$. Sol. in 119.2 pts. cold, and 10.5 pts. boiling H_2O . Sol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$, but sl. sol. in $\text{KNO}_3 + \text{Aq}$. (Vogel, jr. A. 94. 97.)

= 10PbO , $3\text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$. (Wakemann and Wells, Am. Ch. J. 9. 299.)

+ $4\text{H}_2\text{O}$. (André, C. R. 100. 639.)
 6PbO , $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. Nearly insol. in H_2O . (Löwe, J. pr. 98. 385.)

10PbO , $3\text{N}_2\text{O}_5 + 4\text{H}_2\text{O}$. Less sol. in H_2O than $\text{Pb}(\text{NO}_3)_2\text{OH}$, and not decomp. by boiling H_2O . (Wakemann and Wells, Am. Ch. J. 9. 299.)

Lead nitrate, $\text{Pb}(\text{NO}_3)_2$.

Sol. in H_2O with absorption of much heat. (Rose.)

1 pt. $\text{Pb}(\text{NO}_3)_2$ dissolves in $7\frac{1}{2}$ pts. cold H_2O . (Mitscherlich)

1 pt. $\text{Pb}(\text{NO}_3)_2$ dissolves in 1.989 pts. H_2O at 17.5° and forms a liquid of 1.3978 sp. gr. (Karsten)

1 pt. $\text{Pb}(\text{NO}_3)_2$ dissolves in 1.707 pts. H_2O at 22.3° ; in 1.585 pts. H_2O at 24° . (Kopp.)

Sol. in 1.87 pts. H_2O at 17.5° . (Schiff, A. 109. 326.)

100 pts. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ sat. at 102° contain 52.5 pts. $\text{Pb}(\text{NO}_3)_2$, or 100 pt. H_2O dissolve 110.526 pts. $\text{Pb}(\text{NO}_3)_2$ at 102.2° . (Griffiths)

Sol. in 7.5 pts. cold H_2O and much less hot H_2O . (Wittstein.)

100 pts. boiling H_2O dissolve 13 pts. $\text{Pb}(\text{NO}_3)_2$ (Ure's Dict.)

100 pts. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ sat. at $19-20^\circ$ contain 35.80 pts. salt. (v. Hauer, W. A. B. 53, 2. 221.)

1 pt. dissolves:
at 0° 10° 25° 45° 65° 85° 100°
in 2.58 2.07 1.65 1.25 0.99 0.83 0.72 pts. H_2O .

(Kremers, Pogg. 92. 497.)

1 l. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ sat. at 15° contains 461.49 g. $\text{Pb}(\text{NO}_3)_2$ and 928.58 g. H_2O , and has sp. gr. 1.39. (Michel and Krafft, A. ch. (3) 41. 471.)

Solubility in 100 pts. H_2O at t° .

t°	Pts $\text{Pb}(\text{NO}_3)_2$	t°	Pts $\text{Pb}(\text{NO}_3)_2$	t°	Pts $\text{Pb}(\text{NO}_3)_2$

(Long, W. Ann. 1880, 11. 40.)

Sp. gr. of $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ at room temp. containing:

17.93 32.22% $\text{Pb}(\text{NO}_3)_2$.
1.1786 1.3619

(Wagner, W. Ann. 1883, 18. 267.)

Sp. gr. of $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ at 25° .	
Concentration of $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$	Sp. gr.
1-normal	1.1380
$\frac{1}{2}$ "	1.0699
$\frac{1}{4}$ "	1.0351
$\frac{1}{8}$ "	1.0175

(Wagner, Z. phys. Ch. 1890, 5. 36.)

$\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ containing 15.93% $\text{Pb}(\text{NO}_3)_2$ has sp. gr. $20^\circ/20^\circ = 1.1558$.

$\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ containing 30.57% $\text{Pb}(\text{NO}_3)_2$ has sp. gr. $20^\circ/20^\circ = 1.3436$.

$\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ containing 30.69% $\text{Pb}(\text{NO}_3)_2$ has sp. gr. $20^\circ/20^\circ = 1.3465$.

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 279.)

Sat. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ boils at 103.5° . (Kremers.)

Sat. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ boils at 102.2° , and contains 140 pts. $\text{Pb}(\text{NO}_3)_2$ to 100 pts. H_2O . (Griffiths.)

Sat. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ boils at 103.5° . (Gerlach, Z. anal. 26. 427.)

B.-pt. of $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ containing pts. $\text{Pb}(\text{NO}_3)_2$ to 100 pts. H_2O , according to Gerlach (Z. anal. 26. 449).

B-pt	Pts. $\text{Pb}(\text{NO}_3)_2$	B-pt	Pts. $\text{Pb}(\text{NO}_3)_2$
100 5°	11	102 5°	87
101	26	103	111
101.5	44	103.5	137
102	65

Insol. in conc. $\text{HNO}_3 + \text{Aq}$.

Solubility of $\text{Pb}(\text{NO}_3)_2 + \text{Ba}(\text{NO}_3)_2$.

See under $\text{Ba}(\text{NO}_3)_2$.

Solubility of $\text{Pb}(\text{NO}_3)_2 + \text{Cu}(\text{NO}_3)_2$.

See under $\text{Cu}(\text{NO}_3)_2$.

Sol. in sat. $\text{KNO}_3 + \text{Aq}$ without pptn., 100 pts. H_2O at 18.75° dissolving 114 pts. mixed salt, viz. 84.1 pts. $\text{Pb}(\text{NO}_3)_2$ and 29.9 pts. KNO_3 . (Karsten.)

100 pts. H_2O dissolve 119.6 pts. $\text{Pb}(\text{NO}_3)_2$ and 67.1 pts. KNO_3 at 21.2° . (Rudorff, B. 6. 484.)

100 g. H_2O dissolve 95.39 g. $\text{Pb}(\text{NO}_3)_2$ and 61.05 g. KNO_3 at 20° . (Le Blanc and Noyes, Z. phys. Ch. 1890, 6. 386.)

Sol. in sat. $\text{NaNO}_3 + \text{Aq}$ without pptn., 100 pts. H_2O at 18.75° dissolving 121.9 pts. mixed salt, viz. 87.8 pts. $\text{Pb}(\text{NO}_3)_2$ and 34.1 pts. NaNO_3 . (Karsten.)

Solubility of $\text{Pb}(\text{NO}_3)_2 + \text{NaNO}_3$.

Solid phase = $\text{Pb}(\text{NO}_3)_2$.

Lead mercurous nitrate, $2\text{PbO}, 2\text{Hg}_2\text{O}, 3\text{N}_2\text{O}_5$.Decomp. by H_2O . Sol. in warm dil. HNO_3 , or $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ without decomp. (Städeler, A. 87. 129.)Lead silver nitrate, $\text{Pb}(\text{NO}_3)_2, 2\text{AgNO}_3$.Sol. in H_2O . (Sturenberg, Pogg. 74. 115.)Lead silver nitrate iodide, $\text{Pb}(\text{NO}_3)_2, 8\text{AgNO}_3, 4\text{AgI}$.Decomp. by H_2O . (Sturenberg.) $\text{Pb}(\text{NO}_3)_2, 2\text{AgNO}_3, 2\text{AgI}$. Decomp. by H_2O . (Sturenberg.)Lead nitrate nitrite, basic, $4\text{PbO}, \text{N}_2\text{O}_5, \text{N}_2\text{O}_3 + 2\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, \text{Pb}(\text{OH})\text{NO}_2$.Sl. sol. in cold, easily in hot H_2O . Sol. in 80 pts. H_2O at 23° (Chevreuil); 85 pts. at ord. temp. (Bromeis, A. 72. 38); 10.6 pts. at 100° (Chevreuil).+ $2\text{H}_2\text{O}$.

Solubility in acetic acid.

Normality of acid	g. PbO per 100 cc. sat solution	Normality of acid	g. PbO per 100 cc sat. solution
0	0.601	0.25	5.450
0.05	1.323	0.50	9.690
0.10	2.185	0.75	15.874

(Chilesotti, Att. Acad. Linc. 1908, (5) 17, II. 475.)

Formula is $3\text{Pb}(\text{OH})\text{NO}_3, 5\text{Pb}(\text{OH})\text{NO}_2 + \text{H}_2\text{O}$. (v. Lorenz, W. A. B. **84**, 2. 1133.)

+ $3\text{H}_2\text{O}$. (v. Lorenz.)

$4\text{PbO}, \text{N}_2\text{O}_5, 3\text{N}_2\text{O}_3 + 4\text{H}_2\text{O}$. Sol. in H_2O . (Bromeis.)

$6\text{PbO}, \text{N}_2\text{O}_5, 2\text{N}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 2\text{Pb}(\text{OH})\text{NO}_2 + 2\frac{1}{2}\text{H}_2\text{O}$. (v. Lorenz.)

$6\text{PbO}, 2\text{N}_2\text{O}_5, \text{N}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O} = 2\text{Pb}(\text{OH})\text{NO}_3, \text{Pb}(\text{OH})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$. (v. Lorenz.)

$7\text{PbO}, \text{N}_2\text{O}_5, \text{N}_2\text{O}_3 + 3\text{H}_2\text{O}$. Less sol. in H_2O than $4\text{PbO}, \text{N}_2\text{O}_5, \text{N}_2\text{O}_3 + 2\text{H}_2\text{O}$; sol. in cold conc. $\text{HNO}_3 + \text{Aq}$. (Pelgou, A. **39**, 338.)

$8\text{PbO}, \text{N}_2\text{O}_5, 3\text{N}_2\text{O}_3 + 4\frac{1}{2}\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 3\text{Pb}(\text{OH})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$. (v. Lorenz.)

$10\text{PbO}, \text{N}_2\text{O}_5, 4\text{N}_2\text{O}_3 + 5\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 4\text{Pb}(\text{OH})\text{NO}_2$. (v. Lorenz.)

$12\text{PbO}, \text{N}_2\text{O}_5, 5\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 5\text{Pb}(\text{OH})\text{NO}_2$. (v. Lorenz.)

$10\text{PbO}, \text{N}_2\text{O}_5, 2\text{N}_2\text{O}_3 + 4\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 2\text{Pb}(\text{OH})\text{NO}_2, 2\text{PbO} + \frac{1}{2}\text{H}_2\text{O}$. (v. Lorenz.)

$14\text{PbO}, \text{N}_2\text{O}_5, 3\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3, 3\text{Pb}(\text{OH})\text{NO}_2, 3\text{PbO} + \text{H}_2\text{O}$. (Bromeis.)

$14\text{PbO}, 3\text{N}_2\text{O}_5, \text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = 3\text{Pb}(\text{OH})\text{NO}_3, \text{Pb}(\text{OH})\text{NO}_2, 3\text{PbO} + \text{H}_2\text{O}$. (Bromeis.)

$16\text{PbO}, 2\text{N}_2\text{O}_5, 3\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = 4\text{Pb}(\text{OH})\text{NO}_3, 6\text{Pb}(\text{OH})\text{NO}_2, 5\text{PbO}, \text{Pb}(\text{OH})_2$ (v. Lorenz.)

$16\text{PbO}, 3\text{N}_2\text{O}_5, 5\text{N}_2\text{O}_3 + 10\text{H}_2\text{O} = 3\text{Pb}(\text{OH})\text{NO}_3, 5\text{Pb}(\text{OH})\text{NO}_2 + \text{H}_2\text{O}$. (v. Lorenz.)

$26\text{PbO}, 6\text{N}_2\text{O}_5, 7\text{N}_2\text{O}_3 + 21\text{H}_2\text{O} = 6\text{Pb}(\text{OH})\text{NO}_3, 7\text{Pb}(\text{OH})\text{NO}_2 + 4\text{H}_2\text{O}$. (v. Lorenz.)

Lead nitrate phosphate, $\text{Pb}(\text{NO}_3)_2, \text{Pb}_3(\text{PO}_4)_2 + 2\text{H}_2\text{O}$.

Completely insol. in cold H_2O . Decomp. by boiling H_2O into its constituents. Sol. in a little conc. $\text{HNO}_3 + \text{Aq}$ without decomp. (Gerhardt, A. **72**, 83.)

Lead nitrate phosphite, $\text{Pb}(\text{NO}_3)_2, \text{PbHPO}_3$.

Decomp. by H_2O . Sol. in $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ (33.3 g. per litre) dissolves 1 g. salt at 15° . If less than 31 g. per litre of $\text{Pb}(\text{NO}_3)_2$ are present the salt is decomp. (Amat, A. ch. (6) **24**, 317.)

Lead nitrate potassium nitrite, $\text{Pb}(\text{NO}_3)_2, 2\text{KNO}_2 + \text{H}_2\text{O}$.

Difficultly sol. in H_2O . (Lang, J. B. **1862**, 102.)

$3\text{PbO}, 3\text{K}_2\text{O}, 4\text{N}_2\text{O}_3, 2\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$. Sol. in H_2O . (Hayes, Sill. Am. J. (2) **31**, 226.)

Lithium nitrate, LiNO_3 .

Very deliquescent, and sol. in H_2O .

100 pts. H_2O dissolve:

at 0° 20° 40° 70° 100° 110°

48.3 75.7 169.4 196.1 227.3 256.4 pts. LiNO_3 .

(Kremers, Pogg. **99**, 47.)

Forms supersaturated solutions with ease, which crystallize when temp. is lowered to $+1^\circ$. (Kremers, Pogg. **92**, 520.)

Sat. solution boils at over 200° . (Kremers, Pogg. **99**, 43.)

1 pt. LiNO_3 dissolves in 200 pts. HNO_3 . (Schultz, Zeit. Ch. (2) **5**, 531.)

100 pts. of the sat. solution contain at:

64.2° 70.9°

64.9 66.1 pts. anhydrous salt.

(Donnan and Burt, Chem. Soc. **1903**, **83**, 339.)

See $+ \frac{1}{2}\text{H}_2\text{O}$, and $3\text{H}_2\text{O}$.

Sp. gr. of $\text{LiNO}_3 + \text{Aq}$ at 19.5° containing pts. LiNO_3 in 100 pts. H_2O :

12.7	14.2	26.4	41.8 pts LiNO_3
1.069	1.077	1.134	1.197
54.8	57.5	77.4	79.4 pts. LiNO_3
1.245	1.255	1.315	1.319

(Kremers, Pogg. **114**, 45.)

Sp. gr. of $\text{LiNO}_3 + \text{Aq}$.

g LiNO_3 in 1000 g of solution	Sp. gr. $16/16^\circ$
0	1.000000
4.8526	1.002469
10.9128	1.0055495
17.9016	1.009113

(Dijken, Z. phys. Ch. **1897**, **24**, 109.)

Sp. gr. $20^\circ/4^\circ$ of a normal solution of $\text{LiNO}_3 = 1.03803$; of a 0.5-normal solution = 1.01830. (Haigh, J. Am. Chem. Soc. **1912**, **34**, 1151.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. **1898**, **20**, 828.)

Sol. in strong alcohol.

Sol. in acetone. (Eidmann, C. C. **1899**, II, 1014; Naumann, B. **1904**, **37**, 4328.)

Solubility in acetone = 0.343 g. mol. per l. at 18° . (Roshdestwensky and McBride, Chem. Soc. **1911**, **99**, 2140.)

Insol. in benzonitrile. (Naumann, B. **1914**, **47**, 1370.)

Difficultly sol. in ethyl acetate. (Naumann, B. **1910**, **43**, 314.)

$+ \frac{1}{2}\text{H}_2\text{O}$. Solubility in H_2O .

100 pts. of the sat. solution contain at:

43.6° 50.5° 55.0° 60.0°

60.8 61.3 63.0 63.6 pts. anhydrous salt.

61.1° is the temp. at which $\text{LiNO}_3 + \frac{1}{2}\text{H}_2\text{O}$ goes over into LiNO_2 . (Donnan and Burt, Chem. Soc. **1903**, **83**, 339.)

+3H₂O.Solubility in H₂O.

100 pts. of the sat. solution contain pts. anhydrous salt at t°.

t°	Pts anhydrous salt
0 10	34 8
10 50	37 9
12. 10	38 2

Manganous nitrate cupric oxide, $\text{Mn}(\text{NO}_3)_2, 3\text{CuO} + 3\text{H}_2\text{O}$.

Ppt. (Mailhe, C. R. 1902, 134. 234.)

Manganous nitrate hydrazine, $\text{Mn}(\text{NO}_3)_2, 2\text{N}_2\text{H}_4$.Not decomp. by H_2O . (Franzen, Z. anorg. 1908, 60. 286.)**Mercurous nitrate, basic, $2\text{Hg}_2\text{O}, \text{N}_2\text{O}_5 + \text{H}_2\text{O}$.**Ppt. Decomp. by boiling with H_2O . (Marignac, A. ch. (3) 27. 332.)Slowly sol. in cold, rapidly in hot $\text{HCl} + \text{Aq}$; insol in NH_4Cl , and $\text{NH}_4\text{NO}_3 + \text{Aq}$.+ $10\text{H}_2\text{O}$. Slowly sol. in normal HNO_3 . (Reuss, Dissert. 1886.)+ $4\text{Hg}_2\text{O}, 3\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. Sol. in a small quantity of H_2O ; decomp. by a large amt. of H_2O or by warm H_2O . (Rose, Pogg 83. 154.)Is $3\text{HgO}, 2\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ according to Gerhardt.+ $5\text{H}_2\text{O}$. (Reuss, Dissert. 1886.)+ $5\text{Hg}_2\text{O}, 3\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$. (Marignac) Is $2\text{Hg}_2\text{O}, \text{N}_2\text{O}_5 + \text{H}_2\text{O}$. (Lefort, A. 56. 247.)Sol. in boiling, less sol. in cold H_2O . (Marignac, l. c.)+ $4\text{H}_2\text{O}$, and + $6\text{H}_2\text{O}$. (Reuss, Dissert. 1886.)+ $8\text{Hg}_2\text{O}, 5\text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$, and + $11\text{H}_2\text{O}$. (Reuss.)+ $11\text{Hg}_2\text{O}, 6\text{N}_2\text{O}_5 + 25\text{H}_2\text{O}$. (Reuss)+ $16\text{Hg}_2\text{O}, 9\text{N}_2\text{O}_5 + 19\text{H}_2\text{O}$, + $23\text{H}_2\text{O}$, and + $31\text{H}_2\text{O}$. (Reuss)+ $3\text{Hg}_2\text{O}, \text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$. (Cox, Z. anorg. 1904, 40. 177.)**Mercurous nitrate, HgNO_3 .**Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)Fairly sol. in boiling CS_2 . (Arctowski, Z. anorg. 1894, 6. 257.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methylamine. (Franklin, J. Am. Chem. Soc. 1906, 28. 1419.)

+ H_2O . Completely sol. in a little warm H_2O , but decomp. by more H_2O . Completely sol. as acid salt in H_2O containing HNO_3 . (Marignac, A. ch. (3) 27. 332.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $1\frac{1}{4}\text{H}_2\text{O}$, and + $1\frac{1}{2}\text{H}_2\text{O}$, etc. (Reuss, Dissert. 1896.)**Mercuric nitrate, basic, $6\text{HgO}, \text{N}_2\text{O}_5$ (?)**Insol. in hot H_2O . (Kane.)+ $3\text{HgO}, \text{N}_2\text{O}_5 + \text{H}_2\text{O}$. Decomp. to oxide by washing with cold H_2O . Sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Millon, A. ch. (3) 18. 361.)+ $2\text{HgO}, \text{N}_2\text{O}_5 + \text{H}_2\text{O}$. Sl. deliquescent. Decomp. by H_2O ; sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Millon.)+ $2\text{H}_2\text{O}$. Decomp. by cold H_2O . Deliquescent. Sol. in H_2O containing HNO_3 . (Marignac.)+ $3\text{H}_2\text{O}$. (Ditte, J. B. 1854. 366.)**Mercuric nitrate, $\text{Hg}(\text{NO}_3)_2$.**Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Neither dissolved nor attacked by liquid NO_2 . (Frankland, Chem. Soc. 1901, 79. 1361.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in methylal. (Eidmann, C. C. 1899. II, 1014.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Deliquescent. Very sol. in a little H_2O . H_2O precipitates basic salt from conc. $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$. Insol. in alcohol. Decomp. by ether. (Millon.)

+ H_2O . Extraordinarily sol. in H_2O . (Cox, Z. anorg. 1904, 40. 159.)

+ $8\text{H}_2\text{O}$. Melts at 6° in crystal H_2O . (Ditte.)

Mercurummercure nitrate, Hg_2O , 2HgO , N_2O_5 .

Boiling H_2O gradually dissolves out $\text{Hg}_2(\text{NO}_3)_2$, and leaves residue of HgO and Hg . (Brooks, Pogg. 66. 63.)

$2\text{Hg}_2\text{O}$, HgO , $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. (Rây, Chem. Soc. 1905, 87. 175.)

Hg_2O , 2HgO , $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. (Rây.)

Mercurous hydrogen nitrate, 4HgNO_3 , $\text{HNO}_3 + 8\text{H}_2\text{O}$.

(Reuss, Dissert. 1886.)

5HgNO_3 , $3\text{HNO}_3 + 26\text{H}_2\text{O}$. (Reuss.)

Mercuric silver nitrate, $\text{Hg}(\text{NO}_3)_2$, 2AgNO_3 .

Easily sol. in H_2O without decomp. (Berzelius.)

Mercurous strontium nitrate, 2SrO , $2\text{Hg}_2\text{O}$, $3\text{N}_2\text{O}_5$.

Decomp. by H_2O . Much more sol. in H_2O than the corresponding Ba compound.

Readily sol. in warm dil. $\text{HNO}_3 + \text{Aq}$ or $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ without decomposition. (Städeler, A. 87. 131.)

Mercurous thallos nitrate, HgNO_3 , TiNO_3 .

Miscible with H_2O . (Retgers, N. Jahrb. Miner, 1896. II, 183.)

Mercuric nitrate bromide, $\text{Hg}(\text{NO}_3)_2$, HgBr_2 . (Morse, Z. phys. Ch. 1902, 41. 733.)

Mercuric nitrate cadmium oxide, $\text{Hg}(\text{NO}_3)_2$, $\text{CdO} + 2\text{H}_2\text{O}$.

Ppt. (Mailhe, Bull. Soc. 1901, (3) 25. 788.)

+ $3\text{H}_2\text{O}$. Decomp. by H_2O . (Mailhe.)

Mercuric nitrate cobaltous oxide, $\text{Hg}(\text{NO}_3)_2$, $\text{CoO} + 3\text{H}_2\text{O}$.

Ppt. (Mailhe, C. R. 1901, 132. 1275.)

+ $4\text{H}_2\text{O}$. Decomp. by H_2O . (Mailhe, A. ch. 1902, (7) 27. 369.)

Mercuric nitrate cupric oxide, $\text{Hg}(\text{NO}_3)_2$, $\text{CuO} + 2\text{H}_2\text{O}$, and + $4\text{H}_2\text{O}$.

(Mailhe, Bull. Soc. 1901, (3) 25. 791.)

+ $5\text{H}_2\text{O}$. Decomp. by H_2O . (Mailhe, A. ch. 1902, (7) 27. 365.)

Mercuric nitrate cyanide, $\text{Hg}(\text{NO}_3)_2$, $\text{Hg}(\text{CN})_2$.

Very sol. in H_2O . Very sol. in methyl alcohol and solution is not decomp. at bpt. Ethyl alcohol apparently decomp. it. (Prussia, Gazz. ch. it. 1898, 28. (2) 115.)

Mercurous nitrate hydrazine, 2HgNO_3 , N_2H_4 .

Decomp. by H_2O . Stable in dil. $\text{HNO}_3 + \text{Aq}$ solution. (Hofmann and Marburg, A. 1899, 305. 215.)

Ppt.; very unstable. (Hofmann, B. 1897, 30. 2021.)

$\text{Hg}(\text{NO}_3)_2$, N_2H_4 . Sol. in dil. HCl and HNO_3 . (Hofmann and Marburg, A. 1899, 305. 215.)

Ppt.; sol. in acids; decomp. by alkali. (Hofmann, B. 1897, 30. 2021.)

Mercuric nitrate iodide, $\text{Hg}(\text{NO}_3)_2$, 2HgI_2 .

Decomp. by long boiling with H_2O . (Riegel, Jahrb. Pharm. 11. 396.)

$2\text{Hg}(\text{NO}_3)_2$, 3HgI_2 . Easily decomp. by H_2O ; less easily by alcohol or ether. (Riegel.)

$\text{Hg}(\text{NO}_3)_2$, HgI_2 . Decomp. very quickly by $\text{HNO}_3 + \text{Aq}$ or alcohol of 0.814 sp. gr. (Souville, J. Pharm. 26. 474.)

Mercuric nitrate manganous oxide, $\text{Hg}(\text{NO}_3)_2$, $\text{MnO} + 2\text{H}_2\text{O}$.

Decomp. by H_2O . (Mailhe, Bull. Soc. 1901, (3) 25. 790.)

+ $3\text{H}_2\text{O}$. (Mailhe.)

+ $4\text{H}_2\text{O}$. (Mailhe, A. ch. 1902, (7) 27. 370.)

Mercuric nitrate nickel oxide, $\text{Hg}(\text{NO}_3)_2$, $\text{NiO} + 2\text{H}_2\text{O}$.

(Mailhe, Bull. Soc. 1901, (3) 25. 788.)

+ $4\text{H}_2\text{O}$. Decomp. by H_2O . (Mailhe, A. ch. 1902, (7) 27. 369.)

Mercurous nitrate phosphate, HgNO_3 , $\text{Hg}_3\text{PO}_4 + \text{H}_2\text{O}$.

Insol. in H_2O , but decomp. by boiling there-with. Insol. in $\text{H}_3\text{PO}_4 + \text{Aq}$ or alcohol. Completely sol. in hot $\text{NH}_4\text{Cl} + \text{Aq}$. Decomp. by cold $\text{KOH} + \text{Aq}$, and warm $\text{K}_2\text{CO}_3 + \text{Aq}$. (Wittstein.)

2HgNO_3 , Hg_2O , $5\text{Hg}_3\text{PO}_4 + \text{H}_2\text{O}$. (Haack, A. 262. 192.)

Mercuric nitrate silver bromide, $\text{Hg}(\text{NO}_3)_2$, AgBr .

(Morse, Z. phys. Ch. 1902, 41. 733.)

Mercuric nitrate silver cyanide, basic, $\text{Hg}(\text{OH})\text{NO}_3, \text{AgCN} + 2\text{H}_2\text{O}$.

(Schmidt, Z. anorg. 1895, 9. 431.)

$\text{Hg}(\text{OH})\text{NO}_3, 5\text{Ag}_2\text{O}, 20\text{AgCN} + 7\text{H}_2\text{O}$. (Schmidt.)

Mercuric nitrate silver iodide, $\text{Hg}(\text{NO}_3)_2, 2\text{AgI} + \frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O . (Preuss, A. 29. 328.)

Mercuric nitrate sulphide, $\text{Hg}(\text{NO}_3)_2, 2\text{HgS}$.

Very sl. sol. in hot H_2O . Insol. in HNO_3 + Aq. Decomp. by hot H_2SO_4 or aqua regia, also by hot HCl + Aq. (Barfoed, J. pr. 93. 230.)

Sol. in aqua regia. (Denigès, Bull. Soc. 1915, (4) 17. 355.)

$2\text{Hg}(\text{NO}_3)_2, \text{HgO}, 6\text{HgS} + 12\text{H}_2\text{O}$. Insol. in H_2O , and HNO_3 + Aq of 1.2 sp. gr. (Gramp, J. pr. (2) 14. 299.)

Mercuric nitrate zinc oxide, $\text{Hg}(\text{NO}_3)_2, \text{ZnO} + \text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . (Mailhe, C. R. 1901, 132. 1274.)

Molybdenum nitrate, $\text{Mo}_2\text{O}_3, \text{N}_2\text{O}_5$ (?).

Sol. in dil. HNO_3 + Aq. (Berzelius.)

$\text{MoO}_3, 2\text{N}_2\text{O}_5$ (?). Sol. in dil. HNO_3 + Aq. (Berzelius.)

Neodymium nickel nitrate, $2\text{Nd}(\text{NO}_3)_3, 3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in HNO_3 + Aq (sp. gr. 1.325) contains 116.6 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 303.)

Neodymium rubidium nitrate, $[\text{Nd}(\text{NO}_3)_5]\text{Rb}_2 + 4\text{H}_2\text{O}$.

Hydroscopic. (Jantsch, Z. anorg. 1911, 69. 230.)

Neodymium zinc nitrate, $2\text{Nd}(\text{NO}_3)_3, 3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in HNO_3 + Aq (sp. gr. 1.325) contains 177 g. hydrous salt at 16° . (Jantsch.)

Nickel nitrate, basic.

Insol. in H_2O . (Proust.)

$8\text{NiO}, 2\text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$. Insol. in cold or hot H_2O . (Habermann, M. 5. 432.)

$5\text{NiO}, \text{N}_2\text{O}_5 + 4\text{H}_2\text{O}$. Not decomp. by boiling H_2O . (Rousseau and Tite, C. R. 114. 1184.)

Nickel nitrate, $\text{Ni}(\text{NO}_3)_2$.

Solubility in H_2O . See +3, 6, and $9\text{H}_2\text{O}$.

Sp. gr. of aqueous solution at 17.5° containing:

5	10	15	20	% $\text{Ni}(\text{NO}_3)_2$
1.0463	1.0903	1.1375	1.1935	
25	30	35	40	% $\text{Ni}(\text{NO}_3)_2$
1.2534	1.3193	1.3896	1.4667	

(Franz, J. pr. (2) 5. 295.)

Sp. gr. of $\text{Ni}(\text{NO}_3)_2$ + Aq containing g. $\text{Ni}(\text{NO}_3)_2$ (anhydrous) in 1000 g. H_2O at 24.4° :

91.5 g. (= $\frac{1}{2}$ mol.) 183 274.5 369 460.5 549
1.073 1.141 1.205 1.266 1.324 1.378

(Gerlach, Z. anal. 28. 468.)

Sp. gr. of $\text{Ni}(\text{NO}_3)_2$ + Aq at room temp. containing:

16.493 30.006 40.953 % $\text{Ni}(\text{NO}_3)_2$.
1.1363 1.2776 1.3879

(Wagner, W. Ann. 1883, 18. 269.)

Sp. gr. of $\text{Ni}(\text{NO}_3)_2$ + Aq at 25° .

Concentration of $\text{Ni}(\text{NO}_3)_2$ + Aq	Sp gr
1-normal	1.0755
$\frac{1}{2}$ -"	1.0381
$\frac{1}{4}$ -"	1.0192
$\frac{1}{8}$ -"	1.0096

(Wagner, Z. phys. Ch. 1890, 5. 39.)

Sp. gr. at 20° of $\text{Ni}(\text{NO}_3)_2$ + Aq containing M g. mols. of salt per liter.

Sp. gr. 1.14562 1.22134 1.29459
(Jones and Pearce, Am. Ch. J. 1907, 38. 720.)

Sol. in liquid NH_3 . (Guntz, Bull. Soc. 1909, (4) 5. 1008.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Solubility in glycol = 7.5%. (de Coninck, C. C. 1905, II. 1234.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

+ $3\text{H}_2\text{O}$. Solubility in H_2O .

Sat. solution contains at:

58° 60° 64° 70°
61.61 61.99 62.76 63.95 % $\text{Ni}(\text{NO}_3)_2$

90° 95° mpt.

70.16 77.12 % $\text{Ni}(\text{NO}_3)_2$.

(Funk, Z. anorg. 1899, 20. 411.)

+ $6\text{H}_2\text{O}$. Not deliquescent in dry air. Sol. in 2 pts. cold H_2O and in alcohol. (Tupputi.)

Mpt. of $\text{Ni}(\text{NO}_3)_2 + 6\text{H}_2\text{O} = 56.7^\circ$. (Ordway; Tilden, Chem. Soc. 45. 409.)

Sat. solution boils at 136.7° . (Ordway.)

Solubility in H_2O .

Sat. solution contains at:

-21°	-12.5°	-10°	-6°
39.94	41.59	42.11	43.00 % $\text{Ni}(\text{NO}_3)_2$
0°	$+20^\circ$	41°	56.7° mpt.
44.32	49.06	55.22	62.76 % $\text{Ni}(\text{NO}_3)_2$

(Funk, Z. anorg. 1899, 20. 410.)

Sat. solution of $\text{Ni}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$ contains 44.3% $\text{Ni}(\text{NO}_3)_2$ at 0° , and 48.7% $\text{Ni}(\text{NO}_3)_2$ at 18° . (Mylius, Z. anorg. 1912, 74. 411.)
Sp. gr. of $\text{Ni}(\text{NO}_3)_2 + \text{Aq}$ containing in 1000 g. H_2O at 24.4° , g. $\text{Ni}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$.

145.5 g. ($= \frac{1}{2}$ mol.)	291	436.5	582
1.069	1.128	1.179	1.224

727.5	873	1018.5	1164
1.264	1.299	1.329	1.357

(Gerlach, Z. anal. 28. 468.)

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Insol. in absolute alcohol.

Sl. sol. in acetone. (Krug and M'Elroy.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

$+9\text{H}_2\text{O}$. Solubility in H_2O .

Sat. solution contains at:

-23°	-21°	-10.5°
39.02	39.48	44.13% $\text{Ni}(\text{NO}_3)_2$.

Cryohydrate is formed at -27° . (Funk, Z. anorg. 1899, 20. 411.)

Nickel praseodymium nitrate, $3\text{Ni}(\text{NO}_3)_2 \cdot 2\text{Pr}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 9.28 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 303.)

Nickel samarium nitrate, $3\text{Ni}(\text{NO}_3)_2 \cdot 2\text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 29.11 g. hydrous salt at 16° . (Jantsch.)

Nickel thorium nitrate, $\text{NiTh}(\text{NO}_3)_6 + 8\text{H}_2\text{O}$.

Sol. in $\text{HNO}_3 + \text{Aq}$. (Meyer, Z. anorg. 1901, 27. 387.)

Nickel uranyl nitrate, $10\text{Ni}(\text{NO}_3)_2 \cdot 3(\text{UO}_2)(\text{NO}_3)_2$.

Sol. in H_2O and acids; insol. in aq. alkali. (Lancien, C. C. 1912, I. 208.)

Nickel nitrate ammonia, $\text{Ni}(\text{NO}_3)_2 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$.

Efflorescent. Easily sol. in cold H_2O ; decomp. by boiling. Insol. in alcohol. (Erdmann, J. pr. 97. 395; Ephraim, B. 1913, 46. 3106.)

$+1\frac{1}{2}\text{H}_2\text{O}$. (André, C. R. 106. 936.)

Nickel nitrate chloride ammonia, $6\text{Ni}(\text{NO}_3)_2 \cdot \text{NiCl}_3 \cdot 30\text{NH}_3 + 16\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Schwarz, W. A. B. 1850. 272.)

Nickel nitrate cupric oxide, $\text{Ni}(\text{NO}_3)_2 \cdot 3\text{CuO} + 3\text{H}_2\text{O}$.

Ppt. (Maible, C. R. 1902, 134. 234.)

Nickel nitrate hydrazine, $\text{Ni}(\text{NO}_3)_2 \cdot 3\text{N}_2\text{H}_4$.

Insol. in H_2O . Decomp. by hot H_2O . Easily sol. in dil. acids. (Franzen, Z. anorg. 1908, 60. 267.)

Palladium nitrate, basic, $\text{Pd}(\text{NO}_3)_2 \cdot 3\text{PdO} + 4\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . (Kane.)

Palladium nitrate, $\text{Pd}(\text{NO}_3)_2 + x\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O . Decomp. by much H_2O or alcohol. (Kane.)

Decomp. by cold or hot H_2O . (Rose, A. 83. 143.)

Platinic nitrate, $\text{Pt}(\text{NO}_3)_4 (?)$.

Known only in solution, which is decomp. on evaporating. (Berzelius.)

$\text{Pt}(\text{NO}_3)_2 \cdot 3\text{PtO}_2 + 5\text{H}_2\text{O}$. Insol. in H_2O . (Prost, Bull. Soc. (2) 46. 156.)

Platinum nitrate sulphocarbamide, $\text{Pt}(\text{NO}_3)_2 \cdot 4\text{CS}(\text{NH}_2)_2$.

Very sol. in H_2O . Unstable. (Kurnokow, J. pr. 1894, (2) 50. 490.)

Potassium nitrate, KNO_3 .

Not deliquescent, but, according to Mulder, 100 pts. KNO_3 under a bell jar with H_2O take up 339 pts. H_2O in 22 days, and small amounts finally deliquesce completely.

Sol. in H_2O with absorption of heat.

16 pts. $\text{KNO}_3 + 100$ pts. H_2O at 13.2° lower the temperature 10.2° . If the initial temp. is 23° it falls to 12.8° , if 0° it does not fall below -2.7° , which is the freezing-point of the mixture. (Rüdorff, Pogg. 136. 276.)

$\text{KNO}_3 + \text{Aq}$ sat. at 18.1° has 1.1601 sp. gr. and contains 22.72% KNO_3 , or 100 pts. H_2O at 18.1° dissolve 29.45 pts. KNO_3 . (Karsten, 1840.)

Sol. in 3 745 pts. H_2O at 15° . (Gerlach.)

Sol. in 3 pts. H_2O at 21° . (Schiff, A. 109. 326), and solution has 1.1633 sp. gr.

Sol. in 3 pts. cold, and 0.5 pt. boiling H_2O . (Fourcroy.)

$\text{KNO}_3 + \text{Aq}$ sat. at 18° has sp. gr. 1.151, and contains 21.63% KNO_3 , or 100 pts. H_2O dissolve 27.60 pts. KNO_3 at 18° . (Longchamp.)

Sol. in 4 pts. H_2O at 16° , and 0.25 pt. at b.-pt. (Riffault.)

100 pts. H_2O at 114.5° dissolve 284.61 pts. (Griffiths.) Sol. in 7 pts. cold, and 1 pt. boiling H_2O . (Bergmann.)

Sol. in 6.15 pts. cold H_2O at 18.75° . (Abl.)

100 pts. H_2O at 15.5° dissolve 26.6 pts., at 100° , 100 pts. (Ure's Dictionary.)

$\text{KNO}_3 + \text{Aq}$ sat. at 10° contains 33.3%. (Eller.)

$\text{KNO}_3 + \text{Aq}$ sat. in the cold contains 25%. (Fourcroy.)

$\text{KNO}_3 + \text{Aq}$ sat. at 12.5° contains 24.8%. (Hassenratz.)

Solubility of KNO_3 in 100 pts. H_2O at t° .

t°	Pts. KNO_3	t°	Pts. KNO_3

 $\text{KNO}_3 + \text{NaNO}_3$.

100 pts. H_2O dissolve 34.53 pts KNO_3 and 91.16 pts. NaNO_3 at 15.6° , and solution has sp. gr. = 1.478. (Page and Keightley.)

100 pts. $\text{KNO}_3 + \text{NaNO}_3 + \text{Aq}$ sat. at 14° contain 52.17 pts. of the two salts; sat. at 13° contain 53.15 pts. of the two salts (v. Hauer.)

100 pts. H_2O dissolve at 18.75° 29.45 pts. KNO_3 and 89.53 pts. NaNO_3 , if sat. $\text{KNO}_3 + \text{Aq}$ is treated with NaNO_3 , and 35.79 pts. KNO_3 and 88.00 pts. NaNO_3 by the opposite process. 134.38 pts. of the two salts are dissolved if a mixture of the salts is treated with H_2O at 18.75° . (Karsten.)

100 pts. H_2O dissolve 39.34 pts. KNO_3 and 94.60 pts. NaNO_3 , or 133.94 pts. of the two salts at 20° . (Nicol, Phil. Mag. (5) 13. 385.)

Solubility of mixtures of KNO_3 and NaNO_3 .

171	79.1	5.9	85.0

(Etard, A. ch. 1894, (7) 3. 283.)

100 g. H₂O dissolve 41.14 g. KNO₃ and 38.25 g. NaCl at 25°; 168.8 g. KNO₃ and 39.81 g. NaCl at 80°. (Soch, J. phys. Ch. 1898, 2. 46.)

See also under NaCl.

Sol. in sat. CuSO₄ + Aq, forming a double salt, which soon separates out.

Very slowly and slightly sol. in MgSO₄ + Aq with pptn. of MgSO₄. (Karsten.)

KNO₃ + K₂SO₄.

Sat. KNO₃ + Aq dissolves some K₂SO₄, and sat. K₂SO₄ + Aq slowly dissolves some KNO₃.

without pptn., but K₂SO₄ is afterwards pptd. (Karsten.)

100 pts. H₂O dissolve:

	Mulder 18.75° (1)	Karsten 18.75° (2)	Kopp		Mulder 18.75° (5)
			20° (3)	40° (4)	
KNO ₃	29 90	29 42	26 9	59 35	...
K ₂ SO ₄		4.0	6 6	5.75	10.8

2. H₂O sat. with KNO₃ and K₂SO₄ simultaneously, or to a sat. solution of one salt the other was added.

3 and 4. H₂O sat. with both salts simultaneously.

Mulder doubts the results of 3 and 4.

Solubility in K₂SO₄ + Aq at t°.

t°	In 100 cem of the solution		Sp. gr. of solution
	G KNO ₃	G K ₂ SO ₄	
15	216 5	50 7	1.165
25	308 5	47.66	1.210

(Euler, Z. phys. Ch. 1914, 40. 313.)

Slowly sol. in sat. Na₂SO₄ at first without pptn., but afterwards K₂SO₄ or NaSO₄ separates out.

Sol. in sat. ZnSO₄ + Aq with pptn. of double salt. (Karsten.)

Sol. in sat. KClO₃ + Aq, from which solution it is not pptd. by salts which would ppt. it from aqueous solution. (Karsten.)

Hydrazine dissolves 21.7 pts. KNO₃ at 12.5–13°. (de Bruyn, R. t. c. 1899, 18. 297.)

Neither dissolved nor attacked by liquid NO₂. (Frankland, Chem. Soc. 1901, 79. 1361.)

Very sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in absolute alcohol; in dilute alcohol it dissolves proportional to the amount of H₂O present, but always less is dissolved than the H₂O would dissolve by itself. (Gerardin.)

100 pts. alcohol containing % by weight of alcohol dissolve pts. KNO₃ at 15°.

10	20	30	40	50	60	80% alcohol
13.2	8.5	5.6	4.3	2.8	1.7	0.4 pts. KNO ₃ .

(Schiff, A. 118. 365.)

44.1	17.0
53.9	11.9
64.8	7.2
76.0	3.0
87.6	0.7

(Bathrick, J. phys. Ch. 1896, 1. 160.)

100 pts. glycerine (sp. gr. 1.225) dissolve 10 pts. KNO_3 . (Vogel, N. Rep. Ph. 16. 557.)

100 g. trichlorethylene dissolve 0.01 g. KNO_3 at 15° . (Wester and Bruins, Pharm. Weekbl. 1914, 51. 1443.)

Insol. in CS_2 . (Arcowski, Z. anorg. 1894, 6. 257.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

100 g. H_2O sat. with sugar and KNO_3 dissolve 224.7 g. sugar + 41.9 g. KNO_3 , or sat. solution contains 61.36 g. sugar + 11.45 g. KNO_3 at 31.25° . (Köhler, Z. Ver. Zuckerind. 1897, 47. 447.)

Potassium hydrogen nitrate, KNO_3 , HNO_3 .

Very hygroscopic. Decomp. by H_2O . (Groschuff, B. 1904, 37. 1489.)

Potassium dihydrogen nitrate, KNO_3 , 2HNO_3 .

Decomp. by H_2O . (Ditte, A. ch. (5) 18. 320.)

Solubility in H_2O .

Solution temp	% by wt. KNO_3	% by wt. HNO_3	% by wt. H_2O
mpt. $+22^\circ$	44.5	55.5	0
20.5	44.1	55.0	0.9
18.0	43.8	54.5	1.7
12.0	43.0	53.6	3.4
6.0	42.3	52.7	5.0
0	41.6	51.8	6.6

(Groschuff, Z. anorg. 1904, 40. 11.)

Potassium silver nitrate, KNO_3 , AgNO_3 .

Sol. in H_2O . (Russell and Maskelyne, Roy. Soc. Proc. 26. 357.)

3KNO_3 , AgNO_3 Sol. in H_2O . (Rose, Pogg. 106. 320.)

Potassium thallium nitrate, 2KNO_3 , $\text{Tl}(\text{NO}_3)_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Meyer, Z. anorg. 1900, 24. 361.)

Potassium thorium nitrate, 4KNO_3 , $\text{Th}(\text{NO}_3)_4$.

Very sol. in H_2O and alcohol. (Berzelius.)

Hygroscopic, very unstable. (Meyer, Z. anorg. 1901, 27. 379.)

Hydroscopic, sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Meyer, Z. anorg. 1901, 27. 378.)

Potassium thorium hydrogen nitrate, 3KNO_3 , $\text{Th}(\text{NO}_3)_4$, 3HNO_3 .

Decomp. in the air. (Meyer, B. 1900, 33. 2140.)

$+4\text{H}_2\text{O}$. Sol. in HNO_3 of 1.2 sp. gr. Effloresces in the air. (Meyer, Z. anorg. 1901, 27. 380.)

Potassium uranyl nitrate, $\text{K}(\text{UO}_2)(\text{NO}_3)_3$.

Decomp. by H_2O . Sol. in conc. HNO_3 . (Meyer, B. 1903, 36. 4057.)

Solubility in H_2O at t° .

t°	In 100 pts. of the solution			Solid phase
	Pts by wt. UO_2	Pts by wt. K	Pts by wt. NO_3	
0.5	31.98	1.72	..	Double salt + KNO_3
13.0	33.40	2.74	..	"
25.0 a)	37.08	4.05	23.49	"
b)	37.06	3.98	23.46	"
45.0	42.18	5.16	..	"
59.0	41.65	6.03	..	"
80.6 a)	43.72	6.42	..	Double salt
b)	43.70	6.34	..	"

Potassium uranyl nitrate is decomp. by H_2O at temp. below 60° ; above 60° it is sol. in H_2O without decomp.

(Rimbach, B. 1904, 37. 473.)

Potassium nitrate barium sulphate, KNO_3 , 2BaSO_4 .

Easily decomp. Sol. in conc. H_2SO_4 (Silberberger, M. 1904, 25. 251.)

Potassium nitrate phosphomolybdate.

See Phosphomolybdate nitrate, potassium.

Potassium nitrate sulphate, KNO_3 , KHSO_4 .

Decomp. by H_2O and alcohol. (Jacquelain.)

Potassium nitrate sulphotungstate, 2KNO_3 , K_2WS_4 (?)

Very sol. in hot or cold H_2O . Insol. in alcohol. (Berzelius.)

Potassium nitrate tungstate (?).

100 pts. boiling H_2O dissolve 5 pts. salt. (Storer's Dict., p. 393.)

Potassium nitrate zinc iodide.

Permanent. Easily sol. in H_2O . Insol. in alcohol. (Anthon)

Praseodymium nitrate, $\text{Pr}(\text{NO}_3)_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (von Schule, Z. anorg. 1898, 18. 355.)

Praseodymium rubidium nitrate,

$[\text{Pr}(\text{NO}_3)_3]\text{Rb}_2 + 4\text{H}_2\text{O}$.

Hydroscopic. (Jantsch, Z. anorg. 1911, 69. 230.)

Praseodymium sodium nitrate, $\text{Pr}(\text{NO}_3)_3$, $2\text{NaNO}_3 + \text{H}_2\text{O}$.

Sol. in H_2O . (von Schule, Z. anorg. 1898, 18. 356.)

Praseodymium zinc nitrate, $2\text{Pr}(\text{NO}_3)_3$, $3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 14.69 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 321.)

Radium nitrate.

Has apparently the same solubility in H_2O as the corresponding Ba comp. (Curie, Disert. 1903.)

Rhodium nitrate, $\text{Rh}(\text{NO}_3)_3 + 2\text{H}_2\text{O}$ (?).

Deliquescent. Sol. in H_2O . Insol. in alcohol. (Claus.)

Rhodium uranyl nitrate, $2(\text{UO}_2)(\text{NO}_3)_2 \cdot \text{Rh}_2(\text{NO}_3)_6 + 10\text{H}_2\text{O}$.

Sol. in H_2O and acids; insol. in aq. alkalis. (Lancien, C. C. 1912, I. 208.)

Rubidium nitrate, RbNO_3 .

100 pts. H_2O dissolve 20.1 pts. at 0° ; 43.5 pts. at 10° . (Bunsen.)

Solubility in H_2O at t° .

t°	G PbNO_3 per 100 g		t°	G RbNO_3 per 100 g	
	H_2O	Solu- tion		H_2O	Solu- tion
0	19.5	16.3	60	200	66.7
10	33.0	24.8	70	251	71.5
20	53.3	34.6	80	309	75.6
30	81.3	44.8	90	375	78.9
40	116.7	53.9	100	452	81.9
50	155.6	60.9	118.3	617	86.1

(Berkeley, Trans. Roy. Soc. 1904, 203. A. 207.)

100 g. H_2O dissolve 66.855 g. RbNO_3 at 25° . (Haigh, J. Am. Chem. Soc. 1912, 34. 1148.)

Sp. gr. $20^\circ/4^\circ$ of a normal solution of RbNO_3 = 1.100835; of a 0.5 normal solution = 1.04989. (Haigh, J. Am. Chem. Soc. 1912, 34. 1151.)

Sp. gr. of $\text{RbNO}_3 + \text{Aq}$.

G.-equiv. RbNO_3 per l.

at 18° =	0.5035	1.008
Sp. gr. at $6^\circ/6^\circ$	1.05342	1.10566
Sp. gr. at $18^\circ/18^\circ$	1.05228	1.10361
Sp. gr. at $30^\circ/30^\circ$	1.05156	1.10222

G.-equiv. RbNO_3 per l.

at 18° =	2.000	2.685
Sp. gr. at $6^\circ/6^\circ$	1.20655	
Sp. gr. at $18^\circ/18^\circ$	1.20302	1.27066
Sp. gr. at $30^\circ/30^\circ$	1.20036	1.26717

(Clausen, W. Ann. 1914, (4) 44. 1069.)

Easily sol. in HNO_3 . (Schultz, Zeit. Ch. (2) 5. 531.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Rubidium hydrogen nitrate, RbNO_3 , HNO_3 .

Fairly stable in air. (Wells, Am. Ch. J. 1901, 26. 273.)

Rubidium dihydrogen nitrate, RbNO_3 , 2HNO_3 .

Decomp. rapidly in air. (Wells, Am. Ch. J. 1901, 26. 273.)

2RbNO_3 , 5HNO_3 . Decomp. by H_2O . Known only in solution in $\text{HNO}_3 + \text{Aq}$. (Ditte, A. ch. (5) 18. 320.)

Rubidium silver nitrate, RbNO_3 , AgNO_3 .

Sol. in H_2O . (Russell and Maskelyne, Roy. Soc. Proc. 26. 357.)

Rubidium thorium nitrate, $\text{Rb}_2\text{Th}(\text{NO}_3)_6$.

Sl. sol. in HNO_3 ; decomp. by H_2O . (Meyer, Z. anorg. 1901, 27. 384.)

Rubidium uranyl nitrate, $\text{Rb}(\text{UO}_2)(\text{NO}_3)_2$.

Decomp by H_2O . Sol. in conc. HNO_3 (Meyer, B. 1903, 36. 4057.)

Solubility of H_2O at t° .

t°	In 100 pts of the solution				Solid phase
	Pts by wt UO_2	Pts by wt NO_3	Pts by wt Rb	Pts by wt total salt	
25	a) 35.42	19.72	4.63	59.57	Double salt + RbNO_3
"	b) 35.40	19.76	4.67	59.64	"
80	a) 34.64	11.01	69.46	11.01	Double salt
"	b) 34.68	11.01	69.52	11.01	"

Rubidium uranyl nitrate is decomp. by H_2O at low temp.; at 80° it is sol. in H_2O without decomp.

(Rumbach, B. 1904, 37. 476)

Samarium nitrate, $\text{Sm}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve, C. N. 48. 74.)
Very hygroscopic. (Demarçay, C. R. 1900, 130. 1187.)

Samarium zinc nitrate, $2\text{Sm}(\text{NO}_3)_3 \cdot 3\text{Zn}(\text{NO}_3)_2 \cdot 24\text{H}_2\text{O}$.

1 l. sat. solution in $\text{HNO}_3 + \text{Aq}$ (sp. gr. 1.325) contains 36.47 g. hydrous salt at 16° . (Jantsch, Z. anorg. 1912, 76. 321.)

Scandium nitrate, basic.

Sol. in H_2O . (Nilson, B. 13. 1444.)
 $\text{ScOH}(\text{NO}_3)_2 + \text{H}_2\text{O}$. (Crookes, Roy. Soc. Proc. 1908, 80. A. 518.)
 $\text{Sc}_2\text{O}(\text{NO}_3)_4$. (Crookes.)

Scandium nitrate, $\text{Sc}(\text{NO}_3)_3$.

(Crookes, Roy. Soc. Proc. 1908, 80. A. 518.)
 $+4\text{H}_2\text{O}$. Very sol. in H_2O . (Crookes.)

Silver nitrate, AgNO_3 .

100 pts. H_2O at 11° dissolve 127.7 pts. (Schnauss, Arch. Pharm. (2) 82. 260.)

100 pts. H_2O dissolve at:

0°	19.5°	54°	85°	110°
121.9	227.3	500	714	1111 pts. AgNO_3 .

(Kremers, Pogg. 92. 497.)

100 pts. H_2O dissolve 1622.5 pts. at 125° , and 1941.4 pts. at 133° . (Tilden and Shennstone, Phil. Trans. 1884. 23.)

Sat. solution boils at 125° . (Kremers.)

Solubility in H_2O at t° .

Sat. $\text{AgNO}_3 + \text{Aq}$ contains % AgNO_3 at t° .

t°	% AgNO_3	t°	% AgNO_3
-7°	46.2	36.5°	75.7
-7°	46.0	40.5°	76.8
-5°	47.6	45°	77.1
-1°	52.4	48°	78.5
-1°	51.9	73°	84.0

10	61.2	134°	92.1
15.5	66.1	135°	92.8
20	67.8	135°	92.7
26	71.1	148°	93.3
29	73.0	160°	95.2
31	73.8	182°	96.9

(Étard, A. ch. 1894, (7) 2. 526.)

100 g. sat. $\text{AgNO}_3 + \text{Aq}$ at 15.5° contain 65.5 g. AgNO_3 . (Greenish and Smith, Pharm. Jour. 1903, 71. 881.)

Solubility of AgNO_3 in H_2O at $30^\circ = 10.31$ mol.-litre. (Masson, Chem. Soc. 1911, 99. 1136.)

100 g. $\text{AgNO}_3 + \text{Aq}$ sat. at 30° contain 73.0 g. AgNO_3 . (Schreinemakers and de Baat, Arch. Néer. Sc. 1911, (2) 15. 415.)

100 g. sat. $\text{AgNO}_3 + \text{Aq}$ contain 53.5 g. AgNO_3 at 0° ; 66.7 g. at 18° . (Mylius, Z. anorg. 1912, 74. 411.)

Sp. gr. of aqueous solution, according to C. K. = Chemiker Kalender; K. M. = Kohlrausch by Mendeleeff (Z. anal. 27. 284); and K. = Kohlrausch (W. Ann. 1879. 1), containing:

	5	10	15	20% AgNO_3
C. K.	1.041	1.080	1.125	1.160
K. M.	1.0440	1.0901	..	1.1969
K.	1.0422	1.0893	1.1404	1.1958

	25	30	35	40% AgNO_3
C. K.	1.206	1.251
K. M.	1.4791
K.	1.2555	1.3213	1.3945	1.4773

	45	50% AgNO_3
K.	1.5705	1.6745

Sp. gr. of $\text{AgNO}_3 + \text{Aq}$ at 25° .

Concentration of AgNO_3	Sp. gr
1-normal	1.1386
$\frac{1}{2}$ -normal	1.0692
$\frac{1}{4}$ -normal	1.0348
$\frac{1}{8}$ -normal	1.0173

(Wagner, Z. phys. Ch. 1890, 5. 40.)

Sol. in 500 pts. HNO_3 ; 30 pts. 2HNO_3 , $3\text{H}_2\text{O}$ at 20° ; and 6 pts. 2HNO_3 , $3\text{H}_2\text{O}$ at 100° . (Schultz, Zeit. Ch. 1869. 531.)

Insol. in conc. HNO_3 . (Warren, C. C. 1897. I, 438.)

Solubility of AgNO_3 in $\text{HNO}_3 + \text{Aq}$ at 25° .

G mol per l		G AgNO_3 per l	Sp gr 25°

27.91	44.54	27.55
20.92	64.42	14.66
6.83	86.54	6.63

(Schreinemakers, Z. phys. Ch. 1909, 65. 571.)

Solubility of $\text{AgNO}_3 + \text{KNO}_3$ in alcohol. See under KNO_3 .

Sol. in methyl, ethyl, and isobutyl alcohols, CCl_4 , CHCl_3 , acetone and pyridine. (Wilcox, J. phys. Chem. 1910, 14. 587.)

100 pts. H_2O sat. with ether dissolve 88.4 pts. AgNO_3 at 15° . (Eder, l. c.)

Sol. in glycerine.

Sol. in benzonitrile. 100 g. benzonitrile dissolve about 105 g. AgNO_3 at 18° . (Naumann and Schier, B. 1914, 47. 1369.)

1 pt. acetonitrile dissolves about 1.5 pts. AgNO_3 . (Scholl and Steinkopf, B. 1906, 39. 4398.)

Easily sol. in methyl, ethyl, and amyl amine. (Shinn, J. phys. Chem. 1907, 11. 538.)

Sol. in acetone. (Krug and McElroy, J. Anal. Ch. 6. 184.)

0.35 pts. are sol. in 100 pts. acetone at 14° .

0.35 " " " 100 " " 59°.

(Laszyński, B. 1894, 27. 2287.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

1 g. AgNO_3 is sol. in 227 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 0.798$. (Naumann, B. 1904, 37. 4339.)

Insol. in CS_2 . (Arctowski, Z. anorg. 1894, 6. 257.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Sol. in urethane. (Castoro, Z. anorg. 1899, 20. 61.)

100 g. C_6H_6 dissolve 0.022 g. AgNO_3 at 35° ; 0.044 g. at 40.5° . (Linebarger, Am. J. Sci. 1895, 49. 48.)

Mol. weight determined in piperidine, pyridine and benzonitrile. (Werner, Z. anorg. 1897, 15. pp. 17, 23 and 32.)

Solubility of AgNO_3 in pyridine at t° .

* M. pt.

(Kahlenberg and Brewer, J. phys. Ch. 1908, 12. 283.)

Silver nitrate acetylide, $\text{AgNO}_3, \text{AgHC}_2$.

(Willgerodt, B. 1895, 23. 2108.)

 $\text{AgNO}_3, \text{Ag}_2\text{C}_2$. Ppt. (Chavastelon, C. R. 1897, 124. 1365.) $2\text{AgNO}_3, \text{Ag}_2\text{C}_2$. (Chavastelon.)Silver nitrate ammonia, $\text{AgNO}_3, \text{NH}_3$.Partly sol. in H_2O ; rather sol. in alcohol. Sl. sol. in ether. (Reychler, B. 16. 990.)Very sol. in liquid ammonia below -10° . (Joannis, C. R. 1894, 118. 1151.) $\text{AgNO}_3, 2\text{NH}_3$. Easily sol. in H_2O . (Mitscherlich.)

1 l. alcohol dissolves 0.0383 g. mols. (Kuri-low, C. C. 1903, II, 97.)

 $\text{AgNO}_3, 3\text{NH}_3$. Completely sol. in H_2O . (Rose, Pogg. 20. 153.)Silver nitrate antimonide, $\text{AgNO}_3, \text{Ag}_3\text{Sb}$.Decomp. at once by H_2O . (Poleck and Thummel, B. 16. 2435.)Silver nitrate arsenide, $\text{AgNO}_3, \text{Ag}_3\text{As}$.Decomp. at once by H_2O . (Poleck and Thummel.)Silver nitrate bromide, $\text{AgNO}_3, \text{AgBr}$.Decomp. immediately by H_2O or alcohol, with separation of AgBr . (Risse, A. 111. 39.)Silver nitrate chloride, $\text{AgNO}_3, \text{AgCl}$.Quickly decomp. with H_2O ; more slowly with absolute alcohol; not decomp. by ether-alcohol. (Reichert, J. pr. 92. 237.)Silver nitrate cyanide, $2\text{AgNO}_3, \text{AgCN}$.Decomp. by H_2O , not by alcohol. (Hellwig, Z. anorg. 1900, 25. 177.)Silver nitrate iodide, $\text{AgNO}_3, \text{AgI}$.Cold H_2O separates AgI , which redissolves on heating. (Sturenberg, Arch. Pharm. (2) 143. 12.) Sol. in little H_2O without decomp.; more H_2O separates AgI . (Kremers, J. pr. 71. 54.) Insol. in absolute alcohol. Sol. in conc. $\text{AgNO}_3 + \text{Aq}$. $2\text{AgNO}_3, \text{AgI}$. Sol. in little but decomp. by more boiling H_2O . (Risse, A. 111. 39.)Silver nitrate mercuric oxide, $\text{AgNO}_3, 2\text{HgO}$.Decomp. by H_2O . Sol. in HNO_3 and H_2SO_4 . (Finci, Gazz. ch. it. 1910, 41. (2) 548.)Silver nitrate phosphide, $3\text{AgNO}_3, \text{Ag}_3\text{P}$.

(Warren, C. N. 56. 113.)

Silver nitrate silicide, $4\text{AgNO}_3, \text{AgSi}$.

(Büchner, Ch. Ztg. 9. 484.)

Silver nitrate silicate, $2\text{AgNO}_3, 3\text{Ag}_2\text{SiO}_4$.Sol. in dil. $\text{HNO}_3 + \text{Aq}$, but SiO_2 separates out after heating. (Rousseau and Tite, C. R. 114. 294.)Silver nitrate sulphide, $\text{AgNO}_3, \text{Ag}_2\text{S}$.Decomp. by H_2O . (Poleck and Thummel, B. 16. 2435.)Silver nitrate sulphocyanide, $2\text{AgNO}_3, \text{AgSCN}$.Decomp. by H_2O , not by alcohol. (Hellwig, Z. anorg. 1900, 25. 178.)Sodium nitrate, NaNO_3 .Deliquescent in moist air. Sol. in H_2O with absorption of heat. 75 pts. NaNO_3 mixed with 100 pts. H_2O at 13.2° lower the temperature 18.5° . (Rüdorff, B. 2. 68.)

Sol. in 1.58 pts. H_2O at -6° .		
" 0.46 " " $+119^\circ$.	}	(Marx)
" 2.89 " " 2° .		
" 1.12 " " 28° .		(Osann.)

20.00	30.26	1.276
15.32	36.09	1.276
10.97	44.76	1.291

(Engel, C. R. 1887, 104. 911.)

Solubility of NaNO_3 in $\text{NH}_4\text{OH} + \text{Aq}$ at 15° .

G per 100 g H_2O		Sp gr
NH_4	NaNO_3	
13.87	75.03	1.253
17.28	73.99	1.233
20.38	73.18	1.212

(Fedotieff and Koltunoff, Z. anorg. 1914, 85. 251.)

$\text{NaNO}_3 + \text{Na}_2\text{CO}_3$. (See Na_2CO_3 .)

Sol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$.

Very rapidly sol. in sat. $\text{BaCl}_2 + \text{Aq}$ with pptn. of $\text{Ba}(\text{NO}_3)_2$.

Sol. in sat. $\text{KCl} + \text{Aq}$, with formation of KNO_3 .

Sol. in sat. $\text{NH}_4\text{NO}_3 + \text{Aq}$. (See NH_4NO_3 .)

Sol. in sat. $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$, with partial pptn. of $\text{Ba}(\text{NO}_3)_2$. (See $\text{Ba}(\text{NO}_3)_2$.)

Sol. in sat. $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$, with subsequent pptn. of $\text{Pb}(\text{NO}_3)_2$. (See $\text{Pb}(\text{NO}_3)_2$.)

$\text{NaNO}_3 + \text{KNO}_3$.

Sol. in sat. $\text{KNO}_3 + \text{Aq}$; solution thus made at 18° contains 54.33% mixed salt, or 100 pts. H_2O dissolve 118.98 pts. mixed salt, viz 89.53 pts. NaNO_3 and 29.45 pts. KNO_3 . (See KNO_3 .)

$\text{NaNO}_3 + \text{Sr}(\text{NO}_3)_2$.

If $\text{Sr}(\text{NO}_3)_2 + \text{Aq}$ sat. at 14.5° is sat. with NaNO_3 , 100 pts. H_2O dissolve:

NaNO_3	83.7	66.4
$\text{Sr}(\text{NO}_3)_2$...	51.0	62.0
		117.4	

(Mulder.)

$\text{NaNO}_3 + \text{NaNO}_2$. See under NaNO_2 .

$\text{NaNO}_3 + \text{NaCl}$

100 pts. H_2O dissolve 24.91 pts. $\text{NaCl} + 54.55$ pts. NaNO_3 = 79.46 pts. of the two salts at 20° . (Nicol, Phil. Mag. (5) 31. 386.)

100 pts. H_2O dissolve at 18.75° :

	1	2	3	4	5	6
NaCl	36	25.22	24.96	24.98	24.6
NaNO_3	..	52.89	52.84	52.82	86.6	56.8

2. Sat. $\text{NaCl} + \text{Aq}$ treated with NaNO_3 .

3. Sat. $\text{NaNO}_3 + \text{Aq}$ treated with NaCl .

4. Simultaneous treatment of the two salts by H_2O . (Karsten.)

6. Excess of both salts + Aq warmed and cooled to 20° . (Rudorff, B. 6. 484.)

Solubility of NaCl with addition of NaNO₃ at 15.5°.

$\text{Sr}(\text{NO}_3)_2$ is the solid phase in the solutions which are rich in alcohol; $\text{Sr}(\text{NO}_3)_2 + 4\text{H}_2\text{O}$ in

the solutions which contain small amounts of alcohol.

(D'Ans and Siegler, Z. phys. Ch. 1913, 82. 39.)

Not completely insol. in boiling amyl alcohol, 30 ccm. dissolving about 1 mg. (Browning, Sill. Am. J. 143. 52.)

Perfectly anhydrous $\text{Sr}(\text{NO}_3)_2$ is sol. in 830.44 pts. absolute ether-alcohol (1:1). (Fresenius, Z. anal. 32. 190.)

Solubility in organic solvents.

Solvent	% $\text{Sr}(\text{NO}_3)_2$ in the solution at 25°
Methyl alcohol	1.26
Ethyl alcohol	0.02
Propyl alcohol	0.02
Isobutyl alcohol	0.01
Amyl alcohol	0.003
Acetone	0.02

(D'Ans and Siegler, Z. phys. Ch. 1913, 82. 44.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

The composition of the hydrates formed by $\text{Sr}(\text{NO}_3)_2$ at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by $\text{Sr}(\text{NO}_3)_2$ and of the conductivity and sp. gr. of $\text{Sr}(\text{NO}_3)_2 + \text{Aq}$. (Jones, Am. Ch. J. 1905, 34. 305.)

+ $4\text{H}_2\text{O}$. Efflorescent.

Solubility in ethyl alcohol + Aq at 25°.

% $\text{C}_2\text{H}_5\text{OH}$ in the solvent	% $\text{C}_2\text{H}_5\text{OH}$ in the solution	% $\text{Sr}(\text{NO}_3)_2$ in the solution

(D'Ans and Siegler, Z. phys. Ch. 1913, 82. 39.)

Tellurium nitrate, basic, $4\text{TeO}_2, \text{N}_2\text{O}_5 + 1\frac{1}{2}\text{H}_2\text{O}$.

Very hygroscopic. Easily decomp. by H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$, but more sol. when dil. than conc. (Klein and Morel, Bull. Soc. (2) 43. 205.)

Tellurium nitrate, TeNO_3 .

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014.)

Terbium nitrate, $\text{Tb}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$.

Sol. in H_2O . Sol. in alcohol. (Urhain, C. R. 1908, 146. 128.)

Thallous nitrate, TlNO_3 .

1 pt. TlNO_3 dissolves, according to C = Crookes; L = Lamy:

at 15°	18°	58°	107°
in 9.4	10.3	2.3	0.17 pts. H_2O .
C	L	L	L

Sat. TlNO_3 + Aq contains at:

3.5°	18°	32°	58°	95°

$\frac{1}{5}$ - " "	1.0283

(Wagner, Z. phys. Ch. 1890, 5. 40.)

Solubility of TlNO_3 + KNO_3 . (See KNO_3 .)

Insol. in alcohol. (Lamy.)

Sol. in acetone. (Eidmann, Dissert. 1899; Naumann, B. 1904, 37. 4328.)

Thallous hydrogen nitrate, $\text{TlNO}_3 \cdot 2\text{HNO}_3$.

(Wells, Am. Ch. J. 1901, 26. 273.)

$\text{TlNO}_3 \cdot 3\text{HNO}_3$. (Ditte.)

Thallic nitrate, $\text{Tl}(\text{NO}_3)_3 \cdot 3\text{H}_2\text{O}$.

Effloresces in the air. (Meyer, Z. anorg. 1900, 24. 361.)

+ $6\text{H}_2\text{O}$, or $8\text{H}_2\text{O}$. Deliquescent. Sol. in H_2O .

Thalious thallic nitrate, $2\text{TlNO}_3 \cdot \text{Tl}(\text{NO}_3)_3$.

Decomp. by H_2O . (Wells, Am. Ch. J. 1901, 26. 278.)

Thalious uranyl nitrate, $\text{Tl}(\text{UO}_2)(\text{NO}_3)_3$.

Decomp. in moist air. Decomp. by H_2O . (Meyer, B. 1903, 36. 4058.)

Thorium nitrate, $\text{ThO}_2 \cdot 2\text{N}_2\text{O}_5 + 6\text{H}_2\text{O}$.

Crystallized. Sl. hygroscopic. (Fukse, Zeit. angew. Ch. 1897, 10. 116.)

+ $12\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O and alcohol.

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Thorium zinc nitrate, $\text{ZnTh}(\text{NO}_3)_6 \cdot 8\text{H}_2\text{O}$.

Sol. in HNO_3 ; very hygroscopic. (Meyer, Z. anorg. 1901, 27. 386.)

Thulium nitrate, $\text{Tm}_2(\text{NO}_3)_6 \cdot 8\text{H}_2\text{O}$.

Deliquescent. Can readily be cryst. from HNO_3 . (James, J. Am. Chem. Soc. 1911, 33. 1344.)

Tin (stannous) nitrate, basic, $2\text{SnO} \cdot \text{N}_2\text{O}_5$.

Difficultly sol. with partial decomp. in H_2O . (Weber, J. pr. (2), 26. 121.)

Tin (stannous) nitrate, $\text{Sn}(\text{NO}_3)_2 \cdot 20\text{H}_2\text{O}$.

Deliquescent, and easily decomp. (Weber, J. pr. (2) 26. 121.)

Tin (stannic) nitrate, basic, $4\text{SnO}_2 \cdot \text{N}_2\text{O}_5 + 4\text{H}_2\text{O}$.

(Thomas, Bull. Soc. 1896 (3) 15. 312.)

Tin (stannic) nitrate, $\text{Sn}(\text{NO}_3)_4$.

Sol. in H_2O , but decomp. very soon on standing. Stable in presence of conc. HNO_3 + Aq at 90°, but decomp. at 100°. (Monte-martini, Gazz. ch. it. 22. 384.)

Insol. in moderately conc. HNO_3 ; readily decomp. by H_2O . (Engel, C. R. 1897, 125. 710.)

Titanium nitrate, $5\text{TiO}_2 \cdot \text{N}_2\text{O}_5 + 6\text{H}_2\text{O}$.

Sol. to a slight milkiness in cold H_2O . Decomp. on boiling. (Merz, J. pr. 99. 157.)

Uranyl nitrate, basic.

Sol. in H_2O . (Ordway, Sill. Am. J. (2) 26. 209.)

Uranyl nitrate, $\text{UO}_2(\text{NO}_3)_2$.

+ H_2O . (de Forcrand, C. R. 1913, 156. 1046.)

Sol. in fuming HNO_3 from which it can be cryst.

+ $2\text{H}_2\text{O}$. 52.39% is sol. in dry ether at 7°.

54.25% " " " " " " 10°.

(Lebeau, Bull. Soc. 1911, (4) 9. 300.)

+2H₂O. (Vasilieff, C. C. 1910, II. 1527.)
 +3H₂O. Mpt. 121.5°. (Vasilieff.)
 Cryst. out of hot HNO₃+Aq. (Ditte.)
 100 pts. HNO₃ dissolve 39 pts. at 14°. (Ditte, A. ch. 1879, (5) 18. 337.)
 +4H₂O. (de Coninck, C. C. 1901, I. 1354.)
 +6H₂O. Deliquescent in moist, and efflorescent in dry air. Sol. in 0.5 pt. cold H₂O, in 0.3 pt. absolute alcohol, and in 4.0 pts. ether. (Bucholz.)
 Melts in crystal H₂O at 59.4°. (Ordway.)
 1 pt. is sol. in 2 pts. H₂O at 12.9°–14.2°. (de Coninck, C. R. 1900, 131. 1220.)
 Solubility in H₂O at t°.

11.7	5	0.9131	1.0280

(de Coninck, C. R. 1900, 131. 1219.)

Sp. gr. of solution in acetic acid (d=1.055) at t°.

d₁=sp. gr. referred to H₂O.

d₂=sp. gr. referred to acetic acid.

t°	% salt	d ₁	d ₂
14.0	1	1.0387	1.0034
13.8	2	1.0434	1.0080
14.8	3	1.0469	1.0100
16.9	4	1.0505	1.0148
14.6	5	1.0564	1.0205
10.4	6	1.0626	1.0265
11.7	7	1.0682	1.0300

(de Coninck, C. R. 1900, 131. 1304.)

When excess of UO₂(NO₃)₂ is shaken with ether at 7°, two layers are formed, the ether layer containing 59 g. salt per 100 g. solution and the aqueous layer 62.5 g. salt per 100 g. solution. (Lebeau, C. R. 1911, 152. 440.)

Sol. in nearly all proportions in glycerine. (Postans, Pharm. J. 1883, (3) 13. 752.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014; Naumann, B. 1904, 37. 4328.)

+18H₂O. Sat. aq. solution has D₁₇¹⁷=1.7536. (Vasilieff, J. Russ. phys. Chem. Soc. 1911, 43. 1183.)

Uranyl nitrate ammonia, (UO₂)(NO₃)₂, 2NH₃.

(v. Unruh, Dissert. 1909.)

(UO₂)(NO₃)₂, 3NH₃. (v. Unruh.)

(UO₂)(NO₃)₂, 4NH₃. (v. Unruh.)

Uranyl nitrate phosphate, UO₂H₄(PO₄)₂, UO₂(NO₃)₂+14H₂O.

Easily sol. in warm H₂O, with gradual decomp. Easily sol. in HNO₃, HCl, or H₂SO₄+Aq. Sol. in acetic acid with decomp. (Heintz, A. 151. 216.)

Divanadyl nitrate (?).

Known only in solution. Decomp. on evaporation.

Ytterbium nitrate, basic.

Easily sol. in H₂O.

Ytterbium nitrate.

Very sol. in H₂O.

+3H₂O. Ppt. (Cleve, Z. anorg. 1902, 32. 140.)

+4H₂O. (Cleve.)

Yttrium nitrate, basic, 2Y₂O₃, 3N₂O₅+9H₂O.

Deliquescent in moist air. Decomp. by cold or boiling H₂O. Sol. in a solution of yttrium nitrate without decomp. (Bahr and Bunsen, A. 137. 1.)

Yttrium nitrate, Y(NO₃)₃+6H₂O.

Easily sol. in H₂O, alcohol, or ether. (Cleve.)

141.6 grams are sol. in 100 grams H₂O at 25°. (James, J. Am. Chem. Soc. 1910, 32. 876.)

Zinc nitrate, basic, SZnO, N₂O₅+2H₂O.

Insol. in H₂O. (Grouvelle, A. ch. 19. 137.)

6ZnO, N₂O₅+8H₂O=Zn(NO₃)₂, 5Zn(OH)₂+3H₂O. (Bertels, J. B. 1784. 274.)

5ZnO, N₂O₅+5½H₂O. Insol. in cold, somewhat sol. in hot H₂O. (Havermann.)

+6H₂O. Slowly decomp. by cold H₂O. (Rousseau and Tite)

9ZnO, 2N₂O₅. Decomp. by H₂O. (Vogel and Reischauer, N. Jahrb. Pharm. 11. 137.)

4ZnO, N₂O₅+2H₂O. (Schindler.)

+3H₂O. (Ordway, Sill. Am. J. (2) 32. 14; Gerhardt, J. Pharm. (3) 12. 61.)

Insol. in H₂O; sol. in dil. acids (Athanasesco, Bull. Soc. 1896, 15. 1080)

2ZnO, N₂O₅+3H₂O. Decomp. by H₂O, and slowly by alcohol. (Wells, Am. Ch. J. 9. 304.)

7ZnO, 4N₂O₅+14H₂O=4Zn(NO₃)₂, 3Zn(OH)₂+11H₂O. (Bertels.)

Zinc nitrate, Zn(NO₃)₂.

Very deliquescent. Easily sol. in H₂O or alcohol.

Sp. gr. of Zn(NO₃)₂+Aq. F.=according to Franz (J. pr. (2) 5. 274) at 17.5°; O.=according to Oudemans (Z. anal. 7. 410) at 14°:

	5	10	15% Zn(NO ₃) ₂
F.	1.0496	1.0968	1.1476
O.	1.0425	1.087	1.1355

	20	25	30% Zn(NO ₃) ₂
F.	1.2024	1.2640	1.3268
O.	1.1875	1.245	1.305

	35	40	45	50% Zn(NO ₃) ₂
F.	1.906	1.4572	1.5258	1.5984
O.

Calculated for Zn(NO₃)₂+6H₂O:

	10	20	30	40	50% salt.
	1.05361	1.1131	1.1782	1.2496	1.3292

(Oudemans.)

Zn(NO₃)₂+Aq when heated soon decomposes, with formation of an insol. basic salt. (Ordway.)

Sp. gr. of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$ at room temp. containing:

15 955 30 626 44 5% $\text{Zn}(\text{NO}_3)_2$.
1.1155 1 2291 1.4367

(Wagner, W. Ann. 1883, 18. 270.)

Sp. gr. of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$ at 25°.

Concentration of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$	Sp gr
1-normal	1.0758
$\frac{1}{2}$ " "	1.0404
$\frac{1}{4}$ " "	1.0191
$\frac{1}{8}$ " "	1.0096

(Wagner, Z. phys. Ch. 1890, 5. 40.)

Sp. gr. of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$ at 16°.

$\frac{1}{2}$ $\text{Zn}(\text{NO}_3)_2$ g per 1000 g of solution	Sp gr 16°/16°
0.0000	1.000000
0.9950	1.000814
2.0061	1.001646
4.1535	1.003413
8.1824	1.006733
17.7760	1.014702
34.5920	1.028890
68.6780	1.058644

(Dijken, Z. phys. Ch. 1897, 24. 108.)

Sp. gr. of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$ at 17.3°, when p = per cent strength of solution; d = observed density; w = volume conc. in grams per cc.

$$\left(\frac{pd}{100} = w.\right)$$

p	d	w
47 28	1.5504	0.73310
41.32	1.4579	0.60240

1 210	1.0087	0.01221

(Barnes, J. Phys. Chem. 1898, 2. 545.)

Very easily sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)

+ $\frac{1}{2}\text{H}_2\text{O}$. 100 pts. HNO_3 dissolve 28 pts. at 13°; 55 pts. at 55°. (Ditte, A. ch. 1879, (5) 18. 335.)

+ $2\text{H}_2\text{O}$. (Vasilieff, C. C. 1909, II 1966.)

+ $3\text{H}_2\text{O}$.

Solubility in H_2O .

Sat. solution contains at:

37° 40° 41° 43° 45.5° mpt.
66.38 67.42 68 21 69.26 77.77% $\text{Zn}(\text{NO}_3)_2$.

(Funk, Z. anorg. 1899, 20. 401.)

+ $6\text{H}_2\text{O}$.

Solubility in H_2O .

Sat. solution contains at.

—18° —15° —13° —12°
44 63 45.26 45 51 45.75% $\text{Zn}(\text{NO}_3)_2$,

0° +12 5° 18° 25°
48 66 52.00 53 50 55 90% $\text{Zn}(\text{NO}_3)_2$,

36 4° (mpt.) 36° 33 5°
63 63 64 73 65.83% $\text{Zn}(\text{NO}_3)_2$.

(Funk, Z. anorg 1899, 20. 400.)

100 g. $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$ sat. at 0° contain 48.7 g. $\text{Zn}(\text{NO}_3)_2$; at 18°, 53.5 g. $\text{Zn}(\text{NO}_3)_2$. (Mylius, Z. anorg. 1910, 74. 411.)

Melts in its crystal H_2O at 36.4° (Ordway), 50° (Pierre); boils at 131° (Ordway).

Sp. gr. of solution sat. at 18° = 1.664, and contains 53.9% $\text{Zn}(\text{NO}_3)_2$. (Mylius, B. 1897, 30. 1718.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790), ethyl acetate. (Naumann, B. 1910, 43. 314.)

+ $9\text{H}_2\text{O}$.

Solubility in H_2O .

Sat. solution contains at:

—25° —22.5° —20° —18°
40 12 40.75 42.03 43.59% $\text{Zn}(\text{NO}_3)_2$.

Cryohydrate is formed at —29°.

(Funk, Z. anorg. 1899, 20. 401.)

Zinc nitrate ammonia, $\text{Zn}(\text{NO}_3)_2, 4\text{NH}_3$.

Ppt. (Ephraim, B. 1915, 48. 638.)

+ $\frac{2}{3}\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (André, C. R. 100. 639.)

$13\text{ZnO}, 3\text{N}_2\text{O}_5, 2\text{NH}_3 + 18\text{H}_2\text{O}$.

Insol. in cold, decomp. by warm H_2O . (André, C. R. 1885, 100. 640.)

Zinc nitrate cupric oxide,

$\text{Zn}(\text{NO}_3)_2, 3\text{CuO} + 3\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) 27. 169.)

Zinc nitrate hydrazine, $\text{Zn}(\text{NO}_3)_2, 3\text{N}_2\text{H}_4$.

Decomp. by hot H_2O .

Sol. in NH_4OH . (Franzen, Z. anorg. 1908, 60. 279.)

Zirconium nitrate, basic, $3\text{ZrO}_2, 2\text{N}_2\text{O}_5$.

Insol. in H_2O .

$\text{ZrO}_2, \text{N}_2\text{O}_5$. Easily sol. in H_2O and alcohol.

+ H_2O . As above.

Zirconium nitrate, $\text{Zr}(\text{NO}_3)_4 + 5\text{H}_2\text{O}$ (?).

Deliquescent, and sol. in H_2O .

Nitric oxide, NO .

See Nitrogen dioxide.

Nitrilobromosmic acid.

Ammonium nitrilopentabromosmate,
 $[\text{OsNBr}_5](\text{NH}_4)_2 + \text{H}_2\text{O}.$

Very sol. in H_2O . Decomp. in dil. aq. solution.

Stable in $\text{HBr} + \text{Aq}$

Insol. in organic solvents (Werner, B 1906, 39, 501.)

Cæsium hydrogen nitrilopentabromosmate,
 $[\text{OsNBr}_5]_2\text{Cs}_2\text{H}.$

Sl. sol. in H_2O . (Werner.)

Potassium nitrilotetrabromosmate,
 $[\text{OsNBr}_4]\text{K} + 2\text{H}_2\text{O}.$

Very sol. in H_2O . Decomp. in aq. solution. Stable in $\text{HBr} + \text{Aq}$. Insol. in organic solvents. (Werner.)

Rubidium nitrilopentabromosmate,
 $[\text{OsNBr}_5]\text{Rb}_2.$

Sol. in H_2O . Decomp. in dil. aq. solution after a short time. (Werner.)

Nitriochlorosmic acid.

Ammonium nitrilopentachlorosmate,
 $(\text{OsNCl}_5)(\text{NH}_4)_2.$

Sol. in H_2O ; insol. in conc. $\text{HCl} + \text{Aq}$. (Werner, B. 1901, 34, 2702.)

Cæsium nitrilopentachlorosmate,
 $(\text{OsNCl}_5)\text{Cs}_2.$

Sol. in H_2O . (Werner.)

Potassium nitrilopentachlorosmate,
 $(\text{OsNCl}_5)\text{K}_2.$

Sol. in H_2O ; pptd. by HCl ; insol. in organic solvents. (Werner.)

Rubidium nitrilopentachlorosmate,
 $(\text{OsNCl}_5)\text{Rb}_2.$

Sol. in H_2O ; decomp. in dil. neutral solution. (Werner.)

Nitrilotrimetaphosphoric acid, $\text{H}_2\text{NP}_3\text{O}_7 =$

Known only in solution. (Mente, A. 248, 260.)

Aluminum nitrilotrimetaphosphate.

Insol. in H_2O , conc. HCl , or $\text{HNO}_3 + \text{Aq}$. Slowly sol. in boiling conc. H_2SO_4 . Sol. in warm $\text{NaOH} + \text{Aq}$ or $\text{Na}_2\text{CO}_3 + \text{Aq}$ without decomp. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Mente.)

Barium —, $\text{BaNP}_3\text{O}_7.$

Insol. in dil. or conc. acids. Decomp. by boiling NaOH or $\text{Na}_2\text{CO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Mente.)

Cadmium nitrilotrimetaphosphate.

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$, or boiling $(\text{NH}_4)_2\text{CO}_3$, or $\text{NaOH} + \text{Aq}$. (Mente.)

Calcium —, $\text{CaNP}_3\text{O}_7 + \text{H}_2\text{O}.$

Sol. in conc. $\text{HCl} + \text{Aq}$ by long boiling, and more easily in fuming $\text{HNO}_3 + \text{Aq}$. Insol. in NH_4OH or $\text{NaOH} + \text{Aq}$. (Mente.)

Chromium —.

Slowly sol. in dil. acids. Easily sol. in ammonia. Sol. in cold $\text{NaOH} + \text{Aq}$. (Mente.)

Cobalt —, $\text{CoNP}_3\text{O}_7 + \text{H}_2\text{O}.$

Insol. in H_2O . Sl. sol. in dil. acids. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by NaOH or $\text{Na}_2\text{CO}_3 + \text{Aq}$. (Mente.)

Copper —.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by $\text{NaOH} + \text{Aq}$. (Mente.)

Ferric —, $\text{Fe}_2(\text{NP}_3\text{O}_7)_3.$

Insol. in conc. acids. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Decomp. by NaOH or $\text{Na}_2\text{CO}_3 + \text{Aq}$. (Mente.)

Lead —.

Insol. in dil. acids. Sol. in fuming HNO_3 . Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{NaOH} + \text{Aq}$. (Mente.)

Magnesium —, $\text{MgNP}_3\text{O}_7 + \text{H}_2\text{O}.$

Slowly sol. in $\text{HCl} + \text{Aq}$. Sol. in H_2SO_4 or fuming HNO_3 with addition of Br_2 . Insol. in NH_4OH or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Mente.)

Manganous —, $\text{MnNP}_3\text{O}_7 + \text{H}_2\text{O}.$

Insol. in dil. acids. Very sl. sol. in $\text{NaOH} + \text{Aq}$. Insol. in Na_2CO_3 or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Mente.)

Mercurous —, $\text{Hg}_2\text{NP}_3\text{O}_7.$

Insol. in dil. acids, NH_4OH , NaOH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Easily sol. in fuming HNO_3 . (Mente.)

Nickel —, $\text{NiNP}_3\text{O}_7 + \text{H}_2\text{O}.$

Insol. in dil. acids, NH_4OH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Mente.)

Zinc —, $\text{ZnNP}_3\text{O}_7 + 2\text{H}_2\text{O}.$

Easily sol. in NH_4OH , NaOH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Mente.)

Nitrirosulphonic acid, $\text{N}(\text{SO}_3\text{H})_3.$

Not known in free state. (Raschig, A. 241, 161.)

Potassium nitrirosulphonate, $\text{N}(\text{SO}_3\text{K})_3 + 2\text{H}_2\text{O}.$

Soluble in H_2O . (Raschig, A. 241, 161.) Is identical with "potassium ammontrisulphonate" of Claus.

Insol. in cold H_2O (Claus); sol. in 50 pts. H_2O at 23° (Fremy); in H_2O at scarcely 40° without change. Decomp. by boiling. (Claus.)

Potassium sodium nitrosulphonate,
 $\text{N}(\text{SO}_3\text{K})_2(\text{SO}_3\text{Na})$

Nearly insol in cold H_2O . (Raschig, A. 241. 161.)

Sodium nitrosulphonate, $\text{N}(\text{SO}_3\text{Na})_3$.

Not isolated on account of its extreme solubility in H_2O . (Raschig, A. 241. 161.)

Nitrodiphosphoric acid,
 $\text{NP}(\text{SH})_2$.

Decomp. by H_2O . (Stock, B. 1906, 39. 2001.)

Ammonium nitrodiphosphosphate,
 $\text{NP}(\text{SNH}_4)_2$.

Easily sol. in H_2O . Not decomp. by boiling with alkali. Decomp. by acid. (Stock.)

Easily sol. in liquid NH_3 . (Stock, B. 1903, 36. 315.)

Ammonium hydrogen nitrodiphosphosphate, $\text{SHP}(\text{SNH}_4)_2\text{N}$.

Not decomp. by boiling with alkali. Decomp. by acids. (Stock, B. 1906, 39. 1999.)

Barium nitrodiphosphosphate, $\text{BaNPS}_2 + \text{H}_2\text{O}$.

Sol. in H_2O with decomp. Decomp. by hot H_2O . Not decomp. by warming with alkali. Decomp. by acid. (Stock.)

Lead nitrodiphosphosphate, NPS_2Pb .

Sol. in liquid NH_3 . Solution decomp. rapidly with separation of PbS . (Stock.)

Sodium nitrodiphosphosphate, NPSNa_2 .

Not decomp. by boiling with alkali. Decomp. by acid. (Stock.)

Nitrosulphuric acid.

Ammonium nitrosulphate, $\text{N}(\text{SO}_3\text{NH}_4)_3 + 2\text{H}_2\text{O}$.

Rather sl. sol. in H_2O , but much more sol. than K salt. (Divers and Haga, Chem. Soc. 1901, 79. 1094.)

Sodium nitrosulphate, $\text{N}(\text{SO}_3\text{Na})_3 + 5\text{H}_2\text{O}$.

Very sol. in H_2O . (Divers and Haga, Chem. Soc. 1901, 79. 1097.)

Nitrosulphurous acid.

Ammonium nitrosulphite, $\text{NH}(\text{SO}_2\text{NH}_4)_2$.

Somewhat deliquescent. Very sol. in H_2O . Slowly decomp. in solution. Decomp. by boiling with HCl . (Divers, Proc. Chem. Soc. 1901, 17. 163.)

Nitrocobaltic chloride.

Sol. in 200 pts. cold H_2O . (Jorgensen, Z. anorg. 5. 172.)

Nitroplatindiamine nitrate,

$(\text{NO}_2)_2\text{Pt}(\text{N}_2\text{H}_6\text{NO}_3)_2$.

Sol. in cold H_2O with decomp.; violently decomp. on warming. (Hadow, Chem. Soc. (2) 4. 345.)

Nitropurplecobaltic comps.

See Xanthocobaltic comps.

Nitropurpleorhodium comps.

See Xanthorhodium comps.

Nitrocarbamic acid.

Potassium nitrocarbamate, NO_2NK . COOK.

Decomp. by H_2O . (Thiele, B. 1894, 27. 1909.)

Nitro cobalt, Co_2NO_2 .

Decomp. by H_2O . (Sabatier and Senderens, C. R. 115. 236.)

Nitro copper, CuNO_2 .

Violently decomp. by H_2O . (Sabatier and Senderens, C. R. 116. 756.)

Nitroferri cyanhydric acid.

See Nitroprussic acid.

Nitrogen, N_2

Nearly unsol. in all known solvents.

1 vol. recently boiled H_2O absorbs 0.0147 vol N at 15.5° (Henry, 1803)

1 vol. recently boiled H_2O absorbs 0.025 vol N. (Dalton.)

1 vol. recently boiled H_2O absorbs 0.0156 vol N at ord temp (Dalton.)

1 vol. H_2O at t° and 760 mm. absorbs V vols. N gas reduced to 0° and 760 mm.

t°	V	t°	V	t°	V

(Hüfner, Z. phys. Ch. 1907, 57. 618-621.)

Nitrogen bromide, NBr_3 .

Decomp. under H_2O .

Nitrogen bromophosphide, PBr_2N .

Insol. in H_2O . Sol. in ether, less sol. in CS_2 or $CHCl_3$ (Besson, C. R. 114. 1479)

Nitrogen bromosulphide.

See Nitrogen sulphobromide.

Nitrogen chloride, NCl_3 .

Very unstable. Explodes when heated to 93° or by contact with other substances. Insol. in H_2O , but is decomp. thereby (in 24 hours by cold H_2O). Sol. in CS_2 , PCl_3 , and S_2Cl_2 . (H. Davy, Phil Trans 1813, 1. 242.)

Sol. in C_6H_6 , CS_2 , $CHCl_3$, CCl_4 . (Hentschel B. 1897, 30. 1434.)

Nitrogen chlorophosphide, $N_3P_3Cl_6$.

Insol. in H_2O , but slowly decomp. thereby. Insol. in hot H_2SO_4 , HCl , or HNO_3 + Aq. Decomp. by hot fuming HNO_3 . Sol. in alcohol; very sol. in ether, but these solutions gradually decompose. Sol. in CS_2 , $CHCl_3$, C_6H_6 , and oil of turpentine.

Sol. in $POCl_3$. (Gladstone, Chem. Soc. 3. 138.)

Nitrogen chlorosulphide.

See Nitrogen sulphochloride.

Nitrogen fluoride.

Very explosive. (Warren, C. N. 55. 289.)

Nitrogen monoiodamine, NH_2I .

Very rapidly decomp. by H_2O into $N_2H_3I_3$. (Raschig, A. 230. 212.)

Nitrogen diiodamine, NHI_2 .

Properties as triioddiamine.

Nitrogen triioddiamine, NH_3, NI_3 .

Decomp. by H_2O . (Raschig, A. 230. 212.)

Insol. in absolute alcohol. Sol. with decomp. in HCl + Aq. (Bunsen.)

Nitrogen iodide, N_2I_2 .

See Triazoioidide.

Nitrogen iodide, NI_3 .

Insol. in H_2O , but slowly decomp. thereby. Sol. in HCl + Aq. Sol. in KCN + Aq. (Millon, J. pr. 17. 1.)

Sol. in $Na_2S_2O_3$ + Aq. (Guyard, C. R. 97. 526.)

Sol. in $KSCN$ + Aq. (Raschig, A. 230. 212.)

Nitrogen iodide ammonia, $NI_3, 3NH_3$; $NI_3, 2NH_3$; and NI_3, NH_3 .

(Hugot, C. R. 1900, 130. 507.)

$NI_3, 12NH_3$. Ppt.; insol. in ether. (Ruff, B. 1900, 33. 3028.)

Nitrogen monoxide, N₂O.

- (a.) *Liquid*. Miscible with alcohol or ether.
 (b.) *Gas*.

1 vol. H₂O absorbs 0.78–0.86 vol. N₂O at ordinary temp. (Henry), 0.80 vol. at ordinary temp. (Dalton), 0.76 vol. at ordinary temp. (de Saussure), 0.708 vol. at 18° (Pleisch), 0.54 vol. (Dav₃)

1 vol. H₂O at t° and 760 mm. absorbs V vols. N₂O, reduced to 0° and 760 mm.

(Bunsen's Gasometry.)

1 vol. H₂O absorbs 1.30521–0.0453620t + 0.00068430t² vols. N₂O at t° and 760 mm. (Bunsen.)

Coefficient of absorption by H₂O = 0.01883 at 15°. (Steiner, Z. phys. Ch. 1895, 18. 14.)

Coefficient of absorption by H₂O = 0.600 at 23.5°; 0.773 at 15.5°; 0.951 at 8.1° (Gordon, Z. phys. Ch. 1895, 18. 4.)

Absorption of N₂O by H₂O at t°.

t°	Coefficient of absorption
25	0.5752
20	0.6654
15	0.7896
10	0.9479
5	1.1403

(Roth, Z. phys. Ch. 1897, 24. 123.)

Solubility in H₂O at 25° = 0.5942; at 20° = 0.6756; at 15° = 0.7784; at 10° = 0.9101; at 5° = 1.067. (For formula for "solubility," see under oxygen.) (Geffcken, Z. phys. Ch. 1904, 49. 278.)

Solubility of N₂O in H₂O = 0.592 at 25° and 758–1362 mm. pressure. (Findlay and Creighton, Chem. Soc. 1910, 97. 538.)

100 vols. H₂SO₄ (sp. gr. = 1.84) absorb 75.7 vols. N₂O; 100 vols. H₂SO₄ + Aq (sp. gr. = 1.80) absorb 66.0 vols. N₂O; 100 vols. H₂SO₄ + Aq (sp. gr. = 1.705) absorb 39.1 vols. N₂O; 100 vols. H₂SO₄ + Aq (sp. gr. = 1.45) absorb 41.6 vols. N₂O; 100 vols. H₂SO₄ + Aq (sp. gr. = 1.25) absorb 33.0 vols. N₂O.

CaCl₂ + Aq, and NaCl + Aq absorb considerable amounts of N₂O. (Lunge, B. 14. 2188.)

Absorption by acids + Aq.

M = content in gram-equivalents per liter.
 S = solubility (see under Oxygen).

Absorption of N₂O by HNO₃ + Aq.

(Winkler, B. 1901, 34. 1414.)

205.69 cc. H_2O absorb 9.6798 cc. NO at 20° and 760 mm. (Hüfner, Z. phys. Ch. 1907, 59. 420.)

Sol. in conc. HNO_3 + Aq.

100 vols. HNO_3 + Aq of 1.3 sp. gr. agitated with NO gas take up 20 vols. NO . If acid is twice as strong or one-half as strong, the quantity NO is proportional to the amount of HNO_3 . Very dil. HNO_3 + Aq absorbs scarcely more NO than pure H_2O . (Dalton.)

100 pts. HNO_3 + Aq of 1.4 sp. gr absorb 90 pts NO (Dalton), sol in Br_2 , and very sl. sol in conc. H_2SO_4 . (Berthelot)

1 ccm. conc. H_2SO_4 of 1.84 sp. gr. absorbs 0.035 ccm. NO ; of 1.50 sp. gr., 0.017 ccm. NO . (Lunge, B. 18. 1391.)

Absorption of NO by $\text{H}_2\text{SO}_4 + \text{Aq}$ at 18° and 760 mm.

α = Coefficient of solubility.

H_2SO_4	α	H_2SO_4	α
98%	not constant	70%	0.0113
90%	0.0193	60%	0.0118
80%	0.0117	50%	0.0120

(Tower, Z. anorg. 1906, 50. 387.)

Very sol. in aqueous solutions of ferrous salts, especially the sulphate. (Priestley.)

1 vol. $\text{FeSO}_4 + \text{Aq}$ of 1.081 sp. gr., containing 1 grain FeSO_4 to 6 grains H_2O , absorbs 6 vols. NO. (Dalton.)

Absorption by ferrous salts + Aq is proportional to the amount of Fe present, irrespective of the acid or concentration of the solution. Between 0° and 10° , about 2 mols. NO are absorbed for each atom of Fe; between 10° and 15° , 1 mol. NO for 2 atoms of Fe; and at 25° , only 1 mol. NO for $2\frac{1}{2}$ to 3 atoms of Fe. The amount of NO absorbed also varies with the pressure. The sp. gr. of the ferrous salt solution is greater after the absorption of NO than before. The solutions are decomp. by heat, and at 100° all NO is given off. (Gay, A. ch. (6) 5. 145.)

Absorption of NO by $\text{FeSO}_4 + \text{Aq}$ at 25° .

A = vol. H_2O (in litres) containing 1 mol. FeSO_4 .

V = vol. NO (in litres) absorbed.

A	V	A	V
1.2	1.47	7.2	5.52

(Hufner, *l. c.*)

Absorption of NO by $\text{MnCl}_2 \cdot 4\text{H}_2\text{O} + \text{Aq}$ at t° .
205.69 cc. $\text{MnCl}_2 \cdot 4\text{H}_2\text{O} + \text{Aq}$ contain 0.0697 g. Mn.
Coefficient of absorption = 0.06111.

t°	Pressure mm	NO absorbed ccm
20.0	711.96	14.25
20.05	686.5	13.99
20 2	657.4	13.49
20.3	638 9	13.05
20.45	621.0	12 81

(Hufner, *l. c.*)

Coefficient of absorption for $\text{FeSO}_4 + \text{Aq}$ of concentration used by Hufner (*Z. phys. Ch.* 1907, 59. 417) = 0.180 at 20° . Hufner's results are incorrect because he assumed that the absorption-coefficient of NO always had the same value, whereas it does not. NO is reduced by $\text{FeSO}_4 + \text{Aq}$. (Usher, *Z. phys. Ch.* 1908, 62. 624.)

Coefficient of absorption for $\text{CoSO}_4 + \text{Aq}$ sat. at 20° = 0.0288. (Usher, *Z. phys. Ch.* 1908, 62. 624.)

Coefficient of absorption for $\text{NiSO}_4 + \text{Aq}$ of the concentration used by Hufner (*cf. Z. phys. Ch.* 1907, 59. 422) = 0.048 at 20° .

Coefficient of absorption for $\text{NiSO}_4 + \text{Aq}$ sat. at 20° = 0.0245. (Usher, *l. c.*)

Coefficient of absorption for $\text{MnCl}_2 + \text{Aq}$ sat. at 20° = 0.0082. (Usher, *Z. phys. Ch.* 1908, 62. 624.)

Absorption of NO by $\text{FeCl}_2 + \text{Aq}$ at 22° .
A = vol. H_2O (in litres) containing 1 mol. FeCl_2 .
V = vol. NO (in litres) absorbed.

A	V
2 5	3 30
5.18	4 83
10 35	6 56
20 7	8 32

(Bunsen's Gasometry.)

Abundantly absorbed by CS_2 . (Friedburg, C. N. 48. 97.)

Nitrogen trioxide, N_2O_3 .

Sol. in H_2O at 0°. If large amt. of H_2O is present, the solution is quite stable at ordinary temp. (Fremy, C. R. 79. 61.)

Sol. in HNO_3 + Aq.

Sol. in conc. H_2SO_4 to form HNO_2SO_4 .

Sol. in ether.

Nitrogen trioxide stannic chloride, N_2O_3 , $SnCl_4$.

Decomp. by H_2O . (Weber, Pogg. 118. 471.)

Nitrogen tetroxide, NO_2 or N_2O_4

Sol. in H_2O at 0° with decomp. Miscible with very conc. HNO_3 . Absorbed abundantly by CS_2 , $CHCl_3$, and C_6H_5Cl . (Friedburg, C. N. 47. 52.)

Sol. in $C_6H_5NO_2$.

Sl. sol. in $H_2S + Aq$.

Sol. in H_2SO_4 or conc. $HNO_3 + Aq$

H_3PO_4 absorbs some liquid NO_2 . (Frankland, Chem. Soc. 1901, 79. 1362.)

Nitrogen pentoxide, N_2O_5 .

Very deliquescent. Combines with H_2O to form HNO_3 with evolution of heat.

Nitrogen hexoxide, NO_3 .

Decomposes upon air or with H_2O . (Hautefeuille and Chappins, C. R. 92. 80, 134; 94. 1111, 1306.)

Nitrogen oxybromide.

See Nitrosyl and Nitroxyl bromide.

Nitrogen oxychloride.

See Nitrosyl and Nitroxyl chloride.

Nitrogen oxyfluoride.

See Nitrosyl fluoride and Nitroxyl fluoride.

Nitrogen phosphochloride, $P_3N_3Cl_6$.

See Nitrogen chlorophosphide.

Nitrogen selenide, NSe .

Very explosive. Insol. in H_2O . Sol. in $HNO_3 + Aq$, and $NaClO + Aq$. (Espenschied, A. 113. 101.)

Insol. in H_2O , ether, absolute alcohol; very sl. sol. in CS_2 , C_6H_6 , and glacial acetic acid. Decomp. by HCl or $KOH + Aq$. (Verneuil, Bull. Soc. (2) 38. 548.)

Nitrogen sulphide, N_4S_4 .

Insol. in H_2O . Decomp. by hot H_2O . Sl. sol. in alcohol, ether, wood alcohol, oil of turpentine. Easily sol. in CS_2 . Slowly decomp. by $HCl + Aq$ or $KOH + Aq$, rapidly by $HNO_3 + Aq$. 15 g. dissolve in 1 kilo. of CS_2 . (Fordos and Gélis, C. R. 31. 702.)

Sol. in $CHCl_3$. (Demarçay, C. R. 91. 854.)

Sol. in warm glacial acetic acid with decomp. on boiling. (Ruff and Geisel, B. 1904, 37. 1591.)

Nitrogen pentasulphide, N_2S_5 .

Sol. in ether and most organic solvents; insol. in H_2O ; fairly stable in ethereal solution, but decomp. by light. (Muthmann, Z. anorg. 1897, 13. 206.)

Nitrogen sulphobromide, N_2S_4Br .

Decomp. by boiling H_2O and by dil. alkalis, also by boiling with alcohol. (Muthmann, B. 1897, 30. 630.)

$N_4S_4Br_4$ Decomp. by moist air. (Clever, B. 1896, 29. 340-341.)

$N_4S_4Br_6$ Decomp. by moist air. Very unstable. (Clever.)

$N_4S_4Br_2$ Insol. most solvents, unstable. (Clever.)

Nitrogen sulphochloride, $N_4S_4Cl_4$.

Unstable on air. Sol. in warm $CHCl_3$; crystallizes out on cooling. (Demarçay, C. R. 91. 854, 1066.)

Demarçay calls this comp. thiacyl chloride.

Sol. in hot dry benzene, and in CCl_4 ; decomp. by moist air. (Andreocci, Z. anorg. 1897, 14. 249.)

$N_4S_4Cl_2$ Partly sol in H_2O . (Demarçay, C. R. 92. 726.)

Demarçay calls this compound dithiotetra-thiacyl dichloride.

$N_2S_2Cl_2 = N_2S_2, SCl_2$. Decomp. on air. (Fordos and Gélis.)

Demarçay (C. R. 92. 726) calls this comp. thiodithiacyl dichloride.

$N_2S_4Cl_2$ Sol. in H_2O with subsequent decomp. More sol. than S in CS_2 . (Soubeiran, A. ch. 67. 71.)

Is a mixture of S_2Cl_2 and N_4S_4 . (Fordos and Gélis, C. R. 31. 702.)

N_3S_4Cl Sl. sol in warm, insol. in cold $CHCl_3$. (Demarçay, C. R. 92. 726.)

"Thio'triacyl chloride." (Demarçay.)

N_3S_4Cl Sol in H_2O . Insol in most solvents. Sl. sol. in $CHCl_3$. Easily sol. in thionyl chloride. (Demarçay, C. R. 91. 854, 1066.)

Demarçay calls the compound thio'tri-thiacyl chloride $= (NS)_3 \equiv S-Cl$.

$N_4S_4Cl_2 = 2N_2S_2, SCl_2$. Decomp. on air. (Michaelis.)

$N_4S_7Cl_2 = 3N_2S_2, SCl_2$. Not decomp. on air. Decomp. by H_2O containing ammonia.

Nitrogen sulphoiodide, N_3S_4I .

Readily decomp. by H_2O . (Muthmann and Seitter, B. 1897, 30. 627.)

Nitrohydroxylaminic acid, $H_2N_2O_3$.

Known only in solution. (Angeli, Gazz. ch. it. 1897, 27 (2) 357.)

Barium nitrohydroxylamine, $Ba.N_2O_3 + H_2O$.

Ppt. More stable in the air than the sodium salt. Not decomp. by prolonged boiling with H_2O . (Angeli, Gazz. ch. it. 1896, 26. 17-25.)

Cadmium nitrohydroxylamine, $Cd.N_2O_3 + H_2O$.

As Ba salt. (Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 21.)

Calcium nitrohydroxylamine, $\text{CaN}_2\text{O}_3 + \frac{1}{2}\text{H}_2\text{O}$.
(Angeli, Gazz. ch. it. 1900, 30. (1) 593.)

Calcium nitrohydroxylamine, $\text{CaN}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O}$.
(Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 15)

Lead nitrohydroxylamine, PbN_2O_3 .
(Angeli, Gazz. ch. it. 1900, 30. (1) 593.)

Potassium nitrohydroxylamine, $\text{K}_2\text{N}_2\text{O}_3$.
Like Na salt. More hygroscopic. (Angeli, Gazz. ch. it. 1897, 27. (2) 357.)
Sol. in H_2O . (Angeli, Gazz. ch. it. 1900, 30. (1) 593.)

Silver nitrohydroxylamine, $\text{Ag}_2\text{N}_2\text{O}_3$.
Ppt. (Angeli, C. C. 1901, I. 1192)

Sodium nitrohydroxylamine, $\text{Na}_2\text{N}_2\text{O}_3$.
Very sol. in H_2O . Pptd. by alcohol. Aqueous solution is readily decomp. by boiling. (Angeli, Gazz. ch. it. 1896, 26. (2) 17.)

Strontium nitrohydroxylamine, $\text{SrN}_2\text{O}_3 + \text{H}_2\text{O}$.
(Angeli, Gazz. ch. it. 1900, 30. (1) 593.)
 $+1\frac{1}{2}\text{H}_2\text{O}$. (Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 15.)

Nitroiodic acid, $\text{I}_2\text{O}_4(\text{NO})_2$
See Nitrosoiodic acid.

Nitronitrous acid.

Platinum potassium nitronitrite, $\text{K}_2\text{Pt}(\text{NO}_2)_4 \cdot \text{N}_2\text{O}_4$.
Decomp. by heat. (Miolati, C. C. 1896, II 1088.)

Nitroplatinous acid.
See Platonitrous acid.

Nitroprussic acid, $\text{H}_2\text{FeC}_5\text{N}_6\text{O} + \text{H}_2\text{O} = \text{H}_2\text{Fe}(\text{CN})_5\text{NO} + \text{H}_2\text{O}$.
Deliquescent. Easily sol. in H_2O , alcohol, or ether. (Playfair, A. 74. 317.)

Nitroprussides.

The alkali and alkali-earth nitroprussides are sol. in H_2O , and the solutions are not pptd. by alcohol. The others are mostly insol. in H_2O .

Ammonium nitroprusside,
 $(\text{NH}_4)_2\text{Fe}(\text{CN})_5(\text{NO})$.

Deliquescent. Very sol. in H_2O ; not pptd. therefrom by alcohol. (Playfair.)

Barium nitroprusside, $\text{BaFe}(\text{CN})_5\text{NO} + 4\text{H}_2\text{O}$.
Verv sol. in H_2O .
 $+6\text{H}_2\text{O}$.

Cadmium nitroprusside, $\text{CdFe}(\text{CN})_5\text{NO}$.
Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$. Insol. in dil. or conc. $\text{HNO}_3 + \text{Aq}$ even when boiling. Not attacked by NH_4OH or $\text{KOH} + \text{Aq}$. (Norton, Am. Ch. J. 10. 222.)

Calcium nitroprusside, $\text{CaFe}(\text{CN})_5\text{NO} + 4\text{H}_2\text{O}$.
Very sol. in H_2O . (Playfair.)

Cobalt nitroprusside, $\text{CoFe}(\text{CN})_5\text{NO}$.
Ppt. (Norton, Am. Ch. J. 10. 222.)
 $+4\text{H}_2\text{O}$.

Copper nitroprusside, $\text{CuFe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$.
Insol. in H_2O or alcohol.

Ferrous nitroprusside, $\text{FeFe}(\text{CN})_5\text{NO} + x\text{H}_2\text{O} (?)$.
Insol. in H_2O .

Mercurous nitroprusside, $\text{Hg}_2\text{Fe}(\text{CN})_5\text{NO}$.
Insol. in H_2O . Unstable. (Norton, Am. Ch. J. 10. 222.)

Nickel nitroprusside, $\text{NiFe}(\text{CN})_5\text{NO}$.
As the Co salt. (Norton.)

Potassium nitroprusside, $\text{K}_2\text{Fe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$.
Sl. deliquescent. Sol. in 1 pt. H_2O at 16° .
 $\text{K}_2\text{Fe}(\text{CN})_5\text{NO}$, 2KOH . Very sol. in H_2O .

Silver nitroprusside, $\text{Ag}_2\text{Fe}(\text{CN})_5\text{NO}$.
Insol. in H_2O , alcohol, or $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$

Sodium nitroprusside, $\text{Na}_2\text{Fe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$.
Sol. in $2\frac{1}{2}$ pts. H_2O at 16° , and in less hot H_2O .

Zinc nitroprusside, $\text{ZnFe}(\text{CN})_5\text{NO}$.
Very sl. sol. in cold, more in hot H_2O .

Nitrosisulphonic acid.

Cupric nitrosisulphonate, $\text{NO} \left\langle \begin{smallmatrix} \text{O} \\ \text{SO}_3 \end{smallmatrix} \right\rangle \text{Cu}$.

Decomp. by H_2O . (Raschig, B. 1907, 40. 4583.)

Nitrosobromoruthenic acid.

Silver nitrosobromoruthenate ammonia,
 $\text{Ag}_2\text{Ru}(\text{NO})\text{Br}_5 \cdot \text{NH}_3$.

Decomp. by H_2O . Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Very sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Brizard, Bull. Soc. 1895, (3) 13. 1093.)

Nitrosobromosmic acid.

Potassium nitrosobromosmate, $K_2Os(NO)Br_6$.
Stable in aqueous solution (Wintrebert,
A. ch. 1903, (7) 28. 132.)

Nitrosochloroplatinic acid.

Potassium nitrosochloroplatinate,
 $K_2PtCl_4(NO)$.
Sol. in H_2O . (Vèzes, C. R. 110. 757.)

Nitrosochlororuthenic acid.

Ammonium nitrosochlororuthenate,
 $(NH_4)_2Ru(NO)Cl_5$.
Sol. in H_2O . (Joly, C. R. 107. 991.)
5 pts. are sol. in 100 pts. H_2O at 25° .
22 " " " " " " " " 60° .
(Howe, J. Am. Chem. Soc. 1894, 16. 390.)

Cæsium nitrosochlororuthenate,
 $Cs_2Ru(NO)Cl_5$.
0.20 pt. is sol. in 100 pts. H_2O at 25° .
0.56 " " " " " " " " 100° .
(Howe.)
+ $2H_2O$. Very sol. in H_2O . 105.8 pts. are
sol. in 100 pts. H_2O . (Howe.)

Potassium nitrosochlororuthenate,
 $K_2Ru(NO)Cl_5$.
Sol. in H_2O . (Joly.)
12 pts. are sol. in 100 pts. H_2O at 25° .
80 " " " " " " " " 60° .
(Howe.)

Rubidium nitrosochlororuthenate,
 $Rb_2Ru(NO)Cl_5$.
Sol. in boiling H_2O without decomp.
0.57 pt. is sol. in 100 pts. H_2O at 25° .
2.13 " " " " " " " " 60° .
(Howe.)

Silver nitrosochlororuthenate ammonia,
 $Ag_2Ru(NO)Cl_5, NH_3$.
Decomp. by H_2O . Sl. sol. in $NH_4OH + Aq$.
Very sol. in $Na_2S_2O_3 + Aq$. (Brizard, Bull.
Soc. 1895, (3) 13. 1092.)

Nitrosoiodic acid, $I_2O_4(NO)_2$ (?)
Decomp. with H_2O , alcohol, ether, or acetic
ether. Slowly sol. in H_2SO_4 . (Kammerer, J.
pr. 83. 65.)

Nitrososulphonic acid.

Potassium dinitrososulphonate, $N_2O.OK.$
 SO_3K .
Sol. in H_2O . Very unstable. (Hantzsch,
B. 1894, 27. 3268.)

Potassium nitrosodisulphonate, $ON(SO_3K)_2$.
Sol. in H_2O . Very explosive. (Hantzsch,
B. 1895, 28. 996 and 2744.)

Potassium nitrosotrisulphonate, $ON(SO_3K)_3$
+ H_2O .
Sol. in H_2O . (Hantzsch, B. 1895, 28. 2750.)

Sodium nitrosotrisulphonate, $NO_2(SO_3)_3Na$.
Decomp. by H_2O . (Traube, B. 1913, 46.
2521.)

Nitrososulphuric acid,
 $H_2N_2SO_5 = H_2SO_5(NO)_2$.
Not known in free state.

Ammonium dinitrososulphate,
 $(NH_4)_2(NO)_2SO_3$.
Sol. in H_2O Insol. in hot alcohol. (Pe-
louze, A. 15. 240.)

Barium —, $Ba(NO)_2SO_3$.
Sol. in H_2O . (Divers and Haga, Chem. Soc.
47. 364.)

Barium potassium —, $BaK_2(SN_2O_5)_2$.
Sol. in much H_2O to form a clear liquid,
but the solution gradually deposits $BaSO_4$.
(Hantzsch, B. 1894, 27. 3271.)

Cupric nitrosodisulphate, $Cu(NO)(SO_3)_2$.
(Sabatier, Bull. Soc. 1897, (3) 17. 787.)

Lead dinitrososulphate.
Insol. in H_2O . (Divers and Haga, Chem.
Soc. 47. 364.)

Potassium —, $K_2(NO)_2SO_3$.
Decomp. by H_2O at ordinary temp. Insol.
in alcohol. (Pelouze, A. ch. 60. 160.)
Sol. in about 8 pts. H_2O at 14.5° . Less sol.
in presence of KOH . (Divers and Haga,
Chem. Soc. 1895, 67. 455.)

Sodium —, $Na_2(NO)_2SO_3$.
More sol. than K salt. (Pelouze.)
Sl. sol. in H_2O ; very unstable moist or dry;
decomp. by H_2O . (Divers, C. N. 1895, 72.
266.)

Nitrososulphurous acid.

Ruthenium sodium nitrososulphite,
 $O[Ru(SO_3)_2(NO)Na_2] + 2H_2O$.
Sl. sol. in cold H_2O . (Miolati, Gazz. ch.
it. 1900, 30. 511.)

Nitrosulphide of iron.

See Ferrotetranitrososulphonic acid.

Binitrosulphide of iron.

Roussin's comp. is ammonium ferrohepta-
nitrososulphonate, which see.

Nitrosulphonic acid, $\text{HNSO}_3 = \frac{\text{HO}}{\text{NO}_2} \text{SO}_2$.

(*Lead chamber crystals*.) Rapidly sol. in H_2O with decomp. When brought into large amount of H_2O , no gas is evolved. (Fremy, C. R. **70**, 61.)

Sol. in H_2SO_4 without decomp. Sol. in cold $\text{H}_2\text{SO}_4 + \text{Aq}$ of sp. gr. 1.7–1.55. (Weber, J. pr. **100**, 37.)

Sl. sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$ of 1.6 sp. gr. (Dana.) More difficultly sol. in dil. than conc. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Müller.)

Potassium nitrosulphonate, $\text{KOSO}_2\text{NO}_2(?)$.

Decomp. by H_2O . (Schultz-Sellack, B. **4**, 113.)

Nitrosulphonic anhydride (?), N_2O_3 , $2\text{SO}_3 = \text{S}_2\text{O}_5(\text{NO}_2)_2$.

Rapidly sol. in H_2O with decomp. Abundantly sol. in cold H_2SO_4 . (Rose, Pogg. **47**, 605.)

Insol. in cold, slowly sol. in warm H_2SO_4 . (Prevostaye, A. ch. **73**, 362.)

Nitrosulphonic chloride, $\text{NO}_2\text{SO}_2\text{Cl} = \text{NO}_2\text{SO}_2\text{Cl}(?)$.

Decomp. by H_2O . Sol. in fuming H_2SO_4 without decomp. Decomp. by conc. H_2SO_4 . (Weber, Pogg. **123**, 333.)

Dinitrosulphuric acid.

See *Dinitrososulphuric acid*.

Nitrosyl bromide, NOBr .

Decomp. with cold H_2O . (Landolt, A. **116**, 177.)

Nitrosyl tribromide, NOBr_3 .

Decomp. by H_2O or cold alcohol.

Miscible with ether. (Landolt, A. **116**, 177.)

Mixture of NOBr and Br_2 . (Fröhlich, A. **224**, 270.)

Nitrosyl platonic bromide, 2NOBr , PtBr_4 .

Deliquescent. Decomp. by H_2O . (Topsoë, J. B. **1868**, 274.)

Nitrosyl chloride, NOCl .

Decomp. by H_2O . Absorbed by fuming H_2SO_4 without decomp.

Nitrosyl boron chloride, NOCl , BCl_2 .

See *Boron nitrosyl chloride*.

Nitrosyl platonic chloride, 2NOCl , PtCl_4 .

Very deliquescent, and sol. in H_2O with evolution of NO . (Rogers and Boye, Phil. Mag. J. **17**, 397.)

Nitrosyl thallium chloride, 2NOCl , TlCl , TlCl_3 .

Very deliquescent, and sol. in H_2O with decomp. (Sudborough, Chem. Soc. **59**, 657.)

Nitrosyl stannic chloride, 2NOCl , SnCl_4 .

Decomp. by H_2O , chloroform, or benzene, not by carbon disulphide. (Jorgensen.)

Nitrosyl titanium chloride, 2NOCl , TiCl_4 .

Decomp. by H_2O . (Weber, Pogg. **118**, 476.)

Nitrosyl zinc chloride, NOCl , ZnCl_2 .

Very deliquescent, and sol. in H_2O with evolution of NO . (Sudborough, Chem. Soc. **59**, 656.)

Nitrosyl chloride sulphur trioxide, NOCl , SO_3 .

Decomp. by H_2O . Sol. in conc. H_2SO_4 with evolution of HCl . (Weber, Pogg. **123**, 233.)

Nitrosyl fluoride, NOF .

Sol. in H_2O . Solution decomp. on standing with formation of NO and HNO_3 . (Ruff and Stauber, Z. anorg. **1905**, **47**, 190.)

Nitrosyl sulphate, acid, $\text{H}(\text{NO})\text{SO}_4$.

See *Nitrosulphonic acid*.

Nitrosyl sulphate, anhydro, $(\text{NO})_2\text{S}_2\text{O}_7$.

See *Nitrosulphonic anhydride*.

Nitrosyl selenic acid, $\text{SeO}_2(\text{ONO})_2$.

Decomp. by H_2O . (Lenher and Mathews, J. Am. Chem. Soc. **1906**, **28**, 516.)

Nitrosyl sulphuric acid, $\text{H}(\text{NO})\text{SO}_4$.

See *Nitrosulphonic acid*.

Nitrous acid, HNO_2 .

Known only in aqueous solution.

See *Nitrogen trioxide*.

Nitrites.

Normal nitrites, except AgNO_2 , are sol. in H_2O and alcohol; but, as a rule, they are less sol. than the corresponding nitrates.

Ammonium nitrite, NH_4NO_2 .

Very deliquescent, and sol. in H_2O .

H_2O solution decomp. at 50° . (Berzelius.)

Very dil. solution can be evaporated on water bath without decomp. (Bohlig, A. **125**, 25.) Solution containing $1/100,000$ pt. NH_4NO_2 can be evaporated to $1/2$ its vol. without decomp. Solution containing $1/100$ pt. gives a distillate containing 8.6% of NH_4NO_2 , while residue contains 82% of original quantity, 9.4% being lost. (Schöyen.)

Very deliquescent, sol. in H_2O ; slowly but easily sol. in alcohol; insol. in ether. (Sörensen, Z. anorg. **1894**, **7**, 38.)

Ammonium barium cupric nitrite,

Ppt.; decomp. readily. (Przibylla, Z. anorg. 1897, 15. 424.)

Ammonium bismuth silver nitrite,

Moderately sol. in H_2O . Rapidly hydrolyzed by H_2O . (Ball and Abram, Chem. Soc. 1913, 103. 2120.)

Ammonium bismuth sodium nitrite,

Easily decomp. (Ball, Chem. Soc. 1905, 87. 761.)

Ammonium cadmium nitrite ammonia, basic,

Decomp. by H_2O . (Morin, C. R. 100. 1497.)

Ammonium calcium cupric nitrite,

Ppt.; decomp. easily. Sol. in H_2O . Sl. sol. in alcohol. (Przibylla, Z. anorg. 1897, 15. 423.)

Ammonium cobaltic nitrite, $3(\text{NH}_4)_2\text{O}, \text{Co}_2\text{O}_3,$ 

Sl. sol. in H_2O , decomp. in aq. solution on heating. (Rosenheim, Z. anorg. 1898, 17. 45.)

Somewhat sol. in cold H_2O ; decomp. by boiling. Decomp. by conc. H_2SO_4 , not by acetic or dil. mineral acids. (Erdmann, J. pr. 97. 405.)

Ammonium cupric lead nitrite,

Stable at ordinary temp.; sol. in HNO_3 with decomp.

2.575 pts. are sol. in 100 pts. H_2O at 20° , or 2.51% salt in sat. solution at 20° . (Przibylla, Z. anorg. 1897, 15. 420.)

Ammonium cupric strontium nitrite,

Ppt.; sol. in H_2O with decomp. (Przibylla, l. c.)

Ammonium iridium nitrite.

See Iridonitrite, ammonium.

Ammonium lead nickel nitrite,

Ppt. (Przibylla, Z. anorg. 1897, 15. 433.)

Ammonium osmium nitrite.

See Osminitrite, ammonium.

Ammonium osmyl oxynitrite.

See Osmyloxynitrite, ammonium.

Ammonium platinum nitrite.

See Platonitrite, ammonium.

Ammonium rhodium nitrite.

See Rhodonitrite, ammonium.

Ammonium ruthenium hydrogen nitrite,

See Rutheninitrite, ammonium hydrogen.

Barium nitrite, $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

Permanent. Very sol. in H_2O .

Solubility in H_2O at t° .

t°	G. in 100 cc $\text{Ba}(\text{NO}_2)_2$	Sp gr
0	58	1.40
20	63	1.45
25	71	1.50
30	82	1.52
35	97	1.61

(Vogel, Z. anorg. 1903, 35. 389.)

100 pts H_2O dissolve at:

0°	10°	20°	30°
63.5	69.5	79.5	93 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$,
40°	50°	60°	70°
113	136	170	202 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$,
80°	90°	100°	110°
254	331	461	765 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

The sat. solution at 17° contains 40% $\text{Ba}(\text{NO}_2)_2$, and has sp. gr. $17^\circ/0^\circ = 1.4897$. (Oswald, A. ch. 1914, (9) 1. 62.)

100 g. H_2O at 13.5° dissolve 64 g. $\text{Ba}(\text{NO}_2)_2 + 10.2$ g. AgNO_2 with excess of AgNO_2 , and 75.6 g. $\text{Ba}(\text{NO}_2)_2 + 9.5$ g. AgNO_2 with excess of AgNO_2 . (Oswald.)

Sol. in 64 pts. 94% alcohol; nearly insol. in absolute alcohol. (Lang, Pogg. 118. 285.)

Solubility in alcohol + Aq at t° .

t°	Solvent	100 ccm of the sat solution contain g. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$
19.5	10% alcohol	49.30
21.0	20% "	29.30
20.5	30% "	18.41
20.5	40% "	13.33
20.5	50% "	9.11

19.5	80% "	0.98
20.0	90% "	0.00
20.0	absolute alcohol	0.00

(Vogel, Z. anorg. 1903, 35. 390.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Barium caesium nitrite, $\text{CsBa}_2(\text{NO}_2)_5$.

Sol. in H_2O . (Jamieson, Am. Ch. J. 1907, 38. 616.)

$\text{Cs}_2\text{Ba}(\text{NO}_2)_4 + \text{H}_2\text{O}$. Very sol. in H_2O . (Jamieson, Am. Ch. J. 1907, 38. 616.)

Barium caesium silver nitrite, $\text{Cs}_3\text{AgBa}(\text{NO}_2)_6 + 2\text{H}_2\text{O}$.

Decomp. by cold H_2O . (Jamieson, Am. Ch. J. 1907, 38. 616.)

Barium cobaltic nitrite, 2BaO , Co_2O_3 , $4\text{N}_2\text{O}_5 + 10\text{H}_2\text{O}$.

Sol. in moderately warm H_2O without decomp. but not recryst. therefrom. (Rosenheim, Z. anorg. 1898, 17. 51-54.)

3BaO , Co_2O_3 , $6\text{N}_2\text{O}_5 + \text{H}_2\text{O}$. Ppt; very unstable. Nearly insol. in H_2O . (Rosenheim, Z. anorg. 1898, 17. 47.)

Barium cobaltous potassium nitrite, $\text{Ba}(\text{NO}_2)_2$, $\text{Co}(\text{NO}_2)_2$, 2KNO_2 .

Decomp. by H_2O . (Erdmann, J. pr. 97. 385.)

Barium cupric nitrite, $\text{Ba}[\text{Cu}(\text{OH})(\text{NO}_2)_2]_2$.

Ppt. Insol. in H_2O . Decomp by H_2O . Insol. in alcohol, but slowly decomp. by it. (Kurtenacker, Z. anorg. 1913, 82. 208.)

Barium cupric potassium nitrite, $\text{BaCuK}_2(\text{NO}_2)_6$.

Stable when dry, easily decomp. when moist; sol. in H_2O with decomp.

45.86 pts. are sol. in 100 pts. H_2O at 20° , or 31.45% salt is contained in sat. solution at 20° . (Przibylla, Z. anorg. 1897, 15. 424.)

Barium cupric thallium nitrite, $\text{BaCuTl}_2(\text{NO}_2)_6$.

Sl. sol. in H_2O . (Przibylla, Z. anorg. 1898, 18. 461.)

Barium iridium nitrite.

See Iridonitrite, barium.

Barium mercuric nitrite, $2\text{Ba}(\text{NO}_2)_2$, $3\text{Hg}(\text{NO}_2)_2 + 5\text{H}_2\text{O}$.

Very sol. in H_2O and easily decomp. (Rây, Chem. Soc. 1910, 97. 327.)

Barium nickel nitrite, $2\text{Ba}(\text{NO}_2)_2$, $\text{Ni}(\text{NO}_2)_2$.

Somewhat more easily sol. in H_2O than nickel potassium nitrite. (Lang.)

Barium nickel potassium nitrite, $\text{Ba}(\text{NO}_2)_2$, $\text{Ni}(\text{NO}_2)_2$, 2KNO_2 .

Sl. sol. in cold, easily in hot H_2O without apparent decomp. (Lang.)

Barium nickel thallium nitrite, $\text{NiBaTl}_2(\text{NO}_2)_6$.

Ppt. (Przibylla, Z. anorg. 1898, 18. 462.)

Barium osmium nitrite.

See Osminitrite, barium.

Barium osmyl oxynitrite.

See Osmyloxynitrite, barium.

Barium potassium nitrite, $\text{Ba}(\text{NO}_2)_2$, $2\text{KNO}_2 + \text{H}_2\text{O}$.

Easily sol. in H_2O ; insol. in alcohol. (Lang, Pogg, 118. 293.)

Barium rhodium nitrite, $3\text{Ba}(\text{NO}_2)_2$, $\text{Rh}_2(\text{NO}_2)_6$.

See Rhodonitrite, barium.

Barium silver nitrite, $\text{Ba}(\text{NO}_2)_2$, $2\text{AgNO}_2 + \text{H}_2\text{O}$.

Resembles the potassium salt. (Fischer.) Less stable than the Na salt. (Oswald.)

Bismuth nitrite, basic, $(\text{BiO})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$.

Sol. in HCl . (Vanino, J. pr. 1906, (2) 74. 150.)

Bismuth caesium silver nitrite, $\text{Cs}_2\text{BiAg}(\text{NO}_2)_6$.

Very sl. sol. in H_2O . Slowly decomp. by H_2O . (Ball and Abram, Chem. Soc. 1913, 103. 2122.)

Bismuth potassium nitrite, $\text{Bi}(\text{NO}_2)_3$, $3\text{KNO}_2 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Ball, Chem. Soc. 1905, 87. 762.)

Bismuth potassium silver nitrite, $\text{K}_2\text{BiAg}(\text{NO}_2)_6$.

Less sol. in H_2O than NH_4 salt. (Ball and Abram, Chem. Soc. 1913, 103. 2121.)

Bismuth rubidium silver nitrite, $\text{Rb}_2\text{BiAg}(\text{NO}_2)_6$.

Sl. sol. in H_2O with slow hydrolysis. (Ball and Abram.)

Bismuth silver thalious nitrite, $\text{BiAgTl}_2(\text{NO}_2)_6$.

Insol. in H_2O , but decomp. thereby. (Ball and Abram.)

Cadmium nitrite, basic, 2CdO , N_2O_5 .

Insol. in H_2O . (Hampe, A. 125. 335.)

Cadmium nitrite, $\text{Cd}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Lang, J. B. 1862. 99.)

Cadmium potassium nitrite, $\text{Cd}(\text{NO}_2)_2$, KNO_2 .

Easily sol. in H_2O . Very difficultly sol. in absolute alcohol, and only sl. sol. in 90% alcohol. (Hampe, A. 125. 334.)

$\text{Cd}(\text{NO}_2)_2$, 2KNO_2 . Easily sol. in H_2O . Insol. in alcohol. (Lang, J. B. 1862. 99.)

$\text{Cd}(\text{NO}_2)_2$, 4KNO_2 . More sol. in H_2O than the above salt. (Lang.)

Cæsium nitrite, CsNO₂.

Very hygroscopic. Very sol. in H₂O.
(Bull, Chem. Soc 1913, 103. 2130.)

Cæsium calcium nitrite, Cs₂Ca(NO₂)₄+H₂O.
Ppt. (Jamieson, Am. Ch. J 1907, 38. 617.)**Cæsium cobaltic nitrite, Cs₃Co(NO₂)₆+H₂O**
Sol. in 20,100 pts. H₂O at 17°. (Rosenblatt, B. 19. 2531)**Cæsium lead nitrite, CsPb(NO₂)₃+H₂O.**
Sol. in cold H₂O without decomp. When solution is heated, some basic lead salt separates. (Jamieson, Am. Ch. J. 1907, 38. 618.)**Cæsium lead silver nitrite, Cs₃AgPb(NO₂)₆+2H₂O.**
Ppt. (Jamieson.)**Cæsium silver nitrite, CsAg(NO₂)₂**
Decomp. by H₂O. (Jamieson.)**Cæsium silver strontium nitrite, Cs₃AgSr(NO₂)₆+2H₂O.**
Partially decomp. by H₂O. (Jamieson.)**Cæsium strontium nitrite, CsSr(NO₂)₃+H₂O.**
Ppt. Sol. in H₂O (Jamieson.)**Calcium nitrite, Ca(NO₂)₂+H₂O.**
Very deliquescent. Insol. in dil. alcohol. (Fischer, Pogg. 74. 115.)
100 ccm. of the sat. solution contain 111.6 g. Ca(NO₂)₂+H₂O at 20.5°. (Vogel, Z. anorg. 1903, 35. 395.)Solubility in H₂O at t°.

t°	% Ca(NO ₂) ₂	Solid phase
0	38.3	Ca(NO ₂) ₂ , 4H ₂ O
18.5	43	"
42	51.8	"
44	53.5	" + Ca(NO ₂) ₂ , H ₂ O
54	55.2	Ca(NO ₂) ₂ , H ₂ O
64	58.4	"
70	60.3	"
73	61.5	"
91	71.2	"

(Oswald, A. ch. 1914, (9) 1. 32.)

Sat. solution of Ca(NO₂)₂+AgNO₃ contains 92.4 g. Ca(NO₂)₂ and 11.2 g. AgNO₃ per 100 g. H₂O at 14°. (Oswald.)

Solubility in alcohol.

100 ccm. of sat. solution in 90% alcohol contain 39.0 g. Ca(NO₂)₂+H₂O at 20°.

100 ccm. of sat. solution in absolute alcohol contain 1.1 g. Ca(NO₂)₂+H₂O at 20°. (Vogel.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

+4H₂O. The sat. solution at 16° contains 42.3% Ca(NO₂)₂ and has sp. gr. at 16°/0° = 1.4205. (Oswald, A. ch. 1914, (9) 1. 66.)

Calcium cobaltous potassium nitrite, Ca(NO₂)₂, Co(NO₂)₂, 2KNO₂.
Decomp. by H₂O. (Erdmann.)**Calcium cupric potassium nitrite, CaCuK₂(NO₂)₆.**
Ppt., insol. in alcohol; sol. in H₂O with decomp.

14.97 pts. are sol. in 100 pts. H₂O at 20°, or 13.02 per cent of salt is contained in sat. solution. (Przibylla, Z. anorg. 1897, 15. 422.)

Calcium mercuric nitrite, Ca(NO₂)₂, Hg(NO₂)₂+5H₂O.
Very sol. in H₂O. (Rây, Chem. Soc. 1910, 97. 327.)**Calcium nickel potassium nitrite, Ca(NO₂)₂, Ni(NO₂)₂, 2KNO₂.**
Very sl. sol. in cold, easily in hot H₂O. Insol. in alcohol. Sl. sol. in dil. HC₂H₃O₂+Aq. (Erdmann.)**Calcium osmium nitrite.**
*See Osminitrite, calcium.***Calcium potassium nitrite, CaK(NO₂)₃+3H₂O.**
Sol. in H₂O. (Topsoe, W. A. B. 73, 2. 112.)
Deliquescent. (Lang.)**Cobaltous nitrite.**
Known only in solution.**Cobaltic lead nitrite, 3PbO, Co₂O₃, 6N₂O₃+12H₂O.**
Insol. in H₂O. (Rosenheim, Z. anorg. 1898, 17. 48.)**Cobaltic lead potassium nitrite, 3K₂O, 3PbO, 2Co₂O₃, 10N₂O₃+4H₂O.**
Sol. by boiling in much H₂O. Sol. in hot acids with evolution of N₂O₃. (Stromeyer, A. 96. 228.)**Cobaltous potassium nitrite, 2Co(NO₂)₂, 2KNO₂+H₂O.**
Ppt. (Sadtlér.)

Co(NO₂)₂, 2KNO₂+H₂O. Ppt. (Sadtlér.)
3Co(NO₂)₂, 6KNO₂+H₂O. Insol. in cold, sol. in hot H₂O. Sl. sol. in KC₂H₃O₂+Aq. (Erdmann, J. pr. 97. 397.)
Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Cobaltic potassium nitrite (cobalt yellow), Co₂(NO₂)₆, 6KNO₂+3H₂O.
Very sl. sol. in cold H₂O. Insol. in alcohol and ether. Sol. in traces in CS₂. (St. Evre,

- C. R. 35. 552.) Insol. in boiling conc. K_2SO_4 , KCl , KNO_3 , or $KC_2H_3O_2 + Aq$.
Sol. in 1120 pts. H_2O at 17° . (Rosenbladt, B. 1886, 19. 2535.)
Decomp. when heated in aq. solution. (Rosenheim, Z. anorg. 1898, 17. 42.)
More sol. in NH_4Cl or $NaCl + Aq$ than in H_2O (Stromeyer.)
Sl. decomp. by $KOH + Aq$, except when very conc.; easily decomp. by $NaOH$ or $Ba(OH)_2 + Aq$.
Very sl. sol. in $KC_2H_3O_2 + Aq$, or $KNO_3 + Aq$. (Fresenius.) Sol. in $HCl + Aq$.
Sol. in $HC_2H_3O_2$, or $H_2C_2O_4 + Aq$. (Stromeyer.)
Small quantity of $HC_2H_3O_2 + Aq$ does not dissolve. (Fresenius.)
- Cobaltic potassium silver nitrite**,
 $KCoAg_3(NO_2)_6$, and $K_2CoAg(NO_2)_6$.
Very sl. sol. in H_2O . Less sol. than Na comp. (Burgess and Karum, J. Am. Chem. Soc. 1912, 34. 653.)
- Cobaltous potassium strontium nitrite**,
 $Co(NO_2)_2$, $2KNO_3$, $Sr(NO_2)_2$.
Decomp. by H_2O . (Erdmann, J. pr. 97. 385.)
- Cobaltic rubidium nitrite**, $Rb_3Co(NO_2)_6 + H_2O$.
Sol. in 19,800 pts. H_2O . (Rosenbladt, B. 19. 2531.)
- Cobaltic silver nitrite**, $CoAg_3(NO_2)_6$.
Fairly sol. in H_2O . (Cunningham and Perkin, Chem. Soc. 1909, 95. 1568.)
 $2Ag_2O$, Co_2O_3 , $3N_2O_5 + 3H_2O$. Sl. sol. in H_2O ; decomp. by boiling H_2O . (Rosenheim, Z. anorg. 1898, 17. 56.)
- Cobaltic silver hydroxynitrite**,
 $Co_2Ag_3(OH)_3(NO_2)_6$.
Sl. sol. in H_2O . (Suzuki, Chem. Soc. 1910, 97. 729.)
- Cobaltic silver nitrite ammonia**, Co_2O_3 , Ag_2O , $4N_2O_5$, $4NH_3$.
See Cobalt ammonium comps.
- Cobaltic sodium nitrite**, $2Na_2O$, Co_2O_3 , $4N_2O_5$.
Sol. in H_2O and alcohol. (Rosenheim, Z. anorg. 1898, 17. 50.)
 $+ H_2O$. Ppt. (Sadtlger, Sill. Am. J. (2) 49. 196.)
 $3Na_2O$, Co_2O_3 , $6N_2O_5 + xH_2O$. Sol. in H_2O ; decomp. on heating; insol. in alcohol. (Rosenheim, Z. anorg. 1898, 17. 43.)
- Cobaltic strontium nitrite**, $2SrO$, Co_2O_3 , $4N_2O_5 + 11H_2O$.
Ppt. (Rosenheim, Z. anorg. 1898, 17. 54.)
- Cobaltic thallium nitrite**, $Co_2(NO_2)_6$, $6TlNO_2$.
Sol. in 23,810 pts. H_2O at 17° . (Rosenbladt, B. 19. 2531.)
- Cobaltic zinc nitrite**, $2ZnO$, Co_2O_3 , $3N_2O_5 + 11H_2O$.
Sol. in dil. acetic acid. (Rosenheim, Z. anorg. 1898, 17. 56.)
- Cobalt nitrite nitrate**, $2CoO$, Co_2O_3 , $3N_2O_5$, $Co(NO_3)_2 + 14H_2O$.
Ppt. (Rosenheim, Z. anorg. 1898, 17. 58.)
- Cupric nitrite, basic**, $2CuO$, N_2O_5 .
(Hampe, A. 125. 345.)
 $Cu(NO_2)_2$, $3Cu(OH)_2$. Very sl. sol. in H_2O or alcohol. Easily sol. in dil. acids or ammonia. (van der Meulen, B. 12. 758.)
- Cupric nitrite**.
Known only in solution.
- Cupric lead potassium nitrite**, $CuPbK_2(NO_2)_6$.
(van Lessen, R. t. c. 10. 13.)
3.056 pts. are sol. in 100 pts. H_2O at 20° , or 2.51% salt is contained in sat. solution at 20° p. 429. (Przibylla, Z. anorg. 1897, 15. 429.)
- Cupric potassium strontium nitrite**,
 $CuSrK_2(NO_2)_6$.
Sol. in H_2O with decomp. 10.82 pts. are sol. in 100 pts. H_2O at 20° , or 9.77 per cent salt is contained in sat. solution at 20° . (Przibylla, Z. anorg. 1897, 15. 425.)
- Cupric rubidium nitrite**, $Rb_3Cu(NO_2)_5$.
Easily sol. in H_2O . Sol. in alcohol. (Kurténacker, Z. anorg. 1913, 82. 206.)
- Cupric nitrite ammonia**, $Cu(NO_2)_2$, $2NH_3 + 2H_2O$.
Sol. in little H_2O with absorption of much heat. Decomp. by much H_2O . (Peligot, C. R. 53. 209.)
 $3CuO$, N_2O_5 , $2NH_3 + H_2O$. As above. (Peligot.)
- Iridium hydrogen nitrite**, $Ir_2H_3(NO_2)_{12}$.
See Iridonitrous acid.
- Iridium nitrite with MNO_2** .
See Iridonitrite, M.
- Iron (ferrous) lead potassium nitrite**,
 $FePbK_2(NO_2)_6$.
Ppt.; insol. in cold H_2O ; stable at ordinary temp. (Przibylla, Z. anorg. 1897, 15. 439.)
- Iron (ferrous) lead thallos nitrite**,
 $FePbTl_2(NO_2)_6$.
Ppt. (Przibylla, Z. anorg. 1898, 18. 463.)

Lead nitrite, basic, 4PbO , $\text{N}_2\text{O}_3 + \text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_2$, PbO .

Sol. in 143 pts. H_2O at 23° , and 33 pts. at 100° . (Chevreul.)

Sol. in 1250 pts. cold H_2O , and 34.5 pts. at 100° . (Peligot.)

Sol. in cold HNO_3 or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

Composition is 3PbO , $\text{N}_2\text{O}_3 + \text{H}_2\text{O}$. (Meissner, J. B. 1876. 194.)

Composition is as above. (v. Lorenz, W. A. B. 84, 2. 1133.)

3PbO , $\text{N}_2\text{O}_3 = \text{Pb}(\text{NO}_2)_2$, 2PbO . Sol. in H_2O . (Bromeis, A. 72. 38; v. Lorenz.)

2PbO , $\text{N}_2\text{O}_3 + \text{H}_2\text{O}$. Sl. sol. in H_2O . (Bromeis.)

$+3\text{H}_2\text{O}$. (Meissner.)

4PbO , $3\text{N}_2\text{O}_3 + 2\text{H}_2\text{O}$. Sol. in H_2O . (Meissner, J. B. 1876. 195.)

Lead nitrite, $\text{Pb}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

Easily sol. in H_2O . (Peligot, A. ch. 77. 87.)

Lead nickel potassium nitrite, $\text{Pb}(\text{NO}_2)_2$, KNO_2 , $\text{Ni}(\text{NO}_2)_2$.

Insol. in H_2O . (Baubigny, A. ch. (6) 17. 111.)

Ppt. (Przibylla, Z. anorg. 1897, 15. 432.)

Lead nickel thallos nitrite, $\text{NiPbTl}_2(\text{NO}_2)_6$.

Ppt. (Przibylla, Z. anorg. 1898, 18. 462.)

Lead potassium nitrite, $4\text{Pb}(\text{NO}_2)_2$, $6\text{KNO}_2 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O and in absolute alcohol. (Hampe, A. 125. 334.)

$\text{Pb}(\text{NO}_2)_2$, $2\text{KNO}_2 + \text{H}_2\text{O}$. Easily sol. in H_2O . Insol. in alcohol. (Lang, J. B. 1862. 102.)

Lead potassium silver nitrite, $\text{K}_3\text{AgPb}(\text{NO}_2)_6 + 2\text{H}_2\text{O}$.

Ppt. (Jamieson, Am. Ch. J. 1907, 38. 619.)

Lead nitrite nitrate.

See Nitrate nitrite, lead.

Lithium nitrite, $\text{LiNO}_2 + \frac{1}{2}\text{H}_2\text{O}$.

Deliquescent. Easily sol. in alcohol and H_2O . (Vogel, Z. anorg. 1903, 35. 403.)

Sat. solution of $\text{LiNO}_2 + \frac{1}{2}\text{H}_2\text{O}$ in H_2O contains at:

65°	81.5°	91°	96°	92.5°
63.8	68.7	72.4	91.8	94.3% LiNO_2 .
(Oswald.)				

$+ \text{H}_2\text{O}$. Very sol. in H_2O , readily forming supersat. solutions. Very sol. in abs. alcohol. (Ball, Chem. Soc. 1913, 103. 2133.)

100 pts. H_2O dissolve at:

0°	10°	20°
125	156	189 pts. $\text{LiNO}_2 + \text{H}_2\text{O}$.
30°	40°	50°
242	316	459 pts. $\text{LiNO}_2 + \text{H}_2\text{O}$.

LiNO_2 , $\text{H}_2\text{O} + \text{Aq}$ sat. at 19° contains 48.9% LiNO_2 and has sp. gr. = 1.3186. (Oswald, A. ch. 1914, (9) 1. 61.)

100 g. H_2O dissolve 78.5 g. $\text{LiNO}_2 + 10.5$ g. AgNO_2 at 14° . (Oswald.)

Lithium mercuric nitrite, LiNO_2 , $\text{Hg}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

(Ray, Chem. Soc. 1907, 91. 2033.)

4LiNO_2 , $\text{Hg}(\text{NO}_2)_2 + 4\text{H}_2\text{O}$. Extremely deliquescent. (Ray.)

Magnesium nitrite, $\text{Mg}(\text{NO}_2)_2 + 2\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O . Solution decomp. by boiling. Easily sol. in absolute alcohol. (Hampe, A. 125. 334.)

Insol. in absolute alcohol. (Fischer.)

$+3\text{H}_2\text{O}$. Sol. in H_2O and absolute alcohol. Very deliquescent. (Vogel, Z. anorg. 1903, 35. 397.)

Magnesium osmium nitrite.

See Osminitrite, magnesium.

Magnesium potassium nitrite.

Deliquescent, and easily sol. in H_2O . Insol. in alcohol. (Lang.)

Magnesium silver nitrite.

Sol. in H_2O with decomp. (Spiegel, Ch. Z. 1895, 19. 1423.)

Manganous nitrite.

Deliquescent, and sol. in H_2O . (Mitscherlich) Not obtained in a solid state, as the solution decomp. on evaporation. (Lang, Pogg. 118. 290.)

Mercurous nitrite, $\text{Hg}_2(\text{NO}_2)_2$.

Sol. in H_2O with partial decomp. to Hg and $\text{Hg}(\text{NO}_2)_2$. (Ray, A. 1901, 316. 252.)

Sol. in cold conc. HNO_3 . Very slowly sol. in cold dil. HNO_3 . (Ray, Chem. Soc. 1897, 71. 339.)

Decomp. by boiling H_2O and by cold dil. H_2SO_4 . (Ray, Z. anorg. 1896, 12. 366.)

$+ \text{H}_2\text{O}$. Slowly decomp. by H_2O . (Ray, Chem. Soc. 1897, 71. 340.)

Mercuric nitrite, basic, $\text{Hg}(\text{NO}_2)_2$, $2\text{HgO} + \text{H}_2\text{O}$.

Ppt. (Lang.)

12HgO , $5\text{N}_2\text{O}_5 + 24\text{H}_2\text{O}$. (Ray, Chem. Soc. 1897, 71. 341.)

Mercuric nitrite, $\text{Hg}(\text{NO}_2)_2$.

Deliquescent. Partly sol. in boiling H_2O , but the greater part is decomp. into $\text{HgO} + \text{HNO}_2$. (Ray, Proc. Chem. Soc. 1904, 20. 57.)

Mercuriomercuric nitrite, basic.

α . $9\text{Hg}_2\text{O}$, 4HgO , $5\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$.

β . Hg_2O , 2HgO , $\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$.

(Ray, Chem. Soc. 1897, 71. 341.)

Mercuric potassium nitrite, $\text{Hg}(\text{NO}_2)_2$, 2KNO_2 .

Easily sol. in H_2O . Insol. in alcohol. (Lang, 1860.)

$\text{KHg}(\text{NO}_2)_3$. Obtained from $\text{K}_3\text{Hg}(\text{NO}_2)_5$, $\text{H}_2\text{O} + \text{Aq}$ containing a small excess of KNO_2 . Decomp. by H_2O . (Rosenheim, Z. anorg. 1901, 28. 173.)

$\text{K}_3\text{Hg}(\text{NO}_2)_5 + \text{H}_2\text{O}$. Sol. in H_2O . Formula of Lang is incorrect. (Rosenheim, Z. anorg. 1901, 28. 172.)

Mercuric sodium nitrite, $\text{Na}_2\text{Hg}(\text{NO}_2)_4$.

Very hygroscopic. Decomp. by hot H_2O . (Rosenheim, Z. anorg. 1901, 28. 173.)

$+ 2\text{H}_2\text{O}$. Deliquescent. (Rây, Chem. Soc. 1907, 91. 2032.)

$2\text{Hg}(\text{NO}_2)_2$, 3NaNO_2 . Decomp. by H_2O . (Rây, Chem. Soc. 1907, 91. 2032.)

Mercuric strontium nitrite, $3\text{Hg}(\text{NO}_2)_2$, $2\text{Sr}(\text{NO}_2)_2 + 5\text{H}_2\text{O}$.

Very sol. in H_2O . (Rây, Chem. Soc. 1910, 97. 327.)

Mercuric nitrite hydrazine, $\text{Hg}(\text{NO}_2)_2$, N_2H_4 .

Ppt. Decomp. by H_2O . (Hofmann and Marburg, A. 1899, 305. 215.)

Nickel nitrite, basic, 2NiO , N_2O_3 .

Ppt. (Hampe, A. 125. 343.)

Nickel nitrite, $\text{Ni}(\text{NO}_2)_2$.

Sol. in H_2O and alcohol. (Lang, J. B. 1862. 100.)

Nickel potassium nitrite, $\text{Ni}(\text{NO}_2)_2$, 4KNO_2 .

Moderately sol. in H_2O . (Fischer, Pogg. 74. 115.) Extremely sol. in H_2O . (Hampe, A. 125. 346.) Insol. in absolute alcohol.

Nickel potassium strontium nitrite, $\text{Ni}(\text{NO}_2)_2$, 2KNO_2 , $\text{Sr}(\text{NO}_2)_2$.

Sl. sol. in cold, easily sol. in hot H_2O .

Nickel nitrite ammonia, $\text{Ni}(\text{NO}_2)_2$, 4NH_3 .

Sol. in cold H_2O . Decomp. on standing or by heating. Insol. in alcohol. Can be recrystallized by dissolving in $\text{NH}_4\text{OH} + \text{Aq}$, and adding much absolute alcohol. (Erdmann, J. pr. 97. 395.)

$\text{Ni}(\text{NO}_2)_2$, 5NH_3 . Decomp. in the air giving $\text{Ni}(\text{NO}_2)_2$, 4NH_3 . (Ephraim, B. 1913, 46. 3110.)

Osmium nitrite, $\text{Os}(\text{NO}_2)_2$.

Ppt. (Wintrebert, C. R. 1905, 140. 587.)

Osmium nitrite with MNO_2 .

See *Osminitrite*, M.

Osmyl nitrite with MNO_2 .

See *Osmylinitrite*, M.

Osmyl oxynitrite with MNO_2 .

See *Osmylloxynitrite*, M.

Osmyl nitrite ammonia, $\text{OsO}_2(\text{NO}_2)_2$, 4NH_3 .

(Wintrebert, A. ch. 1903, (7) 28. 56.)

Palladious nitrite with MNO_2 .

See *Palladonitrite*, M.

Platinous hydrogen nitrite, $\text{H}_2\text{Pt}(\text{NO}_2)_4$.

See *Platonitrous acid*.

Platinous nitrite with MNO_2 .

See *Platonitrite*, M.

Potassium nitrite, KNO_2 .

Deliquescent. Sol. in H_2O .

Pure KNO_2 is not deliquescent. (Oswald, A. ch. 1914, (9) 1. 32.)

Sol. in about $\frac{1}{3}$ its wt. of H_2O . (Divers, Chem. Soc. 1899, 75. 86.)

100 pts. H_2O dissolve at:

0°	10°	20°	30°	40°	
281	291	302	313	325	pts. KNO_2 .

50°	60°	70°	80°	90°	
337.5	351	365	380	396	pts. KNO_2 .

100°	110°	120°	130°	
413	432	451	473	pts. KNO_2 .

Bpt. of sat. $\text{KNO}_2 + \text{Aq}$ is 132° at 753.5 mm. pressure.

(Oswald, A. ch. 1914, (9) 1. 58.)

Sp. gr. of $\text{KNO}_2 + \text{Aq}$ at 17.5° containing:

10	20	30	40%	
1.049	1.126	1.203	1.295	KNO_2 .

50	60	70	74.5%	
1.377	1.491	1.599	1.646	KNO_2 .

(Oswald.)

100 g. H_2O at 13.5° dissolve 18 g. $\text{KNO}_2 + 2.36$ g. AgNO_2 ; at 25° , 23.1 g. $\text{KNO}_2 + 5.3$ g. AgNO_2 with excess of AgNO_2 .

100 g. H_2O at 13.5° dissolve 276 g. $\text{KNO}_2 + 26.3$ g. AgNO_2 ; at 25° , 279 g. $\text{KNO}_2 + 39.3$ g. AgNO_2 with excess of KNO_2 . (Oswald.)

See also under *AgNO₂*.

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Deliquesces in 90% alcohol; insol. in cold 94% alcohol. More sol. in H_2O than KNO_3 , but less sol. in alcohol. (Fischer.)

Ppt. from its conc. aq. solution by the addition of methyl alcohol. Addition of ethyl alcohol to a conc. aq. solution of KNO_2 causes separation into two layers, of which the lower aq. solution contains 71.9% KNO_2 , while the upper alcoholic layer contains 6.9% KNO_2 . (Donath, Ch. Z. 1911, 35. 773.)

Very sl. sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Potassium rhodium nitrite, 6KNO_3 , $\text{Rh}_2\text{NO}_2\text{O}_6$.

See Rhodonitrite, potassium.

Potassium ruthenium nitrite.

See Ruthenonitrite, potassium.

Potassium silver nitrite, KNO_3 , $\text{AgNO}_2 + \frac{1}{2}\text{H}_2\text{O}$.

Completely sol. in a little H_2O , but decomp. by more H_2O . Sol. in $\text{KNO}_3 + \text{Aq}$ without decomp. Insol. in alcohol. (Lang.)

Potassium strontium nitrite, 2KNO_3 , $\text{Sr}(\text{NO}_2)_2$.

Sol. in H_2O ; insol. in alcohol. (Lang, Pogg 118. 293.)

Potassium zinc nitrite, 2KNO_3 , $\text{Zn}(\text{NO}_2)_2 + \text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O . (Lang, J. B. 1862. 101.)

$\text{K}_2\text{Zn}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$. Very hygroscopic. Decomp. by H_2O . (Rosenheim, Z. anorg. 1901, 28. 174.)

Rhodium nitrite with MNO_2 .

See Rhodonitrite, M.

Rubidium nitrite, RbNO_2 .

Deliquescent; very sol. in H_2O ; sl. sol. in hot alcohol, almost insol. in acetone. (Ball, Chem. Soc. 1913, 103. 2131.)

Ruthenium nitrite with MNO_2 .

See Ruthenonitrite, M.

Silver nitrite, AgNO_2 .

Sol. in 120 pts. cold H_2O (Mitscherlich), in 300 pts. (Fischer), and more abundantly in hot H_2O .

1 l. H_2O dissolves 3.1823 g. or 0.02067 g. mols. at 18° . (Naumann and Rücker, B. 1905, 38. 2294.)

1 litre H_2O dissolves at—

0°	0.0113 mol. AgNO_2
8°	0.0159 " "
14°	0.0189 " "
16°	0.0203 " "
18°	0.0216 " "
25°	0.0260 " "
33°	0.0370 " "

(Pick and Abegg, Z. anorg. 1906, 51. 3.)

1 l. H_2O dissolves 3.609 g. AgNO_2 at 21° . (Oswald, A. ch. 1914, (9) 1. 33.)

Solubility in H_2O at t° .

t°	% AgNO_2
1	0.1589
15	0.2752
25	0.4125
35	0.6016
51	1.0240
60	1.3625

(Creighton and Ward, J. Am. Chem. Soc. 1915, 37. 2335.)

Solubility in $\text{AgNO}_3 + \text{Aq}$ at 18° .

Mols. AgNO_3 per l. of the solution	Mols. AgNO_2 dissolved per l.
0.	0.0207
0.0026	0.0198
0.0052	0.0190

	0.01177	0.3560
	0.02355	0.3119
	0.04710	0.2765

(Creighton and Ward, J. Am. Chem. Soc. 1915, 37. 2336.)

See also under KNO_2 .

$\text{AgNO}_2 + \text{NaNO}_2$.

1 l. 0.02 N- $\text{NaNO}_2 + \text{Aq}$ dissolves 3.185 g. AgNO_2 at 25° , 0.2-N NaNO_2 , 3.016 g. AgNO_2 . (Ley and Schaefer, B. 1906, 39. 1263.)

100 g. H_2O sat. with AgNO_2 and $\text{Sr}(\text{NO}_2)_2$ contain 10.9 g. AgNO_2 and 78.3 g. $\text{Sr}(\text{NO}_2)_2$ at 14° . (Oswald.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4328.)

100 pts. acetonitrile dissolve 23 pts. at ord. temp.; 40 pts. at 81.6° . (Scholl and Steinkopf, B. 1906, 39. 4393.)

Sl. sol. in methyl acetate. (Bezold, Dissert. 1906.)

Insol. in ethyl acetate. (Hamers, Dissert 1906; Naumann, B. 1910, 43. 314.)

Silver sodium nitrite, AgNO_2 , NaNO_2 .

Completely sol. in a little H_2O , but decomp. by more H_2O . (Fischer.)

$+\frac{1}{2}\text{H}_2\text{O}$. (Oswald, A. ch. 1914, (9) 1. 75.)

Silver nitrite ammonia, AgNO_2 , NH_3 .

Sl. sol. in H_2O ; less sol. in alcohol; nearly insol. in ether. (Reychler, B. 16. 2425.)

AgNO_2 , 2NH_3 . (Reychler.)

AgNO_2 , 3NH_3 . Deliquescent. Sol. in H_2O . (Reychler.)

Sodium nitrite, NaNO_2 .

Not deliquescent. Very sol. in H_2O .

More sol. in H_2O than NaNO_3 , but less in alcohol.

6 pts. H_2O dissolve 5 pts. NaNO_2 at 15° . (Divers, Chem. Soc. 1899, 75. 86.)

100 g. H_2O dissolve 83.25 g. NaNO_2 at 15° . (Niementowski and Roszkowski, J. phys. Ch. 1897, 22. 146.)

100 pts. H_2O dissolve at:

0° 10° 20° 30° 40°
73 78 84 91.5 98.5 pts. NaNO_2 ,

50° 60° 70° 80°
107 116 125.5 136 pts. NaNO_2 ,

90° 100° 110° 120°
147 160.5 178 198.5 pts. NaNO_2 .

B-pt. of sat. $\text{NaNO}_2 + \text{Aq} = 128^\circ$ at 761.5 mm. pressure. Sat. solution at 20° has a sp. gr. = 1.3585. (Oswald, A. ch. 1914, (9) 1. 59.)

Solubility in $\text{NaNO}_3 + \text{Aq}$ at t° .

t°	100 pts. H_2O dissolve

* Both salts in solid phase.

(Oswald, A. ch. 1914, (9) 1. 71.)

Solubility in H_2O is decreased by presence of Na_2SO_4 . 100 pts. H_2O dissolve 11.8 pts. Na_2SO_4 + 53.9 pts. $NaNO_2$. (Oswald.)

Very sol. in liquid NH_3 . (Franklin, Am Ch. J. 1898, 20. 829.)

Neither dissolved nor attacked by liquid NO_2 . (Frankland, Chem. Soc. 1901, 79. 1361.)

Sol. in warm 90% alcohol. (Hampe, A. 125. 336.)

100 pts. absolute methyl alcohol dissolve 4.43 pts. at 19.5° ; 100 pts. absolute ethyl alcohol dissolve 0.31 pt. at 19.5° . (de Bruyn, Z. phys. Ch 10. 783.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Strontium nitrite, $Sr(NO_2)_2$.

Very sol. in H_2O , and very sl. sol. in boiling alcohol. (Lang, Pogg. 118. 287.)

Easily sol. in 90% alcohol. (Hampe, A. 125. 340.)

+ H_2O . Hygroscopic. 100 ccm. of the sat. solution contain 62.83 g. $Sr(NO_2)_2 + H_2O$ at 19.5° . (Vogel, Z. anorg. 1903, 35. 393.)

100 pts. H_2O dissolve at:

0°	10°	20°	30°
58.9	67.6	75.5	84 pts. $Sr(NO_2)_2 + H_2O$,

40°	50°	60°	70°
94	105	116	130 pts. $Sr(NO_2)_2 + H_2O$,

80°	90°	100°
145	162	182 pts. $Sr(NO_2)_2 + H_2O$.

Bpt. of sat. solution is 112.5° at 763 mm. pressure. The sat. solution at 19° contains 39.3% $Sr(NO_2)_2$ and has sp. gr. at $19^\circ/0^\circ = 1.4461$. (Oswald, A. ch. 1914, (9) 1. 64.)

Solubility in alcohol. 100 ccm. of the solution in 90% alcohol contain 0.42 g. $Sr(NO_2)_2 + H_2O$ at 20° . 100 ccm. of the solution in absolute alcohol contain 0.04 g. $Sr(NO_2)_2 + H_2O$ at 20° . (Vogel, Z. anorg. 1903, 35. 393.)

Thallous nitrite, $TlNO_2$.

Sol. in H_2O . Ppt. from solution in H_2O by absolute alcohol. (Vogel, Z. anorg. 1903, 35. 404.)

Very sol. in H_2O ; insol. in alcohol. (Ball, Chem. Soc. 1913, 103. 2131.)

Zinc nitrite, basic, $2ZnO, N_2O_3$.

(Hampe, A. 125. 334.)

Zinc nitrite, $Zn(NO_2)_2 + 3H_2O$.

Deliquescent. Sol. in H_2O and alcohol. (Lang, J. B. 1862. 99.)

Nitrous oxide, N_2O .

See Nitrogen monoxide.

Nitroxyl bromide, NO_2Br .

Decomp spontaneously or with H_2O . (Hasenbach, J. pr. (2) 4. 1.)

Does not exist. (Froehlich, A. 224. 270.)

Nitroxyl chloride, NO_2Cl .

Decomp. by H_2O without evolution of gas. Probably does not exist. (Geuther, A. 245. 98.)

Nitroxyl fluoride, NO_2F .

Absorbed by H_2O with formation of HNO_3 and HF . Decomp. by H_2O , alcohol, and ether. (Moissan and Lebeau, C. R. 1905, 140. 1624.)

Nitroxypyrosulphuric acid,

$(HO)S_2O_5(NO_2), H_2O$.

Very deliquescent. Sol. in H_2O with decomp. (Weber, Pogg. 142. 602.)

Nitryl chloride, NO_2Cl .

See Nitroxyl chloride.

Octamine cobaltic compounds.

The formulae of the following octamine cobaltic compounds should be reduced one-half, and they should be classed with the tetramine cobaltic compounds. (Jørgensen, Z. anorg. 2. 279.)

Octamine cobaltic carbonate,

$Co_2(NH_3)_8(CO_3)_4 + 3H_2O$.

Easily sol in H_2O . (Vortmann and Blasberg, B. 22. 2654.)

See Carbonatotetramine carbonate.

$Co_2(NH_3)_8O_3(CO_3)_4 + 3H_2O$. Rather difficultly sol. in H_2O .

— — — chloride (?), $Co_2(NH_3)_8(OH)_2Cl_4 + 2H_2O$.

Ppt.

$Co_2(NH_3)_8(OH)_2Cl_4, 2HgCl_2$.

$Co_2(NH_3)_8(OH)_2Cl_4, PtCl_4 + H_2O$. (Vortmann and Blasberg, B. 22. 2654.)

— — — mercuric chloride, $Co_2(NH_3)_8Cl_6, 3HgCl_2 + H_2O$.

$Co_2(NH_3)_8Cl_6, HgCl_2$. Difficultly sol. in cold H_2O , decomp. on warming. (Vortmann.)

— — — chlorosulphite, $Co_2(NH_3)_8(SO_3)_2Cl_2 + 4H_2O$.

Sol. in H_2O . (Vortmann and Magdeburg, B. 22. 2635.)

— — — chromate,

$Co_2(NH_3)_8(CrO_4)_3(H_2O)_2 + 2H_2O$.

Sol. in H_2O or acetic acid.

+ $8H_2O$. Sol. in warm H_2O or acetic acid.

$Co_2(NH_3)_8(CrO_4)_2Cr_2O_7(H_2O)_2 + H_2O$. Easily sol. in H_2O , from which it is precipitated by dil. $HNO_3 + Aq$ (Vortmann, B. 15. 5895.)

Octamine cobaltic nitrate, $\text{Co}_2(\text{NH}_3)_8(\text{NO}_3)_6 + 2\text{H}_2\text{O}$.

Sol. in H_2O ; precipitated by conc. $\text{HNO}_3 + \text{Aq.}$ (Vortmann.)

— — — **nitratocarbonate**,
 $\text{Co}_2(\text{NH}_3)_8(\text{NO}_3)_2(\text{CO}_3)_2 + \text{H}_2\text{O}$.

Less sol. than other octamine carbonates. (Vortmann and Blasberg, B. 22. 2650.)

See **Carbonatotetramine cobaltic nitrate**.

— — — **purpureochloride**,
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2$.

Easily sol. in H_2O ; partly precipitated from aqueous solution by conc. $\text{HCl} + \text{Aq.}$ (Vortmann, B. 10. 1451.)

= **Chlorotetramine cobaltic chloride**, $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$, *wich see.* (Jorgensen, J. pr. (2) 42. 211.)

— — — **purpureomercuric chloride**,
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2, 6\text{HgCl}_2$

Sl. sol. in cold, easily in hot H_2O . (Vortmann.)

= **Chlorotetramine cobaltic mercuric chloride**. (Jörgensen, J. pr. (2) 42. 211.)

— — — **purpureomercuric hydroxychloride**,
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgCl})_4(\text{HgOH})_4\text{Cl}_6$.

Ppt. (Vortmann and Morgulis, B. 22. 2647.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_8\text{Cl}_6$. (V. and M.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_8\text{Cl}_4(\text{OH})_2$. (V. and M.)

— — — **purpureomercuriodide, basic**,
 $\text{Co}_2\text{N}_8\text{H}_{18}(\text{HgOH})_8\text{I}_6$.

(Vortmann and Borsbach, B. 23. 2805.)

— — — **purpureochloroplatinate**.

Very sl. sol. in H_2O . (Vortmann.)

= **Chlorotetramine cobaltic chloroplatinate**, $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{PtCl}_6 + 2\text{H}_2\text{O}$. (Jörgensen, J. pr. (2) 42. 215.)

— — — **roseochloride**, $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2 + 2\text{H}_2\text{O}$, or $4\text{H}_2\text{O}$.

Sol. in H_2O . (Vortmann, B. 15. 1891.)

See **Roseotetramine cobaltic chloride**.

— — — **roseomercuric chloride**,
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2, 6\text{HgCl}_2 + 3\text{H}_2\text{O}$.

Ppt. (Vortmann.)

— — — **roseomercuric hydroxychloride**,
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgCl})_6(\text{HgOH})_2\text{Cl}_6$.

(Vortmann and Morgulis, B. 22. 2647.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_8\text{Cl}_6$. (V. and M.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_8\text{Cl}_4(\text{OH})_2$. (V. and M.)

— — — **roseomercuric iodide**,

$\text{Co}_2\text{N}_8\text{H}_{21}(\text{HgI})_3\text{I}_6$.

Ppt. Sol. in HCl or HNO_3 . (Vortmann and Borsbach, B. 23. 2806.)

$\text{Co}_2\text{N}_8\text{H}_{20}(\text{HgI})_4\text{I}_6$ Ppt. (V. and B.)

$\text{Co}_2\text{N}_8\text{H}_{20}(\text{HgI})_4\text{I}_4(\text{OH})_2$ Ppt. (V. and B.)

Octamine cobaltic sulphate,

$\text{Co}_2(\text{NH}_3)_8(\text{OH})_2(\text{SO}_4)_2 + 3\text{H}_2\text{O}$. (?).

Insol. in H_2O or dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ Sol. in moderately conc. $\text{HCl} + \text{Aq.}$ (Vortmann and Blasberg, B. 22. 2653.)

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_4)_3 + 6\text{H}_2\text{O}$ Sol. in H_2O . (Vortmann.)

$+ 4\text{H}_2\text{O}$. Easily sol. in H_2O .

See **Roseotetramine cobaltic sulphate**.

— — — **sulphatocarbonate**,

$\text{Co}_2(\text{NH}_3)_8\text{SO}_4(\text{CO}_3)_2 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Vortmann, B. 10. 1458.)

See **Carbonatotetramine cobaltic sulphate**.

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$ Sol. in H_2O . (Vortmann and Blasberg, B. 22. 2650.)

— — — **ammonium sulphite**,

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3\text{NH}_4)_6 + 10\text{H}_2\text{O}$

See **Octamine cobaltisulphite, ammonium**.

Octamine cobaltisulphurous acid.

Ammonium octamine cobaltisulphite,

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3\text{NH}_4)_6 + 10\text{H}_2\text{O}$.

Sol. in H_2O . (Vortmann and Magdeburg, B. 22. 2632.)

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2(\text{SO}_3\text{NH}_4)_2 + 4\text{H}_2\text{O}$.

Ammonium barium — — —,

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_6\text{Ba}_2(\text{NH}_4)_2 + 7\text{H}_2\text{O}$.

Ppt. (V. and M.)

Barium — — —, $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_6\text{Ba}_2 + 7\text{H}_2\text{O}$.

Ppt. (V. and M.)

Cobaltic — — —,

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_6\text{Co}_2 + 36\text{H}_2\text{O}$, and

$24\text{H}_2\text{O}$.

Luteocobaltic — — —,

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_6(\text{NH}_3)_{12}\text{Co}_2 + 8\text{H}_2\text{O}$.

Ppt. (V. and M.)

Octamine iridium chloride,

$\text{Ir}_2(\text{NH}_3)_8\text{Cl}_6$.

Very sol. in H_2O . (Palmaer, B. 22. 16.)

Octamine iridium chlorosulphate,

$\text{Ir}_2(\text{NH}_3)_8\text{Cl}_6\text{SO}_4 + 4\text{H}_2\text{O}$.

(Palmaer.)

Osmiamic acid, $\text{H}_2\text{N}_2\text{Os}_2\text{O}_6$, or

$\text{H}_2\text{N}_2\text{Os}_2\text{O}_5(?)$.

Known only in aqueous solution, which is unstable.

Ammonium osmiamate.

Easily sol. in H_2O or alcohol. (Fritzsche and Struve, J. pr. **41**. 97.)

Barium osmiamate, $Ba_2N_2Os_2O_5$.

Moderately sol. in H_2O .

Lead osmiamate.

Ppt. Sol. in acids without decomp.

Lead osmiamate chloride.

Ppt.

Mercurous osmiamate.

Ppt.

Mercuric osmiamate.

Ppt.

Potassium osmiamate, $K_2N_2Os_2O_5$, or $K_2N_2Os_2O_6$.

Sl. sol. in cold, much more easily in hot H_2O . Sl. sol. in alcohol. Insol. in ether.

Silver osmiamate, $Ag_2N_2Os_2O_5$.

Extremely sl. sol. in H_2O or cold HNO_3 + Aq. Sol. in NH_4OH + Aq.

Sodium osmiamate.

Easily sol. in H_2O or alcohol.

Zinc osmiamate, $ZnN_2Os_2O_5$.

Decomp. by H_2O . Nearly insol. in NH_4OH + Aq.

Osmic acid, H_2OsO_4 .

Stable in H_2O containing alcohol. Sol. in HNO_3 or HCl + Aq. Not attacked by H_2SO_4 + Aq. (Morahit and Wischin, Z. anorg. **3**. 153.)

100 g. H_2O dissolve 5.88 g. H_2OsO_4 at 15° . (Squire and Cains, Pharm. J. 1905, **74**. 720.)
Attacked by liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 828.)

Barium osmate, $BaOsO_4 + H_2O$.

Insol. in H_2O . (Claus, Pogg. **65**. 205.)

Calcium osmate, $CaOsO_4$.

Insol. in H_2O . (Fremy, J. pr. **33**. 411.)

Lead osmate.

Insol. in H_2O . (Fremy.)

Potassium osmate, $K_2OsO_4 + 2H_2O$.

Sl. sol. in cold, much more sol. in hot H_2O , but is decomp. thereby. Sl. sol. in KNO_3 + Aq. Insol. in dil. or conc. alcohol and ether. Fremy, A. ch. (3) **12**. 516.)

Insol. in conc. saline solutions. (Gibbs, Am. J. Sci. (2) **31**. 70.)

Sodium osmate, Na_2OsO_4 .

Sol in H_2O , insol in alcohol and ether. (Fremy, l. c.)

Perosmic acid.

See Perosmic acid.

Osminitrous acid.**Ammonium osminitrite, $(NH_4)_2Os(NO_2)_5 + 2H_2O$.**

Sol. in H_2O . Decomp. when solution is warmed. (Wintrebert, C. R. 1905, **140**. 586.)

Barium osminitrite, $BaOs(NO_2)_5$.

+ H_2O ; + $4H_2O$. (Wintrebert.)

Calcium osminitrite, $CaOs(NO_2)_5 + 4H_2O$.

(Wintrebert.)

Magnesium osminitrite, $MgOs(NO_2)_5 + 4H_2O$.

(Wintrebert.)

Potassium osminitrite, $K_2Os(NO_2)_5$.

Very hygroscopic. Very sol. in H_2O . Decomp. by HCl , HBr and HI . (Wintrebert, A. ch. 1903, (7) **28**. 135.)

Silver osminitrite, $Ag_2Os(NO_2)_5 + 2H_2O$.

Sl. sol. in H_2O with partial decomp. (Wintrebert, C. R. 1905, **140**. 586.)

Sodium osminitrite, $Na_2Os(NO_2)_5 + 2H_2O$.

Sol. in H_2O . (Wintrebert.)

Strontium osminitrite, $SrOs(NO_2)_5 + 2H_2O$.

(Wintrebert.)

Zinc osminitrite, $ZnOs(NO_2)_5 + \frac{1}{2}H_2O$.

(Wintrebert.)

Osmyloxynitrous acid.**Ammonium osmyloxynitrite, $(NH_4)_2OsO_3(NO_2)_2$.**

Decomp. by boiling conc. HCl and by KOH + Aq. (Wintrebert, A. ch. 1903, (7) **28**. 107.)

Barium osmyloxynitrite, $BaOsO_3(NO_2)_2 + 4H_2O$.

(Wintrebert.)

Potassium osmyloxynitrite, $K_2OsO_3(NO_2)_2 + 3H_2O$.

Sl. sol. in cold H_2O . Aqueous solution decomp. slowly. Sol. with decomp. in dil. KOH + Aq. (Wintrebert.)

Silver osmyloxynitrite, $Ag_2OsO_3(NO_2)_2 + H_2O$.

(Wintrebert.)

Strontium osmyloxynitrite, $\text{SrOsO}_3(\text{NO}_2)_2 + 3\text{H}_2\text{O}$. (Wintrebert.)

Osmylnitrous acid.

Potassium osmylnitrite, $\text{K}_2\text{OsO}_2(\text{NO}_2)_4$.

Decomp. by H_2O and by excess of $\text{KOH} + \text{Aq}$. (Weinland, A. ch. 1903, (7) 28. 54.)

Osmisulphurous acid.

Potassium osmisulphite, $[\text{Os}(\text{H}_2\text{O})(\text{SO}_3)_2]\text{K}_2 + 4\text{H}_2\text{O}$.

Ppt. (Rosenheim, Z. anorg. 1899, 21. 144.)

Potassium hydrogen osmisulphite, $[\text{Os}_2(\text{H}_2\text{O})(\text{SO}_3)_{11}]\text{K}_{11}\text{H}_3 + 5\text{H}_2\text{O}$.

Sol. in H_2O without decomp. (Rosenheim.)
 $[\text{Os}(\text{SO}_3)_2]\text{K}_2\text{H}_2 + 2\text{H}_2\text{O}$. Sol. in H_2O without decomp. (Rosenheim.)

Sodium osmisulphite, $[\text{Os}(\text{SO}_3)_2]\text{Na}_2 + 8\text{H}_2\text{O}$.

Only sl. sol. in H_2O .

$[\text{Os}(\text{H}_2\text{O})(\text{SO}_3)_2]\text{Na}_2 + 4\text{H}_2\text{O}$. Ppt.

$[\text{OsO}(\text{SO}_3)_2]\text{Na}_2 + 3\text{H}_2\text{O}$. Ppt. (Rosenheim.)

Osmium, Os.

When finely divided and not ignited to a very high temperature, Os is sol. in $\text{HNO}_3 + \text{Aq}$ or aqua regia. When ignited it is not attacked by any acid.

Insol. in liquid NH_3 . (Gore, Am. ch. J. 1898, 20.. 828)

Osmium ammonium comps.

See—

Oxyosmiumamine comps., $\text{OsO}(\text{NH}_3)_2\text{X}$.

Oxyosmiumdiamine comps., $\text{OsO}_2(\text{NH}_3)_4\text{X}_2$.

Osmium bromide with MBr.

See Bromosmate, M.

Osmium dichloride, OsCl_2 .

Deliquescent. Sol. in little, but decomp. by more H_2O , with pptn. of Os. Sol. in conc. alkali chlorides + Aq with combination and partial decomp. (Berzelius.)

Sol. in alcohol and ether.

Insol. in H_2O . Insol. in HCl and H_2SO_4 . Sl. sol. in HNO_3 and aqua regia. Slowly sol. in strong alkali. Insol. in liquid Cl_2 . Insol. in alcohol and formaldehyde. (Ruff, Z. anorg. 1910, 65. 455.)

Osmium trichloride, OsCl_3 .

Hydroscopic. Sol. in conc. H_2SO_4 , HCl and conc. HNO_3 . Sol. in alkali and in NH_4OH . Insol. in liquid Cl_2 . Easily sol. in alcohol. Sl. sol. in ether. (Ruff, Z. anorg. 1910, 65. 453.)

+ $3\text{H}_2\text{O}$. Sol. in H_2O . (Moraht and Wischin, Z. anorg. 3. 153.)

Osmium tetrachloride, OsCl_4 .

Sol. in a little H_2O , but decomp. by further addition of that solvent. Sol. in conc $\text{HCl} + \text{Aq}$.

Osmium trichloride with MCl .

See Chlorosmate, M.

Osmium tetrachloride with MCl .

See Chlorosmate, M.

Osmium sodium chloride, $\text{Na}_2\text{OsCl}_6 + 2\text{H}_2\text{O}$.

Very sol. in H_2O and in alcohol. (Rosenheim, Z. anorg. 1899, 21. 133.)

Osmium tetrafluoride, OsF_4 .

Sol. in H_2O . (Ruff, B. 1913, 46. 948.)

Osmium hexafluoride, OsF_6 .

Decomp. by H_2O and conc H_2SO_4 . Sol. in $\text{NaOH} + \text{Aq}$. (Ruff, B. 1913, 46. 945.)

Osmium octofluoride, OsF_8 .

Sol. in H_2O , but is somewhat hydrolyzed. Sol. in conc. H_2SO_4 with decomp. Sol. in $\text{NaOH} + \text{Aq}$. (Ruff, B. 1913, 46. 944.)

Osmium monohydroxide, OsO , $x\text{H}_2\text{O}$.

Insol. in H_2O . Sl. sol. in $\text{KOH} + \text{Aq}$. Slowly but completely sol. in acids. (Berzelius.)

Osmium dihydroxide, OsO_2 , H_2O .

Sol. in $\text{HCl} + \text{Aq}$ while still moist. Insol. in H_2SO_4 or $\text{HNO}_3 + \text{Aq}$.
 + $2\text{H}_2\text{O}$. Sol. in HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$ while still moist. (Claus and Jacoby.)

Osmium sesquihydroxide, $\text{Os}_2\text{O}_3\text{H}_3$.

Sol. in acids, and partly sol. in $\text{KOH} + \text{Aq}$. (Claus and Jacoby.)

Osmium iodide, OsI_4 .

Extremely deliquescent. Sol. in H_2O of alcohol, but solution is unstable. (Moraht and Wischin, Z. anorg. 3. 153.)

Osmium potassium nitrosochloride, $\text{K}_2\text{Os}(\text{NO})\text{Cl}_5$.

Stable in aqueous solution. Only sl. attacked by hot HNO_3 . (Wintrebert, A. ch. 1903, (7) 28. 132.)

Osmium monoxide, OsO .

Insol. in H_2O or acids. (Claus and Jacoby.)

Osmium dioxide, OsO_2 .

Insol. in H_2O or acids.

Osmium sesquioxide, Os_2O_3 .

Insol. in acids. (Claus and Jacoby.)

Osmium trioxide, "Osmic acid," OsO_3 .

See Osmic acid.

Osmium tetroxide, "Perosmic acid," OsO_4 .

Slowly but abundantly sol in H_2O . Sol in alcohol and ether with gradual decomposition. Sol in $\text{NH}_4\text{OH} + \text{Aq.}$ the solution undergoing decomposition on heating.

Osmium oxide ammonia, $\text{OsO}_2 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$.

See Oxyosmiumamine hydroxide.

Osmium oxysulphide, $\text{Os}_2\text{S}_7\text{O}_3 + 2\text{H}_2\text{O}$.

Unstable.

$\text{OsO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$. Insol in H_2O . (v. Meyer, J. pr. (2) 16. 77.)

$\text{Os}_2\text{O}_5\text{S}_2 + \text{H}_2\text{O}$. Decomp. and dissolved by HNO_3 , HCl , or $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Moraht and Wischin, Z. unorg. 3. 153.)

Osmium sulphide, Os_2S_3 (?).

(Berzelius)

Min. *Laurite* Insol in all acids, even in aqua regia.

Osmium disulphide, OsS_2 .

Sl. sol. in H_2O ; not more sol. in alkali hydrates or carbonates + Aq. Insol in alkalis after drying. (Fremy, A. ch. (3) 12. 521.)

Osmium tetrasulphide, $\text{OsS}_4 + x\text{H}_2\text{O}$.

Insol. in alkali sulphides, carbonates, or hydroxides + Aq. Sol. in cold dil. $\text{HNO}_3 + \text{Aq.}$ (Claus)

Osmocyanhydric acid, $\text{H}_4\text{Os}(\text{CN})_6$.

Easily sol. in H_2O and alcohol. Insol. in ether. (Martius, A. 117. 361.)

Barium osmocyanide, $\text{Ba}_2\text{Os}(\text{CN})_6 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O and dil. alcohol. (M.)

Barium potassium osmocyanide,

$\text{BaK}_2\text{Os}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Efflorescent. Sl. sol. in cold, easily in hot H_2O .

Ferric osmocyanide, $\text{Fe}_4[\text{Os}(\text{CN})_6]_3 + x\text{H}_2\text{O}$.

Insol. in H_2O .

Potassium osmocyanide, $\text{K}_4\text{Os}(\text{CN})_6 + 3\text{H}_2\text{O}$.

Moderately sol. in boiling, less in cold H_2O . Insol. in alcohol and ether.

Osmosyl ammonium comps.

See Oxyosmium amine comps.

Osmyl potassium bromide, $\text{K}_2\text{OsO}_2\text{Br}_4 + 2\text{H}_2\text{O}$.

Same properties as the chloride. (Wintrebert, A. ch. 1903, (7) 28. 94.)

Osmyl potassium chloride, $\text{K}_2\text{OsO}_2\text{Cl}_4$.

Very sol. in H_2O . Solution is stable only in the presence of a small amt of HCl . Decomp. by hot conc HCl .

+ $2\text{H}_2\text{O}$. As the anhydrous salt. (Wintrebert, A. ch. 1903, (7) 28. 86.)

Osmyl ditetramine comps.

See Oxyosmium diamine comps.

Oxamidodisulphonic acid.

See Hydroxylamine monosulphonic acid.

Oximidosulphonic acid.

See Hydroxylamine disulphonic acid.

Oxyamidodisulphonic acid.

See Hydroxylamine sulphonic acid.

Oxyammonium salts.

See Hydroxylamine salts.

Oxycobaltamines, acid comps.

(Maquenne, C. R. 96. 344.)

Are anhydrooxycobaltamine comps., which see. (Vortmann, M. ch. 6. 404.)

Oxycobaltamine chloride,

$\text{Co}_2(\text{NH}_3)_{10}\text{O} \begin{smallmatrix} \text{OH} \\ \text{OH} \end{smallmatrix} \text{Cl}_4$.

(Vortmann, M. ch. 6. 404.)

$\text{Co}_2(\text{NH}_3)_{10}\text{O}_2\text{Cl}_4$, $\text{HCl} + 3\text{H}_2\text{O}$. Is anhydrooxycobaltamine chloride, which see.

— **chloronitrate hydrochloride,**

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_3)_2\text{Cl}_2$, $4\text{HCl} + 3\text{H}_2\text{O}$.

Is anhydrooxycobaltamine chloronitrate, which see.

— **chlorosulphate,**

$\text{Co}_2(\text{NH}_3)_{10} \begin{pmatrix} \text{OH} \\ \text{O(OH)} \end{pmatrix} (\text{SO}_4)\text{Cl}_2$, 4HCl .

Easily decomp.

— **iodide**, $\text{Co}_2(\text{NH}_3)_{10} \begin{pmatrix} \text{OH} \\ \text{O(OH)} \end{pmatrix} \text{I}_4$.

Sl. sol. in H_2O . Decomp. by much H_2O . (Vortmann.)

— **nitrate**, $\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_3)_4 + \text{H}_2\text{O}$.

Decomp. by H_2O .

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_3)_4$, $\text{HNO}_3 + 2\text{H}_2\text{O}$. Decomp. by H_2O .

— **nitratodisulphate,**

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{SO}_4)(\text{NO}_3)_2$, 4HNO_3 .

Decomp. at once by H_2O .

Oxycobaltamine sulphate,

Very sl. sol. in H_2O with decomp.; more easily sol. in acidified H_2O . Sol. in acids (Maquenne, C. R. 96. 344.)

violently by H_2O .

Oxygen, O_2 .

100 vols H_2O absorb 4.6 vols O gas at ord. temp (Otto-Graham.)

Sol in 27 pts H_2O at ord temp. (Pelouze and Fremy)

100 vols H_2O dissolve 0.925 vol. O (Gay-Lussac)

1 vol. H_2O at t° and 760 mm. absorbs V vols.

O gas, reduced to 0° and 760 mm.

t°	V	t°	V	t°	V
0	0.04114	7	0.03465	14	0.03034
1	0.04007	8	0.03389	15	0.02989

6	0.03544	13	0.03082	20	0.02838

(Bunsen's Gasometry.)

Coefficient of absorption of O by $\text{H}_2\text{O} = 0.04115 - 0.0010899t + 0.000022563t^2$. (Bunsen and Pauli, A. 93. 21.)

Coefficient of absorption of O in H_2O at $64^\circ = 0.041408$; at $12.6^\circ = 0.036011$. (Timofejew, Z. phys. Ch. 6. 148.)

Absorption of O by H_2O . β_1 = "solubility," i. e., the amount of gas (reduced to 0° and 760 mm.) which is absorbed by 1 vol of the liquid when the barometer indicates 760 mm. pressure; β = coefficient of absorption, i. e., amount absorbed by the liquid when the pressure of the gas itself without the tension of the liquid amounts to 760 mm.; $\beta_1 = \beta \frac{760-f}{760}$, when f = vapor tension of solvent at t° .

(Müller.)

Abundantly absorbed by oil of turpentine. Oil of turpentine absorbs its own vol O when exposed two weeks to the air, but does not give it off on boiling. (Brandes.)

Absorbed by other oils, but this is decomposition rather than absorption, as the oils are oxidized. (See Storer's Dict.)

100 vols arterial blood dissolve 10-13 vols. O. (Magnus.)

Coefficient of absorption for petroleum = 0.202 at 20°; 0.229 at 10°. (Gniewasz and Walfisz, Z. phys. Ch. 1. 70.)

The author examined the solubility of O₂ and N₂ at low temp. in alcohols, ethers, acetone, CHCl₃, petroleum, benzene and various inorganic liquids; at low temp. the solubility of the N₂ increases at the same rate as that of the O₂. (Claude, C. R. 1900, 131. 448.)

Oxydimercuri ammonium bromate,(NH₂OH)₂BrO₃.

(Rammelsberg, Pogg. 55. 82.)

— carbonate, (NH₂OH)₂CO₃ + $\frac{1}{2}$ H₂O.

Insol. in H₂O. Decomp. by HCl + Aq only when conc. Not decomp. by boiling KOH + Aq. Decomp. by KI or K₂S + Aq. (Hirzel.) + H₂O. As above. (Hirzel.)

Oxydimercuri ammonium chloride,
($\text{NHg}_2\text{OH}_2\text{Cl}$)

Is *dimercuri ammonium chloride*, $\text{NHg}_2\text{Cl} + \text{H}_2\text{O}$, which see.

— **oxytrimercuri ammonium chloride,**
($\text{NHg}_3\text{OH}_2\text{Cl}$, ($\text{NHg}_3\text{O}_2\text{H}_2\text{Cl}$) (?)

Insol. in H_2O . Easily sol. in dil. $\text{HCl} + \text{Aq}$. More difficultly sol. in very dil. H_2SO_4 or $\text{HNO}_3 + \text{Aq}$. Insol. in conc. H_2SO_4 . Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$, or $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$ (Schmieder.)

— **chromate,** (NHg_2OH_2) $_2\text{CrO}_4$.

Not decomp. by $\text{KOH} + \text{Aq}$. (Hirzel, J. B. 1852. 421.)

— **mercuric chromate,** (NHg_2OH_2) $_2\text{CrO}_4$, 4HgO , 3CrO_3 .

Decomp. by HNO_3 without going into solution. Easily sol. in HCl (Hirzel.)

Composition is (NHg_2OH_2) $_2\text{O}$, 2CrO_3 , $3[(\text{NH}_4)_2\text{O}$, $2\text{Cr}_2\text{O}_3]$ = (NHg_2OH_2) $_2\text{Cr}_2\text{O}_7$, $3(\text{NH}_4)_2\text{Cr}_2\text{O}_7$. (Hensgen, R. t. c. 5. 187.)

Probably (NHg_2) $_2\text{Cr}_2\text{O}_7$, $3(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + 2\text{H}_2\text{O}$.

— **fluoride, acid,** (NHg_2OH_2) F , HF .

(Finkener, Pogg. 110. 632.)

Probably NHg_2F , $\text{HF} + \text{H}_2\text{O}$.

— **hydroxide,** (NHg_2OH_2) $\text{OH} = \text{NHg}_2\text{OH} + \text{H}_2\text{O}$.

(Millon's base.) Sl. sol. in H_2O , especially if warm. Sol. in 13,000 pts. H_2O at 17° , and 1700 pts. at 80° . Insol. in alcohol or ether. (Gerresheim, A. 195. 373.)

+ H_2O . Insol. in H_2O or alcohol. Sol. in traces in $\text{NH}_4\text{OH} + \text{Aq}$. Not decomp. by cold $\text{KOH} + \text{Aq}$; sl. decomp. if hot. (Millon.)

— **ammonium iodate,** (NHg_2OH_2) IO_3 , $2\text{NH}_4\text{IO}_3$.

Insol. in H_2O . (Millon, A. ch. (3) 18. 410.)

— **iodide,** (NHg_2OH_2) I .

Sol. in warm $\text{HCl} + \text{Aq}$. Not decomp. by boiling $\text{KOH} + \text{Aq}$. Sol. in warm $\text{KI} + \text{Aq}$. (Rammelsberg, Pogg. 48. 170.)

Correct formula is $\text{NHg}_2\text{I} + \text{H}_2\text{O}$. (Rammelsberg.)

— **nitrate,** (NHg_2OH_2) NO_3 .

Insol. in H_2O ; not decomp. by boiling $\text{KOH} + \text{Aq}$. Sol. in cold $\text{HCl} + \text{Aq}$, from which it is precipitated by H_2O . Sl. sol. without decomp. in HNO_3 or $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Soubeiran.)

Is *dimercuri ammonium nitrate*, NHg_2NO_3 . (Pesci, Gazz. ch. it. 20. 485.)

— **ammonium nitrate,** $\text{NHg}_2\text{OH}_2\text{NO}_3$, $2\text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . Kane, A. ch. 72. 242.)

Is *dimercuri ammonium ammonium nitrate*, NHg_2NO_3 , $2\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$. (Pesci.)

Oxydimercuri ammonium oxide,
(NHg_2OH_2) $_2\text{O}$.

Insol. in H_2O or alcohol, not attacked by boiling conc. $\text{KOH} + \text{Aq}$. Sol. in hot $\text{NH}_4\text{NO}_3 + \text{Aq}$, $\text{NH}_4\text{Cl} + \text{Aq}$, $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$, $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$, $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$. (Millon, A. ch. (3) 18. 397.)

— **mercuric phosphate,** $\text{Hg}(\text{NHg}_2\text{OH}_2)\text{PO}_4$.

Insol. in H_2O . Slowly sol. in hot $\text{HNO}_3 + \text{Aq}$; not decomp. by boiling with $\text{KOH} + \text{Aq}$, but by KI or $\text{K}_2\text{S} + \text{Aq}$. Sol. in $\text{HCl} + \text{Aq}$ or much hot $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq}$. (Hirzel.)

— **mercuric sulphite,** (NHg_2OH_2) $_2\text{SO}_3$, HgSO_3 .

Insol. in H_2O . Sol. in much $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$. Sol. in $\text{HCl} + \text{Aq}$ with decomposition. Insol. in boiling $\text{KOH} + \text{Aq}$ (Hirzel.)

— **sulphate,** (NHg_2OH_2) $_2\text{SO}_4$.

Sol. in traces in H_2O . Easily sol. in HCl or $\text{HNO}_3 + \text{Aq}$. (Kane.)

Insol. in $\text{HNO}_3 + \text{Aq}$. (Hirzel.)

Slowly sol. in boiling conc. H_2SO_4 . (Hirzel.)

Insol. in conc., easily sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Schmieder, J. pr. 75. 147.)

Moderately sol. in much $(\text{NH}_4)_2\text{SO}_4$ or boiling $\text{NH}_4\text{Cl} + \text{Aq}$. Not decomp. by boiling $\text{KOH} + \text{Aq}$. (Hirzel.)

Easily decomp. by boiling with dil. $\text{KOH} + \text{Aq}$. (Schmieder.)

Does not exist. (Pesci.)

2NH_3 , 2HgO , SO_3 .

See *Dimercuri ammonium sulphate*.

Oxytrimercuri ammonium chloride,
($\text{NHg}_3\text{O}_2\text{H}_2\text{Cl}$) (?)

Insol. in H_2O .

— **nitrate,** ($\text{NHg}_3\text{O}_2\text{H}_2$) NO_3 .

Sol. in cold $\text{HCl} + \text{Aq}$, from which it is precipitated by $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. Not decomp. by H_2SO_4 or warm $\text{KOH} + \text{Aq}$. (Pagenstecher.)

Does not exist. (Pesci, Gazz. ch. it. 20. 485.)

Oxytrimercuri diammonium sulphate,
 2NH_3 , 3HgO , SO_3 .

See *Trimercuri ammonium sulphate*.

Oxytrimercuri oxydimercuri ammonium sulphate,
 $\text{NH}_2\text{Hg}_3\text{O}_2$, $\text{NH}_2\text{Hg}_2\text{O} > \text{SO}_4$.

Completely sol. in $\text{NH}_4\text{Cl} + \text{Aq}$, or $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. Sol. in dil. or conc. $\text{HCl} + \text{Aq}$, and very dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Insol. in $\text{HNO}_3 + \text{Aq}$ or conc. H_2SO_4 . (Schmieder.)

Does not exist. (Pesci.)

Oxytetramercuriammonium mercuric nitrate (?), $2(\text{NHg}_4\text{O}_2)\text{NO}_3$, HgNO_3 (?).

Completely insol in $\text{HNO}_3 + \text{Aq}$. Sol. in warm $\text{HCl} + \text{Aq}$. Slowly decomp. by boiling $\text{KOH} + \text{Aq}$. Gradually sol. in hot conc $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Hirzel.)

Does not exist (Pesci, Gazz. ch. it. 20. 485.)

Oxyntrosulphonic anhydride,

Sol. in H_2O with decomp. (Weber, Pogg. 123. 339.)

Oxyosmiumamine hydroxide (Osmosyldiamine hydroxide),

Insol in H_2O . Sl. sol. in acids. Sol. in $\text{KOH} + \text{Aq}$. When moist, sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Oxyosmiumdiamine chloride (Osmyltetramine chloride), $\text{OsO}_2(\text{N}_2\text{H}_5\text{Cl})_2$.

Sl. sol in cold, more easily in hot H_2O . Insol in $\text{NH}_4\text{Cl} + \text{Aq}$. (Gibbs, Am. Ch. J. 3. 233.)

— chloroplatinate, $\text{OsO}_2(\text{N}_2\text{H}_5\text{Cl})_2$, PtCl_4 .

Sl. sol. in H_2O . (Gibbs.)

— hydroxide, $\text{OsO}_2(\text{N}_2\text{H}_5\text{OH})_2$.

Known only in solution.

— nitrate, $\text{OsO}_2(\text{N}_2\text{H}_5\text{NO}_3)_2$.

— sulphate, $\text{OsO}_2(\text{N}_2\text{H}_5)_2\text{SO}_4 + \text{H}_2\text{O}$. (Gibbs, Am. Ch. J. 3. 233.)

Oxyphosphuretted hydrogen (?), $\text{P}_4\text{H}(\text{OH})$.

P_4O of Leverrier, and Goldschmidt has this formula according to Franke (J. pr. (2) 35. 341). Decomp. slowly by H_2O or alkalies. Forms potassium salt, $\text{P}_4\text{H}(\text{OK})$, sol. in H_2O .

— hydriodide, $\text{P}_4\text{H}(\text{OH})$, HI .

Decomp. at 80° .

Sesquioxypylatisulphuric acid, Pt_2O_3 , 3SO_3 , $\text{SO}_4\text{H}_2 + 11\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (Blondel, A. ch. 1905, (8) 6. 113.)

Barium sesquioxypylatisulphate, Pt_2O_3 , 3SO_3 , $\text{SO}_4\text{Ba} + 8\text{H}_2\text{O}$.

Very sol. in H_2O . (Blondel.)

Potassium sesquioxypylatisulphate, Pt_2O_3 , 3SO_3 , $\text{SO}_4\text{K}_2 + 2\text{H}_2\text{O}$.

(Blondel.)

Sodium sesquioxypylatisulphate, Pt_2O_3 , 3SO_3 , $\text{SO}_4\text{Na}_3 + 8\text{H}_2\text{O}$.

Very sol. in H_2O (Blondel.)

Oxysulphantimonic acid.

See Sulphoxyantimonic acid.

Oxysulpharsenic acid.

See Sulphoxyarsenic acid.

Oxysulphazotic acid, $\text{H}_4\text{S}_4\text{N}_2\text{O}_{14} =$

Known only in its salts. (Claus, A. 153. 52, 194.)

Has formula $(\text{SO}_3\text{H})_2\text{N} \begin{array}{c} \diagup \text{O} \diagdown \\ \text{---} \end{array} \text{N}(\text{SO}_3\text{H})_2$.

(Raschig, A. 241. 161.)

Potassium oxysulphazotate, $\text{NO}(\text{SO}_3\text{K})_2$.

Insol. in alcohol. (Fremy, A. ch. (3) 15. 451.)

According to Raschig the formula is

Very sol. in water, with rapid decomposition. (Raschig.)

See also Peroxylaminesulphonate, potassium.

Oxysulphotungstic acid.

See Sulphotungstic acid.

Oxysulphovanadic acid.

See Sulphoxyvanadic acid.

Ozone, O_3 .

Not appreciably sol. in H_2O . (Schönbein.) Imparts its taste and properties to H_2O . (Williamson.)

Later, Carius (B. 5. 520) found that 1000 vols. H_2O at $1-2.5^\circ$ absorb 5.11 vols. O_3 (red. to 0° and 760 mm). He also still later (A. 174. 1) found, by conducting the gas for 9-12 hours through H_2O , that 1000 vols. H_2O absorb a maximum of 28.160 vols. O_3 . The ozonized oxygen used contained 3.44 vols. O_3 in 100 vols. O_2 . Since gases are absorbed in proportion to their partial pressure, which is very small for the O_3 , the amount of absorption of water for the gas is very considerable. Carius calculated the coefficient of absorption at $+1^\circ$ to be 0.834.

Ozone is *not at all* absorbed by H_2O ; the H_2O through which ozone had been passed gave no reactions for ozone. (Rammelsberg, B. 6. 603.)

Schöne (B. 6. 1224) corroborates Carius, and finds 8.81 vols. to 1000 vols. H_2O as a maximum amount absorbed.

Sol. in H_2O . (Leeds, B. 12. 1831.)

H₂O takes up $\frac{2}{3}$ of its vol. of O₃ at 0° and 760 mm pressure and $\frac{1}{2}$ of its vol. at 12°, or about 15 times that of oxygen at the same pressure and temp (Mailfert, C. R. 1894, 119. 951.)

Solubility in H₂O at t°.

Temp	Wt. O ₃ dissolved in 1 l H ₂ O	Wt O ₃ in gaseous mixture above the solution	Coefficient of solubility of O ₃
0	39.4 mgr.	61 5 mgr.	0.641
6	34 3	61	0.562
11.8	29 9	59 6	0.500
13	28	58.1	0.482
15	25.9	56 8	0.456
19	21	55 2	0.381
27	13 9	51 4	0.270
32	7.7	39 5	0.195
40	4.2	37.6	0.112
47	2.4	31.2	0.077
55	0.6	19.2	0.031
60	0.0	12 3	0.000

(Mailfert, C. R. 1894, 119. 952.)

Solubility of ozone in acidulated H₂O.

Temp	Coefficient of solubility of ozone	Composition of solution
30°	0.240	} 1 l. H ₂ O + 0.7 cc. H ₂ SO ₄
33	0.224	
42.7	0.174	
49	0.156	1 l. H ₂ O + 0.9 cc. "
57	0.096	1 l. " + 0.3 cc. "

(Mailfert.)

0.00002 pt. by weight is sol. in 1 pt. by weight H₂O at ordinary temp. and pressure. Ladenburg, B. 1898, 31. 2510.)

The solution of O₃ in H₂O cannot be brought into equilibrium, because when the gas is blown through the liquid, a portion is continually decomposed, although the concentration remains constant. (Ingles, Chem. Soc. 1903, 83. 1012.)

About 10 mg. ozone are sol. in 1 l. H₂O at +2°; 1.5 mg. ozone are sol. at +28°. (Moufang, C. C. 1911, II. 1674.)

Solubility in 0.1-N H₂SO₄.

C solution: C gas = 0.23 at 20°; 0.44 at 0°. (Luther, Z. Elektrochem. 1905, 11. 833.)

The absorption coefficient of the gas in 0.1 N H₂SO₄ solution is 0.487. (Rothmund, C. C. 1912, I. 1261.)

Sol. in H₂C₂O₄ + Aq. (Jeremin, B. 11. 988.)

Completely absorbed by oil of turpentine and oil of cinnamon. (Soret, A. ch. (4) 17. 113.)

Dipalladamine chloride, Cl₂Pd₂(NH₃)₄Cl =

Sl. sol. in H₂O. (Deville and Debray, C. R. 86. 296.)

Palladium, Pd

Not attacked by H₂O. Sl. attacked by HC + Aq, but Pd sponge or filings are easily dissolved in warm HCl + Aq, with access of air. HNO₃ + Aq of 1.2 sp. gr. dissolves Pd slightly, but it is easily sol in HNO₃ + Aq of 1.35 sp gr. (Rose)

Easily sol in aqua regia. Sl. sol. in conc., but insol. in dil HI + Aq Sol in conc. boiling H₂SO₄. Sol. in boiling FeCl₃ + Aq. Sol. in HBr + Aq with a little HNO₃.

Insol. in liquid NH₃ (Gore, Am Ch J. 1898, 20. 828.)

Palladium ammonium compounds.

See—

Dipalladamine comps., Cl₂Pd₂(NH₃)₄Cl₄

Palladodiamine " Pd(NH₃)₄Cl₂

Palladosamine " Pd(NH₃)₂Cl₂

Palladium dibromide.

Not known in pure state

Palladium bromide with MBr.

See Bromopalladite, M.

Palladium tetrabromide with MBr.

See Bromopalladate, M.

Palladous phosphorus bromide, Pd₂P₂Br₁₀.

Properties as the corresponding chloride. (Strecker, B. 1909, 42. 1776)

Palladium subchloride, Pd₂Cl₂

Deliquescent. Decomp. by H₂O, NH₄Cl, KI, or NH₄OH + Aq. (Kane.)

Sol. in acetone Naumann, B. 1904, 37. 4328.)

Palladium dichloride, PdCl₂.

Slowly but completely sol. in H₂O + 2H₂O Not deliquescent when pure Slowly sol. in H₂O. Much more sol. in H₂O containing HCl.

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Sol. in ethyl acetate. Naumann; B. 1904, 37. 3601.)

Palladium dichloride with MCl.

See Chloropalladite, M.

Palladium tetrachloride with MCl.

See Chloropalladate, M.

Palladous phosphorus chloride, PdCl₂, PCl₃.

Decomp. by H₂O into deliquescent P(OH)₃, PdCl₂. Decomp. by alcohol. (Fink, C. R. 115. 176.)

Decomp. by H₂O. Sol. in CHCl₃ and C₆H₆. Insol. in ligroin and CCl₄. (Strecker, B. 1909, 42. 1775.)

PdCl₂, 2PCl₃. Sol. in C₆H₆, and decomp. by H₂O. (Fink.)

<p>Palladous chloride carbon monoxide, $\text{PdCl}_2 \cdot 2\text{CO}$ Decomp by heat. (Fink, C. R 1898, 126. 648) $2\text{PdCl}_2 \cdot 3\text{CO}$. Decomp. by H_2O Sol. in CCl_4. (Fink)</p>	<p>Palladous oxide, PdO. Slowly sol in acids by boiling (Wohler, A 174. 160)</p>
<p>Palladium difluoride, PdF_2 Sl. sol in H_2O or $\text{HF} + \text{Aq}$ Sl sol while moist, in $\text{NH}_4\text{OH} + \text{Aq}$; insol. after drying, in $\text{NH}_4\text{OH} + \text{Aq}$ Insol in boiling NaF or $\text{NaHF}_2 + \text{Aq}$ (Berzelius)</p>	<p>Palladic oxide, PdO_2. Very sl. attacked by acids</p>
<p>Palladium hydride, Pd_2H (?)</p> <p>Palladous hydroxide, $\text{PdO} \cdot x\text{H}_2\text{O}$ (?). Easily sol in acids or excess of alkali hydrates, and carbonates + Aq. Sol. in hot $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.) Insol in $\text{Na}_2\text{B}_4\text{O}_7$, and $\text{Na}_2\text{HPO}_4 + \text{Aq}$. (Claus)</p>	<p>Palladopalladic oxide, $4\text{PdO} \cdot \text{PdO}_2$ Not attacked by aqua regia (Schneider, Pogg. 141. 528)</p> <p>Palladous oxychloride, $3\text{PdO} \cdot \text{PdCl}_2 + 4\text{H}_2\text{O}$ (?) Sol. in dil acids (Kane)</p>
<p>Palladic hydroxide, $\text{PdO}_2 \cdot x\text{H}_2\text{O}$. Slowly sol. in acids. Sol. in conc. $\text{HCl} + \text{Aq}$ without decomp With dil. $\text{HCl} + \text{Aq}$, Cl_2 is evolved (Berzelius)</p>	<p>Palladous oxychloride ammonia, $\text{PdO} \cdot \text{PdCl}_2 \cdot 6\text{NH}_3$ (?). Sol. in $\text{HCl} + \text{Aq}$. $3\text{PdO} \cdot \text{PdCl}_2 \cdot 2\text{NH}_3 + 3\text{H}_2\text{O}$ (?). Ppt. (Kane)</p>
<p>Palladous hydroxide hydroxylamine; $\text{Pd}(\text{NH}_2\text{O})_4(\text{OH})_2$. Sl sol. in H_2O. Sol. in dil. HCl and in dil. H_2SO_4. (Zeisel, A. 1907, 351. 445.)</p>	<p>Palladium selenide, PdSe. Insol in HNO_3 and aqua regia. (Rossler, A 180. 240.)</p>
<p>Palladium iodide, PdI_2 Insol. in H_2O. Can be detected as a brown coloration in presence of 400,000 pts. H_2O. (Lassaigne.) Sl. sol. in $\text{HI} + \text{Aq}$. Easily sol. in $\text{KI} + \text{Aq}$ (Lassaigne, J. ch. m��d 11. 57.) Insol. in dil. $\text{HCl} + \text{Aq}$, but slightly sol. in saline solutions. (Fresenius.) Sl. sol. in hot conc. $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$, $\text{Cl}_2 + \text{Aq}$, $\text{Br}_2 + \text{Aq}$, $\text{I}_2 + \text{Aq}$, and $\text{CN} + \text{Aq}$; also in HCN, and $\text{MCN} + \text{Aq}$. Insol. in dil. H_2SO_4, HCl, H_3PO_4, HNO_3, or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, or in the K, Na, or NH_4 salts of those acids. Insol. in CuCl_2, ZnCl_2, or $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. Insol. in $\text{KBr} + \text{Aq}$ except in presence of a free mineral acid, but not $\text{HC}_2\text{H}_3\text{O}_2$. Insol. in sugar or starch + Aq, uric acid, alcohol, ether, or oil of lemon. Somewhat sol. in urine. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$, even when dil., with evolution of heat and decomposition. (Kersten, A. 87. 28.) Insol. in alcohol or ether. Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)</p>	<p>Palladium monosulphide, PdS. Insol in H_2O or $(\text{NH}_4)_2\text{S} + \text{Aq}$. Sol. in $\text{HCl} + \text{Aq}$. Pptd. in presence of 10,000 pts. H_2O. (Fellenberg, Pogg. 50. 65) Sol in potassium thiocarbonate + Aq (Rosenblatt, Z anal. 26. 15) A sol. colloidal form was obtained in very dilute solution. (Winnsinger, Bull. Soc. (2) 49. 452.) Does not exist (Kritschenko, Z anorg. 4. 247.)</p> <p>Palladium disulphide, PdS_2. HNO_3 dissolves out part of the S. Easily sol. in aqua regia without separation of S. (Schneider.)</p>
<p>Palladous potassium iodide. See Iodopalladite, potassium.</p>	<p>Palladium sulphide with M_2S. See Sulphopalladate, M.</p>
<p>Palladium suboxide, Pd_2O. Decomp. by acids into palladous salt and Pd. (Kane, Phil. Trans. 1842, 1. 276.) Insol. in acids, even boiling aqua regia. (Willm. B. 25. 220.)</p>	<p>Palladodiamine bromide, $\text{Pd}(\text{N}_2\text{H}_5\text{Br})_2$. Easily sol. in H_2O. — bromopalladite, $\text{Pd}(\text{N}_2\text{H}_5\text{Br})_2 \cdot \text{PdBr}_2$. Properties as the corresponding chloropalladite. — carbonate. Sol. in H_2O. — chloride, $\text{Pd}(\text{N}_2\text{H}_5\text{Cl})_2$. Easily sol. in H_2O.</p>

Palladoamine chloropalladite, $\text{Pd}(\text{N}_2\text{H}_6\text{Cl})_2$, PdCl_2

"Vauquelin's red salt" Insol in cold H_2O . (Fischer)

Sol in boiling H_2O with decomp. Sol. in HCl or $\text{HNO}_3 + \text{Aq}$.

— **fluoride**.

Easily sol in H_2O . (Muller)

— **fluosilicate**.

Sl sol. in cold, easily in warm H_2O . Insol. in alcohol.

— **hydroxide**, $\text{Pd}(\text{N}_2\text{H}_6\text{OH})_2$.

Sol in H_2O .

— **iodide**, $\text{Pd}(\text{N}_2\text{H}_6\text{I})_2$.

Sol in H_2O .

— **nitrate**, $\text{Pd}(\text{N}_2\text{H}_6\text{NO}_3)_2$

Easily sol. in H_2O , HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq}$. Insol in alcohol.

— **palladous nitrite**, $\text{Pd}(\text{N}_2\text{H}_6\text{NO}_2)_2$, $\text{Pd}(\text{NO}_2)_2$.

Easily sol in H_2O .

— **sulphate**, $\text{Pd}(\text{N}_2\text{H}_6)_2\text{SO}_4 + \text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in alcohol.

— **sulphite**, $\text{Pd}(\text{N}_2\text{H}_6)_2\text{SO}_3$.

Sl sol. in H_2O .

Palladochloronitrous acid.

Potassium palladochloronitrite, $\text{Pd}(\text{NO}_2)_2\text{Cl}_2\text{K}_2$.

Sol. in 2 pts. hot, and 3 pts. cold H_2O (Vézes, C. R. 115. 111.)

Palladocyanhydric acid.

Ammonium palladocyanide, $(\text{NH}_4)_2\text{Pd}(\text{CN})_4$ (?)

Sol. in hot H_2O . (Rossler, Z. ch. 1866. 175.)

Barium —, $\text{BaPd}(\text{CN})_4 + 4\text{H}_2\text{O}$.

Not efflorescent. Sol. in H_2O .

Calcium —, $\text{CaPd}(\text{CN})_4 + 4\text{H}_2\text{O}$.

Sol. in H_2O .

Cupric —, $\text{CuPd}(\text{CN})_4$.

Ppt.

Lead —, $\text{PbPd}(\text{CN})_4$.

Ppt.

Magnesium —, $\text{MgPd}(\text{CN})_4$.

Very sol. in H_2O .

Magnesium — **platinocyanide**, $\text{MgPd}(\text{CN})_4$, $\text{MgPt}(\text{CN})_4 + 14\text{H}_2\text{O}$.

Extremely sol in H_2O .

Potassium —, $\text{K}_2\text{Pd}(\text{CN})_4 + 3\text{H}_2\text{O}$.

Efflorescent Sol in H_2O

+ H_2O . Not efflorescent.

Silver —, $\text{Ag}_2\text{Pd}(\text{CN})_4$.

Ppt.

Sodium —, $\text{Na}_2\text{Pd}(\text{CN})_4$.

Not efflorescent. Sol. in H_2O .

+ H_2O .

Palladoiodonitrous acid.

Potassium palladoiodonitrite, $\text{Pd}(\text{NO}_2)_2\text{I}_2\text{K}_2 + 3\text{H}_2\text{O}$.

Effloresces in the air

Decomp by H_2O and dil acids. (Rosenheim, Z anorg 1900, 23. 28.)

Palladonitrous acid.

Potassium palladonitrite, $\text{K}_2\text{Pd}(\text{NO}_2)_4 + 2\text{H}_2\text{O}$.

Efflorescent; sol in H_2O (Lang, J. pr. 83. 415)

Silver palladonitrite, $\text{Ag}_2\text{Pd}(\text{NO}_2)_4$

Easily sol in hot H_2O . (Lang.)

Sodium —, $\text{Na}_2\text{Pd}(\text{NO}_2)_4$.

(Fischer.)

Palladosamine bromide, $\text{Pd}(\text{NH}_3\text{Br})_2$.

Insol. in cold, sl sol in hot H_2O Easily sol. in $\text{HC}_2\text{H}_3\text{O}_2$, H_2SO_3 , KOH , NH_4OH , or alkali carbonates + Aq . (Müller, A. 86. 341.)

— **carbonate**, $\text{Pd}(\text{NH}_3)_2\text{CO}_3$

Moderately sol. in H_2O .

— **chloride**, $\text{Pd}(\text{NH}_3\text{Cl})_2$

Insol. in H_2O , but very gradually decomp. by boiling therewith.

Sol. in warm HCl or $\text{HNO}_3 + \text{Aq}$. Sol. in cold $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{KOH} + \text{Aq}$ without evolution of NH_3 .

+ $2\text{H}_2\text{O}$. Efflorescent. Insol. in H_2O . (Baubigny, A. Suppl. 4. 253.)

— **cyanide**, $\text{Pd}(\text{NH}_3\text{CN})_2$.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

— **fluoride**.

Known only in solution.

— **hydroxide**, $\text{Pd}(\text{NH}_3\text{OH})_2$.

Easily sol. in H_2O . Slowly decomp. by boiling with H_2O . (Müller, A. 86. 341.)

Palladosamine iodide, $\text{Pd}(\text{NH}_3\text{I})_2$.

Insol. in H_2O . Sol in boiling HNO_3 with evolution of I_2 (Fehling, A. 39. 106.)

— **nitrate.**

Known only in solution, which decomp. on evaporation.

— **nitrite, $\text{Pd}(\text{NH}_3\text{NO}_2)_2$**

Moderately sol in H_2O . (Lang.)

— **palladous nitrite, $\text{Pd}(\text{NH}_3\text{NO}_2)_2$, $\text{Pd}(\text{NO}_2)_2$.**

Slowly sol. in cold, easily in hot H_2O . (Lang.)

— **sulphate, $\text{Pd}(\text{NH}_3)_2\text{SO}_4$.**

Moderately sol. in H_2O . (Müller.)

— **sulphite, $\text{Pd}(\text{NH}_3)_2\text{SO}_3$.**

Easily sol. in H_2O . (Müller.)

Pentathionic acid, $\text{H}_2\text{S}_5\text{O}_6$.

Known only in aqueous solution.

Conc. solution is decomp by boiling, but made stable by addition of acids.

Sp. gr. of aqueous solution of pentathionic acid at 22° :

Sp. gr.	1 233	1 320	1 474	1 506
$\% \text{H}_2\text{S}_5\text{O}_6$	32 1	41 7	56	59 7

(Kessler, Pogg. 74. 279.)

Does not exist. (Spring, Bull. Acad. roy. Belg.)

Existence proven by Smith (Chem. Soc. 43. 355.)

Barium pentathionate, $\text{BaS}_5\text{O}_6 + 2\text{H}_2\text{O}$.

Easily sol in H_2O . Aqueous solution is precipitated by alcohol.

Contains $3\text{H}_2\text{O}$. (Lewes, C. N. 43. 41.)

Barium pentathionate tetrathionate, BaS_5O_6 , $\text{BaS}_4\text{O}_6 + 6\text{N}_2\text{O}$.

Easily sol in H_2O . Not precipitated from aqueous solution by two vols. alcohol. (Ludwig, Arch. Pharm. (2) 51. 264.)

Cupric pentathionate, $\text{CuS}_5\text{O}_6 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Debus, Chem. Soc. 53. 360.)

Lead pentathionate, $\text{PbS}_5\text{O}_6 + 4\text{H}_2\text{O}$.

Ppt.

Potassium pentathionate, $\text{K}_2\text{S}_5\text{O}_6$

Sol. in H_2O . (Rammelsberg, J. B. 1857. 136.)

Solution decomposes very quickly when neutral, but is more stable in presence of salts or acids.

Sol. in about 2 pts. H_2O .

Insol. in alcohol. (Debus, Chem. Soc. 53. 295.)

+ H_2O . (Shaw, Chem. Soc. 43. 351.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. (Debus, A. 244. 76.)

+ $2\text{H}_2\text{O}$. (Lewes, C. N. 43. 41.)

Perarsenic acid.**Sodium perarsenate, NaAsO_4 .**

(Alvarez, C. N. 1906, 94. 270.)

Perboric acid.**Ammonium perborate, NH_4BO_3 .**

(Constam and Bennett, Z. anorg. 1900, 25. 265.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Stable in dry air. 100 pts. H_2O at 17.5° dissolve 1.55 g. anhydrous salt.

Decomp. in aqueous solution at ord. temp.

Decomp. by dil. and conc. H_2SO_4 and by HCl . (Melikoff, B. 1898, 31. 953.)

+ H_2O . (Bruhat, C. R. 1905, 140. 508.)

Much more sol. in H_2O than the Na salt. (Tanatar, Z. phys. Ch. 1898, 26. 133.)

+ $3\text{H}_2\text{O}$. (Melikoff, B. 1898, 31. 954.)

NH_4BO_3 , $\text{NH}_4\text{BO}_4 + \text{H}_2\text{O}$. (Petrenko, C. C. 1902, I. 1192.)

Barium perborate, $\text{Ba}(\text{BO}_3)_2 \cdot 7\text{H}_2\text{O}$

Difficultly sol in H_2O (Melikoff, B. 1898, 31. 954.)

Cæsium perborate, $\text{CsBO}_3 + \text{H}_2\text{O}$.

As NH_4 salt (Christensen.)

Calcium perborate.

Sl sol in H_2O Decomp. in water much more rapidly than the Ba salt. (Mehkoff, B. 1898, 31. 954.)

Copper perborate.

Very unstable. Insol in H_2O (Mehkoff, B. 1898, 31. 954.)

Nickel perborate.

Very unstable Insol in H_2O (Melikoff)

Potassium perborate, $2\text{KBO}_3 + \text{H}_2\text{O}$.

1.25 pts are sol. in 100 pts. H_2O at 0° ; 2.5 pts., at 15° .

Insol in alcohol and ether (Girsewald, B. 1909, 42. 867.)

Potassium perborate hydrogen peroxide, $2\text{KBO}_3, \text{H}_2\text{O}_2$.

0.70 pt. is sol. in 100 pts. H_2O at 15° . (Girsewald, B. 1909, 42. 868.)

Potassium perdisborate, $\text{KB}_2\text{O}_5 + 2\text{H}_2\text{O}$

Ppt. (Bruhat, C. R. 1905, 140. 508.)

Rubidium perborate, $\text{RbBO}_3 + \text{H}_2\text{O}$

As Na salt. (Christensen.)

Sodium perborate, $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$.

100 g. H_2O dissolve 4.2 g. at 11° ; 7.1 g. at 22° ; 13.8 g. at 32° . (Jaubert, C. R. 1904, 134. 796.)

+ $4\text{H}_2\text{O}$. Slowly decomp. in cold solution, rapidly when boiled. (Tanatar, Z. phys. Ch. 1898, 26. 132.)

Sol. in H_2O . 100 g. H_2O dissolve 1.17 g. Aq. solution decomp. on warming. (Melikoff, B. 1898, 31. 679.)

100 g. H_2O dissolve 2.55 g. at 15° ; 2.69 g. at 21° ; 2.85 g. at 26° ; 3.78 g. at 32° . (Jaubert and Lion, Rev. gén. Chim. 1905, (7) 8. 163.)

Uranyl perborate, UBO_4 .

(Bruhat, C. R. 1905, 140. 508.)

Perbromic acid, HBrO_4 .

Known only in aqueous solution, which can be concentrated to a thick liquid on water bath. Not decomp. by HCl , SO_3 , or H_2S . (Kammerer, J. pr. 85. 452; 90. 190.)

Does not exist. (Muir, C. N. 33. 256; MacIvor, C. N. 33. 35.)

Barium perbromate, $\text{Ba}(\text{BrO}_4)_2$.

Very sl sol. in boiling H_2O . (Kammerer, J. pr. 90. 190.)

Does not exist (Wolfram, A. 198. 95.)

Potassium perbromate, KBrO_4

Less sol in H_2O than KBrO_3 , but more sol. than KClO_4 . (Kammerer, J. pr. 90. 190.)

Does not exist (Wolfram, A. 198. 95.)

Silver perbromate, AgBrO_4

Sl sol in cold, more abundantly in hot H_2O . (Kammerer, J. pr. 90. 190.)

Does not exist (Wolfram, A. 198. 95.)

Perbromoplatinocyanhydric acid,

Deliquescent. Easily sol. in H_2O , alcohol, and ether. (Holst, Bull. Soc (2) 22. 347.)

Aluminum perbromoplatinocyanide,

Deliquescent. Very sol. in H_2O .

Ammonium —, $(\text{NH}_4)_2\text{Pt}(\text{CN})_4\text{Br}_2$.

Sol. in H_2O .

Barium —, $\text{BaPt}(\text{CN})_4\text{Br}_2 + 5\text{H}_2\text{O}$.

Very sol. in H_2O or alcohol.

Cadmium —, $\text{CdPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$.

Very sol. in H_2O .

Calcium —, $\text{CaPt}(\text{CN})_4\text{Br}_2 + 7\text{H}_2\text{O}$.

Sol in H_2O .

Cobaltous —, $\text{CoPt}(\text{CN})_4\text{Br}_2 + 5\text{H}_2\text{O}$.

Sol. in H_2O . Sl. sol. in alcohol.

Glucinum —, $\text{GlPt}(\text{CN})_4\text{Br}_2$.

Deliquescent. Sol. in H_2O .

Ferrous —

Very sl. sol. in H_2O .

Lead —, $\text{PbPt}(\text{CN})_4\text{Br}_2 + 2\text{H}_2\text{O}$.

Sl. sol. in H_2O .

Lithium —, $\text{Li}_2\text{Pt}(\text{CN})_4\text{Br}_2$.

Deliquescent. Sol in H_2O .

Magnesium —, $\text{MgPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$.

Sol. in H_2O .

Nickel —, $\text{NiPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$.

Sl. sol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Potassium —, $\text{K}_2\text{Pt}(\text{CN})_4\text{Br}_2$.

Sol. in H_2O .

+ $2\text{H}_2\text{O}$. Efflorescent.

Silver perbromoplatinocyanide,
 $\text{Ag}_3\text{PtBr}_2(\text{CN})_4$
 Ppt. (Miolati, Gazz. ch. it 1900, 30. 588)

Sodium —, $\text{Na}_2\text{Pt}(\text{CN})_4\text{Br}_2$.
 Deliquescent Sol. in H_2O .

Strontium —, $\text{SrPt}(\text{CN})_4\text{Br}_2 \cdot 7\text{H}_2\text{O}$.
 Sol. in H_2O .

Zinc —, $\text{ZnPt}(\text{CN})_4\text{Br}_2 \cdot 5\text{H}_2\text{O}$.
 Not very sol in H_2O .

Percarbonic acid.

Ammonium percarbonate, $(\text{NH}_4)_2\text{CO}_4 + 2\text{H}_2\text{O}$.

Sol in H_2O with evolution of NH_3 . Insol in alcohol and ether. (Kasanezky, C. C. 1902, I 1263.)

Barium percarbonate, BaCO_4 .

Insol. in H_2O . (Merck, C. C. 1906, II. 1743.)

Decomp. slowly in the air. Not rapidly decomp. by H_2O . Rapidly decomp. by acids. (Wolffenstein, B. 1908, 41. 280)

Potassium percarbonate, K_2CO_4 .

Sol. in H_2O with decomp. Sl. sol. in alcohol. (v. Hansen, Z. Elektrochem. 1897, 3. 448)

$\text{K}_2\text{C}_2\text{O}_6$. Sol. in H_2O at 0° with only slight decomp. but is decomp. at ord. temp. Sl. sol. in alcohol. (Treadwell, Ch. Z. 1901, 25. 1008.)

Rubidium percarbonate, $\text{Rb}_2\text{CO}_4, 2\text{H}_2\text{O}_2 + \text{H}_2\text{O}$.

Hydroscopic; decomp. by H_2O ; pptd. by alcohol.

$\text{Rb}_2\text{CO}_4, \text{H}_2\text{O}_2 + 2\text{H}_2\text{O}$. Hydroscopic; decomp. by H_2O ; pptd. by alcohol.

$\text{Rb}_2\text{CO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$. Hydroscopic; decomp. by H_2O ; pptd. by alcohol. (Peltner, B. 1909, 42. 1782.)

$\text{Rb}_2\text{C}_2\text{O}_6$. Very deliquescent. (Constam and Hansen, Z. Elektrochem. 1897, 3. 144.)

Sodium percarbonate, $\text{Na}_2\text{CO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O with gradual decomp. (Tanahtar, B. 1899, 32. 1544.)

Sodium hydrogen percarbonate, $4\text{Na}_2\text{CO}_4, \text{H}_2\text{CO}_3$.

Ppt. (Merck, Chem. Soc. 1908, 94. (2) 180.)

Perchloric acid, HClO_4 .

Combines with H_2O with a hissing sound and evolution of much heat.

Solution in H_2O is very stable.

When dil. $\text{HClO}_4 + \text{Aq}$ is distilled, H_2O and HClO_4 distil off until a temp. of 203° is reached, when an acid of constant composition containing 71.6–72.2% HClO_4 (= $\text{HClO}_4 + 2\text{H}_2\text{O}$) is obtained. Forms hydrate $\text{HClO}_4 + \text{H}_2\text{O}$, which is deliquescent, and dissolves in H_2O with evolution of much heat. HClO_4 is very unstable, $\text{HClO}_4 + \text{H}_2\text{O}$ more stable, and $\text{HClO}_4 + 2\text{H}_2\text{O}$ is very stable. (Roscoe, A. 121. 346)

Sp. gr of $\text{HClO}_4 + \text{Aq}$. at $15^\circ/4^\circ$.

79.8	92
70.5	107

(v. Wyk, Z. anorg. 1905, **48**, 36.)

+ H_2O . Deliquescent. (Roscoe, A. **121**, 346.)

+2 H_2O . $\text{HClO}_4 + 2\text{H}_2\text{O}$ has 1.65 sp. gr.

and boils at 200° (Serullas); has 1.72–1.82 sp. gr and boils at 200° (Nativelle, J pr. **26**, 405).

Sol. in alcohol with decomp.; often explosive

+2½ H_2O . (v. Wyck.)

+3 H_2O . (v. Wyck.)

+3½ H_2O . (v. Wyck.)

Perchlorates.

All perchlorates are sol in H_2O , KClO_4 , RbClO_4 , and CsClO_4 somewhat difficultly. They are all deliquescent, and sol in alcohol, excepting NH_4ClO_4 , KClO_4 , $\text{Pb}(\text{ClO}_4)_2$, and $\text{Hg}_2(\text{ClO}_4)_2$. (Serullas, A. ch (2) **46**, 296.)

Aluminum perchlorate, $\text{Al}(\text{ClO}_4)_3 + 6\text{H}_2\text{O}$.

Very deliquescent. (Weinland, Z. anorg. 1913, **84**, 370.)

Aluminum sodium perchlorate, $\text{AlNa}(\text{ClO}_4)_4 + 12\text{H}_2\text{O}$.

Sl. hygroscopic. (Weinland, Z. anorg. 1913, **84**, 370.)

Sol. in acetone. (Naumann, B. 1904, **37**, 4328.)

Ammonium perchlorate, NH_4ClO_4 .

Permanent. Sol. in 5 pts. H_2O ; somewhat sol. in alcohol. (Mitscherlich, Pogg. **25**, 300.)

Solubility of NH_4ClO_4 in H_2O at t°.

t°	G per l solution	Sp. gr.
0	115 63	1.059
20	208 45	1 098
40	305.77	1 128
60	390.50	1 158
80	481.86	1.193
100	570.06	1 216
107	591.15	1.221

(Carlson, Festsck. Stockholm. 1911. 262)

100 g. H_2O dissolve 18.5 g. NH_4ClO_4 . (Hofmann, Hóbold and Quoos, A. 1912, **386**, 304.)

100 g. sat. solution in H_2O contain 1.735 (17.35?) g. NH_4ClO_4 at 14.2°. (Thin and Cumming, Chem. Soc. 1915, **107**, 361.)

Insol. in conc. $\text{HClO}_4 + \text{Aq.}$

100 g. sat. solution in 98.8% ethyl alcohol contain 1.96 g. NH_4ClO_4 at 25.2°. (Thin and Cumming.)

Sol. in acetone. Eidmann, C. C. 1899, II. 1014.)

Barium perchlorate, $\text{Ba}(\text{ClO}_4)_2 + 4\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O and alcohol.

+3H₂O. Solubility of Ba(ClO₄)₂+3H₂O in H₂O at t°.

t°	G per 100 g H ₂ O	Sp gr
0	206	1 782
20	289	1 912
40	358	2 009
60	432	2 070
80	497	2 114
100	564	2 155
120	645	2 195
140	758	2 230

(Carlson, Festsck. Stockholm, 1911. 262.)

Bismuth perchlorate, Bi(ClO₄)₃.

Insol. in H₂O. Easily sol. in HCl or HNO₃+Aq, less easily in H₂SO₄+Aq. (Muir, C. N. 33. 15)

Cadmium perchlorate, Cd(ClO₄)₂.

Very deliquescent. Sol in H₂O and alcohol (Serullas, A. ch. 46. 305.)

+4H₂O. (Salvadori, C. C. 1912, II. 414.)

+6H₂O. (S.)

Cadmium perchlorate ammonia, Cd(ClO₄)₂, 6NH₃.

Cd(ClO₄)₂, 4NH₃. (Salvadori, C. C. 1912, II. 414.)

Cæsium perchlorate, CsClO₄.

Very sl. sol. in H₂O. (Retgers, Z. phys. Ch. 8. 17.)

Solubility in H₂O. 100 g. H₂O dissolve at:

8.5°	14°	33.7°	42°	50°
0.91	1.19	2.99	4.09	5.47 g. CsClO ₄ ,

60°	70°	84°	99°
7.30	9.79	16.51	28.57 g. CsClO ₄ .

(Calzolari, Acc. Sc. Med. Ferrara, 1911, 85. 150.)

Solubility in H₂O at t°.

t°	G per 100 g H ₂ O	Sp. gr.
5	0 97	1.007
25	2.05	1 010
80	17 05	1 084

(Carlson, Festsck. Stockholm, 1911. 262.)

Calcium perchlorate, Ca(ClO₄)₂.

Very deliquescent. Very sol. in H₂O and alcohol. (Serullas, A. ch. 46. 304.)

Cerous perchlorate, Ce(ClO₄)₃+8H₂O.

Very deliquescent. (Jolin.)

Chromic perchlorate, Cr(ClO₄)₃+6H₂O.

Very hygroscopic. (Weinland, Z. anorg. 1913, 84. 371.)

+9H₂O. Can be cryst. from H₂O. (Weinland.)

Cobaltous perchlorate, Co(ClO₄)₂+9H₂O.

Solubility in H₂O at t°.

t°	G anhydrous salt in 100 ccm	Sp gr. of sat solution at t°/4°
—30 7	83.14	.
—21.3	90.57	.
0	100 13	1 5639
+ 7.5	101 92	1 5658
18	103 80	1 5670
26	113 45	1 5811
45	115 10	1 5878

(Golblum and Terlikowsky, Bull. Soc. 1912, (4) 11. 146.)

+6H₂O. (Salvadori, Gazz. ch. it. 1912, 42. (1) 458.)

Cobalt perchlorate ammonia, Co(ClO₄)₂, 6NH₃.

Co(ClO₄)₂, 5NH₃.

Co(ClO₄)₂, 4NH₃, and +2H₂O.

Co(ClO₄)₂, 3NH₃, and +3H₂O.

Co(ClO₄)₂, 3NH₃+2H₂O.

(Salvadori, Gazz. ch. it. 1912, 42. (1) 458.)

Cupric perchlorate, basic, Cu(ClO₄)₂, Cu(OH)₂.

Ppt. (Salvadori, C. C. 1912, II. 414.)

Cupric perchlorate, Cu(ClO₄)₂.

Deliquescent. Sol. in H₂O and alcohol. (Serullas, A. ch. 46. 306.)

+4H₂O. (Salvadori, C. C. 1912, II 414.)

Cupric perchlorate ammonia, Cu(ClO₄)₂, 4NH₃+2H₂O.

Not deliquescent. Sol. in NH₄OH+Aq. (Roscoe, A. 121. 346.)

Cu(ClO₄)₂, NH₃+H₂O.

Cu(ClO₄)₂, 2CuO+2H₂O, NH₃.

Cu(ClO₄)₂, 2CuO+2H₂O, 2NH₃.

Cu(ClO₄)₂, Cu(OH)₂+2H₂O, 6NH₃.

Cu(ClO₄)₂, Cu(OH)₂+2H₂O, 4NH₃.

(Salvadori, C. C. 1912, II 414.)

Didymium perchlorate, Di(ClO₄)₃+9H₂O.

Very deliquescent. Very sol. in H₂O and alcohol. (Cleve.)

Erbium perchlorate, Er(ClO₄)₃+8H₂O.

Very deliquescent.

Glucinum perchlorate, Gl(ClO₄)₂+4H₂O.

Very deliquescent, and sol. in H₂O. (Atterberg.)

Hydrazine perchlorate, (N₂H₄)(HClO₄)₂+3H₂O.

1 l. of sat. solution in H₂O contains 417.2 g. at 18°, sp. gr.=1.264; 669 g. at 35°, sp. gr.=1.391. (Carlson, Festsck. Stockholm, 1911. 262.)

Indium perchlorate, $\text{In}(\text{ClO}_4)_3 \cdot 8\text{H}_2\text{O}$.

Deliquescent. H_2O solution decomp. at 40° with separation of basic salt. Sol. in H_2O and easily forms sat. solutions. Sol. in abs. alcohol, but much less sol. in ether (Mathers, J. Am. Chem. Soc. 1908, **30**, 212.)

Iodine perchlorate, $\text{I}(\text{ClO}_4)_3 \cdot 2\text{H}_2\text{O}$.

Decomp. by H_2O . Indifferent toward organic solvents (Fichter, Z. anorg. 1915, **91**, 135.)

Iron (ferrous) perchlorate, $\text{Fe}(\text{ClO}_4)_2$.

Tolerably permanent; sol. in H_2O (Serullas, A. ch. **46**, 335.)

Iron (ferric) perchlorate, $\text{Fe}(\text{ClO}_4)_3$.

Sol. in H_2O . (Serullas.)

Iron (ferric) sodium perchlorate, $[\text{Fe}(\text{ClO}_4)_4]\text{Na} \cdot 6\text{H}_2\text{O}$.

Hygroscopic. Can be cryst. from H_2O . (Weinland, Z. anorg. 1913, **84**, 366.)

Lanthanum perchlorate, $\text{La}(\text{ClO}_4)_3 \cdot 9\text{H}_2\text{O}$.

Extremely deliquescent. Sol. in H_2O and absolute alcohol. (Cleve.)

Lead perchlorate, basic, 2PbO , $\text{Cl}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Decomp. by H_2O into an insol. more basic salt, and sol. $\text{Pb}(\text{ClO}_4)_2$. (Marignac.)

Lead perchlorate, $\text{Pb}(\text{ClO}_4)_2 \cdot 3\text{H}_2\text{O}$.

Permanent; extremely easily sol. in H_2O . (Roscoe, A. **121**, 356.)

Sol. in about 1 pt. H_2O . (Serullas.)

Lithium perchlorate, LiClO_4 .

Deliquescent. Sol. in H_2O and alcohol (Serullas.)

+ $3\text{H}_2\text{O}$. (Wyruboff, Zeit. Kryst. **10**, 626.)

Magnesium perchlorate, $\text{Mg}(\text{ClO}_4)_2$.

Deliquescent, and sol. in H_2O and alcohol. (Serullas.)

+ $6\text{H}_2\text{O}$. (Weinland, Z. anorg. 1913, **84**, 372.)

Manganous perchlorate, $\text{Mn}(\text{ClO}_4)_2$.

Very deliquescent. Sol. in H_2O and alcohol. (Serullas, A. ch. **46**, 335.)

+ $6\text{H}_2\text{O}$. Sol. in 0.342 pts. H_2O . (Salvadori, C. C. **1912**, II, 414.)

Manganous perchlorate ammonia, $\text{Mn}(\text{ClO}_4)_2 \cdot 5\text{NH}_3 + \text{H}_2\text{O}$.

Sol. in HCl ; insol. in HNO_3 . (Salvadori, C. C. **1912**, II, 414.)

Mercurous perchlorate, $(\text{HgClO}_4)_2 \cdot 4\text{H}_2\text{O}$.

Very sol. in H_2O . Gradually decomp. by

H_2O . Decomp. by alcohol. (Chikashigé, Chem. Soc. 1895, **67**, 1016.)

+ $6\text{H}_2\text{O}$. Very deliquescent (Roscoe, A. **121**, 356.)

Permanent (Serullas.)

Mercuric perchlorate, basic, HgO , $2\text{Hg}(\text{ClO}_4)_2$.

Anhydrous Ppt. Insol. in either HCl or HNO_3 . Decomp. and dissolved by a mixture of the two (Chikashigé, Chem. Soc. 1905, **87**, 824.)

+ $12\text{H}_2\text{O}$. Very sol. in H_2O . (Chikashigé.)

2HgO , $\text{Hg}(\text{ClO}_4)_2$.

α -salt. Decomp. by H_2O . Sol. in acids. (Chikashigé, Chem. Soc. 1895, **67**, 1015.)

β -salt. Insol. in H_2O ; insol. in HCl or HNO_3 . (Chikashigé, Chem. Soc. 1905, **87**, 825.)

Mercuric perchlorate, $\text{Hg}(\text{ClO}_4)_2$.

Very deliquescent. Sol. in H_2O , sl. sol. with decomp. in alcohol. (Serullas, A. ch. **34**, 243.)

+ $6\text{H}_2\text{O}$. Very hygroscopic. Very sol. in H_2O . Slowly decomp. by H_2O , more easily by alcohol. (Chikashigé, Chem. Soc. 1895, **67**, 1014.)

Mercuric perchlorate bromide, HgClO_4Br .

Decomp. by H_2O . (Borelli, Gazz. ch. it. 1908, **38**, (2) 421.)

Mercuric perchlorate cyanide, $\text{Hg}(\text{ClO}_4)_2$, $\text{Hg}(\text{CN})_2$.

Very sol. in H_2O . Sol. in alcohol (Borelli.)

Mercuric perchlorate iodide, $\text{Hg}(\text{ClO}_4)_2\text{I}$.

Deliquescent. Decomp. by H_2O . Sol. in much alcohol. Decomp. by HNO_3 . Completely sol. in KI or $\text{KCN} + \text{Aq}$. (Borelli.)

Mercuric perchlorate sulphocyanide,

$\text{Hg}(\text{ClO}_4)_2$, $\text{Hg}(\text{SCN})_2$.

Insol. in H_2O and conc. acids. Sol. in aqua regia. (Borelli.)

+ $6\text{H}_2\text{O}$. (Salvadori, C. C. **1912**, II, 414.)

Nickel perchlorate, $\text{Ni}(\text{ClO}_4)_2$.

Deliquescent; easily sol. in alcohol and H_2O . (Groth, Pogg. **133**, 226.)

Solubility in H_2O at t° .

t°	G anhydrous salt in 100 ccm.	Sp. gr. of the sat. solution

 +9H₂O. (Golblum and Terlikowsky.)

Nickel perchlorate, ammonia, Ni(ClO₄)₂·6NH₃.

Ppt. (Salvadori.)

Nitrosyl perchlorate, NO·O·ClO₃+H₂O.

Ppt.; sl. hygroscopic; decomp. by H₂O. (Hofmann, B. 1909, 42. 2032.)

Platinum perchlorate, Pt₆ClO₉+15H₂O.

Insol. in H₂O. (Prost, Bull. Soc. (2) 46. 156.)

Potassium perchlorate, KClO₄.

Sol in 57.9 pts H₂O at 21.3° (Longuinne, A. 121. 123), in 65 pts H₂O at 15° (Serullas, A. ch (2) 46 297), in 88 pts H₂O at 10°, in 53 pts H₂O at 100° (Hutstein, J. B. 1851. 331)

Solubility in H₂O.

1 pt. KClO₄ dissolves in 142.9 pts. H₂O at 6°, and solution has sp. gr.=1.0005; in 52.5 pts. H₂O at 25°, and solution has sp. gr.=1.0123; in 15.5 pts. H₂O at 50°, and solution has sp. gr.=1.0181; in 5.04 pts. H₂O at 100°, and solution has sp. gr.=1.0660. (Muir, C. N. 33. 15.)

1 l. H₂O dissolves 78.07 millimols. KClO₄ at 10°; 120.4 millimols. at 20°; 179.9 millimols. at 30°. (Noyes and Sammet, Z. phys. Ch. 1903, 43. 538.)

1 l. H₂O dissolves 0.1475 mol. KClO₄ at 25°. (Rothmund, Z. phys. Ch. 1909, 69. 539.)

Solubility in H₂O at t°.

(Carlson, Festsck. Stockholm, 1911. 262.)

Scandium perchlorate.

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Silver perchlorate, AgClO_4 .

Deliquescent. Sol. in H_2O and alcohol. (Serullas, A. ch. 46. 307.)

Sodium perchlorate, NaClO_4 .

Deliquescent, and very sol. in H_2O and alcohol. (Serullas.)

Not deliquescent (Potilitzin, J. russ. Soc. 1889, 1. 258.)

Solubility in H_2O at t°.

t°	G. in 1 l. of solution	Sp. gr.
15	1076	1.666
50	1234	1.731
143	1414	1.789

(Carlson, Festsck. Stockholm, 1911. 262.)

+ H_2O . Not deliquescent. (Potilitzin.)

Strontium perchlorate, $\text{Sr}(\text{ClO}_4)_2$.

Very deliquescent. Sol. in H_2O and alcohol (Serullas, A. ch. 46. 304.)

Terbium perchlorate.

Very sol. in H_2O and in alcohol. (Potratz, C. N. 1905, 92. 3.)

Thallous perchlorate, TlClO_4 .

1 pt. salt dissolves in 10 pts. H_2O at 15°, and 0.6 pt. at 100°. (Roscoe, Chem. Soc. (2) 4. 504.)

Solubility in H_2O at t°.

t°	G. per 100 g. H_2O	Sp. gr.
0	6.00	1.060
10	8.04	1.075
30	19.72	1.146
50	39.62	1.251
70	65.32	1.430
80	81.49	1.520

(Carlson, Festsck. Stockholm, 1911. 262.)

Sl. sol. in alcohol. (Roscoe.)

Thallic perchlorate, $\text{Ti}(\text{ClO}_4)_3 + 6\text{H}_2\text{O}$.

Very hygroscopic, sol. in H_2O . Decomp. in moist air. (Gewecke, Z anorg 1912, **75**, 274.)

Uranyl perchlorate, $(\text{UO}_2)(\text{ClO}_4)_2 + 4\text{H}_2\text{O}$.

(Salvadori, Ch. Z. 1912, **36**, 513.)
+ $6\text{H}_2\text{O}$. (Salvadori.)

Yttrium perchlorate, $\text{Y}(\text{ClO}_4)_3 + 8\text{H}_2\text{O}$.

Very deliquescent. Sol. in H_2O and alcohol. (Cleve.)

Zinc perchlorate, $\text{Zn}(\text{ClO}_4)_2$.

Deliquescent. Sol. in H_2O and alcohol. (Serullas, A. ch. **46**, 302.)
+ $4\text{H}_2\text{O}$, and $6\text{H}_2\text{O}$. (Salvadori, C. C. 1912, II. 414.)

Zinc perchlorate, ammonia, $\text{Zn}(\text{ClO}_4)_2, 4\text{NH}_3$.

Ppt. (Salvadori, C. C. 1912, II. 414.)
 $\text{Zn}(\text{ClO}_4)_2, 6\text{NH}_3$. (Ephraim, B. 1915, **48**, 643.)

Perchromic acid.

Sol. in ethyl acetate and valerate; in amyl chloride, formate, acetate, butyrate, and valerate. (All give blue solutions.)

Insol. in CS_2 , C_6H_6 , CHCl_3 , CCl_4 , $\text{C}_6\text{H}_5\text{NH}_2$, $\text{C}_6\text{H}_5\text{NO}_2$ and toluene. (Grosvenor, J. Am. Chem. Soc. 1895, **17**, 41-43)

$\text{H}_3\text{CrO}_8 + 2\text{H}_2\text{O}$. Decomp. above -30° . (Riesenfeld, B. 1914, **47**, 552.)

Ammonium perchromate, $(\text{NH}_4)_3\text{CrO}_8$.

Very unstable. Sl. sol. in cold H_2O . Decomp. by conc. H_2SO_4 . Insol. in pure alcohol and pure ether. Decomp. by boiling alcohol containing more than 50% H_2O . (Wohlers, B. 1905, **38**, 1888.)

$\text{CrO}_4, 3\text{NH}_3$. Sol. in 10% $\text{NH}_4\text{OH} + \text{Aq}$; sol. in H_2O with decomp, insol. in other solvents. (Wiede, B. 1897, **30**, 2181.)

$\text{NH}_4\text{CrO}_5, \text{H}_2\text{O}_2$. Decomp. in the air. Sol. in ice cold H_2O , decomp. when warmed. Insol. in alcohol, ether, ligroin and CHCl_3 . (Wiede, B. 1898, **31**, 518.)

Ammonium hydrogen perchromate, $\text{CrO}_2(\text{O.O.NH}_4)(\text{O.OH})$.

Sol. in H_2O with decomp. Difficultly sol. in cold abs. alcohol. (Hofmann, B. 1904, **37**, 3406.)

Barium perchromate, BaCr_2O_8 .

(Byers and Reid, Am. Ch. J. 1904, **32**, 513.)

Calcium perchromate, CaCr_2O_8 .

Very sol. in H_2O . (Mylius, B. 1900, **33**, 3689; Byers and Reid, Am. Ch. J. 1904, **32**, 513.)

Lithium perchromate, $\text{Li}_2\text{Cr}_2\text{O}_8$.

(Byers and Reid, Am. Ch. J. 1904, **32**, 511.)

Magnesium perchromate, MgCr_2O_8 .

(Byers and Reid.)

Potassium perchromate, $\text{K}_2\text{Cr}_2\text{O}_8$.

Sl. sol. in cold H_2O . Decomp. by conc. H_2SO_4 . Insol. in pure alcohol and pure ether. Decomp. by boiling alcohol containing more than 50% H_2O . (Wohlers, B. 1905, **38**, 1888.)

+ $x\text{H}_2\text{O}$. Sol. in H_2O at 0° without decomp. (Riesenfeld and Kutsch, B. 1908, **41**, 3948.)

$\text{K}_2\text{Cr}_2\text{O}_8$. Sol. in H_2O . Decomp. in the air. (Byers and Reid, Am. Ch. J. 1904, **32**, 505.)

$\text{KCrO}_5, \text{H}_2\text{O}_2$ or KH_2CrO_7 . Sol. in ice cold H_2O , decomp. when warmed, explosive. (Wiede, B. 1898, **31**, 520.)

Sodium perchromate, $\text{Na}_2\text{Cr}_2\text{O}_8$.

Sl. sol. in cold H_2O . Decomp. by conc. H_2SO_4 . Insol. in pure alcohol and pure ether. Decomp. by boiling with alc. containing more than 50% H_2O . (Wohlers, B. 1905, **38**, 1888.)

$\text{Na}_2\text{Cr}_2\text{O}_8 + 28\text{H}_2\text{O}$. Efflorescent. Sl. sol. in cold, easily in hot H_2O , with decomp. Not decomp. by $\text{NaOH} + \text{Aq}$. (Haussermann, J. pr. (2) **48**, 70.)

$\text{Na}_2\text{Cr}_2\text{O}_8$. (Byers and Reid, Am. Ch. J. 1904, **32**, 511.)

Perchloroplatinocyanhydric acid,

$\text{H}_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 4\text{H}_2\text{O}$.

Very sol. in H_2O and alcohol.

Ammonium perchloroplatinocyanide,

$(\text{NH}_4)_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 2\text{H}_2\text{O}$.

Sol. in H_2O .

Barium —, $\text{BaPt}(\text{CN})_4\text{Cl}_2 + 5\text{H}_2\text{O}$.

Very sol. in H_2O .

Calcium —, $\text{CaPt}(\text{CN})_4\text{Cl}_2$.

Sol. in H_2O .

Magnesium —, $\text{MgPt}(\text{CN})_4\text{Cl}_2 + x\text{H}_2\text{O}$.

Sol. in H_2O .

Manganous —, $\text{MnPt}(\text{CN})_4\text{Cl}_2 + 5\text{H}_2\text{O}$.

Sol. in H_2O and alcohol.

Potassium —, $\text{K}_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 2\text{H}_2\text{O}$.

Very efflorescent, and sol. in H_2O and alcohol.

Percolumbic acid, $\text{HCbO}_4 + n\text{H}_2\text{O}$.

Insol. in H_2O . Sol. with decomp. in warm H_2SO_4 . (Melikoff, Z. anorg. 1899, **20**, 341.)

Cæsium percolumbate, Cs_3CbO_8 .

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, **30**, 1658.)

Cæsium magnesium percolumbate,
 $\text{MgCsCbO}_8 + 8\text{H}_2\text{O}$

Sol. in H_2O without decomp. (E. F. Smith.)

Calcium potassium percolumbate,
 $\text{CaKCbO}_8 + 4\text{H}_2\text{O}$

Difficultly sol. in H_2O . (E. F. Smith.)

Calcium sodium percolumbate, $\text{CaNaCbO}_8 + 4\text{H}_2\text{O}$

Difficultly sol. in H_2O (E. F. Smith.)

Magnesium potassium percolumbate,
 $\text{MgKCbO}_8 + 7\text{H}_2\text{O}$

Sol. in H_2O without decomp. (E. F. Smith.)

Magnesium rubidium percolumbate,
 $\text{MgRbCbO}_8 + 7\frac{1}{2}\text{H}_2\text{O}$

Sol. in H_2O without decomp. (E. F. Smith.)

Magnesium sodium percolumbate,
 $\text{MgNaCbO}_8 + 8\text{H}_2\text{O}$

Sol. in H_2O without decomp. (E. F. Smith.)

Potassium percolumbate, K_3CbO_8

Sol. in H_2O . Ppt. from aq. solution by alcohol. (E. F. Smith.)

$\text{K}_4\text{Cb}_2\text{O}_{11} + 3\text{H}_2\text{O}$. Sol. with decomp. in H_2O . Ppt. by alcohol. Sol. in $\text{KOH} + \text{H}_2\text{O}_2 + \text{Aq}$ (Melikoff, Z. anorg. 1899, 20. 342.)

Rubidium percolumbate, Rb_3CbO_8

Sol. in H_2O . Insol. in alcohol. (E. F. Smith.)

Sodium percolumbate, Na_3CbO_8

Sol. in H_2O . Insol. in alcohol. (E. F. Smith.)

Perferricyanhydric acid.

Potassium perferricyanide, $\text{K}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O} (?)$.

Very hygroscopic, and sol. in H_2O . Nearly insol. in absolute alcohol. Decomp. by hot H_2O . (Skraup, A. 189. 368.)

Periodic acid, H_5IO_6 .

Deliquescent in moist air; very sol. in H_2O . (Bengieser, A. 17. 254.)

Rather easily sol. in alcohol and ether. (Bengieser.)

Rather easily sol. in alcohol, less in ether. (Langtoch.)

Sl. sol. in alcohol, still less in ether. (Langlois, J. pr. 56. 36.)

Sp. gr. of $\text{H}_5\text{IO}_6 + \text{Aq}$.

$\text{H}_5\text{IO}_6 + 20\text{H}_2\text{O} = 1.4008$.

$\text{H}_5\text{IO}_6 + 40\text{H}_2\text{O} = 1.2165$.

$\text{H}_5\text{IO}_6 + 80\text{H}_2\text{O} = 1.1121$.

$\text{H}_5\text{IO}_6 + 160\text{H}_2\text{O} = 1.0570$.

$\text{H}_5\text{IO}_6 + 320\text{H}_2\text{O} = 1.0288$.

(Thomsen, B. 7. 71.)

Periodates.

Most periodates are insol or sl sol in H_2O , all are insol or very sl. sol in alcohol, but they all dissolve in dil. $\text{HNO}_3 + \text{Aq}$. (Bengieser.)

Aluminum metaperiodate, $\text{Al}(\text{IO}_4)_3 + 3\text{H}_2\text{O}$.

Stable in solution containing HNO_3 . (Eakle, C. C. 1896. II, 649.)

Ammonium metaperiodate, NH_4IO_4

Sl sol. in H_2O . Cryst. with $3\text{H}_2\text{O}$ (Ihre, B. 3. 316), $2\text{H}_2\text{O}$ (Langlois, A. ch. (3) 34. 257)

Stable in solution containing free ammonia. (Eakle, Zeit. Kryst. 1896, 26. 253-88.)

100 pts. H_2O dissolve 27 pts. NH_4IO_4 at 16° , sp. gr. of sat. solution at $16^\circ/4^\circ = 1.0178$. (Barker, Chem. Soc. 1908, 93. 17.)

Ammonium dimesoperiodate, $(\text{NH}_4)_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg, Pogg. 134. 379.)

Stable in solution containing free ammonia. Two modifications (Eakle, Zeit. Kryst. 1896, 26. 558-88; C. C. 1896. II, 649.)

Ammonium lithium dimesoperiodate,
 $(\text{NH}_4)_2\text{Li}_2\text{I}_2\text{O}_9 + 7\text{H}_2\text{O}$

Sol. in H_2O . (Ihre.)

Ammonium magnesium mesoperiodate,
 $\text{NH}_4\text{MgIO}_6 + 3\text{H}_2\text{O}$

Precipitate. (Rammelsberg, Pogg. 134. 510.)

Barium metaperiodate, $\text{Ba}(\text{IO}_4)_2$.

Known only in solution.

Barium dimesoperiodate, $\text{Ba}_2\text{I}_2\text{O}_9$

Sl. sol. in H_2O ; easily sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Rammelsberg, Pogg. 134. 391.)

Cryst. also with $3\text{H}_2\text{O}$, $5\text{H}_2\text{O}$, and $7\text{H}_2\text{O}$.

Barium mesoperiodate, $\text{Ba}_2(\text{IO}_6)_2 + 6\text{H}_2\text{O}$.

(Ihre.)

Barium orthoperiodate, $\text{Ba}_5(\text{IO}_6)_2$

Insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$. (Rammelsberg.)

Barium dimesodiperiodate, $\text{Ba}_5\text{I}_4\text{O}_{19} + 5\text{H}_2\text{O}$.

Precipitate. Sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Rammelsberg, Pogg. 134. 395.)

Barium periodate tungstate.

See Tungstoperiodate, barium.

Cæsium metaperiodate, CsIO_4 .

Sl. sol. in cold H_2O ; readily sol. in hot H_2O . (Wells, Am. Ch. J. 1901, 26. 279.)

2.15 pts. are sol. in 100 pts. H_2O at 15° .

Sp. gr. of the sat. aq. solution at $15^\circ/4^\circ = 1.0166$. (Barker, Chem. Soc. 1908, 93. 17.)

Cæsium periodate hydrogen fluoride, 2CsIO_4 , $3\text{HF} + \text{H}_2\text{O}$.

Sol. in 40–60% HF + Aq. Decomp. by H_2O . Efflorescent. (Weinland, Z. anorg. 1899, 22. 263.)

Cadmium metaperiodate, $\text{Cd}(\text{IO}_4)_2$
Ppt (Rammelsberg, Pogg. 134. 516.)

Cadmium dimesoperiodate, $\text{Cd}_2\text{I}_2\text{O}_9 + 9\text{H}_2\text{O}$.
Insol. in H_2O . (Rammelsberg)

Cadmium mesoperiodate, $\text{Cd}_3(\text{IO}_6)_2 + 5\text{H}_2\text{O}$.
Ppt
 CdHIO_5 . (Kimmins, Chem. Soc. 55. 151.)

Cadmium diperiodate, $\text{Cd}_4\text{I}_2\text{O}_{11} + 3\text{H}_2\text{O}$.
Insol. in H_2O . (Rammelsberg.)

Cadmium periodate, $\text{Cd}_{10}\text{I}_6\text{O}_{31} + 15\text{H}_2\text{O}$.
Insol. in H_2O . (Rammelsberg.)

Calcium metaperiodate, $\text{Ca}(\text{IO}_4)_2$
Sol. in H_5IO_6 + Aq. and acids. (Rammelsberg, Pogg. 134. 405.)

Calcium dimesoperiodate, $\text{Ca}_2\text{I}_2\text{O}_9 + 7\text{H}_2\text{O}$,
and $9\text{H}_2\text{O}$.
Sl. sol. in H_2O . (Rammelsberg.)
 $+ 3\text{H}_2\text{O}$ (Langlois)

Calcium orthoperiodate, $\text{Ca}_5(\text{IO}_6)_2$
Insol. in H_2O . Sol. in HNO_3 + Aq. (Rammelsberg, Pogg. 44. 577.)

Cobaltous periodate, 7CoO , $2\text{I}_2\text{O}_7 + 18\text{H}_2\text{O}$.
Attacked by HCl , and sol. on warming.
Slowly but completely sol. in HNO_3 . (Lautsch, J. pr. 100. 89.)
Could not be obtained by Rammelsberg.

Cupric dimesoperiodate, $\text{Cu}_2\text{I}_2\text{O}_9 + 6\text{H}_2\text{O}$.
Decomp. by H_2O without dissolving.
(Rammelsberg.)

Cupric orthoperiodate, Cu_2HIO_6 .
Very sol. in HNO_3 + Aq. (Kimmins, Chem. Soc. 55. 150.)

Cupric diperiodate, $\text{Cu}_4\text{I}_2\text{O}_{11} + \text{H}_2\text{O}$.
Insol. in H_2O ; sol. in dil. HNO_3 + Aq.
(Rammelsberg.)
 $+ 7\text{H}_2\text{O}$. (R)

Cupric periodate, 5CuO , $\text{I}_2\text{O}_5 + 5\text{H}_2\text{O}$.
Wholly insol. in H_2O . (Rammelsberg, B. 1. 73.)

Didymium perodate, $\text{Di}_2\text{O}_2(\text{IO}_4)_2$.
Precipitate.
 $\text{DiIO}_5 + 4\text{H}_2\text{O}$. Ppt. (Cleve, Bull. Soc. (2) 43. 362.)

Erbium periodate.
Sol. in H_2O (Höglund.)

Glucinum periodate, $\text{Gl}_3(\text{IO}_6)_2 + 11\text{H}_2\text{O}$.
Decomp. by H_2O without dissolving. Easily sol. in HNO_3 + Aq.
 $+ 13\text{H}_2\text{O}$ Nearly insol. in H_2O . (Atterberg, B. 7. 474.)

Iron (ferrous) orthoperiodate, $\text{Fe}_5(\text{IO}_6)_2$.
(Kimmins, Chem. Soc. 55. 150)
 FeH_3IO_6 . (Kimmins.)

Iron (ferric) periodate, $2\text{Fe}_2\text{O}_3$, $\text{I}_2\text{O}_7 + 21\text{H}_2\text{O}$.
Ppt (Rammelsberg.)

Iron (ferric) dimesoperiodate, FeHI_2O_9 .
Insol. in dil. HNO_3 + Aq. (Kimmins, Chem. Soc. 55. 149)

Iron (ferric) metaperiodate, $\text{Fe}(\text{IO}_4)_3$.
(Kimmins.)

Lanthanum periodate, $\text{La}(\text{IO}_4)_3 + 2\text{H}_2\text{O}$.
Precipitate. (Cleve.)

Lead metaperiodate, $\text{Pb}(\text{IO}_4)_2$
Sol. in HNO_3 + Aq. (Kimmins.)

Lead orthoperiodate, $\text{Pb}_3\text{H}_4(\text{IO}_6)_2$.
Sol. in HNO_3 + Aq. (Kimmins, Chem. Soc. 55. 149.)

Lead mesoperiodate, $\text{Pb}_3(\text{IO}_6)_2 + 2\text{H}_2\text{O}$.
Insol. in H_2O or excess of periodic acid + Aq. Decomp. by dil. H_2SO_4 + Aq. (Bengieser, A. 17. 254.)

Lithium metaperiodate, LiIO_4 .
Difficultly sol. in H_2O . (Rammelsberg, B. 1. 132.)
Somewhat deliquescent.
 $+ \text{H}_2\text{O}$; sol. in H_2O . (Barker, Chem. Soc. 1911, 99. 1326.)

Lithium dimesoperiodate, $\text{Li}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$.
Very sl. sol. in H_2O . (Rammelsberg, Pogg. 134. 387.)

Lithium orthoperiodate, Li_5IO_6 .
 H_2O dissolves out a slight amount of LiI . Easily sol. in HNO_3 + Aq. (Rammelsberg, Pogg. 137. 313.)

Magnesium metaperiodate, $\text{Mg}(\text{IO}_4)_2 + 10\text{H}_2\text{O}$.
Easily sol. in H_2O . (Rammelsberg.)

Magnesium diperiodate, $\text{Mg}_4\text{I}_2\text{O}_{11} + 6\text{H}_2\text{O}$, or $9\text{H}_2\text{O}$.
Sl. efflorescent. Insol. in H_2O . (Rammelsberg.)

Magnesium dimesoperiodate, $\text{Mg}_2\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$

(Rammelsberg, Pogg. 134. 499)
+15H₂O Insol. in H₂O Sol. in periodic acid + Aq. (Langlois.)

Manganic periodate.

See Manganiperiodic acid.

Mercurous diperiodate, $5\text{Hg}_2\text{O}$, I_2O_7 , or $4\text{Hg}_2\text{O}$, $\text{I}_2\text{O}_7 = \text{Hg}_4\text{I}_2\text{O}_{11}$

Insol. in H₂O. Easily sol. in $\text{HNO}_3 + \text{Aq}$ and in $\text{HCl} + \text{Aq}$ (Lautsch, J. pr. 100. 86.)

Mercuric orthoperiodate, $\text{Hg}_6(\text{IO}_6)_2$.

Insol. in H₂O. Easily sol. in HCl Sl sol in HNO_3 . (Lautsch.)

Mercuric potassium periodate, 10HgO , $5\text{K}_2\text{O}$, $6\text{I}_2\text{O}_7$.

Insol. in H₂O. Difficultly sol. in warm HNO_3 without decomp (Rammelsberg, Pogg. 134. 526.)

Nickel dimesoperiodate, $\text{Ni}_2\text{I}_2\text{O}_9$.

(Kimmins, Chem. Soc. 55. 151.)

Nickel mesoperiodate, $\text{Ni}_3(\text{IO}_6)_2$

(Kimmins.)

Nickel periodate, 7NiO , $4\text{I}_2\text{O}_7 + 63\text{H}_2\text{O}$.

Insol. in H₂O. Easily sol. in $\text{H}_5\text{IO}_6 + \text{Aq}$ (Rammelsberg, Pogg. 134. 514.)

Potassium metaperiodate, KIO_4

Sl. sol in H₂O. Sol. in 290 pts cold H₂O. (Rammelsberg, Pogg. 134. 320.)

Almost insol. in $\text{KOH} + \text{Aq}$.

0.66 pt. is sol. in 100 pts. H₂O at 13°. Sp. gr. of the sat. sol. at 13°/4° = 1.0051. (Barker, Chem. Soc. 1908, 93. 16.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Potassium mesoperiodate, $\text{K}_3\text{IO}_6 + 4\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H₂O. (Ihre.)

Potassium dimesoperiodate, $\text{K}_4\text{I}_2\text{O}_9 + 9\text{H}_2\text{O}$.

Sol. in 9.7 pts. cold H₂O. (Rammelsberg, Pogg. 134. 320.)

Sol. in $\text{KOH} + \text{Aq}$.

+3H₂O.

Potassium hydrogen dimesoperiodate, $\text{K}_2\text{HI}_2\text{O}_9$.

Less sol. in H₂O than KIO_4 . (Kimmins, Chem. Soc. 51. 356.)

Potassium manganic periodate.

See Manganiperiodate, potassium.

Potassium zinc periodate, K_2O , 4ZnO , $2\text{I}_2\text{O}_7 + 4\text{H}_2\text{O}$.

Ppt. (Rammelsberg, Pogg. 134. 368.)

Potassium periodate tungstate.

See Tungstoperiodate, potassium.

Rubidium periodate, RbIO_4 .

0.65 pt is sol in 100 pts H₂O at 13°. Sp. gr. of the sat. aq. solution at 13°/4° = 1.0052. (Barker, Chem. Soc. 1908, 93. 16.)

Samarium periodate, $\text{Sm}(\text{IO}_6) + 4\text{H}_2\text{O}$.

Precipitate (Cleve.)

Silver metaperiodate, AgIO_4 .

Decomp. by cold H₂O into $\text{Ag}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$, and by warm H₂O into $\text{Ag}_4\text{I}_2\text{O}_9 + \text{H}_2\text{O}$. (Ammermüller and Magnus, Pogg. 28. 516.)
+H₂O. Insol. ppt. (Kimmins.)

Silver mesoperiodate, Ag_3IO_6 .

(Fernlunds, J. pr. 100. 99.)

Ag_3HIO_6 . Insol. ppt. (Kimmins, Chem. Soc. 51. 358.)

Ppt. by dil. HNO_3 ; sol. in HNO_3 . (Rosenheim, A. 1899, 308. 57.)

Silver dimesoperiodate, $\text{Ag}_4\text{I}_2\text{O}_9 + \text{H}_2\text{O}$, or $3\text{H}_2\text{O}$.

Insol. ppt. (Kimmins.)

Decomp. by boiling H₂O into Ag_4IO_6 . (Rammelsberg.)

Silver orthoperiodate, Ag_5IO_6 .

Sol. in HNO_3 or $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg. 134. 386.)

Sol. in excess $\text{NH}_4\text{OH} + \text{Aq}$; pptd. by HNO_3 . (Rosenheim, A. 1899, 308. 56.)

$\text{Ag}_3\text{H}_2\text{IO}_6$. Insol. ppt. (Kimmins, Chem. Soc. 51. 358.)

$\text{Ag}_3\text{H}_3\text{IO}_6$ As above. (Kimmins.)

Sol. in dil. HNO_3 . (Rosenheim, A. 1899, 308. 53.)

Silver diperiodate, $\text{Ag}_5\text{I}_2\text{O}_{11}$.

Sl sol. in $\text{HNO}_3 + \text{Aq}$; insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Lautsch, J. pr. 100. 75.)

Silver dimesodipерiodate, $\text{Ag}_{10}\text{I}_2\text{O}_{19}$.

$\text{HNO}_3 + \text{Aq}$ dissolves out Ag_2O Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Lautsch.)

Sodium metaperiodate, NaIO_4 .

Easily sol. in H₂O.

+2H₂O. (Langlois.)

+3H₂O. Efflorescent; sol. in 12 pts. H₂O at ord. temp. (Rammelsberg, J. pr. 103. 278.)

Sodium dimesoperiodate, $\text{Na}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$.

Scarcely sol. in cold, sl. sol. in hot H₂O. (Magnus and Ammermüller, Pogg. 28. 514.)

Very sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Langlois.)

Sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ with decomp. (Bengieser, A. 17. 254.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+4H₂O.

Sodium mesoperiodate, $\text{Na}_5\text{IO}_6 + \frac{1}{4}\text{H}_2\text{O}$.

Sol. in H_2O . (Ihre.)
 $+\text{H}_2\text{O} = \text{Na}_3\text{H}_3\text{IO}_6$. Less sol. in H_2O than
 $\text{Na}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O} (= \text{Na}_2\text{H}_3\text{IO}_6)$. (Kimmins,
 Chem. Soc. 51. 357)

Sodium orthoperiodate, Na_5IO_6

$\text{Na}_2\text{H}_3\text{IO}_6$. Correct composition for
 $\text{Na}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$ (Kimmins.)
 $\text{Na}_3\text{H}_2\text{IO}_6$. Correct composition for Na_5IO_6
 $+\text{H}_2\text{O}$. (Kimmins)

Strontium metaperiodate, $\text{Sr}(\text{IO}_4)_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O .

Strontium dimesoperiodate, $\text{Sr}_2\text{I}_2\text{O}_9$.

Decomp. by H_2O .
 $+3\text{H}_2\text{O}$.

Strontium mesoperiodate, $\text{Sr}_2(\text{IO}_6)_2$.

Precipitate.

Strontium orthoperiodate, $\text{Sr}_2(\text{IO}_6)_2$.

(Rammelsberg, Pogg. 44. 577.)

Thallic periodate, $3\text{Tl}_2\text{O}_9$, $\text{I}_2\text{O}_7 + 30\text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by alkalis.
 (Rammelsberg, B. 3. 361.)

Thorium periodate.

Precipitate. Sol. in $\text{HNO}_3 + \text{Aq}$.

Uranous periodate.

Precipitate, which quickly decomposes.

Ytterbium periodate, $\text{YbIO}_5 + 2\text{H}_2\text{O}$.

Hydroscopic. (Cleve, Z. anorg. 1902, 32.
 136.)

Yttrium periodate, $\text{Y}_2(\text{IO}_6)_2 + 8\text{H}_2\text{O}$.

Very slightly sol. (Cleve)
 $3\text{Y}_2\text{O}_3, 2\text{I}_2\text{O}_7 + 6\text{H}_2\text{O}$. Precipitate. (Cleve.)

Zinc dimesoperiodate, $\text{Zn}_2\text{I}_2\text{O}_9 + 6\text{H}_2\text{O}$.

(Rammelsberg, Pogg. 134. 513.)

Zinc periodate, $3\text{ZnO}, 2\text{I}_2\text{O}_7 + 7\text{H}_2\text{O}$.

(Langlois.)

Zinc diperiodate, $\text{Zn}_4\text{I}_2\text{O}_{11} + \text{H}_2\text{O}$.

Easily sol. in H_2O , sl. acid with HNO_3 .
 (Langlois, A. ch. (3) 34. 257.)

Zinc dimesodiperiodate, $\text{Zn}_5\text{I}_4\text{O}_{19} + 14\text{H}_2\text{O} (?)$.

(Rammelsberg.)

Zinc periodate, $9\text{ZnO}, 2\text{I}_2\text{O}_7 + 12\text{H}_2\text{O}$.

(Rammelsberg.)

Periodoplatinocyanhydric acid.

Barium periodoplatinocyanide, $\text{BaPt}(\text{CN})_4\text{I}_2$
 $+ x\text{H}_2\text{O}$

Easily sol. in H_2O or alcohol (Holst, Bull.
 Soc. (2) 22. 347.)

Potassium periodoplatinocyanide,

$\text{K}_2\text{Pt}(\text{CN})_4\text{I}_2$.

Permanent. Easily sol. in H_2O or alcohol.

Permanganic acid, HMnO_4 .

Known only in solution, which decomposes
 by evaporation or warming.

Permanganates.

All permanganates are sol. in H_2O , except-
 ing AgMnO_4 , which is sl. sol.

Ammonium permanganate, NH_4MnO_4 .

Sol. in 12.6 pts H_2O at 15° . (Aschoff.)

Sol. in H_2O with decomp. (Christensen,
 Z. anorg. 1900, 24. 206)

Barium permanganate, $\text{Ba}(\text{MnO}_4)_2$.

Sol. in H_2O .

Cadmium permanganate, $\text{Cd}(\text{MnO}_4)_2 + 8\text{H}_2\text{O}$.

Stable. (Klobb, Bull. Soc. 1894, (3) 11
 607.)

Cadmium permanganate ammonia,

$\text{Cd}(\text{MnO}_4)_2, 4\text{NH}_3$.

Sol. in H_2O with decomp. (Klobb, Bull.
 Soc. (3) 3. 510.)

Cæsium permanganate, CsMnO_4 .

Sl. sol. in cold, somewhat more easily sol.
 in hot H_2O . (Muthmann, B. 1893, 26. 1018.)
 Solubility in H_2O .

100 ccm. of the sat. solution contain at:

1°	19°	59°
0.097	0.23	1.25 g. CsMnO_4 .

(Patterson, J. Am. Chem. Soc. 1906, 28.
 1735.)

Calcium permanganate, $\text{Ca}(\text{MnO}_4)_2 + 5\text{H}_2\text{O}$.

Deliquescent.

Cupric permanganate.

Deliquescent.

Cupric permanganate ammonia, $\text{Cu}(\text{MnO}_4)_2 \cdot 4\text{NH}_3$.

Sol. in H_2O with slow decomp. (Klobb, Bull. Soc. (3) 3. 509.)

Didymium permanganate, $\text{Dy}(\text{MnO}_4)_3 + 21\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Frerichs and Smith, A 191. 331.)

Has not been prepared. (Cleve, B. 11. 912.)

Lanthanum permanganate, $\text{La}(\text{MnO}_4)_3 + 21\text{H}_2\text{O}$.

Ppt. (Frerichs and Smith, A 191. 331.)

Has not been prepared (Cleve, B 11. 910.)

Lead permanganate.

Sol. in $\text{HNO}_3 + \text{Aq}$ (Forchhammer.)

Lithium permanganate, $\text{LiMnO}_4 + 3\text{H}_2\text{O}$.

Sol. in 1.4 pts. H_2O at 16° . (Aschoff.)

Magnesium permanganate, $\text{Mg}(\text{MnO}_4)_2$.

Insol. in CHCl_3 , CCl_4 , C_6H_6 , toluene, nitrobenzene, ligroin, ether and CS_2 . Sol. in methyl alcohol, acetone, pyridine, and readily sol. in glacial acetic acid. Only pyridine and glacial acetic acid are sufficiently stable toward the salt to be of any practical use for oxidation purposes. (Michael and Garner, Am. Ch. J. 1906, 35. 268.)

+ $6\text{H}_2\text{O}$. Easily deliquescent.

Nickel permanganate ammonia, $\text{Ni}(\text{MnO}_4)_2 \cdot 4\text{NH}_3$.

Sol. in H_2O with decomp. (Klobb, Bull. Soc. (3) 3. 509.)

Potassium permanganate, KMnO_4 .

Sol. in 16 pts. H_2O at 15° . (Mitscherlich.)

Solubility in 100 pts. H_2O at t° .

t°	Pts KMnO_4
0	2.83
9.8	4.31
19.8	6.34
24.8	7.59
29.8	9.03
34.8	10.67
40.0	12.56
45.0	14.58
50.0	16.89
55.0	19.33
65.0	25.03

(Baxter, J. Am. Chem. Soc. 1906, 28. 1343.)

Solubility in H_2O at t° .

p = pts. KMnO_4 sol. in 100 pts. H_2O at t° .

t°	p	t°	p	t°	p	t°	p

80	312.5
90	227.0
100	67.6

(Herz and Knoch, Z. anorg. 1904, 41. 317.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3795.)

Sol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Rubidium permanganate, RbMnO₄.

Solubility in H₂O lies between K and Cs salts. (Muthmann, B. 1893, 26. 1018.)

Solubility in H₂O.

100 ccm. of the sat. solution contain at

2° 19° 60°
 0.46 1.06 4.68 g. RbMnO₄.

(Patterson, J. Am. Chem. Soc. 1906, 28. 1735.)

Silver permanganate, Ag₂MnO₄.

Sol. in 109 pts cold H₂O and much less hot H₂O. Decomp by boiling. (Mitscherlich, Pogg. 25. 301.)

Silver permanganate ammonia.

Sl. sol. in cold, more easily in hot H₂O. (Klobb, C. R. 103. 384.)

Sodium permanganate, $\text{NaMnO}_4 + 3\text{H}_2\text{O}$.

Deliquescent. Extremely sol. in H_2O .

Moderately sol. in liquid NH_3 (Franklin, Am Ch J 1898, 20, 829.)

Strontium permanganate, $\text{Sr}(\text{MnO}_4)_2 + 4\text{H}_2\text{O}$

Deliquescent Sol in H_2O . (Fromherz.)

Thallos permanganate, TiMnO_4

Sol. in H_2O with decomp (R Meyer, Z anorg. 1899, 22, 188.)

Zinc permanganate, $\text{Zn}(\text{MnO}_4)_2 + 6\text{H}_2\text{O}$.

Deliquescent. Very sol in H_2O . (Martenson, J B. 1873, 274.)

Zinc permanganate ammonia,

$\text{Zn}(\text{MnO}_4)_2, 4\text{NH}_3$

Sol. in H_2O with decomp. (Klobb, Bull. Soc (3) 3, 509.)

Permanganomolybdic acid, MnO_2 ,

$12\text{MoO}_3 + 10\text{H}_2\text{O}$.

Sol. in H_2O . Decomp by alkalis. Sol. in alcohol (Péchar, C. R. 1897, 125, 31.)

Ammonium permanganomolybdate,

$2(\text{NH}_4)_2\text{O}, \text{MnO}_2, 7\text{MoO}_3 + 5\text{H}_2\text{O}$.

(Friedheim and Samelson, Z. anorg. 1900, 24, 73.)

$3(\text{NH}_4)_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$. (Friedheim and Allemann, Mit. d. Nat. Ges. Bern. 1904, 23.)

$+7\text{H}_2\text{O}$. (Friedheim and Samelson, Z anorg. 1900, 24, 70.)

$4(\text{NH}_4)_2\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 7\text{H}_2\text{O}$. (Friedheim and Samelson.)

$3(\text{NH}_4)_2\text{O}, \text{MnO}_2, 12\text{MoO}_3 + 5\text{H}_2\text{O}$. Sl sol. in cold H_2O . Decomp. by alkalis. Insol. in alcohol. (Péchar, C. R. 1897, 125, 30.)

Ammonium manganous permanganomolybdate, $3[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$ and $+7\text{H}_2\text{O}$.

(Friedheim and Allemann, Mitt. d. Nat. Ges. Bern. 1904, 23.)

$3[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$. (Friedheim and Samelson, Z. anorg. 1900, 24, 94.)

$4[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 6\text{H}_2\text{O}$. (Friedheim and Samelson, Z. anorg. 1900, 24, 75.)

$4[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 8\text{H}_2\text{O}$. (Friedheim and Samelson, Z. anorg. 1900, 24, 72.)

Ammonium manganous potassium permanganomolybdate, $2(\text{NH}_4)_2\text{O}, \text{MnO}, \text{K}_2\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 5\text{H}_2\text{O}$.

Very sl. sol. in cold, easily sol. in H_2O at $70-80^\circ$. (Rosenheim, Z. anorg. 1898, 16, 79.)

$3[(\text{NH}_4)_2, \text{K}, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 7\text{H}_2\text{O}$. (Friedheim and Allemann, Mitt d. Nat. Ges. Bern. 1904, 23.)

$4[(\text{NH}_4)_2, \text{K}, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 5\text{H}_2\text{O}$ (Friedheim and Samelson, Z. anorg. 1900, 24, 97.)

$3[(\text{NH}_4)_2, \text{K}, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 6\text{H}_2\text{O}$, and $+10\text{H}_2\text{O}$. (Friedheim and Samelson, Z anorg 1900, 24, 92.)

Ammonium potassium permanganomolybdate, $3[(\text{NH}_4)_2, \text{K}_2]\text{O}, \text{MnO}_2, 8\text{MoO}_3 + 4\text{H}_2\text{O}$.

(Friedheim and Samelson.)

Barium permanganomolybdate, $3\text{BaO}, \text{MnO}_2, 9\text{MoO}_3 + 12\text{H}_2\text{O}$.

Ppt (Hall, J Am Chem. Soc 1907, 29, 700.)

Manganous potassium permanganomolybdate, $2\text{K}_2\text{O}, \text{MnO}, \text{MnO}_2, 9\text{MoO}_3 + 8\text{H}_2\text{O}$.

True formula for $5\text{K}_2\text{O}, \text{Mn}_2\text{O}_3, 16\text{MoO}_3 + 12\text{H}_2\text{O}$ of Struve. (Friedheim and Samelson, Z anorg. 1900, 24, 86.)

$3[\text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$ (Friedheim and Allemann, Mitt. d. Nat. Ges. Bern. 1904, 23.)

$2.6 \text{K}_2\text{O}, 0.4 \text{MnO}, \text{MnO}_2, 9\text{MoO}_3 + 7\text{H}_2\text{O}$. Ppt (Hall, J Am. Chem. Soc. 1907, 29, 700.)

$4[\text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 7\text{H}_2\text{O}$. (Friedheim and Samelson, Z. anorg. 1900, 24, 80.)

Manganous potassium sodium permanganomolybdate, $3[\text{K}_2, \text{Na}, \text{Mn}]\text{O}, \text{MnO}_2, 8\text{MnO}_3 + 4\text{H}_2\text{O}$.

(Friedheim and Allemann, Mitt. d. Nat. Ges Bern. 1904, 48.)

Manganous sodium permanganomolybdate, $3[\text{Na}_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 15\text{H}_2\text{O}$.

(Friedheim and Allemann.)

Potassium permanganomolybdate, $3\text{K}_2\text{O}, \text{MnO}_2, 8\text{MoO}_3 + 3\text{H}_2\text{O}$.

Much less sol. in H_2O than NH_4 comp. (Friedheim and Samelson, Z. anorg. 1900, 24, 78.)

$+5\text{H}_2\text{O}$. Nearly insol. in cold or hot H_2O . (Rosenheim and Itzig, Z. anorg. 1898, 16, 81.)

$3\text{K}_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 5\text{H}_2\text{O}$. (Friedheim and Samelson, Z. anorg. 1900, 24, 81.)

$+6\text{H}_2\text{O}$. (Hall, J. Am. Chem. Soc. 1907, 29, 700.)

$3\text{K}_2\text{O}, \text{MnO}_2, 12\text{MoO}_3 + 4\text{H}_2\text{O}$. Nearly insol. in cold H_2O . Decomp. by alkalis. Insol. in alcohol. (Péchar, C. R. 1897, 125, 31.)

Silver permanganomolybdate, $3\text{Ag}_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$.

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 700.)

Sodium permanganomolybdate, $3\text{Na}_2\text{O}$, MnO_2 , $12\text{MoO}_3 + 13\text{H}_2\text{O}$

Efflorescent. Very sol. in H_2O . Decomp. by alkalis. Insol. in alcohol. (Péchar, C. R. 125. 31.)

Permanganotungstic acid.

Ammonium manganous permanganotungstate, $4(\text{NH}_4)_2\text{O}$, MnO , MnO_2 , $12\text{WO}_3 + 23\text{H}_2\text{O}$.

Readily sol. in H_2O . Can be cryst. therefrom. (Rogers and Smith, J. Am. Chem. Soc. 1904, 26. 1475)

Sodium permanganotungstate, $3\text{Na}_2\text{O}$, MnO_2 , $5\text{WO}_3 + 18\text{H}_2\text{O}$.

Rather easily sol. in hot H_2O . Solution decomp. on long boiling with separation of manganese peroxide (Just, B. 1903, 36. 3621.)

Permolybdic acid, Mo_2O_7 , $5\text{H}_2\text{O} = \text{HMoO}_4 + 2\text{H}_2\text{O}$.

Very sol. in H_2O , and not decomp. by boiling. (Péchar, A. ch. (6) 28. 550)

$\text{H}_2\text{MoO}_5 + 1\frac{1}{2}\text{H}_2\text{O}$. "Ozo-molybdic acid." Only very sl. sol. in H_2O after being dried in the air. Sol. in fairly conc. H_2SO_4 . (Muthmann, B. 1898, 31. 1838.)

H_2MoO_7 , H_2O_2 . Sl. sol. in cold, more easily sol. in hot H_2O , but does not separate on cooling. Sol. in dil. acids, also in H_3PO_4 . (Cammerer, Ch. Z. 1891, 15. 957.)

Ammonium permolybdate, $\text{NH}_4\text{MoO}_4 + 2\text{H}_2\text{O}$

Very sol. in H_2O ; sl. sol. in alcohol, but alcohol extracts it from H_2O , forming a very conc. supersat. solution, which is pptd. by a crystal of NH_4MoO_4 , and only a sl. amount remains in solution. (Péchar, A. ch. (6) 28. 550.)

$3(\text{NH}_4)_2\text{O}$, 5MoO_3 , $2\text{MoO}_4 + 6\text{H}_2\text{O}$. (Muthmann, B. 1898, 31. 1837.)

$3(\text{NH}_4)_2\text{O}$, $7\text{MoO}_4 + 12\text{H}_2\text{O}$. Ppt. (Muthmann, Z. anorg. 1898, 17. 76.)

$3(\text{NH}_4)_2\text{O}$, $5\text{MoO}_4 + 6\text{H}_2\text{O}$. Ppt. (Muthmann)

Ammonium nickel permolybdate ammonia, $(\text{NH}_4)_2\text{Ni}(\text{MoO}_4)_2$, 2NH_3 .

Decomp. by H_2O . Sol. in dil. NH_4OH . (Briggs, Chem. Soc. 1904, 85. 674.)

Barium permolybdate, $\text{Ba}(\text{MoO}_4)_2 + 2\text{H}_2\text{O}$.

(Péchar, A. ch. 1893, (6) 28. 537.)

8BaO , 19MoO_3 , $2\text{H}_2\text{O}_2 + 13\text{H}_2\text{O}$. (Baerwald, Dissert. 1885.)

Cæsium permolybdate, Cs_2O , $4\text{MoO}_4 + 6\text{H}_2\text{O}$.

Sol. hot H_2O . (Muthmann, B. 1898, 31. 1841.)

$3\text{Cs}_2\text{O}$, 7MoO_3 , $3\text{MoO}_4 + 4\text{H}_2\text{O}$. Ppt. (Muthmann.)

Copper permolybdate, $\text{Cu}(\text{MoO}_4)_2 + \text{H}_2\text{O}$

Insol. in H_2O ; easily sol. in acids. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. (Péchar, A. ch. (6) 28. 550.)

Magnesium permolybdate, $\text{Mg}(\text{MoO}_4)_2 + 10\text{H}_2\text{O}$.

Very sol. in H_2O ; sl. sol. in alcohol. (Péchar, A. ch. (6) 28. 550.)

Mercurous permolybdate.

Insol. in H_2O or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Péchar, A. ch. (6) 28. 550.)

Potassium permolybdate, $\text{KMoO}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in cold, more in hot H_2O . Sl. sol. in alcohol. (Péchar, A. ch. (6) 28. 550.)

K_2O , 2MoO_3 , $\text{MoO}_4 + 3\text{H}_2\text{O}$. Ppt. (Muthmann, Z. anorg. 1898, 17. 77.)

K_2O_2 , MoO_4 , H_2O_2 . Decomp. by H_2O . (Mehkoff and Pissarjewsky, B. 1898, 31. 2449.)

$\text{K}_2\text{MoO}_3 + 3\text{H}_2\text{O}$. Nearly insol. in cold, easily sol. in hot H_2O . (Mazzuchelli and Zangrilli, Gazz. ch. it. 1910, 40. (2) 56.)

Rubidium permolybdates.

"Rubidium ozo-molybdate."

$3\text{Rb}_2\text{O}$, $10\text{MoO}_4 + 14\text{H}_2\text{O}$. Ppt.

Rb_2O , 2MoO_3 , $\text{MoO}_4 + 3\text{H}_2\text{O}$. May be recryst. from $\text{H}_2\text{O}_2 + \text{Aq}$.

$3\text{Rb}_2\text{O}$, 5MoO_3 , $2\text{MoO}_4 + 6\text{H}_2\text{O}$. Ppt.

Rb_2O , 3MoO_3 , $\text{MoO}_4 + 4\text{H}_2\text{O}$. Ppt. (Muthmann, B. 1898, 31. 1839-41.)

Silver permolybdate, AgMoO_4 .

(Péchar, A. ch. (6) 28. 550.)

Sodium permolybdate, $\text{NaMoO}_4 + 3\text{H}_2\text{O}$.

Very sol. in H_2O ; insol. in alcohol, but behaves similarly to K salt. (Péchar, A. ch. (6) 28. 550.)

Thalious permolybdate.

Insol. in H_2O . (Péchar, A. ch. 1893, (6) 28. 559.)

Pernitric acid, NO_3 .

See Nitrogen hexoxide.

Silver pernitrate, basic, $3\text{Ag}_2\text{O}_2$, AgNO_3 .

Decomp. H_2O . (Mulder, R. t. c. 1898, 17. 142.)

Perosmic acid.

Potassium perosmate (?).

Sol. in H_2O , but very easily decomp.

Peroxyntic acid.

Silver peroxyntitate.

Analysis of the black compound formed, under certain circumstances, in a silver voltameter when an aqueous solution of AgNO_3

is electrolyzed, points to the composition $3\text{Ag}_2\text{O}$, 5O , AgNO_3 , perhaps $2\text{Ag}_2\text{O}$, AgNO_3 or $3\text{Ag}_2\text{O}_2$, AgNO_3 (Mulder, Chem. Soc. 1896, 70. (2) 561)

Peroxyaminesulphonic acid.

Potassium peroxyaminesulphonate,

Very unstable in H_2O . Very sl. sol. in cold H_2O . More stable in $\text{N}/10$ $\text{KOH} + \text{Aq}$

100 pts. $\text{N}/10$ $\text{KOH} + \text{Aq}$ dissolve 0.62 pt. of the salt at 3° ; 6.6 pts. at 29° . (Haga, Chem Soc 1904, 85. 86.)

Perstannic acid, $\text{H}_2\text{Sn}_2\text{O}_7$.

Known in colloidal state, sol. in H_2O . (Spring, Bull. Soc. (2) 51. 180.)

Potassium perstannate, $\text{KSnO}_4 + 2\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in alcohol. (Tanatar, B. 1905, 38. 1185.)

Sodium perstannate, $\text{NaSnO}_4 + 2\text{H}_2\text{O}$

Difficultly sol. in H_2O with decomp (Tanatar.)

Persulphuric acid, S_2O_7 .

See Sulphur heptoxide.

Sp. gr. of $\text{H}_2\text{S}_2\text{O}_8 + \text{Aq}$

Sp. gr. $14^\circ/14^\circ$	% $\text{H}_2\text{S}_2\text{O}_8$	g. $\text{H}_2\text{S}_2\text{O}_8$ per l
1.042	7.2	75
1.096	15.4	169
1.154	23.6	272
1.246	35.2	438

(Elbs and Schönherr, Z. Elektrochem. 1896, 2. 245)

Ammonium persulphate, $(\text{NH}_4)_2\text{S}_2\text{O}_8$.

Very sol. in H_2O . 100 pts. H_2O at 0° dissolve 58.2 pts. $(\text{NH}_4)_2\text{S}_2\text{O}_8$. (Marshall, Chem. Soc. 59. 771.)

Solubility in H_2O equals 58% at 8° . (Moreau, C. C. 1901, II. 56.)

100 pts. H_2O dissolve 65 pts. at ord. temp. (Elbs, J. pr. 1893, (2) 48. 185.)

Ammonium lead persulphate,

Decomp. by H_2O . Almost insol. in cold H_2SO_4 of sp. gr.=1.7. Sl. sol. in H_2SO_4 (sp. gr.=1.7) at 50° . Sol. in fuming H_2SO_4 and in cold conc. HCl . Sol. in acetic acid, in Na acetate + Aq acidified with acetic acid and in excess of cold 20% $\text{NaOH} + \text{Aq}$. (Elbs, Z. Elektrochem. 1900, 7. 346.)

Ammonium mercurous persulphate ammonia, $(\text{NH}_4)_2\text{HgS}_2\text{O}_8, 2\text{NH}_3$.

Decomp. by H_2O . Insol. in dil or conc., hot or cold H_2SO_4 or HNO_3 . Sol. in HCl . (Tarugi, Gazz. ch. it 1903, 33. (1) 131.)

Barium persulphate, $\text{BaS}_2\text{O}_8 + 4\text{H}_2\text{O}$

Very sol. in H_2O . 100 pts. H_2O at 0° dissolve 39.1 pts. BaS_2O_8 , or 52.2 pts. $\text{BaS}_2\text{O}_8 + 4\text{H}_2\text{O}$. Sol. in absolute alcohol with pptn. of $\text{BaS}_2\text{O}_8 + \text{H}_2\text{O}$. Insol. in alcohol (Marshall.)

Cadmium persulphate ammonia, $\text{CdS}_2\text{O}_8, 6\text{NH}_3$.

Sol. in H_2O . (Barbieri, Z. anorg. 1911, 71. 350)

Cæsium persulphate, $\text{Cs}_2\text{S}_2\text{O}_8$.

Sol. in H_2O . 8.71–8.98 pts. are sol. in 100 pts. H_2O at 23° . (E. F. Smith, J. Am. Chem. Soc. 1899, 21. 935.)

Calcium persulphate.

Very sol. in H_2O (Marshall, J. Soc. Chem. Ind 1897, 16. 396.)

Copper persulphate ammonia, $\text{CuS}_2\text{O}_8, 4\text{NH}_3$.

Sol. in H_2O (Barbieri, Z. anorg. 1911, 71. 351)

Lead persulphate, PbS_2O_8 .

Decomp. by H_2O . Sl. sol. in H_2SO_4 , and in pyrosulphuric acid. Sol. in cold conc. HCl . Insol. or sol with decomp. in all ord. solvents. (Elbs, Z. Elektrochem. 1900, 7. 345.)

Solubility of $\text{Pb}(\text{SO}_4)_2$ in $\text{H}_2\text{SO}_4 + \text{Aq}$. at 22° .
v = moles of H_2SO_4 per mole of H_2O ;
c = millimols $\text{Pb}(\text{SO}_4)_2$ in 1 l.

v	c	v	c
0.304	0.00	0.558	37.2
0.348	1.8	0.699	40.5
0.387	3.0	0.917	23.3
0.407	3.9	1.11	23.7
0.435	5.3	1.54	49.6
0.477	14.4	2.08	83.5
0.515	23.3	2.13	88.2

(Dolezalek and Finckli, Z. anorg. 1906, 51. 321.)

+ $3\text{H}_2\text{O}$. Deliquescent. Very sol. in H_2O . (Marshall.)

Lead potassium persulphate, $\text{K}_2\text{Pb}(\text{SO}_4)_3$.

Decomp. by H_2O . Almost insol. in cold H_2SO_4 of sp. gr.=1.7. Sl. sol. in H_2SO_4 (sp. gr.=1.7) at 50° . Sol. in fuming H_2SO_4 , cold conc. HCl , excess of cold 20% $\text{NaOH} + \text{Aq}$, acetic acid, and in Na acetate + Aq acidified with acetic acid. (Elbs, Z. Elektrochem. 1900, 7. 346.)

Nickel persulphate ammonia, $\text{NiS}_2\text{O}_8, 6\text{NH}_3$.

Unstable in the air Sol in H_2O with decomp. (Barbieri, Z. anorg. 1911, 71. 351.)

Potassium persulphate, $\text{K}_2\text{S}_2\text{O}_8$.

100 pts. H_2O at 0° dissolve 1.77 pts $\text{K}_2\text{S}_2\text{O}_8$; more sol in hot H_2O with very sl decomp. Less sol. in H_2O than any other persulphate. (Marshall.)

Rubidium persulphate, $\text{Rb}_2\text{S}_2\text{O}_8$.

Sol. in H_2O . 3.32–3.49 pts. are sol. in 100 pts. H_2O at 22.5° . (E. F. Smith, J. Am. Chem. Soc. 1899, 21. 934.)

Silver persulphate, basic, $5\text{Ag}_2\text{O}_2, 2\text{Ag}_2\text{SO}_7$.

Decomp by H_2O and acids. (Mulder, C. C. 1899. I, 16.)

Sodium persulphate, $\text{Na}_2\text{S}_2\text{O}_8$.

Very sol. in H_2O (Lowenherz)

Strontium persulphate.

Very sol in H_2O . (Marshall, J. Soc. Chem Ind 1897, 16. 396)

Thallium persulphate, $\text{Tl}_2\text{S}_2\text{O}_8$.

Very sol. in H_2O . (Smith, J. Am. Chem Soc. 1898, 21. 936.)

Zinc persulphate ammonia, $\text{ZnS}_2\text{O}_8, 4\text{NH}_3$.

Sol in H_2O . (Barbieri, Z. anorg. 1911, 71. 350.)

Persulphomolybdic acid.

See Persulphomolybdic acid.

Pertantallic acid, $\text{HTaO}_4 + n\text{H}_2\text{O}$.

Ppt. (Melikoff, Z. anorg. 1899, 20. 345.)

Cæsium pertantalate, Cs_3TaO_8 .

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1667.)

Calcium potassium pertantalate, $\text{CaKTaO}_8 + 4\frac{1}{2}\text{H}_2\text{O}$.

Insol. in cold H_2O ; decomp. by hot H_2O (Melikoff, Z. anorg. 1899, 20. 347.)

Calcium sodium pertantalate, $\text{CaNaTaO}_8 + 4\frac{1}{2}\text{H}_2\text{O}$.

Difficultly sol in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1668.)

Magnesium potassium pertantalate,

Somewhat sol. in H_2O . (E. F. Smith.)

Magnesium rubidium pertantalate,

Somewhat sol. in H_2O . (E. F. Smith.)

Magnesium sodium pertantalate, $\text{MgNaTaO}_8 + 8\text{H}_2\text{O}$.

Somewhat sol in H_2O . (E. F. Smith)

Potassium pertantalate, $\text{K}_3\text{TaO}_8 + \frac{1}{2}\text{H}_2\text{O}$.

Sol in H_2O with decomp.; sol in $\text{KOH} + \text{H}_2\text{O}_2 + \text{Aq}$; pptd. by alcohol. (Melikoff, Z. anorg. 1899, 20. 346)

Rubidium pertantalate, Rb_3TaO_8 .

Somewhat sol in H_2O . (E. F. Smith)

Sodium pertantalate, $\text{Na}_3\text{TaO}_8 + \text{H}_2\text{O}$.

Pptd. by alcohol. Sl. sol in H_2O , decomp. on heating with H_2O . (Melikoff, Z. anorg. 1899, 20. 348.)

$\text{NaTaO}_4 + \text{NaOTaO}_4 + 13\text{H}_2\text{O}$. Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$; pptd. by alcohol. (Melikoff, Z. anorg. 1899, 20. 349.)

Pertitanic acid.**Ammonium pertitanate**, $(\text{NH}_4)_2\text{O}_2, \text{TiO}_3 + \text{H}_2\text{O}_2$.

Fairly stable; decomp. rapidly in aq. solution. (Melikoff, B. 1898, 31. 955.)

Barium pertitanate, $\text{BaO}_2, \text{TiO}_3 + 5\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Melikoff and Pissarjewsky, Z. anorg. 1898, 18. 59)

Potassium pertitanate, $\text{K}_2\text{O}_2, \text{TiO}_3, \text{K}_2\text{O}_4 + 10\text{H}_2\text{O}$.

Stable at zero; deliquesces and decomp. at ordinary temp. (Melikoff, B. 1898, 31. 680.)

Sodium pertitanate, $\text{Na}_2\text{O}_2, \text{TiO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O . Pptd in alcohol. (Melikoff, B. 1898, 31. 955.)

$4\text{Na}_2\text{O}_2, \text{Ti}_2\text{O}_7 + 10\text{H}_2\text{O}$. Decomp. by H_2O . (Melikoff.)

Pertungstic acid.**Barium pertungstate**, $\text{BaO}, 2\text{WO}_3, \text{O} + 6\text{H}_2\text{O}$.

Insol in H_2O . Decomp. by acids. (Kellner, Dissert. 1909.)

Cæsium pertungstate, $3\text{Cs}_2\text{O}, 12\text{WO}_3, 2\text{O} + 12\text{H}_2\text{O}$.

Sl. sol. in cold, easily sol. in warm H_2O . (Kellner.)

Sl. sol. in H_2O . (Kellner.)

Calcium pertungstate, $3\text{CaO}, 6\text{WO}_3, 8\text{O} + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Kellner.)

Lithium pertungstate, $\text{Li}_2\text{O}, 2\text{WO}_3, 2\text{O} + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O (Kellner.)

$3\text{Li}_2\text{O}, 4\text{WO}_3, \text{O} + 9\text{H}_2\text{O}$. Sol. in H_2O . (Kellner.)

<p>Magnesium pertungstate, 2MgO, 4WO_3, $6\text{O} + 9\text{H}_2\text{O}$. Easily sol. in H_2O. (Kellner)</p> <p>Potassium pertungstate, K_2O_4, $\text{WO}_4 + \text{H}_2\text{O}$. Sol. in H_2O with decomp.; explodes in the air at 80° (Melikoff, B. 1898, 31. 634.) K_2O, 2WO_3, $4\text{O} + 4\text{H}_2\text{O}$. Sol. in H_2O from which it is ppt. by alcohol and ether. (Kellner.) $7\text{K}_2\text{O}$, 10WO_3, $5\text{O} + 22\text{H}_2\text{O}$. Very sl. sol in H_2O. (Kellner.)</p> <p>Rubidium pertungstate, $2\text{Rb}_2\text{O}$, 4WO_3, $\text{O} + 3\text{H}_2\text{O}$. Sol. in H_2O with slow decomp. (Kellner.) $5\text{Rb}_2\text{O}$, 12WO_3, $3\text{O} + 12\text{H}_2\text{O}$. Insol in H_2O. (Kellner.)</p> <p>Sodium pertungstate, $\text{Na}_2\text{WO}_4 + \text{H}_2\text{O}$. Very sol. in H_2O. (Péchar, C. R. 112. 1060.) $+2\text{H}_2\text{O}$. Sol. in H_2O but easily decomp. (Kellner.) $\text{Na}_2\text{W}_2\text{O}_9 + 6\text{H}_2\text{O}$. Sol in H_2O and can be cryst. therefrom. (Pissarjewsky, Z. anorg. 1900, 24. 113.) Na_2O_2, $\text{WO}_4 + \text{H}_2\text{O}_2$, $(\text{Na}_2\text{O}_2)\text{WO}_4 + 7\text{H}_2\text{O}$. Decomp. in the air. Sol. in H_2O with decomp. (Melikoff, B. 1898, 31. 633.) Na_2O_2, WO_4, H_2O_2. Very unstable. Decomp. in the air and by H_2O (Melikoff.)</p> <p>Strontium pertungstate, SrO, 2WO_3, $\text{O} + 6\text{H}_2\text{O}$. (Kellner.)</p> <p>Peruranic acid, UO_6, $x\text{H}_2\text{O}$ (?). Known only in its salts.</p> <p>Ammonium peruranate, $(\text{NH}_4)_2\text{O}_2$, $(\text{UO}_4)_2 + 8\text{H}_2\text{O}$. Sol. in H_2O; decomp. by acids and by $\text{Al}(\text{OH})_3$ in aq. solution. (Melikoff, B. 1897, 30. 2904.)</p> <p>Ammonium uranyl peruranate, $(\text{NH}_4)_2(\text{UO}_2)\text{UO}_8 + 8\text{H}_2\text{O}$ (?). Easily sol. in H_2O. (Fairley, Chem. Soc. (2) 31. 134.)</p> <p>Barium peruranate, BaUO_5. As K salt. (de Coninck, C. C. 1909, I. 1970.) $(\text{BaO}_2)_2\text{UO}_4 + 8\text{H}_2\text{O}$. Decomp. by H_2SO_4 and H_2CO_3. (Melikoff, B. 1897, 30. 2905.) $\text{BaO}_2(\text{UO}_4)_2 + 9\text{H}_2\text{O}$. Ppt. (Melikoff.)</p> <p>Calcium peruranate, CaUO_5. As K salt. (de Coninck.)</p> <p>Calcium peruranate, $(\text{CaO}_2)_2\text{UO}_4 + 10\text{H}_2\text{O}$. Ppt. (Melikoff, B. 1897, 30. 2906.)</p>	<p>Copper peruranate, $(\text{CuO}_2)_2\text{UO}_4$. Ppt (Melikoff)</p> <p>Lead peruranate, $(\text{PbO})_2\text{UO}_4$, PbO, UO_3. Ppt (Melikoff.)</p> <p>Lithium peruranate, $(\text{Li}_2\text{O}_2)(\text{UO}_4)_2 + 8\text{H}_2\text{O}$. Sol. in H_2O, decomp. by acids and by $\text{Al}(\text{OH})_3$ in aq. solution; very unstable. (Melikoff)</p> <p>Nickel peruranate, $(\text{NiO})_2\text{UO}_4$. Ppt (Melikoff)</p> <p>Potassium peruranate, $\text{K}_4\text{UO}_8 + 10\text{H}_2\text{O}$ (?). Unstable. (Fairley) K_2UO_5. (de Coninck, C. R. 1909, 148. 1769.) $+3\text{H}_2\text{O}$. Decomp. by H_2O, HCl and dil. HNO_3. (Aloy, Bull. Soc. 1903, (3) 29. 293)</p> <p>Silver peruranate, $\text{Ag}_2\text{U}_2\text{O}_{11}$ (?). (Guyard, Bull. Soc. (2) 1. 95.) Does not exist. (Ahhbegoff, A. 233. 117.)</p> <p>Sodium peruranate, $\text{Na}_4\text{UO}_8 + 3\text{H}_2\text{O}$. Sol. in H_2O. Sl. sol. in alcohol. (Fairley.) Na_2UO_5. As K salt. (de Coninck, C. C. 1909, I. 1970.) $+5\text{H}_2\text{O}$. Decomp. by H_2O and HCl. (Aloy, Bull. Soc. 1903, (3) 29. 293) $(\text{Na}_2\text{O}_2)_2\text{UO}_4 + 8\text{H}_2\text{O}$. Sol. in H_2O; decomp. by dil. HCl, H_2SO_4, and by $\text{Al}(\text{OH})_3$ in aq. solution. (Melikoff, B. 1897, 30. 2903.)</p> <p>Sodium uranyl peruranate, $\text{Na}_2(\text{UO}_2)\text{UO}_8 + 6\text{H}_2\text{O}$ (?). Sol. in H_2O. (Fairley.)</p> <p>Pervanadic acid, HVO_4 (?). Sol. in H_2O. (Pissarjewsky, C. C. 1902, II. 565.)</p> <p>Ammonium pervanadate, NH_4VO_4. Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$; insol. in alcohol. (Scheuer Z. anorg. 1898, 16. 294.) $(\text{NH}_4)_3\text{VO}_6 + 2\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O; insol. in alcohol. (Melikoff, B. 1909, 42. 2292.) $(\text{NH}_4)_4\text{V}_2\text{O}_{11}$. Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$; ppt. from aq. solution by alcohol. (Melikoff, Z. anorg. 1899, 19. 406.)</p> <p>Barium pervanadate, $\text{Ba}(\text{VO}_4)_2$. Sl. sol. in $\text{H}_2\text{O}_2 + \text{Aq}$ free from H_2SO_4; insol. in alcohol. (Scheuer, Z. anorg. 1898, 16. 288.)</p> <p>Cadmium pervanadate, $\text{Cd}(\text{VO}_4)_2$. Sl. sol. in $\text{H}_2\text{O}_2 + \text{Aq}$; insol. in alcohol. (Scheuer.)</p> <p>Calcium pervanadate, $\text{Ca}(\text{VO}_4)_2$. Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$; insol. in alcohol. (Scheuer.)</p>
---	---

Lead pervanadate, $\text{Pb}(\text{VO}_4)_2$

Sl. sol in $\text{H}_2\text{O}_2 + \text{Aq}$ free from H_2SO_4 ; insol in alcohol. (Scheuer.)

Lithium pervanadate, LiVO_4

Sol in $\text{H}_2\text{O}_2 + \text{Aq}$; insol in alcohol (Scheuer.)

Potassium pervanadate, KVO_4

Sol in $\text{H}_2\text{O}_2 + \text{Aq}$ acidified with H_2SO_4 ; insol in alcohol (Scheuer.)

$\text{K}_2\text{VO}_6 + 2\frac{1}{2}\text{H}_2\text{O}$. Sol in H_2O ; insol. in alcohol. (Melikoff, B. 1909, 42. 2293.)

$3\text{K}_2\text{O}_2\text{VO}_4, 2\text{KVO}_4 + 2\text{H}_2\text{O}$. 0.855 g. is sol. in 100 g. H_2O at 19° ; sl. sol. in $\text{KOH} + \text{Aq}$; very stable in the air. (Melikoff and Pissarjewsky, Z. anorg. 1899, 19. 408.)

$\text{K}_4\text{V}_2\text{O}_{12} + 2\text{H}_2\text{O}$. (Melikoff and Pissarjewsky, Z. anorg. 1899, 19. 411)

$\text{K}_4\text{V}_2\text{O}_{13} + 3\frac{1}{2}\text{H}_2\text{O}$. Moderately sol. in H_2O with slow decomp. (Melikoff and Pissarjewsky, Z. anorg. 1899, 19. 410.)

Silver pervanadate, AgVO_4

Sl. sol in $\text{H}_2\text{O}_2 + \text{Aq}$ free from H_2SO_4 ; sol. in alcohol. (Scheuer.)

Sodium pervanadate, NaVO_4

Sol. in H_2O_2 acidified with H_2SO_4 ; insol. in alcohol. (Scheuer.)

Strontium pervanadate, $\text{Sr}(\text{VO}_4)_2$

Sl. sol in $\text{H}_2\text{O}_2 + \text{Aq}$ free from H_2SO_4 ; insol. in alcohol. (Scheuer.)

Philippium, $\text{Ph} (?)$

(Delafontaine, C. R. 87. 559.)

Consists of terbium and yttrium. (Roscoe, B. 15. 1274.)

Phosgene, CoCl_2

See Carbonyl chloride.

Phosphame, $\text{PN}_2\text{H} (?)$

Insol. in H_2O . Insol. in dil. $\text{HNO}_3 + \text{Aq}$; gradually decomp. by conc. HNO_3 . (Rose, Pogg. 24. 308.)

Insol. in conc. HNO_3 . (Pauli, A. 123. 236.)

Sol. in H_2SO_4 with decomp. (Rose.)

Insol. in dil. but decomp. by conc. KOH or $\text{NaOH} + \text{Aq}$.

Insol. in alcohol or ether

Formula is perhaps $\text{P}_2\text{N}_3\text{H}_4$. (Salzmann, B. 6. 494.)

Phosphamic acid, $\text{PO} \begin{smallmatrix} \text{NH} \\ \diagup \\ \text{OH} \end{smallmatrix}$

(Schiff.)

Does not exist, but was impure *pyrophosphodiamic acid*. (Gladstone.) Also Mente (A. 248. 245).

Pyrophosphamic acid, $\text{P}_2\text{NH}_5\text{O}_6 = \text{P}_2\text{O}_3(\text{OH})_3\text{NH}_2$

Deliquescent in moist air; easily sol. in H_2O or alcohol, sl. sol in ether. (Gladstone, Chem Soc. 3. 152.)

Correct composition is imidodiphosphoric acid, $\text{P}_2\text{NH}_4\text{O}_6 = \text{HO}-\text{PO} < \begin{smallmatrix} \text{O} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{OH}$.

(Mente, A. 248. 232)

Barium pyrophosphamate, $\text{Ba}_3(\text{P}_2\text{NH}_5\text{O}_6)_2$

Sol. in HCl or $\text{HNO}_3 + \text{Aq}$, not in $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Gladstone and Holmes, Chem. Soc. (2) 2. 233)

Cupric —, $\text{Cu}_3(\text{P}_2\text{NH}_5\text{O}_6)_2 + 2\text{H}_2\text{O}$

Ppt. Decomp. by cold $\text{KOH} + \text{Aq}$. (Gladstone, Chem Soc. 3. 135)

Ferric —, $\text{Fe}_2(\text{P}_2\text{NH}_5\text{O}_6)_2 + 2\text{H}_2\text{O}$

Insol. in dil. acids. Sol. in conc. H_2SO_4 , and decomp. by warming. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$. (Gladstone, Chem. Soc. 3. 142.)

Lead —, $\text{Pb}_3(\text{P}_2\text{NH}_5\text{O}_6)_2 + 4\text{H}_2\text{O}$

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Potassium —, $\text{K}_3\text{P}_2\text{NH}_5\text{O}_6$

Deliquescent. Sol. in H_2O . Insol. in alcohol. (Gladstone, A. 76. 85)

Silver —, $\text{Ag}_3\text{P}_2\text{NH}_5\text{O}_6 + 5\text{H}_2\text{O}$

Ppt.

Zinc —, $\text{Zn}_3(\text{P}_2\text{NH}_5\text{O}_6)_2$

(Gladstone and Holmes, Chem. Soc. (2) 2. 225)

Phosphamide, PON

See Phosphoryl nitride.

$\text{PN}_2\text{H}_3\text{O}$.

See Phosphoryl imidoamide.

Triphosphamide, PON_2H_3

See Phosphoryl triamide.

Trimetaphosphimic acid, $\text{P}_3\text{N}_3\text{H}_3\text{O}_6$

Sol. in H_2O ; aq. solution does not coagulate albumen. (Stokes, Am. Ch. J. 1895, 17. 275.)

Ammonium trimetaphosphimate,

$(\text{NH}_4)_3\text{P}_3\text{N}_3\text{O}_6\text{H}_3$.

Sol. in H_2O , insol. in alcohol; unstable. (Stokes, Am. Ch. J. 1896, 18. 643)

Barium trimetaphosphimate, $\text{Ba}_3(\text{P}_3\text{N}_3\text{O}_6\text{H}_3)_2 + 4\text{H}_2\text{O}$

$+ 6\text{H}_2\text{O}$. Sl. sol. in H_2O . Easily sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ and in $\text{NaCl} + \text{Aq}$. (Stokes.)

Barium sodium trimetaphosphimate,
 $P_3N_3O_6H_3NaBa + 1\frac{1}{2}H_2O$.

Almost insol in H_2O , easily sol in NH_4Cl + Aq and in $NaCl$ + Aq. (Stokes)

Magnesium trimetaphosphimate,
 $(P_3N_3O_6H_3)_2Mg_3$ (?)

Sol in H_2O , insol. in alcohol; aq. solution decomp. on boiling. (Stokes)

Potassium trimetaphosphimate, $K_3P_3N_3O_6H_3$
 Sol in H_2O ; insol. in alcohol. (Stokes.)

Silver trimetaphosphimate, $Ag_3P_3N_3O_6H_3$.

Ppt.; sol in NH_4OH + Aq; insol. in H_2O ; sl. sol. in HNO_3 + Aq. (Stokes.)

α Sodium trimetaphosphimate, $P_3N_3O_6H_3Na_3 + 4H_2O$.

18.3 pts. are sol. in 100 pts. H_2O at 20° ; very sol. in hot H_2O ; decomp. by alkali on long boiling. (Stokes)

β Sodium trimetaphosphimate, $P_3N_3O_6H_3Na_3 + H_2O$.

Sol in H_2O ; insol. in alcohol. (Stokes)

Tetrametaphosphimic acid,
 $P_4N_4O_8H_8 + 2H_2O$.

Very sl. sol. in H_2O ; decomposes the sol. salts of HCl , H_2SO_4 and HNO_3 . (Stokes, Am. Ch. J. 1895, 17, 290.)

100 pts. H_2O at 20° dissolve 0.64 pt. crystallized acid. Somewhat more sol in boiling H_2O . (Stokes)

100 pts. 10% HNO_3 + Aq at 20° dissolve 0.26 pt. of crystallized acid (Stokes)

Not decomp. by boiling alkalies + Aq. (Stokes, Am. Ch. J. 1896, 18, 785.)

Insol. in alcohol. (Stokes, Am. Ch. J. 1896, 18, 784)

Ammonium tetrametaphosphimate,
 $P_4N_4O_8H_8(NH_4)_2$.

Only sl sol. in boiling H_2O ; sol. in excess of hot 5% HNO_3 . (Stokes)

$P_4N_4O_8H_8(NH_4)_4 + 4H_2O$. Readily sol. in H_2O ; sl. sol. in NH_4OH + Aq. (Stokes.)

Barium tetrametaphosphimate, $P_4N_4O_8H_8Ba_2 + 2H_2O$.

Ppt.; insol. in H_2O . (Stokes.)

Potassium tetrametaphosphimate,
 $P_4N_4O_8H_8K_2$.

Sl. sol. in boiling H_2O ; sol. in cold dil. KOH + Aq. (Stokes.)

$P_4N_4O_8H_8K_4$ (?). Very sol. in H_2O . (Stokes.)

Silver tetrametaphosphimate, $P_4N_4O_8H_8Ag_4$.

Ppt.; insol. in H_2O ; sl. sol. in HNO_3 + Aq. (Stokes.)

$P_4N_4O_8Ag_8$. Ppt., sol. in NH_4NO_3 + Aq. (Stokes)

Sodium tetrametaphosphimate, $P_4N_4O_8H_8Na_4 + 2\frac{1}{2}H_2O$.

Sl. sol. in cold H_2O Easily sol. in hot H_2O . Ppt. from aqueous solution by excess of alkali (Stokes)

Pentametaphosphimic acid,

Sol. in H_2O ; pptd. by alcohol (Stokes; Am. Ch. J. 1898, 20, 748.)

Magnesium pentametaphosphimate,
 $(P_5N_5O_{10}H_5)_2Mg$

Ppt. (Stokes.)

$P_5N_5O_{10}H_5Mg_2 + 5H_2O$. Ppt, insol. in alcohol, almost insol in H_2O ; sl. sol. in conc. acetic acid. (Stokes)

Silver pentametaphosphimate, $P_5N_5O_{10}H_5Ag_5$.

Ppt, sol. in cold KOH + Aq with decomp. (Stokes)

Sodium pentametaphosphimate,

Sol in H_2O ; insol. in alcohol. (Stokes.)

$P_5N_5O_{10}H_5Na_4 + 2H_2O$. Sol in 80% acetic acid, pptd. by alcohol (Stokes)

Hexametaphosphimic acid.

Silver hexametaphosphimate, $P_6N_6O_{12}H_6Ag_6$.

Ppt.; decomp. by cold KOH + Aq. (Stokes, Am. Ch. J. 1898, 20, 757.)

Sodium hexametaphosphimate, $P_6N_6O_{12}H_6Na_6 + 2H_2O$.

Sol. in H_2O , pptd by alcohol. (Stokes.)

Phosphine.

See Hydrogen phosphide.

Pyrophosphodiamic acid,

Deliquescent. Easily sol. in H_2O , alcohol, or ether. Sol. in cold conc. H_2SO_4 without decomp. (Gladstone, Chem. Soc. 3, 353.)

Correct composition is *diimidodiphosphoric acid*, $P_2N_2H_4O_4 + H_2O = HO-PO = (NH)_2 = PO-OH$. (Mente.)

Aluminum pyrophosphodiamate.

Precipitate. Sol. in NH_4OH + Aq. Insol. in acids. (Gladstone, A. 76, 82)

Ammonium —, $P_2O_5(OH)_2(NH_4)_2$.

Very deliquescent in moist air. Sol. in H_2O . (Schiff, A. 103, 168.)

Barium pyrophosphodiamate,
 $\text{BaP}_2\text{O}_5(\text{NH}_2)_2$.

Precipitate. Sl. sol in H_2O . Sol in $\text{NH}_4\text{OH} + \text{Aq}$ (Gladstone)

Calcium —, $\text{CaP}_2\text{O}_5(\text{NH}_2)_2$.

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ and acids. (Gladstone and Holmes.)

Lead —.

Ppt. Decomp by H_2O .

Magnesium —.

Ppt. (Gladstone and Holmes)

Silver —, $\text{Ag}_3\text{P}_2\text{O}_5(\text{NH}_2)_2$.

Sl sol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$. (Gladstone and Holmes)

Strontium —.

Sol. in acids and $\text{NH}_4\text{Cl} + \text{Aq}$ Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Gladstone and Holmes, Chem. Soc. (2) 4. 295.)

Zinc —, $\text{ZnP}_2\text{O}_5(\text{NH}_2)_2$.

Ppt. (Gladstone and Holmes.)

Pyrophosphotriamic acid, $\text{P}_2\text{N}_3\text{H}_7\text{O}_4 =$

Decomp by boiling H_2O or HCl . Sol. in conc. H_2SO_4 upon heating. (Gladstone and Holmes)

Correct formula is $\text{HO}-\text{PO} < \begin{smallmatrix} \text{NH} \\ \text{NH} \end{smallmatrix} > \text{PO}-$
 $\text{NH}_2 = \text{diimidodiphosphomonamic acid}$.
 (Mente, A 248. 241.)

Ammonium pyrophosphotriamate,

Insol. in H_2O . (Gladstone and Holmes.)

Barium —, $\text{BaP}_2\text{N}_3\text{H}_5\text{O}_4$.

$\text{BaH}_2(\text{P}_2\text{N}_3\text{H}_5\text{O}_4)_2$. Decomp. by $\text{HCl} + \text{Aq}$. (Gladstone, Chem. Soc. 4. 6.)

Cobaltous —, $\text{CoP}_2\text{N}_3\text{H}_5\text{O}_4$.

Slowly decomp. by dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, not by $\text{HCl} + \text{Aq}$. (Gladstone and Holmes, Chem Soc. (2) 4. 1.)

Cupric —, $\text{CuP}_2\text{N}_3\text{H}_5\text{O}_4$.

Insol. in H_2O or $\text{NH}_4\text{OH} + \text{Aq}$. (Gladstone and Holmes, Chem. Soc. (2) 4. 1.)

Ferrous —, $\text{FeH}_4(\text{P}_2\text{N}_3\text{H}_5\text{O}_4)_2$.

Insol. in dil. acids. (Gladstone, Chem. Soc. (2) 4. 1.)

Lead —, $\text{H}_2\text{Pb}_3(\text{P}_2\text{N}_3\text{H}_5\text{O}_4)_2$.

Ppt. (Gladstone and Holmes, Chem. Soc. (2) 4. 1.)

$\text{H}_4\text{Pb}_2(\text{P}_2\text{N}_3\text{H}_5\text{O}_4)_2$. Ppt. (G. and H.)
 $\text{H}_6\text{Pb}(\text{P}_2\text{N}_3\text{H}_5\text{O}_4)_2$. (G. and H.)

Mercuric pyrophosphotriamate,

Insol. in H_2O or dil. HCl or $\text{HNO}_3 + \text{Aq}$. (Gladstone and Holmes, Chem Soc. (2) 4. 1.)

Platinum —, $\text{Pt}_2\text{P}_2\text{N}_3\text{H}_5\text{O}_4$.

Decomp by H_2O when freshly pptd. (G. and H.)

Potassium —, $\text{KP}_2\text{N}_3\text{H}_5\text{O}_4$.

Almost insol in H_2O . (Gladstone, Chem. Soc 4. 10.)

Silver —, $\text{Ag}_3\text{P}_2\text{N}_3\text{H}_5\text{O}_4$.

Ppt. Sl attacked by $\text{HC}_2\text{H}_3\text{O}_2$; decomp. by HNO_3 or $\text{NH}_4\text{OH} + \text{Aq}$ into—

$\text{AgH}_2\text{P}_2\text{N}_3\text{H}_4\text{O}_4$ Insol. in H_2O . Decomp. by HCl . (Gladstone, Chem Soc. (2) 4. 1.)

Zinc —

Insol in H_2O . (Gladstone and Holmes.)

Tetraphosphodiamic acid, $\text{P}_4\text{N}_2\text{H}_5\text{O}_{11} =$

Known only as NH_4 salt.

Ammonium tetraphosphodiamate,

Very deliquescent, and sol. in H_2O . (Gladstone)

Ammonium dihydrogen tetraphosphodiamate,

Insol in cold, easily sol. in hot H_2O and dil. acids. (Gladstone.)

Tetraphosphotetramic acid,

Sol. in H_2O . Insol. in alcohol. (Gladstone)

Ammonium tetraphosphotetramate,

Sol. in H_2O , and precipitated from solution by alcohol. (Gladstone.)

Silver —, $\text{Ag}_6\text{P}_4\text{N}_4\text{H}_4\text{O}_9$.

Ppt.

$\text{Ag}_2\text{H}_4\text{P}_4\text{N}_4\text{H}_4\text{O}_9$. Ppt.

Ammonium phosphoarseniovanadico-vanadiotungstate.

See Arseniophosphovanadicovanadiotungstate, ammonium.

Tetraphosphopentazotic acid,

Insol in H_2O . Decomp gradually by boiling with H_2O (Gladstone.)

Ammoniotetraphosphopentazotic acid (?)

Decomp. by H_2O . (Gladstone.)

Cupric tetraphosphopentazotate.

(Gladstone, Chem. Soc. (2) 6. 261.)

Lead —.

(Gladstone, Chem. Soc. (2) 6. 261.)

Potassium —, $KOP_4N_5H_9O_6$.

Insol. in H_2O . (Gladstone, Chem. Soc. (2) 6. 268.)

Phosphoboric acid, H_3BO_3 , $H_3PO_4 = BPO_4 + 3H_2O$.

Not decomp by boiling H_2O or conc. acids. Sol in boiling solution of caustic alkalies. (Vogel, N. Repert. Pharm. 18. 611.)

Phosphochloroplatinous acid,

See Chloroplatinophosphoric acid.

Phosphochromic acid.**Ammonium phosphochromate, $3(NH_4)_2O, P_2O_5, 8CrO_3 + H_2O$.**

Sol. in H_2O with decomp. (Friedheim, Z. anorg. 1894, 6. 284.)

Potassium phosphochromate, $2K_2O, P_2O_5, 4CrO_3 + H_2O$.

Sol. in H_2O but cannot be cryst. therefrom without decomp. Can be cryst. without decomp. from H_2O containing phosphoric acid. (Friedheim.)

$3K_2O, P_2O_5, 8CrO_3$. Sol. in H_2O but cannot be cryst. therefrom without decomp. (Blondel, C. R. 1894, 118. 194.)

Phosphohypophosphotungstic acid.**Potassium sodium phosphohypophosphotungstate, $9K_2O, Na_2O, 4P_2O_5, 2PO_2H_3, 26WO_3 + 23H_2O$.**

Precipitate. Easily sol. in hot H_2O . (Gibbs, Am. Ch. J. 7. 313.)

Tetraphosphotetrimidic acid,

Known only in its salts. (Gladstone.)

Silver tetraphosphotetrimidate.

Ppt (Gladstone.)

Phosphoiodic acid, $P_2O_5, 18I_2O_5 + 4H_2O$.

Decomp. by H_2O . (Chrétien, A. ch. 1898, (7) 15. 389.)

Ammonium phosphoiodate, $4(NH_4)_2O, P_2O_5, 18I_2O_5 + 12H_2O$.

Sol. in H_2O . Sl. sol. in conc. $H_3PO_4 + Aq$. (Chrétien.)

Lithium phosphoiodate, $3Li_2O, P_2O_5, 18I_2O_5 + 11H_2O$.

Sol. in H_2O . Sl. sol. in conc. $H_3PO_4 + Aq$. (Chrétien.)

Potassium phosphoiodate, $4K_2O, P_2O_5, 18I_2O_5 + 5H_2O$.

Decomp. by a small amt. of H_2O , sol. in a large amt. Sl. sol. in conc. $H_3PO_4 + Aq$. (Chrétien.)

Sodium phosphoiodate, $6Na_2O, P_2O_5, 18I_2O_5 + 5H_2O$.

Sol. in H_2O . Sl. sol. in conc. $H_3PO_4 + Aq$. (Chrétien.)

Phosphoiridic acid.

See Chlorophosphoiridic acid.

Phospholuteotungstic acid, $H_3PW_8O_{29}$.

See under Phosphotungstic acid.

Phosphomolybdic acid, $P_2O_5, 18MoO_3 + xH_2O$.

"Phospholuteomolybdic acid."

Deliquescent. Sol. in H_2O in all proportions. (Kehrmann, Z. anorg. 1894, 7. 418.)

$3H_2O, P_2O_5, 20MoO_3 + 21H_2O$. Very sol. in H_2O . Sol. in ether. By evaporation of H_2O solution crystals with $44H_2O$, or from a strong solution in conc. $HNO_3 + Aq$, with $19H_2O$, are obtained; also crystals with 38, and $48H_2O$ are known. (Debray, C. R. 66. 704.)

According to Rammelsberg (B. 10. 1776) formula is $3H_2O, P_2O_5, 22MoO_3$.

According to Gibbs (Am. Ch. J. 3. 317) formula is $3H_2O, P_2O_5, 24MoO_3 + 59H_2O$.

Finkener (B. 11. 1638) gives the formula as $3H_2O, P_2O_5, 24MoO_3 + 58H_2O$, also with $29H_2O$.

$P_2O_5, 20MoO_3 + 52H_2O$. Sol. in dry ether with evolution of heat, and subsequent separation into two layers, the upper consisting of pure ether, and lower of a solution of acid in ether. Sp. gr. of lower layer, when sat. at 13° , is 1.3. On warming lower layer, ether separates out and forms an upper layer. This redissolves on cooling and shaking. The lower layer is insol. in H_2O and miscible with alcohol.

100 pts. ether thus dissolve 80.6 pts. acid at 0°, 84.7 pts. at 8.1°, 96.7 pts. at 19.3°, 103.9 pts. at 27.4°, 107.9 pts. at 32.9°. (Parmentier, C. R. 104. 688.)

P_2O_5 , 22 MoO_3 +57 H_2O , and +58 H_2O (Pohl, Dissert. 1906.)

P_2O_5 , 23 MoO_3 +61 H_2O . (Pohl.)

P_2O_5 , 24 MoO_3 +61 H_2O . (Miolati, C. C. 1903, 11. 789.)

+64 H_2O . (Pohl.)

Diphosphopentamolybdic acid,

$H_2P_2Mo_5O_{23}=3H_2O$, P_2O_5 , 5 MoO_3 .

Not known in free state.

Ammonium phosphomolybdate, $(NH_4)_2O$,

P_2O_5 , 2 MoO_3 +2 H_2O .

(Meschiorer, Dissert. 1894.)

2 $(NH_4)_2O$, P_2O_5 , 4 MoO_3 +5 H_2O . (Friedheim, Z. anorg. 1894, 6. 33.)

+6 H_2O (Perlberger, Dissert. 1904.)

$(NH_4)_2PO_4$, 11 MoO_3 +6 H_2O .

Formula is $(NH_4)_2PO_4$, 10 MoO_3 +1½ H_2O , according to the older authorities.

Scarcely sol in H_2O or aqueous acid solutions. Easily sol in ammonia, and alkalis + Aq. (Svanberg and Struve, J. pr. 44. 291.)

It is almost completely insol in a mixture of $(NH_4)_2MoO_4$ + Aq. and dil. HNO_3 + Aq. Absolutely insol. in a dil. nitric acid solution of ammonium nitrate. (Richters, Z. anal. 10. 471.)

Solubility is increased even in presence of ammonium molybdate and free HNO_3 by HCl, ammonium, and other chlorides, tartaric acid, or large quantities of ammonium oxalate or citrate. Not precipitated in presence of excess of H_3PO_4 . (Fresenius, Z. anal. 3. 446.)

Sol. in 10,000 pts. H_2O at 16°; in 6600 pts. H_2O containing 1 vol. % HNO_3 ; in 550 pts. HCl + Aq. of 1.12 sp. gr.; in 620 pts. alcohol of 0.80 sp. gr.; in 190 pts. HNO_3 + Aq. (sp. gr. = 1.2) at 50°; in 5 pts. conc. H_2SO_4 at 100°; in 3 pts. NH_4OH + Aq. of 0.95 sp. gr. (Eggertz, J. pr. 79. 496.)

Sol. in 21,186 pts. H_2O , 38,117 pts. dil. alcohol, and 13,513 pts. strong alcohol. (Hehner, Analyst, 1879. 23.)

According to Sonnenschein, the solubility is increased by much H_2O or alcohol, alkaline hydroxides, carbonates, ortho-, pyro-, and metaphosphates; sodium borate, hyposulphate, thiosulphate, acetate, arsenate, and arsenite; potassium sodium tartrate, ammonium oxalate, orthophosphoric acid, and sulphuric acid. It is not increased by ammonium molybdate or sulphate, potassium sulphate, acid tartrate, acid oxalate, nitrate, or chlorate, iodide, chloride, or bromide; sodium bromide or nitrate; nitric, hydrochloric, boric, tartaric, oxalic, and dilute sulphuric acids. (Sonnenschein, J. pr. 53. 342.)

Sol. in hot H_2O . Sol. in cold caustic alkalis, alkali carbonates, and phosphates,

NH_4Cl , and $(NH_4)_2C_2O_4$ + Aq.; sl. sol in $(NH_4)_2SO_4$, KNO_3 , and KCl + Aq.; very sl. sol. in NH_4NO_3 + Aq. Sol in K_2SO_4 , Na_2SO_4 , NaCl, $MgCl_2$, H_2SO_4 , HCl, and conc. or dil. HNO_3 + Aq.

Presence of $(NH_4)_2MoO_4$ totally changes the effect of acid liquids; insol. in dil. HNO_3 or H_2SO_4 + Aq. containing $(NH_4)_2MoO_4$, but somewhat sol. in HCl + Aq. even in presence of that salt. Tartaric acid and similar organic substances totally prevent the precipitation of this salt. (Eggertz in Fresenius' Quant. anal.)

5 $(NH_4)_2O$, 48 MoO_3 , 2 P_2O_5 +17 H_2O = 3 $(NH_4)_2O$, 24 MoO_3 , P_2O_5 +2 $(NH_4)_2O$, H_2O , 24 MoO_3 , P_2O_5 +16 H_2O . Formula of above salt according to Gibbs.

3 $(NH_4)_2O$, 22 MoO_3 , P_2O_5 +9 H_2O , or 12 H_2O .

8 $(NH_4)_2O$, H_2O , 60 MoO_3 , 3 P_2O_5 +11 H_2O . Sl. sol in H_2O .

3 $(NH_4)_2O$, 16 MoO_3 , P_2O_5 +14 H_2O . Insol. in cold, sol. with decomp. in hot H_2O . Sol. in NH_4OH + Aq. (Gibbs, Am. Ch. J. 3. 317.)

5 $(NH_4)_2O$, P_2O_5 , 16 MoO_3 . (Meschiorer, Dissert. 1894.)

3 $(NH_4)_2O$, P_2O_5 , 18 MoO_3 +14 H_2O . Sol. in H_2O . The aqueous solution is stable at ordinary temp. for several days, but when warmed ordinary ammonium phosphomolybdate separates (Kehrmann, Z. anorg. 1894, 7. 414.)

3 $(NH_4)_2O$, P_2O_5 , 28 MoO_3 +8 H_2O . 100 g. H_2O dissolve 0.0238 g. at 15°. 1 pt. is sol. at 15° in 4206 pts. H_2O ; 7300 pts. 5% NH_4NO_3 + Aq; 4930 pts. 1% HNO_3 + Aq. (de Lucchi, Rass. Min. 1910, 32. 21.)

9 $(NH_4)_2O$, 2 P_2O_5 , 28 MoO_3 +8 H_2O . (Meschiorer, Dissert. 1894.)

Ammonium diphosphopentamolybdate,

2 $(NH_4)_2PO_4$, 5 MoO_3 +7 H_2O = 3 $(NH_4)_2O$, 5 MoO_3 , P_2O_5 +7 H_2O .

Easily sol. in hot, less in cold H_2O . (Zenkner, J. pr. 58. 256.)

5 $(NH_4)_2O$, H_2O , 10 MoO_3 , 2 P_2O_5 +6 H_2O = 3 $(NH_4)_2O$, 5 MoO_3 , P_2O_5 +2 $(NH_4)_2O$, H_2O , 5 MoO_3 , P_2O_5 +6 H_2O . Sol. in H_2O . (Gibbs, Am. Ch. J. 1895, 17. 87.)

+8 H_2O . (Perlberger.)

+18 H_2O . (Mazzuchelli and Zangrilli, Gazz. ch. it. 1910, 40. (2) 55.)

5 $(NH_4)_2O$, P_2O_5 , 10 MoO_3 +13 H_2O , and +14 H_2O . (Perlberger, Dissert. 1904.)

Ammonium barium phosphomolybdate,

3 $(NH_4)_2O$, 30 BaO , P_2O_5 , 30 MoO_3 .

Insol. precipitate (Seligsohn, J. pr. 67. 478.)

Ammonium cadmium phosphomolybdate,

5 $(NH_4)_2O$, CdO, P_2O_5 , 6 MoO_3 +8 H_2O

(Perlberger, Dissert. 1904.)

3 $(NH_4)_2O$, 2CdO, 2 P_2O_5 , 9 MoO_3 +14 H_2O . (Perlberger.)

Ammonium cobaltous phosphomolybdate,
 $(\text{NH}_4)_2\text{O}$, 2CoO , P_2O_5 , $5\text{MoO}_3 + 10\text{H}_2\text{O}$.

Decomp. by cold H_2O . Sol. in acids and hot H_2O . (Arnfeld, Dissert. 1898.)
 $4(\text{NH}_4)_2\text{O}$, CoO , $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 12\text{H}_2\text{O}$. Sl. sol. in cold, easily sol. in hot H_2O (Arnfeld.)

Ammonium manganous phosphomolybdate,
 $(\text{NH}_4)_2\text{O}$, 2MnO , P_2O_5 , $5\text{MoO}_3 + 20\text{H}_2\text{O}$.

Decomp. by H_2O , but dissolves clear on heating. (Arnfeld.)
 $4(\text{NH}_4)_2\text{O}$, MnO , $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 18\text{H}_2\text{O}$. (Arnfeld.)

$5(\text{NH}_4)_2\text{O}$, 10MnO , $2\text{P}_2\text{O}_5$, $20\text{MoO}_3 + 10\text{H}_2\text{O}$. Very sl sol in H_2O (Gibbs, Am Ch J 1895, 17. 87)

Ammonium nickel phosphomolybdate,
 $(\text{NH}_4)_2\text{O}$, 2NiO , P_2O_5 , $5\text{MoO}_3 + 10\text{H}_2\text{O}$.

Decomp by cold, but sol in hot H_2O . (Arnfeld.)

$(\text{NH}_4)_2\text{O}$, NiO , $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 12\text{H}_2\text{O}$. Very sol in H_2O . (Arnfeld.)

Ammonium potassium phosphomolybdate,
 $6(\text{NH}_4)_2\text{O}$, $15\text{K}_2\text{O}$, $2\text{P}_2\text{O}_5$, $60\text{MoO}_3 + 12\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in alcohol (Selgsohn, J. pr. 67. 477.)

Ammonium sodium phosphomolybdate,
 $6(\text{NH}_4)_2\text{O}$, $15\text{Na}_2\text{O}$, $2\text{P}_2\text{O}_5$, $60\text{MoO}_3 + 18\text{H}_2\text{O}$.

Sol. in much boiling H_2O Insol. in alcohol (Selgsohn, J pr. 67. 474.)

Barium phosphomolybdate, 3BaO , P_2O_5 , $24\text{MoO}_3 + x\text{H}_2\text{O}$.

Moderately sol in cold, very easily sol. in hot H_2O . Decomp in aqueous solution at ordinary temp on standing (Kehrmann, Z. anorg 1894, 7. 414.)

Cesium phosphomolybdate, $3\text{Cs}_2\text{O}$, P_2O_5 , $6\text{MoO}_3 + 8\text{H}_2\text{O}$

Ppt. (Ephraim, Z. anorg. 1910, 65. 240.)
 $2\text{Cs}_2\text{O}$, P_2O_5 , $14\text{MoO}_3 + 3\text{H}_2\text{O}$. Difficulty sol. in H_2O . (Ephraim.)
 $3\text{Cs}_2\text{O}$, P_2O_5 , $21\text{MoO}_3 + 4\text{H}_2\text{O}$ (?). (Ephraim.)

Calcium potassium phosphomolybdate, 2CaO , $3\text{K}_2\text{O}$, $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 22\text{H}_2\text{O}$.

(Friedheim, Z. anorg. 1893, 4. 293)

Cobaltous phosphomolybdate, 2CoO , P_2O_5 , $4\text{MoO}_3 + x\text{H}_2\text{O}$.

(Arnfeld, Dissert. 1898.)
 3CoO , P_2O_5 , $5\text{MoO}_3 + 16\frac{1}{2}\text{H}_2\text{O}$, and $+17\frac{1}{2}\text{H}_2\text{O}$. Extremely sol. in H_2O . (Arnfeld.)
 3CoO , P_2O_5 , $18\text{MoO}_3 + 38\text{H}_2\text{O}$. Sol. in H_2O . (Arnfeld.)
 3CoO , P_2O_5 , $24\text{MoO}_3 + 58\text{H}_2\text{O}$, and $+60\text{H}_2\text{O}$. Sol. in H_2O . (Arnfeld.)

Cobaltous potassium phosphomolybdate,
 K_2O , 2CoO , P_2O_5 , $5\text{MoO}_3 + 15\text{H}_2\text{O}$.

(Arnfeld.)
 $4\text{K}_2\text{O}$, CoO , $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 12\text{H}_2\text{O}$. Sl sol. in cold, easily sol. in hot H_2O . (Arnfeld.)

Croceocobaltic phosphomolybdate, 24MoO_3 , P_2O_5 , $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{O}$, $2\text{H}_2\text{O} + 21\text{H}_2\text{O}$

Sl sol. in cold, easily in hot H_2O (Gibbs, Am. Ch. J. 3. 317.)

Gold phosphomolybdate ammonia, $12\text{Au}_2\text{O}_3$, $7\text{P}_2\text{O}_5$, 3MoO_3 , $24\text{NH}_3 + 21\text{H}_2\text{O}$.

Insol. in H_2O . (Gibbs, Am. Ch. J. 1895, 17. 172)

Gold sodium phosphomolybdate ammonia,
 $5\text{Au}_2\text{O}_3$, Na_2O , P_2O_5 , 11MoO_3 , $15\text{NH}_3 + 10\text{H}_2\text{O}$.

Sol in dil HCl Almost insol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Gibbs)

Lead phosphomolybdate, 23PbMoO_4 , P_2O_5 , $2\text{PbPO}_4 + 7\text{H}_2\text{O}$.

Sol. in 500,000 pts. H_2O Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in KOH , NaOH , or $\text{HNO}_3 + \text{Aq}$; somewhat less sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Beuf, Bull. Soc (3) 3. 852.)

Lithium phosphomolybdate, $12\text{Li}_2\text{O}$, $4\text{P}_2\text{O}_5$, $5\text{MoO}_3 + 18\text{H}_2\text{O}$.

Partially sol. in H_2O . (Ephraim, Z. anorg. 1909, 64. 233.)

$3\text{Li}_2\text{O}$, P_2O_5 , $5\text{MoO}_3 + 16\text{H}_2\text{O}$. Ppt. (Ephraim, Z. anorg. 1910, 65. 233-6)

$3\text{Li}_2\text{O}$, P_2O_5 , $5\text{MoO}_3 + 17\text{H}_2\text{O}$. Ppt. (E.)
 $5\text{Li}_2\text{O}$, $2\text{P}_2\text{O}_5$, $8\text{MoO}_3 + 28\text{H}_2\text{O}$. Easily sol. in H_2O (E.)

$3\text{Li}_2\text{O}$, P_2O_5 , $12\text{MoO}_3 + 18\text{H}_2\text{O}$. Ppt. (E.)
 $3\text{Li}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + 27\text{H}_2\text{O}$. Sol. in H_2O . (E.)

Manganous phosphomolybdate, 3MnO , P_2O_5 , $5\text{MoO}_3 + 20\text{H}_2\text{O}$.

Very sol. in H_2O . Sl. sol. in alcohol. (Arnfeld.)

3MnO , P_2O_5 , $18\text{MoO}_3 + 38\text{H}_2\text{O}$ Sol. in H_2O . (Arnfeld.)

3MnO , P_2O_5 , $24\text{MoO}_3 + 58\text{H}_2\text{O}$, and $+60\text{H}_2\text{O}$. Easily sol. in H_2O (Arnfeld.)

Manganous potassium phosphomolybdate,
 2MnO , $3\text{K}_2\text{O}$, $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 30\text{H}_2\text{O}$.

Sol. in hot H_2O . (Arnfeld.)

Manganous sodium phosphomolybdate,
 7MnO , $9\text{Na}_2\text{O}$, $2\text{P}_2\text{O}_5$, $22\text{MoO}_3 + 57\text{H}_2\text{O}$.

Nearly insol. in cold H_2O . Sol. in boiling H_2O but decomp. thereby. (Gibbs, Am. Ch. J. 1895, 17. 85.)

Nickel phosphomolybdate, 2NiO , P_2O_5 , $4\text{MoO}_3 + x\text{H}_2\text{O}$.

Ppt. (Arnfeld.)
 3NiO , P_2O_5 , $5\text{MoO}_3 + 20\text{H}_2\text{O}$. Decomp. by H_2O . (Arnfeld.)

3NiO , P_2O_5 , $18\text{MoO}_3 + 34\text{H}_2\text{O}$ Sol. in H_2O (Arnfeld.)

3NiO , P_2O_5 , $24\text{MoO}_3 + 58\text{H}_2\text{O}$, and $+60\text{H}_2\text{O}$ Efflorescent Sol in H_2O . (Arnfeld.)

Nickel potassium phosphomolybdate, K_2O , 2NiO , P_2O_5 , $5\text{MoO}_3 + 13\text{H}_2\text{O}$.

Decomp by cold H_2O , but goes into solution by boiling. (Arnfeld.)

$4\text{K}_2\text{O}$, NiO , $2\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 12\text{H}_2\text{O}$. Sol. in H_2O . (Arnfeld.)

Potassium phosphomolybdate, K_3PO_4 ,

$11\text{MoO}_3 + 1\frac{1}{2}\text{H}_2\text{O} = 3\text{K}_2\text{O}$, P_2O_5 , $22\text{MoO}_3 + 3\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in alkalies. (Svanberg and Struve.)

100 g. H_2O dissolve 0.007 g at 30° ; 100 g. 10% $\text{HNO}_3 + \text{Aq}$ dissolve 0.204 g. at 30° . (Donk, Bull. 90, Bur of Chem, U. S. Dept. of Agric. 1905.)

According to older authorities the formula is K_3PO_4 , $10\text{MoO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

$+6\text{H}_2\text{O}$. (Rammelsberg.)

$2\text{K}_2\text{O}$, H_2O , 24MoO_3 , $\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$. Sl. sol. in cold H_2O .

$5\text{K}_2\text{O}$, H_2O , 44MoO_3 , $2\text{P}_2\text{O}_5 + 21\text{H}_2\text{O}$ (Gibbs, Am Ch J 3. 317.)

$3\text{K}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + 11\text{H}_2\text{O}$, and $+15\text{H}_2\text{O}$ (Elias.)

$+14\text{H}_2\text{O}$ Sl sol in cold, very easily sol. in hot H_2O . Can be cryst from hot H_2O . (Kehrmann, Z. anorg. 1894, 7. 416.)

$3\text{K}_2\text{O}$, P_2O_5 , $17\text{MoO}_3 + 12\text{H}_2\text{O}$ Moderately sol in H_2O . (Ehas, Dissert. 1906.)

$5\text{K}_2\text{O}$, P_2O_5 , $17\text{MoO}_3 + x\text{H}_2\text{O}$ Aqueous solution decomp. rapidly in the cold. (Kehrmann, Z. anorg. 1894, 7. 423.)

$4\text{K}_2\text{O}$, $2\text{H}_2\text{O}$, 9MoO_3 , $\text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$. (Zenkner.)

$5\text{K}_2\text{O}$, H_2O , 10MoO_3 , $\text{P}_2\text{O}_5 + 19\text{H}_2\text{O}$. Easily sol. in H_2O (Rammelsberg, B. 10. 1776.)

$6\text{K}_2\text{O}$, 15MoO_3 , P_2O_5 . Insol. in H_2O . Sol in $\text{KOH} + \text{Aq}$. (Rammelsberg.)

K_2O , P_2O_5 , $2\text{MoO}_3 + 13\text{H}_2\text{O}$. Very sol. in H_2O (Friedheim, Z anorg. 4. 287.)

$2\text{K}_2\text{O}$, P_2O_5 , $4\text{MoO}_3 + 8\text{H}_2\text{O}$. Sol. in H_2O . (Friedheim.)

Potassium diphosphopentamolybdate, $3\text{K}_2\text{O}$, P_2O_5 , $5\text{MoO}_3 + 7\text{H}_2\text{O}$

Sol. in H_2O ; precipitated by HNO_3 or $\text{HCl} + \text{Aq}$. (Zenkner, J. pr 58. 261.)

$2\text{K}_2\text{O}$, P_2O_5 , $5\text{MoO}_3 + 6\text{H}_2\text{O}$ (Friedheim.)

Potassium diphosphopentamolybdate nitrate, $2\text{K}_3\text{PO}_4$, 5MoO_3 , $6\text{KNO}_3 + 9\text{H}_2\text{O}$.

(Debray, C. R. 66. 706.)

Rubidium phosphomolybdates:

$7\text{Rb}_2\text{O}$, P_2O_5 , $22\text{MoO}_3 + 12\text{H}_2\text{O}$; $3\text{Rb}_2\text{O}$, P_2O_5 , $20\text{MoO}_3 + 12\text{H}_2\text{O}$; $6\text{Rb}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + 10\text{H}_2\text{O}$; $5\text{Rb}_2\text{O}$, $2\text{P}_2\text{O}_5$, $9\text{MoO}_3 + 13\text{H}_2\text{O}$; $7\text{Rb}_2\text{O}$, $3\text{P}_2\text{O}_5$, $10\text{MoO}_3 + 15\text{H}_2\text{O}$. (Ephraim, Z. anorg. 1910, 65. 237-9.)

Silver phosphomolybdate, $7\text{Ag}_2\text{O}$, P_2O_5 , $20\text{MoO}_3 + 24\text{H}_2\text{O}$

Ppt Sol in dil. $\text{HNO}_3 + \text{Aq}$, forming—

$2\text{Ag}_2\text{O}$, P_2O_5 , $20\text{MoO}_3 + 7\text{H}_2\text{O}$. Sl. sol. in H_2O (Rammelsberg.)

Formula of first salt is—

$7\text{Ag}_2\text{O}$, 22MoO_3 , $\text{P}_2\text{O}_5 + 14\text{H}_2\text{O}$. Sol in hot H_2O , but solution is quickly decomp. (Gibbs, Am. Ch. J. 3. 317.)

$7\text{Ag}_2\text{O}$, P_2O_5 , 24MoO_3 Ppt. (Miolati, J. pr. 1908 (2) 77. 451.)

Silver diphosphopentamolybdate,

$\text{Ag}_5\text{Mo}_3\text{P}_2\text{O}_{23} + 7\text{H}_2\text{O}$.

Easily sol. in H_2O . (Debray, C. R. 66. 705.)

Sodium phosphomolybdate.

Sol. in H_2O and $\text{HNO}_3 + \text{Aq}$. (Sonnenschein, A. 104. 45.)

Na_2O , $5\text{H}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + x\text{H}_2\text{O}$.

$2\text{Na}_2\text{O}$, $4\text{H}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + x\text{H}_2\text{O}$.

$3\text{Na}_2\text{O}$, P_2O_5 , $18\text{MoO}_3 + 26\text{H}_2\text{O}$. (Friedheim.)

$3\text{Na}_2\text{O}$, P_2O_5 , $24\text{MoO}_3 + 42\text{H}_2\text{O}$. (Rosenheim and Pinsker, Z. anorg. 1911, 70. 79.)

Sodium diphosphopentamolybdate, $3\text{Na}_2\text{O}$, P_2O_5 , $5\text{MoO}_3 + 14\text{H}_2\text{O}$.

Easily sol. in H_2O . (Debray.)

Sodium auramine phosphomolybdate, Na_2O , $5\text{Au}_2\text{O}_3$, $2\text{P}_2\text{O}_5$, 11MoO_3 , 15NH_3 .

Sol. in hot H_2O . Very sol in hot HCl . (Gibbs, Am. Ch J. 1895, 17. 171.)

Metaphosphomolybdic acid.

Ammonium monometaphosphomolybdate, $3(\text{NH}_4)_2\text{O}$, $4\text{NH}_4\text{PO}_3$, $10\text{MoO}_3 + 9\text{H}_2\text{O}$.

Very sol in H_2O . (Gibbs, Am Ch. J. 7. 392.)

Barium hexametaphosphomolybdate, BaO , $\text{Ba}_3(\text{PO}_3)_6$, $14\text{MoO}_3 + 55\text{H}_2\text{O}$.

Sol. in H_2O . (Gibbs.)

Pyrophosphonitrylic acid, $\text{P}_2\text{HNO}_4 =$

$\text{P}_2\text{O}_3\text{N}$.

Not known in free state

Ammonium pyrophosphonitrylate,

$\text{P}_2\text{O}_3\text{N}$.

Insol but gradually decomp. by H_2O . (Gladstone.)

Potassium —, KP_2NO_4 .

Insol. in H_2O (Gladstone.)

Silver —, AgP_2NO_4 .

Ppt.

Triphosphonitrilic chloramide,

Sol. in H_2O without decomp; sol in ether, alcohol; sl. sol. in benzene (Stokes, Am Ch J. 1895, 17. 287.)

Triphosphonitrilic tetrachlorhydrin,

Sol. in ether, alcohol, and H_2O ; insol. in benzene and CS_2 . (Stokes, Am Ch J 1895, 17. 286)

Triphosphonitrilic chloride, $P_3N_3Cl_6$

Sol. in glacial acetic acid and H_2SO_4 100 pts ether dissolve 46.5 pts at 20° . (Liebig.)

Insol. in light petroleum; sol in benzene (Stokes, Am. Ch. J. 1897, 19. 783.)

Tetraphosphonitrilic chloride, $P_4N_4Cl_8$

Sol. in alcohol, ether, benzene, H_2SO_4 Sl sol. in H_2O with decomp. 100 pts. ether dissolve 12.3 pts. at 20° . (Stokes, Am Ch. J. 1895, 17. 281.)

Pentaphosphonitrilic chloride, $(PNCl_2)_5 = P_5N_5Cl_{10}$

Sol. in benzene, light petroleum, acetic acid, ether, CS_2 ; insol in H_2O . (Stokes, Am. Ch. J. 1897, 19. 790)

Hexaphosphonitrilic chloride, $(PNCl_2)_6 = P_6N_6Cl_{12}$

Sol. in benzene, light petroleum, ether, CS_2 , insol. in H_2O . (Stokes.)

Heptaphosphonitrilic chloride, $(PNCl_2)_7 = P_7N_7Cl_{14}$

Sol. in benzene, light petroleum, ether, CS_2 ; insol in H_2O ; sol. in alcohol with decomp (Stokes.)

Polyphosphonitrilic chloride, $(PNCl_2)_x$

Depolymerizes on distillation; insol. in benzene and light petroleum and all neutral solvents; sol. in H_2O with decomp. (Stokes.)

Phosphonitrilochloramide, $P_2N_2Cl_3(NH_2)$

Slowly sol. in H_2O with decomp. Insol. in ether and CS_2 . Sl. sol. in boiling CCl_4 . (Besson and Rosset, C. R. 1903, 146. 1149.)

Phosphonium bromide, PH_4Br

Decomp. violently by H_2O .

Phosphonium chloride, PH_4Cl

(Ogier, Bull. Soc. (2) 32. 483.)

Phosphonium titanium chloride, $2PH_4Cl, 3TiCl_4$

Decomp. by H_2O , HCl , or alkalis + Aq. R ose.)

Phosphonium iodide, PH_4I

Decomp. by H_2O , alkalis, alcohol, etc. (Rose, Pogg 46. 636)

Decomp by PCl_3 (Wilde, B 16. 217)

Phosphonium sulphate (?)

Deliquescent, very unstable (Besson, C R. 109. 644)

Phosphoramidate, $P(NH_2)_3$

Insol. in NH_4Br , $3NH_3$; sol. in NH_4I , $3NH_3$. (Hugot, C. R. 1905, 141. 1235.)

Phosphortriamide, PON_3H_3

See Phosphoryl triamide.

Phosphoric acid, anhydrous, P_2O_5

See Phosphorus pentoxide.

Metaphosphoric acid, HPO_3

Sol. in H_2O . Not isolated. (Fleitmann, Pogg. 78. 362)

Deliquescent. Sol. in H_2O , but aqueous solution decomp. into H_3PO_4 , slowly in the cold, but more rapidly on heating. Conc. solutions decomp. more rapidly than when dil (Giran, A. ch. 1903, (7) 30. 203.)

Insol. in liquid CO_2 (Büchner, Z. phys. Ch. 1906, 54. 674.)

Dimetaphosphoric acid, $H_2P_2O_6$

Not isolated. (Fleitmann)

Trimetaphosphoric acid, $H_3P_3O_9$

Sol. in H_2O ; the solution is permanent in the cold, but on evaporation it is quickly decomp to H_3PO_4 .

Tetrametaphosphoric acid, $H_4P_4O_{12}$

Not isolated.

**Hexametaphosphoric acid, $H_6P_6O_{18}$
(Glacial phosphoric acid.)**

Deliquescent; easily sol. in H_2O with evolution of heat and conversion into H_3PO_4 . Not easily sol. in presence of slight impurities.

Insol. in liquid NH_3 (Gore, Am. Ch. J. 1898, 20. 828.)

Orthophosphoric acid, H_3PO_4

Very sol. in H_2O .

100 pts. of the solution contain at:

26.23°	27.02°	29.42°	29.77°

(Kohlrausch, W. Ann. 1894, 53. 29.)

Miscible with conc. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ Sol. in 30 pts. warm creosote.1 cc. of a sat. solution of ether in H_2O dissolves 0.0886 grams H_3PO_4 .

1 cc. of a sat. solution of H_2O in ether dissolves 0.000033 grams H_3PO_4 .

Solutions of H_3PO_4 in H_2O containing less than 0.434 grams acid per 1 cc. lose an insignificant amount of acid to ether when agitated therewith (Berthelot, C. R. 1896, 123. 345.)

The composition of the hydrates formed by H_3PO_4 at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by H_3PO_4 and of the conductivity and sp. gr. of $\text{H}_3\text{PO}_4 + \text{Aq.}$ (Jones, Am. Ch. J. 1905, 34. 331.)

$10\text{H}_3\text{PO}_4 + \text{H}_2\text{O}$. Solubility in H_2O .

100 pts. of the solution contain at

24.11°	24.38°	24.40°
94.78	94.80	94.84 pts. H_3PO_4 ,

24.81°	25.41°	25.85°
94.95	95.26	95.54 pts. H_3PO_4 .

(Smith and Menzies, J. Am. Chem. Soc. 1909, 31. 1186.)

$2\text{H}_3\text{PO}_4 + \text{H}_2\text{O}$. Solubility in H_2O .

100 pts. of the solution contain at.

-16.3°	0.5°	14.95°	24.03°	27.0°
76.7	78.7	81.7	85.7	87.7 pts. H_3PO_4 ,

29.15°	29.35° (mpt.)
90.5	91.6 pts. H_3PO_4 ,

28.5°	27.0°	25.41°
92.5	93.4	94.1 pts. H_3PO_4 .

Retroflex part of curve.

(Smith and Menzies, J. Am. Chem. Soc. 1909, 31. 1186.)

Pyrophosphoric acid (Diphosphoric acid),
 $\text{H}_4\text{P}_2\text{O}_7$.

Very sol. in H_2O . The solution may be kept without change, but on heating it is converted into H_3PO_4 .

The acid in solution gradually changes to H_3PO_4 ; the conversion being more rapid with more concentrated solutions. (Montemartini and Egidi, Gazz. ch. it. 1902, 32. (1) 381.)

Phosphoric acid, $\text{H}_3\text{P}_2\text{O}_6$ (?)

Sol. in H_2O . (Joly, C. R. 100. 447.)

Phosphates.

The phosphates of NH_4 , K , Na , Li , Cs , and Rb are sol. in H_2O , with the exception of certain metaphosphates; the other phosphates excepting neutral Ti salts, are nearly insol. in H_2O , excepting when an excess of H_3PO_4 is present. The latter are all sol. in $\text{HNO}_3 + \text{Aq}$.

(a) **Metaphosphates.**

Monometaphosphates. Only alkali monometaphosphates are known, and they are all insol. in H_2O .

Dimetaphosphates. Alkali dimetaphosphates and some double salts containing an alkali as one of the bases are sol. in H_2O , the rest are sl. sol. or insol. in H_2O .

Trimetaphosphates. All salts are sol. in H_2O .

Tetrametaphosphates. The alkali salts are sol. in H_2O , the others are insol.

Hexametaphosphates. The alkali salts are sol., the others insol., in H_2O , but are mostly sol. in Na hexametaphosphate + Aq .

(b) **Orthophosphates.** K , Na , Li , Cs , and Rb orthophosphates are sol. in H_2O . All the others are insol. in H_2O , but sol. in excess of H_3PO_4 , and $\text{HNO}_3 + \text{Aq}$; less easily sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Pb , Al , and Fe_2 phosphates are insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sl. sol. in NH_4 salts + Aq , especially $\text{NH}_4\text{Cl} + \text{Aq}$, from which solution they are pptd. by $\text{NH}_4\text{OH} + \text{Aq}$. Orthophosphates insol. in H_2O are also insol. in an excess of alkali orthophosphates + Aq .

All orthophosphates are insol., or very sl. sol. in alcohol.

(c) **Pyrophosphates.** Alkali pyrophosphates are sol. in H_2O ; the others are insol. in H_2O , but are mostly sol. in an excess of Na pyrophosphate + Aq .

Aluminum metaphosphate, $\text{Al}_2(\text{PO}_3)_6$.

Insol. in H_2O and conc. acids. (Maddrell, A. 61. 59.)

Aluminum orthophosphate, basic, $3\text{Al}_2\text{O}_3 \cdot \text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$.

Min. *Evansite*.

$4\text{Al}_2\text{O}_3 \cdot 3\text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$. Ppt. Insol. in H_2O . (Rammelsberg.)

$2\text{Al}_2\text{O}_3 \cdot \text{P}_2\text{O}_5$.

+ $3\text{H}_2\text{O}$. Min. *Angelite*.

+ $5\text{H}_2\text{O}$. Min. *Kalate* (Turquoise). Sol. in $\text{HCl} + \text{Aq}$.

+ $6\text{H}_2\text{O}$. Decomp. by H_2O . (Hautefeuille, J. pr. (2) 87. 111.)

Min. *Peganite*. More or less sol. in HCl , and $\text{HNO}_3 + \text{Aq}$.

+ $8\text{H}_2\text{O}$. Ppt. (Munroe, A. 159. 278.)

Min. *Fischerite*. Sl. attacked by HCl or $\text{HNO}_3 + \text{Aq}$; sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$.

$3\text{Al}_2\text{O}_3 \cdot 2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$, or $12\text{H}_2\text{O}$. Sol. in acids, even after ignition. (Millot, C. R. 82. 89.)

+ $10\text{H}_2\text{O}$. Min. *Cæruleolactite*. Sol. in acids.

+ $12\text{H}_2\text{O}$. Min. *Wavellite*.

Aluminum orthophosphate, $\text{Al}_2(\text{PO}_4)_3$.

Crystalline Not attacked by conc. HCl or $\text{HNO}_3 + \text{Aq}$, difficultly by hot conc. H_2SO_4 . (de Schulten, C. R. 98. 1583.)

Ignited $\text{Al}_2(\text{PO}_4)_3$ is sl. decomp. by H_2O , so that solubility determinations are variable. For an extended discussion, see original paper (Cameron and Hurst, 1904, 26. 898.)

+4H₂O. Easily sol. in mineral acids, insol. in acetic and other organic acids. Easily sol. in KOH+Aq, but is reprecipitated by NH₄Cl+Aq. Sol. in NH₄OH+Aq. Sol. in a large amount of alum+Aq (Rose), in aluminum acetate and other aluminum salts +Aq (Fleischer, Z anal. 6. 28) More sol. than ferric phosphate in ammonium oxalate or citrate+Aq (Millot)

Acid NH₄ citrate+Aq dissolves 3% of the P₂O₅; neutral NH₄ citrate+Aq dissolves 6.6% of the P₂O₅; ammoniacal NH₄ citrate+Aq dissolves completely in 25 min (Erlenmeyer, B. 14. 1869)

Sol. in NH₄OH+Aq, especially in presence of alkali phosphates (de Koninck, Z. anal. 23. 90.)

Not pptd. in presence of alkali tartrates or citrates, sugar, glycerine, etc

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Min. *Variscite*. Very quickly sol. in warm conc HCl+Aq.

+5H₂O Min. *Zepharovitchite*.

+8H₂O Min. *Gibbsite*.

Aluminum orthophosphate, acid, 2Al₂O₃, 3P₂O₅+16H₂O.

Insol. in acids after being ignited (Millot, Bull. Soc. (2) 22. 244.)

+4H₂O, and 6H₂O. Insol. in H₂O or alcohol. (Hautefeuille and Margottet, J pr (2) 37. 111.)

Al₂O₃, 2P₂O₅+8H₂O. Insol. in acids or aqua regia after being ignited (Millot.)

2Al₂O₃, 5P₂O₅+14H₂O. Decomp. by cold H₂O into—

4Al₂O₃, 7P₂O₅+9H₂O. Decomp. by hot H₂O. (Erlenmeyer, A. 194. 200)

Al₂O₃, 3P₂O₅+3H₂O=Al₂(H₂PO₄)₃. Deliquescent; completely sol. in a little cold H₂O, and conc. solution can be boiled without decomp, but dil. solution (1:20) separates Al₂(PO₄)₃ on boiling, which redissolves on cooling, the more quickly the more dilute the original solution. (Erlenmeyer, A. 194. 198.)

Aluminum pyrophosphate, Al₄(P₂O₇)₃+10H₂O.

Precipitate. Sol. in mineral acids, and Na₂P₂O₇+Aq; insol. in acetic acid. Sol. in KOH+Aq; sol. in NH₄OH+Aq, but when dissolved in HCl+Aq is reprecipitated by NH₄OH+Aq, and is not redissolved in an excess thereof. (Schwarzenberg, A. 65. 147.)

Sol. in alum+Aq. (Rose, Pogg. 76. 19.)

Aluminum pyrometaphosphate, Al₂O₃, 2P₂O₅.

(Hautefeuille and Margottet, C. R. 96. 849.)

Aluminum ammonium dihydrogen orthophosphate, NH₄H₂PO₄, AlPO₄.

Partially decomp. by H₂O. Sol. in acids and alkalies. Nearly insol. in 50% acetic acid. (Cohen, J. Am. Chem. Soc. 1907, 29. 720.)

Aluminum calcium phosphate, Al₂O₃, 3CaO, P₂O₅+3H₂O.

Min. *Tavistockite*.

2Al₂O₃, 6CaO, 3P₂O₅+3H₂O. Min. *Kivro-lite*.

Aluminum calcium phosphate sulphate, 3Al₂O₃, SO₃, Ca₃(PO₄)₂+6H₂O.

Min. *Svanbergite*. Scarcely attacked by HCl+Aq, and only sl. by H₂SO₄+Aq.

Aluminum ferrous magnesium phosphate, (Mg, Fe)₂Al₂P₂O₁₀+4H₂O.

Min. *Childrenite*. Slowly sol. in HCl+Aq.

Min. *Eosphorite*. Sol. in HNO₃ or HCl+Aq.

(Mg, Fe)Al₂P₂O₉+H₂O. Min. *Lazulite*. Only sl. attacked by acids, when not previously ignited.

Aluminum lithium phosphate, Al₂(PO₄)₂, 4Li₂PO₄+30H₂O.

Precipitate. (Berzelus)

Insol. in H₂O; easily sol. in acids.

Aluminum magnesium phosphate.

Min. *Lazulite*.

See Phosphate, aluminum ferrous magnesium.

Aluminum potassium phosphate, Al₂O₃, K₂O, 2P₂O₅.

Insol. in acids. (Ouvrard, A. ch. (6) 16. 289.)

2Al₂O₃, 2K₂O, 3P₂O₅. (Ouvrard.)

Aluminum silver metaphosphate, 2Al₂O₃, Ag₂O, 4P₂O₅.

(Hautefeuille and Margottet, C. R. 96. 849, 1142)

Aluminum sodium pyrophosphate,

Al₂Na₂(P₂O₇)₂.

Insol. in H₂O and acids. (Wallroth.)

Nearly insol. in acids. (Ouvrard, A. ch. (6) 16. 338.)

2Al₂O₃, 3Na₂O, 3P₂O₅. Sol. in HNO₃+Aq. (Ouvrard.)

Al₄(P₂O₇)₃, 2Na₂P₂O₇+30H₂O.

Very difficultly sol. in H₂O. (Pahl, Bull. Soc. (2) 22. 122)

Aluminum phosphate lithium fluoride,

2Al₂(PO₄)₃, 3LiF.

Min. *Amblygonite*. Sl. attacked by HCl+Aq, more easily by H₂SO₄+Aq.

Ammonium metaphosphate, NH₄PO₃.

Insol. in H₂O. (Fleitmann, Pogg. 78. 345.)

Ammonium dimetaphosphate, (NH₄)₂(PO₃)₂.

Sol. in 1.15 pts. cold or hot H₂O. (Fleitmann, Pogg. 78. 245) More sol. in dil. alcohol than Na or K salt.

Sol in 0.9 pts H_2O ; easily sol. in acids especially by boiling with conc. H_2SO_4 (Glatzel, Dissert. 1880.)

Ammonium trimetaphosphate, $(\text{NH}_4)_3\text{P}_3\text{O}_9$.

Very sol in H_2O (Lindbom, Acta Lund. 1873. 15)

Ammonium tetrametaphosphate,

$(\text{NH}_4)_4\text{P}_4\text{O}_{12}$.

Sol. in H_2O . (Warschauer, Z. anorg. 1903, 36. 177.)

+4 H_2O . Much more sol. in H_2O than the K or Na salt. 1 pt. is sol in 8 pts. H_2O (Glatzel, Dissert. 1880.)

Ammonium pentametaphosphate,

$(\text{NH}_4)_5\text{P}_5\text{O}_{15}$.

Sol. in H_2O . (Tammann, J. pr. 1892, (2) 45. 455.)

Ammonium dekametaphosphate,

$(\text{NH}_4)_{10}\text{P}_{10}\text{O}_{30}$.

Very sl. sol. in H_2O ; 100 g. H_2O dissolved 1.20-1.54 g. in 2 months Easily sol. in hot H_2O with decomp. (Tammann, J. pr. 1892, (2) 45. 448.)

+12 H_2O . (Tammann, J. pr. 1892, (2) 45. 465.)

Ammonium orthophosphate, $(\text{NH}_4)_3\text{PO}_4 + 3\text{H}_2\text{O}$.

Difficultly sol. in H_2O .

Less sol in H_2O than $(\text{NH}_4)_2\text{HPO}_4$. (Berzelius)

Insol. in alkalis + Aq. (Berzelius.)

Sl. sol. in H_2O . Decomp in the air. (Schottlander, Z. anorg. 1894, 7. 344.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25°.

In 1000 g of the solution, mols

NH_4	PO_4
7.42	0.084
5.02	0.20
2.95	0.46
3.04	1.02
3.32	1.32
4.78	2.32

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 105.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)
+5 H_2O . (Sestini, Gazz. ch. it. 9. 298.)

Ammonium hydrogen orthophosphate, $(\text{NH}_4)_2\text{HPO}_4$.

Easily sol. in H_2O . Effloresces to form $\text{NH}_4\text{H}_2\text{PO}_4$. (Schiff, A. 112. 88.)

Sol in 4 pts. cold, and less hot H_2O . Solution loses NH_3 by boiling. Insol. in alcohol.

100 g. H_2O dissolve 131 g. at 15°; sp. gr. of sat. solution = 1.343. (Greenish and Smith, Pharm. J. 1901, 66. 774.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25°.

In 1000 g of the solution, mols

NH_4	PO_4
6.42	3.23
6.46	3.74
6.56	4.01
6.78	4.34
7.26	4.83
7.16	4.82

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 105.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Ammonium dihydrogen orthophosphate, $\text{NH}_4\text{H}_2\text{PO}_4$.

Does not effloresce

Less easily sol. in H_2O than $(\text{NH}_4)_2\text{HPO}_4$. (Mitscherlich, A. ch. 19. 385.)

Sol. in 5 pts. cold, and less hot H_2O .

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25°.

In 1000 g of the solution, mols.

NH_4	PO_4
6.72	4.54
5.62	3.88
4.62	3.36
2.72	2.59
2.50	2.54
2.58	4.29
2.76	6.21
3.06	7.70
3.10	7.86

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 106.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Ammonium orthophosphate, acid.

Decomp. into $\text{NH}_4\text{H}_2\text{PO}_4$ at 77-78°. (Parravano and Mieli, Gazz. ch. it. 1908, 38, II. 536.)

Ammonium pyrophosphate, $(\text{NH}_4)_4\text{P}_2\text{O}_7$.

Easily sol. in H_2O . Alcohol precipitates it from the aqueous solution. (Schwarzenberg, A. 65. 141.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Ammonium hydrogen pyrophosphate $(\text{NH}_4)_2\text{H}_2\text{P}_2\text{O}_7$.

Very sol. in H_2O . Insol. in alcohol. (Schwarzenberg, A. 65. 141.)

Ammonium barium trimetaphosphate,
 $(\text{NH}_4)_2\text{BaP}_3\text{O}_9 + \text{H}_2\text{O}.$

Easily sol. in H_2O . (Lindbom.)

Ammonium cadmium dimetaphosphate,
 $(\text{NH}_4)_2\text{O}, \text{CdO}, 2\text{P}_2\text{O}_5 + 3\text{H}_2\text{O} =$
 $(\text{NH}_4)_2\text{Cd}(\text{P}_2\text{O}_6)_2.$

Efflorescent. (Fleitmann, Pogg. 78. 347.)

Ammonium cadmium orthophosphate,
 $\text{NH}_4\text{CdPO}_4 + 1\frac{1}{4}\text{H}_2\text{O}.$

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and acids.
 (Drewson, Gm. K. Handb. 6te Aufl. III. 74)

Ammonium calcium dimetaphosphate,
 $(\text{NH}_4)_2\text{Ca}(\text{P}_2\text{O}_6)_2 + 2\text{H}_2\text{O}.$

Very sl. sol. in H_2O . Not decomp. by acids. (Fleitmann, Pogg. 78. 344.)

Ammonium calcium phosphate, $\text{NH}_4\text{CaPO}_4 +$
 $\text{H}_2\text{O}.$

Ppt. (Herzfeld and Feuerlein, Z. anal. 20. 191.)

+ $7\text{H}_2\text{O}$. Not completely decomp. by cold H_2O in $\frac{3}{4}$ hour, rapidly by hot H_2O . (Lasne, Bull. Soc. 1902, (3) 27. 131)

Ammonium chromium orthophosphate, basic,
 $5(\text{NH}_4)_2\text{H}_2\text{PO}_4, 2\text{CrPO}_4, 4\text{Cr}(\text{OH})_3.$

(Cohen, J. Am. Chem. Soc. 1907, 29. 1196.)
 $(\text{NH}_4)_2\text{HPO}_4, 2\text{CrPO}_4 + 3\text{H}_2\text{O}$. Ppt. (Cohen.)

Ammonium chromic pyrophosphate,
 $\text{NH}_4(\text{CrP}_2\text{O}_7) + 6\text{H}_2\text{O}.$

Sl. sol. in cold H_2O . Decomp. by boiling H_2O . (Rosenheim, B. 1915, 48. 586.)

Ammonium cobaltous metaphosphate.

Extremely sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$. (Persoz, J. pr. 3. 215.)

Ammonium cobaltous orthophosphate,
 $\text{NH}_4\text{CoPO}_4 + \text{H}_2\text{O}.$

Not decomp. by boiling H_2O . (Debray, J. Pharm. (3) 46. 121.)

+ $12\text{H}_2\text{O}$. Ppt. (Chancel, 1862.)
 $\text{Co}(\text{NH}_4)_2\text{H}_2(\text{PO}_4)_2 + 4\text{H}_2\text{O}$. Insol. in H_2O . (Debray.)

Ammonium copper dimetaphosphate,
 $(\text{NH}_4)_2\text{P}_2\text{O}_6, \text{CuP}_2\text{O}_6 + 2\text{H}_2\text{O}.$

Very sl. sol. in H_2O ; insol. in alcohol. (Fleitmann, Pogg. 78. 345.)

+ $4\text{H}_2\text{O}$. Efflorescent. Very sl. sol. in H_2O ; insol. in alcohol. (F.)

Sol. in 50 pts. H_2O . Slowly attacked by acids. Only boiling H_2SO_4 attacks easily. (Glatzel, Dissert. 1880.)

Ammonium glucinum orthophosphate,
 $\text{NH}_4\text{GIPO}_4.$

Insol. in cold, sl. sol. in hot H_2O . (Rössler, Z. anal. 17. 148.)

Ammonium glucinum sodium orthophosphate,
 $(\text{NH}_4)_2\text{GIna}_2(\text{PO}_4)_2 + 7\text{H}_2\text{O}.$

(Scheffer, A. 109. 146.)

Ammonium iron (ferrous) orthophosphate,
 $\text{NH}_4\text{FePO}_4 + \text{H}_2\text{O}.$

Insol. even in boiling H_2O . When still moist, easily sol. in dil. acids, but sparingly and slowly sol. after drying, even in conc. acids. Decomp. by NH_4OH , KOH , and $\text{NaOH} + \text{Aq}$. Insol. in alcohol (Otto, J. pr. 2. 409.)

$(\text{NH}_4)_2\text{FeH}_2(\text{PO}_4)_2 + 4\text{H}_2\text{O}$. (Debray.)

Ammonium iron (ferric) hydrogen orthophosphate, basic, $2(\text{NH}_4)_2\text{HPO}_4, 3\text{FePO}_4,$
 $3\text{Fe}(\text{OH})_3$

Ppt. Insol. in 95% alcohol. (Cohen, J. Am. Chem. Soc. 1907, 29. 719)

Ammonium iron (ferric) hydrogen orthophosphate, $\text{NH}_4\text{H}_2\text{Fe}(\text{PO}_4)_2.$

Ppt. Same properties as Na salt. (Weinland, Z. anorg. 1913, 84. 356.)

Partially hydrolyzed by H_2O . Readily sol. in HCl , HNO_3 , H_2SO_4 and H_3PO_4 . Partially hydrolyzed by cold $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in excess of hot $\text{NH}_4\text{OH} + \text{Aq}$. Completely hydrolyzed by caustic alkalies. Practically insol. in 50% acetic acid. (Cohen, J. Am. Chem. Soc. 1907, 29. 718.)

Ammonium lead dimetaphosphate,
 $(\text{NH}_4)_2\text{Pb}(\text{P}_2\text{O}_6)_2$

Very difficultly sol. in H_2O and acids. (Fleitmann, Pogg. 78. 343.)

Ammonium lithium metaphosphate, $\text{Li}_2\text{O},$
 $2(\text{NH}_4)_2\text{O}, 3\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}.$

Not appreciably sol. in cold H_2O but rapidly and abundantly sol. in H_2O at 70° . (Tammann, J. pr. 1892, (2) 45. 442.)

Ammonium lithium phosphate, $(\text{NH}_4)_2\text{LiPO}_4.$

Sl. sol. in H_2O . (Berzelius.)

Ammonium magnesium metaphosphate,
 $(\text{NH}_4)_2\text{O}, 2\text{MgO}, 2\text{P}_2\text{O}_5 + 9\text{H}_2\text{O} (?)$.

Sol. with difficulty in H_2O or acids when heated. Easily sol. in H_2O before heating. (Wach, Schw. J. 59. 29.)

Precipitated from aqueous solution by alcohol.

Ammonium magnesium dimetaphosphate,
 $(\text{NH}_4)_2\text{Mg}(\text{P}_2\text{O}_6)_2 + 6\text{H}_2\text{O}.$

Efflorescent. (Fleitmann, Pogg. 78. 346.)

Ammonium magnesium phosphate,
 NH_4MgPO_4 , and $+6\text{H}_2\text{O}.$

1 l. H_2O dissolves 66 mg. anhydrous NH_4MgPO_4 at 15° . (Fresenius, A. 55. 109.)

1 l. H_2O dissolves 74.1 mg. anhydrous NH_4MgPO_4 at $20.5-22.5^\circ$. (Ebermayer.)

1 l. H_2O dissolves 106 mg. anhydrous NH_4MgPO_4 . (Liebig)

Insol in H_2O , but when boiled with H_2O it loses NH_3 and H_2O . (Struve, Z. anal. 1898, 37. 485.)

Solubility of $\text{NH}_4\text{MgPO}_4 \cdot 6\text{H}_2\text{O}$ in H_2O at t° .

t°	G salt in 100 g H_2O
0	0.0231
20	0.0516
40	0.0359
50	0.0303
60	0.0401
70	0.0163
80	0.0195

(Wenger, Dissert. Geneva, 1911.)

Aqueous solution is precipitated by NH_4OH , but not by $\text{Na}_2\text{HPO}_4 + \text{Aq}$. (Fresenius.)

Sol in 44,600 pts. H_2O containing ammonia. More sol. in H_2O containing NH_4Cl , and is sol in 7548 pts. of a solution containing 1 pt. NH_4Cl to 5 pts. H_2O and ammonia, and in 15,627 pts. of a solution containing 1 pt. of NH_4Cl to 7 pts. H_2O and ammonia. (Fresenius.)

According to Kremers (J. pr. 55. 190), a solution of 3 pts. H_2O to 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.96 sp. gr. is best suited for washing the precipitated NH_4MgPO_4 .

According to Ebermayer (J. pr. 60. 41), 1 pt. anhydrous salt is sol. in 13,497 pts. H_2O at 23° ; in 31,098 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (4 pts. H_2O : 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.961 sp. gr.) at 21.25° ; in 36,764 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (3 pts. H_2O : 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$) at 20.6° ; in 43,089 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 pt. H_2O : 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$) at 22.5° ; in 45,206 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 pt. H_2O : 2 pts. $\text{NH}_4\text{OH} + \text{Aq}$) at 22.5° ; in 52,412 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (1 pt. H_2O : 3 pts. $\text{NH}_4\text{OH} + \text{Aq}$) at 22.5° ; in 60,883 pts. pure $\text{NH}_4\text{OH} + \text{Aq}$ (sp. gr. 0.961) at 22.5° .

Almost absolutely insol. in H_2O containing $\frac{1}{4}$ vol. $\text{NH}_4\text{OH} + \text{Aq}$ (sp. gr. 0.96) and NH_4Cl , i. e., much more insol. than given by Fresenius. (Kubel, Z. anal. 8. 125.)

According to Kissel (Z. anal. 8. 173), 1 l. $\text{NH}_4\text{OH} + \text{Aq}$ (3 pts. H_2O : 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.96 sp. gr.) dissolves 4.98 mg. in 24 hours, while 13.9 mg. are dissolved if 18 g. NH_4Cl to a litre of H_2O are also present.

$(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ containing 2.2 g. per litre dissolves 71.7 mg.; 3.0 g., 113 mg.; 10 g., 147 mg.; $\text{NaCl} + \text{Aq}$ containing 2 g. NaCl per l. dissolves 123.4 mg.; $\text{NaNO}_3 + \text{Aq}$ containing 3 g. NaNO_3 per l. dissolves 93.1 mg. (Liebig, A. 106. 196.)

Completely insol. in water containing ammonium phosphate or ammonium sodium phosphate (Berzelius.)

800 ccm. H_2O , sat. with CO_2 , dissolve 1.425 g. (Liebig.)

Easily sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$, acetic and other

acids, also in boiling solution of ammonium citrate (Millot, Bull. Soc (2) 18. 20)

When in presence of Fe or Al salts it is sol. to a considerable extent in $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$.

6 g. NH_4Cl in 100 ccm H_2O containing 10 ccm 6.34% $\text{NH}_4\text{OH} + \text{Aq}$ dissolve pptd. salt = 0.0029 g. $\text{Mg}_2\text{P}_2\text{O}_7$. 1 g. $(\text{NH}_4)_2\text{C}_2\text{O}_4$ in 100 ccm H_2O , and $\text{NH}_4\text{OH} + \text{Aq}$ dissolve = 0.0061 g. $\text{Mg}_2\text{P}_2\text{O}_7$. 2 g. citric acid in excess of $\text{NH}_4\text{OH} + \text{Aq}$ dissolve = 0.0147 g. $\text{Mg}_2\text{P}_2\text{O}_7$. Solubility prevented by excess of magnesia mixture. (Lindo, C N. 48. 217.)

Solubility of $\text{NH}_4\text{MgPO}_4 \cdot 6\text{H}_2\text{O}$ in salts + Aq at t° .

(G. salt dissolved in 100 g. solvent.)

t°	5% $\text{NH}_4\text{NO}_3 + \text{Aq}$	5% $\text{NH}_4\text{Cl} + \text{Aq}$	1 pt. NH_4OH (D = 0.96) + 4 pts. H_2O

t°	4% $\text{NH}_4\text{OH} + \text{Aq}$ and 5% $\text{NH}_4\text{Cl} + \text{Aq}$	4% $\text{NH}_4\text{OH} + \text{Aq}$ and 10% $\text{NH}_4\text{Cl} + \text{Aq}$
20	0.0165	0.0541
60	0.0274	0.0731

(Wenger, Dissert. Geneva, 1911.)

About 3 times as sol. in $\text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ as in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$, but solubility is prevented by excess of MgCl_2 . (Ville, Bull. Soc. (2) 18. 316)

Sl. sol. in ammonium citrate + Aq containing 400 g. ammonium citrate in a litre. Solubility = 0.457% at ord temp. and 0.58% at 50° . (Bolis, Ch. Z. 1903, 27. 1151.)

Min. Struvite.

+ H_2O . Insol. in H_2O or citric acid + Aq. (Millot and Maquenne, Bull. Soc (2) 23. 238.)

Ammonium magnesium hydrogen orthophosphate, $(\text{NH}_4)_2\text{MgH}_2(\text{PO}_4)_2 + 3\text{H}_2\text{O}$ (?).

(Graham.)

Ammonium magnesium phosphate, 5MgO , $(\text{NH}_4)_2\text{O}$, $2\text{P}_2\text{O}_5 + 24\text{H}_2\text{O}$.

(Gawalovsky, C. C. 1885. 721.)

Ammonium magnesium sodium pyrophosphate, $(\text{NH}_4)_2\text{Mg}_2\text{Na}(\text{P}_2\text{O}_7)_4$.

Insol. in H_2O and not decomp. thereby. (Berthelot and André, A. ch. 1897, (7) 11. 186.)

Ammonium manganous dimetaphosphate,
 $(\text{NH}_4)_2\text{Mn}(\text{PO}_3)_4 + 4\text{H}_2\text{O}.$

Relatively easily attacked by acids. (Glatzel, Dissert. 1880.)
+6H₂O.

Efflorescent (Fleitmann, Pogg. 78. 346.)

Ammonium manganous orthophosphate,
 $\text{NH}_4\text{MnPO}_4 + \text{H}_2\text{O}.$

Sol. in 32,092 pts. cold, and 20,122 pts. boiling H₂O, and in 17,755 pts. NH₄Cl + Aq (1.4% NH₄Cl). (Fresenius)

+7H₂O. Insol. in H₂O below 70°; at 70° 100 g. H₂O dissolve 0.0052 g. salt; at 80°, 0.0067 (Wenger, Dissert. Geneva, 1911.)

Easily sol. in dil. acids. Decomp. by KOH + Aq, but not by NH₄OH + Aq or K₂CO₃ + Aq. Insol. in NH₄OH or NH₄ salts + Aq. (Gibbs.)

Solubility in salts + Aq at t°.

(G. in 100 g. solvent.)

t°	5% NH ₄ NO ₃ +Aq	5% NH ₄ Cl + Aq.	1 pt. NH ₄ OH D = 0.96 + 4 pts. H ₂ O.
0	0.0206	0.0020	0.0116

70	0.0281	0.0414	0.0191
80	0.0326	0.0451	0.0197

(Wenger, I. c.)

Insol. in alcohol.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Ammonium manganic pyrophosphate,
 $\text{NH}_4\text{MnP}_2\text{O}_7 + 3\text{H}_2\text{O}.$

Decomp. by cold H₂O with separation of Mn₂O₃. (Rosenheim, B. 1915, 48. 584.)

Ammonium manganous sodium pyrophosphate,
 $\text{NH}_4\text{NaMnP}_2\text{O}_7 + 3\text{H}_2\text{O}.$

Insol. in H₂O or alcohol. Easily sol. in very dil. acids. (Otto, J. pr. 2. 418.)

Formula is Na₄(NH₄)₄Mn₂(P₂O₇)₃ + 12H₂O, according to Berzelius.

Ammonium mercuric metaphosphate.

Sol. in H₂O, or at least in NH₄OH + Aq. (Persoz, J. pr. 3. 216.)

Ammonium nickel metaphosphate.

Insol. in H₂O. Sol. in NH₄OH + Aq, from which it is repptd. on evaporation of the NH₃. (Persoz, J. pr. 3. 215.)

Ammonium nickel dimetaphosphate,
 $(\text{NH}_4)_2\text{NiP}_2\text{O}_7 + 4\text{H}_2\text{O}.$

Sol. in 12.5 pts. H₂O. (Glatzel, Dissert. 1880.)

Ammonium nickel orthophosphate,
 $\text{NH}_4\text{NiPO}_4 + 2\text{H}_2\text{O}.$

Ppt. (Debray, C. R. 59. 40.)
+6H₂O. Decomp. by boiling H₂O. (Debray)

Ammonium potassium dimetaphosphate,
 $(\text{NH}_4)_3\text{K}_4(\text{P}_2\text{O}_6)_7.$

More sol. in H₂O than following salt. (Fleitmann, Pogg. 78. 341.)

NH₄K₃P₄O₁₂ + 2H₂O. Difficultly sol. in H₂O. (Fleitmann.)

Ammonium potassium pyrophosphate,
 $\text{NH}_4\text{K}_2\text{HP}_2\text{O}_7 + \frac{1}{2}\text{H}_2\text{O}.$

Deliquescent. Sol. in H₂O. Decomp. on boiling. (Schwarzenberg.)

Ammonium sodium dimetaphosphate,
 $\text{NH}_4\text{NaP}_2\text{O}_6 + \text{H}_2\text{O}.$

More sol. in H₂O than Na₂P₂O₆, but less than (NH₄)₂P₂O₆. Less sol. in alcohol than in H₂O. (Fleitmann, Pogg. 78. 340.)

Ammonium sodium orthophosphate,
 $(\text{NH}_4)_2\text{NaPO}_4 + 4\text{H}_2\text{O}.$

Decomp. by H₂O. Cryst. from NH₄OH + Aq of 0.96 sp. gr. From H₂O solution, NaNH₄HPO₄ + 4H₂O separates out. (Uelsmann, Arch. Pharm. (2) 99. 138.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+5H₂O.
NH₄Na₂PO₄ + 12H₂O. (Herzfeld, Z. anal. 20. 191.)

(NH₄)₃Na(PO₃)₂ + 6H₂O. Sol. in H₂O with decomp. Cryst. from hot conc. NH₄OH + Aq. (Uelsmann, Arch. Pharm. (2) 99. 138.)

Ammonium sodium hydrogen phosphate (Microcosmic salt),
 $\text{NH}_4\text{NaHPO}_4 + 4\text{H}_2\text{O}.$

Efflorescent. Easily sol. in H₂O. Sol. in 6 pts. cold, and 1 pt boiling H₂O. Insol. in alcohol.

Aqueous solution gives off NH₃, especially if hot.

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Min. *Stercorite*.

+5H₂O. (Uelsmann.)

The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34. 319.)

(NH₄)₂Na₂H₅(PO₄)₄ + 3H₂O. Decomp. by H₂O. (Filhol and Senderens, C. R. 93. 388.)

Ammonium sodium pyrophosphate,
 $(\text{NH}_4)_2\text{Na}_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}.$

Easily sol. in H₂O. Aqueous solution decomp. by boiling (Schwarzenberg, A. 65. 142.)

+6H₂O. (Rammelsberg)

Ammonium sodium glucinum orthophosphate,
 $(\text{NH}_4)_2\text{Na}_2\text{Gl}(\text{PO}_4)_2 + 7\text{H}_2\text{O}$.

Precipitate (Scheffer)

Ammonium thalious orthophosphate,
 $(\text{NH}_4)_3\text{PO}_4$, $(\text{NH}_4)_2\text{TiPO}_4$, or $\text{H}_2\text{NH}_4\text{PO}_4$,
 HTl_2PO_4 .

Sol. in H_2O (Lamy; Rammelsberg)

Ammonium uranyl phosphate,
 $\text{NH}_4(\text{UO}_2)\text{PO}_4 + x\text{H}_2\text{O}$.

Insol. in H_2O and $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in mineral acids, from which it is precipitated by $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$, in which it is insol (Knop.)

+ $3\text{H}_2\text{O}$. Insol. in H_2O and acetic acid. Sol. in all mineral acids, oxalic acid and $\text{M}_2\text{CO}_3 + \text{Aq}$. (Lienau, Dissert. 1898.)

Ammonium vanadium phosphate.

See Phosphovanadate, ammonium.

Ammonium zinc dimetaphosphate,
 $(\text{NH}_4)_2\text{Zn}(\text{P}_2\text{O}_6)_2 + 6\text{H}_2\text{O}$.

Efflorescent. (Fleitmann, Pogg. 78. 347)

+ $4\text{H}_2\text{O}$. Sol. in 70 pts. H_2O . Decomp. by H_2SO_4 . (Glatzel, Dissert. 1880.)

Ammonium zinc orthophosphate, basic,
 3NH_3 , 2ZnO , $\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$.

(Rother, A. 1867, 143. 356)

$4(\text{NH}_4)_2\text{O}$, 6ZnO , $3\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$. (Schweikert, A. 1868, 145. 57.)

Ammonium zinc orthophosphate, $\text{NH}_4\text{ZnPO}_4 + \text{H}_2\text{O}$.

Insol. in H_2O . Sol. in acids, and caustic alkalis. (Bette, A. 15. 129)

Ammonium zinc hydrogen phosphate,
 $\text{NH}_4\text{H}_2\text{PO}_4$, $\text{ZnHPO}_4 + \text{H}_2\text{O}$.

Insol. in H_2O (Debray.)

$4(\text{NH}_4)_2\text{O}$, 6ZnO , $3\text{P}_2\text{O}_5$. (Schweikert, A. 145. 57)

$3(\text{NH}_4)_2\text{O}$, 4ZnO , $2\text{P}_2\text{O}_5 + 13\text{H}_2\text{O}$. (Rother, A. 143. 356.)

Ammonium phosphate selenate.

See Selenophosphate, ammonium.

Barium triphosphate, 5BaO , $3\text{P}_2\text{O}_5$.

Insol. in H_2O ; insol. in acids after heating to a high temp. (Schwarz, Z. anorg. 1895, 9. 264.)

Barium metaphosphate, $\text{Ba}(\text{PO}_3)_2$.

Insol. in H_2O or dil. acids. (Maddrell, A. 61. 61.)

Not decomp. by boiling with acids or alkali carbonates + Aq . (Fleitmann, Pogg. 78. 352.)

Barium dimetaphosphate, $\text{BaP}_2\text{O}_6 + 2\text{H}_2\text{O}$.

More difficultly sol. in H_2O than $\text{Ba}_3(\text{P}_3\text{O}_{10})_2$. Slightly attacked by boiling conc. $\text{HCl} + \text{Aq}$ or $\text{HNO}_3 + \text{Aq}$. Easily decomp. by H_2SO_4 . (Fleitmann, Pogg. 78. 254.)

Barium trimetaphosphate, $\text{Ba}_3(\text{P}_3\text{O}_{10})_2 + 2\text{H}_2\text{O}$
 Somewhat sol. in H_2O (Fleitmann, A. 65. 313)

+ $6\text{H}_2\text{O}$ Easily sol. in $\text{HCl} + \text{Aq}$ (Lindbom)

1 l. H_2O dissolves 2.589 g. at ord. temp. (Wiesler, Z. anorg. 1901, 28. 198)

Barium hexametaphosphate, $\text{Ba}_3\text{P}_6\text{O}_{18}$ (?)

Sol. in H_2O only after boiling several hours. Nearly insol. in H_2O (Ludert, Z. anorg. 5. 15)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Wackenroder.)

Sol. in $\text{Na}_6\text{P}_6\text{O}_{18} + \text{Aq}$ Sol. in $\text{HNO}_3 + \text{Aq}$. After ignition it is nearly insol. in $\text{HNO}_3 + \text{Aq}$.

Barium orthophosphate, $\text{Ba}_3(\text{PO}_4)_2$.

Precipitate. Very sl. sol. or insol. in H_2O . (Graham, Pogg. 32. 49.)

Sol. in $\text{HCl} + \text{Aq}$ Decomp. by $\text{SO}_2 + \text{Aq}$. Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Barium hydrogen phosphate, BaHPO_4 .

Sol. in 10,000 pts. H_2O . (Malaguti, A. ch. (3) 51. 346.)

Sol. in 20,570 pts. H_2O at 20° . (Bischof, 1833.)

Not completely soluble in water containing CO_2 , but BaCl_2 causes no ppt. in $\text{Na}_2\text{HPO}_4 + \text{Aq}$ containing 7.16 g. or less Na_2HPO_4 in a litre after it has been saturated with CO_2 . (Setschenow, C. C. 1875. 97.)

Easily sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$, and dil. $\text{HCl} + \text{Aq}$. $\text{HNO}_3 + \text{Aq}$ of 1.275 sp. gr. if not diluted has scarcely any solvent action, but more dissolves on dilution until a maximum is reached, when 10 vols of H_2O have been added. (Bischof, Schw. J. 67. 39.)

Sol. in 367–403 pts. acetic acid (1.032 sp. gr.) at 22.5° . (Bischof, l. c.)

Easily sol. in H_2O containing NH_4Cl , NH_4NO_3 , or NH_4 succinate, from which solutions it is completely pptd. by $\text{NH}_4\text{OH} + \text{Aq}$. (Rose.)

Insol. in Na_2HPO_4 or $\text{BaCl}_2 + \text{Aq}$. (Rose, Pogg. 76. 23)

More sol. in BaCl_2 or $\text{NaCl} + \text{Aq}$ than in H_2O , 1 pt. BaHPO_4 being sol. in 4362 pts. H_2O containing 1.2% NaCl and 0.8% BaCl_2 . (Ludwig, Arch. Pharm. (2) 56. 265)

Sol. in Na citrate + Aq . (Spiller.)

Barium tetrahydrogen phosphate,
 $\text{BaH}_4(\text{PO}_4)_2$.

Sol. in H_2O . (Mitscherlich, 1821.)

Decomp. by much H_2O into BaHPO_4 . Sol. in phosphoric, and certain other acids. (Berzelius, A. ch. 2. 153.)

Barium pyrophosphate, $\text{Ba}_2\text{P}_2\text{O}_7 + x\text{H}_2\text{O}$.

Somewhat sol. in H_2O , in much $\text{H}_2\text{P}_2\text{O}_7 + \text{Aq}$, also in $\text{HCl} + \text{Aq}$ or $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ or $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Schwarzenberg.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Wackenroder.)

Barium hydrogen pyrophosphate, $\text{BaH}_2\text{P}_2\text{O}_7$,
 $\text{Ba}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$
 Ppt. (Knorre and Oppelt, B. 21. 773.)

Barium tetraphosphate, $\text{Ba}_3\text{P}_4\text{O}_{13}$.
 Insol in H_2O or acids when strongly heated.
 (Fleitmann and Henneberg, A. 65. 331.)

Barium manganic pyrophosphate,
 $\text{Ba}(\text{MnP}_2\text{O}_7)_2 + 5\text{H}_2\text{O}$.
 Almost insol. in H_2O . (Rosenheim, B. 1915, 48. 585.)

Barium potassium trimetaphosphate,
 $\text{BaKP}_3\text{O}_9 + \text{H}_2\text{O}$.
 Much less sol. in H_2O than $\text{NH}_4\text{BaP}_3\text{O}_9$ or
 NaBaP_3O_9 (Lindbom.)
 Sol. in $\text{HCl} + \text{Aq}$ after ignition.

Barium potassium orthophosphate, BaKPO_4 .
 Insol. in H_2O . (Ouvrard, A. ch. (6) 16. 297.)
 $+10\text{H}_2\text{O}$. (de Schulten, C. R. 96. 706.)

Barium sodium dimetaphosphate,
 $\text{BaNa}_2(\text{P}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$.
 (Glatzel, Dissert 1880.)

Barium sodium trimetaphosphate, BaNaP_3O_9 ,
 $+4\text{H}_2\text{O}$.
 More easily sol. in H_2O than $\text{Ba}_3(\text{P}_3\text{O}_9)_2$.
 Sol. in acids, unless ignited. (Fleitmann and
 Henneberg, A. 65. 314.)
 Efflorescent. Sol. in $\text{HCl} + \text{Aq}$ after igni-
 tion only by long boiling. When fused it is
 easily sol. in $\text{HCl} + \text{Aq}$. (Lindbom, Acta
 Lund. 1873. 21.)

Barium sodium orthophosphate, $\text{BaNaPO}_4 +$
 $10\text{H}_2\text{O}$.
 (de Schulten, C. R. 96. 706.)
 Not attacked by cold, but decomp. by hot
 H_2O . (Villiers, C. R. 104. 1103.)
 Sl. sol. in H_2O . (Quartaroli, C. A. 1911.
 2375.)

Barium sodium pyrophosphate,
 $\text{Ba}_4\text{Na}_4(\text{P}_2\text{O}_7)_3$.
 Sol. in hot HCl and HNO_3 . (Tammann,
 J. pr. 1892, (2) 45. 469.)
 $6\text{Ba}_2\text{P}_2\text{O}_7$, $\text{Na}_4\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$. Completely
 insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$, but not insol. in H_2O
 or $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in HNO_3 or HCl
 $+ \text{Aq}$. Insol. in alcohol. (Baer, Pogg. 75.
 164.)

Barium uranous metaphosphate, UO_2 , BaO ,
 P_2O_5 .
 (Colani, A. ch. 1907, (8) 12. 142.)

Barium uranyl orthophosphate,
 $\text{Ba}(\text{UO}_2)_2(\text{PO}_4)_2 + 8\text{H}_2\text{O}$.
 Min. *Uranocircute*.

Barium phosphate chloride, $3\text{Ba}_3(\text{PO}_4)_2$,
 BaCl_2 .
 Min. *Barytapahite* (Deville and Caron, A.
 ch. (3) 67. 451.)
 $4\text{BaH}_4(\text{PO}_4)_2$, BaCl_2 (Erlenmeyer, J. B.
 1857. 145.)
 15BaO , $6\text{P}_2\text{O}_5$, $\text{BaCl}_2 + 6\text{H}_2\text{O}$ (?). Sol. in
 18,000 pts. cold H_2O . Much more sol. in H_2O
 containing BaCl_2 , NH_4Cl , and NH_4OH .
 (Ludwig, Arch. Pharm. (2) 56. 271.)

Bismuth orthophosphate, basic, 2BiPO_4 ,
 $3\text{Bi}_2\text{O}_3$.
 Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$. (Cavazzi,
 Gazz. ch. it. 14. 289.)

Bismuth orthophosphate, BiPO_4 .
 Insol. in H_2O or $\text{HNO}_3 + \text{Aq}$. Sl. sol. in
 NH_4 salts $+ \text{Aq}$ (Chancel, C. R. 50. 416.)
 Not decomp. by H_2O . Other phosphates
 of Bi are decomp. by H_2O . (Montmartini,
 C. C. 1900, II. 1256.)
 Not hydrolyzed by hot H_2O ; sl. sol. in BiCl_3
 $+ \text{Aq}$; decomp. by boiling alkali. (Caven,
 J. Soc. Chem. Ind. 1897, 16. 30.)
 More sol. in $\text{HCl} + \text{Aq}$ than in $\text{HNO}_3 + \text{Aq}$.
 (Rose.)
 Sol. in $\text{UO}_3(\text{NO}_3)_2 + \text{Aq}$. (M'Curdy, Am. J.
 Sci. (2) 31. 282.)
 Insol. in $\text{MNO}_3 + \text{Aq}$.
 Insol. in Bi salts $+ \text{Aq}$. (Rose, Pogg. 76.
 26.)
 Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$, but insol. in $\text{NH}_4\text{NO}_3 +$
 Aq (Brett, 1837.)
 $+ 1\frac{1}{2}\text{H}_2\text{O}$. (Kuhn.)
 $+ 3\text{H}_2\text{O}$. Ppt. Decomp. by H_2S or KOH
 $+ \text{Aq}$. (Vanino, J. pr. 1906, (2) 74. 151.)

Bismuth pyrophosphate, basic, $2\text{Bi}_2\text{O}_3$, P_2O_5 .
 Insol. in H_2O and $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$; sol. in
 hot HCl and $\text{HNO}_3 + \text{Aq}$. Insol. in $\text{Na}_4\text{P}_2\text{O}_7$
 $+ \text{Aq}$, and NH_4 citrate $+ \text{Aq}$. (Passerini,
 Cim. 9. 84.)

Bismuth pyrophosphate, $\text{Bi}_4(\text{P}_2\text{O}_7)_3$.
 Insol. in H_2O or $\text{HNO}_3 + \text{Aq}$. (Chancel,
 C. R. 50. 416.)
 Decomp. by H_2O . (Wallroth, Bull. Soc. (2)
 39. 316.)
 Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Stromeyer.)

Bismuth sodium pyrophosphate, NaBiP_2O_7 ,
 $+ 3\text{H}_2\text{O}$.
 Insol. in H_2O . (Rosenheim, B. 1915, 48.
 588.)

Boron phosphate, BPO_4 .
 Insol. in H_2O . Not attacked by boiling
 alkalis. (Meyer, B. 22. 2919.)

Bromomolybdenum phosphate.

See under Bromomolybdenum comps.

Cadmium triphosphate, $\text{Cd}_3(\text{P}_3\text{O}_{10})_2$

Insol in H_2O and acids. (Glühmann, Dissert. 1899.)

Cadmium tetraphosphate, 6CdO , $4\text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$.

Insol. in acids. (Glühmann)

Cadmium metaphosphate.

Verv sol. in $\text{NH}_4\text{OH} + \text{Aq}$ (Persoz, A. ch. 56. 334)

Cadmium dimetaphosphate, $\text{Cd}(\text{PO}_3)_2 + 2\text{H}_2\text{O}$.

Sol. in 32 pts. H_2O Scarcely attacked by acids, especially conc. H_2SO_4 . (Glatzel, Dissert. 1880.)

Cadmium tetrametaphosphate.

Insol. in H_2O . Easily decomp. by $\text{Na}_2\text{S} + \text{Aq}$ (Fleitmann, Pogg. 78. 358)

$\text{Cd}_3(\text{PO}_3)_4 + 10\text{H}_2\text{O}$ Not so very difficultly attacked by acids but insol. after ignition. (Glatzel, Dissert 1880.)

Cadmium orthophosphate, $\text{Cd}_3(\text{PO}_4)_2$.

Ppt. Insol. in H_2O Sol. in Cd salts + Aq. (Stromeyer.)

Easily sol. in NH_4 sulphate, chloride, nitrate, or succinate + Aq. (Wittstein, Repert. 57. 32.)

$\text{H}_2\text{Cd}_3(\text{PO}_4)_4 + 4\text{H}_2\text{O}$. Sol. in dil. $\text{H}_3\text{PO}_4 + \text{Aq}$. (de Schulten, Bull. Soc. (3) 1. 473.)

Cadmium tetrahydrogen phosphate,

Decomp. by great excess of H_2O . (de Schulten.)

Cadmium pyrophosphate, $\text{Cd}_2\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in NH_4OH , $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$, or acids. Insol. in $\text{KOH} + \text{Aq}$. Sol. in $\text{SO}_2 + \text{Aq}$. (Schwarzenberg, A. 65. 183)

Cadmium hydrogen orthophosphate hydrazine, $\text{CdHPO}_4 \cdot 2\text{N}_2\text{H}_4$.

Decomp. by light. (Franzen, Z. anorg. 1908, 60. 283.)

Cadmium potassium tetrametaphosphate,

Sol. in 135 pts. H_2O . Difficultly decomp. by acids. (Glatzel, Dissert. 1880.)

Cadmium potassium orthophosphate,

Insol. in H_2O ; sol. in dil. $\text{HCl} + \text{Aq}$. (Ouvrard, A. ch. (6) 16. 321.)

Cadmium potassium pyrophosphate,

Insol. in H_2O , sol in dil $\text{HCl} + \text{Aq}$ (Ouvrard)

$5\text{Cd}_2\text{P}_2\text{O}_7$, $4\text{K}_4\text{P}_2\text{O}_7 + 30\text{H}_2\text{O}$ Much more easily sol in H_2O than the CdNa salt (Pahl, Sv. V. A. F 30, 7. 39)

Cadmium sodium triphosphate, $\text{Na}_3\text{CdP}_3\text{O}_{10} + 12\text{H}_2\text{O}$.

Sol. in acids even after ignition. (Glühmann, Dissert 1899.)

Cadmium sodium trimetaphosphate,

Sl. sol in H_2O . Insol. in alcohol (Wiesler, Z. anorg. 1901, 28. 204.)

Cadmium sodium tetrametaphosphate,

Completely insol. in H_2O (Glatzel, Dissert 1880.)

Cadmium sodium orthophosphate,

Insol in H_2O ; very sol. in dil acids. CdNaPO_4 . As above. (Ouvrard.)

Cadmium sodium pyrophosphate,

Sol in dil. acids, even acetic acid. (Wallroth.)

$+ 4\text{H}_2\text{O}$. Insol. in H_2O . (Pahl, Sv. V. A. F. 30, 7. 39)

Cadmium phosphate bromide, $3\text{Cd}_3(\text{PO}_4)_2$, CdBr_2 .

Sol. in cold very dil. $\text{HNO}_3 + \text{Aq}$. (de Schulten, Bull. Soc. (3) 1. 472.)

Cadmium phosphate chloride, $3\text{Cd}_3(\text{PO}_4)_2$, CdCl_2 .

Sol. in dil $\text{HNO}_3 + \text{Aq}$. (de Schulten.)

Cæsium metaphosphate, CsPO_3 .

Sol. in H_2O . (von Berg, B. 1901, 34. 4185.)

Cæsium orthophosphate, $\text{Cs}_3\text{PO}_4 + 5\text{H}_2\text{O}$.

Deliquescent; very sol. in H_2O . (von Berg.)

Cæsium hydrogen orthophosphate, $\text{Cs}_2\text{HPO}_4 + \text{H}_2\text{O}$.

Very sol. in H_2O . (von Berg.)

Cæsium dihydrogen orthophosphate,

Sol. in H_2O ; insol. in alcohol. (von Berg.)

Cæsium pyrophosphate, $\text{Cs}_4\text{P}_2\text{O}_7$.

Very sol in H_2O ; very hygroscopic. (von Berg.)

Calcium triphosphate, $5\text{CaO}, 3\text{P}_2\text{O}_5$

Insol. in H_2O . (Schwarz, Z. anorg. 1895, 9. 264)

Calcium monometaphosphate, $\text{Ca}(\text{PO}_3)_2$

Insol. in H_2O and dil. acids. (Maddrell, A. 61. 61.)

Not decomp by digestion with alkali carbonates + Aq. (Fleitmann)

Calcium dimetaphosphate, $\text{Ca}_2(\text{P}_2\text{O}_5)_2 + 4\text{H}_2\text{O}$

Insol. in H_2O . Decomp by warm H_2SO_4 , but not appreciably by conc. HCl or HNO_3 + Aq. (Fleitmann, Pogg. 78. 255.)

Calcium hexametaphosphate (?)

Insol. in H_2O . Sol. in $\text{Na}_6\text{P}_6\text{O}_{18}$ + Aq and in HCl + Aq. (Rose, Pogg. 76. 3.)

$\text{Ca}_3\text{P}_6\text{O}_{18}$. Nearly insol. in H_2O ; sol. in dil acids. (Lüder, Z. anorg. 5. 15)

Calcium orthophosphate, basic, $3\text{Ca}_3(\text{PO}_4)_2 + \text{CaO}_2\text{H}_2$

(Warington, J. B. 1873. 253.)

$4\text{CaO}, \text{P}_2\text{O}_5$ (Hilgenstock.)

Calcium orthophosphates,

Equilibrium in system $\text{CaO} + \text{P}_2\text{O}_5 + \text{H}_2\text{O}$.

Solubility of CaO in P_2O_5 + Aq at 25° .

(Bassett, Z. anorg. 1908, 59. 20.)

Calcium orthophosphate, $Ca_3(PO_4)_2$.

Decomp. by long boiling with H_2O into basic salt, $3Ca_3(PO_4)_2, CaO_2H_2$. This decomp begins with cold H_2O , so that the solubility at $6-8^\circ$ varies from 9.9 to 28.6 mg. in a litre. (Warrington, Chem. Soc. (2) 11. 983.)

1 l cold H_2O dissolves in 7 days 31 mg. ignited, and 79 mg. freshly precipitated $Ca_3(PO_4)_2$. (Voleker, J. B. 1862. 131.)

100,000 pts H_2O dissolve 2.36 pts. gelatinous Ca phosphate; 2.56 pts ignited Ca phosphate, 3.00 pts Ca phosphate from bone dust. (Maly and Donath, J. pr. (2) 7. 416.)

Solubility of bones in various solvents is given by Maly and Donath, l. c.

0.009 g. $Ca_3(PO_4)_2$ is sol. in 1 l. H_2O .
0.153 " " " " " " " " " " " "

sat. with CO_2 . (Joffre, Bull. Soc 1898, (3) 19. 372.)

Determinations of solubility in H_2O as stated in the literature vary because $Ca_3(PO_4)_2$ is apparently a solid solution of $CaHPO_4$ and CaO . When placed in contact with H_2O more PO_4 ions dissolve than Ca ions, the resulting solution is acid and solid phase richer in Ca than before addition of H_2O . For material of the approximate composition, $Ca_3(PO_4)_2$, the amt dissolved by CO_2 free H_2O at ord. temp. is 0.01–0.10 g. per l. depending on conditions of experiment. H_2O sat with CO_2 dissolves 0.15–0.30 g. per l. (Cameron and Hurst, J. Am. Chem. Soc. 1904, 26. 903.)

The decomposition of $Ca_3(PO_4)_2$ in H_2O is increased by presence of $CaSO_4$; decreased by presence of $CaCO_3$ or of $CaSO_4$ and CO_2 . CO_2 increases the amount of PO_4 dissolved in the solution of water alone and the sat. $CaSO_4$ solutions, but has no other effect than to increase the amount of Ca in the solutions in contact with $CaCO_3$. (Cameron and Seidell, J. Am. Chem. Soc. 1904, 26. 1458.)

Sol. in $CO_2 + Aq$.

1 l. H_2O containing 1 vol. CO_2 dissolves in 12 hours at 10° 0.75 g. precipitated $Ca_3(PO_4)_2$; 0.166 g. $Ca_3(PO_4)_2$ from bone ash; 0.300 g. $Ca_3(PO_4)_2$ from bones which had been buried 20 years. (Lassaigne, J. ch. méd. (3) 3. 11.)

1 l. H_2O containing 0.8 vol. CO_2 dissolves 0.61 g. $Ca_3(PO_4)_2$. (Liebig, A. 106. 196.)

H_2O sat. with CO_2 at $5-10^\circ$ and 760 mm. pressure dissolves 0.527–0.60 g. $Ca_3(PO_4)_2$, or, if containing 1% NH_4Cl , 0.739 g. $Ca_3(PO_4)_2$. (Warrington, Chem. Soc (2) 9. 80.)

Solubility varies according to form of $Ca_3(PO_4)_2$.

In apatite, 1 pt. $Ca_3(PO_4)_2$ dissolves in 222,222 pts. H_2O sat. with CO_2 ; in raw bones, in 5698 pts.; in bone ash, in 8029 pts.; in So. Carolina phosphate, in 6983 pts.; in phosphatic guano from Orchilla Id., in 8009 pts. (Williams, C. N. 24. 306.)

$Al_2O_3H_3$ and $Fe_2O_3H_3$ prevent the solubility of $Ca_3(PO_4)_2$ in H_2O containing CO_2 . (Warrington, l. c.)

1 l. H_2O dissolves 0.22848 g. $Ca_3(PO_4)_2$ under a CO_2 -pressure of 2 atmos. at 14° . (Ehlert, Z. Elektrochem. 1912, 18. 728.)

Sol. in $SO_2 + Aq$, forming a liquid of 1.3 sp. gr. at 9° from freshly precipitated $Ca_3(PO_4)_2$, and of 1.188 sp. gr. from bone ash.

Sol. in $H_2S + Aq$. 1 l. H_2O sat with H_2S

dissolves 190–240 mg. $\text{Ca}_3(\text{PO}_4)_2$ (Béchamp, A. ch. (4) 16. 241.)

Easily sol in HNO_3 or $\text{HCl} + \text{Aq.}$

100 pts. very dil. $\text{HCl} + \text{Aq}$ dissolve 198–225 pts. $\text{Ca}_3(\text{PO}_4)_2$. (Crum, A. 63. 294.)

100 pts. HCl of 1.153 sp. gr. (containing 31% HCl) dissolve at 17° when diluted with:

0	1	4	7	pts. H_2O
25.3	45.0	62.3	64.7	pts. $\text{Ca}_3(\text{PO}_4)_2$
10	13	16	19	pts. H_2O
68.0	71.9	69.5	69.7	pts. $\text{Ca}_3(\text{PO}_4)_2$

(Bischof, Schw. J 67. 39.)

Decomp. by H_2SO_4

Completely decomp. to CaSO_4 and H_3PO_4 by a mixture of H_2SO_4 and alcohol

Solubility in $\text{HNO}_3 + \text{Aq.}$

1 pt. of $\text{Ca}_3(\text{PO}_4)_2$ dissolves at 16–25–17.5° in pts. $\text{HNO}_3 + \text{Aq}$ which contain pts. H_2O to 1 pt. HNO_3 (sp. gr. = 1.23).

Pts $\text{HNO}_3 + \text{Aq}$	Pts H_2O	Pts $\text{HNO}_3 + \text{Aq}$	Pts. H_2O

20	12.50
25	13.79
30	15.10

(Causse, C. R. 1892, 114. 414.)

Very small quantities of the salts of the alkali metals increase the solubility in H_2O . (Lassaigne, J. chim. méd. (3) 3. 11.)

1 litre cold H_2O with 2 g. NaCl dissolves 45.7 mg. $\text{Ca}_3(\text{PO}_4)_2$; with 3 g. NaNO_3 , 33 mg. $\text{Ca}_3(\text{PO}_4)_2$. (Liebig.)

1 litre H_2O containing 8.75% NaCl dissolves 317.5 mg. $\text{Ca}_3(\text{PO}_4)_2$. (Lassaigne.)

NH_4 salts have even more effect, especially $\text{NH}_4\text{Cl} + \text{Aq.}$ which dissolves $\text{Ca}_3(\text{PO}_4)_2$ in the cold; also ammonium nitrate and succinate. (Wittstein.)

$(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ dissolves $\text{Ca}_3(\text{PO}_4)_2$ as easily as CaSO_4 . (Liebig, A. 61. 128.)

1 litre H_2O containing 2 g. NaCl dissolves at 7–12.3° 45.7 mg. $\text{Ca}_3(\text{PO}_4)_2$; 3 g. NaNO_3 at 17.3°, 33 mg. $\text{Ca}_3(\text{PO}_4)_2$; 2.2 g. $(\text{NH}_4)_2\text{SO}_4$, 76.7 mg. $\text{Ca}_3(\text{PO}_4)_2$. (Liebig, A. 106. 185.)

Dry $\text{Ca}_3(\text{PO}_4)_2$ also dissolves by long boiling with solutions of ammonium chloride, nitrate, succinate (Wittstein), or sulphate (Delkeskamp).

Sol. in 89,448 pts. H_2O (boiled) at 7°; 19,628 pts. H_2O (boiled) containing 1% NH_4Cl at 10°; 4324 pts. H_2O (boiled) containing 10% NH_4Cl at 17°; 1788 pts. H_2O sat. with CO_2 and containing 10% NH_4Cl at 10° and 751 mm. pressure, 1351 pts. H_2O sat. with CO_2 and containing 1% NH_4Cl at 12° and 745 mm. pressure, 42,313 pts. H_2O sat. with CO_2 and containing CaCO_3 at 21° and 756.3 mm. pressure; 18,551 pts. H_2O sat. with CO_2 and containing CaCO_3 and 1% NH_4Cl at 16° and 746.1 mm. pressure. (Warington, Chem. Soc. (2) 4. 296)

Aqueous solutions of the following NH_4 salts dissolve the given amts. of $\text{Ca}_3(\text{PO}_4)_2$, calculated for 100 pts. of the corresponding acid: NH_4Cl , 0.655 pt.; NH_4NO_3 , 0.306 pt.; $(\text{NH}_4)_2\text{SO}_4$, 1.050 pts.; $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$, 0.255 pt.; NH_4 tartrate, 4.56 pts.; NH_4 citrate, 7.015 pts.; NH_4 malate, 1.125 pts. $\text{Ca}_3(\text{PO}_4)_2$. (Terreil, Bull. Soc. (2) 35. 578)

Solubility in various salts + Aq under a CO_2 pressure of 2 atmospheres, at 14°.

Salt	G. salt per 100 g. H_2O	G. $\text{Ca}_3(\text{PO}_4)_2$ sol. in 1 l. of the solvent

(Ehlert and Hempel, Z. Elektrochem. 1912, 18. 728.)

$\text{Ca}_3(\text{PO}_4)_2$ is sol. in $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$ 100 ccm $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$ (1½% $\text{K}_2\text{C}_2\text{O}_4$) dissolves 57.1% of the P_2O_5 from phosphorite, 71% from guano by boiling 25 min. At ord temp. bone meal gives up 50–80% of its P_2O_5 to $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$ in 36 hours (Liebig, Landw. J. B. 1881. 603)
Sol in Ca succrate + Aq. (Bobierre, C R 32. 859.)

More sol in H_2O containing starch, glue, or other animal substances than in pure H_2O . (Vauquelin, Pogg 85. 126)

Sol. in H_2O containing organic matter, therefore when bones decay under H_2O , $\text{Ca}_3(\text{PO}_4)_2$ is dissolved in considerable quantity. (Hayes, Edin. Phil. J. 5. 378.)

Sol. in sodium citrate + Aq (Spiller.)

Solubility in NH_4 citrates + Aq.

Ammonium citrate solution of 1.09 sp. gr at 30–35° dissolves precipitated $\text{Ca}_3(\text{PO}_4)_2$ completely, but not phosphorite. (Frese-
nius.)

Dried on the air, with 2½% H_2O . Sol. in 40 min. in diammonium citrate + Aq (sp. gr. = 1.09); triammonium citrate + Aq (sp. gr. =

1.09) dissolves 55.3% of the P_2O_5 ; citric acid + Aq (¼%) dissolves 83.8% of the P_2O_5 . (Erlenmeyer, B. 14. 1253)

Dried at 50°, with 1⅓% H_2O . Sol. in 45 min. in diammonium citrate + Aq (sp. gr. = 1.09); triammonium citrate + Aq dissolves 52.3% of the P_2O_5 . (Erlenmeyer.)

Ignited. Diammonium citrate + Aq (sp. gr. 1.09) dissolves 93% of the P_2O_5 ; triammonium citrate + Aq (sp. gr. 1.09) dissolves 32% of the P_2O_5 ; citric acid (¼%) dissolves 53.4% of the P_2O_5 . (Erlenmeyer.)

Insol. in liquid NH_3 . (Franklin, Am Ch. J. 1898, 20. 827.)

Insol. in alcohol and ether.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Eidmann, C C. 1899, II. 1014; Naumann, B. 1904, 37. 4329)

Min. *Apatite*.

0.002 g. is sol. in 1 l. H_2O .

0.014 " " " 1 l. H_2O sat. with CO_2 . (Joffe, Bull. Soc. 1898, (3) 19. 374.)

+ H_2O . Solubility in H_2O , in H_2O sat. with CO_2 , and in H_2O containing $\text{CO}_2 + \text{CaH}_2(\text{CO}_3)_2$. Temp. 16°–20°.

Solvent	In 1 l of the filtrate

(Schloesing, C. R. 1900, 131. 151.)

Calcium hydrogen phosphate, CaHPO_4 , and $+2\text{H}_2\text{O}$

Insol. or nearly so in H_2O . Gradually decomp. by cold, more quickly by hot H_2O .

1000 pts. H_2O dissolve 0.135–0.152 pt. $\text{CaHPO}_4 + 2\text{H}_2\text{O}$. Solution clouds up on boiling. (Birnbäum)

1000 pts. H_2O dissolve 0.28 pt., and if sat. with CO_2 , 0.66 pt. $\text{CaHPO}_4 + 2\text{H}_2\text{O}$. (Dusart and Pelouze.)

When this salt dissolves in H_2O , decomp. takes place and a very considerable time is necessary to establish equilibrium. (Randell, C. R. 1902, 134. 112.)

Much less decomp. by H_2O than $\text{Ca}_3(\text{PO}_4)_2$ or $\text{CaH}_4(\text{PO}_4)_2$, and the decomposition of this salt in water depends only slightly upon the relative amounts of solid and solvent which are present. The decomposition is increased by the addition of CO_2 . The presence of CaSO_4 or of CaCO_3 decreased the amount of phosphoric acid which dissolved. See original paper. (Cameron and Seidell, J. Am. Chem. Soc. 1904, 26. 1460.)

When the ratio of $\text{P}_2\text{O}_5 : \text{CaO}$ is above 1.0 or below 1.27, H_2O dissolves 0.40–0.54 g. CaO and 1.11–1.52 g. P_2O_5 (see original paper). (Cameron and Bell, J. Am. Chem. Soc. 1905, 27. 1512.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq.}$

G H_3PO_4 in 100 cc $\text{H}_3\text{PO}_4 + \text{Aq.}$	G. CaHPO_4 dissolved by 100 cc. of solvent
5	4.30
10	7.15
15	9.30
20	11.86
25	13.40
30	15.10

(Causse, C. R. 1892, 114. 415.)

1 l. H_2O containing 2.2 g. $(\text{NH}_4)_2\text{SO}_4$, 2 g. NaCl , or 3 g. NaNO_3 dissolves 79.2, 66.3, or 78.9 mg. CaP_2O_7 , which is present in form of CaHPO_4 . (Liebig, A. 106. 185.) Slowly but completely sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq.}$ (Kraut, Arch. Pharm. (2) 111. 102.) Easily sol. in $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Gerland, J. pr. (2) 4. 123.) Very sol. in HCl or $\text{HNO}_3 + \text{Aq.}$ Less sol. in $\text{HC}_2\text{H}_3\text{O}_2$. (Berzelius.) More sol. in dil. than conc. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ but 60 pts. $\text{HC}_2\text{H}_3\text{O}_2$ (1 mol.) dissolve at most 23.1 pts. P_2O_5 (1 mol. = 142 pts.) from this compound. Aqueous solution of sodium acetate dissolves more easily than H_2O , and becomes turbid on boiling. (Birnbäum.)

Completely sol. in $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq.}$ (Liebig, Landw. J. B. 1881. 603.)

1 l. of sat. solution in N/200 acid K tartrate + Aq at 25° contains 0.235 g. CaHPO_4 .

Insol. in alcohol. Sol. in many organic substances, as starch or gelatine + Aq.

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

$+ \frac{1}{2}\text{H}_2\text{O}$. (Vorbringer, Z. anal. 9. 457.)
 $+ \text{H}_2\text{O}$. (Gerlach, J. pr. (2) 4. 104.)
 $+ 2\text{H}_2\text{O}$. Min. *Brushite*.
 $+ 3\text{H}_2\text{O}$. Min. *Metabrushite*.
 $+ 5\text{H}_2\text{O}$. (Dusart, C. R. 66. 327.)

Calcium tetrahydrogen orthophosphate, $\text{CaH}_4(\text{PO}_4)_2 + \text{H}_2\text{O}$.

Very deliquescent. Crystals take up 97.7 pts. H_2O in 16 days, and 226 pts. H_2O in 28 days from air saturated with moisture. (Birnbäum, Zeit. Ch. (2) 7. 131.)

Not hygroscopic when pure. (Stocklassa, B. 23. 626 R.)

Completely sol. in 100 pts. H_2O , but decomp. by 10–40 pts. H_2O with separation of CaHPO_4 , which slowly dissolves. (Erlenmeyer, J. B. 1873. 254.)

Later (B. 9. 1839) Erlenmeyer says $\text{CaH}_4(\text{PO}_4)_2 + \text{H}_2\text{O}$ is sol in 700 pts. H_2O and decomp. into CaHPO_4 by a less amount of H_2O . Wattenberg (Z. anal. 19. 243) says that the decomposition by small amts. of H_2O down to 144 pts. H_2O to 1 pt salt is inappreciable.

Completely sol. in 200 pts. H_2O if pure, and in less H_2O in presence of H_3PO_4 . (Stocklassa.)

Sol in 25 pts. H_2O at 15° . Solution begins to decompose when warmed to 50° . (Otto, C. C. 1887. 1563.)

Greatly decomp. by H_2O and the resulting solution is to be regarded as a solution of the decomposition products rather than of the substance itself. The presence of an excess of CaSO_4 does not materially affect the amount of phosphoric acid entering the solution. (Cameron, J. Am. Chem. Soc. 1904, 26. 1462.)

Violently decomp. by H_2O in conc. solution; only sl. decomp. when dissolved in 200 pts H_2O . (Stocklassa, Z. anorg. 1892, 1. 310.)

Solubility of $\text{CaH}_4\text{P}_2\text{O}_8$ in $\text{H}_3\text{PO}_4 + \text{Aq}$ at pressure of 745 mm. at high temp.

T $^\circ$	100 g of the solution contain		Solid phase
	G. P_2O_5	G. CaO	
115°	43.60	5.623	$\text{CaH}_4\text{P}_2\text{O}_8$, $\text{H}_2\text{O} + \text{CaHPO}_4$
132°	53.43	4.327	$\text{CaH}_4\text{P}_2\text{O}_8 + \text{CaH}_4\text{P}_2\text{O}_8$, H_2O
169°	63.95	4.489	$\text{CaH}_4\text{P}_2\text{O}_8$

(Bassett, Z. anorg. 1908, 59. 26.)

Glacial $\text{HC}_2\text{H}_3\text{O}_2$ ppt. it completely from aqueous solution even in presence of HNO_3 . (Persoz.)

Decomp. by 50 pts. absolute alcohol at b. pt. in 1 hour; by 30 pts. in 2 hours. Sol. in absolute ether. (Erlenmeyer, l. c.)

Calcium pyrophosphate, $\text{Ca}_2\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$.

Somewhat sol. in H_2O ; completely sol. in mineral acids; less sol. in acetic acid, and insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ (Schwarzenberg, A. 65. 145.) Less sol. in warm than in cold acetic acid. (Baer, Pogg. 75. 155.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Wackenroder, A. 41. 316.)

Insol. in $\text{CaCl}_2 + \text{Aq}$

Min. *Pyrophosphorite*.

Calcium hydrogen pyrophosphate, $\text{CaH}_2\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Pahl, B. 7. 478.)

$2\text{CaH}_2\text{P}_2\text{O}_7, \text{Ca}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$ Decomp. by boiling with H_2O into—

$\text{CaH}_2\text{P}_2\text{O}_7, \text{Ca}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$. Insol. in hot H_2O (Knorre and Oppelt, B. 21. 771.)

Tetracalcium hydrogen phosphate,

Ppt Insol. in H_2O , but decomp. by boiling therewith. Sol. in acids. (Warrington, Chem. Soc. (2) 4. 296.)

$+ 2\text{H}_2\text{O}$.

Calcium tetrakisphosphate, $\text{Ca}_3\text{P}_4\text{O}_{13}$.

Insol. in acids when ignited. (Fleitmann and Henneberg, A. 65. 331.)

Calcium lithium phosphate, CaLiPO_4 .

Insol. in H_2O . (Rose, Pogg. 77. 298.)

Calcium potassium dimetaphosphate,

As BaK comp. (Glatzel, Dissert. 1880.)

Calcium potassium orthophosphate, CaKPO_4 .

Insol. in H_2O . (Rose, Pogg. 77. 291.)

Easily sol. in acids. (Ouvrard, A. ch. (6) 16. 308.)

Calcium potassium pyrophosphate, $\text{CaK}_2\text{P}_2\text{O}_7$.

Insol. in H_2O ; easily sol. in dil. acids. (Ouvrard, C. R. 106. 1599.)

Calcium sodium dimetaphosphate,

As BaNa comp. (Glatzel.)

Calcium sodium trimetaphosphate,

Sl. sol. in H_2O . (Fleitmann, A. 65. 315.)

Easily sol. in H_2O . Difficultly sol. in $\text{HCl} + \text{Aq}$ when heated to redness. Easily sol. in boiling $\text{HCl} + \text{Aq}$ after being fused. (Lindbom.)

Calcium sodium orthophosphate, CaNaPO_4 .

Insol. in H_2O . (Rose, Pogg. 77. 292.)

Easily sol. in dil. acids. (Ouvrard, A. ch. (6) 16. 308.)

$3\text{CaO}, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5$. Sol. in dil. acids. (Ouvrard, C. R. 1888, 106. 1599.)

Calcium sodium pyrophosphate, $\text{CaNa}_2\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$

Insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. Easily sol. in $\text{HCl} + \text{Aq}$, $\text{HNO}_3 + \text{Aq}$, and also in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Baer, Pogg. 75. 159.)

$\text{Ca}_{10}\text{Na}_{16}(\text{P}_2\text{O}_7)_8$. Sol. in acids. (Wallroth, Bull. Soc. (2) 39. 316.)

$3\text{CaO}, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5$. Easily sol. in acids. (Ouvrard, A. ch. (6) 16. 307.)

Calcium thorium metaphosphate, $\text{ThO}_2, \text{CaO}, \text{P}_2\text{O}_5$.

(Colani, C. R. 1909, 149. 209.)

Calcium uranous metaphosphate, $\text{UO}_2, \text{CaO}, \text{P}_2\text{O}_5$.

Insol. in acids (Colani, A. ch. 1907, (8) 12. 140.)

Calcium uranyl phosphate, $\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 + 2, 3, \text{or } 4\text{H}_2\text{O}$.

Sol. in $\text{HNO}_3 + \text{Aq}$ (Debray)

$\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 + 8\text{H}_2\text{O}$. Min. *Uranite*.

Sol. in $\text{HNO}_3 + \text{Aq}$.

$3\text{CaO}, 5\text{UO}_3, 2\text{P}_2\text{O}_5 + 16\text{H}_2\text{O}$. (Blinkoff, Dissert. 1900.)

Calcium phosphate chloride, $\text{Ca}_3(\text{PO}_4)_2, \text{CaCl}_2$.

(Deville and Caron, A. ch. (3) 67. 458.)

$3\text{Ca}_3(\text{PO}_4)_2, \text{CaCl}_2$. *Chlorapatite*. Insol. in H_2O . (Daubrée, Ann. Min. (4) 19. 684.)

$7\text{CaH}_4(\text{PO}_4)_2, \text{CaCl}_2 + 14\text{H}_2\text{O}$. Sol. in $\text{HCl} + \text{Aq}$.

$4\text{CaH}_4(\text{PO}_4)_2, \text{CaCl}_2 + 8\text{H}_2\text{O}$.

$\text{CaH}_4(\text{PO}_4)_2, \text{CaCl}_2 + 2\text{H}_2\text{O}$. Partly sol. in H_2O with decomp. Also with $8\text{H}_2\text{O}$. (Erlenmeyer, J. B. 1857. 145.)

Calcium phosphate chloride fluoride,

Min. *Apatite*. Boiling H_2O dissolves out CaCl_2 , dil. mineral acids dissolve easily, acetic acid with more difficulty. Easily soluble in molten NaCl , crystallizing on cooling. (Forchhammer.)

Calcium phosphate silicate, $\text{Ca}_3(\text{PO}_4)_2, \text{Ca}_3\text{SiO}_4$.

Insol. in H_2O ; decomp. by $\text{HCl} + \text{Aq}$. (Carnot and Richard, C. R. 97. 316.)

$4\text{Ca}_3(\text{PO}_4)_2, \text{Ca}_3\text{SiO}_5$. (Bücking and Linck, C. C. 1887. 562.)

$4\text{Ca}_3(\text{PO}_4)_2, 3\text{Ca}_3\text{SiO}_5$. (B. and L.)

$\text{Ca}(\text{PO}_3)_2, \text{CaSiO}_3$. (Stead and Ridsdate, Chem. Soc. 51. 601.)

Calcium dihydrogen phosphate sulphite, $\text{CaH}_2(\text{PO}_4)_2, \text{CaSO}_3 + \text{H}_2\text{O}$.

Not decomp. by cold, slowly by boiling H_2O . Slightly sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in mineral acids. Insol. in cold, slowly sol. in boiling acetic acid. More sol. in a solution of oxalic acid. (Gerland, C. N. 20. 268.)

Cerous metaphosphate, $\text{Ce}(\text{PO}_3)_3$.

(Rammelsberg)
 $\text{Ce}_2\text{O}_3, 5\text{P}_2\text{O}_5$ Insol. in H_2O or acids.
 (Johnsson, B. 22. 976.)

Cerous orthophosphate, CePO_4 .

Insol. in H_2O . Easily sol. in acids.
 (Grandeau, A. ch. (6) 8. 193.)
 Insol. in acids. (Hartley, Proc. Roy. Soc. 41. 202.)

+ $2\text{H}_2\text{O}$. Insol. in H_2O . Sol. in acids.
 (Jolin)

Insol. in $\text{H}_3\text{PO}_4 + \text{Aq}$; sl. sol. in HCl or $\text{HNO}_3 + \text{Aq}$ (Hisinger.)

Insol. in $\text{HNO}_3 + \text{Aq}$. (Boussingault, A. ch. (5) 5. 178.)

Min. *Cryptolite*. Completely decomp. by H_2SO_4 when finely powdered. Insol. in dil. $\text{HNO}_3 + \text{Aq}$.

Ceric orthophosphate, $4\text{CeO}_2, 6\text{P}_2\text{O}_5 + 26\text{H}_2\text{O}$.

Ppt. (Hartley, Proc. Roy. Soc. 41. 202.)

Cerous pyrophosphate, $\text{Ce}_2\text{H}_2(\text{P}_2\text{O}_7)_6 + 6\text{H}_2\text{O}$.

Sol. in cerous nitrate + Aq .
 $\text{Ce}_4(\text{P}_2\text{O}_7)_3 + 12\text{H}_2\text{O}$. Sol. in excess of sodium pyrophosphate + Aq . Easily sol. in HCl . (Rosenheim, B. 1915, 48. 592.)

Cerous lanthanum thorium phosphate,

$(\text{Ce}, \text{La}, \text{Th})_3(\text{PO}_4)_2$.

Min. *Monazite*. Sol. in $\text{HCl} + \text{Aq}$ with white residu.

Cerous potassium orthophosphate, $2\text{Ce}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{P}_2\text{O}_5 = 2\text{CePO}_4, \text{K}_3\text{PO}_4$.

Insol. in H_2O ; sol. in acids. (Ouvrard, C. R. 107. 37.)

Cerous sodium orthophosphate, $\text{Ce}_2\text{O}_3, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5 = \text{CePO}_4, \text{Na}_3\text{PO}_4$.

Insol. in H_2O . (Ouvrard, C. R. 107. 37.)

Cerous sodium pyrophosphate, CeNaP_2O_7 .

Insol. in acetic, and cold dil. mineral acids. Sol. in warm acids. (Wallroth.)

Chromous phosphate, $\text{Cr}_3(\text{PO}_4)_2$.

Insol. in H_2O . Easily sol. in citric, tartaric and acetic acids. Sl. sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$. (Moissan, A. ch. 1882, (5) 25. 415.)

+ H_2O . Precipitate. Easily sol. in acids. (Moberg; Moissan, A. ch. (5) 21. 199.)

Chromic metaphosphate, $\text{Cr}_2(\text{PO}_3)_6$.

Insol. in H_2O or conc. acids. (Maddrell, A. 61. 53.)

Chromic orthophosphate, CrPO_4 .

Hydrolyzed by hot H_2O . Somewhat sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and in $\text{Cr}_2(\text{SO}_4)_3 + \text{Aq}$. (Caven, J. Soc. Chem. Ind. 1897, 16. 29.)

Insol. in methyl acetate. (Naumann, B.

1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Chromic phosphate, $\text{Cr}_2(\text{PO}_4)_3 + 12\text{H}_2\text{O}$.

Violet modification. Precipitate. (Rammelsberg, Pogg. 68. 383.)

+ $6\text{H}_2\text{O}$. *Green modification*. Very sl. sol. in H_2O and still less in NH_4NO_3 or $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Carnot, C. R. 94. 1313.)

Insol. in acetic, but easily sol. in mineral acids. Easily sol. in cold KOH or $\text{NaOH} + \text{Aq}$, from which it is separated on boiling. (Dowling and Plunkett, Chem. Gaz. 1858. 220.)

Chromic hydrogen phosphate, $\text{Cr}_2\text{H}_3(\text{PO}_4)_4 + 16\text{H}_2\text{O}$.

Sol. in H_2O . (Haushofer.)

Chromic pyrophosphate, $\text{Cr}_4(\text{P}_2\text{O}_7)_3$.

Anhydrous. Insol. in H_2O or acids. (Ouvrard, A. ch. (6) 16. 344.)

+ $7\text{H}_2\text{O}$. Precipitate. Sol. in strong mineral acids, $\text{SO}_2 + \text{Aq}$, $\text{KOH} + \text{Aq}$, and $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Schwarzenberg, A. 65. 149.)
 Insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Stromeyer.)

Chromic potassium phosphate, $\text{Cr}_2\text{O}_3, \text{K}_2\text{O}, 2\text{P}_2\text{O}_5$.

Insol. in H_2O and in acids. (Ouvrard, A. ch. (6) 16. 289.)

Chromic potassium pyrophosphate,

$\text{K}(\text{CrP}_2\text{O}_7) + 5\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . Decomp. by boiling H_2O . (Rosenheim, B. 1915, 48. 586.)

$\text{Cr}_2\text{K}_2\text{H}_4(\text{P}_2\text{O}_7)_3$. Insol. in H_2O , acids, or alkalies. Sl. decomp. by boiling conc. H_2SO_4 . (Schjerning, J. pr. (2) 45. 515.)

Chromic silver phosphate, $2\text{Cr}_2\text{O}_3, 2\text{Ag}_2\text{O}, 5\text{P}_2\text{O}_5$.

(Hautefeuille and Margottet, C. R. 96. 1142.)

Chromic sodium orthophosphate, $\text{Na}_2\text{HPO}_4, 2\text{CrPO}_4 + 5\text{H}_2\text{O}$.

Decomp. by H_2O . (Cohen, J. Am. Chem. Soc. 1907, 29. 1197.)

Chromic sodium pyrophosphate,

$\text{Cr}_2\text{Na}_2(\text{P}_2\text{O}_7)_2$.

Insol. in acids. (Wallroth, Bull. Soc. (2) 39. 316.)

+ $10\text{H}_2\text{O}$, and $16\text{H}_2\text{O}$. Sl. sol. in cold H_2O . Decomp. by boiling H_2O . (Rosenheim, B. 1915, 48. 586.)

Cobaltous monometaphosphate, $\text{Co}(\text{PO}_3)_2(?)$.

Insol. in H_2O and dil. acids. Sol. in conc. $\text{HCl} + \text{Aq}$. (Maddrell, A. 58. 61.)

Cobaltous dimetaphosphate, $\text{Co}_2(\text{P}_2\text{O}_6)_2$

Insol. in cold conc. H_2SO_4 ; sl. sol. on warming, but sol. in H_2O after treating with H_2SO_4 . Sol. in conc. $\text{NH}_4\text{OH} + \text{Aq.}$ Scarcely attacked by boiling $\text{Na}_2\text{S} + \text{Aq.}$ (Fleitmann)

Cobaltous hexametaphosphate (?)

Ppt. Sol. in sodium hexametaphosphate + Aq (Rose, Pogg. 76. 4)

Cobaltous orthophosphate, $\text{Co}_3(\text{PO}_4)_2 + x\text{H}_2\text{O}$

Sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$ or $\text{NH}_4\text{OH} + \text{Aq}$; sl. sol. in NH_4Cl or $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Salvetat, C. R. 48. 295.) Sol. in Co salts + Aq. + $2\text{H}_2\text{O}$. (Debray, A. ch. (3) 61. 438.) + $8\text{H}_2\text{O}$. (Reynoso, C. R. 34. 795.)

Cobaltous hydrogen orthophosphate, $\text{CoHPO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$

Ppt. (Debray.) + $2\frac{1}{2}\text{H}_2\text{O}$. Ppt. Insol. in H_2O Sol. in $\text{H}_3\text{PO}_4 + \text{Aq.}$ (Bödeker, A. 94. 357.)

Cobaltous tetrahydrogen orthophosphate, $\text{CoH}_4(\text{PO}_4)_2$

Sol. in H_2O . (Reynoso)

Cobaltous pyrophosphate.

Ppt. Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ (Stromeyer) Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Schwarzenberg)

Cobaltous pyrometaphosphate, $3\text{CoO}, 2\text{P}_2\text{O}_5$

(Braun.) $6\text{CoO}, 5\text{P}_2\text{O}_5$. (Braun)

Cobaltous potassium phosphate, CoKPO_4

Insol. in H_2O ; easily sol. in dil acids. (Ouvrard, C. R. 106. 1729.) $3\text{CoO}, 3\text{K}_2\text{O}, 2\text{P}_2\text{O}_5$. As above.

Cobaltous sodium triphosphate, $\text{NaCo}_2\text{P}_3\text{O}_{10}$

(Schwarz, Z. anorg. 1895, 9. 260) $\text{Na}_4\text{CoP}_3\text{O}_{10} + 12\text{H}_2\text{O}$. Very sol. in H_2O ; decomp. in aq. solution. Sol. in acids. (Schwarz, Z. anorg. 1895, 9. 258.)

Cobaltous sodium metaphosphate, $\text{Co}_2\text{Na}_2(\text{PO}_3)_8$

Insol. in H_2O or acids, even conc. H_2SO_4 . (Watts' Dict.)

Cobaltous sodium monometaphosphate, $6\text{Co}(\text{PO}_3)_2, 2\text{NaPO}_3$

Insol. in H_2O and dil acids. Sol. in conc. H_2SO_4 . (Maddrell, A. 61. 57.)

Cobaltous sodium trimetaphosphate,

$\text{CoNa}_3(\text{PO}_3)_3 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Fleitmann and Henneberg, A. 65. 315.)

Cobaltous sodium orthophosphate, CoNaPO_4

Insol. in H_2O . (Ouvrard, C. R. 106. 1729) $\text{Co}_3(\text{PO}_4)_2, 2\text{Na}_2\text{HPO}_4 + 8\text{H}_2\text{O}$. (Debray, J. Pharm (3) 46. 119.)

Cobaltous sodium pyrophosphate,

$\text{Co}_{10}\text{Na}_{16}(\text{P}_2\text{O}_7)_9$.

Insol. in H_2O . Sol. in acids. (Wallroth.) + $x\text{H}_2\text{O}$. Sol. in H_2O . (Stromeyer)

Cobaltous zinc phosphate, $\text{Co}_3(\text{PO}_4)_2, 3\text{Zn}_3(\text{PO}_4)_2 + 12\text{H}_2\text{O}$

Ppt. Sol. in acids. (Gentele.)

$\text{CoZn}_2(\text{PO}_4)_2 + 6\text{H}_2\text{O}$. Insol. in H_2O .

Columbium phosphate (?)

Insol. in H_2O . (Blomstrand)

Cupric dimetaphosphate, $\text{Cu}_2(\text{P}_2\text{O}_6)_2$

Insol. in H_2O . Sol. in conc. H_2SO_4 . (Maddrell, A. 61. 62.) Insol. in most conc. acids and in alkalies, except hot $\text{NH}_4\text{OH} + \text{Aq}$ or conc. H_2SO_4 , in which it is moderately sol.

Not decomp. by H_2S , but by $(\text{NH}_4)_2\text{S} + \text{Aq}$, less easily by Na_2S , and $\text{K}_2\text{S} + \text{Aq}$. (Fleitmann, Pogg. 78. 242.)

+ $8\text{H}_2\text{O}$. Completely insol. in H_2O . (Fleitmann)

Cupric hexametaphosphate (?)

Sol. in $\text{Na}_6\text{P}_6\text{O}_{18} + \text{Aq}$ or $\text{CuCl}_2 + \text{Aq}$. (Rose, Pogg. 76. 5.)

$\text{Cu}_3\text{P}_6\text{O}_{18}$. Easily sol. in H_2O or acids, especially when freshly pptd. (Lüder, Z. anorg. 5. 15.)

Cupric orthophosphate, basic, $6\text{CuO}, \text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$

Min. *Phosphocalcite*.

$5\text{CuO}, \text{P}_2\text{O}_5 + 2\text{H}_2\text{O}$. Min. *Dihydrite*. + $3\text{H}_2\text{O}$. Min. *Ehlite*. Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$, and $\text{HNO}_3 + \text{Aq}$.

$4\text{CuO}, \text{P}_2\text{O}_5 + \text{H}_2\text{O}$. Slowly sol. in NH_4OH or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$; insol. in cold $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Steinschneider, C. C. 1891, II. 51.)

Sl. sol. in $\text{CuCl}_2 + \text{Aq}$ and $\text{CaSO}_4 + \text{Aq}$. Decomp. by boiling H_2O and boiling Aq potash. (Caven, J. Soc. Chem. Ind. 1897, 16. 29.)

Min. *Libethenite*. Sol. in acids and $\text{NH}_4\text{OH} + \text{Aq}$.

+ $2\text{H}_2\text{O}$. Min. *Pseudolibethenite*. Sol. in acids and $\text{NH}_4\text{OH} + \text{Aq}$.

+ $3\text{H}_2\text{O}$. Min. *Tagilite*. Sol. in acids and $\text{NH}_4\text{OH} + \text{Aq}$.

Cupric triphosphate, $5\text{CuO}, 3\text{P}_2\text{O}_5 + 13\text{H}_2\text{O}$

Sol. in H_2O . Sol. in HNO_3 . (Schwarz, Z. anorg. 1895, 9. 262.)

Cupric dimetaphosphate, $\text{CuP}_2\text{O}_6 + 4\text{H}_2\text{O}$

Sol. in 78 pts. H_2O . Easily decomp. by hot conc. H_2SO_4 . (Glatzel, Dissert. 1880.)

Cupric trimetaphosphate, $\text{Cu}_3(\text{P}_3\text{O}_9)_2 + 9\text{H}_2\text{O}$.
Very sl. sol. in H_2O (0.04 g. in 1 l. at 20°).
(Tamman, J. pr 1892, (2) 45. 425)

Cupric tetrametaphosphate, $\text{Cu}_2\text{P}_4\text{O}_{12}$.
Insol. in H_2O and in HCl . Sl. sol. in boiling HNO_3 . Very sol. in boiling conc. H_2SO_4 .
(Glatzel.)
+ $8\text{H}_2\text{O}$. Nearly insol. in H_2O . Slowly attacked by acids except conc. H_2SO_4 .
(Glatzel.)

Cupric orthophosphate, $\text{Cu}_3(\text{PO}_4)_2 + 3\text{H}_2\text{O}$.
Insol. in H_2O ; easily sol. in acids, even H_3PO_4 , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Sl. sol. in NH_4 salts + Aq .
Sl. sol. in Cu salts + Aq (Rose, Pogg. 76. 25.)

Sol. in cold $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ (Steinschneider, C. C. 1891, II, 51.)
Insol. in liquid NH_3 (Gore, Am. Ch. J. 1898, 20. 827)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790)

Cupric hydrogen phosphate, $\text{CuHPO}_4 + \frac{1}{2}\text{H}_2\text{O} (?)$.

Insol. in H_2O ; sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$, and $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in NH_4Cl , and $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett, Phil Mag (3) 10. 98.)

Cupric pyrophosphate, basic, $\text{Cu}_2\text{P}_2\text{O}_7$, 2CuO , $\text{H}_2\text{O} + 3\text{H}_2\text{O}$
Insol. in H_2O . (Pahl, J. B. 1873. 229.)

Cupric pyrophosphate, $\text{Cu}_2\text{P}_2\text{O}_7$.

Anhydrous. Insol. in H_2O , and very sl. sol. in conc. acids. (Fleitmann, Pogg. 78. 244.)

As insol. as Cu metaphosphate, but decomp. by H_2S . (Rose, Pogg. 76. 14.)

+ $2\text{H}_2\text{O}$. Sol. in mineral acids, and $\text{NH}_4\text{OH} + \text{Aq}$; also in $\text{Na}_4\text{F}_2\text{O}_7 + \text{Aq}$. (Schwarzenberg, A. 65. 156.)

Sol. in cold $\text{H}_2\text{SO}_4 + \text{Aq}$ without decomp., crystallizing out on boiling.

Decomp. by boiling $\text{KOH} + \text{Aq}$.
Sol. in large excess of $\text{CuSO}_4 + \text{Aq}$.

+ $2\frac{1}{2}\text{H}_2\text{O}$. (Pahl, Sv. V. A. F. 30, 7. 40.)
+ $5\text{H}_2\text{O}$. Very sl. sol. in H_2O .

Sol. in dil. acids. (Wiesler, Z. anorg. 1901, 28. 202.)

Cupric iron (ferric) pyrophosphate,
 $\text{Cu}_3\text{Fe}_2(\text{P}_2\text{O}_7)_3 + 12\text{H}_2\text{O}$.

Ppt. (Pascal, C. R. 1908, 146. 233.)

Cupric potassium phosphate, 4CuO , K_2O , $3\text{P}_2\text{O}_5$.

Insol. in H_2O . (Ouvrard, C. R. 111. 177.)
 CuKPO_4 . As above.

Cupric potassium tetrametaphosphate,
 $\text{K}_2\text{CuP}_4\text{O}_{12} + 4\text{H}_2\text{O}$.

Sol. in 58 pts H_2O . Easily attacked by acids. (Glatzel, Dissert. 1880.)

Cupric potassium pyrophosphate, $\text{CuK}_2\text{P}_2\text{O}_7$.

Extremely easily sol. in H_2O . (Persoz, A. ch (3) 20. 315.)

$\text{Cu}_2\text{P}_2\text{O}_7$, $3\text{K}_4\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$. Insol. in H_2O .
(Pahl, Sv. V. A. F. 30, 7. 44.)

Cupric sodium phosphate, $\text{Cu}_3\text{Na}_6(\text{PO}_4)_4$.

Insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in conc. acids. (Wallroth, Bull. Soc. (2) 39. 316.)

Cupric sodium triphosphate,
 $\text{CuNa}_3\text{P}_3\text{O}_{10} + 12\text{H}_2\text{O}$.

Sl. sol. in H_2O ; very unstable
Easily sol. in acids. (Stange, Z. anorg. 1896, 12. 458.)

Cupric sodium tetrametaphosphate,
 $\text{CuNa}_2\text{P}_4\text{O}_{12}$.

As insol. in H_2O as Cu dimetaphosphate. Difficultly decomp. by digestion with $\text{Na}_2\text{S} + \text{Aq}$. (Fleitmann, Pogg. 78. 355)

+ $4\text{H}_2\text{O}$. Sol. in 45 pts. H_2O (Glatzel, Dissert. 1880.)

Cupric sodium orthophosphate, $3\text{Cu}_3(\text{PO}_4)_2$, NaH_2PO_4

Decomp. by H_2O to 4CuO , P_2O_5 . (Steinschneider, C. C. 1891, II. 52.)

$2\text{Cu}_3(\text{PO}_4)_2$, Na_2HPO_4 . Decomp. by H_2O into—

$3\text{Cu}_3(\text{PO}_4)_2$, Na_2HPO_4 . Decomp. by H_2O . (S.)

$\text{Cu}_4(\text{PO}_4)_2$, NaH_2PO_4 . Decomp. by H_2O . (S.)

$6\text{Cu}_3(\text{PO}_4)_2$, $2\text{Na}_3\text{PO}_4$. Decomp. by H_2O . (S.)

Cupric sodium pyrophosphate, $\text{CuNa}_2\text{P}_2\text{O}_7$.

Insol. in H_2O . (Fleitmann and Henneberg, A. 65. 387.)

+ $\frac{2}{3}\text{H}_2\text{O}$ (F. and H.) Much more sol. than the next salt. (Pahl.)

+ $6\text{H}_2\text{O}$. (Persoz, A. ch (3) 20. 315.)
 $\text{Cu}_2\text{P}_2\text{O}_7$, $\text{CuNa}_2\text{P}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$. Very ef-

florescent; insol. in H_2O . (F. and H.)
+ $10\frac{1}{2}\text{H}_2\text{O}$. (Pahl, Sv. V. A. F. 30, 7. 42.)

$\text{CuNa}_2\text{P}_2\text{O}_7$, $\text{Na}_4\text{P}_2\text{O}_7$. Sol. in H_2O . (F. and H.)

+ $2\text{H}_2\text{O}$. (F. and H.)
+ 12, and $16\text{H}_2\text{O}$. Very efflorescent, and

sol. in H_2O . (Pahl.)
 $\text{Cu}_3\text{Na}_2\text{P}_4\text{O}_{14} + 10\text{H}_2\text{O}$. Insol. in H_2O ;

sol. in HCl and HNO_3 , even after heating. (Stange, Z. anorg. 1896, 12. 456.)

Cupric uranyl phosphate, $(\text{UO}_2)_2\text{Cu}(\text{PO}_4)_2 + 8\text{H}_2\text{O}$.

Insol. in H_2O , easily sol. in acids. (Debray.)

Min. *Chalcolite*. Sol. in $\text{HNO}_3 + \text{Aq}$.

- Cupric orthophosphate ammonia**, $\text{Cu}_3(\text{PO}_4)_2 \cdot 4\text{NH}_3$
Sl. sol in H_2O . Easily sol in H_2O containing NH_4OH (Schiff, A. 123. 41.)
 2CuO , $3\text{P}_2\text{O}_5$, $20\text{NH}_3 + 21\text{H}_2\text{O}$. Easily sol in cold H_2O , with subsequent decomp (Metzner, A. 149. 66)
 2CuO , P_2O_5 , 6NH_3 (Maumené.)
- Cupric pyrophosphate ammonia**, 8CuO , $3\text{P}_2\text{O}_5$, $4\text{NH}_3 + 4\text{H}_2\text{O}$.
Sl. sol. in H_2O . (Schwarzenberg, A. 65. 133)
 $\text{Cu}_2\text{P}_2\text{O}_7$, $4\text{NH}_3 + \text{H}_2\text{O}$ Sl. sol in H_2O . (Schiff, A. 123. 1)
- Didymium metaphosphate**, $\text{D}_1(\text{PO}_3)_3$
Precipitate. (Smith.)
 D_1O_3 , $5\text{P}_2\text{O}_5$. Insol. in H_2O . (Cleve.)
- Didymium phosphate**, $2\text{D}_1\text{O}_3$, $3\text{P}_2\text{O}_5$.
Insol in H_2O . (Ouvrard, C. R. 107. 37.)
- Didymium orthophosphate**, DiPO_4 .
Insol. in H_2O . Very sl. sol. in dil., easily sol. in conc acids. (Marignac.) Insol. in H_2O . (Wallroth, Bull. Soc. (2) 39. 316.)
 $+\text{H}_2\text{O}$ (Frerichs and Smith, A. 191. 355.)
- Didymium trihydrogen phosphate**, $\text{D}_1\text{H}_3(\text{PO}_4)_3$.
Precipitate. (Frerichs and Smith.)
Existence is doubtful. (Cleve, B. 12. 910)
- Didymium hexahydrogen phosphate**, $\text{DiH}_3(\text{PO}_4)_2 + \text{H}_2\text{O}$
Precipitate. (Hermann.)
- Didymium pyrophosphate**, $\text{D}_1_4(\text{P}_2\text{O}_7)_2 + 6\text{H}_2\text{O}$.
Precipitate (Cleve.)
- Didymium hydrogen pyrophosphate**, $\text{Di}_2\text{H}_6(\text{P}_2\text{O}_7)_2$.
Precipitate. Sol. in disodium pyrophosphate + Aq. (Frerichs and Smith, A. 191. 355.)
Does not exist. (Cleve.)
- Didymium potassium phosphate**, $2\text{D}_1\text{O}_3$, $3\text{K}_2\text{O}$, $3\text{P}_2\text{O}_5 = 2\text{DiPO}_4$, K_3PO_4 .
Insol. in H_2O . (Ouvrard, C. R. 107. 37.)
- Didymium sodium orthophosphate**, D_1O_3 , $3\text{Na}_2\text{O}$, $2\text{P}_2\text{O}_5 = \text{DiPO}_4$, Na_3PO_4 .
Insol. in H_2O . (Ouvrard.)
- Didymium sodium orthophosphate**, D_1O_3 , Na_2O , $2\text{P}_2\text{O}_5 = \text{DiNaP}_2\text{O}_7$.
Insol. in H_2O . (Ouvrard, C. R. 107. 37.)
- Dysprosium orthophosphate**, $\text{DyPO}_4 + 5\text{H}_2\text{O}$.
Nearly insol in H_2O
Easily sol in dil acids or acetic acid. (Jantsch, B. 1911, 44. 1276)
- Erbium phosphate**, $\text{ErPO}_4 + \text{H}_2\text{O}$.
Precipitate.
- Erbium pyrophosphate**, $\text{ErHP}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$.
Scarcely sol. in boiling H_2O . Slowly sol. in acids.
- Erbium sodium pyrophosphate**, ErNaP_2O_7 .
Precipitate. (Wallroth.)
- Glucinum metaphosphate**, $\text{Gl}(\text{PO}_3)_2$.
Insol. in H_2O and acids. (Bleyer, Z. anorg. 1912, 79. 274.)
- Glucinum orthophosphate, basic**.
 $2\text{Gl}_3\text{P}_2\text{O}_8$, $\text{GlO} + 13\text{H}_2\text{O}$.
Ppt. (Bleyer, Z. anorg. 1912, 79. 268.)
- Glucinum orthophosphate**, $\text{Gl}_3(\text{PO}_4)_2 + 6\text{H}_2\text{O}$.
Precipitate. Insol. in H_2O . Sol. in acids. (Atterberg, Sv. V. A. Handl. 12. 5. 33.)
1 l. 2% $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ dissolves 0.55 g. of the anhydrous salt; 1 l. 10% $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ dissolves 1.725 g. (Sestini, Gazz. ch. it. 20. 313.)
 $+7\text{H}_2\text{O}$. (Atterberg)
- Glucinum hydrogen orthophosphate**, $\text{GlHPO}_4 + 3\text{H}_2\text{O}$.
 $\text{GlH}_4(\text{PO}_4)_2$ hygroscopic. (Bleyer, Z. anorg. 1912, 79. 266.)
Precipitated by alcohol. (Atterberg.)
- Glucinum phosphate**, 5GlO , $2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$.
Ppt. Sol. in H_2O with decomp. (Scheffer.)
 3GlO , P_2O_5 , $3\text{H}_2\text{O} + \text{H}_2\text{O}$. (Sestini, Gazz. ch. it. 20. 313.)
- Glucinum pyrophosphate**, $\text{Gl}_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}$.
Precipitate. (Scheffer)
Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Stromeyer.)
- Glucinum potassium phosphate**, GlKPO_4 .
Insol in H_2O . (Ouvrard, C. R. 110. 1333.)
- Glucinum sodium phosphate**, GlNaPO_4 .
Sl. sol. in cold, easily sol. in hot acids. (Wallroth.) Insol. in acetic acid.
Min. *Beryllonite*.
 GlO , $2\text{Na}_2\text{O}$, P_2O_5 . Insol. in H_2O . (Ouvrard, C. R. 110. 1333.)
- Gold (Auric) sodium pyrophosphate (?)**, $\text{Au}_4(\text{P}_2\text{O}_7)_3$, $2\text{Na}_4\text{P}_2\text{O}_7 + \text{H}_2\text{O}$.
Sol in H_2O . (Persoz.)

Gold sodium pyrophosphate, ammonia,
 $14\text{Au}_2\text{O}_3, 6\text{P}_2\text{O}_5, 3\text{Na}_2\text{O}, 14\text{NH}_3 + 24\text{H}_2\text{O}.$

Insol. in H_2O . (Gibbs, Am Ch. J. 1895, 17. 172.)

Iron (ferrous) trimetaphosphate, $\text{Fe}(\text{P}_3\text{O}_9)_3 + 12\text{H}_2\text{O}$.

Rather sl sol. in cold, more easily in hot H_2O . After ignition sol. in $\text{HCl} + \text{Aq}$ only after long boiling. (Lindbom, Acta Lund 1873. 17.)

Ferrous hexametaphosphate, $\text{Fe}_3\text{P}_6\text{O}_{18}$.

When freshly pptd. is sol. in H_2O , and very sol. in least traces of acids, or $\text{Na}_2\text{P}_6\text{O}_{18} + \text{Aq}$ (Lüder, Z. anorg. 5. 15.)

Ferrous phosphate, basic, $7\text{FeO}, 2\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$.

Min. *Ludlamite*. Sol. in dil. H_2SO_4 or $\text{HCl} + \text{Aq}$. Decomp. by boiling KOH or $\text{NaOH} + \text{Aq}$.

Ferrous orthophosphate, $\text{Fe}_3(\text{PO}_4)_2$.

Insol. in H_2O ; sol. in acids.

Sol. in 1000 pts. H_2O containing more than 1 vol. CO_2 . (Pierre.)

Sol. in an excess of ferrous salts + Aq .

Sol. in 560 pts. H_2O containing $\frac{1}{100}$ pt. $\text{HC}_2\text{H}_3\text{O}_2$. Sol. in 1666 pts. H_2O containing 150 pts. $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$. (Pierre, A. ch. (3) 36. 78.)

Sol. in NH_4 salts + Aq .

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Not pptd. in presence of Na citrate

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ H_2O . (Debray, A. ch. (3) 61. 437.)

+ $8\text{H}_2\text{O}$. Min. *Vivianite*. Easily sol. in HCl or $\text{HNO}_3 + \text{Aq}$. Boiling $\text{KOH} + \text{Aq}$ dissolves out phosphoric acid. Sol. in cold citric acid + Aq . (Bolton, C. N. 37. 14.)

Insol. in H_2O . Sol. in acids. (Evans, C. C. 1897, I. 580.)

Ferrous hydrogen orthophosphate, $\text{FeHPO}_4 + \text{H}_2\text{O}$.

Ppt. (Debray, A. ch. (3) 61. 437.)

Is impure $\text{Fe}_3(\text{PO}_4)_2$. (Erlenmeyer and Heinrichs, A. 194. 176.)

Ferrous tetrahydrogen orthophosphate,
 $\text{FeH}_4(\text{PO}_4)_2 + \text{H}_2\text{O}.$

Easily sol. in H_2O . Not changed by alcohol. (Erlenmeyer and Heinrichs, A. 194. 176.)

Ferrous pyrophosphate.

Ppt. Sol. in an excess of $\text{Na}_2\text{P}_2\text{O}_7$ or $\text{FeSO}_4 + \text{Aq}$. (Schwarzenberg, A. 65. 153.)

Ferric metaphosphate, $\text{Fe}_3(\text{PO}_3)_3$ or $\text{Fe}(\text{PO}_3)_3$.

Insol. in H_2O or dil. acids. Sol. in conc. H_2SO_4 . (Maddrell, Phil. Mag. (3) 30. 322.)

Iron (ferric) orthophosphate, basic, $2\text{Fe}_2\text{O}_3, \text{P}_2\text{O}_5 + x\text{H}_2\text{O}$.

Insol. in NH_4 citrate, sol. in NH_4 tartrate + Aq . (Wittstein.)

+ $3\text{H}_2\text{O}$. Min. *Krauvite*. Easily sol. in $\text{HCl} + \text{Aq}$.

+ $4\text{H}_2\text{O}$. Ppt. (Millot, C. R. 82. 89.)

+ $5\text{H}_2\text{O}$. Min. *Dufrenite*.

+ $12\text{H}_2\text{O}$. Min. *Cacoxene*. Sol. in $\text{HCl} + \text{Aq}$

+ 18, or $24\text{H}_2\text{O}$. Min. *Delvauxite*.

$5\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 14\text{H}_2\text{O}$. Min. *Beraunite*

Sol. in $\text{HCl} + \text{Aq}$.

$3\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$. Min. *Eleonorite*.

Sol. in $\text{HCl} + \text{Aq}$.

Ferric orthophosphate, $\text{Fe}_3(\text{PO}_4)_2 + x\text{H}_2\text{O}$, or $2\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + x\text{H}_2\text{O}$.

+ 4, or $8\text{H}_2\text{O}$. (Pptd. ferric phosphate)

Insol. in H_2O . Sol. in 1500 pts. boiling H_2O . (Bergmann, 1815.) Sol. in pure H_2O when all traces of soluble salts are absent. (Fresenius.) Very sl sol. in, but decomp. by H_2O . (Lachowicz, W. A. B. 101, 2b 374.) For an extended discussion of solubility in and decomposition by H_2O and effect of salts see Cameron and Hurst, (J Am. Chem. Soc. 1904, 26. 888.)

Easily sol. in dil. mineral acids, excepting $\text{H}_3\text{PO}_4 + \text{Aq}$. Insol. in cold $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Wittstein.) 100 cem. cold H_2O containing 10% $\text{HC}_2\text{H}_3\text{O}_2$ dissolve 0.007 g. salt. (Sestini, Gazz. ch. it. 5. 252.) When freshly pptd. easily sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$, or $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. (Berthier.) Easily sol. in tartaric or citric acid + Aq , also in NH_4 salts of those acids, and Na citrate + Aq . (Heydenreich, C. N. 4. 158.) See below.

Sol. in 12,500 pts. H_2O sat. with CO_2 . (Pierre, A. ch. (3) 36. 78.)

Insol. in NH_4 salts + Aq . (Wittstein.) Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ in presence of Na_2HPO_4 ; insol. in hot $\text{Na}_2\text{HPO}_4 + \text{Aq}$; sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Berzelius). NH_4OH , KOH , or $\text{NaOH} + \text{Aq}$ dissolve out H_3PO_4 .

Sol. in ferric salts + Aq , even ferric acetate, but insol. in ferrous acetate + Aq .

Partially sol. in large amt. of $\text{Na}_2\text{CO}_3 + \text{Aq}$. Not pptd. in presence of Na citrate (Spiller.)

Arth (Bull. Soc. (3) 2. 324) obtained a modification of $\text{Fe}_2(\text{PO}_4)_3$, insol. in $\text{HNO}_3 + \text{Aq}$, but sol. in hot conc. $\text{HCl} + \text{Aq}$.

+ $4\text{H}_2\text{O}$. Min. *Strenpite*. Easily sol. in $\text{HCl} + \text{Aq}$; insol. in $\text{HNO}_3 + \text{Aq}$.

+ $5\text{H}_2\text{O}$. Only sl. sol. in H_2O . Slowly sol. in HNO_3 , easily sol. in HCl . (Weinland, Z. anorg. 1913, 84. 361.)

Diammonium citrate + Aq dissolves 4.8% of the P_2O_5 ; triammonium citrate, 5.8% P_2O_5 ; and with an excess of NH_4OH , 21.2% P_2O_5 is dissolved. (Erlenmeyer, B. 14. 1253.)

+ $9\text{H}_2\text{O}$. Dissolves in 35 min. in diammonium citrate + Aq (sp. gr. 1.09); in 55 min. in triammonium citrate + Aq (sp. gr. 1.09); citric acid + Aq ($\frac{1}{4}$ % citric acid) dissolves 17.5% of the P_2O_5 . (Erlenmeyer, l. c.)

Iron (ferric) phosphate, acid, $8\text{Fe}_2\text{O}_3, 9\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$.

Insol. in H_2O . (Rümpler, Z. anal. **12**. 151.)
 $6\text{Fe}_2\text{O}_3, 7\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$.
 $4\text{Fe}_2\text{O}_3, 5\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$.

$2\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$. Ppt. Decomp. by H_2O finally into $\text{Fe}_2(\text{PO}_4)_2$. (Erlenmeyer and Heinrich, A. **194**. 176.)
 $8\text{Fe}_2\text{O}_3, 11\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$. As above. (E. and H.)
 $4\text{Fe}_2\text{O}_3, 7\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$. As above (E. and H.)

$\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$. Insol. in H_2O or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$; sol. in NH_4 citrate, alkali hydrates, or carbonates + Aq . (Winkler.) Slowly decomp. by H_2O . (E. and H.)
 $+10\text{H}_2\text{O}$ (Waime, C. N. **36**. 132.)
 $2\text{Fe}_2\text{O}_3, 5\text{P}_2\text{O}_5 + 17\text{H}_2\text{O}$.

$\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 6\text{H}_2\text{O} = \text{FeH}_2(\text{PO}_4)_3$. Deliquescent. Insol. in H_2O , but decomp. into $\text{Fe}_2(\text{PO}_4)_2$. (E. and H.)
 $+4\text{H}_2\text{O}$. (Hautefeuille and Margottet, C. R. **106**. 135.)

Ferric pyrophosphate, $\text{Fe}_4(\text{P}_2\text{O}_7)_3$.

Two modifications—(a) Sol. in acids, $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$, $\text{FeCl}_3 + \text{Aq}$, $\text{NH}_4\text{OH} + \text{Aq}$, and in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$.
 Insol. in acetic, sulphurous acid, or $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in NH_4 citrate + Aq . (Schwarzenberg, A. **65**. 153.)
 (b) Insol. in dil. acids, $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$, $\text{FeCl}_3 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Gladstone, Chem. Soc (2) **5**. 435.)

Solubility of $\text{Fe}_4(\text{P}_2\text{O}_7)_3$ in $\text{NH}_4\text{OH} + \text{Aq}$ at 0° .

100 g. sat solution contain		100 g sat. solution contain	
G NH_3	G $\text{Fe}_4(\text{P}_2\text{O}_7)_3$	G NH_3	G $\text{Fe}_4(\text{P}_2\text{O}_7)_3$

7.91	14.61		

(Pascal, A. ch. 1909, (8) **16**. 374.)

Insol. in acetone. (Krug and M'Elroy, J. Anal. Appl. Ch. **6**. 184.)
 Insol. in liquid NH_3 . (Franklin, Am. Ch. J. **1898**, **20**. 828.)

Ferroferric orthophosphate, $2\text{Fe}_3(\text{PO}_4)_2, 3(\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5) + 16\text{H}_2\text{O}$.

Ppt. Sol. in $\text{HCl} + \text{Aq}$. (Rammelsberg.)
 $4\text{Fe}_2\text{O}_3, 6\text{FeO}, 5\text{P}_2\text{O}_5 + 40\text{H}_2\text{O}$. Sol. in 40 min. in diammonium citrate + Aq (sp. gr. = 1.09); triammonium citrate + Aq (sp. gr. = 1.09) dissolves 55.7% of the P_2O_5 . (Erlenmeyer, B. **14**. 1253.)

Ferrous lithium phosphate, $\text{Li}_3\text{PO}_4, \text{Fe}_3(\text{PO}_4)_2$.

Min. *Triphylline*. Easily sol. in acids; not wholly decomp. by $\text{KOH} + \text{Aq}$.

Iron (ferrous) manganous phosphate, $\text{Fe}_3(\text{PO}_4)_2, \text{Mn}_3(\text{PO}_4)_2$.

Min. *Triphite*. Easily sol. in $\text{HCl} + \text{Aq}$.
 $5(\text{Mn}, \text{Fe})\text{O}, 2\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$ Min. *Huraulite*. Sol. in acids

Ferric manganous sodium phosphate, $\text{FePO}_4, (\text{Na}_2, \text{Mn})_3\text{PO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Min.—(?)

Ferrous manganous phosphate chloride, $3(\text{Mn}, \text{Fe})_3(\text{PO}_4)_2, \text{MnCl}_2$.

(Deville and Caron)

Ferrous manganous phosphate fluoride, $(\text{Mn}, \text{Fe})_3(\text{PO}_4)_2, (\text{Mn}, \text{Fe})\text{F}_2$.

Min *Triphite, Zwiëlesite* Sol. in $\text{HCl} + \text{Aq}$.
 $3(\text{Mn}, \text{Fe})_3(\text{PO}_4)_2, \text{MnF}_2$. (Deville and Caron, C. R. **47**. 985.)

Ferric potassium phosphate, $2\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{P}_2\text{O}_5$.

Not attacked by boiling H_2O . (Ouvrard, A. ch (6) **16**. 289)

$\text{Fe}_2\text{O}_3, \text{K}_2\text{O}, 2\text{P}_2\text{O}_5$. Insol. in H_2O ; very sl. attacked by acids. (Ouvrard.)

Ferric silver metaphosphate, $2\text{Fe}_2\text{O}_3, 2\text{Ag}_2\text{O}, 5\text{P}_2\text{O}_5$.

(Hautefeuille and Margottet, C. R. **96**. 1142.)

Ferric silver pyrophosphate, $\text{Fe}_2\text{Ag}_5(\text{P}_2\text{O}_7)_3 + 4\text{H}_2\text{O}$.

Ppt. (Pascal, C. R. 1908, **146**. 232)

Ferric sodium phosphate, $2\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{P}_2\text{O}_5$.

Decomp. by H_2O . (Ouvrard.)

Ferrous sodium triphosphate, $\text{FeNa}_3\text{P}_3\text{O}_{10} + 11\frac{1}{2}\text{H}_2\text{O}$.

Stable dry; sol. in HNO_3 ; decomp. in contact with H_2O . (Stange, Z. anorg. **1896**, **12**. 451.)

Ferric sodium hydrogen orthophosphate, $\text{Fe}(\text{PO}_4)_2\text{H}_2\text{Na} + \text{H}_2\text{O}$.

Difficultly sol. in H_2O . Slowly decomp. by boiling with H_2O . Sol. in dil. HCl and dil. HNO_3 . Decomp. by alkalis and alkali carbonates. (Weinland, Z. anorg. **1913**, **84**. 354.)
 $\text{Fe}(\text{PO}_4)_2\text{H}_2\text{Na} + \text{H}_2\text{O}$. Difficultly sol. in H_2O . Decomp. by boiling with H_2O . Sol. in dil. HCl and in dil. HNO_3 . Decomp. by alkalis and alkali carbonates. (Weinland, Z. anorg. **1913**, **84**. 358.)

Ferric sodium pyrophosphate, $\text{Fe}_4(\text{P}_2\text{O}_7)_3, 2\text{Na}_4\text{P}_2\text{O}_7 + 7\text{H}_2\text{O}$.

Slowly but completely sol. in H_2O . Pptd. by alcohol. (Milck, J. B. **1865**. 263.)

Very sol. in H_2O (Fleitmann and Henneberg.)

+5, and $6\text{H}_2\text{O}$ Easily sol in H_2O , especially if warm. (Pahl, J. B. 1873. 229.)

FeNaP_2O_7 . Insol. in H_2O , dil. HCl , or $\text{HNO}_3 + \text{Aq}$; sl. sol in conc. $\text{HCl} + \text{Aq}$; decomp. by conc hot H_2SO_4 without solution. (Jørgensen, J. pr. (2) 16. 342.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329)

$\text{Na}_6\text{Fe}_2(\text{P}_2\text{O}_7)_3 + 9\text{H}_2\text{O}$. Decomp. by H_2O . (Rosenheim, B. 1915, 48. 586.)

$\text{Fe}_4(\text{P}_2\text{O}_7)_3, 5\text{Na}_4\text{P}_2\text{O}_7 + 7\text{H}_2\text{O}$. (Pahl, J. B. 1873. 229)

Iron (ferric) phosphate sulphate, $3\text{Fe}_2(\text{PO}_4)_2, 2\text{Fe}_2(\text{SO}_4)_3, 2\text{Fe}_2\text{O}_3\text{H}_6$.

Min. *Diaochite*

Lanthanum metaphosphate, $\text{La}_2(\text{PO}_3)_6$.

Precipitate. (Frerichs and Smith.)

$\text{La}_2\text{O}_3, 5\text{P}_2\text{O}_5$. Insol in H_2O , dil., or conc. acids. (Johnsson, B. 22. 976)

Lanthanum orthophosphate, LaPO_4 .

Precipitate. (Hermann.)

Insol. in H_2O and acids. (Ouvrard, C. R. 107. 37.)

Lanthanum hydrogen phosphate,

$\text{La}_2\text{H}_3(\text{PO}_4)_3$.

Precipitate. (Frerichs, B. 7. 799.)

Existence is doubtful. (Cleve, B. 11. 910.)

Lanthanum phosphate, acid, $\text{La}_2\text{O}_3, 2\text{P}_2\text{O}_5$.

Precipitate. (Hermann.)

Lanthanum pyrophosphate, $\text{LaHP}_2\text{O}_7 + 3\text{H}_2\text{O}$. (Cleve.)

$\text{La}_2\text{H}_3(\text{P}_2\text{O}_7)_3$. Precipitate. (Frerichs and Smith.)

Does not exist. (Cleve.)

Lanthanum potassium orthophosphate,

$2\text{La}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{P}_2\text{O}_5 = 2\text{LaPO}_4, \text{K}_3\text{PO}_4$.

Insol. in H_2O . (Ouvrard, C. R. 107. 37)

Lanthanum sodium orthophosphate, $\text{La}_2\text{O}_3, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5$.

Insol. in H_2O . (Ouvrard.)

Lanthanum sodium pyrophosphate,

LaNaP_2O_7 .

Insol. in acetic, and dil. cold mineral acids. Sol. in warm dil. acids. (Wallroth.)

Lead dimetaphosphate, PbP_2O_6 .

Ppt. Almost insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$. (Fleitmann, Pogg. 78. 253.)

Lead trimetaphosphate, $\text{Pb}_3(\text{P}_3\text{O}_9)_2 + 3\text{H}_2\text{O}$.

Nearly insol. in H_2O . Less sol. in H_2O than the corresponding Ag salt. (Fleitmann and Henneberg, A. 65. 304.)

Most insol. of the trimetaphosphates. (Lindbom, Acta Lund. 1873. 12.)

Anhydrous salt is insol. in H_2O ; easily sol. in $\text{HNO}_3 + \text{Aq}$. (Lindbom)

Lead tetrametaphosphate, $\text{Pb}_2\text{P}_4\text{O}_{12}$.

Insol in H_2O .

More easily decomp by acids than the other insol metaphosphates. Easily decomp. by alkali hydrosulphides + Aq in the cold. (Fleitmann, Pogg. 78. 353.)

Lead hexametaphosphate, $\text{Pb}_3\text{P}_6\text{O}_{18}$.

Nearly insol. in H_2O ; sol. in acids. (Lüder, Z. anorg. 5. 15.)

Lead orthophosphate, basic, $4\text{PbO}, \text{P}_2\text{O}_5$.

(Gerhardt, A. 72. 85.)

Lead orthophosphate, $\text{Pb}_3(\text{PO}_4)_2$.

Insol. in H_2O ; sol. in $\text{HNO}_3 + \text{Aq}$ Insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

Sl. sol. in H_2O . 1.35×10^{-4} g. is contained in 1 litre of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 604.)

Not hydrolyzed by boiling H_2O . Sol. in boiling $\text{KOH} + \text{Aq}$; insol in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$. (Caven, J. Soc. Chem. Ind. 1897, 16. 30.)

Sol. in 782.9 pts $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ containing 38.94 pts pure $\text{HC}_2\text{H}_3\text{O}_2$ (Bertrand, Monit. Scient. (3) 10. 477.)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Lead hydrogen phosphate, PbHPO_4 .

Insol. in H_2O . Decomp. by H_2SO_4 , or $\text{HCl} + \text{Aq}$. Sol. in HNO_3 , or in KOH or $\text{NaOH} + \text{Aq}$ Insol in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in cold $\text{NH}_4\text{Cl} + \text{Aq}$ (Brett), from which it can be completely precipitated by a great excess of $\text{NH}_4\text{OH} + \text{Aq}$.

More sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ at $18.8-25^\circ$ than in pure H_2O . (Wappen.)

Sol in sat. $\text{NaCl} + \text{Aq}$, but less than PbSO_4 . (Bequerel, C. R. 20. 1524.)

Insol. in Pb salts + Aq .

Not pptd. in presence of Na citrate (Spiller.)

Lead pyrophosphate, $\text{Pb}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$.

Insol. in H_2O . Sol. in HNO_3 , or $\text{KOH} + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$, $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{SO}_2 + \text{Aq}$. (Schwarzenberg, A. 65. 133.) Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Stromeyer.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Lead potassium phosphate, PbKPO_4 .

Decomp. by hot H_2O . (Ouvrard, C. R. 110. 1333.)

Lead sodium phosphate, PbNaPO_4 .

Very sol. in dil. acids. (Ouvrard, C. R. 110. 1333.)

$10\text{PbO}, 8\text{Na}_2\text{O}, 9\text{P}_2\text{O}_5$. (Ouvrard.)

Lead sodium pyrophosphate, $\text{PbNa}_2\text{P}_2\text{O}_7$.

Insol. in hot H_2O . (Gerhardt, A. ch. (3) 22. 506.)

Lead triphosphate sodium pyrophosphate, $\text{Pb}_5\text{Na}_4\text{P}_5\text{O}_{27} + 10\text{H}_2\text{O}$.

Sol. in HNO_3 after melting. (Stange, Z. anorg. 1896, 12. 459.)

Lead phosphate chloride, 2PbHPO_4 , PbCl_2 .

Insol. in boiling H_2O , sol. in dil. HNO_3 + Aq. (Gerhardt, A. ch. (3) 22. 505.)

$2\text{Pb}_3(\text{PO}_4)_2$, PbCl_2 . Ppt. (Heintz, Pogg. 73. 119.)

$3\text{Pb}_3(\text{PO}_4)_2$, PbCl_2 . Min. *Pyromorphite*. Sol. in HNO_3 , and KOH + Aq.

Sl. sol. in cold citric acid + Aq. (Bolton, C. N. 37. 14.)

+ H_2O . Insol. in H_2O . Sol. in dil. HNO_3 + Aq. (Heintz.)

Lithium metaphosphate, LiPO_3 .

Insol. in boiling H_2O . Scarcely sol. in acetic acid. Easily sol. in mineral acids. (Merling, Z. anal. 1879, 18. 565.)

Lithium tetrametaphosphate, $\text{Li}_4\text{P}_4\text{O}_{12} + 4\text{H}_2\text{O}$.

Very sol. in H_2O . (Warschauer, Z. anorg. 1903, 36. 180.)

Lithium orthophosphate, Li_3PO_4 .

Very slightly sol. in H_2O .

Sol. in 2539 pts. pure H_2O and 3920 pts. ammoniacal H_2O ; much more readily in H_2O containing NH_4 salts. Easily sol. in HCl + Aq. or HNO_3 + Aq. (Mayer, A. 98. 193.) Easily sol. in carbonic acid water. (Troost) Sol. in dil. acids or acetic acid. (de Schulten, Bull. Soc. (3) 1. 479.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

+ $\frac{1}{2}\text{H}_2\text{O}$, or H_2O .

Lithium hydrogen phosphate, Li_2HPO_4 .

Nearly insol. in H_2O . (Gmelin.) Sol. in 833 pts. H_2O at 12° . (Rammelsberg.)

$\text{Li}_2\text{H}(\text{PO}_4)_2 + \text{H}_2\text{O}$. Sol. in 200 pts. H_2O . (Rammelsberg.)

Lithium dihydrogen phosphate, LiH_2PO_4 .

Deliquescent, and very sol. in H_2O . (Rammelsberg.)

Heptalithium dihydrogen phosphate,

$\text{Li}_7\text{H}_2(\text{PO}_4)_3$.

+ $1\text{H}_2\text{O}$, or $2\text{H}_2\text{O}$. Sol. in H_2O . (Rammelsberg.)

Lithium pentahydrogen phosphate,

$\text{LiH}_5(\text{PO}_4)_2 + \text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O .

Lithium pyrophosphate, $\text{Li}_4\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$.

(Rammelsberg, B. A. B. 1883. 21.)

Lithium manganous phosphate, Li_3PO_4 , $\text{Mn}_2(\text{PO}_4)_2$

Min. *Lithiophilite*.

Lithium potassium metaphosphate, Li_2O , $2\text{K}_2\text{O}$, $3\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$.

As NH_4 comp. (Tammann, J. pr. 1892, (2) 45. 443.)

Lithium potassium pyrophosphate, $\text{Li}_3\text{KP}_2\text{O}_7$. (Kraut, A. 1876, 182. 170.)

Lithium sodium phosphate, $3\text{Li}_2\text{O}$, Na_2O , P_2O_5 .

Insol. in H_2O . Sol. in dil. acids (Ouvrard, C. R. 110. 1333.)

$2\text{Li}_2\text{O}$, Na_2O , $2\text{P}_2\text{O}_5$. As above (Ouvrard.)

Lithium sodium pyrophosphate, Li_2O , Na_2O , P_2O_5 .

$5\text{Li}_2\text{O}$, Na_2O , $3\text{P}_2\text{O}_5$. $4\text{Li}_2\text{O}$, $6\text{Na}_2\text{O}$, $5\text{P}_2\text{O}_5$. (Kraut, A. 1876, 182. 168.)

Magnesium metaphosphate, $\text{Mg}(\text{PO}_3)_2$.

Insol. in H_2O or dil. acids, but sol. in H_2SO_4 + Aq. (Maddrell, A. 61. 62.)

Not decomp. by very long digestion with alkali carbonates, or orthophosphates + Aq. (Fleitmann.)

Magnesium dimetaphosphate, $\text{Mg}_2(\text{P}_2\text{O}_6)_2 + 9\text{H}_2\text{O}$.

Insol. in H_2O ; decomp. by acids. (Fleitmann, Pogg. 78. 259.)

Magnesium trimetaphosphate, $\text{Mg}_3(\text{P}_3\text{O}_9)_2$.

Sl. sol. in cold H_2O , more easily in hot H_2O . When ignited, insol. in boiling HCl + Aq. (Lindbom.)

Cryst. with 12, or $15\text{H}_2\text{O}$.

Magnesium tetrametaphosphate, $\text{Mg}_2\text{P}_4\text{O}_{12}$.

Insol. in H_2O , somewhat sol. in HCl + Aq. More easily sol. in HNO_3 + Aq, especially easily sol. in conc. H_2SO_4 . (Glatzel, Dissert. 1880.)

+ $10\text{H}_2\text{O}$. Sol. in 70 pts. H_2O . (Glatzel.)

Magnesium orthophosphate, $\text{Mg}_3(\text{PO}_4)_2$, and +5, or $7\text{H}_2\text{O}$.

1 litre H_2O dissolves 0.1 g. ignited $\text{Mg}_3(\text{PO}_4)_2$ in 7 days, but 0.205 g. if freshly precipitated. (Völkner, J. B. 1862. 131.)

1 l. H_2O with 2 g. NaCl dissolves 75.8 mg.; 1 l. H_2O with 3 g. NaNO_3 dissolves 61.9 mg.

$\text{Mg}_3(\text{PO}_4)_2$. (Liebig, A. 106. 185.)

Easily sol. in acids, except in acetic acid. (Schaffner, A. 50. 145.)

Easily sol. in H_2O in presence of alkali salts.

+6½H₂O. Sol. in 30 min. in diammonium citrate+Aq (sp. gr.=1.09); triammonium citrate+Aq (sp. gr.=1.09) dissolves 37.5% of the P₂O₅. (Erlenmeyer, B. 14. 1253.)

+20H₂O. Sol. in 10 min in diammonium citrate+Aq (sp. gr.=1.09); triammonium citrate+Aq (sp. gr.=1.09) dissolves 23.2% of the P₂O₅; sol. in 15 min. in ¼% citric acid +Aq. (Erlenmeyer, l. c.)

Insol in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 828)

Magnesium hydrogen phosphate, MgHPO₄+7H₂O.

Sol. in 322 pts cold H₂O in several days. If heated to 40° becomes milky, and separates a precipitate out at 100° of same salt, so that solution at 100° contains only 1 pt. salt in 498 pts H₂O. Much more sol. in H₂O containing traces of acids, even dil. oxalic or acetic acids. (Graham, Phil. Mag Ann. 2. 20) Easily sol in H₂SO₃+Aq. (Gerland, J. pr. (2) 4. 127)

Sol. in aqueous solution of Mg salts, but insol. in Na₂HPO₄+Aq (Rose.) Sol in sodium citrate+Aq. (Spiller) When freshly precipitated it is sol in hot NH₄Cl+Aq, and NH₄OH+Aq does not completely reprecipitate it; less sol. in NH₄NO₃+Aq. (Brett, Phil. Mag (3) 10. 96.) Insol. in alcohol (Berzelius)

For solubility in H₂PO₄, see under MgO.

+½H₂O. (Debray.)

+H₂O. Easily sol. in dil. acids. (de Schulten, C. R. 100. 263)

+3H₂O. Sl. sol in H₂O, easily in acids. (Stoklasa, Z. anorg. 3. 67.)

+4½H₂O. (Bergmann)

+6H₂O. (Debray.)

Magnesium tetrahydrogen phosphate,

MgH₄(PO₄)₂.

Not hygroscopic. Sol. in 5 pts. H₂O without decomp. (Stoklasa, Z. anorg. 3. 67.)

+2H₂O. Not hygroscopic. Sol. in H₂O without decomp. (Stoklasa, Z. anorg. 1. 307.)

Decomp. by alcohol into MgHPO₄+3H₂O.

Magnesium pyrophosphate, Mg₂P₂O₇.

Nearly insol. in H₂O; readily sol. in HCl or HNO₃+Aq. (Fresenius.)

+3H₂O. Sl. sol. in H₂O, easily in HCl or HNO₃+Aq; sol. in H₂SO₃+Aq, and Na₄P₂O₇+Aq. (Schwarzenberg.)

Sol. in MgSO₄+Aq, and (NH₄)₂CO₃+Aq.

Magnesium tetraphosphate, Mg₃P₄O₁₃.

Insol. in H₂O. (Fleitmann and Henneberg, A. 65. 331.)

Magnesium potassium dimetaphosphate,

K₂Mg₂(P₂O₆)₃.

Very sol. in dil. acids. (Ouvrard, C. R. 1888, 106. 1729.)

+4H₂O. Sol. in 10.2 pts. H₂O. (Glatzel.)

Magnesium potassium orthophosphate,

MgKPO₄

Sl. sol. in H₂O. Decomp. by H₂O. Easily sol in acids.

+6H₂O.

2MgO, K₂O, 3P₂O₅. Insol. in H₂O; sol. in dil. HCl+Aq. (Ouvrard, C. R. 106. 1729.)

Mg₂HK(PO₄)₂+15H₂O (Haushofer)

Magnesium rubidium orthophosphate,

RbMgPO₄+6H₂O.

Easily sol. in warm dil. HCl+Aq

Not decomp by boiling H₂O. (Erdmann, A. 1897, 294. 73.)

Magnesium sodium triphosphate,

MgNa₃P₃O₁₀+13H₂O.

Decomp. in the air. (Stange, Z. anorg. 1896, 12. 454.)

Magnesium sodium metaphosphate, 3MgO,

Na₂O, 4P₂O₅.

Insol. in H₂O or H₂PO₄+Aq. Scarcely sol. in HCl+Aq, or aqua regia. Not decomp by (NH₄)₂CO₃+Aq. Sol in conc. H₂SO₄. (Maddrell, A. 61. 53)

Magnesium sodium dimetaphosphate,

MgNa₂(P₂O₆)₂+4H₂O.

Sol in 25 pts H₂O (Glatzel, Dissert. 1880.)

Magnesium sodium trimetaphosphate,

MgNa₄(P₃O₉)₂+5H₂O.

Sl. sol. in H₂O. After ignition is insol. in H₂O. (Lindbom.)

Magnesium sodium phosphate, 10MgO,

8Na₂O, 9P₂O₅

Insol. in H₂O; easily sol. in dil. acids. (Ouvrard, C. R. 106. 1729.)

Magnesium sodium orthophosphate,

MgNaPO₄.

Insol. in H₂O. (Rose.)

+9H₂O. (Schoecker and Violet, A. 140. 232.)

MgO, 2Na₂O, P₂O₅. Insol. in H₂O. (Ouvrard.)

3MgO, 3Na₂O, 2P₂O₅. Insol. in H₂O. (Ouvrard.)

Magnesium sodium pyrophosphate, basic (?)

Precipitate; sl. sol in H₂O. Easily in HCl+Aq, HNO₃+Aq, and Na₄P₂O₇+Aq. (Baer, Pogg. 75. 168.)

Sol. in (NH₄)₂CO₃+Aq, and in MgSO₄+Aq.

Insol. in alcohol.

Magnesium phosphate chloride, Mg₃(PO₄)₂,

MgCl₂.

(Deville and Caron, A. ch. (3) 67. 455.)

Magnesium pyrophosphate nitrogen dioxide, $\text{Mg}_2\text{P}_2\text{O}_7$, H_2O , NO_2 .

Scarcely sol in water. (Luck, Z. anal. 13. 255.)

Magnesium phosphate fluoride, $\text{Mg}_3(\text{PO}_4)_2$, MgF_2 .

Min. *Wagnerite*. Slowly sol. in hot HNO_3 , and H_2SO_4 .

Magnesium phosphate calcium fluoride, $2\text{Mg}_3(\text{PO}_4)_2$, CaF_2 .

Min. *Kjerulfite*.

Manganous dimetaphosphate, $\text{Mn}_2(\text{P}_2\text{O}_6)_2$.

Anhydrous Insol in H_2O and dil acids (Fleitmann) Sol. in conc. H_2SO_4 . (Madrell) Scarcely attacked by warm $\text{Na}_2\text{S} + \text{Aq}$, and not much more by $(\text{NH}_4)_2\text{S} + \text{Aq}$ Decomp. by $\text{Na}_2\text{CO}_3 + \text{Aq}$ $+ 8\text{H}_2\text{O}$. Insol. in H_2O and dil acids. (Fleitmann, Pogg. 78. 257.)

Manganous trimetaphosphate, $\text{Mn}_3(\text{P}_3\text{O}_{10})_2 + 11\text{H}_2\text{O}$.

Difficultly sol in cold or warm H_2O More easily sol. in cold, very easily in warm $\text{HCl} + \text{Aq}$. When ignited, is insol. in acids, even aqua regia (Lindbom.)

Manganous hexametaphosphate.

Sol. in sodium hexametaphosphate $+ \text{Aq}$. (Rose, Pogg. 76. 4)

$\text{Mn}_3\text{P}_6\text{O}_{18}$. Nearly insol. in H_2O ; easily sol. in acids. (Lüder, Z. anorg. 5. 15.)

Manganic metaphosphate, $\text{Mn}(\text{PO}_3)_3$.

Insol. in H_2O or acids; decomp. by alkalis. (Schjerning, J. pr. (2) 45. 515.) Insol. in H_2O ; sol. in HCl , decomp. by alkalis $+ \text{Aq}$. (Barbier, C. R. 1902, 135. 1055.)

$+ \text{H}_2\text{O}$. Insol. in H_2O or acids, except $\text{HCl} + \text{Aq}$. Sl. decomp. by boiling with H_2SO_4 . (Hermann, Pogg. 74. 303.)

Manganous tetrametaphosphate, $\text{Mn}_2(\text{PO}_2)_4$.

Not attacked by acids. (Glatzel, Dissert. 1880.)

$+ 10\text{H}_2\text{O}$. Sol. only in boiling conc H_2SO_4 . (Glatzel.)

Manganous dekametaphosphate, 5MnO , $5\text{P}_2\text{O}_5 + 12\text{H}_2\text{O}$.

Ppt. (Tammann, J. pr. 1892, (2) 45. 450)

Manganous orthophosphate, $\text{Mn}_3(\text{PO}_4)_2$.

$+ \text{H}_2\text{O}$. (Debray)

$+ 3\text{H}_2\text{O}$. Sol in 20 min. in diammonium citrate $+ \text{Aq}$ (sp. gr. = 1.09); triammonium citrate $+ \text{Aq}$ (sp. gr. = 1.09) dissolves 30.2% of the P_2O_5 . (Erlenmeyer, B. 14. 1253.)

$+ 4\frac{1}{2} - 5\frac{1}{2}\text{H}_2\text{O}$. Efflorescent. (Erlenmeyer and Heinrich, A. 190. 208)

$+ 7\text{H}_2\text{O}$ Very sl sol. in H_2O (Berzelius.) Easily sol. in mineral acids; sol. in $\text{HC}_2\text{H}_3\text{O}_2$

$+ \text{Aq}$ Easily sol in $\text{SO}_2 + \text{Aq}$ (Gerland, J. pr. (2) 4. 97.)

Somewhat sol in boiling $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, but deposited on cooling (Berzelius)

Partly sol in cold NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett)

Sol. in cold or hot solutions of ammonium sulphate or succinate. (Wittstein)

Sl sol. in Mn salts $+ \text{Aq}$ (Rose, Pogg. 76. 25.)

Insol. in alcohol.

Sol in 10 min in diammonium citrate $+ \text{Aq}$ (sp. gr. = 1.09); triammonium citrate $+ \text{Aq}$ (sp. gr. = 1.09) dissolves 53% of the P_2O_5 . (Erlenmeyer, B. 14. 1253)

Manganous dihydrogen orthophosphate, $\text{MnHPO}_4 + 3\text{H}_2\text{O}$

Sl. sol. in H_2O . Solution decomp. at 100° . (Debray.) Slowly decomp. by cold H_2O into $\text{Mn}_3(\text{PO}_4)_2$. (Erlenmeyer and Heinrich, A. 190. 203.)

Easily sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Gerland.)

Sl. sol. in $\text{HC}_2\text{H}_3\text{O}_2$, easily in conc. mineral acids. (Heintz.) Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, from which it is reprecipitated on boiling. Decomp. by boiling $\text{KOH} + \text{Aq}$.

Insol in alcohol.

$\text{Mn}_3(\text{PO}_4)_2$, $2\text{MnHPO}_4 + 4\text{H}_2\text{O}$. (de Schulten, C. C. 1905, I. 188.)

Manganous tetrahydrogen phosphate, $\text{MnH}_4(\text{PO}_4)_2 + 2\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O , with decomp. to MnHPO_4 . (Erlenmeyer and Heinrich, A. 190. 208.)

Not decomp. by H_2O . (Otto, C. C. 1887. 1563)

H_2O decomp. it into MnHPO_4 and H_3PO_4 containing some dissolved salt. The less H_2O used, the more MnHPO_4 separates. The acid filtrate separates MnHPO_4 on boiling. At 0° the decomp. increases in proportion to the amt. of salt, but 1 g. of the salt is unchanged in 100 g. H_2O . With less than 20 g. of salt to 100 g. H_2O the decomp. is analogous to that of $\text{CaH}_4(\text{PO}_4)_2$, but with larger amts. of salt it is the opposite, becoming less with increasing amts. of the salt. (Viard, C. R. 1899, 129. 412.)

Alcohol dissolves out H_3PO_4 . (Heintz.)

Pentamanganous dihydrogen phosphate,

$\text{Mn}_5\text{H}_2(\text{PO}_4)_4 + 4\text{H}_2\text{O}$.

Not decomp. by boiling H_2O . (Erlenmeyer and Heinrich, A. 190. 208.)

Manganic orthophosphate, basic, $\text{Mn}_2\text{P}_2\text{O}_6 + \text{H}_2\text{O}$.

Sl. sol. in H_2O .

Manganic orthophosphate, $\text{MnPO}_4 + \text{H}_2\text{O}$.

Sol. in acids (Christensen, J. pr. (2) 28. 1)

Manganous pyrophosphate, $\text{Mn}_2\text{P}_2\text{O}_7$.

Anhydrous (Lewis, Sill Am. J. (3) 14. 281)

+ H_2O
+ $3\text{H}_2\text{O}$. Insol. in H_2O . Insol. in $\text{MnSO}_4 + \text{Aq}$, but sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Rose)

Difficultly sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$, but easily sol. in $\text{K}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Pahl.) Decomp. by $\text{KOH} + \text{Aq}$. Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Schwarzenberg)

Insol. in acetone. (Naumann, B. 1904, 37. 4329)

Manganous hydrogen pyrophosphate,

Sol. in H_2O . (Pahl)

Manganic pyrophosphate,

Sol. in H_2SO_4 , and H_3PO_4 . (Auger, C R. 1901, 133. 95.)

MnHP_2O_7 . Insol. in H_2O ; very sl. attacked by dil. $\text{HCl} + \text{Aq}$, easily by conc. Sol. in conc. H_2SO_4 (Schjerning, J. pr. (2) 45. 515.)

Manganous potassium dimetaphosphate,

Sol. in 95 pts H_2O . When ignited is not attacked by acids. (Glatzel, Dissert. 1880.)

Manganous potassium orthophosphate,

Insol. in H_2O , easily sol. in dil. acids (Ouvrard)

Manganic potassium pyrophosphate,

+ $5\text{H}_2\text{O}$. Sl. sol. in cold H_2O .

+ $3\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Rosenheim, B. 1915, 48. 584.)

Manganous potassium phosphate, $\text{MnK}_2\text{P}_2\text{O}_7$.

Insol. in H_2O ; sol. in dil. acids. (Ouvrard, C. R. 106. 1729.)

+ $8\text{H}_2\text{O}$. Sl. sol. in H_2O . (Pahl.)

$\text{Mn}_2\text{P}_2\text{O}_7$, $2\text{K}_4\text{P}_2\text{O}_7 + 10\text{H}_2\text{O}$. Difficultly sol. in H_2O . (Pahl)

Manganic potassium pyrophosphate,

Insol. in H_2O . Decomp. by acids and bases. (Schjerning.)

Manganic silver pyrophosphate,

Almost insol. in H_2O . (Rosenheim, B. 1915, 48. 585.)

Manganous sodium triphosphate,

Sl. sol. in H_2O ; the melt obtained by heating the salt is readily sol. in H_2SO_4 . (Stange, Z. anorg. 1896, 12. 455)

Manganous sodium dimetaphosphate,

Easily sol. in boiling H_2SO_4 , but not attacked by acids after boiling (Glatzel, Dissert. 1880)

Manganous sodium trimetaphosphate,

Sol. in H_2O . (Fleitmann and Henneberg.)

$\text{MnNa}(\text{PO}_3)_3$ Insol. in H_2O , dil. acids, or alkalies. (Schjerning, J. pr. (2) 45. 515.)

Manganous sodium octometaphosphate,

Insol. in acids except conc. H_2SO_4 . (Tammann, J. pr. 1892, (2) 45. 469)

+ $5\text{H}_2\text{O}$. Almost insol. in cold H_2O .

Decomp. by boiling H_2O with separation of Mn_2O_3 (Rosenheim, B. 1915, 48. 584)

Manganous sodium orthophosphate,

Insol. in H_2O . (Ouvrard, C. R. 106. 1729)

MnO , $2\text{Na}_2\text{O}$, P_2O_5 . As above.

Manganous sodium pyrophosphate,

Insol. in H_2O ; easily sol. in dil. acids. (Wallroth.)

+ $4\frac{1}{2}\text{H}_2\text{O}$. Very sl. sol. in H_2O . (Pahl.)

$3\text{Mn}_2\text{P}_2\text{O}_7$, $2\text{Na}_4\text{P}_2\text{O}_7 + 24\text{H}_2\text{O}$. Very sl. sol. in H_2O . (Pahl.)

Manganic sodium pyrophosphate, $\text{MnNaP}_2\text{O}_7 + \text{H}_2\text{O}$.

(Christensen, J. pr (2) 28. 1.)

Manganic dipyrophosphate ammonia,

Insol. in H_2O .

Decomp. by HCl and by alkalies. (Barbier, C. R. 1902, 135. 1109.)

Manganous phosphate chloride, $\text{Mn}_2(\text{PO}_4)_2$, MnCl_2 .

Insol. in H_2O . (Deville and Caron, A. ch. (3) 67. 459.)

$3\text{Mn}_3(\text{PO}_4)_2$, MnCl_2 . Insol. in H_2O . (Deville and Caron.)

Mercurous hexametaphosphate (?).

Ppt. Sol. in sodium hexametaphosphate + Aq . (Rose)

$\text{Hg}_6\text{P}_6\text{O}_{18}$. Insol. in H_2O ; very sl. sol. in acids. (Lüdt, Z. anorg 5. 15.)

Moderately sol. in H_2O when freshly pptd. More sol. in acids than the mercurous salt. (Lüdt.)

Mercurous orthophosphate, $(\text{Hg}_2)_2(\text{PO}_4)_2$.

Ppt. Decomp. by boiling with H_2O (Gerhardt.)

Sol. in $\text{HNO}_3 + \text{Aq.}$ Sol. in $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq.}$ Insol. in $\text{H}_3\text{PO}_4 + \text{Aq.}$

Mercuric orthophosphate, $\text{Hg}_2(\text{PO}_4)_2$.

Insol. in H_2O . Sl. sol. in hot H_2O , crystallizing out on cooling (Haack, A. 262. 185). Slowly sol. in cold dil., quickly in hot dil. or cold conc. $\text{HCl} + \text{Aq.}$ Less easily sol. in $\text{HNO}_3 + \text{Aq.}$ Sol. in $\text{H}_3\text{PO}_4 + \text{Aq.}$ (Berzelius) Insol. in $\text{H}_3\text{PO}_4 + \text{Aq.}$ (Haack) Decomp. by $\text{NaCl} + \text{Aq.}$ into insol. HgCl_2 , $3\text{Hg}_2\text{O}$, but sol. in $\text{NaCl} + \text{Aq.}$ containing HNO_3 (Haack)

Sol. in 6 pts. NH_4Cl in aqueous solution by heating. (Trommsdorff.)

Sol. in $(\text{NH}_4)_2\text{CO}_3$, $(\text{NH}_4)_2\text{SO}_4$, or $\text{NH}_4\text{NO}_3 + \text{Aq.}$ (Wittstein.)

Insol. in alcohol.

Mercuromercuric orthophosphate, $7\text{Hg}_2\text{O}$,

14HgO , $2\text{P}_2\text{O}_5 + 20\text{H}_2\text{O}$

(Brooks, Pogg. 66. 63.)

Mercurous pyrophosphate, $\text{Hg}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$.

Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq.}$ when recently pptd. Insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq.}$ when heated to 100° . Sol. in $\text{HNO}_3 + \text{Aq.}$ Decomp. by $\text{HCl} + \text{Aq.}$ (Schwarzenberg, A. 65. 133.)

Mercuric pyrophosphate, $\text{Hg}_2\text{P}_2\text{O}_7$.

Sol. in acids; insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq.}$ after being heated to 100° . Sol. in $\text{NaCl} + \text{Aq.}$; quickly decomp. by $\text{NaOH} + \text{Aq.}$ and $\text{Na}_2\text{HPO}_4 + \text{Aq.}$

Sol. in 6 pts. $\text{NH}_4\text{Cl} + \text{Aq.}$ (Trommsdorff.) Sol. in NH_4NO_3 , $(\text{NH}_4)_2\text{SO}_4$, and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$; also in $\text{KI} + \text{Aq.}$

Mercurous silver orthophosphate, AgHg_2PO_4 .

Sol. in HNO_3 . (Jacobsen, Bull. Soc. 1909, (4) 5. 949.)

Molybdenum phosphate, $\text{Mo}_2(\text{PO}_4)_2$ (?).

Insol. in H_2O . Sol. in $\text{MoCl}_2 + \text{Aq.}$

Molybdenum sodium pyrophosphate,

$\text{Na}(\text{MoP}_2\text{O}_7) + 12\text{H}_2\text{O}$.

Ppt. (Rosenheim, B. 1915, 48. 589.)

Nickel dimetaphosphate, NiP_2O_6 .

Insol. in H_2O or dil. acids. Sol. in conc. H_2SO_4 . Not decomp. by boiling alkali carbonates or sulphides + Aq. (Maddrell, A. 61. 58.)

+ $4\text{H}_2\text{O}$. Sol. in cold acids. (Glatzel, Dissert. 1880.)

Nickel tetrametaphosphate, $\text{Ni}_2\text{P}_4\text{O}_{12}$.

Insol. in HCl . Sol. in conc. HNO_3 and especially sol. in H_2SO_4 on boiling. (Glatzel.)

Nickel tetrametaphosphate, $\text{Ni}_2\text{P}_4\text{O}_{12} + 12\text{H}_2\text{O}$.

Easily sol. in acids (Glatzel)

Nickel orthophosphate, $\text{Ni}_3(\text{PO}_4)_2 + 7\text{H}_2\text{O}$.

Insol. in H_2O Sol. in acids (Rammelsberg, Pogg. 68. 383)

Sol. in Ni salts + Aq. (Rose, Pogg. 76. 25.)

Insol. in $\text{Na}_2\text{HPO}_4 + \text{Aq.}$ (Tupputi, 1811.)

Very sl. sol. in hot $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq.}$

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790), ethylacetate. (Naumann, B. 1910, 43. 314)

Nickel pyrophosphate, $\text{Ni}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in mineral acids, $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq.}$ and $\text{NH}_4\text{OH} + \text{Aq.}$ Not pptd. from $\text{Ni}_2\text{P}_2\text{O}_7 + \text{Aq.}$ by alcohol. (Schwarzenberg, A. 65. 158.)

Nickel potassium dimetaphosphate,

$\text{NiK}_2\text{P}_4\text{O}_{12} + 6\text{H}_2\text{O}$.

Sol. in 130 pts. H_2O (Glatzel.)

Nickel potassium orthophosphate, NiKPO_4 .

Insol. in H_2O ; sol. in dil. acids. (Ouvrard, R. 106. 1729.)

3NiO , $3\text{K}_2\text{O}$, $2\text{P}_2\text{O}_5$. As above.

Nickel sodium triphosphate, $\text{Na}_3\text{NiP}_3\text{O}_{10} + 12\text{H}_2\text{O}$.

Very sol. in H_2O ; decomp. in Aq. solution. (Schwarz, Z. anorg. 1895, 9. 261.)

Nickel sodium metaphosphate, $3\text{Ni}(\text{PO}_3)_2$, NaPO_3 .

Insol. in H_2O and dil. acids. Sol. in conc. H_2SO_4 . (Maddrell, A. 61. 56.)

$\text{NiNa}(\text{PO}_3)_3 + 8\text{H}_2\text{O}$. Easily sol. in H_2O . (Lindbom.)

Nickel sodium dimetaphosphate, $\text{NiNa}_2\text{P}_4\text{O}_{12} + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O . Moderately sol. in acids. (Glatzel, Dissert. 1880.)

Nickel sodium trimetaphosphate,

$\text{Ni}_2\text{Na}_2(\text{P}_3\text{O}_9)_2 + 9\text{H}_2\text{O}$.

1 l. H_2O dissolves 60.6 g. at 20° . (Tammann, J. pr. 1892, (2) 45. 426.)

$\text{Na}_3\text{NiP}_3\text{O}_{10} + 12\text{H}_2\text{O}$. Insol. and not decomp. by H_2O Sol. in acids (Schwarz, Z. anorg. 1895, 9. 261.)

Nickel sodium octometaphosphate,

$\text{Na}_2\text{Ni}_3(\text{PO}_3)_8$.

(Tammann, J. pr. 1892, (2) 45. 469.)

Nickel sodium orthophosphate, $\text{NiNaPO}_4 + 7\text{H}_2\text{O}$

Ppt. (Debray, C. R. 59. 40.)

NiO , $2\text{Na}_2\text{O}$, P_2O_5 . Insol. in H_2O . Easily sol. in dil. acids. (Ouvrard.)

Nickel sodium pyrophosphate,

Insol. in H_2O . Moderately sol. in acids. (Wallroth.)

Osmium phosphate (?)

Sl. sol in H_2O ; sol in $\text{HNO}_3 + \text{Aq}$ (Berzelius.)

Palladium orthophosphate (?)

Ppt.

Phosphorus phosphate, $4\text{P}_4\text{O}$, $3\text{P}_2\text{O}_5$ (?)

Decomp spontaneously. Sol. in H_2O and alcohol when fresh; insol. in ether. (le Verrier, A. 27. 167, Reinitzer, B. 14. 1884)

Platinum phosphate, PtP_2O_7 .

Insol. in H_2O , acids and alkalies. Decomp. by fusing with potassium carbonate. (Barnett, C. N. 1895, 71. 256.)

Potassium monometaphosphate, KPC_3 .

Nearly insol in H_2O ; sol. in weak acids, even in acetic acid. (Maddrell, A. 61. 62.)

Insol. in H_2O and weak acids (Fleitmann, Pogg. 78. 250.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829)

Potassium dimetaphosphate, $\text{K}_2\text{P}_2\text{O}_6 + \text{H}_2\text{O}$.

Sol. in 1.2 pts. cold H_2O , but not more in hot H_2O . (Fleitmann, Pogg. 78. 250.)

Potassium trimetaphosphate, $\text{K}_3\text{P}_3\text{O}_9$.

Very sol. in cold H_2O before it is fused. (Lindbom, Acta Lund. 1873. 14.)

Potassium orthophosphate, K_3PO_4 .

Not deliquescent. Very sol. in H_2O (Graham, Pogg. 32. 47.)

Very sl. sol in cold, easily in hot H_2O (Darracq.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25° .

In 1000 g. of the solution, mols.	
K	PO_4
9.14	3.13
8.84	3.22
8.42	3.44
7.52	3.78
6.90	4.15
6.88	4.12

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 103.)

Insol. in alcohol.

Potassium hydrogen orthophosphate,

Very unstable; very sol. in H_2O with decomp. Identical with the substance de-

scribed as dipotassium phosphate by Berzelius. (Staudenmaier, Z. anorg. 1894, 5. 389.)

$3\text{K}_2\text{HPO}_4, \text{KH}_2\text{PO}_4 + 2\text{H}_2\text{O}$. Very unstable; very sol. in H_2O with decomp (Staudenmaier.)

Potassium hydrogen orthophosphate,

Deliquescent. Very sol. in H_2O and alcohol.

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25° .

In 1000 g. of the solution, mols	
K	PO_4
6.80	4.08
6.80	4.05
6.76	3.96
6.50	3.81
6.16	3.61
5.24	3.25
4.42	2.94

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 103.)

Potassium dihydrogen phosphate, KH_2PO_4 .

Deliquescent. Easily sol. in H_2O . (Vauquelin, A. ch. 74. 96.)

1 l. sat. aq. solution at 7° contains 249.9 g. KH_2PO_4 . (Muthmann and Kuntze, Z. Kryst. Min. 1894, 23. 308.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25° .

In 1000 g. of the solution, mols	
K	PO_4
2.90	2.36

38.5	18.17
84	58.42
110	77.53
126 5	92.26

(Parravano and Mieli.)

Potassium *pyrophosphate*, $\text{K}_4\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O

Precipitated from aqueous solution by alcohol. (Schwarzenberg, A. 65. 136.)

Insol. in methyl acetate. (Naumann, B 1909, 42. 3790)

Potassium hydrogen *pyrophosphate*, $\text{K}_2\text{H}_2\text{P}_2\text{O}_7$

Very deliquescent, and sol. in H_2O . Insol in alcohol (Schwarzenberg)

Potassium silver *metaphosphate*, $\text{K}_2\text{Ag}_4(\text{PO}_3)_6 + \text{H}_2\text{O}$.

(Tammann, J pr. 1892, (2) 45. 417)

Potassium sodium *dimetaphosphate*, $\text{KNaP}_2\text{O}_6 + \text{H}_2\text{O}$.

Sol. in 24 pts. H_2O . (Fleitmann, Pogg. 78. 339.)

Potassium sodium phosphate, $\text{KNaHPO}_4 + 7\text{H}_2\text{O}$.

Not efflorescent. Sol. in H_2O .

Tripotassium trisodium *hexahydrogen phosphate*, $\text{H}_3\text{Na}_3\text{K}_3(\text{PO}_4)_4 + 22\text{H}_2\text{O}$.

Sol. in H_2O . (Filhol and Senderens, C. R. 93. 388.)

Potassium sodium *pyrophosphate*, $\text{K}_2\text{Na}_2\text{P}_2\text{O}_7 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Schwarzenberg, A. 65. 140)

Potassium strontium *dimetaphosphate*, $\text{K}_2\text{Sr}(\text{P}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$

As the KBa comp. (Glatzel, Dissert. 1880.)

Potassium strontium *hecametaphosphate*, $\text{K}_2\text{Sr}_2\text{P}_{10}\text{O}_{18}$

(Tammann, J. pr. 1892, (2) 45. 435.)

Potassium strontium *orthophosphate*, KSrPO_4

Insol. in H_2O ; sol. in dil. acids. (Grandeau, A. ch. (6) 8. 193.)

Potassium strontium *pyrophosphate*, $\text{K}_2\text{SrP}_2\text{O}_7$.

Insol. in H_2O ; sol. in dil. acids. (Ouvrard, C. R. 106. 1599.)

Potassium thorium phosphate, $\text{K}_2\text{O}, 4\text{ThO}_2, 3\text{P}_2\text{O}_5$.

Insol. in HCl , HNO_3 , or aqua regia. (Troost and Ouvrard, C. R. 102. 1422.)

$\text{K}_2\text{O}, \text{ThO}_2, \text{P}_2\text{O}_5$ Insol in H_2O ; sol. in $\text{HNO}_3 + \text{Aq}$. (Troost and Ouvrard.)

$6\text{K}_2\text{O}, 3\text{ThO}_2, 4\text{P}_2\text{O}_5$. Sol. in acids. (Troost and Ouvrard.)

Potassium tin (stannic) phosphate, $\text{K}_2\text{O}, 4\text{SnO}_2, 3\text{P}_2\text{O}_5$.

(Ouvrard, C. R. 111. 177.)

$\text{K}_2\text{O}, 2\text{SnO}_2, \text{P}_2\text{O}_5$. (Ouvrard.)

Potassium titanium phosphate, $\text{K}_2\text{O}, 4\text{TiO}_2, 3\text{P}_2\text{O}_5$.

(Ouvrard, C. R. 111. 177)

$\text{K}_2\text{O}, 2\text{TiO}_2, \text{P}_2\text{O}_5$. (Ouvrard.)

Potassium uranous phosphate, $4\text{UO}_2, \text{K}_2\text{O}, 3\text{P}_2\text{O}_5$.

Practically insol. in conc. HNO_3 and HCl , even when the acids are boiling. Attacked by $\text{HF} + \text{HNO}_3$. (Colani, A. ch. 1907, (8) 12. 133)

Potassium uranous *metaphosphate*, $\text{UO}_2, \text{K}_2\text{O}, \text{P}_2\text{O}_5$

Easily sol. in HNO_3 . Sol. in conc. HCl . (Colani.)

Potassium uranous *pyrophosphate*, $3\text{UO}_2, 6\text{K}_2\text{O}, 4\text{P}_2\text{O}_5$.

Sol. in acids. (Colani.)

Potassium uranyl phosphate, $\text{K}_2\text{O}, \text{UO}_3, \text{P}_2\text{O}_5$.

(Ouvrard, C. R. 110. 1333.)

$2\text{K}_2\text{O}, \text{UO}_3, \text{P}_2\text{O}_5$. (Ouvrard.)

$\text{K}_2\text{O}, 2\text{UO}_3, \text{P}_2\text{O}_5$. (Ouvrard.)

- Potassium uranyl orthophosphate**, $K(UO_2)PO_4 \cdot 3H_2O$.
As NH_4 comp. (Lienau, Dissert. 1898.)
- Potassium vanadium phosphate**.
See Phosphovanadate, potassium.
- Potassium yttrium phosphate**, $3K_2O, Y_2O_3, 2P_2O_5$.
 $K_2O, Y_2O_3, 2P_2O_5$.
 $3K_2O, 5Y_2O_3, 6P_2O_5$ (Duboin, C. R. 107. 622.)
- Potassium zinc tetrametaphosphate**, $K_2Zn(PO_3)_4 \cdot 6H_2O$.
Sol. in 70 pts. H_2O . (Glatzel, Dissert. 1880.)
- Potassium zinc phosphate**, $KZnPO_4$.
Insol. in H_2O . Sol. in dil acids (Ouvrard, C. R. 106. 1729)
 $K_2ZnP_2O_7$. As above.
- Potassium zirconium phosphate**, $K_2O, 4ZrO_2, 3P_2O_5$.
Insol. in acids or aqua regia (Troost and Ouvrard, C. R. 102. 1422.)
 K_2O, ZrO_2, P_2O_5 Insol. in H_2O, HNO_3, HCl , or aqua regia. Sol. in hot conc. H_2SO_4 . (Troost and Ouvrard)
- Potassium phosphate selenate**.
See Selenophosphate, potassium.
- Potassium hydrogen phosphate sulphate**, $KH_2PO_4, KHSO_4$.
Decomp. by H_2O and alcohol. (Jacquelin.)
- Rhodium phosphate, basic**, $4Rh_2O_3, 3P_2O_5 + 32H_2O$.
Insol. in H_2O or acids. (Claus)
 $Rh_2O_3, P_2O_5 + 6H_2O = RhPO_4 + 3H_2O$. Sol. in H_2O . (Claus.)
- Rubidium metaphosphate**, $RbPO_3$.
Sol. in H_2O . (von Berg, B. 1901, 34. 4183.)
- Rubidium orthophosphate**, $Rb_3PO_4 + 4H_2O$.
Hydroscopic; sol. in H_2O ; pptd by alcohol. (von Berg, B. 1901, 34. 4183.)
- Rubidium hydrogen orthophosphate**, $Rb_2HPO_4 + H_2O$.
Sol. in H_2O ; insol. in conc. $NH_4OH + Aq$; insol. in alcohol. (von Berg.)
- Rubidium dihydrogen orthophosphate**, RbH_2PO_4 .
Very sol. in H_2O ; pptd. by alcohol. (von Berg.)
- Rubidium pyrophosphate**, $Rb_4P_2O_7$.
Hydroscopic; sol. in H_2O (von Berg.)
- Samarium anhydrometaphosphate**, $Sm_2O_3, 5P_2O_5$.
Insol. in H_2O or $HNO_3 + Aq$. (Cleve.)
- Samarium orthophosphate**, $SmPO_4$.
Scarcely attacked by boiling $HNO_3 + Aq$. (Cleve.)
 $+ 2H_2O$.
- Samarium pyrophosphate**, $SmHP_2O_7 + 1\frac{1}{2}H_2O$.
(Cleve.)
- Silicon phosphate**.
See Silicophosphoric acid.
- Silver metaphosphate**, $Ag_2O, 2P_2O_5 + H_2O$.
(Kroll, Z. anorg. 1912, 76. 408.)
- Silver dimetaphosphate**, $Ag_2P_2O_6$.
Very sl. sol. in H_2O . (Fleitmann, Pogg. 78. 253.)
Sol. in cold aniline metaphosphate + Aq . (Nicholson.)
Very sl. sol. in H_2O . (Warschauer, Dissert. 1903.)
 $+ H_2O$. Very sol. in H_2O . (Langheld, B. 1912, 45. 3760.)
- Silver trimetaphosphate**, $Ag_3P_3O_9$.
Sol. in 60 pts. cold H_2O . Can be crystallized from conc. $HNO_3 + Aq$. (Fleitmann and Henneberg.)
 $+ H_2O$. (Lindbom.)
- Silver hexametaphosphate**, $Ag_6P_6O_{18}$.
Insol. in H_2O . Sol. in HNO_3 or $NH_4OH + Aq$, and in a large excess of sodium hexametaphosphate + Aq . (Rose.)
Easily decomp. by $Na_2S + Aq$
Decomp. gradually by hot H_2O into $Ag_3P_3O_9$.
When freshly pptd., easily sol. in H_2O . Easily sol in dil. acids. (Lüder, Z. anorg. 5. 15.)
- Silver orthophosphate**, Ag_3PO_4 .
Very sl. sol. in H_2O . 1 l. H_2O dissolves 6.5×10^{-3} g. Ag_3PO_4 at $19^\circ 46'$. (Böttger, Z. phys. Ch. 1903, 46. 603.)
Sol. in H_3PO_4, HNO_3 , or $HC_2H_3O_2 + Aq$, in NH_4OH or $(NH_4)_2CO_3 + Aq$. Less easily in ammonium nitrate or succinate, and incompletely in $(NH_4)_2SO_4 + Aq$. (Lassaigne, J. Pharm. (3) 16. 289.)
Insol. in $Na_2HPO_4 + Aq$. (Stromeyer.)
Not pptd. in presence of Na citrate. (Spiller.)
If 1 mol. Ag_3PO_4 is boiled with 1 mol. Na_2CO_3 , 44% of it is decomp. (Malaguti.)
Readily sol. in soluble hyposulphites + Aq with decomp. (Herschel.)
Insol in Ag salts + Aq . (Rose.)
Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Silver hydrogen orthophosphate, Ag_3HPO_4 .

Decomp. by H_2O or alcohol into H_3PO_4 and Ag_3PO_4 . (Joly, C. R. 103. 1071.)

Sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$; insol. in ether. (Schwarzenberg, A. 65. 162.)

Silver pyrophosphate, $\text{Ag}_4\text{P}_2\text{O}_7$.

Insol. in hot or cold H_2O . Sol. in cold $\text{HNO}_3 + \text{Aq}$ without decomp. Decomp. by hot HNO_3 or H_2SO_4 into orthophosphate. Decomp. by $\text{HCl} + \text{Aq}$ into AgCl and H_3PO_4 . Insol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. (Stromeyer, Schw. J. 58. 126.)

Insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. Very sl. sol. in $\text{AgNO}_3 + \text{Aq}$. (Schwarzenberg, A. 65. 161.)

Not completely insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ (Rose.)

Insol in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Silver hydrogen pyrophosphate, $\text{Ag}_2\text{H}_2\text{P}_2\text{O}_7$.

Decomp. by H_2O into $\text{Ag}_2\text{P}_2\text{O}_7$. (Hurtzig and Geuther, A. 111. 160.)

Decomp. by cold H_2O . (Cavalier, C. R. 1904, 139. 285.)

Silver hydrogen pyrophosphate metaphosphate, $2\text{Ag}_2\text{HP}_2\text{O}_7, \text{HPO}_3$.

Decomp. by H_2O . Easily sol. in $\text{HNO}_3 + \text{Aq}$. (H. and G.)

Silver tetraphosphate, $6\text{Ag}_2\text{O}, 4\text{P}_2\text{O}_5 = \text{Ag}_6\text{P}_4\text{O}_{13}$.

Insol. in, but gradually decomp. by boiling H_2O . (Berzelius.)

Sol. in large excess of the corresponding Na salt + Aq.

Silver dekaphosphate, $\text{Ag}_{12}\text{P}_{10}\text{O}_{31}$.

Easily sol. in sodium dekaphosphate + Aq. (Fleitmann and Henneberg, A. 65. 330.)

Silver ultraphosphate, $\text{Ag}_2\text{O}, 3\text{P}_2\text{O}_5$.

(Kroll, Z. anorg. 1912, 76. 407.)

Silver sodium dimetaphosphate, AgNaP_2O_6 .

Sol. in H_2O . (Fleitmann and Henneberg, Pogg. 65. 310.)

Silver sodium pyrophosphate, $6\text{Ag}_4\text{P}_2\text{O}_7, \text{Na}_4\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$.

Not completely sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Baer, Pogg. 75. 152.)

Easily sol. in H_2O . (Stromeyer.)

$\text{Ag}_3\text{NaP}_2\text{O}_7 + \frac{1}{2}\text{H}_2\text{O}$. Ppt. (Stange, Z. anorg. 1896, 12. 460.)

Silver uranyl phosphate, $2\text{Ag}_2\text{O}, 6\text{UO}_3, 3\text{P}_2\text{O}_5 + 30\text{H}_2\text{O}$.

(Blinkoff, Dissert. 1900.)

Silver phosphate ammonia, $\text{Ag}_3\text{PO}_4, 4\text{NH}_3$ (Widmann, B. 17. 2284.)

Sodium triphosphate, $\text{Na}_5\text{P}_3\text{O}_{10}$.

Very sol. in H_2O ; decomp. easily in aq. solution at 100° . (Schwarz, Z. anorg. 1895, 9. 253.)

Sodium monometaphosphate, NaPO_3 .

Insol in H_2O . Sol. in dil. and conc. acids. (Maddrell, A. 61. 63.)

Insol in acids. (Graham.)

Gradually decomp. by alkalis.

Sodium dimetaphosphate, $\text{Na}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$.

Deliquescent. Sol. in 7.2 pts. of cold or hot H_2O . Very sol. in conc. $\text{HCl} + \text{Aq}$. Sol. in $\text{NaOH} + \text{Aq}$. Insol. in strong, very sl. sol. in dilute alcohol. (Fleitmann, Pogg. 78. 246.)

Sodium trimetaphosphate, $\text{Na}_3\text{P}_3\text{O}_9 + 6\text{H}_2\text{O}$.

Sol. in 4.5 pts. cold H_2O . Insol. in strong, very sl. sol. in dil. alcohol. (Fleitmann and Henneberg, A. 65. 307.)

Decomp. by boiling H_2O . (Lindbom.)

Sodium tetrametaphosphate, $\text{Na}_4\text{P}_4\text{O}_{12}$.

Sol. in H_2O ; cryst. with about $4\text{H}_2\text{O}$. Less sol. in alcohol than in H_2O . (Fleitmann, Pogg. 78. 854.)

Sodium hexametaphosphate, $\text{Na}_6\text{P}_6\text{O}_{18}$.

Deliquescent. Very sol. in H_2O . Insol. in alcohol. (Graham, Pogg. 32. 56.)

Sodium orthophosphate, $\text{Na}_3\text{PO}_4 + 12\text{H}_2\text{O}$.

Not deliquescent in dry air

100 pts H_2O dissolve 19.6 pts. crystals at 15.5° . (Graham.)

100 pts. H_2O dissolve 28.3 pts. $\text{Na}_3\text{PO}_4 + 12\text{H}_2\text{O}$ at 15° . (Schiff.)

Solubility in $\text{H}_2\text{PO}_4 + \text{Aq}$ at 25° .

(D'Ans and Schreiner. Z. phys. Ch. 1911, 75. 99.)

* Transition points.

The composition of the hydrates formed by this salt at different dilutions is calculated

from determinations of the lowering of the fr.-pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions (Jones, Am. Ch. J. 1905, **34**, 318.)

$\text{Na}_2\text{HPO}_4 + \text{Aq}$ saturated at 15° has 1.0469 sp. gr. (Michel and Krafft), saturated at 16° , 1.0511 (Stolba).

Sp. gr. of $\text{Na}_2\text{HPO}_4 + \text{Aq}$ at 19° .

% $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.	% $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.	% $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.

3	1.0125	7	1.0292	11	1.0460
4	1.0166	8	1.0332	12	1.0503

(Schiff, A. **110**, 70.)

Saturated solution freezes at -0.45° (Rüddorf, Pogg. **122**, 337), and boils at 105° (Griffiths), $105-106.4^\circ$ (Mulder), 103.5° (Legrand).

Sat. $\text{Na}_2\text{HPO}_4 + \text{Aq}$ boils at 105.5° (Griffiths); at 106.5° , and contains 113.2 pts. Na_2HPO_4 to 100 pts. H_2O (Legrand); forms a crust at 106.4° , and contains 108.8 pts. Na_2HPO_4 to 100 pts. H_2O ; highest temp. observed, 106.8° . (Gerlach, Z. anal. **26**, 427.)

B.-pt. of $\text{Na}_2\text{HPO}_4 + \text{Aq}$ containing pts. Na_2HPO_4 to 100 pts. H_2O . G = according to Gerlach (Z. anal. **26**, 450); L = according to Legrand (A. ch. (2) **59**, 426.)

B-pt	G	L	B-pt	G	L
100.5°	8.6	11.0	104°	68.4	76.4

102	34.4	40.8	105.5	93.7	98.4
102.5	42.9	50.3	106	102.1	105.0
103	51.4	59.4	106.5	110.5	111.4
103.5	59.9	68.1	106.6	..	112.6

+ H_2O . Transition point, 95.2° . (Shiomi.)
+ $2\text{H}_2\text{O}$. Transition point, 48.35° . (D'Ans and Schreiner); 48° (Shiomi); 48.3° (Menzies and Humphrey).

+ $7\text{H}_2\text{O}$. Not efflorescent. Sol. in H_2O with absorption of heat.

Sol. in 8 pts. H_2O at 23° . (Neese, J. B. **1863**, 181.)

Transition point, 35.4° (D'Ans and Schreiner); 36.45° (Shiomi); 35.2° (Menzies and Humphrey).

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25° .

In 1000 g. of the solution, mols	
Na	PO_4
6 31	4 63
6 76	4 88
7 31	5 55

(D'Ans and Schreiner, Z. phys. Ch. **1910**, **75**, 101.)

See also above.

+ $12\text{H}_2\text{O}$. Efflorescent. Sol. in H_2O with absorption of heat.

14 pts. $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$ mixed with 100 pts. H_2O at 10.8° lower the temperature 3.7° . (Rüddorf, B. **2**, 68.)

Sol. in 8.48 pts. H_2O at 17° , or 100 pts. H_2O dissolve 11.8 pts. at 17° , and solution has sp. gr. = 1.0422 (Schiff).
Sol. in 4 pts. cold, and 2 pts. boiling H_2O (Pagens).
Sol. in 4 pts. H_2O at 18.75° (Abl).
100 pts. H_2O dissolve 12.735 pts. $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$ (Michel and Krafft).

100 pts. H_2O dissolve 6.5 pts. $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$ at 0° ; 27.5 pts. at 30° . (Tilden, Chem. Soc. **45**, 409.)

Solubility in $\text{H}_3\text{PO}_4 + \text{Aq}$ at 25° .

In 1000 g. of the solution, mols

5 63	3 87

(D'Ans and Schreiner, Z. phys. Ch. **1910**, **75**, 101.)

See also above.

Melts in crystal water below 100° , and easily forms supersaturated solutions. (Gay-Lussac.)

Melts in crystal H_2O at 34.6° (Persoz), 35° (Kopp), $40-41^\circ$ (Mulder).

Melts in crystal H_2O at 35° . (Tilden, Chem. Soc. **45**, 409.)

Supersaturated solutions are brought to crystallization by addition of a crystal of $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$ or an isomorphous substance as $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$. (Thomson, Chem. Soc. **35**, 200.)

Insol. in alcohol.

Sodium dihydrogen phosphate, $\text{NaH}_2\text{PO}_4 + \text{H}_2\text{O}$.

Very sol. in H_2O . Insol. in alcohol. (Graham.)

+ $2\text{H}_2\text{O}$. Unchanged on air. Very sol. in H_2O , and solubility increases rapidly with the temperature. (Joly and Dufet, C. R. **102**, 1391.)

100 pts. H_2O dissolve 59.9 pts. at 0° ; 84.6 pts. at 18° . (Joly and Dufet.)

Solubility of NaH_2PO_4 in H_2O at t° .
G. of anhydrous NaH_2PO_4 in 100 g. H_2O .
Solid phase; $\text{NaH}_2\text{PO}_4 + 2\text{H}_2\text{O}$.

98 5	52.72
111	69.59
119	77.55
122	81.71
123	87.20

(Parravano and Mieli.)

$+ \text{H}_2\text{O}$. Very deliquescent. (Salzer, Arch. Pharm. 1894, 232. 369.)

Sodium pyrophosphate, $\text{Na}_2\text{P}_2\text{O}_7$, and
 $+10\text{H}_2\text{O}$.

Less sol. in H_2O than sodium hydrogen orthophosphate. (Clark, Ed. J. Sci. 7. 298.)

100 pts. H_2O dissolve (a) pts. $\text{Na}_2\text{P}_2\text{O}_7$, (b) pts. $\text{Na}_4\text{P}_2\text{O}_7 + 10\text{H}_2\text{O}$ at:

	0°	10°	20°	30°	40°	50°
a	3.16	3.95	6.23	9.95	13.50	17.45
b	5.41	6.81	10 92	18.11	24.97	33.25

	60°	70°	80°	90°	100°

b.	44.07	52.11	63.40	77.47	93.11

(Poggiale.)

Sol. in H_2SO_4 . (Walden, Z. anorg. 1902, 29. 384.)

Crystallizes unchanged from $\text{NH}_4\text{Cl} + \text{Aq}$ (Winkler), or conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Uelsmann.)

Decomp. into orthophosphate by heating with H_2SO_4 , HCl , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{H}_3\text{PO}_4 + \text{Aq}$. Insol. in liquid NH_3 (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol. Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Sodium hydrogen pyrophosphate, $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$.

Decomp. by H_2O . Sol. in H_2O containing $\text{HC}_2\text{H}_3\text{O}_2$ without decomp. (Bayer, J. pr. 106. 501.)

Sl. sol. in alcohol. Much more sol. in H_2O than NaH_2PO_4 .

+ $6\text{H}_2\text{O}$. (Rammelsberg, B. A. B. 1883. 21.)

100 g. sat. solution contain 14.95 g. $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$ at 18° . (Giran, A. ch. 1902, (7) 30. 249.)

$\text{NaH}_2\text{P}_2\text{O}_7$. Very hygroscopic. (Salzer, Arch. Pharm. 1894, 232. 369.)

100 g. sat. solution contain 62.7 g. at 18° . (Giran, A. ch. 1902, (7) 30. 249.)

$\text{Na}_3\text{HP}_2\text{O}_7 + \text{H}_2\text{O}$ Sol. in 3 pts. H_2O . (Salzer, Arch. Pharm. 1894, 232. 366.)

+ $6\text{H}_2\text{O}$. 100 g. sat. solution contain 28.17 g. $\text{Na}_3\text{HP}_2\text{O}_7$ at 18° . (Giran.)

Sodium tetraphosphate, $\text{Na}_6\text{P}_4\text{O}_{13}$.

Slowly sol. in 2 pts. cold H_2O . Easily decomp.

+ $18\text{H}_2\text{O}$. (Uelsmann.)

Sodium hydrogen tetraphosphate,

$\text{Na}_4\text{H}_2\text{P}_4\text{O}_{13}$.

Sol. in H_2O .

Sodium dekaphosphate, $\text{Na}_{12}\text{P}_{10}\text{O}_{31}$.

Sol. in H_2O . (Fleitmann and Henneberg, A. 65. 333.)

Sodium strontium dimetaphosphate,

$\text{Na}_2\text{Sr}(\text{P}_2\text{O}_5)_2 + 4\text{H}_2\text{O}$.

As the NaBa comp. (Glatzel, Dissert. 1880.)

Sodium strontium trimetaphosphate,

$\text{NaSrP}_3\text{O}_9 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O and acids. (Fleitmann, A. 65. 315.)

Sodium strontium orthophosphate, NaSrPO_4

+ H_2O .

Scarcely sol. in H_2O ; sol. in acids.

+ $9\text{H}_2\text{O}$. (Joly, C. R. 104. 905.)

Sodium strontium pyrophosphate (?).

Sl. sol. in H_2O . Insol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Baer, Pogg. 75. 166.)

Easily sol. in $\text{HCl} + \text{Aq}$, or $\text{HNO}_3 + \text{Aq}$.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Sodium thallium pyrophosphate,

$\text{Na}_6[\text{Tl}(\text{P}_2\text{O}_7)_2] + 6\text{H}_2\text{O} = \text{Na}(\text{TlP}_2\text{O}_7)$,
 $\text{Na}_4\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$.

Decomp. by H_2O . (Rosenheim, B. 1915, 48. 588.)

Sodium thorium orthophosphate,

$\text{Na}_2\text{Th}_2(\text{PO}_4)_3$.

Insol. in acids (Wallroth, Bull. Soc. (2) 39. 316.)

Sodium thorium phosphate, Na_2O , 4ThO_2 , $3\text{P}_2\text{O}_5$

Insol. in HNO_3 , HCl , or aqua regia. (Troost and Ouvrard, C. R. 105. 30.)

$5\text{Na}_2\text{O}$, 2ThO_2 , $3\text{P}_2\text{O}_5$. Sol. in $\text{HNO}_3 + \text{Aq}$. (T. and O.)

Na_2O , ThO_2 , P_2O_5 (T. and O.)

Sodium thorium pyrophosphate, $\text{Na}_4\text{P}_2\text{O}_7$, $\text{ThP}_2\text{O}_7 + 2\text{H}_2\text{O}$.

(Cleve.)

Sodium tin (stannic) phosphate, $\text{NaSn}_2(\text{PO}_4)_3$.

(Ouvrard, C. R. 111. 177.)

$\text{Na}_2\text{Sn}(\text{PO}_4)_2$. (Wunder, J. pr. (2) 4. 339.)

$6\text{Na}_2\text{O}$, 3SnO_2 , $4\text{P}_2\text{O}_5$. (Ouvrard.)

Sodium titanium phosphate, $\text{NaTi}_2(\text{PO}_4)_4$.

Insol. in acids. (Rose, J. B. 1867. 9.)

$6\text{Na}_2\text{O}$, TiO_2 , $4\text{P}_2\text{O}_5$. (Ouvrard, C. R. 111. 177.)

Sodium uranium phosphate, UO_2 , Na_2O , P_2O_5 .

Easily attacked by acids. (Colani, A. ch. 1907, (8) 12. 137.)

Sodium uranium metaphosphate, 4UO_2 , Na_2O , $3\text{P}_2\text{O}_5$.

Insol. in boiling HNO_3 . (Colani.)

Sodium uranium pyrophosphate, 3UO_2 ,

$6\text{Na}_2\text{O}$, $4\text{P}_2\text{O}_5$.

Sol. in acids. (Colani.)

Sodium uranyl phosphate, Na_2O , UO_3 , P_2O_5 .

(Ouvrard, C. R. 110. 1333.)

$2\text{Na}_2\text{O}$, UO_3 , P_2O_5 . (Ouvrard.)

Na_2O , 5UO_3 , $2\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$. Insol. in H_2O ; decomp. by acetic acid. (Werther, A. 68. 312.)

Sodium uranyl pyrophosphate.

Very sol. in H_2O . (Persoz, A. ch. (3) 20. 322.)

Sodium ytterbium pyrophosphate, NaYbP_2O_7 .

Easily sol. in the strong acids. (Wallroth.)

Sodium yttrium pyrophosphate, NaYP_2O_7 .

Sol. in H_2O . (Stromeyer.)

Insol. in H_2O . Easily sol. in strong acids. (Wallroth.)

Sodium zinc triphosphate,
 $\text{Na}_2\text{O}, 47\text{ZnO}, 3\text{P}_2\text{O}_5 + 19\text{H}_2\text{O}.$

Sol. in H_2O . (Schwarz, Z. anorg. 1895, 9. 266.)

Sodium zinc trimetaphosphate, $\text{Na}_2\text{O}, 2\text{ZnO}, 3\text{P}_2\text{O}_5.$

Ppt. Sol. in H_2O . (Fleitmann and Henneberg, A. 65. 304.)

Sodium zinc tetrametaphosphate,
 $\text{Na}_2\text{Zn}(\text{PO}_3)_4 + 6\text{H}_2\text{O}.$

As K comp. (Glatzel, Dissert. 1880.)

Sodium zinc octometaphosphate,
 $\text{Na}_2\text{Zn}_3(\text{PO}_3)_8$

Insol. in acids.

Sol in conc. H_2SO_4 . (Tammann, J. pr. 1892, (2) 45. 420.)

Sodium zinc orthophosphate, $\text{NaZnPO}_4.$

Difficultly sol. in H_2O or acetic acid. Easily sol. in dil. mineral acids. (Scheffer, A. 145. 53.)

$2\text{Na}_2\text{O}, \text{ZnO}, \text{P}_2\text{O}_5.$ Insol. in H_2O ; sol. in dil. acids. (Ouvrard, C. R. 106. 1796.)

Sodium zinc pyrophosphate, $\text{Na}_3\text{ZnP}_2\text{O}_7.$

Insol. in H_2O ; sol. in dil. acids. (Wallroth.)

$3\text{Na}_4\text{P}_2\text{O}_7, \text{Zn}_2\text{P}_2\text{O}_7 + 24\text{H}_2\text{O}.$ Very efflorescent. (Pahl.)

$\text{Na}_4\text{P}_2\text{O}_7, \text{Zn}_2\text{P}_2\text{O}_7 + 2\frac{1}{2}, 3, 3\frac{1}{2}, \text{and } 8\text{H}_2\text{O}.$ Insol. in H_2O ; sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}.$ (Pahl, Sv. V. A. F. 30, 7. 35.)

$4\text{Na}_4\text{P}_2\text{O}_7, 5\text{Zn}_2\text{P}_2\text{O}_7 + 20\text{H}_2\text{O}.$ Insol. in $\text{H}_2\text{O}.$ (Pahl.)

$\text{Na}_4\text{P}_2\text{O}_7, 4\text{Zn}_2\text{P}_2\text{O}_7 + 12\text{H}_2\text{O}.$ Sl. sol. in $\text{H}_2\text{O}.$ (Pahl.)

Sodium zirconium phosphate, $\text{Na}_2\text{O}, 4\text{ZrO}_2, 3\text{P}_2\text{O}_5 = \text{NaZr}_2(\text{PO}_4)_3.$

Insol. in acids or aqua regia. (Troost and Ouvrard, C. R. 105. 30.)

$6\text{Na}_2\text{O}, 3\text{ZrO}_2, 4\text{P}_2\text{O}_5.$ Sol. in acids. (T. and O.)

$4\text{Na}_2\text{O}, \text{ZrO}_2, 2\text{P}_2\text{O}_5.$ Sol. in acids. (T. and O.)

Sodium phosphate fluoride, $\text{Na}_3\text{PO}_4, \text{NaF} + 12\text{H}_2\text{O}.$

100 pts. H_2O dissolve, at 25° , 12 pts. salt and form solution of 1.0329 sp. gr.; at 70° , 57.5 pts. salt and form solution of 1.1091 sp. gr. (Briegleb, A. 97. 95.)

$2\text{Na}_3\text{PO}_4, \text{NaF} + 19\text{H}_2\text{O}, \text{and } 22\text{H}_2\text{O}.$ Sol. in $\text{H}_2\text{O}.$ (Baumgarten, J. B. 1865. 219.)

Sodium phosphate stannate,
 $4\text{Na}_3\text{PO}_4, \text{Na}_2\text{SnO}_3 + 4\text{H}_2\text{O}.$

(Prandtl, B. 1907, 40. 2132.)

Sodium phosphate titanate,
 $\text{Na}_2\text{O}, \text{TiO}_3, \text{P}_2\text{O}_5 + 3\text{H}_2\text{O}.$

Hygroscopic. (Mazzuchelli and Pantanelli, C. C. 1909, II. 420.)

Sodium phosphate vanadate.

See Phosphovanadate, sodium.

Strontium monometaphosphate, $\text{Sr}(\text{PO}_3)_2.$

Insol. in H_2O and acids. Not decomp. by alkali carbonates + Aq. (Maddrell, A. 61. 61.)

Strontium hexametaphosphate.

Nearly insol. in H_2O ; easily sol. in acids. (Lüder, Z. anorg. 5. 15.)

Strontium orthophosphate, basic, $\text{Sr}(\text{OH})_2, \text{Sr}_2(\text{PO}_4)_2.$

(Woyczynski, Z. anorg. 1894, 6. 311.)

Strontium orthophosphate, $\text{Sr}_3(\text{PO}_4)_2.$

Insol. in $\text{H}_2\text{O}.$ Sol. in $\text{HCl} + \text{Aq}.$ (Erlenmeyer, J. B. 1857. 145.)

Strontium hydrogen phosphate, $\text{SrHPO}_4.$

Insol. in $\text{H}_2\text{O}.$ Sol. in $\text{H}_3\text{PO}_4, \text{HCl}, \text{or } \text{HNO}_3 + \text{Aq}.$ (Vauquelin.) Easily sol. in cold ammonium nitrate, chloride, or succinate + Aq, but is partly precipitated by a little $\text{NH}_4\text{OH} + \text{Aq}.$ (Brett.)

Sol in boiling $\text{NH}_4\text{Cl} + \text{Aq}.$ (Fuchs, 1834.) Sol. in Na citrate + Aq. (Spiller)

Partly decomp. by boiling Na_2CO_3 , and $\text{K}_2\text{CO}_3 + \text{Aq}.$ (Dulong.)

$\text{SrH}_4(\text{PO}_4)_2 + 2\text{H}_2\text{O}.$ Decomp. by treating with H_2O , leaving 4.29% SrHPO_4 . (Barthe.)

Strontium phosphate, acid, $\text{H}_2\text{O}, 2\text{SrO}, 3\text{P}_2\text{O}_5 + x\text{H}_2\text{O}.$

Entirely sol. in $\text{H}_2\text{O}.$ (Barthe, C. R. 114. 1267.)

Strontium pyrophosphate, $\text{Sr}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}.$

Somewhat sol. in $\text{H}_2\text{O}.$ Easily sol. in HCl or $\text{HNO}_3 + \text{Aq}.$ Insol. in $\text{HC}_2\text{H}_3\text{O}_2$ or $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}.$ (Schwarzenberg, A. 65. 144.) + $2\frac{1}{2}\text{H}_2\text{O}.$ (Knorre and Oppelt, B. 21. 773.)

Strontium hydrogen pyrophosphate,
 $\text{SrH}_2\text{P}_2\text{O}_7, 2\text{Sr}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}.$

Ppt. (Knorre and Oppelt, B. 21. 772) $\text{SrH}_2\text{P}_2\text{O}_7, 3\text{Sr}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}, \text{and } + 2\text{H}_2\text{O}.$ (Knorre and Oppelt.)

$\text{Sr}_2\text{H}_2(\text{P}_2\text{O}_7)_3 + 8\text{H}_2\text{O}, \text{and } + 12\text{H}_2\text{O}.$

Ppt. (Pahl, Gm. - K. 2, 2. 172.)

$\text{Sr}_{12}\text{H}_2(\text{P}_2\text{O}_7)_{10} + 5\text{H}_2\text{O}, + 18\text{H}_2\text{O} \text{ and } + 20\text{H}_2\text{O}.$

Insol. in $\text{Sr}(\text{NO}_3)_2 + \text{Aq}$ or $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}.$ (Pahl, Gm. - K. 2, 2. 171.)

Strontium thorium phosphate,

$\text{Th}_2\text{O}, \text{SrO}, \text{P}_2\text{O}_5.$

(Colani, C. R. 1909, 149. 209.)

- Strontium uranium metaphosphate**,
 $\text{UO}_3, \text{SrO}, \text{P}_2\text{O}_5$.
 (Colani, A. ch. 1907, (8) 12. 141)
- Strontium uranyl phosphate**,
 $\text{SrO}, 4\text{UO}_3, 2\text{P}_2\text{O}_5 + 21\text{H}_2\text{O}$.
 (Blinkoff, Dissert. 1900.)
 $2\text{SrO}, 5\text{UO}_3, 2\text{P}_2\text{O}_5 + 24\text{H}_2\text{O}$. As Ba comp.
 (Blinkoff.)
- Strontium phosphate chloride**, $3\text{Sr}_3(\text{PO}_4)_2$,
 SrCl_2 .
Strontium apatite. Insol in H_2O . (Deville and Caron.)
- Tellurium phosphate (?)**.
 Insol in H_2O . (Berzelius)
- Thalious metaphosphate**, TiPO_3 .
 Two modifications:
 α. Difficultly sol in H_2O .
 β. Extremely easily sol in H_2O . (Lamy)
- Thalious orthophosphate**, Ti_3PO_4 .
 1 pt. is sol in 201.2 pts. H_2O at 15° , and 149 pts. boiling H_2O ; sol. in $\text{HNO}_3 + \text{Aq}$. (Crookes.) Sl. sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Very easily sol. in solutions of NH_4 salts. (Carstanjen.) Insol. in alcohol. (Lamy.)
- Thalious hydrogen phosphate**, Ti_2HPO_4 .
Anhydrous Much less sol. in H_2O than the hydrous salt, but easily sol. in a solution of the hydrous salt (Lamy.)
 $+ \frac{1}{2}\text{H}_2\text{O}$. Easily sol. in H_2O . Insol. in alcohol. (Lamy.)
 Composition is $\text{HTi}_2\text{PO}_4, 2\text{H}_2\text{TiPO}_4$. (Rammelsberg, W. Ann. 16. 694.)
- Thalious dihydrogen phosphate**, TiH_2PO_4 .
 Very easily sol in H_2O . Insol. in alcohol. (Rammelsberg, B. 3. 278.)
- Tri-thalious trihydrogen phosphate**, $\text{Ti}_3\text{HPO}_4, 2\text{TiH}_2\text{PO}_4$.
 True composition of Ti_2HPO_4 of Lamy. (Rammelsberg.)
- Thalious pyrophosphate**, $\text{Ti}_4\text{P}_2\text{O}_7$.
 Sol. in 2.5 pts. H_2O with slight decomposition. (Lamy.)
 $+ 2\text{H}_2\text{O}$. More sol. in H_2O than the above salt, with partial decomp. (Lamy.)
- Thalious hydrogen pyrophosphate**, $\text{H}_2\text{Ti}_2\text{P}_2\text{O}_7$,
 $+ \text{H}_2\text{O}$.
 Very sol. in H_2O . (Lamy.)
- Thallic phosphate, basic**, $2\text{Ti}_2\text{O}_3, \text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$.
 Insol. in H_2O .
- Thallic phosphate, basic**, $\text{Ti}_3\text{P}_3\text{O}_{27} + 13\text{H}_2\text{O}$.
 (Rammelsberg, W. Ann. 16. 694)
 $\text{Ti}_6\text{P}_4\text{O}_{19} + 12\text{H}_2\text{O}$. (R)
- Thallic phosphate**, $\text{TiPO}_4 + 2\text{H}_2\text{O}$
 Completely insol. in H_2O Sol. in conc. HNO_3 , and dil. $\text{HCl} + \text{Aq}$. (Willm)
- Thorium metaphosphate**, $\text{Th}(\text{PO}_3)_4$.
 Insol. in H_2O (Troost, C. R. 101. 210)
- Thorium metaphosphate**, $\text{ThO}_2, 2\text{P}_2\text{O}_5$.
 Insol. in acids (Johnsson, B. 22. 976.)
- Thorium orthophosphate**, $\text{Th}_3(\text{PO}_4)_4 + 4\text{H}_2\text{O}$.
 Insol in H_2O and phosphoric acid (Berzelius); also acetic acid (Cleve.)
 Sol in HCl , and $\text{HNO}_3 + \text{Aq}$ (Cleve)
- Thorium hydrogen phosphate**, $\text{ThH}_2(\text{PO}_4)_2 + \text{H}_2\text{O}$.
 Precipitate
- Thorium pyrophosphate**, $\text{ThP}_2\text{O}_7 + 2\text{H}_2\text{O}$.
 Precipitate. Insol. in H_2O Sol. in great excess of pyrophosphoric acid or sodium pyrophosphate + Aq . (Cleve.)
- Thorium phosphate bromide**.
 See Bromophosphate, thorium.
- Thorium phosphate chloride**.
 See Chlorophosphate, thorium.
- Tin (stannous) phosphate**, $5\text{SnO}, 4\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$.
 Insol. in H_2O . (Lenssen, A. 114. 113.)
 $\text{Sn}_3(\text{PO}_4)_2$ Insol. in H_2O . Sol. in mineral acids (Kühn.)
 Insol. in NH_4Cl or $\text{NH}_4\text{NO}_3 + \text{Aq}$. Sol. in $\text{KOH} + \text{Aq}$.
- Tin (stannic) phosphate**, $2\text{SnO}_2, \text{P}_2\text{O}_5 + 10\text{H}_2\text{O}$.
 Insol in H_2O or $\text{HNO}_3 + \text{Aq}$. (Reynoso, J. pr. 54. 261.)
Anhydrous. Insol. in acids. (Hautefeuille and Margottet, C. R. 102. 1017)
- Tin (stannic) phosphate**, SnP_2O_7 .
 Insol. in acids. (Hautefeuille and Margottet, C. R. 102. 1017)
- Tin (stannous) phosphate chloride**, $3\text{SnO}, \text{P}_2\text{O}_5, \text{SnCl}_2 + \text{H}_2\text{O}$.
 Not decomp. by hot H_2O . (Lenssen, A. 114. 113.)
- Titanium phosphate**, $\text{Ti}_2\text{P}_2\text{O}_8 = 2\text{TiO}_2, \text{P}_2\text{O}_5$.
 Insol. in acids. (Hautefeuille and Margottet, C. R. 102. 1017.)
 (Ouvrard, C. R. 111. 177.)
 $+ 3\text{H}_2\text{O}$. Ppt. Insol. in H_2O . (Merz.)

- TiO_2 , P_2O_5 . (Knop) Is $\text{NaTi}_2(\text{PO}_4)_3$.
(Wunder, J. B. 1871. 324)
 H_2TiPO_7 . Sol. in HCl , HNO_3 , H_2SO_4 .
Sl. sol. in H_3PO_4
Sol. in KOH , NH_4OH , $(\text{NH}_4)_2\text{CO}_3$ and
 $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq}$
Very sl. sol. in acetic acid (Faber, Z.
anal. 1907, 46. 288.)
- Uranous metaphosphate**, $\text{U}(\text{PO}_3)_4$
Insol. in HNO_3 , HCl , or H_2SO_4 , even
when hot and conc. (Colani, A. ch. 1907, (8)
12. 105.)
- Uranic metaphosphate**, $\text{U}_2(\text{PO}_3)_6$
Insol. in H_2O and acids (Hautefeuille and
Margottet, C. R. 96. 849)
- Uranous orthophosphate**, $\text{U}_3(\text{PO}_4)_4$.
More easily attacked by acids than the pyro
and meta phosphates, especially by HNO_3
(Colani, A. ch 1907, (8) 12. 123.)
- Uranous hydrogen orthophosphate**, $\text{UHPO}_4 + \text{H}_2\text{O}$.
Insol. in H_2O . Insol. in dil. sl. sol. in
conc $\text{HCl} + \text{Aq}$. Decomp. by $\text{KOH} + \text{Aq}$,
not by $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg.
59. 1)
- Uranous pyrophosphate**, UP_2O_7 .
Insol. in H_2O .
Sl. sol. in min. acids. (Colani)
- Uranous phosphate**, 2UO_2 , P_2O_5 .
Easily attacked by boiling HNO_3 .
(Colani.)
 UO_2 , $\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$. Insol. in H_2SO_4 and
in $\text{HCl} + \text{Aq}$ of medium concentration. Sol.
in very conc. $\text{HCl} + \text{Aq}$. (Aloy, Dissert.
1901.)
- Uranyl metaphosphate**, $\text{UO}_2(\text{PO}_3)_2$.
(Rammelsberg, B. A. B. 1872. 447.)
 UO_2 , $2\text{P}_2\text{O}_5$. Insol. in acids. (Johnsson,
B. 22. 976)
- Uranyl orthophosphate**, $\text{UO}_2\text{HPO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$.
Insol. in H_2O .
+ $3\text{H}_2\text{O}$.
+ $4\text{H}_2\text{O}$.
+ $4\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . Sol. in 67,000
pts. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, 50,000 pts. $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$,
and 300,000 pts. of a mixture of the above
two solutions. Sol. in K_2CO_3 or $\text{Na}_2\text{CO}_3 + \text{Aq}$.
(Kitschin, C. N. 27. 199.)
- Uranyl dihydrogen phosphate**,
 $\text{UO}_2\text{H}_2(\text{PO}_4)_2 + 3\text{H}_2\text{O}$.
Decomp. by H_2O . Sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$.
(Werther, J. pr 43. 322.)
- Uranyl pyrophosphate**, $(\text{UO}_2)_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}$.
Efflorescent Insol. in H_2O . Sol. in
 $\text{HNO}_3 + \text{Aq}$, and $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ Insol. in
 $\text{Na}_2\text{HPO}_4 + \text{Aq}$. Insol. in alcohol or ether.
(Girard, C. R. 34. 22.)
+ $4\text{H}_2\text{O}$. (Casteing, Bull. Soc. (2) 34. 20.)
- Uranyl tetraphosphate** (?), $\text{UO}_2\text{P}_4\text{O}_{11}$.
(Johnsson, B. 22. 978.)
- Uranous orthophosphate chloride**, $\text{U}_3(\text{PO}_4)_4$,
 UCl_4 .
Sl. sol. in $\text{HCl} + \text{Aq}$. Sol. in HNO_3 and
 $\text{HNO}_3 + \text{HCl}$ (Colani, A. ch. 1907, (8) 12.
127.)
- Uranous hydrogen orthophosphate chloride**,
 $\text{U}(\text{HPO}_4)_2$, UCl_4 .
Very sl. sol. in H_2O . (Aloy, Dissert. 1901.)
- Vanadium phosphate**, $(\text{VO}_2)_2\text{H}_2\text{PO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$.
Sol. in H_2O .
See Phosphovanadic acid.
- Vanadium pyrophosphate**,
 $\text{V}_4(\text{P}_2\text{O}_7)_3 + 30\text{H}_2\text{O}$.
Insol. in H_2O . (Rosenheim, B. 1915, 48.
590)
- Devanadyl phosphate**.
Very deliquescent, and sol. in H_2O . Insol.
in alcohol (Berzelius.)
- Ytterbium metaphosphate**, $\text{Yb}(\text{PO}_3)_3$.
Insol. in H_2O . (Cleve, Z. anorg 1902, 32.
149.)
- Ytterbium orthophosphate**, $\text{YbPO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$.
Ppt (Cleve.)
- Ytterbium phosphate**, Yb_2O_3 , $2\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$.
Sol. in H_2O . (Cleve.)
- Yttrium metaphosphate**, $\text{Y}(\text{PO}_3)_3$.
Insol. in H_2O or acids. (Cleve.)
- Yttrium orthophosphate**, YPO_4 .
Anhydrous. Insol. in H_2O or acids after
ignition.
Min. *Xenotime* Insol. in conc. acids. Sl.
sol. in much conc. $\text{HCl} + \text{Aq}$, but easily sol.
therein when first heated with a little $\text{HCl} + \text{Aq}$.
(Wartha, A. 139. 237.)
- Yttrium hydrogen orthophosphate**, $\text{Y}_2(\text{HPO}_4)_3$.
Decomp. by boiling with H_2O into insol.
 YPO_4 and sol. acid salt.
- Yttrium pyrophosphate**, $\text{YHP}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$.
Difficultly sol. in acids. Decomp. by
 H_2SO_4 . Sol. in $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$. (Cleve.)
 $2\text{Y}_2\text{O}_3$, $3\text{P}_2\text{O}_5$. Insol. in acids. (Johnsson,
B. 22. 976.)

Zinc metaphosphate.Sol in H_2O . (Berzelius.)**Zinc dimetaphosphate, $\text{Zn}_2\text{P}_2\text{O}_6$** Sol. only in boiling H_2SO_4 (Fleitmann, Pogg. 78. 350.)Not decomp. by boiling Na_2S or $(\text{NH}_4)_2\text{S} + \text{Aq}$.+ $4\text{H}_2\text{O}$ Insol. in H_2O , but decomp. by boiling therewith. (Fleitmann, Pogg 78. 258.)Sol. in 4 pts. H_2O . Conc. H_2SO_4 decomp. it easily; other acids act slightly. (Glatzel, Dissert 1880.)

Difficultly decomp. by boiling acids

Zinc trimetaphosphate, $\text{Zn}_3(\text{PO}_3)_3 + 9\text{H}_2\text{O}$.1 l. H_2O dissolves 0.1 g. at 20° . (Tammann, J. pr. 1892, (2) 45. 426.)**Zinc tetrametaphosphate, $\text{Zn}_2(\text{PO}_3)_4 + 10\text{H}_2\text{O}$.**Sol. in 55 pts. H_2O . Decomp. by acids only on boiling. (Glatzel, Dissert. 1880.)Somewhat sol. in $\text{HNO}_3 + \text{Aq}$ Sol. in boiling H_2SO_4 . (Glatzel.)**Zinc orthophosphate, $\text{Zn}_3(\text{PO}_4)_2 + 4\text{H}_2\text{O}$** Insol. in H_2O . Easily sol. in acids, NH_4OH , $(\text{NH}_4)_2\text{CO}_3$, $(\text{NH}_4)_2\text{SO}_4$, or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Heintz, A. 143. 356.)Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ (Fuchs.)Easily sol. in Zn salts + Aq . (Rose.)Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)Min. *Hopeite*.+ $6\text{H}_2\text{O}$. (Reynoso.)**Zinc hydrogen phosphate, $\text{ZnHPO}_4 + \text{H}_2\text{O}$.**Insol in H_2O ; sol. in $\text{H}_3\text{PO}_4 + \text{Aq}$. (Gramham.)**Zinc tetrahydrogen phosphate, $\text{ZnH}_4(\text{PO}_4)_2 + 2\text{H}_2\text{O}$.**Nearly insol. in H_2O , but decomp. thereby into H_3PO_4 and 10ZnO , $4\text{P}_2\text{O}_5 + 10\text{H}_2\text{O}$ (Demel, B. 12. 1171.)**Zinc phosphate, 10ZnO , $4\text{P}_2\text{O}_5 + 10\text{H}_2\text{O}$.**Insol. in H_2O . (Demel, B. 12. 1171.)**Zinc pyrophosphate, $\text{Zn}_2\text{P}_2\text{O}_7 + \frac{3}{2}\text{H}_2\text{O}$.**Ppt. Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in acids, $\text{KOH} + \text{Aq}$, $\text{NH}_4\text{OH} + \text{Aq}$ (Schwarzenberg, A. 65. 151.)Sol. in $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ (Gladstone), and in $\text{ZnSO}_4 + \text{Aq}$. (Rose.)

Insol. in acetic acid. (Knorre, Z. anorg. 1900, 24. 389.)

+ $5\text{H}_2\text{O}$. Insol. in H_2O . (Pahl, J. B. 1873. 229.)**Zinc hydrogen pyrophosphate.**Sol. in H_2O . (Pahl, Sv. V. A. F. 30, 7. 45.)**Zinc metaphosphate ammonia.**

Ppt (Bette.)

Zinc orthophosphate ammonia, 2ZnO , P_2O_5 , $3\text{NH}_3 + 8\text{H}_2\text{O}$

(Rother, A. 143. 356.)

 6ZnO , $3\text{P}_2\text{O}_5$, $8\text{NH}_3 + 4\text{H}_2\text{O}$ (Schweikert, A. 145. 517.)**Zinc pyrophosphate ammonia, $3\text{Zn}_2\text{P}_2\text{O}_7$, $4\text{NH}_3 + 9\text{H}_2\text{O}$.**Ppt Insol. in H_2O (Bette.)**Zirconium orthophosphate, 5ZrO_2 , $4\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$**

Somewhat sol in acids (Hermann, J pr 97. 321.)

Insol in acids (Paykull, Bull. Soc. (2) 20. 65.)

 22ZrO_2 , $\frac{1}{2}\text{P}_2\text{O}_5$. Not attacked by acids. (Hautefeuille and Margottet, C. R. 102. 1017.)**Zirconium pyrophosphate, $\text{Zr}(\text{PO}_3)_2$.**

(Knop, A. 159. 36.)

Phosphoricovanadicotungstic acid.**Ammonium phosphoricovanadicotungstate, $14(\text{NH}_4)_2\text{O}$, $2\text{P}_2\text{O}_5$, $7\text{V}_2\text{O}_5$, $31\text{WO}_3 + 78\text{H}_2\text{O}$.**Sol. in H_2O . Insol. in alcohol, ether, CS_2 and benzene. (Rogers, J. Am. Chem. Soc. 1903, 25. 305.)**Phosphorimidamide, PN_2H_3 .**

(Joannis, C. R. 1904, 139. 365.)

Phosphorimide, $\text{P}_2(\text{NH})_3$.Very sol. in ammoniacal solution of NH_4I . (Hugot, C. R. 1905, 141. 1236.)**Phosphornitryl, PON**

See Phosphoryl nitride.

Phosphorosomolybdic acid, P_2O_5 , $24\text{MoO}_3 + 63\text{H}_2\text{O}$.

(Rosenheim and Pinsker, Z. anorg. 1911, 70. 77.)

Ammonium phosphorosomolybdate, $2(\text{NH}_4)_2\text{O}$, $2\text{H}_3\text{PO}_3$, $12\text{MoO}_3 + 12\frac{1}{2}\text{H}_2\text{O}$.Insol. in cold, slightly sol. in hot H_2O . (Gibbs, Am. Ch. J. 5. 361.)**Phosphorosophosphomolybdic acid.****Ammonium phosphorosophosphomolybdate, $9(\text{NH}_4)_2\text{O}$, $2\text{H}_3\text{PO}_3$, $3\text{P}_2\text{O}_5$, $72\text{MoO}_3 + 38\text{H}_2\text{O}$.**Nearly insol. in H_2O (Gibbs.)

Phosphorosophosphotungstic acid.

Potassium phosphorosophosphotungstate,
 $5K_2O, 2H_3PO_3, P_2O_5, 24WO_3 + 13H_2O$.
 Sol. in much boiling H_2O . (Gibbs, Am. Ch. J. 7. 313.)

Phosphorosotungstic acid.

Ammonium phosphorosotungstate, $6(NH_4)_2O, 4H_3PO_3, 22WO_3 + 25H_2O$.
 Sl sol in cold H_2O .

Potassium —, $5K_2O, 16H_3PO_3, 32WO_3 + 46H_2O$.
 Sl sol. in hot H_2O .

Sodium —, $2Na_2O, 8H_3PO_3, 22WO_3 + 35H_2O$.
 Nearly insol. in cold, sl. sol. in hot H_2O .
 (Gibbs, Am. Ch. J. 7. 313)

Phosphorous anhydride, P_2O_3

See Phosphorus trioxide.

Phosphorous acid, H_3PO_3

Deliquescent. Very sol. in H_2O .

Phosphites.

The neutral alkali phosphites are sol in H_2O ; most of the others are sl. sol. in H_2O , but sol. in $H_3PO_3 + Aq$; all are insol. in alcohol.

Aluminum phosphite, basic, $Al_2(HPO_3)_3$.

$Al_2(OH)_6$
 Ppt (Grützner, Arch. Pharm. 1897, 235. 698.)

Aluminum phosphite.

Precipitate. (Rose, Pogg. 9. 39.)
 Sl. sol. in H_2O .

Ammonium phosphite, $(NH_4)_2HPO_3 + H_2O$.

Very deliquescent, and sol. in H_2O . (Rose, Pogg. 9. 28.)

Sol. in 2 pts. cold, and less hot H_2O . Insol. in alcohol (Berzelius.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Ammonium hydrogen phosphite, $(NH_4H)HPO_3$.

Very deliquescent, and sol. in H_2O . 1 pt. H_2O dissolves 1.71 pts. salt at 0° ; 1.9 pts. at 14.5° ; and 2.60 pts. at 31° . (Amat, C. R. 105. 809.)

Ammonium hydroxylamine phosphite, $NH_4(NH_2OH)HPO_3$.

Sol. in H_2O and abs. alcohol. (Hofmann, Z. anorg. 1898, 16. 466.)

Ammonium magnesium phosphite, $(NH_4)_2Mg_3(PhO_3)_4 + 16H_2O$.

Slightly sol. in H_2O . (Rammelsberg, Pogg. 131. 367)

Antimonyl phosphite, $(SbO)H_2PO_3$.

Very sol. in H_2O containing HCl . (Grützner, Arch. Pharm. 1897, 235. 694.)

Barium phosphite, $BaHPO_3$.

100 pts. H_2O dissolve 0.25 pt. (Ure.)
 Very slightly sol. in H_2O , and decomp by boiling H_2O (Dulong.)
 Easily sol. in H_2O containing NH_4Cl . (Wackenroder, A. 41. 315.)
 Sol in $H_3PO_3 + Aq$ or $HCl + Aq$. (Railton.)

Barium hydrogen phosphite, $Ba_2H_2(HPO_3)_3 + 8H_2O$.

Easily sol. in H_2O , but decomp. by boiling therewith Insol. in alcohol. (Rammelsberg, Pogg. 132. 496.)

Barium dihydrogen phosphite, $BaH_2(HPO_3)_2 + \frac{1}{2}H_2O$.

Easily sol. in H_2O . (Rose, Pogg. 9. 215.)
 $+ H_2O$. Sol. in H_2O ; decomp. by boiling H_2O into a neutral insol., and an acid sol. salt. (Wurtz, A. 58. 66.)
 $+ 2H_2O$. Easily sol in H_2O . (Rammelsberg, Pogg. 132. 496)
 Insol. in alcohol. (Wurtz.)

Bismuth phosphite, $2Bi_2O_3, 3P_2O_3$.

Insol. in H_2O .
 $Bi_2(HPO_3)_3 + 3H_2O$. Ppt. (Grützner, Arch. Pharm. 1897, 235. 696.)
 Decomp. by H_2S . Not decomp. by $KOH + Aq$. (Vanimo, J. pr. 1906, (2) 74. 151.)

Cadmium phosphite, $CdHPO_3 + 3H_2O$.

Ppt. (Rose, Pogg. 9. 41.)

Calcium phosphite, $CaHPO_3 + \frac{3}{2}H_2O$

Sl. sol. in H_2O ; the aqueous solution is decomp. by boiling.
 $+ H_2O$. Sol. in $NH_4Cl + Aq$. (Wackenroder, A. 41. 315)
 Insol. in alcohol.

Calcium hydrogen phosphite, $CaH_2(HPO_3)_2 + H_2O$.

Sol. in H_2O Aqueous solution is decomp. by alcohol. (Wurtz, A. ch. (3) 7. 212.)

Chromic phosphite.

Precipitate. Almost insol. in H_2O . (Rose, Pogg. 9. 40.)

Cobaltous phosphite, $CoPHO_3 + 2H_2O$.

Ppt Sl. sol. in H_2O . (Rose.)

Cupric phosphite, $\text{CuHPO}_3 + 2\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . (Wurtz, A. ch. (3) 16. 213.)

Didymium phosphite, $\text{Di}_2(\text{HPO}_3)_3$.

Precipitate. (Frerichs and Smith, A. 191. 331.)

Glucinum phosphite.

Precipitate Insol. in H_2O . (Rose, Pogg. 9. 39.)

Iron (ferrous) phosphite, $\text{FeHPO}_3 + x\text{H}_2\text{O}$.

Ppt. Nearly insol. in H_2O . (Rose, Pogg. 9. 35.)

Iron (ferric) phosphite, basic, $\text{Fe}_2(\text{HPO}_3)_3$, $\text{Fe}_2(\text{OH})_6$.

(Grützner, Arch. Pharm. 1897, 235. 697.)
 $\text{Fe}_2(\text{HPO}_3)_3$, $\text{Fe}(\text{OH})_3 + 5\text{H}_2\text{O}$ Hydro-
scopic. (Berger, C. R. 1904, 138. 1500.)

Iron (ferric) phosphite, $\text{Fe}_2(\text{HPO}_3)_3 + 9\text{H}_2\text{O}$.

Ppt. Sol in iron alum + Aq. (Rose.)

Lanthanum phosphite, $\text{La}_2(\text{HPO}_3)_3$.

Precipitate. (Smith.)

Lead phosphite, basic, 4PbO , $\text{P}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Ppt. (Rose, Pogg. 9. 222.)
 3PbO , $\text{P}_2\text{O}_3 + \text{H}_2\text{O}$. Insol. in H_2O . Sol. in
warm dil. $\text{H}_3\text{PO}_3 + \text{Aq}$, from which it is
pptd. by $\text{NH}_4\text{OH} + \text{Aq}$. (Wurtz, A. ch. (3) 16. 214.)

Lead phosphite, PbHPO_3 ,

Insol. in H_2O . Very sl. sol. in a solution
of phosphorous acid; easily sol. in cold HNO_3
+ Aq. (Wurtz.)

Lead hydrogen phosphite, $\text{PbH}_4(\text{PO}_3)_2$.

Decomp. by H_2O . (Amat, C. R. 110. 901.)

Lead pyrophosphite, $\text{PbH}_2\text{P}_2\text{O}_5$.

Gradually decomp. by H_2O into H_3PO_3 and
 PbHPO_3 . (Amat, C. R. 110. 903.)

Lithium hydrogen phosphite, LiH_2PO_3 .

Very sol. in H_2O . (Amat, A. ch. (6) 24. 309.)

Lithium pyrophosphite, $\text{Li}_2\text{H}_2\text{P}_2\text{O}_5$.

Very sol. in H_2O . (Amat, A. ch. 1891, (6) 24. 352.)

Magnesium phosphite, $\text{MgHPO}_3 + 3\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Rose, Pogg. 9. 28.)

Sol. in 400 pts. H_2O . (Berzelius.)
+ $4\text{H}_2\text{O}$.

Magnesium pyrophosphite, $\text{Mg}(\text{H}_2\text{PO}_3)_2$.

Very sol in H_2O . (Amat, A. ch. 1891, (6) 24. 313.)

Manganous phosphite, $\text{MnHPO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Difficultly sol in H_2O , easily in MnCl_2 or
 $\text{MnSO}_4 + \text{Aq}$ (Rose, Pogg. 9. 33.)

Nickel phosphite, $\text{NiHPO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$.

Ppt. Sl sol. in H_2O .

Potassium phosphite, K_2HPO_3 .

Very deliquescent. Very sol in H_2O .
Insol in alcohol. (Dulong.)

Potassium hydrogen phosphite, $(\text{KH})\text{HPO}_3$.

1 pt. H_2O dissolves about 172 pts. salt at
 20° . (Amat, C. R. 106. 1351.)

K_2HPO_3 , $2\text{H}_3\text{PO}_3$. Very sol in H_2O .
(Wurtz, A. 58. 63.)

Sol. in 3 pts cold, and in less hot H_2O .
(Fourcroy and Vauquelin.)

Potassium pyrophosphite, $\text{K}_2\text{H}_2\text{P}_2\text{O}_5$.

Very sol. in H_2O . (Amat, A. ch. (6) 24. 351.)

Sodium phosphite, basic, Na_2HPO_3 ,
 NaOH (?).

Not obtained in pure state (Zimmerman,
B. 7. 290); = Na_3PO_3 (Wislicenus)
Does not exist. (Amat.)

Sodium phosphite, $\text{Na}_2\text{HPO}_3 + 5\text{H}_2\text{O}$.

Deliquescent, and very sol. in H_2O . In-
sol in alcohol.

Correct formula for Na_3PO_3 of Rose and
Dulong.

Sodium hydrogen phosphite, $(\text{NaH})\text{HPO}_3 +$
 $2\frac{1}{2}\text{H}_2\text{O}$

0.56 pt. salt dissolves in 1 pt. H_2O at 0° ;
0.66 pt. at 10° , 1.93 pts at 42° . (Amat,
C. R. 106. 1351.)

$\text{Na}_2\text{H}_4(\text{HPO}_3)_3 + \text{H}_2\text{O}$. Deliquescent in
moist air. Sol. in 2 pts. cold, and about the
same amt. hot H_2O . Sl. sol. in spirit. (Four-
croy and Vauquelin.)

Sodium pyrophosphite, $\text{Na}_2\text{H}_2\text{P}_2\text{O}_5$.

Very sol. in H_2O with gradual decomp. into
 Na_2HPO_3 . (Amat.)

Strontium phosphite, $\text{SrHPO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Difficultly sol. in H_2O . Aqueous solution
decomp. on heating into a sol acid salt and
an insol. basic salt.

Strontium hydrogen phosphite, $\text{SrH}_4(\text{PO}_3)_2$.

Very sol. in H_2O . (Amat, A. ch. (6) 24. 312.)

Thallous hydrogen phosphite, TlH_2PO_3 .

Very sol. in H_2O . (Amat, A. ch. (6) 24. 310.)

Thallous pyrophosphite, $\text{Tl}_2\text{H}_2\text{P}_2\text{O}_5$.

Deliquescent. Very sol. in H_2O . (Amat.)

Tin (stannous) phosphite, SnHPO_3 .

Ppt Sol in $\text{HCl} + \text{Aq.}$ (Rose, Pogg 9. 45.)

Tin (stannic) phosphite, $2\text{SnO}_3, \text{P}_2\text{O}_3$.

Ppt (Rose, Pogg. 9. 47)

Titanium phosphite (?)

Precipitate (Rose, Pogg 9. 47)

Uranyl phosphite, $(\text{UO}_2)_3\text{H}_2(\text{HPO}_3)_4 + 12\text{H}_2\text{O}$.

Precipitate. (Rammelsberg. Pogg. 132. 500.)

Zinc phosphite, ZnHPO_3 .

Sol. in H_2O . (Rammelsberg, Pogg 132. 481)

+ $2\frac{1}{2}\text{H}_2\text{O}$. More easily sol. in cold than warm H_2O . (Rammelsberg.)

Zinc phosphite, acid, $\text{Zn}_2\text{H}_3\text{P}_3\text{O}_8$.

Sol. in H_2O

+ $2\text{H}_2\text{O}$. Sol. in H_2O . (Rammelsberg, Pogg. 132. 498)

$\text{Zn}_3\text{H}_3\text{P}_3\text{O}_{13}$. Sol. in H_2O .

+ $3\text{H}_2\text{O}$ Sol. in H_2O . (Rammelsberg)

$\text{Zn}_2\text{H}_3\text{P}_3\text{O}_{14}$. Sol. in H_2O .

+ H_2O Sol. in H_2O . (Rammelsberg)

Zirconium phosphite, $\text{Zr}(\text{PO}_3)_2 + \text{H}_2\text{O}$.

Ppt. Nearly insol in dil. mineral acids. (Hauser, Z. anorg. 1913, 84. 92)

Phosphorous anhydride, P_2O_3 .

See Phosphorus trioxide.

Phosphorus, P.

(a) *Ordinary white phosphorus.* Insol. in H_2O , but slowly decomp. thereby (G. K.), very sl. sol. in H_2O . (Berzelius and others)

A pure aqueous solution containing 0.1 g P in 500 cc. H_2O can be obtained by dissolving 0.1 g P in CS_2 mixed with ether and hot alcohol; this solution is poured into 500 cc. boiling H_2O free from air, and the boiling continued with stirring until the alcohol, ether and CS_2 are boiled off. (Bokorny, Ch. Ztg. 1896, 20. 1022.)

100 g. H_2O sat with P contains 0.0003 g.

P. (Stich, C. C. 1903, I. 1291.)

Sol. with decomp. in hot conc. $\text{HNO}_3 + \text{Aq}$

Decomp by boiling caustic alkalies + Aq

Easily sol. in SCl_2 , especially if hot. (Wöhler.)

Sol. in sulphur phosphides.

Largely sol. in PCl_3 .

Easily sol. in PCl_5 .

Sol. in PBr_3 Sol. in PSCl_3 , easily on warming, separating on cooling (Serullas, A. ch. 1829, 42. 25.)

Sol. in liquid SO_2 . (Sestini, Bull. Soc 1868, (2) 10. 226.)

Sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol in S_2Cl_2 without foaming. (Nicolardot, C. R. 1908, 147. 1304.)

Sol. in PS_2Cl_3 . (Gladstone, A. 1850, 74. 91.)

Sol in 320 pts. cold alcohol of 0.799 sp. gr., and in 240 pts. of the same when warm. Pptd from alcoholic solution by H_2O . (Buchner.)

One grain P dissolves in 1 ounce abs alcohol. (Schacht.)

Sol. in 20 pts. absolute ether at 20° and 240 pts. ordinary ether at 20° . (Bucholz.)

Sol. in 80 pts absolute ether at 15.5° , and 240 pts. ordinary ether at 15.5° . (Brugnatelli, A. ch 24. 73.)

Solubility of P_4 in 100 g. ether at t° .

(Christomanos.)

Sol. to about 1% in acetic acid. (Vulpus, Arch Pharm 1878, **213**, 38.)

100 g. 96% acetic acid dissolve 0.105% P. (Stich, Pharm. Ztg. 1903, **48**, 343.)

Sol. in 0.05 pt. CS₂ (Eottger); 0.125 pt. (Trommsdorf.)

Alcohol ppts. P from CS₂ solution.
1 pt. CS₂ dissolves 17-18 pts P. (Vogel, J. B. 1868, 149.)

Solubility in CS₂ at t°. (g. per 100 g. of solution.)

t°	G. P ₄	t°	G. P ₄
-10	31 40	-2 5	75 00
-7.5	35 85	0 0	81 27

-3.2	71 72	..	.

(Cohen and Inouye, Z. phys. Ch. 1910, **72**, 418.)

Very sol. in methylene iodide. (Retgers, Z. anorg. **3**, 343.)

Strong vinegar dissolves P. (Beudet.)

Sol. in considerable amount in stearic acid. (Vulpus, Arch. Pharm. (3) **13**, 38.)

Sol. in ethyl chloride, benzoyl chloride, stannic chloride, and in liquid cyanogen.

Sl. sol. in ethyl nitrite, and wood-spirit.

Sl. sol. in acetone, with gradual decomposition.

Insol. in nicotine, and conine.

Sl. sol. in cold, more sol. in hot benzene. (Mansfield.)

Sol. in 14 pts. hot, and less in cold petroleum from Amiano. (Saussure.)

Sl. sol. in "liquid paraffine" (Crismer, B. 17, 649)

Sl. sol. in warm essential oils, as oil of turpentine, and in the fatty oils.

Sol. in hot oil of copaiba, separating out on cooling.

Sol. in hot oil of caraway, and mandarin oil (Luca.)

Sl. sol. in cold, more sol. in hot caoutchic, depositing on cooling.

Readily sol. in warm, less in cold styrene.

Sol. in aniline, and quinoline (Hofmann.)

Sl. sol. in cold creosote.

Somewhat sol. in fusel oil.

Easily sol. in valerianic acid, and amyl valerate.

Sol. in hexyl alcohol, ethylene chloride, allyl sulphocyanide, mercury methyl, chloroform, bromoform, warm chloral, acetic ether, aldehyde, hot cacodyl sulphide, and in cacodyl oxide.

100 g. oil of almonds sat. with P contain 1.25 g. (Stich, C. C. **1903**, I. 1291.)

100 g. oleic acid sat. with P contain 1.06 g. (Stich.)

100 g. paraffine sat. with P contain 1. g. (Stich.)

(b) *Amorphous phosphorus* Insol. in H₂O.

Insol. in NH₄OH+Aq. (Flückiger)

Sol. in boiling KOH+Aq

The statement of Burgess and Chapman, (Chem. Soc. **79**, 1235) that red P is sol. in aqueous alcoholic alkali is incorrect. Both ordinary crystalline and amorphous red P are insol. in aqueous alcoholic alkali. (Michaelis, A. 1902, **325**, 367)

Insol. in liquid NH₃. (Hugot, A. ch. 1900 (7) **21**, **31**); (Franklin, Am. Ch. J. 1898, **20**, 828.)

Bright red variety is sol. in liquid NH₃ at ord. temp. leaving a black residue. (Stoch, Böttcher and Lenger, B. 1909, **42**, 2854.)

Red. Amorphous.

Sol. in S₂Cl₂ with foaming. (Nicolardot, C. R. 1908, **147**, 1304.)

Solubility of amorphous bright red P₄ in PBr₃ is diminished by long heating as follows:

	172°	185°
Initial concentration	0.555	0.476
Final concentration	0.374	0.397
Length of expt. in hours	34	24

198° 218°

0 592 0 476

0 416 0 592

18 17

(Buck, Dissert. 1904.)

Ordinary amorphous P₄ is sol. in PBr₃.

A sample prepared by heating bright red amorphous P with 94.2% P dissolved by heating in PBr₃ as follows:

% P	0 106	0.121	0.178
hours	10	20	42

A finely pulverized commercial product containing 98.0% P:

% P	0 92	0 116
hours	10	20

An ordinary commercial product with 98% P:

% P	0 056	0 108
hours	10	42

(Buck.)

100 g. PBr₃ dissolve 0.2601 g. bright red phosphorus at 172°; 0.3634 g. at 184°. (Schenk, B. 1902, **35**, 353.)

Insol. in KOH+Aq

Conc. H₂SO₄ does not act upon it in the cold, but dissolves easily when hot.

Insol. in dil., easily sol. in conc. HNO₃+Aq with decomposition

Much more sol. in HNO₃+Aq than ordinary P. (Personne, C. R. **45**, 115.)

Insol. in methylene iodide. (Retgers.)

Appreciably sol. in isobutyl alcohol. (Svedberg.)

Insol. in CS₂, alcohol, ether, naphtha, ligroine, PCl₃, etc.

Sl. sol. in boiling oil of turpentine and

other high-boiling liquids, with conversion into ordinary phosphorus.

Insol. in oil of turpentine even at 270°.
(Colson, A. ch. 1908, (8) 14. 554.)

(c) *Crystalline* Insol. in, and not attacked by dil. $\text{HNO}_3 + \text{Aq.}$

Sol. in CS_2

Phosphorus tribromide, PBr_3 .

Decomposed by H_2O , slowly at 8°, but very rapidly at 25°. (Löwig, Pogg. 14. 485)

Sol. in liquid H_2S . (Antony and Magri, Gazz. ch. it. 1905, 35. (1) 206.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 27.)

Sol. in ether, acetone, CHCl_3 , C_6H_6 and CS_2 . (Christomanos, Z. anorg. 1904, 41. 287.)

Phosphorus pentabromide, PBr_5 .

Fumes on air, and is violently decomp. by H_2O .

Phosphorus tribromide ruthenium bromide, $\text{Ru}_2\text{P}_3\text{Br}_{19}$.

Decomp. by boiling H_2O .

Slowly sol. in hot alcohol with decomp.

Insol. in benzene, CCl_4 , ligroin and cold alcohol. (Strecker, B. 1909, 42. 1775.)

Phosphorus thiophosphoryl bromide, PBr_3 , PSBr_3 .

Decomp. by H_2O into PSBr_3 . (Michaelis.)

Phosphorus tribromide ammonia, 3PBr_3 , 5NH_3 .

Slowly but completely sol. with decomp. in H_2O . (Storer's Dict.)

Phosphorus pentabromide ammonia, PBr_5 , 9NH_3 .

(Besson, C. R. 111. 972.)

Phosphorus monobromotetrachloride, PBrCl_4 .

Decomp. by H_2O . (Prinvault, C. R. 74. 868.)

Phosphorus dibromotrichloride, PCl_3Br_2 .

Very unstable. (Michaelis, B. 5. 9.)

Phosphorus tetrabromotrichloride, PCl_3Br_4 .

Decomp. with H_2O . (Geuther.)

Phosphorus heptabromodichloride, PCl_2Br_7 .

Very unstable. (Prinvault, C. R. 74. 868.)

Phosphorus octobromotrichloride, PCl_3Br_8 .

Very easily decomp. (Michaelis, B. 5. 9.)

Phosphorus bromofluoride, PF_3Br_2 .

Decomp. violently with H_2O . (Moissan, Bull. Soc. (2) 43. 2.)

Phosphorus bromonitride.

See Nitrogen bromophosphide.

Phosphorus dichloride, P_2Cl_4 .

Decomp. by H_2O . (Besson, C. R. 1910, 150. 103)

Phosphorus trichloride, PCl_3 .

Gradually decomp. by H_2O .

0.11 g. is sol. in 100 ccm. liquid H_2S . (Antony, Gazz. ch. it. 1905, 35 (1) 206.)

Acted upon by liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Miscible with CS_2 , C_6H_6 , CHCl_3 , and ether.

Decomp. with alcohol.

Phosphorus pentachloride, PCl_5 .

Very deliquescent, and sol. in H_2O with violent decomp. and evolution of heat. Sol. in liquid HCl . Acted upon by liquid NH_3 . Somewhat sol. without decomp. in CS_2 . (Schiff, A. 102. 118. (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. without decomp. in benzoyl chloride. (Gerhardt)

Sol. in oil of turpentine with evolution of heat.

Monophosphorus platinous chloride, PtCl_3 , PtCl_2 .

Deliquescent. Sol. in H_2O with formation of chloroplatinophosphoric acid. Similarly decomp. by alcohol. Abundantly sol. in hot benzene, toluene, chloroform, or carbon tetrachloride, and crystallizes on cooling. (Schützenberger, Bull. Soc. (2) 17. 482.)

Diphosphorus platinous chloride, 2PtCl_3 , PtCl_2 .

Decomp. by H_2O with formation of chloroplatinodiphosphoric acid. Similarly decomp. by alcohol. Sol. without decomp. in PCl_3 , CCl_4 , CHCl_3 , C_6H_6 , or C_7H_8 . (Schützenberger.)

Sol. in propyl alcohol with formation of the propyl ether of platinochlorophosphorous acid and HCl . (Pomey, C. R. 104. 364.)

Phosphorus diplatinous chloride, PtCl_3 , 2PtCl_2 .

Sol. in alcohol, with formation of ether $(\text{PtCl}_2)_2\text{P}(\text{OC}_2\text{H}_5)_2$. (Cochin, C. R. 86. 1402.)

Phosphorus platinic chloride, PtCl_3 , PtCl_4 . (Schützenberger.)

Phosphorus pentachloride platinic chloride, PtCl_3 , PtCl_4 , or $(\text{PtCl}_4)_2\text{PtCl}_6$.

Decomp. at once by H_2O . (Baudrimont, A. ch. (4) 2. 47.)

Phosphorus pentachloride selenium tetrachloride, $2\text{PCl}_5, \text{SeCl}_4$.

Sol in H_2O with decomp (Baudrimont, A ch (4) 2. 5)

Phosphorus trichloride ruthenium chloride, $\text{Ru}_2\text{P}_3\text{Cl}_{19}$

Slowly decomp. by boiling H_2O .

Sol. in benzene and CHCl_3

Sl sol in CCl_4 . Insol in ligrom (Strecker, B. 1909, 42. 1774)

Phosphorus tellurium chloride, $\text{PCl}_3, 2\text{TeCl}_4$.

Very deliquescent

Sol in H_2O . (Metzner, A ch. 1898, (7) 15. 203)

Phosphorus pentachloride stannic chloride, $\text{PCl}_5, \text{SnCl}_4$.

Very deliquescent. Sol. in much H_2O with evolution of heat, forming SnCl_4 , HCl , and H_3PO_4 , and soon separates out stannic phosphate (Cassellmann, A 83. 257.)

Phosphorus trichloride titanium chloride, $\text{PCl}_3, \text{TiCl}_4$.

(Bertrand, Bull. Soc. (2) 33. 565.)

Phosphorus pentachloride titanium chloride, $\text{PCl}_5, \text{TiCl}_4$.

Deliquescent. Decomp. by H_2O and alcohol. Sol in ether. Sl sol. in PCl_3 . (Tüttschew, A 141. 111.)

Completely sol in dil. acids (Weber.)

Phosphorus uranium pentachloride, $\text{PCl}_5, \text{UCl}_5$.

Decomp. with H_2O .

Phosphorus pentachloride zirconium chloride, $\text{PCl}_5, \text{ZrCl}_4$.

Decomp. by H_2O with pptn. of Zr phosphate. (Paykull)

Phosphorus trichloride ammonia, $\text{PCl}_3, 5\text{NH}_3$.

Insol. as such in H_2O , but slowly decomp. by boiling H_2O . More easily sol. with decomp. in acids. Sol with decomp. by boiling with KOH or $\text{NaOH} + \text{Aq}$. (Berzelius.)

Phosphorus pentachloride ammonia, $\text{PCl}_5, 5\text{NH}_3$

Properties as $\text{PCl}_3, 5\text{NH}_3$. (Berzelius.)

$\text{PCl}_5, 8\text{NH}_3$. Sl. decomp. on air. (Besson, C. R. 111. 972.)

Phosphorus pentachloride tungsten trioxide, $2\text{PCl}_5, \text{WO}_3(?)$.

(Persoz and Bloch, C. R. 28. 389.)

Phosphorus chlorobromide.

See Phosphorus bromochloride.

Phosphorus chlorofluoride, PCl_2F_3 .

Absorbed by H_2O with decomp. Absorbed by alcohol or ether. (Poulenc, A ch. (6) 24. 555.)

Phosphorus chloriodide, PCl_2I_2 .

Decomp. by moist air or H_2O . Sol. in CS_2 . (Most, B. 13. 2029.)

Phosphorus chloronitride.

See Nitrogen chlorophosphide.

Phosphorus trifluoride, PF_3 .

Decomp. slowly by H_2O . (Moissan, Bull. Soc. (2) 43. 2.)

Rapidly absorbed by KOH or $\text{NaOH} + \text{Aq}$, slowly by BaO_2H_2 , and $\text{K}_2\text{CO}_3 + \text{Aq}$. Absorbed by absolute alcohol with decomp. (Moissan, C. R. 99. 655.)

Phosphorus pentafluoride, PF_5 .

Fumes on air. (Thorpe, A. 182. 20)

Phosphorus pentafluoride ammonia, $2\text{PF}_5, 5\text{NH}_3$.

(Moissan, C. R. 101. 1490)

Phosphorus pentafluoride nitrogen peroxide.

Decomp. by H_2O . (Tassel, C. R. 110. 1264.)

Phosphorus fluobromide.

See Phosphorus bromofluoride.

Phosphorus fluochloride.

See Phosphorus chlorofluoride.

Phosphorus subiodide, P_2I_2 .

Sol. in dil HNO_3 and in alkalies + Aq . (Boulouch, C. R. 1905, 141. 257.)

Phosphorus diiodide, P_2I_4 .

Decomp. by H_2O . Sol. in CS_2 . (Corenwinder, A. ch. (3) 30. 242.)

0.09 g. is sol. in 100 ccm. liquid H_2S . (Antony, C. C. 1905, I. 1692.)

Phosphorus triiodide, PI_3 .

Very deliquescent. Decomp. in moist air and by H_2O . (Corenwinder, A. ch. (3) 30. 242.)

Very sol. in CS_2

Phosphorus pentaiodide, $\text{PI}_5(?)$.

(Hampton, C. N. 42. 180.)

Phosphorus iodosulphide.

See Phosphorus sulphoiodide.

Phosphorus nitride, P_3N_5 .

Very slightly decomp. by long boiling with H_2O .

Completely insol. in any solvent. (Stock, B 1903, 36. 317.)

Phosphorus suboxide, P_2O .

Unchanged in dry, gradually oxidized in moist air. Insol in H_2O , alcohol, ether, and oils; not acted on by $HCl + Aq$; oxidized by HNO_3 or H_2SO_4 (Marchand, J. pr. 13. 442.)

Sl. sol. in H_2O . (le Verrier, A. 27. 167.)

Forms hydrate P_2O , $2H_2O$, which gives up its H_2O when dried.

Two modifications: (a) decomp. slowly by H_2O or alkalis, (b) not decomp. by H_2O or alkalis. (Reinitzer and Goldschmidt, B. 13. 847.)

Is oxyphosphuretted hydrogen (?), $P_4H(OH)$. (Franke, J. pr. (2) 35. 341.)

— H_3P_2O .

Insol. in all solvents. Decomp. by H_2O . Not attacked by non-oxidizing acids. Decomp. by dil. alkalis. (Gautier, C. R. 76. 173.)

— P_4HO .

Insol. in nearly all substances. Not attacked by dilute acids; oxidized by ordinary HNO_3 , and conc. H_2SO_4 at 200° . Attacked by very dil. alkaline solutions. Perhaps identical with phosphorus suboxide P_2O . (Gautier, C. R. 76. 49.)

Phosphorus oxide, P_2O .

Decomp. by heating with H_2O at 100° . (Besson, C. R. 1897, 124. 764.)

Phosphorus trioxide, P_4O_6 (formerly P_2O_3).

Deliquescent, but very slowly dissolved by cold H_2O to form H_3PO_3 . Violently decomp. by hot H_2O or alcohol.

Sol. without decomp. in ether, carbon disulphide, benzene, or chloroform. (Thorpe and Tutton, Chem. Soc. 57. 545.)

Phosphorus tetroxide, P_2O_4 .

Very deliquescent. Sol. with evolution of heat in H_2O . (Thorpe and Fulton, Chem. Soc. 49. 833.)

Phosphorus pentoxide, P_2O_5 .

Very deliquescent. Sol. in H_2O with great evolution of heat, forming H_3PO_4 .

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1893, 20. 828.)

Insol. in acetone. (Eidmann, C. C. 1899, (I. 1014); (Naumann, B. 1904, 37. 4329.)

Phosphorus sulphur oxide, $P_2O_5, 3SO_2 = (PO)_2(SO_4)_3$ (phosphoryl sulphate) (?).

Decomp. by H_2O . Sol. in cold, more sol. in warm SO_2 . (Weber, B. 20. 86.)

Phosphorus oxy-compounds.

See under Phosphoryl compounds.

Phosphorus oxysulphide.

See Phosphorus sulphoxide.

Phosphorus semiselenide, P_2Se .

Decomp. with H_2O . Insol. in cold, decomp. by boiling $KOH + Aq$. Insol. in, but apparently decomp. by alcohol and ether. Easily sol. in CS_2 . (Hahn, J. pr. 93. 430.)

Phosphorus monoselenide, P_2Se .

Stable in dry, decomp. in moist air and by H_2O . Insol. in alcohol and ether. Decomp. by boiling $KOH + Aq$. CS_2 dissolves out P. (Hahn, J. pr. 93. 430.)

Sl. sol. in CS_2 . (Gore, Phil. Mag (4) 30. 414.)

Phosphorous sesquiselenide, P_4Se_3 .

Sol. in CCl_4 ; sl. sol. in CS_2 . (Meyer, Z. anorg. 1902, 30. 258.)

Phosphorus triselenide, P_2Se_3 .

Decomp. by boiling H_2O and slowly in moist air. Easily sol. in cold $KOH + Aq$, less easily in $M_2CO_3 + Aq$. Insol. in alcohol, ether, and CS_2 . (Hahn, J. pr. 93. 430.)

Phosphorus pentaselenide, P_2Se_5 .

Slowly decomp. in moist air or by H_2O , easily by $KOH + Aq$ or alcohol. Insol. in CS_2 . Sol. in CCl_4 . (Hahn, J. pr. 93. 430.)

Phosphorus selenides with M_2Se .

See M phosphoselenide, under M.

Phosphorus semisulphide, $P_2S(?)$.

1. *Liquid*. Not decomp. by, and insol. in boiled H_2O . Insol. in alcohol and ether. Sl. sol. in fats and volatile oils; decomp. by alkalis. Dissolves P on warming, with separation on cooling. Sol. in CS_2 .

2. *Red modification*. Not attacked at first by $HNO_3 + Aq$ (sp. gr. 1.22), but after a time is attacked with the greatest violence. Weak acids attack only when hot. (Berzelius, A. 46. 129.)

Existence is doubtful. (Schulze, B. 13. 1862; Isambert, C. R. 96. 1628.)

Phosphorus monosulphide, $P_2S(?)$.

1. *Ordinary*. Same properties as phosphorus semisulphide, 1.

2. *Red modification*. Unchanged by air, H_2O , or alcohol. Decomp. by conc. $KOH + Aq$, not by dilute. Sl. sol. in $NH_4OH + Aq$. (Berzelius, A. 46. 129.)

Existence is doubtful. (Schulze; Isambert.)

Does not exist. (Helff, Z. phys. Ch. 12. 206.)

Phosphorus sesquisulphide, P_4S_3 .

Not attacked by cold, slowly by hot H_2O . Cold $KOH + Aq$ dissolves with decomp.

Oxidized by HNO_3 and aqua regia. Sol. in alcohol and ether with decomp. Sol. in CS_2 (100 pts. CS_2 dissolve 60 pts. P_4S_3), PCl_3 , and PSCl_3 , and in K_2S or $\text{Na}_2\text{S} + \text{Aq.}$ (Lemoine, Bull. Soc. (2) 1. 407.)

Very sol. in CS_2 . (Rebs, A. 246. 367.)

Decomp. by dil. and conc. $\text{KOH} + \text{Aq.}$ 1 pt. P_4S_3 is sol. in 9 pts. CS_2 at -20° ; in 3.7 pts. CS_2 at 0° ; in 1 pt. CS_2 at 17° , in 40 pts. benzene at 17° ; in 9 pts. benzene at 80° ; in 32 pts. toluene at 17° ; in 6.5 pts. toluene at 111° . (Stock, B. 1910, 43. 156.)

Phosphorus trisulphide, P_2S_3 .

Decomp. by water. (Kekulé, A. 90. 310)

Sol. in $\text{M}_2\text{CO}_3 + \text{Aq}$ with separation of S. Easily sol. in KOH , NaOH , $\text{NH}_4\text{OH} + \text{Aq.}$ (Berzelius, A. 46. 129)

Sol. in alcohol and ether. (Lemoine.)

Correct formula is P_4S_6 . (Isambert, C. R. 102. 1386.)

Extremely sl. sol. in CS_2 . (Rebs, A. 246. 368.)

Existence doubtful. (Helff, Z. phys. Ch. 12. 210.)

Phosphorus sulphide, P_4S_7 .

Sl. sol. in CS_2 . (Mai, A. 265. 192.)

Slowly decomp. by cold, rapidly by hot H_2O .

Sol. in cold alkalis.

1 pt. is sol. in 3500 pts. CS_2 at 17° ; in 20,000 pts. at 0° . (Stock, B. 1910, 43. 416.)

Phosphorus disulphide, P_2S_2 (formerly P_2S_4).

Almost insol. in CS_2 . (Helff.)

Phosphorus pentasulphide, P_2S_5 .

Very deliquescent. Decomp. by H_2O . Very sol. in KOH , NaOH , $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in $\text{M}_2\text{CO}_3 + \text{Aq}$ with separation of S at low temp. Decomposes alcohol, acetic acid, etc. (Kekulé, A. 106. 331.)

Sol. in CS_2 . (Isambert, C. R. 102. 1386.)

Not very sol. in CS_2 . (Rebs, A. 246. 367.)

Mpt., 290° ; bpt., $513-515^\circ$ at 760 mm.

Decomp. by H_2O .

Easily sol. in warm $\text{NaOH} + \text{Aq.}$

1 pt. is sol. in 450 pts. CS_2 at room temp.; in 550 pts. at 0° ; in 1200 pts. at -20° . (Stock, B. 1910, 43. 1225.)

Ordinary form.

Sol. in 195 pts. boiling CS_2 .

New form.

Sol. in 32 pts. CS_2 . (Stock, B. 1905, 38. 2722.)

Phosphorus persulphide, P_2S_{12} (?).

Decomp. by H_2O , alkalis, etc. Consists of S, and mechanically united P. (Ramme, B. 12. 941.)

Phosphorus sulphides with M_2S .

See M Phosphosulphide, under M.

Phosphorus zinc sulphide, ZnP_2S_2 .

Sol. in $\text{HCl} + \text{Aq}$ with separation of P_2S (?). (Berzelius, A. 46. 150.)

Phosphorus trisulphide ammonia, $\text{P}_2\text{S}_3, 2\text{NH}_3$.

Decomp. by H_2O . (Bineau)

Phosphorus pentasulphide ammonia,

$\text{P}_2\text{S}_5, 6\text{NH}_3$.

Sol. in liquid NH_3 . (Stock, B. 1903, 36. 314.)

$\text{P}_2\text{S}_5, 7\text{NH}_3$. (Stock.)

Phosphorus sulphobromide.

See Thiophosphoryl bromide.

Phosphorus sulphochloride.

See Thiophosphoryl chloride.

Phosphorus sulphoiodide, $\text{P}_2\text{S}_3\text{I}$.

Sl. attacked by cold, rapidly by hot H_2O ; violently decomp. by fuming HNO_3 . Easily sol. in CS_2 . Sl. sol. in C_6H_6 or CHCl_3 , and still less in ether or absolute alcohol. (Ouvrard, C. R. 115. 1301.)

$\text{P}_2\text{S}_3\text{I}_2$. Easily sol. in CS_2 . More easily than $\text{P}_4\text{S}_{10}\text{I}_2$ and less than PI_3 . (Ouvrard, A. ch. 1894, (7) 2. 224.)

P_2SI_4 . Easily decomp. (Ouvrard.)

$\text{P}_4\text{S}_{12}\text{I}_2$. Insol. in H_2O ; sol. in warm ether.

Sl. sol. in benzene, CHCl_3 and glacial acetic acid; sol. in toluene and xylene. (Wolter, Ch. Ztg. 1907, 31. 640.)

Easily sol. in CS_2 . Sl. sol. in benzene, ether, absolute alcohol and CHCl_3 . (Ouvrard, C. R. 1892, 115. 1301.)

Phosphorus sulphoxide, $\text{P}_4\text{O}_6\text{S}_4$.

Deliquescent. Easily sol. in H_2O with decomp. Sol. in 2 pts. CS_2 without decomp. Sol. in benzene with decomp. (Thorpe and Tutton, Chem Soc. 59. 1019.)

$\text{P}_2\text{O}_2\text{S}_3$. Slowly decomp. by H_2O . Violently attacked by fuming HNO_3 . (Besson, C. R. 1897, 124. 152.)

$\text{P}_4\text{S}_5\text{O}_4$. Deliquescent; sol. in H_2O with decomp.; insol. in most solvents. (Stock, B. 1913, 46. 1382.)

Phosphoryl triamide, $\text{PO}(\text{NH}_2)_3$.

Insol. in boiling H_2O , $\text{KOH} + \text{Aq}$, or dil. acids. Decomp. by long boiling with HCl or $\text{HNO}_3 + \text{Aq}$. More easily decomp. with aqua regia. Easily sol. in warm H_2SO_4 or nitrosulphuric acid. (Schiff, A. 101. 300.)

Does not exist. (Gladstone; Mente, A. 248. 238.)

Phosphoryl bromide, POBr_3 .

Not miscible with H_2O , but gradually decomp. in contact with it. Sol. in H_2SO_4 , ether, oil of turpentine (Gladstone, Phil. Mag. (3) 35. 345); in CHCl_3 , CS_2 (Baudrimont, Bull. Soc. 1861. 118).

Easily sol in AsBr_3 . (Walden, Z. anorg. 1902, **29**, 374.)

Sol in CCl_4 , and in C_6H_6 . (Oddo, Chem. Soc. 1900, **78**, (2) 75.)

Phosphoryl bromide sulphide.

See Thiophosphoryl bromide.

Phosphoryl bromochloride, POCl_2Br .

Decomp. by H_2O . (Menschutkin, A. **139**, 343.)

Phosphoryl dibromochloride, POClBr_2 .

Decomp. by H_2O . (Geuther, Jena Zeit. **10**, 130.)

Phosphoryl chloride, POCl .

Very hygroscopic. Sol in H_2O with decomp. Insol. in most solvents. Sol in PCl_3 . (Besson, C. R. 1897, **125**, 772.)

POCl_3 . Decomp. by H_2O . Not acted on by liquid CO_2 , P , PH_3 , CS_2 , I , Br , Cl , etc. Sol. in CCl_4 , C_6H_6 , CS_2 , CHCl_3 and ether. (Oddo, Gazz. ch. it. 1899, **29**, (2) 318; Chem. Soc. 1900, **78** (2) 74.)

Phosphoryl boron chloride, POCl_3 , BCl_3 .

See Boron phosphoryl chloride.

Phosphoryl stannous chloride, POCl_3 , SnCl_2 .

Deliquescent. Decomp. by H_2O (Casselmann, A. **91**, 242.)

Phosphoryl stannic chloride, POCl_3 , SnCl_4 .

Deliquescent. Decomp. by H_2O . (Casselmann.)

Phosphoryl titanium chloride, POCl_3 , TiCl_4 .

Deliquescent, and decomp. by H_2O . (Weber, Pogg. **132**, 453.)

Pyrophosphoryl chloride, $\text{P}_2\text{O}_3\text{Cl}_4$.

Decomp. violently with H_2O . (Geuther and Michaelis, B. **4**, 766.)

Very sol. in H_2O with decomp.; very unstable. (Besson, C. R. 1897, **124**, 1100.)

Metaphosphoryl chloride, PO_2Cl .

Decomp. by H_2O . (Gustavson.)

Does not exist. (Michaelis.)

Phosphoryl fluoride, POF_3 .

Absorbed and decomp. at once by H_2O or alcohol. (Moissan, C. R. **102**, 1245.)

Phosphoryl imidoamide, $\text{PN}_2\text{H}_5\text{O} = \text{PO}(\text{NH})\text{NH}_2$.

Insol. in H_2O ; gradually decomp. by boiling with H_2O , more rapidly in presence of KOH . Insol. in boiling conc. $\text{HCl} + \text{Aq}$. Insol. in cold, decomp. by hot H_2SO_4 . Moderately dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ dissolves without evolution

of gas. Insol. in boiling nitric or nitrosulphuric acid. (Gerhardt, A. ch. (3) **20**, 255.) Insol. in alcohol, oil of turpentine, etc.

Phosphoryl iodide, $\text{P}_2\text{I}_5\text{O}_8$ (?)

Sol. in H_2O , alcohol, and ether (Burton, Am. Ch. J. **3**, 280)

PO_2I_2 . (Burton.)

Phosphoryl nitride, PON .

Insol. in H_2O , acids, or alkalis. (Gladstone, Chem. Soc. **2**, 121.)

Phosphoryl chlorosulphide, $\text{P}_2\text{O}_2\text{SCL}_4$.

Slowly decomp. in contact with H_2O . (Besson, C. R. 1897, **124**, 153.)

Phosphoryl thio-compounds.

See Thiophosphoryl compounds.

Phosphoselenic acid.

See Selenophosphoric acid.

Phosphoselenide, M .

See under M .

Phosphosilicic acid.

See Silicophosphoric acid.

Phosphosilicosovanadicotungstic acid.

Ammonium phosphosilicosovanadicotungstate.

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, **25**, 1225.)

Phosphosilicovanadic acid, 3SiO_2 , $2\text{V}_2\text{O}_5$, $2\text{P}_2\text{O}_5 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Berzelius.)

Phosphostannosovanadicotungstic acid.

Ammonium phosphostannosovanadicotungstate.

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, **25**, 1226.)

Phosphosulphide, M .

See under M .

Phosphosulphuric anhydride, P_2O_5 , 3SO_3 .

Very easily decomp. (Weber, B. **19**, 3190.)

Phosphotelluric acid.

Ammonium phosphotellurate, $2(\text{NH}_4)_2\text{O}$, P_2O_5 , $\text{TeO}_3 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Weinland, Z. anorg. 1901, **28**, 61.)

$4(\text{NH}_4)_2\text{O}$, $3\text{P}_2\text{O}_5$, $2\text{TeO}_3 + 11\text{H}_2\text{O}$. Sol. in H_2O without decomp. (Weinland.)

Potassium phosphotellurate, $15K_2O, P_2O_5, TeO_3$.

+17.5 H_2O Very sol. in H_2O .
+4.5 H_2O Ppt (Weinland)

Rubidium phosphotellurate, $1.5Rb_2O, P_2O_5, TeO_3+4.5H_2O$.

Ppt (Weinland.)

Sodium phosphotellurate, $2Na_2O, P_2O_5, 2TeO_3+9H_2O$.

Difficultly sol. in cold H_2O . (Weinland)

Phosphothorosovanadicotungstic acid.

Ammonium phosphothorosovanadicotungstate.

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1226.)

Phosphotitanosovanadicotungstic acid.

Ammonium phosphotitanosovanadicotungstate.

Formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1226.)

Phosphotungstic acid, $P_2O_5, 12WO_3+42H_2O$.

Not efflorescent. Sol. in H_2O , alcohol, and ether. (Péchar, C. R. 110. 754.)

$P_2O_5, 16WO_3+69H_2O$. Very efflorescent. Sol. in H_2O , alcohol, and ether. (Péchar, C. R. 109. 301.)

$+xH_2O = H_5PW_8O_{28}+xH_2O$ (α -phospholuteotungstic acid). Known only in aqueous solution. (Kehrmann, B. 20. 1808.)

$+48H_2O = H_3PW_8O_{28}+16H_2O$ (α -anhydrophospholuteotungstic acid). Sol. in its crystal H_2O by warmth of the hand; sol. in less than $\frac{1}{8}$ pt. H_2O . (Kehrmann)

Correct composition is represented by $H_3PW_9O_{31}+9H_2O$. (Kehrmann, Z. anorg. 1. 422.)

$P_2O_5, 20WO_3+8H_2O$. Very efflorescent. (Gibbs, B. 10. 1386)

$+19H_2O = H_{11}PW_{10}O_{38}+8H_2O$. Sol. in H_2O . (Scheibler, B. 5. 801.)

$+50$, and $62H_2O$. Very efflorescent (Péchar, C. R. 109. 301.)

$3H_2O, P_2O_5, 21WO_3+30H_2O$. Efflorescent. Sol. in H_2O in nearly every proportion.

$P_2O_5, 22WO_3+28H_2O = H_5PW_{11}O_{43}+18H_2O$. Efflorescent. (Scheibler, B. 5. 801.)

Composition is $6H_2O, 22WO_3, P_2O_5+45H_2O$. (Gibbs.)

$H_3PO_4, 12WO_3+18H_2O$, or $P_2O_5, 24WO_3+39H_2O$. Sol. in H_2O , alcohol and ether. (Soboleff, Z. anorg. 1896. 12. 18.)

$P_2O_5, 24WO_3+40H_2O = 6H_2O, P_2O_5, 24WO_3+34H_2O$. Very efflorescent. Sol. in H_2O . (Gibbs.)

+45 H_2O .

Solubility in H_2O at t°

t°	100 ccm. H_2O dissolve g of the cryst acid	Sp gr of the solution
0	16 206	1 1890
22	49 718	1 6913
43	53 64	1.8264
92	86 75	2 5813

(Soboleff, Z. anorg. 1896. 12. 31.)

Solubility in ether at t° .

t°	100 ccm ether dissolves g of the cryst acid.
0	81 196
7 8	85 327
18 2	96.017
24 2	101 348

(Soboleff.)

$+53H_2O = 6H_2O, P_2O_5, 24WO_3+47H_2O$. Sol in H_2O (Gibbs)

Sol in ether. If an equal vol. of ether is placed above a layer of conc. aqueous solution of acid, oily drops form between the two layers, which sink to bottom, forming a third layer. The sp. gr. of the latter is 1.525. The crystallized acid dissolved in smallest amt. ether forms an oil of sp. gr. = 2.083. Ethereal solution is miscible with alcohol, and also with a large quantity of H_2O . (Drechsel, B. 20. 1452)

$+61H_2O$. Sol. in H_2O . (Gibbs, Proc. Am. Acad. 16. 116)

Aluminum ammonium phosphotungstate.

See Aluminicophosphotungstate, ammonium.

Ammonium phosphotungstate, $3(NH_4)_2O, P_2O_5, 7WO_3+Ag$.

Sl. sol. in cold H_2O without decomp. Decomp. by hot H_2O (Kehrmann, Z. anorg. 1892. 1. 438.)

$2(NH_4)_2O, P_2O_5, 12WO_3+5H_2O$. Insol. in cold H_2O . (Péchar, C. R. 110. 754.)

$6(NH_4)_2O, P_2O_5, 16WO_3+10H_2O$. Easily sol. in hot H_2O . (Péchar.)

$5(NH_4)_2O, P_2O_5, 16WO_3+xH_2O = (NH_4)_5PW_8O_{28}+xH_2O$ (Ammonium α -phospholuteotungstate). Sl. sol in H_2O . (Kehrmann.)

$3(NH_4)_2O, P_2O_5, 16WO_3+16H_2O = (NH_4)_3PW_8O_{28}+8H_2O$ (Ammonium α -anhydrophospholuteotungstate). Efflorescent. Easily sol. in H_2O . (Kehrmann.)

$5(NH_4)_2O, P_2O_5, 17WO_3+16H_2O$. Very sl. sol. in cold H_2O . (Kehrmann, Z. anorg. 1894. 6. 387.)

$3(NH_4)_2O, P_2O_5, 18WO_3+14H_2O$. (Phospholuteotungstate.) (Kehrmann, Z. anorg. 1893. 4. 140.)

$3(\text{NH}_4)_2\text{O}$, P_2O_5 , $21\text{WO}_3 + x\text{H}_2\text{O}$. Rather sl. sol in cold, easily in hot H_2O and alcohol. Insol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$ (Kehrmann and Freinkel, B. 25. 1972.)

$3(\text{NH}_4)_2\text{O}$, $3\text{H}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 18\text{H}_2\text{O}$. Sl. sol. in cold H_2O (Gibbs)

$3(\text{NH}_4)_2\text{O}$, $3\text{H}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 26\text{H}_2\text{O}$. Very sl. sol. even in hot H_2O (Gibbs, Proc. Am. Acad. 16. 122.)

Ammonium barium α -anhydrophospholutedungstate, $\text{NH}_4\text{BaPW}_3\text{O}_{28} + x\text{H}_2\text{O} = (\text{NH}_4)_2\text{O}$, 2BaO , P_2O_5 , $16\text{WO}_3 + x\text{H}_2\text{O}$. Sol. in H_2O . (Kehrmann.)

Barium phosphotungstate, 2BaO , P_2O_5 , $12\text{WO}_3 + 15\text{H}_2\text{O}$

Very efflorescent. Sol in H_2O ; insol. in alcohol. (Péchar, C. R. 110. 754.)

3BaO , P_2O_5 , $16\text{WO}_3 + x\text{H}_2\text{O} = \text{Ba}_3(\text{PW}_3\text{O}_{28})_x + x\text{H}_2\text{O}$. (Barium α -anhydrophospholutedungstate). Not efflorescent. Quite difficultly sol. in H_2O . (Kehrmann.)

2BaO , P_2O_5 , $16\text{WO}_3 + 10\text{H}_2\text{O}$. Efflorescent. (Péchar, A. ch. (6) 22. 240.)

2BaO , $6\text{H}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 24\text{H}_2\text{O}$. Sol in H_2O (Gibbs, B. 10. 1386.)

6BaO , $2\text{H}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 46\text{H}_2\text{O}$. Sol in H_2O (Gibbs, Proc. Am. Acad. 16. 126.)

7BaO , P_2O_5 , $22\text{WO}_3 + 59\text{H}_2\text{O}$. Sol in H_2O . (Sprenger, J. pr. (2) 22. 418.)

$+53\text{H}_2\text{O}$. (Kehrmann, B. 24. 2335.)

4BaO , $2\text{H}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 39\text{H}_2\text{O}$. Sol in H_2O without decomp (Gibbs)

BaO , P_2O_5 , $24\text{WO}_3 + 59\text{H}_2\text{O}$. Sol. in H_2O . (Sprenger)

2BaO , P_2O_5 , $24\text{WO}_3 + 59\text{H}_2\text{O}$. Sol. in H_2O . (Sprenger)

3BaO , P_2O_5 , $24\text{WO}_3 + 46\text{H}_2\text{O} = 3\text{BaO}$, $3\text{H}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 43\text{H}_2\text{O}$. Easily sol. in hot H_2O . (Gibbs)

3BaO , P_2O_5 , $24\text{WO}_3 + 48\text{H}_2\text{O}$. Sol in H_2O . (Soboleff, Z. anorg. 1896, 12. 18.)

$+58\text{H}_2\text{O}$. Sol in H_2O . (Sprenger)

Efflorescent. Sl. sol in dil. $\text{BaCl}_2 + \text{Aq}$. (Kehrmann, Z. anorg. 1. 423.)

Barium potassium phosphotungstate, 5BaO , $2\text{K}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 48\text{H}_2\text{O}$.

Sol. in H_2O . (Kehrmann and Fremkel, B. 25. 1968.)

Barium silver phosphotungstate, 4BaO , $3\text{Ag}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 34\text{H}_2\text{O}$.

Very sl. sol in H_2O . (Kehrmann and Freinkel, B. 25. 1966.)

Barium sodium phosphotungstate, 2BaO , Na_2O , P_2O_5 , $24\text{WO}_3 + 46\text{H}_2\text{O}$.

Sol. in H_2O , forming cloudy liquid, which clears up. Solution in HCl is not cloudy. (Brandhorst and Kraut, A. 249. 380)

Calcium phosphotungstate, CaO , $5\text{H}_2\text{O}$, 16WO_3 , $\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$.

Readily sol. in H_2O . (Gibbs, Proc. Am. Acad. 16. 130.)

2CaO , P_2O_5 , $12\text{WO}_3 + 19\text{H}_2\text{O}$. Efflorescent. Insol. in alcohol (Péchar, C. R. 110. 754.)

2CaO , P_2O_5 , $20\text{WO}_3 + 22\text{H}_2\text{O}$. Efflorescent (Péchar, A. ch. (6) 22. 233.)

Cadmium phosphotungstate, 2CdO , P_2O_5 , $12\text{WO}_3 + 13\text{H}_2\text{O}$.

Sl. efflorescent. Very sol. in H_2O (Péchar, C. R. 110. 754.)

Cupric phosphotungstate, 3CuO , 24WO_3 , $\text{P}_2\text{O}_5 + 58\text{H}_2\text{O}$.

Sol. in H_2O . (Sprenger, J. pr. (2) 22. 418.)

2CuO , P_2O_5 , $12\text{WO}_3 + 11\text{H}_2\text{O}$. Very efflorescent (Péchar, C. R. 110. 754.)

2CuO , P_2O_5 , $20\text{WO}_3 + 13\text{H}_2\text{O}$. Efflorescent (Péchar, A. ch. (6) 22. 235.)

Lead phosphotungstate, 2PbO , P_2O_5 , $12\text{WO}_3 + 6\text{H}_2\text{O}$

Insol in cold, sol. in boiling H_2O (Péchar, C. R. 110. 754.)

2PbO , P_2O_5 , $20\text{WO}_3 + 6\text{H}_2\text{O}$. Sol. in boiling H_2O . (Péchar, A. ch. (6) 22. 236.)

Lithium phosphotungstate, Li_2O , P_2O_5 , $12\text{WO}_3 + 21\text{H}_2\text{O}$.

Sol in H_2O . (Péchar, C. R. 110. 754.)

Magnesium phosphotungstate, 2MgO , P_2O_5 , 12WO_3 .

Sl. efflorescent. (Péchar, C. R. 110. 754.)

2MgO , P_2O_5 , $20\text{WO}_3 + 19\text{H}_2\text{O}$. Sl. efflorescent. (Péchar, A. ch. (6) 22. 234.)

Mercurous phosphotungstate.

Insol in dil. $\text{HNO}_3 + \text{Aq}$. (Péchar, C. R. 110. 754.)

Potassium phosphotungstate, K_2O , P_2O_5 , $12\text{WO}_3 + 9\text{H}_2\text{O}$.

Insol. in cold, sl. sol. in hot H_2O (Péchar, C. R. 110. 754.)

$5\text{K}_2\text{O}$, P_2O_5 , $16\text{WO}_3 + x\text{H}_2\text{O} = \text{K}_5\text{PW}_3\text{O}_{28} + x\text{H}_2\text{O}$. (Potassium α -phospholutedungstate).

Very sl. sol. in cold, more easily in hot H_2O . Sol in cold dil. $\text{HNO}_3 + \text{Aq}$ (Kehrmann)

$3\text{K}_2\text{O}$, P_2O_5 , $16\text{WO}_3 + 16\text{H}_2\text{O} = \text{K}_3\text{PW}_3\text{O}_{28} + 8\text{H}_2\text{O}$. (Potassium α -anhydrophospholutedungstate). Efflorescent. Easily sol.

in H_2O . (Kehrmann.)

$5\text{K}_2\text{O}$, P_2O_5 , $17\text{WO}_3 + 21$ or $22\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Kehrmann, Z. anorg. 1894, 6. 387.)

$3\text{K}_2\text{O}$, P_2O_5 , $18\text{WO}_3 + 28\text{H}_2\text{O}$. (Duparc and Pearce, Bull. Soc. Min. 1895, 18. 42.)

K_2O , $5\text{H}_2\text{O}$, P_2O_5 , $18\text{WO}_3 + 14\text{H}_2\text{O}$. Very sl. sol. in H_2O . (Gibbs.)

$6\text{K}_2\text{O}$, P_2O_5 , $18\text{WO}_3 + 30\text{H}_2\text{O}$, and $23\text{H}_2\text{O}$.

The $23\text{H}_2\text{O}$ salt is more sol. in H_2O than the $30\text{H}_2\text{O}$ salt (Gibbs.)

$7\text{K}_2\text{O}$, H_2O , P_2O_5 , $20\text{WO}_3 + 27\text{H}_2\text{O}$ Sol. in H_2O . (Gibbs, B. 10. 1386.)

K_2O , P_2O_5 , $20\text{WO}_3 + 5\text{H}_2\text{O}$ Nearly insol in H_2O . (Péchar, A. ch. (6) 22. 231.)

$8\text{K}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 18\text{H}_2\text{O}$. Sl sol in H_2O (Gibbs.)

$3\text{K}_2\text{O}$, P_2O_5 , $21\text{WO}_3 + 31\text{H}_2\text{O}$. Easily sol. in cold H_2O or alcohol. Much less sol in very dil. $\text{HCl} + \text{Aq}$ or $\text{KCl} + \text{Aq}$ Decomp. by boiling H_2O . (Kehrmann and Frenkel, B. 25. 1971.)

$2\text{K}_2\text{O}$, $4\text{H}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 2\text{H}_2\text{O}$ Very sl sol in H_2O . (Gibbs.)

$7\text{K}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 31\text{H}_2\text{O}$. Easily sol in cold or hot H_2O . Insol in alcohol (Kehrmann, B. 25. 1966.)

$3\text{K}_2\text{O}$, $3\text{H}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 8$, and $14\text{H}_2\text{O}$. Sol. in a large amount of H_2O with partial decomp. (Gibbs, Proc. Am. Acad. 16. 120.)

Practically insol. in H_2O . Easily sol. in NH_4OH , alkalies, or alkali carbonates + Aq . (Kehrmann, B. 24. 2329.)

$6\text{K}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 18\text{H}_2\text{O}$ Sol. in H_2O . (Gibbs, Proc. Am. Acad. 15. 1.)

Potassium lead α -phospholuteotungstate.

Sl. sol. in H_2O . (Kehrmann.)

Silver phosphotungstate, Ag_2O , P_2O_5 , $12\text{WO}_3 + 8\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . (Péchar, C. R. 110. 754.)

$5\text{Ag}_2\text{O}$, P_2O_5 , $16\text{WO}_3 + x\text{H}_2\text{O} = \text{Ag}_5\text{PW}_6\text{O}_{28} + x\text{H}_2\text{O}$ (Silver α -phospholuteotungstate). Ppt. (Kehrmann.)

$3\text{Ag}_2\text{O}$, P_2O_5 , $16\text{WO}_3 + 16\text{H}_2\text{O} = \text{Ag}_3\text{PW}_6\text{O}_{28} + 8\text{H}_2\text{O}$. (Silver α -anhydrophospholuteotungstate). Easily sol. in H_2O . (Kehrmann.)

Ag_2O , 24WO_3 , $\text{P}_2\text{O}_5 + 60\text{H}_2\text{O}$. Insol. in H_2O .

$3\text{Ag}_2\text{O}$, 24WO_3 , $\text{P}_2\text{O}_5 + 58\text{H}_2\text{O}$. Insol. in H_2O . (Sprenger, J. pr. (2) 22. 418.)

Sodium phosphotungstate, $3\text{Na}_2\text{O}$, P_2O_5 , $7\text{WO}_3 + \text{Aq}$.

Sol. in H_2O . (Kehrmann, Z. anorg. 1. 437.)

$5\text{Na}_2\text{O}$, $11\text{H}_2\text{O}$, $2\text{P}_2\text{O}_5$, $12\text{WO}_3 + 26\text{H}_2\text{O} = \text{Na}_5\text{H}_{11}\text{P}_2\text{W}_6\text{O}_{31} + 13\text{H}_2\text{O}$ (?). (Scheibler, B. 5. 801.)

$2\text{Na}_2\text{O}$, P_2O_5 , $12\text{WO}_3 + 18\text{H}_2\text{O}$. Sol. in H_2O . Insol. in alcohol. (Péchar, C. R. 110. 754.)

$5\text{Na}_2\text{O}$, 14WO_3 , $2\text{P}_2\text{O}_5 + 42\text{H}_2\text{O}$. Easily sol. in H_2O . (Gibbs.)

Na_2O , P_2O_5 , 20WO_3 , $2\text{H}_2\text{O} + 19\text{H}_2\text{O}$. Sol. in H_2O . (Gibbs, Am. Ch. J. 1895, 17. 183.)

Na_2O , P_2O_5 , $20\text{WO}_3 + 23\text{H}_2\text{O} = \text{Na}_2\text{O}$, $7\text{H}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 16\text{H}_2\text{O}$. Easily sol. in H_2O . (Gibbs.)

+ $25\text{H}_2\text{O}$. Sl. efflorescent; very sol. in H_2O ; insol. in alcohol. (Péchar, A. ch. (6) 22. 227.)

$2\text{Na}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 10\text{H}_2\text{O}$. Sol. in H_2O ; insol. in alcohol. (Péchar.)

+ $30\text{H}_2\text{O}$ (P.)

$3\text{Na}_2\text{O}$, P_2O_5 , $20\text{WO}_3 + 32\text{H}_2\text{O}$. As above. (P.)

$2\text{Na}_2\text{O}$, P_2O_5 , $22\text{WO}_3 + 9\text{H}_2\text{O}$. Very sl. sol. in H_2O . (Gibbs.)

$3\text{Na}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 22\text{H}_2\text{O}$. Sol. in H_2O . (Brandhorst and Kraut, A. 249. 379.)

+ $30\text{H}_2\text{O}$. Sol. in H_2O . (Soboleff, Z. anorg. 1896, 12. 18.)

+ $42\text{H}_2\text{O}$

Solubility in H_2O at t° .

t°	100 ccm. H_2O dissolve g. of the cryst. salt
0	22.04
22	59.65
93	98.184

(Soboleff, Z. anorg. 1896, 12. 31.)

$2\text{Na}_2\text{O}$, $4\text{H}_2\text{O}$, 24WO_3 , $\text{P}_2\text{O}_5 + 23\text{H}_2\text{O}$. Readily sol. in H_2O (Gibbs, Proc. Am. Acad. 16. 118.)

Sp. gr. at 20° of solutions of $2\text{Na}_2\text{O}$, $4\text{H}_2\text{O}$, P_2O_5 , $24\text{WO}_3 + 23\text{H}_2\text{O}$ containing:

10.22	20.94	31.13% salt,
1.085	1.190	1.316

42.61	52.92	64.11% salt.
1.496	1.702	2.001

or, by calculation, $a = \text{sp. gr. if } \% \text{ is crystallized salt}$, $b = \text{sp. gr. if } \% \text{ is anhydrous salt}$:

	5	10	15	20	25% salt,
a	1.040	1.084	1.131	1.181	1.237
b	1.044	1.092	1.143	1.199	1.262

	30	35	40	45	50% salt,
a	1.299	1.370	1.449	1.538	1.640
b	1.333	1.414	1.507	1.613	1.734

55 60 64% salt.

a 1.754 1.884 1.998

b 1.872

(Brandhorst and Kraut, A. 249. 377.)

Strontium phosphotungstate, 2SrO , P_2O_5 , $12\text{WO}_3 + 17\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in alcohol. (Péchar, C. R. 110. 754.)

Thallium phosphotungstate, Tl_2O , P_2O_5 , $12\text{WO}_3 + 4\text{H}_2\text{O}$.

Ppt. (Péchar, C. R. 110. 754.)

Zinc phosphotungstate, 2ZnO , P_2O_5 , $12\text{WO}_3 + 7\text{H}_2\text{O}$.

Efflorescent. (Péchar, C. R. 110. 754.)

Monometaphosphotungstic acid.

Ammonium monometaphosphotungstate, $(\text{NH}_4)_2\text{O}$, $2\text{NH}_4\text{PO}_3$, $18\text{WO}_3 + 11\text{H}_2\text{O}$.

Sl. sol. in cold H_2O .

Potassium monometaphosphotungstate,
 $3K_2O, 2KPO_3, 24WO_3 + 20H_2O$.

Very sl. sol. in H_2O . (Gibbs, Am. Ch. J. 7. 319.)

Orthometaphosphotungstic acid.

Potassium sodium orthometaphosphotungstate,
 $2K_2O, 4Na_2O, 6NaPO_3, 6K_2PO_4, 22WO_3 + 42H_2O$.

Sl. sol. in H_2O . (Gibbs, Am. Ch. J. 7. 319.)

Pyrophosphotungstic acid.

Ammonium manganous sodium pyrophosphotungstate,
 $5(NH_4)_2O, 6MnO, 2Na_2O, 2P_2O_5, 28WO_3 + 48H_2O$

Very sol. in cold and in hot H_2O (Gibbs, Am. Ch. J. 1895, 17. 90.)

Ammonium sodium pyrophosphotungstate,
 $6(NH_4)_2P_2O_7, 3Na_4P_2O_7, 2(NH_4)_2O, 22WO_3 + 31H_2O$.

Nearly insol. in cold H_2O or $NH_4OH + Aq$. Sol. in a large amount of hot H_2O .

Manganous sodium pyrophosphotungstate,
 $6Na_2O, 3MnO, P_2O_5, 14WO_3 + 36H_2O$.

Efflorescent in dry air. Sol. in H_2O and can be recryst. therefrom. (Gibbs)

Potassium pyrophosphotungstate,
 $9K_4P_2O_7, 22WO_3 + 49H_2O$.

Very sl. sol. in cold H_2O .
 $6K_4P_2O_7, 3H_4P_2O_7, 22WO_3, K_2O, H_2O + 42H_2O$. Sl. sol. in cold. Sol. in much boiling H_2O . (Gibbs, Am. Ch. J. 7. 392.)

Phosphovanadic acid, $P_2O_5, V_2O_5, 2H_2O + 9H_2O$.

Sol. in H_2O .

Composition is vanadium phosphate $(VO_2)_2H_3PO_4 + 4\frac{1}{2}H_2O$. (Friedheim, B. 23. 1531.)

This is the only "acid" which exists. (F.) $P_2O_5, V_2O_5 + 14H_2O$. Sol. in H_2O ; can be recryst. from dil. $H_3PO_4 + Aq$. (Ditte, C. R. 102. 757.)

$3P_2O_5, 2V_2O_5 + 9H_2O$. Sol. in H_2O . (Ditte.)
 $P_2O_5, 3V_2O_5$. (Berzelius.)
 $3H_2O, 7P_2O_5, 6V_2O_5 + 34H_2O$. Sol. in H_2O .
 Decomp. by much H_2O into—
 $6H_2O, P_2O_5, 20V_2O_5 + 53H_2O$. Sol. in H_2O . (Gibbs, Am. Ch. J. 7. 209.)

Ammonium phosphovanadate, $(NH_4)_2O, P_2O_5, V_2O_5 + H_2O$.

Sl. sol. in cold H_2O . (Gibbs, Am. Ch. J. 7. 209.)

$+ 3H_2O$. Composition is $(VO_2)(NH_4)HPO_4 + H_2O$. (Friedheim.)

$(NH_4)_2O, P_2O_5, 2V_2O_5 + 7H_2O$. Easily sol. in H_2O . (Gibbs.) Sl. sol. in H_2O . (Fried-

heim.) Composition is $(NH_4)_2O, V_2O_5, + 2(VO_2)_2H_2PO_4 + 5H_2O$ (Friedheim.)

$5(NH_4)_2O, 2P_2O_5, 3V_2O_5 + 24H_2O$. Easily sol. in H_2O (Ditte, C. R. 102. 1019.) Could not be obtained. (Friedheim.)

$5(NH_4)_2O, 4P_2O_5, 2V_2O_5 + 24H_2O$. As above (Ditte.) Could not be obtained. (Friedheim.)

$7(NH_4)_2O, P_2O_5, 12V_2O_5 + 26H_2O$. Easily sol. in H_2O . Composition is $2(NH_4)_3HPO_4 + 5(NH_4)_2O, 12V_2O_5 + 25H_2O$ (Friedheim.)

Potassium phosphovanadate, $K_2O, P_2O_5, 2V_2O_5 + 7H_2O$

Sl. sol. in H_2O ; decomp. thereby to $7K_2O, 12V_2O_5, P_2O_5 + 26H_2O$.

Composition is $K_2O, V_2O_5 + 2(VO_2)_2H_2PO_4 + 5H_2O$. (Friedheim.)

$3K_2O, 4P_2O_5, 6V_2O_5 + 21H_2O$. Sl. sol. in H_2O . (Gibbs)

$7K_2O, P_2O_5, 12V_2O_5 + 26H_2O$. Easily sol. in H_2O . Composition is $2K_2HPO_4 + 5K_2O, 12V_2O_5 + 25H_2O$. (Friedheim.)

$2K_2O, P_2O_5, V_2O_5$
 $3K_2O, 2P_2O_5, 2V_2O_5 + 5H_2O$.

$13K_2O, 2P_2O_5, 22V_2O_5 + 58H_2O$.
 $15K_2O, 2P_2O_5, 25V_2O_5 + 76H_2O$.

(Friedheim, Z. anorg. 1894, 5. 446.)
 $16K_2O, 2P_2O_5, 27V_2O_5 + 57H_2O$.

$6K_2O, P_2O_5, 11V_2O_5 + 33H_2O$.
 $7K_2O, P_2O_5, 13V_2O_5 + 38H_2O$.

$4K_2O, P_2O_5, 3V_2O_5 + 3H_2O$.
 (Friedheim, Z. anorg. 1894, 5. 459-465.)

Silver phosphovanadate, $2Ag_2O, P_2O_5, V_2O_5 + 5H_2O$.

Sl. sol. in cold or hot H_2O . (Gibbs.)

Phosphovanadicotungstic acid.

Ammonium phosphovanadicotungstate,
 $(NH_4)_2O, P_2O_5, V_2O_5, WO_3 + xH_2O$.

Ppt. (Smith, J. Am. Chem. Soc. 1902, 24. 577.)

$15(NH_4)_2O, 2P_2O_5, 6V_2O_5, 44WO_3 + 106H_2O$. Sol. in H_2O . Insol. in alcohol, ether or benzene (Rogers, J. Am. Chem. Soc. 1903, 25. 303.)

Phosphovanadicovanadiotungstic acid.

Ammonium phosphovanadicovanadiotungstate,
 $14(NH_4)_2O, 2P_2O_5, 3V_2O_5, 7V_2O_5, 27WO_3 + 66H_2O$.

Sparingly sol. in cold H_2O . Sol. in hot H_2O . (Rogers, J. Am. Chem. Soc. 1903, 25. 309.)

Phosphovanadicozirconosotungstic acid.

Ammonium phosphovanadicozirconosotungstate.

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1226.)

Phosphovanadicovanadic acid.**Ammonium phosphovanadicovanadate,**

$7(\text{NH}_4)_2\text{O}$, $2\text{P}_2\text{O}_5$, VO_2 , $18\text{V}_2\text{O}_5 + 50\text{H}_2\text{O}$.
Sol. in H_2O . (Gibbs, Am. Ch. J. 7. 209.)
 $7(\text{NH}_4)_2\text{O}$, $14\text{P}_2\text{O}_5$, 16VO_2 , $6\text{V}_2\text{O}_5 + 65\text{H}_2\text{O}$.
Decomp. by boiling with H_2O into—
 $5(\text{NH}_4)_2\text{O}$, $10\text{P}_2\text{O}_5$, 11VO_2 , $\text{V}_2\text{O}_5 + 41\text{H}_2\text{O}$.
Sol. in H_2O . (Gibbs.)

Potassium —, $5\text{K}_2\text{O}$, $12\text{P}_2\text{O}_5$, 12VO_2 , $6\text{V}_2\text{O}_5 + 40\text{H}_2\text{O}$.

Decomp. by hot H_2O into—
 $7\text{K}_2\text{O}$, $12\text{P}_2\text{O}_5$, 14VO_2 , $6\text{V}_2\text{O}_5 + 52\text{H}_2\text{O}$.
Sol. in H_2O . (Gibbs.)

Sodium —, $4\text{Na}_2\text{O}$, $5\text{P}_2\text{O}_5$, VO_2 , $4\text{V}_2\text{O}_5 + 37\text{H}_2\text{O}$.

Insol. in H_2O . (Gibbs.)

Phosphovanadiomolybdic acid.**Ammonium phosphovanadiomolybdate,**

$7(\text{NH}_4)_2\text{O}$, $2\text{P}_2\text{O}_5$, V_2O_5 , $48\text{MoO}_3 + 30\text{H}_2\text{O}$.
Sl. sol. in cold, somewhat more in hot H_2O with partial decomp. (Gibbs, Am. Ch. J. 5. 391.)
 $8(\text{NH}_4)_2\text{O}$, P_2O_5 , $8\text{V}_2\text{O}_5$, $14\text{MoO}_3 + 50\text{H}_2\text{O}$.
Easily sol. in hot H_2O without decomp. (Gibbs.)
 $5(\text{NH}_4)_2\text{O}$, P_2O_5 , $2\frac{1}{2}\text{V}_2\text{O}_5$, $21\frac{1}{2}\text{MoO}_3 + 50\text{H}_2\text{O}$.
 $8(\text{NH}_4)_2\text{O}$, P_2O_5 , $5\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 45\text{H}_2\text{O}$.
 $7(\text{NH}_4)_2\text{O}$, P_2O_5 , $5\frac{1}{2}\text{V}_2\text{O}_5$, $16\frac{1}{2}\text{MoO}_3 + 50\text{H}_2\text{O}$.
 $8(\text{NH}_4)_2\text{O}$, P_2O_5 , $7\text{V}_2\text{O}_5$, $15\text{MoO}_3 + 50\text{H}_2\text{O}$.

All above compounds are sol. in H_2O .
(Blum, J. Am. Chem. Soc. 1908, 30. 1859.)
 $6(\text{NH}_4)_2\text{O}$, P_2O_5 , $7\text{V}_2\text{O}_5$, $9\text{MoO}_3 + 28\text{H}_2\text{O}$,
 $+ 33\text{H}_2\text{O}$, and $+ 37\text{H}_2\text{O}$.

Can be recryst. from H_2O . (Hinsen, Dissert. 1904.)

$4(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $11\text{MoO}_3 + 37\text{H}_2\text{O}$.
(Jacoby, Dissert. 1900.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $7\text{V}_2\text{O}_5$, $11\text{MoO}_3 + 34\text{H}_2\text{O}$
and $+ 43\text{H}_2\text{O}$. (Hinsen, Dissert. 1904.)

$8(\text{NH}_4)_2\text{O}$, P_2O_5 , $7\text{V}_2\text{O}_5$, $11\text{MoO}_3 + 30\text{H}_2\text{O}$.
(Hinsen.)

$5(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 39\text{H}_2\text{O}$.
1 cc. of solution in H_2O contains 0.2624 g. of hydrous salt. Sp. gr. of solution at $18^\circ = 1.0932$. (Lahrman, Dissert. 1904.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 24\text{H}_2\text{O}$.
Nearly insol. in cold H_2O . (Lahrman.)

$7(\text{NH}_4)_2\text{O}$, P_2O_5 , $6\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 33\text{H}_2\text{O}$.
(Stamm, Dissert. 1905.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 37\text{H}_2\text{O}$.
1 cc. of solution sat. at 18° contains 0.1543 g. hydrous salt and has sp. gr. = 1.0900. (Toggenburg, Dissert. 1902.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $5\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 29\text{H}_2\text{O}$.
1 cc. solution sat. at 18° contains 0.2533 g. hydrous salt. Sp. gr. = 1.0797. (Stamm, Dissert. 1905.)

$+ 32\text{H}_2\text{O}$ (Stamm.)

$+ 34\text{H}_2\text{O}$. Stamm.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $14\text{MoO}_3 + 28\text{H}_2\text{O}$.
Easily sol. in H_2O with decomp. (Toggenburg, Dissert. 1902.)

$8(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $14\text{MoO}_3 + 24\text{H}_2\text{O}$.
Decomp. by cold H_2O . (Lahrman, Dissert. 1904.)

$5(\text{NH}_4)_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 39\text{H}_2\text{O}$.
1 cc. of solution sat. at 18° contains 0.2445 g hydrous salt and has sp. gr. = 1.144 (Jacoby, Dissert. 1900.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $15\text{MoO}_3 + 41\text{H}_2\text{O}$.
Extraordinarily easily sol. in H_2O . (Jacoby.)

$7(\text{NH}_4)_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 31\text{H}_2\text{O}$.
(Schulz, Dissert. 1905.)

$6(\text{NH}_4)_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 40\text{H}_2\text{O}$.
(Schulz.)

$8(\text{NH}_4)_2\text{O}$, P_2O_5 , $5\text{V}_2\text{O}_5$, $73\text{MoO}_3 + 26\text{H}_2\text{O}$.
 $+ 33\text{H}_2\text{O}$ (Stamm, Dissert. 1905.)

Ammonium barium —, $0.5(\text{NH}_4)_2\text{O}$.

5.5BaO , P_2O_5 , $6\text{V}_2\text{O}_5$, $8\text{MoO}_3 + 38\text{H}_2\text{O}$.
(Hinsen, Dissert. 1904.)

$2(\text{NH}_4)_2\text{O}$, 4BaO , P_2O_5 , $7\text{V}_2\text{O}_5$, $10\text{MoO}_3 + 43\text{H}_2\text{O}$. Sl. sol. in H_2O . Decomp. on heating. (Toggenburg, Dissert. 1902.)

$(\text{NH}_4)_2\text{O}$, 5BaO , P_2O_5 , $6\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 49\text{H}_2\text{O}$. Less sol. in H_2O than NH_4 comp. (Jacoby, Dissert. 1900.)

$2(\text{NH}_4)_2\text{O}$, 4BaO , P_2O_5 , $4\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 37\text{H}_2\text{O}$. Sol. in much hot H_2O with decomp. (Toggenburg, Dissert. 1902.)

$2(\text{NH}_4)_2\text{O}$, 4BaO , P_2O_5 , $5\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 46\text{H}_2\text{O}$. (Stamm, Dissert. 1905.)

$3(\text{NH}_4)_2\text{O}$, 4BaO , P_2O_5 , $5\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 40\text{H}_2\text{O}$ (Stamm.)

$3(\text{NH}_4)_2\text{O}$, 3BaO , P_2O_5 , $4\text{V}_2\text{O}_5$, $14\text{MoO}_3 + 39\text{H}_2\text{O}$ (Stamm.)

$2(\text{NH}_4)_2\text{O}$, 4BaO , P_2O_5 , $3\text{V}_2\text{O}_5$, $17\text{MoO}_3 + 46\text{H}_2\text{O}$ (Schulz, Dissert. 1905.)

Ammonium potassium —, $(\text{NH}_4)_2\text{O}$, $6\text{K}_2\text{O}$, P_2O_5 , $6\text{V}_2\text{O}_5$, $10\text{MoO}_3 + 38\text{H}_2\text{O}$.

(Jacoby, Dissert. 1900.)

$(\text{NH}_4)_2\text{O}$, $6\text{K}_2\text{O}$, P_2O_5 , $7\text{V}_2\text{O}_5$, $11\text{MoO}_3 + 25\text{H}_2\text{O}$. (Jacoby, Dissert. 1900.)

$(\text{NH}_4)_2\text{O}$, $5\text{K}_2\text{O}$, P_2O_5 , $6\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 46\text{H}_2\text{O}$. (Jacoby.)

$(\text{NH}_4)_2\text{O}$, $5\text{K}_2\text{O}$, P_2O_5 , $5\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 25\text{H}_2\text{O}$; $+ 29\text{H}_2\text{O}$; $+ 30\text{H}_2\text{O}$. Sl. sol. in cold, more easily in hot H_2O . (Stamm, Dissert. 1905.)

$5\text{K}_2\text{O}$, $(\text{NH}_4)_2\text{O}$, P_2O_5 , $4\text{V}_2\text{O}_5$, $14\text{MoO}_3 + 31\text{H}_2\text{O}$ (Stamm.)

$(\text{NH}_4)_2\text{O}$, $4\text{K}_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $15\text{MoO}_3 + 36\text{H}_2\text{O}$ (Jacoby, Dissert. 1900.)

$(\text{NH}_4)_2\text{O}$, $6\text{K}_2\text{O}$, P_2O_5 , $3\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 43\text{H}_2\text{O}$ (Schulz, Dissert. 1905.)

$5(\text{NH}_4)_2\text{O}$, K_2O , P_2O_5 , $2\text{V}_2\text{O}_5$, $20\text{MoO}_3 + 52\text{H}_2\text{O}$ (Schulz.)

Barium potassium —, 2BaO , $2\text{K}_2\text{O}$, P_2O_5 , $2\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 47\text{H}_2\text{O}$.

(Schulz, Dissert. 1905.)

Potassium phosphovanadomolybdate, $7K_2O$, P_2O_5 , $7V_2O_5$, $9MoO_3 + 25H_2O$.

(Hinsen, Dissert. 1904.)

$5K_2O$, P_2O_5 , $2V_2O_5$, $20MoO_3 + 53H_2O$ (Schulz, Dissert. 1905.)

Phosphovanadotungstic acid.

Ammonium phosphovanadotungstate, $10(NH_4)_2O$, $3P_2O_5$, V_2O_5 , $60WO_3 + 60H_2O$

Nearly insol in cold, sl sol. in hot H_2O . Sol. in $(NH_4)_2HPO_4 + Aq$, and in $NH_4OH + Aq$.

$5(NH_4)_2O$, P_2O_5 , $3V_2O_5$, $16WO_3 + 37H_2O$. Easily sol in H_2O . (Gibbs, Am Ch J 5. 391.)

$13(NH_4)_2O$, $2P_2O_5$, $8V_2O_5$, $34WO_3 + 86H_2O$. Very sol in cold and hot H_2O .

nsol. in alcohol, ether, CS_2 , benzene and nitrobenzene (Rogers, J Am Chem. Soc. 1903, 25. 299.)

Barium —, $18BaO$, $3P_2O_5$, $2V_2O_5$, $60WO_3 + 144H_2O$.

Easily sol in hot H_2O with decomp (Gibbs, Am. Ch J. 5. 391.)

Potassium —, $3K_2O$, P_2O_5 , V_2O_5 , $7WO_3 + 11H_2O$.

Sol in H_2O .

$8K_2O$, $3P_2O_5$, $4V_2O_5$, $18WO_3 + 23H_2O$. Sol. in hot H_2O with decomp into preceding salt. (Gibbs, Am Ch. J. 5. 391.)

Silver —, $13Ag_2O$, $2P_2O_5$, $8V_2O_5$, $33WO_3 + 41H_2O$.

Somewhat sol in H_2O .

Completely sol in H_2O containing a few drops HNO_3 (Rogers, J Am Chem Soc. 1903, 25. 302.)

Phosphovanadovanadicotungstic acid.

Barium phosphovanadovanadicotungstate, $18BaO$, $3P_2O_5$, V_2O_5 , VO_2 , $60WO_3 + 150H_2O$.

Sl. sol. in cold, easily sol. in hot H_2O . (Gibbs, Am. Ch J. 5. 391.)

Phosphuretted hydrogen.

See Hydrogen phosphide.

Platibromonitrous acid.

Potassium platibromonitrite, $K_2Pt(NO_2)_4Br_2$.

Rather sl. sol. in H_2O . (Blomstrand, J. pr. (2) 3. 214.)

Sol. in about 40 pts. cold, and 20 pts. boiling H_2O . Insol. in alcohol. Sl. sol. in KBr or $KNO_3 + Aq$. (Vèzes, A. ch. (6) 29. 198.)

$K_2Pt(NO_2)_3Br_3$. Sol. in about 5 pts. warm H_2O with decomp. (Vèzes.)

$K_2Pt(NO_2)_2Br_4$. Sol. in less than 5 pts. H_2O with decomp (Vèzes.)

Platichloronitrous acid.

Potassium platichloronitrite, $K_2Pt(NO_2)_4Cl_2$.

Rather sl. sol. in H_2O . (Blomstrand J. pr. (2) 3. 214.)

Sol. in 40 pts. cold, and 20 pts. boiling H_2O . Insol. in alcohol. Sl. sol. in KCl or $KNO_3 + Aq$ (Vèzes, A. ch. (6) 29. 183.)

$K_2Pt(NO_2)_3Cl_3$. Very sol. in H_2O . (Vèzes.) $K_2Pt(NO_2)_3Cl_3 + H_2O$. Sol. in H_2O with decomp. (Vèzes.)

Platiiodonitrous acid.

Potassium platiiodonitrite, $K_2Pt(NO_2)_3I_4$.

Sl sol in cold, more easily in hot H_2O ; decomp. by boiling (Vèze, A. ch. (6) 29. 207.)

$K_2Pt(NO_2)_3I_5$. As above. (Vèzes.)

Platin-.

See also Platin-, plato-, plat-, and platos-.

Platindiamine compounds.

See Chloro-, bromo-, hydroxylo-, iodo-, nitrate-, nitrito-, sulphato-, etc., platindiamine compounds.

Platintriamine carbonate,

$Pt(NH_3)_3(CO_3)_2$.

Ppt. Sol. in $NaOH + Aq$. (Geddes, J. pr. (2) 26. 257.)

— chloride $Pt(NH_3)_3Cl_4$.

Sol. in hot H_2O (Gerdes.)

— chloroplatinate, $Pt(NH_3)_3Cl_4$, $PtCl_4 + 2H_2O$.

Very sl. sol. in H_2O . (Gerdes.)

— nitrate, $Pt(NH_3)_3(NO_3)_4$.

Easily sol. in H_2O , sl. sol. in $HNO_3 + Aq$. (Gerdes.)

— sulphate, $Pt(NH_3)_3(SO_4)_2 + H_2O$.

Nearly insol. in H_2O . (Gerdes.)

Tetraplatinamine iodide, $Pt_4(NH_3)_8I_{10}$.

(Blomstrand, B. 16. 1469.)

Octoplatinamine iodide, $Pt_8(NH_3)_{16}I_{18}$.

(Blomstrand.)

Platinic acid.

Barium platinate, basic (?), $3BaO$, $2PtO_2$.

Insol in $H_2C_2H_3O_2 + Aq$; easily sol. in $HCl + Aq$. (Rousseau.)

Barium platinate, BaPtO₃

(Rousseau, C. R. 109. 144.)
 +H₂O. Insol in dil. HNO₃+Aq, sol in warm HCl+Aq. (Topsoe, B. 3. 464.)
 +4H₂O. Very sl sol. in H₂O, BaO₂H₂, or NaOH+Aq. Easily sol. in dil. acids, except HC₂H₃O₂, in which it is insol. in the cold, but decomp. on heating. (Topsoe, l. c.)
 Composition is 3BaPtO₃, BaCl₂, PtCl₂O+4H₂O (?). (Johannsen, A. 155. 204.)

Calcium platinate chloride (?), 2Ca₂Pt₂O₅Cl₂+7H₂O (?)

"Herschel's precipitate"
 Easily sol. in HCl+Aq, and in HNO₃+Aq, if freshly pptd (Herschel.)
 Very sol. in HNO₃+Aq. (Weiss and Döbereiner, A. 14. 252.)
 Composition is CaPtO₃, PtCl₂O, CaO+7H₂O (?). (Johannsen, A. 155. 204.)

Potassium platinate.

Sol. in H₂O. (Berzelius)
 K₂O, PtO₂+3H₂O. Very sol. in H₂O. (Blondel, A. ch. 1905, (8) 6. 90.)
 K₂Pt(OH)₆. Sol. in H₂O; insol. in alcohol. (Bellucci, Z. anorg. 1905, 44. 173.)

Sodium platinate, Na₂O, 3PtO₂+6H₂O.

Dil. acids dissolve out Na₂O and leave PtO₂. Sol. in HNO₃+Aq (Döbereiner, Pogg. 28. 180.)
 Na₂O, PtO₂+3H₂O. Sol. in H₂O. (Blondel.)

Metaplatinic acid, 5PtO₂, 5H₂O.

Insol. in H₂O. (Blondel, A. ch. 1905, (8) 6. 103.)

Sodium metaplatinate, Na₂O, 5PtO₂+9H₂O.

Insol. in H₂O. (Blondel.)

Platinimolybdic acid, 4H₂O, PtO₂, 10MoO₃. (Gibbs.)**Ammonium platinimolybdate, 8MoO₃, 2PtO₂, 3(NH₄)₂O+12H₂O.**

4MoO₃, 2PtO₂, 2(NH₄)₂O+19H₂O.
 Sol. in hot H₂O. (Gibbs, Am. Ch. J. 1895, 17. 80-82.)

Potassium platinimolybdate,

60MoO₃, PtO₂, 10K₂O+40H₂O.
 So. in hot H₂O. (Gibbs.)

Silver platinimolybdate.**Sodium platinimolybdate, 4Na₂O, PtO₂, 10 MoO₃+29H₂O.**

Sol. in H₂O. (Gibbs, Sill. Am. J. (3) 14. 61.)

Platinitungstic acid.**Ammonium platinitungstate, 4(NH₄)₂O, PtO₂, 10WO₃+12H₂O.**

Sol. in H₂O. (Gibbs, B. 10. 1384.)

Potassium platinitungstate, 4K₂O, PtO₂, 10WO₃+9H₂O.

Sol. in H₂O. (Gibbs)

Sodium platinitungstate, 4Na₂O, PtO₂, 10WO₃+25H₂O.

Sol. in H₂O. (Gibbs.)
 5Na₂O, 7WO₃, 2PtO₂+35H₂O. Sol. in H₂O. (Gibbs.)
 Is double salt 3Na₂O, 7WO₃+2Na₂PtO₃. (Rosenheim, B. 24. 2397.)

10WO₃, PtO₂, 4Na₂O+23H₂O
 10WO₃, PtO₂, 6Na₂O+28H₂O.
 20WO₃, PtO₂, 9Na₂O+58H₂O.
 30WO₃, 2PtO₂, 15Na₂O+89H₂O.
 30WO₃, PtO₂, 12Na₂O+72H₂O.
 All are sol. in boiling H₂O. (Gibbs, Am. Ch. J. 1895, 17. 74-80.)

Platino-

See also Plato—.

Platinochlorophosphoric acid.

See Chloroplatinophosphoric acid.

Platinocyanhydric acid, H₂Pt(CN)₄.

Deliquescent. Very sol. in H₂O, alcohol, and ether.

Ammonium platinocyanide, (NH₄)₂Pt(CN)₄+3H₂O.

Very sol. in H₂O.
 +2H₂O. Sol. in 1 pt. H₂O, and still more easily in alcohol.
 +H₂O.

Ammonium hydroxylamine platinocyanide, NH₄(NH₄O)Pt(CN)₄+3½H₂O.

Sol. in H₂O. (Scholz, M. Ch. 1. 900.)

Ammonium magnesium platinocyanide, (NH₄)₂Mg[Pt(CN)₄]₂+6H₂O.**Barium platinocyanide, BaPt(CN)₄+4H₂O.**

Sol. in 33 pts. H₂O at 16°, and in much less at 100°. Sol. in alcohol.

Barium potassium platinocyanide, BaK₂[Pt(CN)₄]₂.

Sol. in H₂O.

Barium rubidium platinocyanide, BaRb₂[Pt(CN)₄]₂.

Sol. in H₂O.

Cadmium platinocyanide , $\text{CdPt}(\text{CN})_4$. Ppt Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Martius, A. 117. 376.) $\text{CdPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O.}$ (M.)	Lanthanum platinocyanide , $\text{La}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O.}$ Easily sol. in $\text{H}_2\text{O.}$ (Cleve.)
Calcium platinocyanide , $\text{CaPt}(\text{CN})_4 + 5\text{H}_2\text{O.}$ Very sol. in $\text{H}_2\text{O.}$	Magnesium platinocyanide , $\text{MgPt}(\text{CN})_4 + 2\text{H}_2\text{O.}$ Solubility in H_2O 100 g. of the sat. solution contain at: 96 4° 100° 44 33 43 96 g. $\text{MgPt}(\text{CN})_4$ (Buxhoevdén, Z. anorg 1897, 15. 325.)
Calcium potassium platinocyanide , $\text{CaK}_2[\text{Pt}(\text{CN})_4]_2$. Sol. in $\text{H}_2\text{O.}$	+4 $\text{H}_2\text{O.}$ Solubility in $\text{H}_2\text{O.}$ 100 g. of the sat. solution contain at: 42.2° 46.3° 48.7° 55° 40 21 39.79 40.75 40 02 g. $\text{MgPt}(\text{CN})_4$, 58 1° 69° 77.8° 87.4° 42.01 43 48 44.88 45.52 g. $\text{MgPt}(\text{CN})_4$,
Cerium platinocyanide , $\text{Ce}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O.}$ Sol. in $\text{H}_2\text{O.}$	90° 93° 45 59 45.04 g. $\text{MgPt}(\text{CN})_4$. (Buxhoevdén.)
Cobaltous platinocyanide ammonia , $\text{CoPt}(\text{CN})_4, 2\text{NH}_3$. Insol. in H_2O , but sol. in hot $\text{NH}_4\text{OH} + \text{Aq.}$	+7 $\text{H}_2\text{O.}$ Sol. in 3.4 pts. H_2O at 16°. Easily sol. in alcohol and ether.
Cupric platinocyanide , $\text{CuPt}(\text{CN})_4 + x\text{H}_2\text{O.}$ Ppt.	Solubility in $\text{H}_2\text{O.}$ 100 g. of the sat. solution contain at:
Cupric platinocyanide ammonia , $\text{CuPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O.}$ $\text{CuPt}(\text{CN})_4, 4\text{NH}_3$. Sol. in H_2O , alcohol, and ether.	—4 12° +0 5° 5 5° 18 0° 24 9 26 33 28 07 31 23 g. $\text{MgPt}(\text{CN})_4$,
Didymium platinocyanide , $\text{Di}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O.}$ Efflorescent in dry air. Sol. in $\text{H}_2\text{O.}$ (Cleve.)	36 6° 45 0° 46.2° 38 36 41 32 41 96 g. $\text{MgPt}(\text{CN})_4$. (Buxhoevdén.)
Dysprosium platinocyanide , $\text{Dy}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O.}$ Easily sol. in $\text{H}_2\text{O.}$ (Jantsch, B. 1911, 44. 1277.)	Magnesium potassium platinocyanide , $\text{MgK}_2[\text{Pt}(\text{CN})_4]_2 + 7\text{H}_2\text{O.}$ Sol. in $\text{H}_2\text{O.}$
Erbium platinocyanide , $\text{Er}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O.}$ Sol. in $\text{H}_2\text{O.}$ (Cleve.)	Mercuric platinocyanide , $\text{HgPt}(\text{CN})_4$. Ppt.
Gadolinium platinocyanide , $2\text{Gd}(\text{CN})_3, 3\text{Pt}(\text{CN})_2 + 18\text{H}_2\text{O.}$ Sol. in H_2O ; decomp. in the air. (Benedicks, Z. anorg. 1900, 22. 405.)	Mercuric platinocyanide nitrate , $5\text{HgPt}(\text{CN})_4, \text{Hg}(\text{NO}_3)_2 + 10\text{H}_2\text{O.}$ Ppt.
Glucinum platinocyanide , $\text{GlPt}(\text{CN})_4$. (Toczynski, Dissert. 1871.)	Nickel platinocyanide ammonia , $\text{NiPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O.}$
Hydroxylamine platinocyanide , $(\text{NH}_4\text{O})_2\text{Pt}(\text{CN})_4 + 2\text{H}_2\text{O.}$ Deliquescent. Very sol. in $\text{H}_2\text{O.}$ (Scholz.)	Potassium platinocyanide , $\text{K}_2\text{Pt}(\text{CN})_4 + 3\text{H}_2\text{O.}$ Extremely efflorescent. Sl. sol. in cold, easily in hot $\text{H}_2\text{O.}$ (Willm, B. 19. 950.) Sol. in alcohol and ether.
Hydroxylamine lithium platinocyanide , $(\text{NH}_4\text{O})\text{LiPt}(\text{CN})_4 + 3\text{H}_2\text{O.}$ Sol. in $\text{H}_2\text{O.}$	Potassium sodium platinocyanide , $\text{K}_2\text{Pt}(\text{CN})_4, \text{Na}_2\text{Pt}(\text{CN})_4 + 6\text{H}_2\text{O.}$ Sol. in $\text{H}_2\text{O.}$ (Willm, B. 19. 950.)
Indium platinocyanide , $\text{In}_2[\text{Pt}(\text{CN})_4]_3 + 2\text{H}_2\text{O.}$ Hydroscopic; sol. in $\text{H}_2\text{O.}$ (Renz, B. 1901, 34. 2765.)	Praseodymium platinocyanide , $2\text{Pr}(\text{CN})_3, 3\text{Pt}(\text{CN})_2$. Sol. in $\text{H}_2\text{O.}$ (Von Scheele, Z anorg. 1898, 18. 355.)

Samarium platincyanide, $\text{Sm}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O}$.

Sol. in H_2O (Cleve)

Scandium platincyanide, $\text{Sc}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O}$.

Sol. in H_2O and insol. in alcohol; when boiled in alcohol it is dehydrated. (Crookes, Phil. Trans 1910, 210. A, 368.)
 $+ 21\text{H}_2\text{O}$. (Orlow, Ch. Z. 1912, 36. 1407.)

Silver platincyanide, $\text{Ag}_2\text{Pt}(\text{CN})_4$.

Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Silver platincyanide ammonia, $\text{Ag}_2\text{Pt}(\text{CN})_4 \cdot 2\text{NH}_3$.

Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Silver platincyanide bromide.

See Bromoplatincyanide, silver.

Silver platincyanide chloride.

See Chloroplatincyanide, silver.

Silver platincyanide iodide.

See Iodoplatincyanide, silver.

Sodium platincyanide, $\text{Na}_2\text{Pt}(\text{CN})_4 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O . (Willm, Z. anorg. 4. 298.)

Sol. in alcohol.

Strontium platincyanide, $\text{SrPt}(\text{CN})_4 + 5\text{H}_2\text{O}$.

Sol. in H_2O .

Thalious platincyanide, $\text{Th}_2\text{Pt}(\text{CN})_4$.

Nearly insol. in cold, sl. sol. in hot H_2O . (Friswell, Chem. Soc. 24. 461.)

Thalious platincyanide carbonate,

$2\text{Th}_2\text{Pt}(\text{CN})_4 \cdot \text{Th}_2\text{CO}_3$.

Nearly insol. in cold H_2O . (F.)

Thorium platincyanide, $\text{Th}[\text{Pt}(\text{CN})_4]_2 + 16\text{H}_2\text{O}$.

Somewhat difficultly sol. in cold, easily in hot H_2O . (Cleve, Sv. V. A. H. Bih. 2. No. 6.)

Uranyl platincyanide, $(\text{UO}_2)\text{Pt}(\text{CN})_4 + x\text{H}_2\text{O}$.

Sol. in H_2O . (Levy, Chem. Soc. 1908, 93. 1459.)

Ytterbium platincyanide, $2\text{Yb}(\text{CN})_3 \cdot 3\text{Pt}(\text{CN})_2 + 18\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve, Z. anorg. 1902, 32. 139.)

Yttrium platincyanide, $\text{Y}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in absolute alcohol. (Cleve and Höglund.)

Zinc platincyanide ammonia, $\text{ZnPt}(\text{CN})_4 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$

Platinonitrous acid.

See Platonitrous acid.

Platinoplatinicyanhydric acid, $\text{HPt}(\text{CN})_4 + x\text{H}_2\text{O}$.

Sol. in H_2O . (Levy, Chem. Soc. 1912, 101. 1093.)

Platinoselenocyanhydric acid.

Potassium platinoselenocyanide, $\text{K}_2\text{Pt}(\text{SeCN})_6$.

Sol. in H_2O and alcohol. (Clarke and Dudley, B. 1878, 11. 1325.)

Platinoselenostannic acid.

See under Selenostannate, platinum.

Platinosulphocyanhydric acid, $\text{H}_2\text{Pt}(\text{SCN})_4$.

Known only in aqueous solution.

Potassium platinosulphocyanide, $\text{K}_2\text{Pt}(\text{SCN})_4$.

Permanent. Sol. in 25 pts. H_2O at 15° , and more readily at higher temp. Very sol. in warm alcohol.

Silver —, $\text{Ag}_2\text{Pt}(\text{SCN})_4$.

Insol. in H_2O . Sol. in $\text{KSCN} + \text{Aq}$, and partly sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Platinosulphocyanhydric acid, $\text{H}_2\text{Pt}(\text{SCN})_6$.

Known only in aqueous, and alcoholic solutions

Ammonium platinosulphocyanide, $(\text{NH}_4)_2\text{Pt}(\text{SCN})_6$.

Sol. in H_2O and alcohol.

Barium —, $\text{BaPt}(\text{SCN})_6$.

Sol. in H_2O and alcohol.

Ferrous —, $\text{FePt}(\text{SCN})_6$.

Insol. in H_2O or alcohol. Not attacked by dil. H_2SO_4 , HCl , or $\text{HNO}_3 + \text{Aq}$

Lead —, $\text{PbPt}(\text{SCN})_6$.

Sl. sol. in cold, decomp. by hot H_2O . Sol. in alcohol

$\text{PbPt}(\text{SCN})_6$, PbO . Insol. in H_2O or alcohol. Sol. in acetic or nitric acids

Mercurous —, $\text{Hg}_2\text{Pt}(\text{SCN})_6$.

Ppt. Insol. in H_2O .

Potassium platinosulphocyanide,
 $K_2Pt(SCN)_6$

Sol in 12 pts H_2O at 60° . Much more easily in boiling H_2O , and still more easily in hot alcohol.

+ $2H_2O$. (Miolati and Bellucci, Gazz. Ch. it. 1900, **30**, II. 592.)

Silver —, $Ag_2Pt(SCN)_6$

Insol in H_2O or $K_2Pt(SCN)_6 + Aq$. Sol in cold $NH_4OH + Aq$ and in $KCNS + Aq$.

Sodium —, $Na_2Pt(SCN)_6$

Sol. in H_2O and alcohol

Platinosulphostannic acid.

See under Sulphostannate, platinum.

Platinosulphurous acid.

See Platosulphurous acid.

Platinum, Pt.

Not attacked by H_2O , H_2SO_4 , HCl , or $HNO_3 + Aq$. Slowly sol in aqua regia, or a mixture of HBr and HNO_3 , but much less easily than Au

Precipitated Pt is remarkably sol. in $HCl + Aq$ in presence of air. (Wilm, B. 1881, **14**, 636.)

Pure Pt foil is attacked by fuming HCl under influence of light, but not in the dark. (Berthelot, C. R. 1904, **138**, 1297.)

Dil. $HCl + Aq$ dissolves 10–15% Pt from active Pt black. (Wöhler, B. 1903, **36**, 3482.)

Conc. HNO_3 oxidizes Pt black; Pt sponge, less easily; sheet Pt, slightly. (Wöhler, Dissert. 1901.)

Pt in presence of Hg is more or less sol. in conc. HNO_3 . (Tarugi, Gazz. ch. it. 1903, **33**, II. 171.)

Pt vessels are attacked by evaporating HNO_3 therein. (Jaunek and Meyer, Z. anorg. 1913, **83**, 71.)

Sl sol. in conc. H_2SO_4 containing small amounts of nitrogen oxides. (Scheurer-Kestner, C. R. 86. 1082.)

Pt black, pptd. by formic acid, is easily sol. in boiling H_2SO_4 . (Deville and Stas, Paris, 1878.)

Thin sheet Pt is attacked by boiling H_2SO_4 containing K_2SO_4 ; 1 sq. cm. loses 0.01 g. in 1 hour and velocity of the reaction is not accelerated by addition of HNO_3 . Pt black is completely dissolved under the above conditions in 50 hours. (Delépine, C. R. 1905, **141**, 1013.)

Further data on solubility of Pt in H_2SO_4 are given by Delépine. (C. R. 1906, **142**, 631.)

95% H_2SO_4 dissolves 0.04 g. Pt from commercial Pt at 250 – 260° in 28 hours. (Conroy, J. Soc. Chem. Ind. 1903, **22**, 465.)

See also Quenessen. (Bull. Soc. 1906, (3) **35**, 620.)

0.0038 g is dissolved by 10 cc of boiling H_2SO_4 . (McCoy, Eighth Inter. Cong. App. Chem. 1912, 2)

$HCl + HNO_3$, so long as they are sufficiently dil or the temperature is so low that they cannot react on each other, have no action on Pt. Addition of Cl does not bring about reaction, but a few drops of KNO_3 or $N_2O_3 + Aq$ bring about an immediate reaction. (Millon)

Slowly sol in $HI + Aq$ (Deville, C. R. **42**, 896.)

Conc. H_3PO_4 attacks Pt when heated in presence of air, but not in its absence. (Hüttner, Z. anorg. 1908, **59**, 216.)

Pt dissolves easily in most acids when they contain H_2O_2 . (Fairley, B. 1875, **8**, 1600.)

Slowly sol. in boiling $FeCl_3 + Aq$ (Saint-Pierre, C. R. **54**, 1077.)

$FeCl_3$ in acid solution is without influence on Pt. (Marie, C. R. 1908, **146**, 476.)

Pt is completely insol. in $KCN + Aq$. (Rössler, Z. Chem. 1866, 175.)

Pt is attacked by boiling conc. $KCN + Aq$. (Deville and Debray, C. R. **82**, 241.)

Solubility of Pt in 10% $KCN + Aq$ is very small at ord. temp. (1.4 mg. in 8 days) but is considerably greater in boiling conc. $KCN + Aq$. (71.5 mg. in 5 hours). (Glaser, Z. Elektrochem. 1903, **9**, 15.)

Pt foil is dissolved in boiling $KCN + Aq$ (0.030 g. for 1 cc. in 1 hour). Insol. in cold $KCN + Aq$. (Brochet and Petit, C. R. 1904, C. R. **138**, 1255.)

Sol in $RbCl_4I + Aq$ (Erdmann, Arch. Pharm 1894, **232**, 30)

Insol in liquid NH_3 (Gore, Am. Ch. J. 1898, **20**, 828)

Platinum ammonium compounds.

Data published since the first edition of this work have not been included in this edition.

Platinum antimonide, PtSb_2 .

(Christoffe, 1863.)

Platinum arsenide, Pt_3As_2 .

(Tivoli, Gazz. ch. it. 14. 487.)

PtAs_2 . Min. *Sperrylite*. Sl. attacked by aqua regia. (Wells, Sill. Am. J. (3) 37. 67.)

Platinum arsenic hydroxide (?), PtAsOH .

Insol. in, and slowly decomp. by H_2O and alcohol. Easily decomp. by $\text{HCl} + \text{Aq}$; not attacked by $\text{HNO}_3 + \text{Aq}$. Sol. in aqua regia; not attacked by cold conc. H_2SO_4 , but decomp. on heating. (Tivoli, Gazz. ch. it. 14. 487.)

Platinum potassium azoimide.

Ppt. Explodes violently even in aq. solution. (Curtius, J. pr. 1898, (2) 58. 304.)

Platinum boride, Pt_2B_2 .

Very slowly sol. in aqua regia. (Martius, A. 109. 79.)

Platinous bromide, $PtBr_2$.

Insol. in H_2O . Sol. in $HBr + Aq$. Sl. sol. in $KBr + Aq$. (Topsøe, J. B 1868. 274.)

Platinic bromide, $PtBr_4$.

Not deliquescent; sol in H_2O (Meyer and Zublin, B. 13. 404.)

Sl. sol in H_2O . 100 g $PtBr_4 + Aq$ sat. at 20° contain 0.41 g. $PtBr_4$. (Halberstadt, B. 17. 2962.)

Easily sol in $HBr + Aq$; sl sol in $HC_2H_3O_2 + Aq$. Sol. in considerable amount in K or NH_4 oxalate $+ Aq$.

Very sl. sol in alcohol or ether, also in glycerine. (Halberstadt.)

Platinic hydrogen bromide.

See Bromoplatinic acid.

Platinous bromide carbonyl.

See Carbonyl platinous bromide.

Platinic bromide with MBr .

See Bromoplatinate, M.

Platinum carbide, PtC_2 .

Hot aqua regia dissolves out nearly all the Pt. (Zeise, J. pr. 20. 209.)

Platinum carbon disulphide, $PtCS_2$.

See Platinum sulphocarbide.

Platinum monochloride, $PtCl + xH_2O$.

Easily sol. in HCl ; mod. sol. in hot dil. H_2SO_4 without decomp. (Sonstadt, Proc. Chem. Soc. 1898, 14. 179.)

Platinous chloride, $PtCl_2$.

Insol. in H_2O , conc. H_2SO_4 , or HNO_3 . Sol. in hot $HCl + Aq$ with exclusion of air. (Berzelius.)

Insol. in alcohol or ether; sol. in $NH_4OH + Aq$. (Raewsky, A. ch. (3) 22. 280.) Sol. in aqua regia with formation of $PtCl_4$.

Insol. in cold conc. $KI + Aq$, but sol. when heated. (Lassaigne, A. ch. (2) 51. 117.)

Sl. sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Platinum trichloride, $PtCl_3$.

Sl. sol. in cold, more sol. in hot H_2O .

Partially hydrolyzed by boiling with H_2O .

Insol in cold conc HCl Sol. in hot conc. HCl with decomp.

Sol. in $KI + Aq$. (Wöhler, B 1909, 42. 3961.)

Platinic chloride, $PtCl_4$.

Not deliquescent. Very sol in H_2O . (Pulinger, Chem. Soc. 61. 420.)

Sp. gr. of aqueous solution containing:

5	10	15	20	25	% $PtCl_4$,
1 046	1 097	1 153	1 214	1 285	
30	35	40	45	50	% $PtCl_4$.
1 362	1 450	1 546	1 666	1 785	

(Precht, Z. anal. 18. 512.)

Insol. in conc. H_2SO_4 . (Dumas.)

Sl. sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol. in alcohol and ether; sol. in anhydrous acetone. (Zeise, A. 33. 34.)

Insol. in ether. (Willstätter, B. 1903, 36. 1830.)

Sl. sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

$+ H_2O$. Sol. in H_2O . (Gutbier and Heinrich, Z. anorg. 1913, 81. 378.)

$+ 4H_2O$. Sol. in H_2O . (Pigeon, C. R. 1891, 112. 792.)

$+ 5H_2O$. Not deliquescent. Sol. in H_2O or $HCl + Aq$.

Composition is probably $H_2PtCl_4O + 4H_2O$. (Norton, J. pr. 110. 469.)

$+ 7H_2O$. Sol. in H_2O . (Pigeon.)

$+ 8H_2O$. (Blondel, A. Ch. 1905, (8) 6. 98.)

Platinic thallium chloride, $Tl_3Pt_2Cl_5H_5O_4$.

Ppt.; insol. in H_2O . (Miolati, Z. anorg. 1900, 22. 460.)

Platinous hydrogen chloride.

See Chloroplatinous acid.

Platinic hydrogen chloride.

See Chloroplatinic acid.

Platinous chloride with MCl .

See Chloroplatinite, M.

Platinic chloride with MCl .

See Chloroplatinate, M.

Platinous phosphorus chloride.

See Phosphorus platinous chloride.

Platinic phosphorus chloride.

See Phosphorus platinic chloride.

Platinous chloride carbonyl.

See Carbonyl platinous chloride.

Platinum chloride hydroxylamine,

Ppt. Sol in alcohol and in ether Decomp in aq. solution

$\text{Pt}(\text{NH}_2\text{OH})_2\text{Cl}_2$. Sol in H_2O . (Uhlenhuth, A 1900, 311. 124)

Platinous chloride sulphocarbamide,

Sl. sol in H_2O ; very sol. in hot H_2O ; decomp sl on boiling (Kurnakow, J. pr. 1894, (2) 50. 483.)

Platinum chloriodide, PtCl_2I_2

Very deliquescent (Kammerer, A 148. 329.)

PtClI_3 . Insol in H_2O Sl sol. in alcohol Sol in $\text{KOH} + \text{Aq}$, from which it is pptd. by H_2SO_4 . (Mather, Sill. Am. J 27. 257)

Platinum chloronitride, PtNCl

(Alexander, C. C. 1887. 1254.)

Platinous cyanide with MCN .

See Platinocyanide, M.

Platinous fluoride, $\text{PtF}_2(?)$.

Insol. in H_2O . (Moissan, A ch. (6) 24. 287.)

Platinic fluoride, PtF_4 .

Deliquescent. Sol in H_2O with immediate decomp into PtO_4H_4 and HF (Moissan, C R. 109. 807.)

Platinous hydroxide, PtO_2H_2 .

Sol. in HCl , HBr , and $\text{H}_2\text{SO}_3 + \text{Aq}$, but not in other oxygen acids. Decomp by boiling $\text{KOH} + \text{Aq}$ (Thomsen, J. pr (2) 16. 344.)

When freshly pptd, is insol. in dil. HNO_3 and H_2SO_4 , and in $\text{HC}_2\text{H}_3\text{O}_2$; sol. in conc. HNO_3 and H_2SO_4 . Very sol. in H_2SO_3 and HCl . After drying, is insol. in conc. HNO_3 and H_2SO_4 . (Wöhler, Z. anorg. 1904, 40. 424.)

Platinic hydroxide, $\text{Pt}(\text{OH})_4$.

Easily sol in dil. acids and in $\text{NaOH} + \text{Aq}$. (Topsoe, J. B 1870. 386.)

Nearly insol in acetic acid (Döbereiner.)

Insol. in all acids except conc. HCl and aqua regia. (Wöhler, Z. anorg. 1904, 40. 433.)

+ H_2O Ppt. (Prost, Bull. Soc. (2) 44. 256.)

Insol. in $2\text{N}-\text{H}_2\text{SO}_4$ and dil. $\text{HNO}_3 + \text{Aq}$; mod. sol. in conc. HNO_3 , H_2SO_4 , $2\text{N}-\text{HCl}$ and $\text{NaOH} + \text{Aq}$. (Wöhler.)

+ $2\text{H}_2\text{O}$. Easily sol. in dil. acids, even acetic acid, and in $\text{NaOH} + \text{Aq}$. (Topsoe.)

Insol. in acetic acid; sl. sol. in $2\text{N}-\text{H}_2\text{SO}_4$ and HNO_3 ; easily sol. in HCl , and $\text{NaOH} + \text{Aq}$. (Wöhler.)

Platinoplatinic hydroxide, $\text{Pt}_3\text{O}_4 \cdot 9\text{H}_2\text{O}$.

Ppt. (Prost, Bull Soc (2) 46. 156.)

$\text{Pt}_3\text{O}_{11} \cdot 11\text{H}_2\text{O}$ Ppt. (Prost.)

Platinum hydroxylamine comps.

See—

Platodioxamine comps., $\text{Pt}(\text{NH}_2\text{O})_4\text{R}_2$

Platosoxamine comps., $\text{Pt}(\text{NH}_3\text{O})_2\text{R}_2$.

Platosoxamine-amine comps.,

$\text{Pt}(\text{NH}_3\text{O})_3\text{NH}_3\text{R}_2$.

Platinous iodide, PtI_2 .

Insol. in H_2O , acids, or alcohol. (Lassaigne, A ch (2) 51. 113.)

Difficultly sol in $\text{Na}_2\text{SO}_3 + \text{Aq}$. (Topsoe.)

Gradually decomp by hot $\text{HI} + \text{Aq}$ of 1.038 sp gr., also by hot $\text{KI} + \text{Aq}$, PtI_4 being dissolved out and Pt left behind. Not attacked by conc H_2SO_4 , HCl , or $\text{HNO}_3 + \text{Aq}$, but gradually decomp. by KOH or $\text{NaOH} + \text{Aq}$. (Lassaigne.)

Insol in acetone. (Eidmann, C. C. 1889, II 1014.)

Platinic iodide, PtI_4 .

Insol in H_2O . Sol in NaOH or $\text{Na}_2\text{CO}_3 + \text{Aq}$, H_2SO_3 , or $\text{Na}_2\text{SO}_3 + \text{Aq}$ Sol in $\text{HI} + \text{Aq}$ or alkali iodides + Aq Sol. in alcohol, with partial decomp. Not attacked by acids. (Lassaigne, A. ch. (2) 51. 122)

Very sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol in alcohol (Belluci, C. C 1902, I. 625)

Platinic iodide with MI .

See Iodoplatinate, M.

Platinum nitride chloride, PtNCl .

See Platinum chloronitride.

Platinous oxide, PtO .

Sol in $\text{H}_2\text{SO}_3 + \text{Aq}$ Insol. in other acids. (Döbereiner, Pogg 28. 183)

Sol. in conc. H_2SO_4 ; easily in conc $\text{HCl} + \text{Aq}$ (Storer's Dict.)

Very sl. sol. in $\text{HCl} + \text{Aq}$. Sl. sol. in aqua regia. (Wöhler, B. 1903, 36. 3482.)

Platinic oxide, PtO_2 .

Insol. in acids, even aqua regia. (Wöhler, Dissert, 1901.)

Platinum trioxide, PtO_3 .

Unattacked by dil. H_2SO_4 , HNO_3 or acetic acid. Sol. with decomp in dil. and conc. HCl , conc. H_2SO_4 or conc. HNO_3 . (Wöhler, B. 1909, 42. 3329)

Platinum sesquioxide, $\text{Pt}_2\text{O}_3 + x\text{H}_2\text{O}$.

Insol. in dil sol in conc. H_2SO_4 . Sl. sol. in hot dil. HNO_3 . Sol. in HCl Sol. in conc. alkali hydroxides + Aq . (Wöhler, B. 1909, 42. 3964.)

+2H₂O. Insol. in HNO₃ and H₂SO₄. Insol. in alkalis +Aq, also cold dil. HCl+Aq. Sol. in aqua regia. (Dudley, Am. Ch. J. 1902, 28, 66.)
+5H₂O. (Delépine, Bull. Soc. 1910, (4) 7, 103.)

Platinoplatinic oxide, Pt₃O₄.

Not attacked by long boiling with HCl, HNO₃, or aqua regia. (Jørgensen, J pr (2) 16, 344.)

Does not exist. (Wöhler, Z. anorg. 1904, 40, 450.)

Platinum oxychloride, 3PtO, PtCl₂ (?).

Sol. in HCl, and in KOH+Aq (Kane, Phil. Trans. 1842, 298.)

PtCl₂(OH)₂=H₂PtCl₂O₂ (Jørgensen, J pr. (2) 16, 345.)

5PtO₂, 2HCl+9H₂O. Insol. in cold H₂O; decomp. on boiling. Slowly sol. in HCl. (Blondel, A. ch, 1905, (8) 6, 100.)

Platinum oxysulphide, PtOS.

See Platinum sulphhydroxide.

Platinum phosphide, PtP₂

Insol. in HCl+Aq Sol in aqua regia. (Schrötter, W. A. B 1849, 303.)

PtP₂H₂. Insol. in H₂O, and HCl+Aq. (Cavazzi, Gazz. ch. it. 13, 324.)

PtP Insol. in aqua regia. (Clark and Joslin.)

Pt₂P Sol in aqua regia (Clark and Joslin)

Pt₃P₃ Partially sol in aqua regia. (Clark and Joslin, C N 48, 385.)

Attacked very slowly by aqua regia. Rapidly sol. in molten alkalis. (Granger, C. N. 1898, 77, 229)

Completely sol in aqua regia if the action sufficiently prolonged, though with difficulty. (Granger, C. R 1896, 123, 1285)

Platinum diselenide, PtSe₂.

As PtS₂. (Minozzi, Chem. Soc. 1909, 96, (2) 899.)

Platinum triselenide, PtSe₃.

Sl. attacked by hot conc. HNO₃; not attacked by cold conc. HCl+Aq; slowly sol. in aqua regia and Cl₂+Aq; insol. in CS₂.

Platinum silicide, Pt₂Si.

Sol. in hot aqua regia. (Vigouroux, C. R. 1896, 123, 117.)

Pt₂Si₂. (Colson, C. R. 94, 27.)

Pt₄Si₄. Slowly decomp. by aqua regia. (Guyard, Bull. Soc. (2) 25, 511.)

PtSi. Insol. in HNO₃, H₂SO₄, HF, and HCl. Completely sol. in aqua regia. (Lebeau and Novitzky, C. R. 1907, 145, 241.)

Platinum sulphhydroxide, PtOS+H₂O = PtS(OH)₂.

Decomp easily into—

H₂O cannot be removed without decomposing the compound. (v. Meyer, J pr (2) 15, 1)

Platinous sulphide, PtS

Not attacked by boiling acids, aqua regia, or KOH+Aq. (Böttger, J. pr. 2, 274.)

Sol. in large excess of (NH₄)₂S+Aq.

Platinoplatinic sulphide, Pt₂S₃.

Not attacked by HCl or HNO₃+Aq, and only slowly by aqua regia. (Schneider, Pogg. 138, 607.)

Platinic sulphide, PtS₂.

Anhydrous Aqua regia attacks sl, other acids not at all. (Davy.)

Hydrated Insol. in HCl+Aq; sl. sol. in boiling HNO₃+Aq. Sol. n aqua regia. (Fresenius.) Sol in alkali sulphides, hydrates and carbonates+Aq (Berzelius) Very sl. sol. in (NH₄)₂S+Aq (Claus)

Insol. in NH₄Cl, or NH₄NO₃+Aq. 1 pt. PtCl₄ in 100 pts. H₂O+25 pts HCl is not pptd by H₂S. (Reinsch.)

Difficultly sol. in alkali sulphhydroxides+Aq, but more easily in presence of SnS, Sb₂S₃, As₂S₃, or SnS₂. (Ribau, C. R. 85, 283.)

Platinum sulphide, Pt₃S₂, or Tetraplatinum sulphoplatinate, 4PtS, PtS₂.

Decomp. on moist air, but not attacked by acids. (Schneider, J. pr. (2) 7, 214.)

Platinum sulphides with M₂S.

See Sulphoplatinate, M.

Platinum sulphocarbide, PtC₂S₂.

Not attacked by hot HCl, HNO₃+Aq, slightly by aqua regia. (Schützenberger, C. R. 111, 391.)

Platinum telluride, PtTe.

Decomp. by fused oxidizing agents; slowly sol. in conc. HNO₃. (Roessler, Z. anorg. 1897, 15, 407.)

Platinum ditelluride, PtTe₂.

Insol. in boiling conc. KOH+Aq; slowly sol. in boiling conc. HNO₃; decomp. by fused oxidizing agents. (Roessler.)

Plato-.

See also Platino-.

Platoamidosulphonic acid.

Potassium platoamidosulphonate,
 $K_2Pt(NH_2SO_3)_4 + 2H_2O$.

Very sl. sol. in cold H_2O ; sol. in 10 pts. boiling H_2O . (Ramberg and St. Kahlenberg, B. 1912, 45. 1514.)

Sodium —, $Na_2(Pt(NH_2SO_3)_4 + 4H_2O$.

Very sol. in H_2O . (Ramberg and St. Kahlenberg.)

Platodiamine bromide, $Pt[(NH_3)_2Br]_2 + 3H_2O$.

Easily sol. in H_2O . (Cleve.)

— **carbonate,** $Pt(N_2H_5)_2CO_3 + H_2O$.

Sol. in H_2O . (Peyrone, A. 51. 14.)

$Pt(N_2H_5CO_3H)_2$ Sl. sol in, but decomp. by boiling with H_2O into—

— **sesquicarbonate.**

More sol. than preceding salt. (Reiset, C. R. 11. 711.)

— **chloride,** $Pt[(NH_3)_2Cl]_2 + H_2O$.

"Reiset's first chloride" Sol. in 4 pts H_2O at 16.5°, and in less hot H_2O . Insol in alcohol or ether. (Reiset, A. ch. (3) 11. 419.)

As sol. in $NH_4Cl + Aq$ as in H_2O ; insol. in absolute alcohol; sl. sol in dil. alcohol; very sol. in dil. $HCl + Aq$. (Peyrone, A. ch (3) 12. 196.)

— **cuprous chloride,** $Pt(NH_3)_4Cl_2$, Cu_2Cl_2 .

Sol. in H_2O , and pptd. from H_2O solution by alcohol. (Buckton.)

— **cupric chloride,** $Pt(NH_3)_4Cl_2$, $CuCl_2$.

Sl. sol. in cold, decomp. by hot H_2O into $Pt(NH_3)_4Cl_2$, Cu_2Cl_2 . (Buckton, Chem. Soc. 5. 218)

Nearly insol. in H_2O ; easily sol. in warm $HCl + Aq$; insol. in alcohol. (Millon and Commaillie, C. R. 57. 822.)

Millon and Commaillie's salt is $Cu(NH_3)_4Cl_2$, $PtCl_2$, cuprammonium chloroplatinite.

— **lead chloride,** $Pt(NH_3)_4Cl_2$, $PbCl_2$.

Sol. in hot, much less in cold H_2O . Insol. in $HCl + Aq$ or alcohol. (Buckton, Chem. Soc. 5. 213.)

— **mercuric chloride,** $Pt(NH_3)_4Cl_2$, $HgCl_2$.

Easily sol. in hot H_2O , much less in cold. Insol. in $HCl + Aq$. (Buckton.)

— **zinc chloride,** $Pt(NH_3)_4Cl_2$, $ZnCl_2$.

Easily sol. in hot H_2O . Insol. in alcohol. (Buckton.)

Platodiamine chloroplatinate, $Pt(NH_3)_4Cl_2$, $PtCl_4$.

Ppt Insol. in H_2O . (Cossa, Gazz. ch. it. 17. 1.)

— **chloroplatinite,** $Pt(NH_3)_4Cl_2$, $PtCl_2$.

(Magnus' green salt.) Insol. in, and not decomp. by H_2O , $HCl + Aq$, or alcohol. (Magnus.)

Slowly sol. in boiling $NH_4OH + Aq$ and in conc. NH_4 salts + Aq . (Reiset, A. ch. (3) 11. 427.)

Almost as sol. in $(NH_4)_2CO_3 + Aq$ as in $NH_4OH + Aq$. Sol in hot $PtCl_4 + Aq$. (Reiset.)

Not decomp. by boiling KOH , dil. HCl , or $H_2SO_4 + Aq$, but easily by $HNO_3 + Aq$. (Gros, A. 27. 245.)

— **chromate,** $Pt(NH_3)_4CrO_4$.

Scarcely sol. in H_2O . (Cleve.)

— **dichromate,** $Pt(NH_3)_4Cr_2O_7$.

Sl. sol. in H_2O . Insol. in alcohol. Sol. in $KOH + Aq$. (Buckton, Chem. Soc. 5. 213.)

— **platinous cyanide,** $Pt(NH_3)_4(CN)_2$, $Pt(CN)_2$.

Sl. sol. in cold, easily in boiling H_2O ; sol. in KOH , HCl , and dil. $H_2SO_4 + Aq$ without decomp., but conc. H_2SO_4 decomposes.

— **potassium ferrocyanide,**

$Pt(NH_3)_4K_2[Fe(CN)_6] + 3H_2O$.

— **hydroxide,** $Pt[(NH_3)_2OH]_2$.

"Reiset's first base." Easily sol. in H_2O . Sl. sol. in alcohol.

— **iodide,** $Pt[(NH_3)_2I]_2$.

Sl. sol. in cold, more easily in hot H_2O , but slowly decomp. on boiling. (Reiset.)

— **nitrate,** $Pt[(NH_3)_2NO_3]_2$

Sol. in about 10 pts. boiling H_2O . Insol. or but sl. sol. in alcohol. (Peyrone, A. ch. (3) 12. 203.)

— **nitrate sulphate,** $[Pt(NH_3)_4NO_3]_2SO_4$, $Pt(NH_3)_4SO_4$.

Very easily sol. in H_2O (Carlgren, Sv. V. A. F. 47. 310.)

— **nitrite,** $Pt[(NH_3)_2NO_2]_2 + 2H_2O$.

Efflorescent. Very sol. in hot or cold H_2O . Insol. in 90% alcohol. (Lang.)

— **platinous nitrite,** $Pt[(NH_3)_2NO_2]_2$, $Pt(NO_2)_2$.

Scarcely sol. in cold, somewhat more easily in hot H_2O . Not attacked by cold dil. acids. More sol. in $NH_4OH + Aq$ than in H_2O . (Lang.)

- Platodiamine phosphate**, $\text{Pt}(\text{N}_2\text{H}_5)_2\text{HPO}_4 + \text{H}_2\text{O}$
Rather difficultly sol. in cold, and very easily in hot H_2O . (Cleve.)
- **ammonium phosphate**, $\text{Pt}(\text{N}_2\text{H}_5)_2\text{PO}_4(\text{NH}_4)_2$, $4\text{NH}_4\text{H}_2\text{PO}_4 + \text{H}_2\text{O}$.
Very easily sol in H_2O with decomp. into—
 $\text{Pt}(\text{N}_2\text{H}_5)_2\text{PO}_4$, $2\text{NH}_4\text{H}_2\text{PO}_4 + 9\text{H}_2\text{O}$.
Much more sol. in H_2O than the preceding comp. (Cleve.)
- **sulphate**, $\text{Pt}(\text{NH}_3)_4\text{SO}_4$.
Sol. in 32 pts. H_2O at 16.5° ; more easily when heated. (Reiset.)
Sol in 50–60 pts. boiling H_2O ; less in cold H_2O ; insol. in alcohol. (Cleve.)
- **sulphate, acid**, $\text{Pt}[(\text{NH}_3)_2\text{SO}_4\text{H}]_2 + \text{H}_2\text{O}$.
Decomp. by H_2O or alcohol into neutral salt.
 $3\text{Pt}(\text{NH}_3)_4\text{SO}_4$, $\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$. Sol. in H_2O . (Cleve.)
- **sulphite**, $\text{Pt}(\text{NH}_3)_4\text{SO}_3$.
Nearly insol. in cold H_2O . (Birnbbaum, A. 152. 143.)
 $\text{Pt}[(\text{NH}_3)_2\text{SO}_3\text{H}]_2 + 2\text{H}_2\text{O}$. Ppt. Sol. in $\text{HCl} + \text{Aq}$. (Cleve.)
- **platinous sulphite**, $3\text{Pt}(\text{NH}_3)_4\text{SO}_3$, $\text{PtSO}_3 + 2\text{H}_2\text{O}$.
Scarcely sol. in cold H_2O , sol. in 190 pts. H_2O at 100° . Easily sol. in warm $\text{HCl} + \text{Aq}$ with decomp. (Peyrone.)
 $+ 4\text{H}_2\text{O}$ (Carlgren, Sv. V. A. F. 47. 308.)
 $2\text{Pt}(\text{NH}_3)_4\text{SO}_3$, PtSO_3 , H_2SO_3 . Insol. in cold H_2O or alcohol. Scarcely sol. in hot H_2O . (Peyrone.)
- **sulphocyanide**, $\text{Pt}(\text{NH}_3)_4(\text{CNS})_2 + \text{H}_2\text{O}$.
Very sol in H_2O . Solution is decomp. on boiling. (Cleve, Sv. V. A. H. 10. 9. 7.)
- **platinous sulphocyanide**, $\text{Pt}(\text{NH}_3)_4(\text{CNS})_2$, $\text{Pt}(\text{CNS})_2$.
Insol. in H_2O and alcohol; sol. in dil. $\text{HCl} + \text{Aq}$. (Buckton, Chem. Soc. 13. 122.)
- Platomonodiamine chloride**, $\text{Pt}\frac{(\text{NH}_3)_2\text{Cl}}{\text{NH}_3\text{Cl}}$.
Easily sol. in H_2O . (Cleve.)
- Platomonodiamine chloroplatinite**
 $2\text{Pt}\frac{(\text{NH}_3)_2\text{Cl}}{\text{NH}_3\text{Cl}}$, PtCl_2 .
Moderately sol. in cold, but more easily in hot H_2O . (Cleve.)
- **nitrate**, $\text{Pt}\frac{(\text{NH}_3)_2\text{NO}_3}{\text{NH}_3\text{NO}_3} + \text{H}_2\text{O}$.
Easily sol. in H_2O . (Cleve.)
- Platomonodiamine sulphate**, $\text{Pt}\frac{(\text{NH}_3)_2\text{SO}_4}{\text{NH}_3}$.
Easily sol. in cold, but much more in hot H_2O .
- Platosemidiamine bromide**, $\text{Pt} < \frac{(\text{NH}_3)_2}{\text{Br}} >$.
Sol in H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Cleve.)
- **chloride**, $\text{Pt} < \frac{(\text{NH}_3)_2}{\text{Cl}} >$.
(Peyrone's chloride.) Sol in 387 pts. H_2O at 0° , and 26 pts at 100° (Cleve); in 33 pts. at 100° . (Peyrone.)
Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; very sl. sol. in HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$; more easily in $\text{HNO}_3 + \text{Aq}$; sol. in alkali carbonates $+ \text{Aq}$. (Peyrone, A. ch. (3) 12. 193.)
- Platosemidiamine chlorosulphurous acid**, $\text{Pt} < \frac{(\text{NH}_3)_2\text{SO}_3\text{H}}{\text{Cl}} >$.
Easily sol. in H_2O . (Cleve.)
- Ammonium platosemidiamine chlorosulphite platosemidiamine sulphite**, $\text{Pt} < \frac{(\text{NH}_3)_2\text{SO}_3\text{NH}_4}{\text{Cl}} >$, $\text{Pt} < \frac{(\text{NH}_3)_2\text{SO}_3\text{NH}_4}{\text{SO}_3\text{NH}_4} > + 2\text{H}_2\text{O}$.
Easily sol. in H_2O . Insol. in alcohol. (Cleve.)
- Platosemidiamine cyanide**, $\text{Pt}(\text{CN})(\text{NH}_3)_2\text{CN}$.
Easily sol in H_2O . (Cleve.)
- **platinous cyanide**, $\text{Pt}(\text{CN})(\text{NH}_3)_2\text{CN}$, $\text{Pt}(\text{CN})_2(?)$.
Ppt.
- **hydroxide**, $\text{Pt} < \frac{(\text{NH}_3)_2\text{OH}}{\text{OH}} >$.
Not known.
- **iodide**, $\text{Pt} < \frac{(\text{NH}_3)_2\text{I}}{\text{I}} >$.
Sl. sol in boiling H_2O . (Cleve.)
- **nitrate** $\text{Pt}\frac{(\text{NH}_3)_2\text{NO}_3}{\text{NO}_2}$.
Moderately sol. in H_2O . (Cleve.)
- **nitrite**, $\text{Pt}\frac{(\text{NH}_3)_2\text{NO}_2}{\text{NO}_2}$.
Very sl. sol. in cold, more easily in hot H_2O .
- **oxalate**, $\text{Pt}(\text{NH}_3)_2\text{C}_2\text{O}_4$.
(Cleve.)
 $+ 2\text{H}_2\text{O}$. (Cleve.)
- **sulphate**, $\text{Pt} < \frac{(\text{NH}_3)_2}{\text{SO}_4} >$.
Very sl. sol. even in hot H_2O . (Cleve.)

Platosemidiamine sulphocyanide,
 $\text{Pt}(\text{SCN})(\text{NH}_3)_2\text{SCN}$.Easily sol. in warm H_2O , but solution soon decomposes.**Platosemidiamine sulphurous acid.****Ammonium platosemidiamine sulphite,**
 $\text{Pt} < (\text{NH}_3)_2\text{SO}_3(\text{NH}_4), (\text{NH}_4)_2\text{SO}_3$.Very sol in H_2O . (Cleve.)**Barium —,** $\text{Pt}(\text{SO}_3)[(\text{NH}_3)_2\text{SO}_3]\text{Ba}$, BaSO_3 .
Ppt. (Cleve.)**Silver —.** $\text{Pt}(\text{SO}_3\text{Ag})[(\text{NH}_3)_2\text{SO}_3\text{Ag}]$,
 Ag_2SO_3
Ppt. (Cleve.)**Diplatodiamine chloride,** $\text{Pt}_2(\text{NH}_3)_4\text{Cl}_2$.
Insol. in H_2O .— **hydroxide,** $\text{Pt}_2(\text{NH}_3)_4(\text{OH})_2 + \text{H}_2\text{O}$.
Insol. in H_2O .— **nitrate,** $\text{Pt}_2(\text{NH}_3)_4(\text{NO}_3)_2$.
Insol. in H_2O . (Cleve.)— **sulphate,** $\text{Pt}_2(\text{NH}_3)_4\text{SO}_4$.
Insol. in H_2O . (Cleve.)**Platobromonitrous acid.****Potassium platobromonitrite,** $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Br} + 2\text{H}_2\text{O}$.Sol. in about 3 pts. cold, and 2 pts. boiling H_2O . (Vèzes, A. ch. (6) 29. 194.) $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Br}_2 + \text{H}_2\text{O}$. Sol. in 1 pt. cold, and still less hot H_2O . Insol in alcohol. (Vèzes.)**Platochloronitrous acid.****Potassium chloronitrite,** $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Cl} + 2\text{H}_2\text{O}$.Sol. in about 3 pts. cold, and 2 pts. boiling H_2O . (Vèzes, A. ch. (6) 29. 178.) $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Cl}_2$. Sol. in about 3 pts. cold, and 2 pts. boiling H_2O . (Vèzes.)**Platochlorosulphurous acid.**

See Chloroplatosulphurous acid.

Platiodonitrous acid, $\text{H}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$.

Known only in solution. (Nilson, J. pr. (2) 21. 172.)

Aluminum platiodonitrite, $\text{Al}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 27\text{H}_2\text{O}$.Easily sol. in H_2O . (Nilson.)**Ammonium —,** $(\text{NH}_4)_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O ; decomp. on heating.**Barium platiodonitrite,** $\text{BaPt}(\text{NO}_2)_2\text{I}_2 + 4\text{H}_2\text{O}$.Very sol. in H_2O **Cadmium —,** $\text{CdPt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$.
Easily sol. in H_2O .**Cæsium —,** $\text{Cs}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$.
Easily sol in H_2O .**Calcium —,** $\text{CaPt}(\text{NO}_2)_2\text{I}_2 + 6\text{H}_2\text{O}$.
Very easily sol. in H_2O **Cerium —,** $\text{Ce}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 18\text{H}_2\text{O}$.
Easily sol in H_2O .**Cobalt —,** $\text{CoPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O .**Didymium —,** $\text{D}_{12}[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 24\text{H}_2\text{O}$.
Sol. in H_2O .**Erbium —,** $\text{Er}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 18 \text{H}_2\text{O}$.
Sol. in H_2O **Ferrous —,** $\text{FePt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O .**Ferric —,** $\text{Fe}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 6\text{H}_2\text{O}$.
Sol. in H_2O .**Lanthanum —,** $\text{La}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 24\text{H}_2\text{O}$.
Sol. in H_2O .**Lead —, basic,** $\text{PbPt}(\text{NO}_2)_2\text{I}_2$, $\text{Pb}(\text{OH})_2$.
Insol. in H_2O .**Lithium —,** $\text{Li}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 6\text{H}_2\text{O}$.
Very sol. in H_2O .**Magnesium —,** $\text{MgPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O .**Manganese —,** $\text{MnPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O .**Mercurous —, basic,** $2\text{Hg}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$,
 $\text{Hg}_2\text{O} + 9\text{H}_2\text{O}$.
Insol. in H_2O .**Nickel —,** $\text{NiPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O .**Potassium —,** $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O in all proportions.
Very sol. in alcohol.**Rubidium —,** $\text{Rb}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O .

Silver platiodonitrite, $\text{Ag}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$.
Insol. in H_2O

Sodium —, $\text{Na}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 4\text{H}_2\text{O}$
Very sol. in H_2O

Strontium —, $\text{SrPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$
Sol. in H_2O .

Thallium —, $\text{Tl}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$.
Insol. in H_2O .

Yttrium —, $\text{Y}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 27\text{H}_2\text{O}$.
Sol. in H_2O .

Zinc —, $\text{ZnPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$.
Sol. in H_2O

Triplatoctonitrosylic acid, $\text{H}_4\text{Pt}_3\text{O}(\text{NO}_2)_8$
(Nilson, J. pr. (2) 16. 241.)

Potassium triplatoctonitrosylate.
See under Platonitrite, potassium.

Platonitrous acid, $\text{H}_2\text{Pt}(\text{NO}_2)_4$.
Sol. in H_2O or alcohol. (Lang. J. pr. 83. 419.)
Is called "Platotetranitrosylic acid" by Nilson.

Aluminum platonitrite, $\text{Al}_2[\text{Pt}(\text{NO}_2)_4]_3 + 14\text{H}_2\text{O}$.
Sol. in H_2O
 $\text{Al}_2(\text{OH})_2[\text{Pt}(\text{NO}_2)_4]_3\text{O}_2 + 10\text{H}_2\text{O}$. Sl. sol. in cold, easily in hot H_2O and alcohol. (Nilson, B. 9. 1727.)

Ammonium platonitrite, $(\text{NH}_4)_2\text{Pt}(\text{NO}_2)_4 + 2\text{H}_2\text{O}$.
Moderately sol. in cold H_2O . (Nilson, B. 9. 1724.)

Barium platonitrite, $\text{BaPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$.
Sl. sol. in cold, very sol. in hot H_2O . (Lang.)

Cadmium platonitrite, $\text{CdPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$.
Easily sol. in H_2O . (Nilson.)

Cæsium platonitrite, $\text{Cs}_2\text{Pt}(\text{NO}_2)_4$.
Resembles K salt.

Calcium platonitrite, $\text{CaPt}(\text{NO}_2)_4 + 5\text{H}_2\text{O}$.
Very sol. in H_2O . (Nilson.)

Cerium platonitrite, $\text{Ce}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$.
Sol. in H_2O . (Nilson.)

Chromium diplatonitrite,
 $\text{Cr}_2(\text{OH})_2[\text{Pt}(\text{NO}_2)_4]_2\text{O}_2 + 24\text{H}_2\text{O}$.
Sol. in H_2O . (Nilson.)

Cobalt platonitrite, $\text{CoPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$.
Easily sol. in H_2O (Nilson.)

Copper platonitrite, $\text{CuPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$.
Sol. in H_2O . (Nilson.)
 $3\text{CuPt}(\text{NO}_2)_4$, $\text{CuO} + 12\text{H}_2\text{O}$. Decomp. by H_2O (Nilson.)

Didymium platonitrite, $\text{Di}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$
Deliquescent; sol. in H_2O

Erbium platonitrite, $\text{Er}_2[\text{Pt}(\text{NO}_2)_4]_3 + 9$, and $21\text{H}_2\text{O}$.
Deliquescent; sol. in H_2O .

Glucinum diplatonitrite, $\text{GlPt}(\text{NO}_2)_2]_2\text{O} + 9\text{H}_2\text{O}$
Sl. sol. in cold H_2O .

Indium diplatonitrite, $\text{In}(\text{OH})_2[\text{Pt}(\text{NO}_2)_2]_4\text{O}_2 + 10\text{H}_2\text{O}$
Sl. sol. in H_2O

Ferric diplatonitrite, $\text{Fe}_2[\text{Pt}(\text{NO}_2)_2]_6\text{O}_3 + 30\text{H}_2\text{O}$.
Sl. sol. in cold, easily in hot H_2O .

Lanthanum platonitrite, $\text{La}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$.
Deliquescent; sol. in H_2O .

Lead platonitrite, $\text{PbPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$.
Sl. sol. in H_2O . (Nilson.)

Lithium platonitrite, $\text{Li}_2\text{Pt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$.
Sl. deliquescent; easily sol. in H_2O .

Magnesium platonitrite, $\text{MgPt}(\text{NO}_2)_4 + 5\text{H}_2\text{O}$.
Easily sol. in H_2O .

Manganese platonitrite, $\text{MnPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$.
Sol. in H_2O .

Mercurous platonitrite, $\text{Hg}_2\text{Pt}(\text{NO}_2)_4$, Hg_2O .
Nearly insol. in H_2O . (Lang, J. pr. 83. 415.)
 $+ \text{H}_2\text{O}$. Nearly insol. in H_2O . (Nilson.)

Nickel platonitrite, $\text{NiPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$.
Easily sol. in H_2O . (Nilson.)

Potassium platonitrite, $\text{K}_2\text{Pt}(\text{NO}_2)_4$.
Sol. in 27 pts H_2O at 15° ; more easily sol. in warm H_2O . (Lang, J. pr. 83. 415.)
 $+ 2\text{H}_2\text{O}$. Efflorescent. (Lang.)
 $\text{K}_2\text{H}_2\text{Pt}_2\text{O}(\text{NO}_2)_6 + 3\text{H}_2\text{O}$. Very sl. sol. in cold (0.01 mol. in 1 l. at 16°), but very easily in hot H_2O . (Vèzes, A. ch. (6) 29. 162.)
 $\text{K}_4\text{Pt}_3\text{O}(\text{NO}_2)_8 + 2\text{H}_2\text{O}$. Sl. sol. in warm H_2O . (Nilson.)

Potassium platonitrite bromide.

See Platibromonitrite and platobromonitrite, potassium.

Potassium platonitrite chloride.

See Plati- and platochloronitrite, potassium.

Potassium plat nitrite hydrogen chloride,

Sol. in H_2O . (Miolati, Att. Linc. Rend. 1896, (5) 5, II. 358.)

Potassium platonitrite iodide.

See Plati- and platiodonitrite, potassium.

Potassium platonitrite nitrogen dioxide,

Violently decomp. by H_2O . (Miolati, Atti Linc. Rend. 1896, (5) 5, II, 356.)

Rubidium platonitrite, $\text{Rb}_2(\text{Pt})(\text{NO}_2)_4$, and $+2\text{H}_2\text{O}$.

Very slowly sol. in cold, more easily in warm H_2O . (Nilson.)

Silver platonitrite, $\text{Ag}_2\text{Pt}(\text{NO}_2)_4$.

Very sl. sol. in cold, easily in hot H_2O .

Silver d₂platonitrite, $\text{Ag}_2\text{Pt}_2(\text{NO}_2)_4\text{O}$

Insol. in H_2O . (Nilson.)

Sodium platonitrite, $\text{Na}_2\text{Pt}(\text{NO}_2)_4$

Easily sol. in H_2O .

Strontium platonitrite, $\text{SrPt}(\text{NO}_2)_4+3\text{H}_2\text{O}$

Somewhat sl. sol. in cold H_2O , but easily sol. in warm H_2O .

Thallium platonitrite, $\text{Tl}_2\text{Pt}(\text{NO}_2)_4$.

Very sl. sol. in H_2O . (Nilson.)

Yttrium platonitrite, $\text{Y}_2[\text{Pt}(\text{NO}_2)_4]_3+9$, or $21\text{H}_2\text{O}$.

Sol. in H_2O .

Zinc platonitrite, $\text{ZnPt}(\text{NO}_2)_4+8\text{H}_2\text{O}$.

Sol. in H_2O .

Platodioxamine chloride,

Easily sol. in H_2O . (Alexander, A. 246. 239.)

— chloroplatinite, $\text{Pt}(\text{NH}_3\text{O.NH}_3\text{OCl})_2$, PtCl_2 .

Sol. in warm $\text{HCl}+\text{Aq}$. Insol. in cold H_2O or alcohol; very sl. sol. in hot H_2O . (Alexander.)

— hydroxide, $\text{Pt}(\text{NH}_3\text{O.NH}_3\text{O})_2(\text{OH})_2$.

Insol. in H_2O or alcohol. Easily sol. in HCl or HNO_3+Aq . Difficultly sol. in hot dil. $\text{H}_2\text{SO}_4+\text{Aq}$. (Alexander.)

Platodioxamine oxalate,

Insol. in cold H_2O , alcohol, or organic acids. (Alexander)

— phosphate, $\text{Pt}_2(\text{NH}_3\text{O.NH}_3\text{O})_{12}(\text{PO}_4)_2+3\text{H}_2\text{O}$.

Ppt. (Alexander)

— sulphate, $\text{Pt}(\text{NH}_3\text{O.NH}_3\text{O})\text{SO}_4+\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Alexander,)

Platosamine bromide, $\text{Pt}(\text{NH}_3\text{Br})_2$.

Sl. sol. even in hot H_2O (Cleve)

— chloride, $\text{Pt}(\text{NH}_3\text{Cl})_2$.

"Reiset's second chloride" Sol. in 140 pts. H_2O at 100° (Peyrone, A. 61. 180)

Sol. in 130 pts. H_2O at 100° , and 4472 pts. at 0° (Cleve)

Easily sol. in $\text{NH}_4\text{OH}+\text{Aq}$, HNO_3 , or aqua regia, with decomp. Sol. in $\text{KCN}+\text{Aq}$ with evolution of NH_3 . (Cleve.)

— ammonium chloride, $\text{Pt}(\text{NH}_3\text{Cl})_2$, $2\text{NH}_4\text{Cl}$

Sl. sol. in cold, easily in hot H_2O ; insol. in alcohol; sol. in NH_4OH or $(\text{NH}_4)_2\text{CO}_3+\text{Aq}$. (Grimm, A. 99. 75.)

Platosamine chlorosulphurous acid,

Easily sol. in H_2O without decomp. (Cleve.)

Ammonium platosamine chlorosulphite,

Sol. in H_2O . (Peyrone, A. 61. 180.)

Platosamine cyanide, $\text{Pt}(\text{NH}_3\text{CN})_2$.

Quite easily sol. in H_2O or $\text{NH}_4\text{OH}+\text{Aq}$. (Buckton.)

— hydroxide, $\text{Pt}(\text{NH}_3\text{OH})_2$.

"Reiset's second base." Very sol. in H_2O . (Odling, B. 3. 685.)

— iodide, $\text{Pt}(\text{NH}_3\text{I})_2$.

Very sl. sol. in H_2O . Sol. in cold $\text{NH}_4\text{OH}+\text{Aq}$ to form platodiamine iodide. (Cleve.)

— nitrate, $\text{Pt}(\text{NH}_3\text{NO}_3)_2$.

Moderately sol. in hot H_2O . Sol. in $\text{NH}_4\text{OH}+\text{Aq}$ with combination. (Reiset, A. ch. (3) 11. 26.)

— nitrite, $\text{Pt}(\text{NH}_3\text{NO}_2)_2$.

Very sl. sol. in cold, easily in hot H_2O . Insol. in alcohol. (Lang.)

Platosamine platinous nitrite, $\text{Pt}(\text{NH}_3\text{NO}_2)_2$,
 $\text{Pt}(\text{NO}_2)_2$.

Slowly and sl sol in cold, more easily sol. in hot H_2O .

Extremely sl sol even in conc. acids; more sol. in $\text{NH}_4\text{OH} + \text{Aq}$ than in H_2O (Lang.)

— oxide, $\text{Pt}(\text{NH}_3)_2\text{O}$.

Insol. in H_2O or $\text{NH}_4\text{OH} + \text{Aq}$. (Reiset.)

— oxalate, $\text{Pt}(\text{NH}_3)_2\text{H}_2(\text{C}_2\text{O}_4)_2 + 2\text{H}_2\text{O}$.

Ppt. (Cleve.)

— sulphate, $\text{Pt}(\text{NH}_3)_2\text{SO}_4 + \text{H}_2\text{O}$.

Sl. sol. in cold, more easily in hot H_2O .

— sulphite, $\text{Pt}(\text{NH}_3)_2\text{SO}_3 + \text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve.)

— sulphocyanide, $\text{Pt}(\text{NH}_3\text{SCN})_2$.

Insol. in H_2O ; can be cryst. from alcohol; not attacked by HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$. (Buckton.)

Very sol. in hot H_2O (Cleve.)

— silver sulphocyanide,

(Cleve.)

Platosamine sulphurous acid,

Exists only in its salts

See **Platosamine sulphite**.

Ammonium platosamine sulphite,

Sol. in H_2O . Insol. in alcohol.

Barium platosamine sulphite,

Ppt. (Cleve.)

Cobalt — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{CO} + 6\text{H}_2\text{O}$.

Very sl. sol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$.

Copper — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{Cu} + 5\text{H}_2\text{O}$.

Very sl. sol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$.

Lead — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{Pb} + \text{H}_2\text{O}$.

Ppt.

Manganese — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{Mn} + 4\text{H}_2\text{O}$.

Ppt. Sl. sol. in H_2O .

Nickel — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{Ni} + 7\text{H}_2\text{O}$.

Sl. sol. in H_2O .

Sodium platosamine sulphite,
 $\text{Pt}(\text{NH}_3\text{SO}_3\text{Na})_2 + 5\frac{1}{2}\text{H}_2\text{O}$.

Sol in H_2O 100 ccm sat solution at 20° contains 5.52 g. cryst. salt. (Haberland and Hanekop, A. 245. 235.)

Silver — — —, $\text{Pt}(\text{NH}_3\text{SO}_3\text{Ag})_2 + \text{H}_2\text{O}$.

Ppt

Uranyl — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{UO}_2 + \text{H}_2\text{O}$.

Ppt.

Zinc — — —, $\text{Pt}(\text{NH}_3)_2(\text{SO}_3)_2\text{Zn} + 6\text{H}_2\text{O}$.

Ppt. Very sl. sol in H_2O . (Cleve.)

Platososemiamine potassium chloride,

Very sol in H_2O ; insol in alcohol. (Cossa, B. 23. 2507.)

Platosoxamine chloride, $\text{Pt}\begin{matrix} \text{NH}_3\text{OCl} \\ \text{NH}_3\text{OCl} \end{matrix}$.

Sol in H_2O Much less sol in H_2O than platodioxamine chloride. (Alexander, A. 246. 239.)

Platosoxamine amine chloride,

Easily sol in H_2O Insol in alcohol and conc. $\text{HCl} + \text{Aq}$. (Alexander, A. 246. 239.)

— chloroplatinite, $\text{Pt}\begin{matrix} \text{NH}_3\text{O.NH}_3\text{Cl} \\ \text{NH}_3\text{O.NH}_3\text{OCl} \end{matrix} \text{PtCl}_2$

Ppt.

Platosulphurous acid.

Ammonium platosulphite, $(\text{NH}_4)_6\text{Pt}(\text{SO}_3)_4 + 3\text{H}_2\text{O}$.

Sol in H_2O . (Birnbaum, A. 139. 170.)

$(\text{NH}_4)_2\text{Pt}(\text{SO}_3)_2 + \text{H}_2\text{O}$. Sol. in H_2O . (Liebig, Pogg. 17. 108.)

Ammonium platosulphite chloride,

Sol. in H_2O . (Birnbaum.)

$\text{PtClSO}_3\text{H}, 2\text{NH}_4\text{Cl}$. Deliquescent; sol. in H_2O . (Birnbaum, A. 152. 143.)

See also **Chloroplatosulphite**, **ammonium**.

Potassium platosulphite, $\text{K}_4\text{Pt}(\text{SO}_3)_4 + 4\text{H}_2\text{O}$.

Sl. sol. in cold, easily in hot H_2O . Much more sol. than the Na salt. (Birnbaum, A. 139. 168.)

$+ 3\text{H}_2\text{O}$. (Lang, J. pr. 83. 415.)

$6\text{K}_2\text{O}, 2\text{PtO}, 10\text{SO}_2$. Sl. sol. in H_2O . (Claus, J. B. 1847-48. 453.)

Does not exist. (Lang.)

$\text{K}_2\text{Pt}(\text{SO}_3)_2$. Sol. in H_2O .

Silver platosulphite, $\text{Ag}_6\text{Pt}(\text{SO}_3)_4$

Ppt. Very sol. in cold $\text{NH}_4\text{OH} + \text{Aq}$ (Lang J, pr. 83. 415)

Sodium platosulphite, $\text{Na}_6\text{Pt}(\text{SO}_3)_4$

Very sl sol. in cold, somewhat more easily in hot H_2O . Not decomp by boiling KOH or $\text{NaOH} + \text{Aq}$. Gradually sol in $(\text{NH}_4)_2\text{S}$ or $\text{K}_2\text{S} + \text{Aq}$. Insol. in $\text{NaCl} + \text{Aq}$ or alcohol (Litton and Schnedermann, A 42. 316.)

+ $1\frac{1}{2}\text{H}_2\text{O}$.

+ $7\text{H}_2\text{O}$.

$\text{Na}_2\text{Pt}(\text{SO}_3\text{H})_4$. Moderately sol. in H_2O (Litton and Schnedermann.)

Platothiosulphuric acid.**Sodium platothiosulphate, $\text{Na}_6\text{Pt}(\text{S}_2\text{O}_3)_4 + 10\text{H}_2\text{O}$.**

Very sol. in H_2O (Schottlander, A. 140. 200)

$\text{PtS}_2\text{O}_3, 4\text{Na}_2\text{S}_2\text{O}_3 + 10\text{H}_2\text{O}$.

$\text{PtS}_2\text{O}_3, 6\text{Na}_2\text{S}_2\text{O}_3 + 19\text{H}_2\text{O}$.

$2\text{PtS}_2\text{O}_3, 7\text{Na}_2\text{S}_2\text{O}_3 + 18\text{H}_2\text{O}$. (Jochum, C. C. 1885. 642.)

Plumbic acid.**Barium plumbate, Ba_2PbO_4 .**

Insol. in H_2O . Sol in $\text{HCl} + \text{Aq}$ with evolution of Cl . Sol. in acids in presence of a reducing substance. (Kassner, Arch. Pharm. 228. 109.)

Calcium plumbate.

Insol. in H_2O . $\text{HNO}_3 + \text{Aq}$ dissolves out CaO . (Crum, A. 55. 218.)

Ca_2PbO_4 . Properties as Ba_2PbO_4 (Kassner, Arch. Pharm. 228. 109.)

+ $4\text{H}_2\text{O}$. Easily decomp. by HNO_3 . (Kassner, Arch. Pharm. 1894, 232. 378)

Calcium hydrogen plumbate, $\text{H}_2\text{CaPb}_2\text{O}_6$

Fairly stable; slowly sol. in HNO_3 in the cold. (Kassner)

Calcium lead orthoplumbate, CaPbPbO_4 .

Insol. in H_2O . Sol. in HCl . HNO_3 , acetic and other acids cause a separation of PbO_2 . (Kassner, Arch. Pharm. 1903, 241. 147)

Copper metaplumbate, CuPbO_3 .

Decomp. by acids. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Acetic acid dissolves Cu . (Hoehnel, Arch. Pharm. 1896, 234. 399.)

Lead metaplumbate, PbPbO_3 .

Identical with lead sesquioxide. (Hoehnel, Arch. Pharm. 1896, 234. 399.)

Manganese metaplumbate.

Decomp. by acids. (Hoehnel, Arch. Pharm. 1896, 234. 399.)

Potassium plumbate, $\text{K}_2\text{PbO}_3 + 3\text{H}_2\text{O}$.

Very deliquescent. Decomp by pure H_2O into PbO_2 and KOH . Sol in $\text{KOH} + \text{Aq}$ without decomp (Freymy, J. Pharm. (3) 3. 32.)

Silver metaplumbate, Ag_2PbO_3

Ppt (Grützner, Arch. Pharm. 1895, 233. 518)

Sodium plumbate.

Sol in H_2O with decomposition. Sl. sol in alkalis + Aq . (Freymy, A. ch. (3) 12. 490)

Sodium metaplumbate, $\text{Na}_2\text{PbO}_3 + 4\text{H}_2\text{O}$.

Decomp by H_2O , insol. in alcohol (Hoehnel, Arch. Pharm. 1894, 232. 224)

Strontium plumbate, Sr_2PbO_4 .

Properties as Ba_2PbO_4 (Kassner, Arch. Pharm. 228. 109)

Zinc metaplumbate, $\text{ZnPbO}_3 + 2\text{H}_2\text{O}$.

Decomp. by dil acids; insol. in H_2O . (Hoehnel, Arch. Pharm. 1896, 234. 398)

Plumbous acid.**Calcium plumbite.**

Sl. sol in H_2O . (Karsten, Scher. J. 5. 575.)

Potassium plumbite, $\text{PbO}, x\text{K}_2\text{O}$.

Known only in solution

Silver plumbite, Ag_2PbO_2

Insol. in H_2O , $\text{NH}_4\text{OH} + \text{Aq}$ and $\text{KOH} + \text{Aq}$; sol. in HNO_3 and acetic acid; and in conc. H_2SO_4 , HI , and HF . (Bullheimer, B 1898, 31. 1288)

+ $2\text{H}_2\text{O}$. Insol. in H_2O . Decomp. on air. (Kratwig, B 15. 264)

Sodium plumbite.

Known only in solution

Potassium, K_2 .

Violently decomposes H_2O or alcohol. Insol. in hydrocarbons. Sol with violent action in acids

Solubility in fused KOH at t° .

t°	G. K sol. in 100 g. fused KOH
480	7.8—8.9
600	3 —4
650	2 —2.7
700	0.5—1.3

(Hevesy, Z. Elektrochem 1909, 15. 534.)

Sol in liquid NH_3 . (Seely, C. N. 23. 169); (Franklin, Am. Ch. J. 1898, 20. 829)

1 gram atom of K dissolves in 4.74 mol.

liquid NH_3 at 0° ; in 4.79 mol. at -50° ; in 4.82 mol. at -100° . (Ruff, B 1906, **39**, 839.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, **54**, 674.)

Slowly sol. in ethylene diamine. Insol. in ethyl amine and in secondary and tertiary amines. (Kraus, J. Am. Chem. Soc. 1907, **29**, 1561.)

Potassium acetylide, K_2C_2 .

(Moissan, C. R. 1898, **127**, 917.)

Potassium acetylide acetylene, K_2C_2 , C_2H_2 .

(Moissan, C. R. 1898, **127**, 915.)

Potassium amalgams.

Hg_4K , Hg_5K , Hg K , Hg_{10}K , Hg_{12}K and Hg_{18}K . (Guntz, C. R. 1900, **131**, 183.)

Hg_{14}K . Stable up to 0° . Can be cryst. from Hg without decomp. below 0° .

Hg_{12}K . Stable from 0° to 71° or 73° . Can be cryst. from Hg without decomp. at any temp. between these limits.

Hg_{10}K . Stable from 71° or $73-75^\circ$. Can be cryst. from Hg without decomp. at any temp. between these limits. (Kerp, Z. anorg. 1900, **25**, 68.)

Potassium amide, KH_2N .

Decomp. by water or alcohol. Insol. in hydrocarbons

Potassium ammonickelate, $\text{Ni}_2\text{N}_3\text{K}_6$, 6NH_3 .

Decomp. by H_2O . Sl. sol. in liquid NH_3 . (Bohart, J. phys. Chem. 1915, **19**, 559.)

Potassium ammonoargentate, AgNHK , NH_3 or AgNH_2 , KNH_2 .

Ppt., decomp. in the air. Decomp. by H_2O or by liquid NH_3 solutions of acids. (Franklin, J. Am. Chem. Soc. 1915, **37**, 855.)

Potassium ammonobarate, BaNK , 2NH_3 .

Hydrolyzed by H_2O . Insol. in liquid NH_3 . Decomp. and dissolved in a solution of NH_4NO_3 in liquid NH_3 . (Franklin, J. Am. Chem. Soc. 1915, **37**, 2297.)

Potassium ammonocadmiate, $\text{Cd}(\text{NHK})_2$, 2NH_3 .

Ppt. (Franklin, Am. Ch. J. 1912, **47**, 310.) $\text{Cd}(\text{NHK})_2$, 2NH_3 . Decomp. by H_2O . Insol. in liquid NH_3 . (Bohart, J. phys. Chem. 1915, **19**, 542.)

Potassium ammonocalciate, CaNK , 2NH_3 .

Hydrolyzed by H_2O . Readily sol. in a solution of NH_4NO_3 in liquid NH_3 . (Franklin, J. Am. Chem. Soc. 1915, **37**, 2300.)

Potassium ammonocuprite, CuNK_2 , 3NH_3 .

Very sol. in liquid NH_3 .

CuNK_2 , 2NH_3 .

CuNK_2 , NH_3 . (Franklin, J. Am. Chem. Soc. 1912, **34**, 1503.)

CuNK_2 , $2\frac{1}{2}\text{NH}_3$. Ppt. (Franklin, Am. Ch. J. 1912, **47**, 311.)

Potassium ammonomagnesate, $\text{Mg}(\text{NHK})_2$, 2NH_3 .

Sl. sol. in liquid NH_3 . Rapidly hydrolyzed by H_2O . (Franklin, J. Am. Chem. Soc. 1913, **35**, 1463.)

Potassium ammonoplumbite, PbNK , $2\frac{1}{2}\text{NH}_3$.

Completely hydrolyzed by action of water vapor. Violently decomp. by H_2O or dil. acids. Sol. in liquid NH_3 . (Franklin, J. phys. Chem. 1911, **15**, 519.)

Potassium ammonostannate, $\text{Sn}(\text{NK})_2$, 4NH_3 .

Decomp. by H_2O . Readily sol. in $\text{HCl} + \text{Aq}$. Sl. sol. in liquid NH_3 . Readily sol. in a solution of NH_4I in liquid NH_3 . (Fitzgerald, J. Am. Chem. Soc. 1907, **29**, 1696.)

Potassium ammonostrontiate, SrNK , 2NH_3 .

Hydrolyzed vigorously by H_2O . Sol. in solutions of NH_4NO_3 in liquid NH_3 . Insol. in liquid NH_3 . (Franklin, J. Am. Chem. Soc. 1915, **37**, 2299.)

Potassium ammonothallate, TlNK_3 , 4NH_3 .

Sensitive to action of air or moisture. Violently decomp. by H_2O or dil. acids. Moderately sol. in liquid NH_3 at 20° , more sol. at higher temp. and much less sol. at lower temp. Decomp. by liquid NH_3 solutions of acids (Franklin, J. phys. Chem. 1912, **16**, 689.)

Potassium ammonotitanate, $(\text{N})\text{TiNHK}$.

Vigorously hydrolyzed by H_2O . Insol. in liquid NH_3 solutions of either potassium amide or NH_4Br . (Franklin, J. Am. Chem. Soc. 1912, **34**, 1500.)

Potassium ammonozincate, $\text{Zn}(\text{NHK})_2$, 2NH_3 .

Decomp. by water. Sl. sol. in liquid NH_3 . (Fitzgerald, J. Am. Chem. Soc. 1907, **29**, 663.)

Decomp. by H_2O . Sol. in dilute acids. Sl. sol. in liquid NH_3 . Sol. in solutions of ammonium salts in liquid NH_3 . (Franklin, Z. anorg. 1907, **55**, 195.)

Potassium arsenide, K_3As .

(Hugot, C. R. 1899, **129**, 604.)

K_2As_4 . (Hugot.)

Potassium arsenide, ammonia, AsK_3 , NH_3 .

Nearly insol. in liquid NH_3 . (Hugot.)

K_2As_4 , NH_3 . (Hugot.)

Potassium azoimide, KN_3 .

Stable in aq. solution.

46.5 pts. are sol. in 100 pts. H_2O at 10.5° .48.9 " " " " 100 " H_2O " 15.5° .49.6 " " " " 100 " H_2O " 17° .0.1375 " " " " 100 " abs. alcohol at 16° .

Insol. in pure ether (Curtius, J pr 1898, (2) 58. 280.)

Potassium bromide, KBr.Solubility of KBr in 100 pts. H_2O at t° .

t°	Pts KBr	t°	Pts. KBr
0	53 48	60	85 35
20	64 52	80	93 46
40	74 63	100	102 0

(Kremers, Pogg. 97. 151.)

Solubility of KBr in 100 pts. H_2O at t° .

t°	Pts KBr	t°	Pts KBr
-13.4	46 17	43 15	77.0
-6.2	49 57	45.45	77.73

30.0	70.35	110.0	110.3
37.9	74.46

Solubility is represented by a straight line of the formula $54.43 + 0.5128t$. (Coppet, A. ch. (5) 30. 416.)100 pts KBr+Aq sat. at $15-16^\circ$ contain 39.06 pts. KBr (v. Hauer, J. pr. 98. 137.)Solubility of KBr in 100 pts. H_2O at high temp.

t°	Pts. KBr
140	120.9
181	145 6

(Tilden and Shenstone, Phil. Trans. 1884. 23.)

Sat. solution boils at 112° . (Kremers.)

Sat. KBr+Aq contains at:

-12°	-10°	$+3^\circ$	32°	39°
31.0	31.5	35.7	41.6	47.7% KBr,
55°	77°	140°	173°	220°
45.5	48.7	54.1	58.5	61.6% KBr.

(Étard, A. ch. 1894, (7) 2. 539.)

If solubility S =pts. KBr in 100 pts. solution, $S=34.5+0.2420t$ from 0° to 40° , $S=$ 41.5+0.1378t from 30° to 120° . (Étard, C R. 98. 1432.)Solubility of KBr in 100 g. H_2O at t° .

t°	G KBr	t°	G KBr
10 5	62 1	-11	44 9
10	60 7	-10 5	41 8
3 5	55 5	-10	39 7
0	52.6	-8 5	35 7
-5	50 1	-8	31 2
-8	47 5	-6 5	25 0
-11 5	45 3		

(Meusser, Z. anorg. 1905, 44. 80.)

68.74 g KBr are sol. in 100 g. H_2O at 25° (Amadori and Pampanini, Rend. Ac. Linc. 1911, V, 20. 473.)Sp. gr. of KBr+Aq at 19° .

% KBr	Sp gr	% KBr	Sp gr.
5	1.037	30	1.256
10	1.075	35	1.309
15	1.116	40	1.366
20	1.159	45	1.432
25	1.207		

(Gerlach, Z. anal. 8. 285.)

Sp. gr. of KBr+Aq at 15° containing:

5	10	20	30	36% KBr.
1.0357	1.074	1.1583	1.2553	1.3198

(Kohlrausch, W. Ann. 1879. 1.)

50	41.3	1.82	100	54.5	2.53

(Precht and Wittgen.)

100 g. H₂O dissolve 34.76 g. KCl+2.93 g. K₂SO₄ at 25°. (Van't Hoff and Meyerhoffer, Z. phys. Ch. 1898, **27**, 75.)Sol. in 20% KC₂H₃O₂+Aq (Stromeyer.) Quickly attacked by liquid NO₂ in the presence of traces of moisture, with evolution of Cl₂. (Frankland, Chem. Soc. 1901, **79**, 1361.)Sl sol. in liquid NH₃ (Franklin, Am. Ch. J. 1898, **20**, 829.)Easily sol. in liquid HF. (Franklin, Z. anorg. 1905, **46**, 2.)100 g. hydrazine dissolves 8.5 pts. KCl at 12.5-13°. (de Bruyn, R. t. c. 1899, **18**, 297.)100 g. anhyd. hydroxylamine dissolve 12.3 g. KCl at 17-18°. (de Bruyn, Z. phys. Ch. 1892, **10**, 782.)

100 pts alcohol of 0.900 sp. gr. dissolve 4.62 pts.; 0.872, 1.66 pts., 0.834, 0.38 pt., 0.817, 0.00 pt. KCl. (Kirwan.)

Sol. in 48 pts. boiling alcohol. (Wenzel.)

Insol. in absolute alcohol containing LiCl. (Mitscherlich.)

At 15°, 100 pts. alcohol of p percentage by volume (S=sp. gr.) dissolve pts KCl as follows:

p	10	20	30	40
S	0.934	0.972	0.958	0.940
KCl	19.8	14.7	10.7	7.7

p	50	60	80
S	0.918	0.896	0.848
KCl	5.0	2.8	0.45

(Schiff, A. **118**, 365.)100 pts of a mixture of 40% alcohol with 60% H₂O dissolve 9.2 pts. KCl at 15°. (Schiff.)Insol. in absolute alcohol or in 96% alcohol at 15° or below. At 20°, 100 pts. of the latter dissolve 0.04 pt.; at 25°, 0.06 pt.; at 30°, 0.20 pt. KCl. Dilute alcohol dissolves less KCl than the contained H₂O would dissolve by itself.

Solubility in dil. alcohol. D = sp. gr. of alcohol; S = solubility in 100 pts. alcohol at t°

D = 0.9904		D = 0.9848		D = 0.9793		D = 0.9726

	100	0 00	100 00	0 00

Since there is but one liquid phase here,
these figures represent the solubility of KCl in
acetone+Aq at 30° and 40°.

(Snell, J. phys. Chem. 1898, 2. 484.)

The addition of KCl to mixtures of acetone
and H₂O will cause a division into
two layers. The following table gives
the temp at which sat. solutions of KCl
in acetone+Aq of varying concentra-
tions separate into two layers and also
the compositions of the sat solutions of
KCl in acetone+Aq.

% acetone	Temp. of division	100 g. of solution contain		
		G. H ₂ O	G. acetone	G. KCl
26	46.5°			
30	40.0	59 36	25 44	15 20
40	34 2	53.21	35 47	11.32
50	32 6	45 97	45.97	8.06
60	33.3	37 86	56.80	5.34
70	35 5	29.09	68 25	2 66
75	39.0			
80	45.6	19 80	79 20	1.00

(Snell.)

The following table gives the compositions of the solutions of KCl in acetone+Aq at the points at which the solution just divides into two layers. Temp.=40°.

100 g of the solution contain		
G H ₂ O	G acetone	G KCl
56.68	28.63	14.68
53.05	35.67	11.29
50.34	39.82	9.83
47.60	43.83	8.58
44.35	48.36	7.29
42.68	50.75	6.57
38.53	56.26	5.21
36.59	58.84	4.57
32.37	64.18	3.45
30.62	66.43	2.95
28.12	69.45	2.44

(Snell.)

The addition of KCl to aqueous acetone causes the separation of the liquid into two layers. The following table gives the composition of these layers at 40°.

Upper layer contains per 100 g. of solution		
G. H ₂ O	G acetone	G. KCl
55.20	31.82	12.99
54.27	36.69	12.03
53.27	35.44	11.29
51.69	37.76	10.55
51.23	48.50	10.27
50.34	39.88	9.77
49.08	41.67	9.26
48.02	43.18	8.79
47.62	43.73	8.64
46.49	45.34	8.17
45.65	46.52	7.83
45.64	46.57	7.79
58.99	25.24	15.77

Lower layer contains per 100 g of solution

G. H ₂ O	G acetone	G KCl
28.14	69.42	2.44
29.45	67.83	2.72
30.96	65.97	3.07

(Schroeder, J. pr. 1908, (2) 77. 268.)

Insol. in anhydrous pyridine and in 97% pyridine+Aq.

Very sl. sol. in 95% pyridine+Aq.

Sl. sol. in 93% pyridine+Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

100 ccm. of a sat. solution of KCl in furfural at 25° contain 0.085 pts. by wt. KCl. (Walden, Z. phys. Ch. 1906, 55. 713.)

100 g H₂O dissolve 246.5 g. sugar+44.8 g. KCl at 31.25°; 100 g. sat. solution contain 62.28 g. sugar+11.33 g. KCl (Köhler, Z. Ver. Zuckerind, 1897, 47. 447.)

Solubility in glucose+Aq at 25°.

Concentration of glucose in 9. mol per 1000 g H ₂ O	Solubility in 1000 g H ₂ O	Molecular solubility
	362 70	4 86
0 25	366 10	4 91
0 50	369 85	4 96
1 0	376 25	5 04
3 0	402 25	5 39

(Armstrong and Eyre, Proc. Roy. Soc. 1910, 84. 127.)

Potassium manganic chloride, K₂MnCl₅.

Sol. in H₂O, less sol. in NH₄Cl+Aq; unstable. (Neuman, M. 1894, 15. 492.)

Potassium rhodium chloride.

See Chlororhodite, potassium.

Potassium ruthenium sesquichloride.

See Chlororuthenite, potassium.

Potassium ruthenium tetrachloride.

See Chlororuthenate, potassium.

Potassium tellurium chloride.

See Chlorotellurate, potassium.

Potassium thallic chloride, 3KCl, TiCl₃+2H₂O.

Sol. in H₂O. Not decomp. by boiling H₂O. (Rammelsberg.)

Potassium thorium chloride, KCl, 2ThCl₄+18H₂O.

Deliquescent; sol. in H₂O and alcohol. (Berzelius.)

Potassium tin (stannous) chloride (Potassium chlorostannite), KCl, SnCl₂+H₂O.

Decomp. by H₂O; sol. in hot HCl or KCl+Aq. (Remsen and Richardson, Am. Ch. J. 14. 90.)

2KCl, SnCl₂+H₂O. Partially decomp. by dissolving in H₂O. (Rammelsberg, Pogg. 94. 507.)

+2H₂O. Very sol. in hot, and but slightly in cold HCl+Aq or KCl+Aq. (Remsen and Richardson.)

4KCl, SnCl₂+3H₂O. (Poggiale, C. R. 20. 1182.)

Does not exist (Remsen and Richardson.)

Potassium tin (stannic) chloride, 2KCl, SnCl₄.

See Chlorostannate, potassium.

Potassium tungsten chloride, K₂(OH)WCl₅.

Decomp. by moisture Insol. in organic solvents. (Olsson, B. 1913, 46. 581.)

K₃W₂Cl₅. Sol. in H₂O. Nearly insol. in most organic solvents. (Olsson.)

Potassium uranium chloride, UCl₄, 2KCl

Very hygroscopic; sol. in H₂O with decomp.; sol. in acetic acid Decomp. by alcohol. Nearly insol. in ether. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Potassium uranyl chloride, K₂(UO₂)Cl₄.

Very sol in H₂O. Moderately sol. in dil. alcohol. (Aloy, Dissert. 1901.)

+2H₂O. Very sol. in H₂O and alcohol. (Arfvedson.)

Sol in H₂O, with decomp. and separation of KCl, unless H₂O is acidulated with HCl. (Peligot, A. ch. (3) 5. 37.)

Solubility in H₂O at t°.

t°	100 pts. of the solution contain			Solid phase
	Pts UO ₂	Pts. Cl	Pts. K

78.5	35.26	18.24	9.95	"

(Rimbach, B. 1904, 37. 463.)

Potassium uranyl chloride is decomp. by H_2O at temp. below 60° . Above 60° , it is sol. in H_2O without decomp.

Potassium vanadium chloride, $\text{VK}_2\text{Cl}_5 + \text{H}_2\text{O}$.

Difficultly sol. in H_2O and alcohol. (Stahler, B. 1904, 37. 4412.)

Potassium yttrium chloride.

Sol. in H_2O with evolution of heat.

Potassium zinc chloride, 2KCl , ZnCl_2 .

Very deliquescent. Sol. in 1 pt. cold, and in all proportions of hot H_2O . (Pierre, A. ch (3) 16. 248.)

$+ \text{H}_2\text{O}$. Not very deliquescent. Can be recryst. (Ephraim, Z. anorg. 1908, 59. 58)

KCl , $\text{ZnCl}_2 + 2\text{H}_2\text{O}$. Not deliquescent. Cannot be recryst. without decomp. (Ephraim.)

Potassium chloriodide, KCl_2I .

Very unstable. (Wells and Wheeler, Sill. Am. J. 143. 475.)

KCl_2I . Sol. in H_2O with decomp. Ether dissolves out ICl_3 . (Filhol, J. Pharm 25. 433.)

Potassium fluoride, KF or K_2F_2 .

Very deliquescent. Very sol. in H_2O . Sl. sol. in $\text{HF} + \text{Aq}$. Easily sol. in conc $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in alcohol. (Berzelius.) Sol. in dilute alcohol. (Stromeyer, A. 100. 83.)

Sp. gr. of aqueous solution of KF at 18° containing—

	5	10	20	30	40% KF .
	1.041	1.084	1.117	1.272	1.378

(Kohlrausch, W. Ann. 1879. 1.)

Solubility in $\text{HF} + \text{Aq}$ at 21° .

(G. per 100 g. H_2O .)

HF	KF	HF	KF
0.0	96.3	13.95	31.4
1.21	72.0	15.98	33.4
1.61	61.0	17.69	35.6
3.73	40.4	20.68	38.4
4.03	32.5	28.60	46.9
6.05	30.4	41.98	61.8
9.25	29.9	53.71	74.8
11.36	29.6	74.20	105.0
12.50	30.5	119.20	169.5

(Ditte, C. R. 1896, 123. 1282.)

Easily sol. in liquid HF . (Franklin, Z. anorg. 1905, 46. 2.)

Very sl. sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

KF will "salt out" acetone from aqueous solution. The table shows the composition of the solutions at the points at which inhomogeneous solutions of KF , acetone and H_2O just become homogeneous at 20° .

100 g. of the solution contain:

G KF	G H_2O	G. acetone	G KF	G H_2O	G. acetone
5.75	58.91	35.34	0.61	31.95	67.44
5.00	56.28	38.72	0.50	29.92	69.58
3.84	52.25	43.91	28.42	69.76	1.82
3.06	49.05	47.89	25.74	71.24	3.02
2.61	46.84	50.55	22.35	72.99	4.66
2.22	44.79	52.99	20.28	73.80	5.90
14.95	73.66	11.39	18.71	74.10	7.19
11.46	70.77	17.77	16.31	73.97	9.72
9.17	67.30	23.53	12.40	72.01	15.59
7.72	64.01	28.27	33.86	65.73	0.397
7.07	62.03	30.90	29.97	68.54	1.50
6.43	60.50	33.07	22.05	73.41	4.54
1.38	40.55	58.06	17.82	74.01	8.16
0.979	36.42	62.60	14.34	73.29	12.37
0.693	32.69	66.61	44.24	55.52	0.240
0.57	31.50	67.93	33.34	65.66	1.00
0.89	35.74	63.36	29.86	68.54	1.60
0.75	33.84	65.41	24.38	72.16	3.45

At the first quadruple point where the hydrate, acetone, water and vapor are in equilibrium the upper layer contains 98% acetone, while the lower layer contains in 100 g., 46.3 g. KF . A sat. solution of KF will thus dehydrate acetone to the extent of 98%.

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, 36. 1115.)

Similar data are given for KF in ethyl and propyl alcohol by Frankforter and Frary. (J. phys. Ch. 1913, 17. 402.)

$+2\text{H}_2\text{O}$. Very deliquescent. (Guntz, A. ch. (6) 3. 20.)

Sat. aq. solution at 18° contains 45.3% KF (de Forcrand, C. R. 1911, 152. 1210.)

Sp. gr. of solution sat. at $18^\circ = 1.502$, and contains 48% KF . (Mylus and Funk, B. 1897, 30. 1718.)

$+4\text{H}_2\text{O}$. Not deliquescent. (de Forcrand, C. R. 1911, 152. 1075.)

Sat. aq. solution at 18° contains 35.96% KF . (de Forcrand, C. R. 1911, 152. 1210.)

Potassium hydrogen fluoride, KF , $\text{HF} = \text{KHF}_2$.

Easily sol. in H_2O . Sl. sol. in H_2O containing HF . Easily sol. in conc. $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in dil. alcohol, but insol. in absolute alcohol.

KF , 2HF . Deliquescent. Decomp. by H_2O with absorption of heat. (Moissan, C. R. 106. 547.)

KF , 3HF . As above. (Moissan.)

Potassium manganic fluoride.

See Fluomanganate, potassium.

Potassium scandium fluoride, K_3ScF_6 .

Sol in H_2O Decomp. by acids. (R. J. Meyer, Z anorg 1914, 86. 275)

Potassium silicon fluoride.

See Fluosilicate, potassium.

Potassium tantalum fluoride.

See Fluotantalate, potassium.

Potassium tellurium fluoride, KF, TeF_4 .

Decomp by H_2O (Högbom, Bull. Soc. (2) 35. 60)

Potassium thallic fluoride, $2TlF_3, KF$.

Decomp. by moisture Insol. in HF . (Gewecke, A. 1909, 366. 226.)

Potassium thorium fluoride, $2KF, ThF_4 + 4H_2O$.

Nearly insol. in H_2O . Sol. in $HF + Aq$. KF, ThF_4 Precipitate (Chydenius)

Potassium tin (stannous) fluoride, $2KF, 3SnF_2 + H_2O$

Sol. in H_2O . (Wagner, B. 19. 896.)

Potassium tin (stannic) fluoride.

See Fluostannate, potassium.

Potassium titanium tetrafluoride.

See Fluotitanate, potassium.

Potassium titanium sesquifluoride, $4KF, Ti_2F_6$.

Precipitate. Very sl. sol. in H_2O . Sol. in dil. acids. (Piccini, C. R. 97. 1064.)

See also Fluosessquitanate, potassium.

Potassium titanyl fluoride.

See Fluoxypertitanate, potassium.

Potassium tungstyl fluoride.

See Fluoxytungstate, potassium.

Potassium uranium fluoride, KF, UF_4 .

Insol. in H_2O and dil. acids. Difficultly sol. in conc. $HCl + Aq$. Sol. in conc. H_2SO_4 . (Bolton, J. B. 1866. 212.)

Potassium uranyl fluoride.

See Fluoxyuranate, potassium.

Potassium vanadium sesquifluoride.

See Fluovanadate, potassium.

Potassium vanadium tetrafluoride (?).

Easily sol. in H_2O . Insol. in alcohol. (Berzelius.)

Potassium zinc fluoride, KF, ZnF_2 .

Sol in H_2O . (R. Wagner.)

$2KF, ZnF_2$ Sol. in H_2O (Berzelius.)

Potassium zirconium fluoride.

See Fluozirconate, potassium.

Potassium fluoride hydrogen peroxide, KF, H_2O_2 .

Not hygroscopic. Very sol. in H_2O . Is not decomp. at 70° and only partially so at 110° (Tanatar, Z anorg 1901, 28. 255)

Potassium fluoride vanadic acid.

See Fluoxylvanadate, potassium.

Potassium hydride, KH .

Decomp. by H_2O . Insol. in oil of turpentine, benzene, ether and CS_2 . (Moissan, C R 1902, 134. 18.)

Potassium hydrosulphide, KSH .

Very deliquescent, and sol in H_2O with gradual decomp. Crystallizes with $\frac{1}{2}H_2O$. Sol. in alcohol.

Potassium hydroxide, KOH .

Very deliquescent, and sol in H_2O with evolution of much heat. 100 pts. KOH , exposed over H_2O at $16-20^\circ$ take up 460 pts. H_2O in 56 days (Mulder)

1 pt. KOH dissolves in 0.5 pt. cold H_2O (Lowitz); in 0.47 pt. cold H_2O (Bineau, C R 41. 509); in 1 pt. H_2O . (Abl)

Solubility of KOH in H_2O at t°

t°	G KOH per 100 g.		Solid phase
	H_2O	solution	
—22	3 7	3.6	Ice

100	178	64 03	"
125	213	68.06	"
143	311 7	75 73	"

(Pickering, Chem. Soc. 1893, 63. 908.)

100 pts. KOH are sol. in 93.4 pts. H_2O at 15° or 100 pts. H_2O dissolve 107 pts. KOH at 15° . Sp. gr. = 1.5355 at 15° .

All higher values found in solubility tables are incorrect. (Ferchland, Z. anorg. 1902, 30. 133.)

100 g. sat. aq. solution at 15° contain 50.48 g. KOH. (de Forcrand, C. R. 1909, 149. 719.)

Sat. KOH+Aq boils at 157 7° (Griffiths); 340°. (Gerlach).

B-pt. of KOH+Aq containing pts. KOH to 100 pts. H₂O.

36	1.35485	18	1.16875	0	0.99918
35	1.34396	17	1.15898	.	..

(Pickering, Phil. Mag. 1894, (5) **37**. 375.)

Sp. gr. of N solution at 18°/4° = 1.0481. (Loomis, W. Ann. 1896, **60**. 550.)

Sp. gr. of KOH + Aq.

% KOH	6.87	12.10
Sp. gr. 20°/20°	1.0601	1.1025

(Le Blanc and Rohland, Z. phys. Ch. 1896, **19**. 272.)

KOH + Aq containing equal pts. of KOH and H₂O freezes at -54°. (Guyton-Morveau, Gm.-K. **2**, **1**. 18.)

KOH is completely miscible with NaOH and with RbOH in both the liquid and the solid states. (Hevesy, Z. phys. Ch. 1910, **73**. 667.)

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, **20**. 828.)

Abundantly sol. in strong alcohol or wood-spirit.

See below under KOH + 2H₂O.

Readily sol. in glycerine.

Sol. in not less than 25 pts. of ether. (Boullay.) Sol. in much more than 25 pts. of ether. (Connell.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790), ethyl acetate. (Naumann, B. 1904, **37**. 3601.)

Insol. in acetone. Readily sol. in fusel oil.

Insol. in acetone and in methylal (Eidmann, C. C. **1899**, II. 1014.)

Sol. in aqueous solution of mannite (Favre, A. ch. (3) **11**. 76.)

The composition of the hydrates formed by KOH at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by KOH and of the conductivity and sp. gr. of KOH + Aq. (Jones, Am. Ch. J. 1905, **34**. 337.)

+H₂O. Very deliquescent, and sol. in H₂O with absorption of much heat.

100 g. sat. solution in H₂O at 30° contain 55.75 g. anhyd. KOH. (de Waal, Dissert. **1910**.)

Solubility of KOH + 2H₂O in alcohol + Aq at 30°.

% KOH	% alcohol	% H ₂ O
55.75	0	44.25
54.81	0.43	44.76

27.20	73.01	negative
26.25	81.98	"

*Separates into two layers.

(de Waal, Dissert, **1910**)

+4H₂O.

Potassium hydrogen titanium diimide,
Ti(NH)NK.

Decomp. by H₂O and alcohol Insol in all ord indifferent organic solvents. (Ruff, B. 1912, 45. 1371)

Potassium iodide, KI

Deliquescent only in very moist air Very sol. in H₂O with absorption of heat.

The temp. of H₂O can be lowered 24° by dissolving KI (Baup)
140 pts KI dissolved in 100 pts H₂O at 10.8° lower the temp. 22.5°. (Rudorff, Pogg. 136. 276.)

100 pts. H₂O dissolve 126.6 pts. KI at 0° (Kremers); 127.8 pts. KI at 0° (Mulder); 127.9 pts KI at 0°. (Gerardin)

By boiling, 100 pts. H₂O dissolve 221 pts. KI at 120° (Baup); 222.2 pts. KI at 120° (Gay-Lussac); 222.6 pts. KI at 118.4° (Mulder); 223.58 pts. KI at 117° (Legrand); 223.6 pts. KI at 117°. (Gerardin.)

Between these temps. the solubility increases proportional to temp.

Sol in 0.735 pt H₂O at 12.5°, in 0.709 pt. H₂O at 16°, in 0.7 pt H₂O at 18°, in 0.45 pt H₂O at 120°. (Graham-Otto)

100 pts. KI + Aq sat at 15-16° contain 58.07 pts KI (v Hauer, J. pr 98, 137)

100 pts H₂O at 12.5° dissolve 136 pts., at 16°, 141 pts. KI. (Baup.)

100 pts. H₂O at 18° dissolve 143 pts. KI, at 120°, 271 pts (Gay-Lussac)

Sol in 0.79 pt H₂O at 0°, in 0.70 pt. H₂O at 20°, in 0.63 pt H₂O at 48°, in 0.57 pt. H₂O at 60°, in 0.53 pt. H₂O at 80°, in 0.51 pt H₂O at 100°. (Kremers, Pogg. 97. 15)

Sol. in 0.71 pt. H₂O at 15°. (Eder, Dingl. 221. 89.)

Solubility of KI in 100 pts. H₂O at t°.

(Foote and Chalker, Am. Ch. J. 1908, 39. 564.)

See also under Iodine.

KI+Aq sat. at 14.5° containing 139 8 pts. KI to 100 pts. H₂O dissolves 1 0 pt. K₂SO₄ with separation of 2 2 pts. KI, so that solution contains 137.6 pts. KI and 1.0 pt. K₂SO₄ to 100 pts. H₂O (Mulder, Rotterdam, 1864.)

100 pts. H₂O dissolve 86.3 pts. KI and 2.1 pts. Na₂SO₄ at 14.5°. (Mulder, J. B. 1866. 67.)

Sol in AsCl₃, SnCl₄ and POCl₃. (Walden, Z. anorg 1900, 25. 214.)

Attacked by dry liquid NO₂ with liberation of I₂. (Frankland, Chem Soc. 1901, 79. 1361.)

Sol in liquid SO₂. (Walden, B. 1899, 32. 2864.)

Solubility in SO₂ decreases with rise of temp. (Walden, Z. phys. Ch. 1903, 42. 456) Insol. in liquid CO₂. (Büchner, Z. phys. Ch. 1906, 54. 674)

Very easily sol in liquid NH₃. (Franklin, Am Ch. J. 1898, 20. 829.)

Hydrazine dissolves 135.7 pts. KI at 12.5-13°. (de Bruyn, R. t. c. 1899, 18. 297.)

100 pts alcohol of 0.85 sp gr dissolve 18 pts KI at 12 5°. 100 pts absolute alcohol dissolve 2 5 pts. KI at 13 5° Much more sol in hot alcohol (Baup.)

100 pts. alcohol of D sp. gr at 0° dissolve at 18°—

D 0.9904 0.9851 0.9726 0.9665 0.9528

130 5 119 4 100 1 89.9 76.9 pts. KI,

D 0.9390 0.9088 0.8464 0.8322

66.4 48.2 11 4 6.2 pts. KI.

That is, aqueous alcohol dissolves approximately the same amount of KI that the water present in the alcohol would dissolve, and it is therefore probable that KI is insol in strictly absolute alcohol (Gerardin.)

Solubility in 100 pts. alcohol of 0.9496 sp. gr. at:

8° 13° 25° 46° 55° 62°
67.4 69.2 75.1 84.7 87 5 90 2 pts. KI.
(Gerardin, A. ch. (4) 5. 155.)

Sol. in 68 3 pts. absolute alcohol (Eder, Dingl. 221. 89); in 370 pts. ether (sp. gr. 0.729), (Eder, l. c.); in 120 pts. alcohol-ether (1 : 1), (Eder, l. c.)

Sol. in 10-12 pts. 90% alcohol, and 40 pts. absolute alcohol. (Hager, Comm. 1883.)

100 pts. absolute methyl alcohol dissolve 16.5 pts. at 20.5°, 100 pts. absolute ethyl alcohol dissolve 1.75 pts at 20 5°. (de Bruyn, Z. phys. Ch. 10. 783.)

Solubility of KI in methyl alcohol+Aq at 25°.

P = % by wt. of alcohol in alcohol+Aq.

S = Sp. gr. of alcohol+Aq sat. with KI.

L = millimols KI in 100 ccm of the solution.

100 g. propyl alcohol dissolve 0.43 g. KI at 25°.

100 g. isoamyl alcohol dissolve 0.09 g. KI at 25°.

(Turner and Bissett, Chem. Soc. 1913, **103**, 1909.)0.455 g. is sol. in 100 g. propyl alcohol. (Schlamp, Z. phys. Ch. 1894, **14**, 276.)Alcoholic solution can be mixed with $\frac{1}{2}$ vol. ether without pptn.100 g. 95% formic acid dissolve 38.2 g. KI at 18.5°. (Aschan, Chem. Ztg. 1913, **37**, 1113.)

Solubility in organic solvents at t°.

C = pts. by wt. of KI in 100 ccm. of the sat solution

L = no. of litres which at the saturation temp. hold in solution 1 mol. KI.

S = sp. gr. of the solution at t°, referred to H₂O at t°.

p = pts. by wt of KI in 100 g. of the solution.

(Walden, Z. phys. Ch. 1906, 55. 715.)

Insol. in CS₂. (Arcetowski, Z. anorg. 1894, 6. 257.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3789)

Sol. in ethyl acetate. (Casaseca, C. R. 30. 821.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in ethylamine. (Shinn, J. phys. Chem. 1907, 11. 538.)

100 pts. acetone dissolve 2.930 pts. KI at 25°. (Krug and McElroy, J. Anal. Ch. 6. 184.)

Sol. in acetone, insol. in methylal. (Eidmann, C. C. 1899. 11. 1014.)

3.08 pts. sol. in 100 pts. acetone at -2 5°.

2.38 " " " 100 " " " +22°.

1 21 " " " 100 " " " 56°.

0.26 " " " 100 " pyridine " 10°.

0 11 " " " 100 " " " 119°.

(Laszczynski, B. 1894, 27. 2287.)

Freely sol. in glycerine Insol. in acetic acid (Berthemet.)

Sol. in 3 pts glycerine; insol in olive oil. (Cap and Garot.)

100 g. glycerol dissolve 40 g. KI at 15.5°. (Ossendowski, Pharm. J. 1907, 79. 575.)

Potassium triiodide, KI₃.

Very deliquescent; very sol. in H₂O and alcohol (Johnson, Chem. Soc. 1877, 1. 249)

Solution of I in KI contains this salt (see KI) Decomp. by heat or shaking with CS₂, ether, chloroform. Sol. in alcohol, from which CS₂ does not remove I. (Jørgensen, J. pr (2) 2. 247.)

Potassium periodide.

Solubility determinations show that the compds. KI₃ and KI₇ are the only periodides of potassium which form solids at 25°.

See under KI+I. (Foote and Chalker, Am. Ch. J. 1908, 39. 566.)

KI₇ See above.

Potassium mercuric iodide ammonia,

K₂HgI₄, 2NH₃.

(Peters, Z. anorg. 1912, 77. 188)

Potassium silver iodide, KI, AgI.

Sol. in KI+Aq Sol. in hot alcohol. (Boullay, A. ch. 34. 377.)

2KI, AgI. Sol. in KI+Aq. Decomp. by H₂O (Boullay.)

Hygroscopic. (Hellwig, Z. anorg. 1900, 25. 180)

3KI, AgI. Decomp. by H₂O. (Ditte, C. R. 93, 415.)

KI, 2AgI. Sol. in methylethylketone. (Marsh, Chem. Soc. 1913, 103. 783.)

Potassium silver polyiodide, AgK₃I₁₂, 3KI+5H₂O.

Very deliquescent. (Johnson, Chem. Soc. 33. 183.)

Potassium tellurium iodide.

See Iodotellurate, potassium.

Potassium thallic iodide, KI, TI₃.

Decomp. by H₂O Can be crystallized from alcohol. (Willm.)

3KI, 2TI₃+3H₂O. Partially decomp. by H₂O. (Rammelsberg.)

Potassium (tin) stannous iodide, KI, SnI₂+1½H₂O.

When treated with a small quantity of H₂O, KI dissolves out; but when more H₂O is added, the substance is completely dissolved. More sol. in warm than cold alcohol. (Boullay.)

- Potassium zinc iodide**, KI, ZnI_2
Very deliquescent. (Rammelsberg, Pogg 43. 665.)
 $K_2ZnI_4 + 2H_2O$. Hydroscoptic. (Ephraim, Z. anorg. 1910, 67. 382.)
- Potassium iodide sulphur dioxide**, KI, SO_2
(Péchar, C. R. 1900, 130. 1188.)
 $KI, 4SO_2$. (Walden, Z. phys. Ch. 1903, 42. 439.)
 $KI, 14SO_2$. (Walden.)
- Potassium nitride**, K_2N .
Decomp. violently by H_2O (H. Davy.)
- Potassium ruthenium dihydronitrosobromide**,
 $Ru_2H_2NOBr_3, 2HBr, 3KBr$.
Ppt. (Brizard, A. ch. 1900, (7) 21. 362.)
- Potassium ruthenium nitrosochloride**,
 $Ru_2H_2NOCl_3, 3KCl, 2HCl$.
Sl. sol in H_2O . (Brizard, C. R. 1899, 129. 216.)
- Potassium suboxide**.
Decomposes H_2O .
Does not exist. (Lupton, Chem. Soc. 1876, 2. 565)
- Potassium oxide**, K_2O .
Very sol. in H_2O with much heat.
See Potassium hydroxide.
- Potassium dioxide**, K_2O_2 .
Deliquescent. Sol. in H_2O .
Forms compound $K_2O_2, 2H_2O_2$. (Schöne, A. 193. 241.)
- Potassium peroxide**, K_2O_4 .
Deliquescent. Very sol. with decomp. in H_2O .
- Potassium silicon oxyfluoride**, $SiF_2(OK)_2$ and $SiO(F)OK$.
(Schiff and Bechi, A. Suppl. 4. 33.)
- Potassium tantalum oxyfluoride**, $K_4Ta_4O_5F_{14}$.
Insol. in boiling water. Easily sol. in $HF + Aq$. (Marignac, A. ch. (4) 9. 268.)
- Potassium phosphide**, KP_3 .
Decomp. by H_2O . (Joannis, C. C. 1894, II. 834.)
 KP_3 . Easily decomp. by H_2O . (Hugot, C. R. 1895, 121. 208.)
- Potassium hydrogen phosphide**, PH_2K .
Decomp. by H_2O . (Joannis, C. R. 1894, 119. 558.)
- Potassium phosphoselenide**, $KSeP = K_2Se, P_2Se$.
Sol. in cold H_2O with rapid decomp. Sol. in alcohol with slight decomp. (Hahn, J. pr. 93. 430.)
- Potassium phosphotriselenide**, $2K_2Se, P_2Se_3$.
Deliquescent. Decomp. violently with H_2O . Sol. in alcohol or ether, or in a mixture of the two, with slight decomp., but decomp. gradually on the air. (Hahn, J. pr. 93. 430.)
- Potassium phosphopentaseelenide**, $K_4P_2Se_7 = 2K_2Se, P_2Se_5$.
Deliquescent; immediately decomp. by H_2O , alcohol, or ether. (Hahn.)
- Potassium phosphosulphide**, $4K_2S_2, P_2S_3$.
Deliquescent. Sol. in H_2O with decomp.
- Potassium selenide**, K_2Se .
Sol. in H_2O with subsequent decomp. on the air.
Insol. in liquid NH_3 ; sol. in air free H_2O to a colorless liquid. (Hugot, C. R. 1899, 129. 299.)
 $+2H_2O$. Sol. in H_2O with decomp. (Clever, Z. anorg. 1895, 10. 143.)
 $+9, 14$, or $19H_2O$. (Fabre, C. R. 102. 613.)
- Potassium tetraselenide**, K_2Se_4 .
Easily sol. in H_2O . Decomp. on standing. Sol. in liquid NH_3 . (Hugot, C. R. 1899, 129. 299.)
- Potassium monosulphide**, K_2S .
Deliquescent. Sol. in H_2O and alcohol. H_2O solution decomp. on air.
Sol. in 10 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 81.)
Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)
Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)
Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)
 $+5H_2O$. (Schöne, Pogg. 131. 380.)
All potassium sulphides are sol. in glycerine; insol. in ether and ethyl acetate.
- Potassium disulphide**, K_2S_2 .
Sol. in H_2O and alcohol, with gradual decomp.
- Potassium trisulphide**, K_2S_3 .
Sol. in H_2O and alcohol, with gradual decomp. on the air.
- Potassium tetrasulphide**, K_2S_4 .
Sol. in H_2O and alcohol.
 $+2H_2O$. Sol. in H_2O . Sl. sol. in alcohol.
 $+8H_2O$. Sol. in H_2O . Alcohol takes out water. (Schöne.)
- Potassium pentasulphide**, K_2S_5 .
Sol. in H_2O and alcohol.

Potassium palladium sulphide.*See Sulphopalladate, potassium.***Potassium platinum sulphide.***See Sulphoplatinate, potassium.***Potassium silver sulphide,**Decomp. by H_2O . (Ditte, C. R. 1895, 120. 91.)**Potassium rhodium sulphide, $3\text{K}_2\text{S}, \text{Rh}_2\text{S}_3$.**Decomp. by H_2O . (Leidié.)**Potassium tellurium sulphide.***See Sulphotellurate, potassium.***Potassium thallium sulphide, $\text{K}_2\text{S}, \text{Tl}_2\text{S}_3$.**Not decomposed by H_2O , or hot NH_4OH , or $\text{KOH} + \text{Aq}$. Decomp. by HCl or moderately conc. $\text{H}_2\text{SO}_4 + \text{Aq}$. Hot $\text{HNO}_3 + \text{Aq}$ decomp. with separation of S. (Schneider, J. pr. 110. 168.)**Potassium tin (stannic) sulphide.***See Sulphostannate, potassium.***Potassium zinc sulphide, $\text{K}_2\text{S}, 3\text{ZnS}$.**Not attacked by H_2O , but easily decomp. by the most dil. acids. (Schneider, J. pr. (2) 8. 29.)**Potassium telluride, K_2Te .**Sol. in H_2O . (Demarçay, Bull. Soc. (2) 40. 99.)Sol. in H_2O and liquid NH_3 . (Hugot, C. R. 1899, 129. 388.)**Praseocobaltic chloride,**Easily sol. in H_2O .Dil. $\text{HCl} + \text{Aq}$ dissolves traces; conc. $\text{HCl} + \text{Aq}$ dissolves more. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. Sol. in conc. H_2SO_4 without decomp. Sl. sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Rose.)**— mercuric chloride, $\text{Co}(\text{NH}_3)_4\text{Cl}_3, \text{HgCl}_2$.**Sl. sol. in cold H_2O ; insol. in $\text{HgCl}_2 + \text{Aq}$. (Vortmann, B. 15. 1892.)**— chloride dichromate,**Scarcely sol. in cold, easily sol. in warm H_2O . (Vortmann, B. 15. 1897.)**Praseocobaltic chloride nitrate,**Much less sol. in H_2O than the chloride. Precipitated from aqueous solution by dil. $\text{HNO}_3 + \text{Aq}$. (Vortmann, B. 15. 1896.)**Praseodymicotungstic acid.****Ammonium praseodymicotungstate,**
 $2(\text{NH}_4)_2\text{O}, \text{Pr}_2\text{O}_3, 16\text{WO}_3 + 16\text{H}_2\text{O}.$ Very sl. sol. in H_2O . Decomp. by acids and alkalis. (E. F. Smith, J. Am. Chem. Soc. 1904, 26. 1478.)**Barium praseodymicotungstate, $4\text{BaO}, \text{Pr}_2\text{O}_3,$
 $16\text{WO}_3 + 7\text{H}_2\text{O}.$** Ppt. Insol. in H_2O
 $6\text{BaO}, \text{Pr}_2\text{O}_3, 16\text{WO}_3 + 9\text{H}_2\text{O}.$ Ppt. (E. F. Smith.)**Silver praseodymicotungstate, $4\text{Ag}_2\text{O}, \text{Pr}_2\text{O}_3,$
 $16\text{WO}_3 + 8\text{H}_2\text{O}.$** Insol. in H_2O . (E. F. Smith.)**Praseodymium, Pr****Praseodymium bromide, $\text{PrBr}_3 + 6\text{H}_2\text{O}.$** Very sol. in H_2O ; sol. in HBr . (von Schule, Z. anorg. 1898, 18. 353.)**Praseodymium carbide, PrC_2 .**Decomp. by H_2O ; insol. in conc. HNO_3 , decomp. by dil. HNO_3 . (Moissan, C. R. 1900, 131. 597.)**Praseodymium chloride, PrCl_3 .**Very sol. in H_2O . Insol. in PCl_3 or SnCl_4 . Sol. in alcohol. Insol. in ether and most organic solvents. (Matignon, C. R. 1902, 134. 427.)2.14 g. PrCl_3 dissolve in 100 g. pyridine at 15° . (Matignon, Int. Cong. App. Chem. 1909, 2. 53.) $+ 7\text{H}_2\text{O}.$ 100 g. H_2O dissolve 334.2 g. $\text{PrCl}_3 + 7\text{H}_2\text{O}$ or 103.9 g. of the anhydrous salt at 13° . The aqueous solution sat. at 14° has a sp. gr. $16^\circ/16^\circ = 1.687$. At 100° , the solubility in H_2O is unlimited. (Matignon, A. ch. 1906, (8) 8. 388.)Sol. in conc. HCl (von Schule, Z. anorg. 1898, 18. 352.)100 pts. of a solution of the salt in $\text{HCl} + \text{Aq}$ contain at 13° 41.05 pts. of anhydrous salt and 7.25 pts. HCl . Sp. gr. of this solution at $16^\circ = 1.574$. (Matignon, A. ch. 1906, (8) 8. 388.)**Praseodymium hydride, PrH_3 (?).**

(Muthmann, A. 1904, 331. 59.)

Praseodymium hydroxide.

Sol. in citric acid. (Baskerville, J. Am. Chem. Soc. 1904, 26. 49.)

Praseodymium nitride, PrN .Decomp. in moist air with evolution of NH_3 . (Muthmann, A. 1904, 331. 59.)

Praseodymium oxide, Pr_2O_3

Easily sol in H_2O . (v. Welsbach, M. 6. 477.)

Decomp. by heating in the air. (Scheele, Z. anorg. 1898, 17. 322)

Praseodymium monoperoxide, $\text{Pr}(\text{OH})_2\text{H}_2\text{O}$

(Melikoff, Chem. Soc. 1902, 82. (2) 140)

Praseodymium superoxide, $\text{Pr}(\text{OH})_2(\text{OOH})$.

Ppt. (Melikoff, C. C. 1902, I. 172)

Praseodymium trisuperoxide, $\text{Pr}(\text{OOH})_3$.

Ppt. (Melikoff)

Praseodymium peroxide, Pr_4O_7 .

Sol in acids with evolution of O. (v. Welsbach.)

Praseodymium oxysulphide, Pr_2SO_2 .

(Biltz, Z. anorg. 1911, 71. 436.)

Praseodymium disulphide, PrS_2 .

Decomp. by heat. (Biltz, Z. anorg. 1911, 71. 437.)

Purpureocobaltic salts.

For other purpureocobaltic salts, see—

Chloropurpureocobaltic salts.

Bromopurpureocobaltic salts.

Nitratopurpureocobaltic salts.

Sulphatopurpureocobaltic salts.

Purpureocobaltic cobalticyanide,

Insol. in H_2O .

— ferricyanide, $\text{Co}(\text{NH}_3)_5\text{Fe}(\text{CN})_6$.

Insol. in cold H_2O . Probably belongs to roseo series.

— mercuric hydroxychloride,

Ppt. (Vortmann and Morgulis, B. 22. 2645.)

**— mercuriodide, basic,**

Ppt. Sl. sol. in acids. Sol. in KI + Aq. (Vortmann and Borsbach, B. 23. 2804.)

— molybdate, $\text{Co}_2\text{O}_3(\text{NH}_3)_{10}, 7\text{MoO}_3 + 3\text{H}_2\text{O}$ (?)

Insol. in H_2O or dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ (Carnot, C. R. 109. 109.)

— sulphate.

See Sulphatopurpureocobaltic salts.

— tungstate, $\text{Co}(\text{NH}_3)_5\text{O}(\text{WO}_4)$.

Scarcely sol. in cold or hot H_2O . (Gibbs.)

in H_2O , or dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$, or $\text{NH}_4\text{OH} + \text{Aq.}$ (Carnot, C. R. 109. 147.)

Purpureocobaltic vanadate, $\text{Co}_2\text{O}_3(\text{NH}_3)_{10}, 5\text{V}_2\text{O}_5 + 9\text{H}_2\text{O}$ (?)

Ppt. Insol. in H_2O . (Carnot, C. R. 109. 147.)

Purpureocobaltic octamine salts.

See Octamine cobaltic purpureo salts.

Pyrosulphuric acid, $\text{H}_2\text{S}_2\text{O}_7$.

See Disulphuric acid.

Radium, Ra**Radium A.**

More sol than Radium B and C in all solvents; sol. even in organic solvents, especially CS_2 . (Ramstedt, Le Radium, 1913, 10. 159)

Radium B.

More quickly sol. than Radium C in H_2O and acids; less quickly sol. in alkaline solutions; very sl. sol. in organic solvents. (Ramstedt, Le Radium, 1913, 10. 159.)

Radium C.

Sol. in common acids, less so in alkaline solutions and in H_2O , only very sl. sol. in organic solvents. (Ramstedt, Le Radium, 1913, 10. 159; Chem. Soc 1913, 104. (2) 659.)

Radium bromide.

Less sol. in H_2O than corresponding Ba comp. (Curie, Dissert. 1903.)

Radium chloride.

Less sol. in H_2O than corresponding Ba comp. (Curie, Dissert. 1903.)

Radium emanation.

Coefficient of absorption for $\text{H}_2\text{O} = 0.245$ at 3° ; 0.23 at 20° ; 0.17 at 40° ; 0.135 at 60° ; 0.12 at 70° ; 0.12 at 80° . (Hofmann, Phys. Zeit. 1905, 6. 339.)

Solubility in H_2O at t° .

Coefficient of solubility = conc. of the emanation in the liquid: conc. of the emanation in the gas.

t°	Coefficient of solubility
0	0.506
4.3	0.424
5.7	0.398
10.0	0.340
14.0	0.303
17.6	0.280
20.0	0.245
26.8	0.206
31.6	0.193
39.1	0.160

Coefficient of solubility in sea-water of sp. gr. at $14^\circ = 1.022$ is 0.255.

(Boyle, Phil. Mag. 1911, (6) 22. 850.)

Solubility in H₂O.

Temp.	0°	5°	17.5°	35°	41°	51°
Sol.	0.526	0.283	0.183	0.161	0.138	
Temp.	60°	74°	79°	82°	91°	
Sol.	0.127	0.112	0.111	0.111	0.108	

(Kofer, M. 1913, 34. 389.)

Coefficient of solubility of radium emanation at 14° in various solvents.

Ethyl alcohol	7.34
Amyl alcohol	9.31
Toluene	13.7
Sea water	0.255
Mercury	0

(Boyle, Phil. Mag. 1911, (6) 22. 851.)

Coefficient of solubility emanation of radium in various solvents at t°.

Solvents	t = 18°	t = 0°	t = -18°
Ethyl acetate	7.35	9.41	13.6
Acetone	6.30	7.99	10.8
Absolute alcohol	6.17	8.28	11.4
Aniline	3.80	4.43	..
Benzene	12.82	16.54 at 3°	..
Chloroform	15.08	20.5	28.5
Cyclohexane	18.04 at 80°
Water	0.285	0.52	..
Ether	15.08	20.09	29.1
Glycerine	0.21
Hexane	16.56	23.4	35.2
Paraffine oil	9.2	12.6	..
Carbon-bisulphide	23.14	33.4	50.3
Toluene	13.24	18.4	27
Xylene	12.75

(Ramstedt, Le Radium, 1911, 8. 255.)

Solubility in various oils, etc., at t°.

Rape oil		Poppy seed oil		Oil of turpentine	
t°	Solubility	t°	Solubility	t°	Solubility
-3	51.2	-5	50.5	-21	42.5
10	35.3	16	30.2	0	23.1
20	26.1	40	19.1	18	16.6
100	6.2	65	12.4	50	7.5
200	3.3	90	8.4	65	4.08

Solubility in 10% dammar resin in oil of turpentine = 16.7 at 18°.

Solubility in 5% colophony in amyl alcohol = 11.2 at 20°.

Solubility in amyl alcohol = 10.6 at 18°.

Solubility in 20% colophony in amyl alcohol = 11.1 at 20°.

(Curie, Thesis. 1910.)

Coefficient of absorption for petroleum =

22.70 at -21°.
12.87 at +3°.
9.55 at 20°.
8.13 at 40°.
7.01 at 60°.

(Hofmann, Phys. Zeit. 1905, 6. 339.)

Rhodicyanhydric acid, H₃Rh(CN)₆.

Not known in the free state.

Potassium rhodicyanide, K₃Rh(CN)₆.

Sol. in H₂O. Easily decomp. by acids.
Very sol. in H₂O. (Leidié, C. R. 1900, 130. 89.)

Rhodium, Rh.

Insol. in all acids, including aqua regia.

Rhodium "sponge" is sol. in HNO₃ + Aq, and somewhat in HCl + Aq when exposed to air.

Rhodium ammonia compounds.

See—

Bromopurpureorhodium comps.,
BrRh(NH₃)₅X₂.

Chloropurpureorhodium comps.,
ClRh(NH₃)₅X₂.

Iodopurpureorhodium comps.,
IRh(NH₃)₅X₂.

Luteorhodium comps., Rh(NH₃)₅X₃.

Nitratopurpureorhodium comps.,

(NO₃)Rh(NH₃)₅X₂.

Roseorhodium comps., Rh(NH₃)₅(OH₂)X₃.

Xanthorhodium comps., (NO₂)Rh(NH₃)₅X₂.

Rhodium tribromide, RhBr₃ + 2H₂O.

Very sol. in H₂O. (Goloubkine, Chem. Soc. 1911, 100. (2) 45.)

Rhodium rubidium bromide.

See Bromorhodite, rubidium.

Rhodium sodium bromide.

See Bromorhodite, sodium.

Rhodium dichloride, RhCl₂ (?).

Insol. in H₂O, HCl, or HNO₃ + Aq. Not attacked by boiling KOH or K₂CO₃ + Aq. (Fellenberg.)

Decomp. by boiling KOH + Aq. (Berzelius.)

Does not exist. (Leidié, C. R. 106. 1076.)

Rhodium trichloride, RhCl₃.

Insol. in acids, even aqua regia. When boiled for a long time with KOH + Aq, it becomes sol. in HCl + Aq.

Insol. in H₂O and acids; sol. in alkalis + Aq. (Leidié, C. R. 1899, 129. 1251.)

+4H₂O. Very sl. deliquescent. Easily sol. in H₂O, HCl + Aq, or alcohol. Insol. in ether. Decomp. by H₂SO₄ only when boiling. (Claus, J. pr. 80. 282.)

No definite amount of crystal H_2O . (Leidié A. ch. (6) 17. 271.)

Rhodium chloride with MCl .

See Chlororhodite, M .

Rhodium dihydroxide, $\text{RhO}_2 \cdot 2\text{H}_2\text{O}$, or **Rhodium rhodate**, $\text{Rh}_2\text{O}_3 \cdot \text{Rh}_2\text{O}_3 + 6\text{H}_2\text{O}$.
Sol. in $\text{HCl} + \text{Aq}$.

Rhodium sesquihydroxide, $\text{Rh}_2\text{O}_3 \cdot \text{H}_2\text{O}$.

Only sl. sol. in conc. $\text{HCl} + \text{Aq}$. (Claus) $+ 2\text{H}_2\text{O}$. Easily sol. in HCl , H_2SO_4 , H_2SO_3 , HNO_3 , or $\text{HSCN} + \text{Aq}$; also when moist, in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in conc. $\text{KOH} + \text{Aq}$; very sl. sol. in H_3BO_3 , H_3PO_4 , $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, and $\text{HCN} + \text{Aq}$. Sol. in acid alkali oxalates $+ \text{Aq}$. (Leidié, C. R. 107. 234.)

Rhodium triiodide, RhI_3 .

Ppt. (Goloubkine, Chem. Soc. 1911, 100. (2) 45.)

Rhodium monoxide, RhO .

Not attacked by acids. (Deville and Debray, A. ch. (3) 61. 83.)

Rhodium sesquioxide, Rh_2O_3 .

Insol. in H_2O , boiling $\text{KOH} + \text{Aq}$, or any acid, even aqua regia. (Claus)

Rhodium dioxide, RhO_2 .

Insol. in all acids or alkalies.

Rhodium trioxide, RhO_3 .

"Rhodic acid." Known only in solution of "Potassium rhodate," which is very easily decomp. (Claus.)

Rhodium oxybromide, $\text{Rh}(\text{OH})_2\text{Br} + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Goloubkine, Chem. Soc. 1911, 100. (2) 45.)

Rhodium monosulphide, RhS .

Insol. in aqua regia.

Rhodium sesquisulphide, Rh_2S_3 .

Sol. in alkali sulphides $+ \text{Aq}$. (Debray, C. R. 97. 1332.)

Insol. in alkali sulphides $+ \text{Aq}$. Not attacked by HNO_3 , aqua regia, or $\text{Br}_2 + \text{Aq}$ (Leidié, Bull. Soc. (2) 50. 664.)

Rhodium sodium sulphide, $3\text{Na}_2\text{S} \cdot \text{Rh}_2\text{S}_3$.

Decomp by H_2O . (Leidié.)

Rhodium sesquisulphhydroxide, $\text{Rh}_2\text{S}_3 \cdot \text{H}_2\text{O}$.

Easily sol. in aqua regia or $\text{Br}_2 + \text{Aq}$. Insol. in alkali sulphides $+ \text{Aq}$ or acids. (Leidié, Bull. Soc. (2) 50. 664.)

Rhodochromium bromide,

$\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Br})_5 + \text{H}_2\text{O}$.

Rather difficultly sol. in H_2O . Decomp. by boiling or standing. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ or $\text{NaOH} + \text{Aq}$. Insol. in dil. $\text{HBr} + \text{Aq}$, $\text{KBr} + \text{Aq}$, or alcohol. (Jörgensen, J. pr. (2) 25. 321.)

— **bromide, basic**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{OH})\text{Br})_4 + \text{H}_2\text{O}$.

Sl. sol. in H_2O . Sol. in NH_4OH or $\text{NaOH} + \text{Aq}$. Insol. in alcohol. (Jörgensen.)

— **bromoplatinate**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Br}_3\text{PtBr}_6)_5$, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Br}_3(\text{PtBr}_6)_2 + 4\text{H}_2\text{O}$.

Ppt (Jörgensen.)

— **chloraurate**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Cl}_3(\text{AuCl}_4)_2 + 2\text{H}_2\text{O}$.

Difficultly sol but not insol. in H_2O . (Jörgensen.)

— **chloride**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Cl}_5 + \text{H}_2\text{O}$.

Sol. in about 40 pts of cold H_2O . Insol. in cold dil. $\text{HCl} + \text{Aq}$, $\text{NH}_4\text{Cl} + \text{Aq}$, or alcohol. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Jörgensen, J. pr. (2) 25. 321.)

— **chloroiodide, basic**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{OH})\text{Cl}_3\text{I}_2)_4$.

Sl. sol. in cold H_2O ; insol. in alcohol. (Jörgensen.)

— **chloroplatinate**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Cl}_3\text{PtCl}_6)_5$, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{Cl}(\text{PtCl}_6)_2 + 4\text{H}_2\text{O}$.

Precipitate. (Jörgensen.)

— **dithionate**, $[\text{HO}(\text{Cr}_2(\text{NH}_3)_{10})_2(\text{S}_2\text{O}_8)_5 + 2\text{H}_2\text{O}$.

Nearly insol. in H_2O .

— **dithionate, basic**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{OH}(\text{S}_2\text{O}_8)_2 + \text{H}_2\text{O}$.

Insol. in H_2O , cold $\text{NH}_4\text{OH} + \text{Aq}$, or $\text{NaOH} + \text{Aq}$.

— **iodide**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{I}_5 + \text{H}_2\text{O}$.

Very difficultly sol. in H_2O . Insol. in very dil. $\text{HI} + \text{Aq}$ or alcohol. Sl. sol. in NH_4OH or $\text{KOH} + \text{Aq}$. (Jörgensen.)

— **nitrate**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{NO}_3)_6)_5$.

Rather difficultly sol. in H_2O , from which it is precipitated by a few drops of $\text{HNO}_3 + \text{Aq}$. Sol. in hot dil. $\text{NH}_4\text{OH} + \text{Aq}$.

— **nitrate chloroplatinate**, $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{NO}_3)(\text{PtCl}_6)_2 + 4\text{H}_2\text{O}$.

Precipitate. (Jörgensen.)

Rhodochromium sulphate,

$[\text{HO}(\text{Cr}_2(\text{NH}_3)_{10})_2(\text{SO}_4)_5 + 2\text{H}_2\text{O}$.

Very sl. sol. in cold H_2O . Easily sol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Almost insol. in a mixture of 3 vols. H_2O , 1 vol. alcohol, and $\frac{1}{3}$ vol dil $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Jørgensen)

Rhodonitrous acid.

Ammonium rhodonitrite, $(\text{NH}_4)_6\text{Rh}_2(\text{NO}_2)_{12}$

Nearly insol in cold, sl. sol in hot H_2O
Insol in conc NH_4Cl or $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$
Insol in alcohol. (Leidié, C. R. 111. 108)

Barium rhodonitrite, $\text{Ba}_3\text{Rh}_2(\text{NO}_2)_{12}$

Sl. sol in cold, more easily in hot H_2O (Lamy.)
+ $12\text{H}_2\text{O}$. Sol. in 50 pts. H_2O at 16° , and 6.5 pts at 100° (Leidié, C. R. 111. 108)

Potassium rhodonitrite, $\text{K}_6\text{Rh}_2(\text{NO}_2)_{12}$

Nearly insol. in cold, very sl sol. in boiling H_2O . Completely insol. in $\text{KNO}_3 + \text{Aq.}$ and in $\text{KCl} + \text{Aq}$ (30% KCl), or $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$ (50% $\text{KC}_2\text{H}_3\text{O}_2$) Insol in alcohol. (Leidié, C. R. 111. 106)

Sodium rhodonitrite, $\text{Na}_6\text{Rh}_2(\text{NO}_2)_{12}$

Sol in $2\frac{1}{2}$ pts H_2O at 17° , and 1 pt at 100° . Insol in alcohol Decomp. by $\text{HCl} + \text{Aq.}$ (Leidié, C. R. 111. 107.)

Rhodosochromium bromide.

Sol. in H_2O ; insol. in dil. $\text{HBr} + \text{Aq}$ (1 : 1). (Jørgensen, J. pr. (2) 45. 260.)

— chloraurate, $\text{Cr}_2(\text{NH}_3)_6(\text{HO})_3\text{Cl}_3$,
 $2\text{AuCl}_3 + 2\text{H}_2\text{O}$.

Not insol in cold H_2O . (Jørgensen)

— chloride, $\text{Cr}_2(\text{NH}_3)_6(\text{HO})_3\text{Cl}_3 + 2\text{H}_2\text{O}$

Sol. in 10.6 pts H_2O at 18° ; decomp. by boiling. Pptd by $\frac{1}{2}$ to 1 vol. dil $\text{HCl} + \text{Aq.}$
Sol in cold dil $\text{NH}_4\text{OH} + \text{Aq}$ (Jørgensen, J. pr. (2) 45. 260.)

— chloroplatinate, $2\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3\text{Cl}_3$,
 $3\text{PtCl}_4 + 6\text{H}_2\text{O}$.

Insol in H_2O . (Jørgensen)
 $\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3\text{Cl}_3$, $2\text{PtCl}_4 + 2\text{H}_2\text{O}$. Insol. in 95% alcohol. (Jørgensen)

— chromate, $[\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3]_2(\text{CrO}_4)_2 + 7\text{H}_2\text{O}$. (Jørgensen.)

Very sl. sol in H_2O . (Jørgensen.)

— iodide, $\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3\text{I}_3 + 2\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in dil. $\text{HI} + \text{Aq.}$ (Jørgensen.)

— nitrate, $\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3(\text{NO}_3)_3 + \text{H}_2\text{O}$.

Much less sol. in cold H_2O than the chloride. Insol. in dil. $\text{HNO}_3 + \text{Aq.}$ (Jørgensen)

— oxalate,
 $[\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3]_2(\text{C}_2\text{O}_4)(\text{HC}_2\text{O}_4)_4 + 2\text{H}_2\text{O}$.

Sol. in cold H_2O , but not very easily. (Jørgensen.)

Rhodosochromium sulphate,

$[\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$.

Very sl sol. in cold H_2O Easily sol in dil. $\text{NH}_4\text{Cl} + \text{Aq.}$ (Jørgensen)

$[\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3]\text{SO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ Decomp by H_2O into H_2SO_4 and above compound (Jørgensen)

— persulphide, $[\text{Cr}_2(\text{NH}_3)_6(\text{OH})_3]\text{S}_{11} + 4\text{H}_2\text{O}$.

Ppt Insol. in H_2O . (Jørgensen.)

Rhodosulphuric acid.

Potassium rhodosulphate, $\text{K}_6\text{Rh}_2(\text{SO}_4)_6$.

Two modifications:

(a) Slowly sol in cold, easily in hot H_2O .

(b) Insol. in H_2O .

Does not exist. (Leidié, C. R. 107. 234.)

Sodium rhodosulphate.

Insol. in H_2O , HCl , HNO_3 , or aqua regia. (Claus.)

Does not exist. (Leidié)

$\text{Na}_6\text{Rh}_2(\text{SO}_4)_6$. Insol. in H_2O . (Seubert and Kobbé, B. 23. 2560.)

Rhodosulphurous acid.

Potassium rhodosulphite, $\text{K}_6\text{Rh}_2(\text{SO}_3)_6 + 6\text{H}_2\text{O}$.

Nearly insol. in H_2O . Slowly sol. in acids. Not decomp. by boiling $\text{KOH} + \text{Aq.}$ (Claus.)

Sodium rhodosulphite,
 $\text{Na}_6\text{Rh}_2(\text{SO}_3)_6 + 4\frac{1}{2}\text{H}_2\text{O} = 3\text{Na}_2\text{SO}_3$,
 2RHSO_3 .

Insol. in cold, very sl. sol. in hot H_2O . Easily sol in $\text{HNO}_3 + \text{Aq.}$ (Seubert and Kobbé, B. 23. 2558)

Roseochromium bromide,

$\text{Cr}(\text{NH}_3)_5\text{Br} + \text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in $\text{HBr} + \text{Aq.}$ (Christensen, J. pr. (2) 23. 26.)

— bromochromate, $\text{Cr}(\text{NH}_3)_5\text{Br}(\text{CrO}_4)$.

Somewhat sol. in H_2O , but decomp. on standing. (Jørgensen, J. pr. (2) 25. 398.)

— bromoplatinate, $\text{Cr}(\text{NH}_3)_5\text{Br}(\text{PtBr}_6) + 2\text{H}_2\text{O}$.

Precipitate. Difficultly sol. in H_2O . (Christensen, l. c.)

— chloride, $\text{Cr}(\text{NH}_3)_5\text{Cl}_3 + \text{H}_2\text{O}$.

Easily sol. in H_2O with subsequent decomp. Insol. in alcohol. (Christensen, J. pr. (2) 23. 26.)

— mercuric chloride, $\text{Cr}(\text{NH}_3)_5\text{Cl}_3$, $3\text{HgCl}_2 + 2\text{H}_2\text{O}$.

Sl. sol. in H_2O . Sol. in dil. $\text{HCl} + \text{Aq}$ with decomposition. (Christensen, l. c.)

Roseochromium dithionate, basic,
 $\text{Cr}(\text{NH}_3)_5(\text{OH})_2\text{S}_2\text{O}_6 + \text{H}_2\text{O}$.Easily sol. in very dil. $\text{HCl} + \text{Aq}$ (Jörgensen, J. pr. (2) 25. 398.)— **iodide**, $\text{Cr}(\text{NH}_3)_5\text{I}_3$ Easily sol. in H_2O ; decomp. by boiling (Christensen, l. c.)— **nitrate**, $\text{Cr}(\text{NH}_3)_5(\text{NO}_3)_3 + \text{H}_2\text{O}$.Rather easily sol. in H_2O . (Christensen, l. c.) $\text{Cr}(\text{NH}_3)_5(\text{NO}_3)_2(\text{OH})_2$, HNO_3 . Decomp. by H_2O or alcohol. (Jörgensen, J. pr. (2) 44. 63.)— **sulphate**, $[\text{Cr}(\text{NH}_3)_5]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$.Easily sol. in H_2O . Precipitated by alcohol. (Christensen, l. c.)— **sulphate bromoplatinate**,
 $[\text{Cr}(\text{NH}_3)_5(\text{SO}_4)]_2\text{PtBr}_6$.Difficultly sol. in H_2O . (Christensen, l. c.)— **sulphate chloroplatinate**,
 $[\text{Cr}(\text{NH}_3)_5(\text{SO}_4)]_2\text{PtCl}_6$.Difficultly sol. in H_2O . (Christensen, l. c.)**Roseocobaltic bromide,**Sol. in H_2O ; insol. in $\text{HBr} + \text{Aq}$. (Jörgensen, J. pr. (2) 31. 49.)₃— **bromoplatinate**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Br}_3$,
 $\text{PtBr}_4 + \text{H}_2\text{O}$.Somewhat sol. in H_2O or dil. alcohol. Insol. in strong alcohol. (Jörgensen.) $2\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Br}_3$, $3\text{PtBr}_4 + 4\text{H}_2\text{O}$ Ppt. (Jörgensen.)— **bromosulphate**,Sol. in H_2O . (Krok.)— **bromosulphate bromaurate**,— **carbonate**.Very sol. in H_2O .— **chloraurate**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$, AuCl_3 .
Moderately sol. in cold H_2O .— **chloride**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$.Sol. in 4.8 pts. H_2O at 10.1° , but decomp. on heating.100 pts. H_2O dissolve 16.12 pts. at 0° , and 24.87 pts. at 16.19° . (Kurnakoff, J. russ. Soc. 24. 269.)Sl. sol. in 1000 pts. fuming $\text{HCl} + \text{Aq}$, more easily in 20% $\text{HCl} + \text{Aq}$. (Rose.)**Roseocobaltic mercuric chloride,**
 $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$, $3\text{HgCl}_2 + \text{H}_2\text{O}$.

More easily sol. in solvents than the anhydrous purpureo salt. (Carstanjen.)

 $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$, HgCl_2 . Sol. in $\text{HCl} + \text{Aq}$ with decomp. into above salt. (Jörgensen.)— **chloroplatinate**,Decomp. by H_2O . (Jörgensen.) $2\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$, $\text{PtCl}_4 + 2\text{H}_2\text{O}$. Decomp. by H_2O . $2\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$, $3\text{PtCl}_4 + 6\text{H}_2\text{O}$. Not difficultly sol. in warm H_2O (Gibbs.)— **chlorosulphate**, $\text{Co}(\text{NH}_3)_5\text{Cl}(\text{SO}_4)$.Easily sol. in H_2O .— **chlorosulphate mercuric chloride**,
 $\text{Co}(\text{NH}_3)_5\text{Cl}(\text{SO}_4)$, $\text{HgCl}_2 + 3\text{H}_2\text{O}$.Sol. in hot H_2O , and can be recrystallized without decomp. (Krok.)— **dichromate**,

Can be recrystallized out of weak acetic acid.

— **cobalticyanide**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{Co}(\text{CN})_6$.Nearly absolutely insol. in cold H_2O . (Jörgensen.) $+ \text{H}_2\text{O}$. (Gibbs and Gentele.)— **dithionate**, $\text{Co}(\text{NH}_3)_5(\text{S}_2\text{O}_8)(\text{OH})$.Decomp. by H_2O . (Rammelsberg, Pogg. 58. 296.) $\text{Co}(\text{NH}_3)_5(\text{OH}_2)(\text{S}_2\text{O}_8) + 2\text{H}_2\text{O}$. Ppt. (Jörgensen.)— **hydroxide**, $\text{Co}(\text{NH}_3)_5(\text{OH})_3$.

Known only in aqueous solution.

— **mercuric hydroxychloride**,

Ppt. Sol. in dil. acids. (Vortmann and Morgulis, B. 22. 2646.)

 $\text{CoN}_5\text{H}_{12}(\text{HgOH})_2\text{Cl}_2(\text{OH})$. Ppt. Sol. in dil. acids. (Vortmann and Morgulis.)— **iodide**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{I}_3$.Less sol. in H_2O than bromide. Insol. in $\text{HI} + \text{Aq}$. (Jörgensen.)— **iodosulphate**, $\text{Co}(\text{NH}_3)_5(\text{OH}_2)\text{I}(\text{SO}_4)$.Easily sol. in H_2O . (Krok.)— **mercuriodide**, $[\text{CoN}_5\text{H}_{13}]_2(\text{HgI})_2\text{I}_2$.

Ppt. (Vortmann and Borsbach, B. 23. 2805.)

 $\text{CoN}_5\text{H}_{13}(\text{HgI})_2\text{I}_3$. Ppt. (Vortmann and Borsbach.) $\text{CoN}_5\text{H}_{13}(\text{HgI})_2\text{I}_2(\text{OH})$. Ppt.

Roseocobaltic nitrate,

Three modifications:

α . Sol. in 20 pts. H_2O at 15° . (Jørgensen.)
 β . Known only in solution. Insol. in cold $\text{HNO}_3 + \text{Aq.}$ (Gibbs.)

γ . Easily sol. in hot H_2O . (Gibbs) (Purpureo salt?)

$\text{Co}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)_3$, HNO_3 . Decomp. by H_2O or alcohol. (Jørgensen, J. pr. (2) 44. 63.)

— **nitrate chloroplatinate,**

Ppt. (Jørgensen.)

— **nitratosulphate,**

Sl. sol. in cold, easily in hot H_2O .

— **oxalate,** $[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{C}_2\text{O}_4)_3 + 2\text{H}_2\text{O}.$

Nearly insol. in H_2O .

— **oxalochloroplatinate,**

Sol. in hot H_2O .

— **oxalosulphate,** $[\text{Co}(\text{NH}_3)_5]_2(\text{SO}_4)_2\text{C}_2\text{O}_4, \text{H}_2\text{C}_2\text{O}_4 + 2\text{H}_2\text{O}.$

Sol. in hot H_2O .

$[\text{Co}(\text{NH}_3)_5]_2(\text{SO}_4)_2(\text{C}_2\text{O}_4)(\text{OH})_2 + 6\text{H}_2\text{O}$. Sl. sol. in H_2O .

— **orthophosphate,**

Nearly insol. in H_2O

$[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{PO}_4\text{H})_3 + 4\text{H}_2\text{O}$. Very sl. sol. in cold H_2O ; easily in H_2O containing HCl . (Jørgensen.)

— **pyrophosphate,**

Insol. in H_2O . (Jørgensen.)

$\text{Co}(\text{NH}_3)_5(\text{OH}_2)(\text{P}_2\text{O}_7\text{Na}) + 12\text{H}_2\text{O}$. Nearly insol. in cold, easily sol. in hot H_2O containing NH_4OH . (Jørgensen, J. pr. (2) 23. 252.)

— **sulphate,** $[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}.$

Three modifications:

α . Sl. sol. in cold H_2O . Sol. in 58 pts. at 27° (Gibbs); 83.5 pts. at 20.2° , and 94.6 pts. at 17.2° (Jørgensen); more easily sol. in hot H_2O , and still more easily in $\text{NH}_4\text{OH} + \text{Aq.}$

β . Sol. in 1–2 pts. H_2O . (Gibbs.)

γ . Less sol. than luteosulphate. (Jørgensen.)

$+ 2\text{H}_2\text{O}$. Easily sol. in H_2O . (Vortmann.)

Roseocobaltic sulphate, acid,

(Fremy), or $4[\text{Co}(\text{NH}_3)_5]_2(\text{SO}_4)_3, 9\text{H}_2\text{SO}_4 + 11\text{H}_2\text{O}$ (Jørgensen).

More easily sol. in H_2O than neutral sulphate, into which it is converted by recrystallization. Sol. in about 13 pts. H_2O . (Jørgensen.)

— **cerium sulphate,**

Sl. sol. in cold, practically insol. in boiling H_2O . Sol. in acids. (Gibbs, Am. Ch. J. 15. 560.)

$[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{SO}_4)_3, \text{Ce}(\text{SO}_4)_2 + 2\frac{1}{2}\text{H}_2\text{O}$. As above. (Gibbs)

— **sulphate chloraurate.**

Three modifications:

α . $\text{Co}(\text{NH}_3)_5(\text{OH}_2)(\text{SO}_4)\text{Cl}$, AuCl_3 . Ppt. (Jørgensen)

β . $\text{Co}(\text{NH}_3)_5(\text{SO}_4)$, $\text{AuCl}_3 + 2\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Gibbs.)

γ . As above. Can be recrystallized from hot H_2O .

— **sulphate chloroplatinate.**

Three modifications, all difficultly sol. in hot or cold H_2O . (Jørgensen.)

— **sulphite,** $[\text{Co}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{SO}_3)_3 + \text{H}_2\text{O}.$

Sl. sol. in cold, decomp. by hot H_2O . (Gibbs.)

— **cobaltic sulphite,**

Insol. in cold, decomp. by hot H_2O . (Künzel.)

Roseocobaltic octamine compounds.

See Roseotetramine cobaltic compounds.

Roseoiridium compounds.

See Iridoquopentamine compounds.

Roseorhodium bromide,

Sol. in cold H_2O . (Jørgensen, J. pr. (2) 34. 394.)

Roseorhodium cobalticyanide,

Scarcely sol. in H_2O .

— **iodosulphate,** $\text{Rh}(\text{NH}_3)_5(\text{OH}_2)\text{I}(\text{SO}_4).$

Very sl. sol. in H_2O ; easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Jørgensen.)

— **nitrate,** $\text{Rh}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)_3.$

Moderately sol. in cold H_2O . (Jørgensen.)

$\text{Rh}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)_3, \text{HNO}_3$. Decomp.

by H_2O or alcohol (Jørgensen, J. pr (2) 44. 63.)

Roseorhodium nitrate chloroplatinate,
 $[\text{Rh}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)]_2\text{PtCl}_6 + 2\text{H}_2\text{O}$.
 Ppt (Jørgensen)

— **orthophosphate,**
 $[\text{Rh}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{HPO}_4)_3 + 4\text{H}_2\text{O}$.
 Very sl sol in H_2O

— **sodium pyrophosphate,**
 $[\text{Rh}(\text{NH}_3)_5(\text{OH}_2)]_2\text{Na}_2\text{P}_2\text{O}_7 + 23\text{H}_2\text{O}$.
 Ppt. Very sl sol in cold H_2O . Easily sol. in very dil. acids

— **sulphate,**
 $[\text{Rh}(\text{NH}_3)_5(\text{OH}_2)]_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$.
 Very sl sol in cold, much more in hot H_2O .

— **sulphate chloroplatinate,**
 $\text{Rh}(\text{NH}_3)_5(\text{OH}_2)(\text{SO}_4)\text{PtCl}_6$.
 Ppt. Nearly insol. in H_2O or alcohol.

Roseotetramine cobaltic bromide,
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2\text{Br}_3$
 Sol in H_2O , insol. in $\text{HBr} + \text{Aq}$ Nearly insol. in alcohol. (Jørgensen, Z anorg. 2. 295.)

— **chloride,** $\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2\text{Cl}_3$.
 Easily sol in H_2O ; insol in conc. $\text{HCl} + \text{Aq}$; sol. in sat. $\text{HgCl}_2 + \text{Aq}$ (Jørgensen)

— **cobalticyanide,**
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2\text{Co}(\text{CN})_6$.
 (Jørgensen.)

— **oxalate sulphate,**
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2]_2(\text{SO}_4)_2\text{C}_2\text{O}_4$.
 Ppt. (Jørgensen.)

— **pyrophosphate,**
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2]_4(\text{P}_2\text{O}_7)_3 + 6\text{H}_2\text{O}$.
 Nearly insol. in H_2O , but easily sol. in very dil. acids + Aq (Jørgensen.)

— **sulphate,**
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2]_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$.
 Sol. in about 35 pts. H_2O , and more easily by addition of dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$. (Jørgensen.)

— **sulphate bromaurate,**
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2]_2(\text{SO}_4)_2\text{AuBr}_4$.
 Sl. sol. in cold H_2O ; insol. in alcohol. (Jørgensen.)

— **sulphate chloroplatinate,**
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)_2]_2(\text{SO}_4)_2\text{PtCl}_6$.
 As the bromaurate. (Jørgensen.)

Rubidium, Rb_2 .

Decomp. H_2O with violence. Insol. in hydrocarbons Sol. in liquid NH_3 (Seely, C N 23. 169); (Franklin, Am. Ch. J. 1898, 20. 829).

Rubidium acetylide acetylene RbC_2 , C_2H_2 .

Very hygroscopic.
 Insol. in CCl_4 and in ether. (Moissan, C. R. 1903, 136. 1220.)

Rubidium amalgam, RbHg_{12} .

Stable in contact with Hg below 0° . Above 0° the composition of the amalgam varies. Can be cryst. from Hg without decomp. below 0° (Kerp, Z. anorg. 1900, 25. 68.)

Rubidium amide, RbNH_2 .

Very deliquescent. Violently decomp. by H_2O ; less violently acted on by alcohol. (Titherley, Chem. Soc. 1897, 71. 470.)

Rubidium ammonia, RbNH_3 .

Decomp. by H_2O
 Very sol. in liquid NH_3 . (Moissan, C R. 1903, 136. 1178)

Rubidium azoimide, RbN_3

Sl. hygroscopic.
 Stable in aq. solution.
 107 1 pts are sol in 100 pts. H_2O at 16° .
 114 1 " " " 100 " H_2O " 17° .
 0 182 " " " 100 " abs. alcohol at 16° .

Insol. in pure ether.
 (Curtius, J. pr. 1898, (2) 58. 281.)

Rubidium bromide, RbBr .

100 pts. H_2O dissolve 98 pts. at 5° ; 104.8 pts at 16° . (Reissig, A. 127. 33)

Solubility in H_2O .

100 pts of the solution contain at:

0.5°	5.0°	16 0°
47 26	49 50	51 17 pts. RbBr ,

39.7°	57 5°	113 5°.
56 87	60 39	67 24 pts. RbBr .

(Rimbach, B. 1905, 38. 1557.)

Sp. gr. of RbBr containing g. equiv. RbBr per l.

G. equiv RbBr	Sp. gr $6^\circ/6^\circ$	Sp. gr. $18^\circ/18^\circ$	Sp. gr. $30^\circ/30^\circ$
0.508	1.06448	1.06389	1.06326
1.020	1.12931	1.12799	1.12626
2.031	1.25622	1.25366	1.25187
4.072	1.50574	1.50107	1.49870

(Clausen, W. Ann. 1914, (4) 44. 1070.)

RbBr + Aq. containing 6.60% RbBr has sp. gr. $20^{\circ}/20^{\circ} = 1.0525$.

RbBr + Aq. containing 14.36% RbBr has sp. gr. $20^{\circ}/20^{\circ} = 1.1226$ (Le Blanc and Rohland, Z. phys. Ch. 1896, 19, 279)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

Difficultly sol. in acetone (Naumann, B. 1904, 37, 4328)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790)

Rubidium tribromide, RbBr₃.

Very sol. in H₂O; decomp. by alcohol and ether (Wells and Wheeler, Sill. Am. J. 143, 475.)

Rubidium ruthenium bromide.

See Bromoruthenate and bromoruthenite, rubidium.

Rubidium selenium bromide.

See Bromoselenate, rubidium.

Rubidium tellurium bromide.

See Bromotellurate, rubidium.

Rubidium thallic bromide, RbBr, TlBr₃ + H₂O

Recryst. from H₂O unchanged. (Pratt, Am. J. Sci. 1895, (3) 49, 403)

3RbBr, TlBr₃ + H₂O. Very sol. in H₂O. (Pratt.)

Rubidium stannic bromide.

See Bromostannate, rubidium.

Rubidium bromochloride, RbBr₂Cl.

Easily decomp., even by H₂O. (Wells and Wheeler.)

RbBrCl₂. Sol. in H₂O; decomp. by alcohol and ether. (Wells and Wheeler.)

Rubidium bromochloroiodide, RbBrClI.

Sol. in H₂O and alcohol. Decomp. by ether. (Wells and Wheeler.)

Rubidium bromoiodide, RbBr₂I.

Very sol. in H₂O. Sat. solution contains about 44% RbBr₂I, and sp. gr. = 3.84. (Wells and Wheeler.)

Rubidium carbide, Rb₂C₂.

Decomp. violently by H₂O. (Moissan, C. R. 1903, 136, 1221.)

Rubidium chloride, RbCl.

100 pts. H₂O dissolve 76.88 pts. at 1°, 82.89 pts. at 7°. (Bunsen.)

Solubility in H₂O at t°.
100 pts of the solution contain pts. RbCl.

t°	Pts RbCl
0 4	43.61
15 5	46 56
57 3	53 71
114.9	59 48

(Rimbach, B. 1902, 35, 1304.)

Solubility of RbCl in H₂O at t°.

t°	G RbCl per 100 g		t°	G RbCl per 100 g	
	H ₂ O	Solution		H ₂ O	Solution
0	77.0	43 5	60	115.5	53.6
10	84.4	45.8	70	121.4	54.8
20	91.1	47.7	80	127 2	56.0
30	97.6	49.4	90	133.1	57.1
40	103.5	50.9	100	138.9	58.9
50	109.3	52.2	112.9	146.6	59.5

(Berkeley, Phil. Trans. Roy. Soc. 1904, 203, A. 189.)

Sat. RbCl + Aq at 25° contains 48.57% RbCl. (Foote, Am. Ch. J. 1906, 35, 242.)

Sp. gr. of RbCl + Aq containing in 100 pts. H₂O:

13 14 25 88 33 13 pts. RbCl.
1 1066 1 2156 1 2675 sp. gr.

(Tammann, W. Ann. 24, 1885.)

A normal solution of RbCl has sp. gr. at 25° = 1.0610. (Wagner, Z. phys. Ch. 1890, 5, 39.)

RbCl + Aq containing 6.64% RbCl has sp. gr. $20^{\circ}/20^{\circ} = 1.0502$

RbCl + Aq containing 10.59% RbCl has sp. gr. $20^{\circ}/20^{\circ} = 1.0815$. (Le Blanc and Rohland, Z. phys. Ch. 1896, 19, 278)

Sp. gr. $20^{\circ}/4^{\circ}$ of a normal solution of RbCl = 1.085405. (Haigh, J. Am. Chem. Soc. 1912, 34, 1151.)

Sp. gr. of RbCl + Aq sat. at t°.

t°	Sp. gr.	t°	Sp. gr.
0.55	1.4409	60.25	1.5558
18 7	1.4865	75.15	1.5746
31.5	1.5118	89.35	1.5905
44.7	1.5348	114*	1.6148

* Boiling point.

(Berkeley.)

Sp. gr. of RbCl containing g. equiv. RbCl per l.

G equiv RbCl	Sp. gr. 6°/6°	Sp. gr. 18°/18°	Sp. gr. 30°/30°
0.5123	1.06410	1.04538	1.04503

3.984	1.34334	1.33967	1.33757

(Clausen, W. Ann. 1914, (4) 44, 1069.)

Very sl sol in liquid NH_3 (Franklin, Am Ch J. 1898, 20. 829.)

Solubility in alcohols at 25°.

100 g. methyl alcohol dissolve 1.41 g.

100 g. ethyl alcohol dissolve 0.078 g.

100 g. propyl alcohol dissolve 0.015 g.

100 g. isoamyl alcohol dissolve 0.0025 g.

(Turner and Bissett, Chem. Soc. 1913, 103. 1909.)

Insol. in anhydrous pyridine and in 97% pyridine+Aq. Very sl. sol. in 95% pyridine+Aq; sl sol. in 93% pyridine+Aq (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790); acetone; (Naumann, B. 1904, 37. 4329); (Eidmann, C C 1899, II. 1014)

Rubidium ruthenium trichloride.

See Chlororuthenite, rubidium.

Rubidium ruthenium tetrachloride.

See Chlororuthenate, rubidium.

Rubidium oxyruthenium chloride,
 $\text{Rb}_2\text{RuO}_2\text{Cl}_4$.

Ppt.; decomp. by H_2O ; sol in cold HCl . (Howe, J. Am Chem Soc. 1901, 23. 779)

Rubidium tellurium chloride.

See Chlorotellurate, rubidium.

Rubidium thallic chloride, 2RbCl , $\text{TiCl}_3 + \text{H}_2\text{O}$.

Can be recryst. from H_2O without change. (Pratt, Am J. Sci 1895, (3) 49. 399)

3RbCl , TiCl_3 . Crystallizes from HCl solution. (Neumann, A. 244. 348.)

+ H_2O . Very sol. in cold H_2O . (Pratt, Am. J. Sci. 1895, (3) 49. 398.)

+ $2\text{H}_2\text{O}$. Efflorescent in dry air. Sol. in 75 pts. H_2O at 18°, and 1.6 pts at 100°. (Godeffroy, Zeitschr. d. allgem österr Apothekerv 1880. No. 9)

Rubidium stannic chloride.

See Chlorostannate, rubidium.

Rubidium titanium chloride, 2RbCl , $\text{TiCl}_3 + \text{H}_2\text{O}$.

Sol. in H_2O . (Stahler, B. 1904, 37. 4403.)

Rubidium tungsten chloride, $\text{Rb}_3\text{W}_2\text{Cl}_9$.

Sl. sol. in cold, more sol. in hot H_2O .

Sol. in very dil. NaOH +Aq.

Nearly insol. in most organic solvents. (Olsson, B. 1913, 46. 574.)

Rubidium uranous chloride, Rb_2UCl_6 .

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Rubidium uranyl chloride, 2RbCl , $(\text{UO}_2)\text{Cl}_2 + 2\text{H}_2\text{O}$.

Solubility in H_2O .

100 pts. of the solution contain at

24 8° 80.3°

57 8 65 73 pts. UO_2Cl_2 , 2RbCl .

(Rimbach, B 1904, 37. 467.)

Rubidium vanadium chloride, $\text{Rb}_2\text{VCl}_5 + \text{H}_2\text{O}$.

Sl. sol in H_2O and alcohol.

Decomp. by H_2O on standing so that it dissolves. (Stähler, B. 1904, 37. 4411.)

Rubidium zinc chloride, 2RbCl , ZnCl_2 .

Easily sol. in H_2O and HCl +Aq. (Godefroy, B 8. 9)

Rubidium chloride selenium dioxide, RbCl , $2\text{SeO}_2 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Muthmann, B 1893, 26. 1013.)

Rubidium chloriodide, RbCl_2I .

Properties are similar to those of RbBrClI . (Wells.)

RbCl_2I Sol. in alcohol, not attacked by ether. (Wells and Wheeler, Sill Am. J. 144. 42.)

Sol. in POCl_3 (Walden, Z. anorg. 1900, 25. 212.)

Nearly insol. in AsBr_3 . (Walden, Z. anorg. 1902, 29. 374)

Very stable, sl. sol in H_2O at 0°; only very sl sol. in HCl . (Erdmann, Arch. Pharm. 1894, 232. 32.) (C. C. 1894, I. 670.)

Rubidium fluoride, RbF .

Very sol in H_2O . (Eggeling, Z. anorg. 1905, 46. 174.)

100 g. H_2O dissolve 130.6 g. RbF at 18°. (de Forcrand, C. R. 1911, 152. 1210.)

Sol in dil. HF . (Pennington, J. Am. Chem. Soc. 1896, 18. 57.)

Insol. in liquid NH_3 . (Core, Am. Ch. J. 1898, 20. 829)

Rubidium hydrogen fluoride, RbF , HF .

Very deliquescent.

Insol. in alcohol and ether. (Chabrie, C. R. 1905, 140. 91.)

Very hygroscopic. Sol in H_2O . (Eggeling, Z. anorg 1905, 46. 175)

RbF , 2HF . Very sl. sol. in H_2O . (Eggeling, Z. anorg 1905, 46. 176.)

Rubidium silicon fluoride.

See Fluosilicate, rubidium.

Rubidium tantalum fluoride.

See Fluotantalate, rubidium.

Rubidium uranyl fluoride, 4RbF , $\text{UO}_2\text{F}_2 + 6\text{H}_2\text{O}$.

(Ditte, C. R. 91. 115.)

Rubidium hydride, RbH

Decomp. by H_2O with evolution of H_2 . (Moissan, C R 1903, 136. 589)

Rubidium hydroxide, RbOH.

Deliquescent, and very sol. in H_2O Sol in alcohol. (Bunsen)

Sat. RbOH + Aq contains 64.17% RbOH at 15°. (de Forcrand, C. R. 1909, 149. 1344)

Rubidium iodide, RbI.

100 pts H_2O dissolve 137.5 pts at 69°; 152 pts. at 17.4°. (Reissig, A. 127. 33)

Sat. RbI + Aq. at 25° contains 61.93% RbI. (Foote and Chalker, Am. Ch. J. 1908, 39. 567.)

Sp. gr. of RbI + Aq containing:

5%	10%	cold	hot
		sat.	sat.

Sp. gr. 1 0353 1 0755 1 726 1 9629.
(Erdmann, Arch. Pharm. 1894, 232. 25.)

Sp. gr. of RbI + Aq containing g. equiv.
RbI per l,

G. equiv RbI	Sp. gr 6°/6°	Sp. gr 18°/18°	Sp. gr 30°/30°
0.510	1.08347	1.08268	1 08226
1.025	1.16751	1.16569	1 16433
2.025	1.33012	1.32637	1.32531
4.015	1.64731	1.64144	1.63780

(Clausen, W. Ann. 1914, (4) 44. 1070.)

Nearly insol. in $AsBr_3$. (Walden, Z. anorg 1902, 29. 374.)

Sol. in $AsCl_3$. (Walden, Z. anorg. 1900, 25. 214); liquid SO_2 . (Walden, Z. anorg 1902, 30. 161); S_2Cl_2 . (Walden, Z. anorg. 1900, 25. 217); SO_2Cl_2 (Walden); $POCl_3$ (Walden)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789)

Solubility in organic solvents at t°

C = pts. by wt. of RbI in 100 cem. of the sat. solution.

L = no. of litres which at the saturation temp. hold in solution 1 mol. RbI.

Solvent	t°	C	L
Furfural	25°	4 93	4.31
Acetonitrile	25°	1 350	15.73
"	0°	1 478	14 36
Propionitrile	25°	0 305	69 61
"	0°	0 274	77.48
Nitromethane	25°	0.518	41.00
"	0°	0 567	37 44
Acetone	25°	0.674	31.5
"	0°	0 960	22.1

(Walden, Z. phys. Ch. 1906, 55. 718.)

Rubidium triiodide, RbI₃

Very sol. in H_2O . Sol. in about $\frac{1}{3}$ pt. H_2O at 20°; sol. in alcohol. Decomp. by ether. (Wells and Wheller, Sill. Am. J. 143. 475.)

Solubility determinations show that RbI₃ is the only polyiodide of rubidium formed at 25°. RbI₇ and RbI₅, mentioned by Abegg and Hamburger, (Z. anorg. 50, 403) could not be obtained. (Foote and Chalker, Am. Ch. J. 1908, 39. 567.)

Rubidium silver iodide, 2RbI, AgI.

Easily decomp by H_2O . (Wells and Wheeler, Sill. Am. J. 144. 155.)

RbI, AgI + $\frac{1}{2}H_2O$. (Marsh, Chem. Soc. 1913, 103. 783.)

RbI, 2AgI. Not deliquescent.

Very sol. in acetone (Marsh, Chem. Soc. 1913, 103. 783.)

Rubidium tellurium iodide.

See Iodotellurate, rubidium.

Rubidium thallic iodide, RbI, TI₃ + 2H₂O.

Decomp by H_2O . (Pratt, Am. J. Sci. 1895, (3) 49. 403.)

Rubidium nitride,

Decomp. by heat. (Franz Fischer, B. 1910, 43. 1468)

See also Rubidium azoimide.

Rubidium dioxide, RbO₂.

Decomp by H_2O . (Erdmann, A. 1897, 294. 68.)

Rubidium sulphide, Rb₂S + 4H₂O.

Deliquescent; very sol. in H_2O . (Biltz, Z. anorg. 1906, 48. 299.)

Rubidium disulphide, Rb₂S₂.

Anhydrous.

Sol in H_2O .

Very hygroscopic. (Biltz, Z. anorg. 1906, 50. 72.)

+ H_2O . From Rb₂S₂ + Aq.

Hygroscopic. (Biltz.)

Rubidium trisulphide, Rb₂S₃

Anhydrous.

Sol. in H_2O .

Hygroscopic. (Biltz, Z. anorg. 1906, 50. 75.)

+ H_2O . From Rb₂S₃ + Aq. (Biltz.)

Rubidium tetrasulphide Rb₂S₄ + 2H₂O.

Sol. in H_2O . (Biltz, Z. anorg. 1906, 48. 304.)

Rubidium pentasulphide, Rb₂S₅.

Deliquescent. Decomp. by H_2O .

Very easily sol. in 70% alcohol.

Insol. in ether, ethyl sulphide or $CHCl_3$. (Biltz, B. 1905, 38. 127.)

Rubidium hydrogen sulphide, RbHS.

Deliquescent, very sol in H_2O . (Biltz, Z. anorg. 1906, 48. 300)

Rubidium copper tetrasulphide, RbCuS₄.

Decomp. very slowly in the air.

Sl. sol. in H_2O

Very slowly decomp. by cold conc., more rapidly by hot conc., and still more rapidly by dil. HCl , H_2SO_4 and HNO_3 . Sl. sol in alcohol (Biltz, B. 1907, 40. 978.)

Ruthenic acid.**Barium ruthenate, BaRuO₄+H₂O**

Ppt. (Debray and Joly, C. R. 106. 1494.)

Calcium ruthenate, CaRuO₄.

Ppt.

Magnesium ruthenate, MgRuO₄.

Ppt.

Potassium ruthenate, K₂RuO₄+H₂O.

Very sol in H_2O .

Perruthenic acid.**Potassium perruthenate, KRuO₄.**

Sl. sol. in H_2O (Debray and Joly, C. R. 106. 1494.)

Sodium perruthenate, NaRuO₄+H₂O.

Sl. sol. in H_2O .

Ruthenium, Ru.

Not attacked by acids, except aqua regia, which dissolves it only very slightly. (Claus, Pogg. 65. 218)

Ruthenium ammonium comps.

See Ruthenochamine comps, etc.

Ruthenium tribromide, RuBr₃.

Sol. in H_2O . Solution decomposes slowly on standing, but rapidly on heating. (Gutbier, Z. anorg. 1905, 45. 178.)

Ruthenium tribromide, ammonia,

$2\text{RuBr}_3, 7\text{NH}_3$.

Sol. in H_2O and ammonia with slight warming.

Insol. in alcohol. (Gutbier, Z. anorg. 1905, 45. 182)

Ruthenium dichloride, RuCl₂.

Insol. in acids, even in aqua regia. Sl. attacked by acids. Traces are dissolved by boiling with conc. $\text{KOH}+\text{Aq}$.

+ $x\text{H}_2\text{O}$. Known only in aqueous solution. (Claus, A. 59. 238.)

Ruthenium trichloride, RuCl₃.

Deliquescent. Sol. in H_2O and alcohol, but solution is decomp. by heating into Ru_2O_3 and HCl . (Claus)

Pure RuCl_3 is insol. in cold H_2O , mineral, or organic acids. Slowly decomp. by boiling H_2O . Insol. in CCl_4 , CS_2 , CHCl_3 , PCl_3 , or ether. Slowly sol. in hot absolute alcohol, but decomp. into $\text{Ru}(\text{OH})\text{Cl}_2$ by 95% alcohol. (Joly, C. R. 114. 292)

Hydroscopic.

Sol. in H_2O ; decomp. at 50° .

Sol. in alcohol. (Gutbier, Z. anorg. 1905, 45. 174)

See also Ruthenium nitrosochloride.

Ruthenium tetrachloride, RuCl₄.

Sol. in H_2O and alcohol. (Claus.)

Ruthenium trichloride with MCl.

See Chlororuthenite, M.

Ruthenium tetrachloride with MCl.

See Chlororuthenate, M.

Ruthenium sesquihydroxide, Ru₂O₃H₃.

Sol. in acids, insol. in alkalis. Less sol. in $\text{NH}_4\text{OH}+\text{Aq}$ than any other oxide of the Pt metals. (Claus)

Ruthenium dihydroxide, RuO₄H₄+3H₂O.

Sol. in acids and alkalis. (Claus, A. 59. 237.)

Contains NO. Joly, C. R. 107. 994.)

Ruthenium triiodide, RuI₃

Ppt. (Claus.)

Insol. in H_2O , $\text{KI}+\text{Aq}$, and alcohol. (Gutbier, Z. anorg. 1905, 45. 181.)

Ruthenium triiodide ammonia,

$2\text{RuI}_3, 7\text{NH}_3$.

Sol. in H_2O and ammonia with slight warming.

Insol. in alcohol. (Gutbier, Z. anorg. 1905, 45. 182.)

Ruthenium nitrosochloride, RuCl₃(NO)+H₂O, and 5H₂O.

Slowly sol. in cold, easily in hot H_2O . (Joly, C. R. 108. 855)

Ruthenium dihydronitrosochloride, NO Ru₂H₂Cl₃, 2HCl.

Sol. in H_2O . (Brizard, A. ch. 1900, (7) 21. 353.)

Ruthenium silver nitrosochloride,

$\text{NO Ru}_2\text{H}_2\text{Cl}_3, 2\text{HCl}, 3\text{AgCl}$.

Ppt. (Brizard, A. ch. 1900, (7) 21. 357.)

Ruthenium nitrososessquioxide, Ru₂O₃(NO)₂+2H₂O.

Ppt. (Joly, C. R. 108. 854.)

Ruthenium dihydronitrosohydroxide,
 $\text{NO} \cdot \text{Ru}_2\text{H}_2(\text{OH})_3 + 2\text{H}_2\text{O}$ Sl sol in cold H_2O with decomp (Brizard, A. ch. 1900, (7) 21. 349.)**Ruthenium dihydronitrosoxychloride,**
 $\text{NO} \cdot \text{Ru}_2\text{H}_2\text{Cl}_2\text{OH} + 2\text{H}_2\text{O}$

Ppt (Brizard, A. ch. 1900, (7) 21. 349.)

Ruthenium monoxide, RuO .

Insol in acids. (Claus, A. 59. 236.)

Ruthenium sesquioxide, Ru_2O_3 .Insol. in acids. Mixture of Ru and RuO_2 . (Debray and Joly, C. R. 106. 1494.)

See Ruthenium nitrososesequioxide.

Ruthenium dioxide, RuO_2 .

Insol. in acids. (Debray and Joly.)

Ruthenium trioxide, RuO_3 .

"Ruthenic acid." Known only in its salts.

Ruthenium tetroxide, RuO_4 .Rather difficultly and slowly sol. in H_2O (Claus.)Decomp. in aqueous solution into $\text{Ru}_2\text{O}_5 + 2\text{H}_2\text{O}$. (Debray and Joly.)**Ruthenium pentoxide, Ru_2O_5 .**

(Debray and Joly, C. R. 106. 1494.)

 $+ 2\text{H}_2\text{O}$. Ppt. (Debray and Joly.)**Ruthenium heptoxide, Ru_2O_7 .**

"Perruthenic acid." Known only in its salts.

Ruthenium oxide, Ru_4O_9 .

(Debray and Joly.)

Ruthenium oxychloride, $\text{Ru}(\text{OH})\text{Cl}_2$.Very sol. in H_2O , but decomp. by an excess. (Joly, C. R. 114. 293.)**Ruthenium silicide, RuSi .**Insol. in boiling acids; slowly attacked by a mixture of fused KHSO_4 and KNO_3 . (Moissan, C. R. 1903, 137. 231.)**Ruthenium trisulphide, RuS_3 .**

Ppt. (Antony, Gazz. ch. it. 1900, 30. 539.)

Ruthenomonamine hydroxide,

See Ruthenosamine hydroxide.

Ruthenodiamine carbonate,Easily sol. in H_2O . Insol. in alcohol. (Claus.)**Ruthenodiamine chloride,**
 $\text{Ru}(\text{N}_2\text{H}_5\text{Cl})_2 + 3\text{H}_2\text{O}$ Not very sol. in cold, easily sol. in hot H_2O . Insol. in alcohol

See Ruthenonitrosodiamine comps.

— mercuric chloride, $\text{Ru}(\text{N}_2\text{H}_5\text{Cl})_2, \text{HgCl}_2$.Nearly insol. in cold, sol. in hot H_2O . (Gibbs, Sill Am J. (2) 34, 350.)— chloroplatinate, $\text{Ru}(\text{N}_2\text{H}_5\text{Cl})_2, \text{PtCl}_4$.Sl. sol. in H_2O . (Claus.)— hydroxide, $\text{Ru}(\text{N}_2\text{H}_5\text{OH})_2$.

Known only in aqueous solution.

— nitrate, $\text{Ru}(\text{N}_2\text{H}_5\text{NO}_3)_2 + 2\text{H}_2\text{O}$ Somewhat difficultly sol. in cold, easily in hot H_2O . Insol. in alcohol.— sulphate, $\text{Ru}(\text{N}_2\text{H}_5)_2\text{SO}_4 + 4\text{H}_2\text{O}$.Moderately sol. in H_2O . Insol. in alcohol. (Claus.)**Ruthenocyanhydric acid, $\text{H}_4\text{Ru}(\text{CN})_6$.**Easily sol. in H_2O and alcohol. Less sol. in ether. (Claus, J. B. 1855. 444.)**Potassium ruthenocyanide, $\text{K}_4\text{Ru}(\text{CN})_6 + 3\text{H}_2\text{O}$.**Sl efflorescent. Very sol. in H_2O ; sl. sol. in dil. alcohol. (Claus.)**Ruthenonitrosodiamine bromide,**Sl. sol. in H_2O . (Joly, C. R. 111. 969.) $\text{Ru}(\text{NO})\text{OH}(\text{NH}_3)_4\text{Br}_2$. Less sol. than corresponding chloride. (Joly, C. R. 108. 300.)— chloride, $\text{Ru}(\text{NO})(\text{NH}_3)_4\text{Cl}_2$.Sl. sol. in H_2O (Joly, C. R. 111. 969.) $\text{Ru}(\text{NO})\text{OH}(\text{NH}_3)_4\text{Cl}_2$. Sol. in H_2O . (Joly, C. R. 108. 1300.) $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_4\text{Cl}_2, \text{HCl} + \text{H}_2\text{O} (?)$. Very sol. in H_2O (Joly, C. R. 111. 969.)

— chloroplatinate,

Scarcely sol. in boiling H_2O . (Joly, C. R. 108. 1300.) $\text{Ru}(\text{NO})(\text{NH}_3)_4\text{Cl}_2, \text{PtCl}_4$. Ppt. (Joly, C. R. 111. 969.)— iodide, $\text{Ru}(\text{NO})(\text{NH}_3)_4\text{I}_2$.Sl. sol. in H_2O . (Joly, C. R. 111. 969.) $\text{Ru}(\text{NO})\text{OH}(\text{NH}_3)_4\text{I}_2$. Less sol. than the corresponding bromide. (Joly, C. R. 108. 1300.)— nitrate, $\text{Ru}(\text{NO})(\text{NH}_3)_4(\text{NO}_3)_2$.More sol. in H_2O than $\text{Ru}(\text{NO})\text{OH}(\text{NH}_3)_4(\text{NO}_3)_2$. (Joly, C. R. 111. 969.)

$\text{Ru}(\text{NO})\text{OH}(\text{NH}_3)_4(\text{NO}_3)_2$. Sl. sol. in cold H_2O , insol. in conc. $\text{HNO}_3 + \text{Aq}$ (Joly, C. R. 108. 1300)

Ruthenonitrosodiamine sulphate,

Sl. sol in H_2O . (Joly, C. R. 111. 969)

$[\text{Ru}(\text{NO})(\text{NH}_3)_4]_2(\text{SO}_4)_6, \text{H}_2\text{SO}_4 + \text{H}_2\text{O}$. Decomp. by cold H_2O (Joly)

$\text{Ru}(\text{NO})(\text{OH})_4(\text{NH}_3)_4\text{SO}_4 + \text{H}_2\text{O}$. Most sol. in H_2O of this class of salts. (Joly, C. R. 108. 1300)

Ruthenonitrous acid.

Ammonium ruthenonitrite, $\text{RuH}_2(\text{NO}_2)_4, 3\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$

Easily sol. in H_2O , practically insol. in $\text{KCl} + \text{Aq}$. (Brizard, A. ch. 1900, (7) 21. 368)

Potassium ruthenonitrite,

Easily sol. in H_2O , alcohol, or ether. (Gibbs, Sill. Am J. (2), 34. 344.)

Sl. sol. in H_2O . Easily sol. in $\text{KNO}_2 + \text{Aq}$. (Claus)

$\text{K}_4\text{Ru}_2(\text{NO}_2)_{10} = \text{Ru}_2\text{O}_2(\text{N}_2\text{O}_3)_3, 4\text{KNO}_2$. Very sol. in H_2O (Joly and Vèzes, C. R. 109. 667.)

$\text{K}_8\text{Ru}_2(\text{NO}_2)_{14} = \text{Ru}_2\text{O}_2(\text{N}_2\text{O}_3)_2, 8\text{KNO}_2$. Sl. sol. in H_2O . Sol. in cold dil. acids. (Joly and Vèzes.)

$\text{Ru}_2\text{H}_2(\text{NO}_2)_4, 3\text{KNO}_2 + 4\text{H}_2\text{O}$. Very sol. in H_2O . Aqueous solution decomp. sl. on long boiling. Almost insol in conc. $\text{KCl} + \text{Aq}$. (Brizard, C. R. 1899, 129. 216.)

Silver ruthenonitrite, $\text{NO} \cdot \text{Ru}_2\text{H}_2(\text{NO}_2)_4, 3\text{AgNO}_2 + 2\text{H}_2\text{O}$.

Ppt. (Brizard, A. ch. 1900, (7) 21. 368.)

Sodium ruthenonitrite, $\text{Ru}_2(\text{NO}_2)_6, 4\text{NaNO}_2 + 4\text{H}_2\text{O}$.

Very sol. in H_2O without decomp. (Joly, C. R. 1894, 118. 469.)

Ruthenosamine hydroxide,

Very deliquescent, and sol. in H_2O . (Claus.)

Samarium, Sm.

The element has not been isolated.

Samarium bromide, $\text{SmBr}_3 + 6\text{H}_2\text{O}..$

Very deliquescent. (Cleve.)

Samarium carbide, SmC_2 .

Decomp. by water and acids. (Moissan, C. R. 1900, 131. 925.)

Samarium dichloride, SmCl_2 .

Decomp. by H_2O with liberation of H_2 and formation of samarium oxide and samarium oxychloride. Insol in CS_2 , CHCl_3 , benzene, abs. alcohol, pyridine and toluene. (Matignon, C. R. 1906, 142. 85.)

Samarium trichloride, SmCl_3 .

The anhydrous salt is very hygroscopic and easily sol. in H_2O . (Matignon, C. R. 1902, 134. 1309.)

Very sol. in H_2O . Very sol. in abs. alcohol. 6.38 g. are sol in 100 grams pyridine at ord. temp; insol. in quinoline. (Matignon, A. ch. 1906, (8) 8. 406.)

$+3\text{H}_2\text{O}$. Deliquescent.

Samarium chloride ammonia, $\text{SmCl}_3 + \text{NH}_3$; $+2\text{NH}_3$; $+3\text{NH}_3$; $+4\text{NH}_3$; $+5\text{NH}_3$; $+8\text{NH}_3$; $+9.5\text{NH}_3$; $+11.5\text{NH}_3$.

(Matignon, C. R. 1905, 140. 143)

Samarium fluoride, $\text{SmF}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Precipitate Insol. in H_2O and dil. acids, (Cleve.)

Samarium iodide, SmI_3 .

(Matignon, A. ch. 1906, (8) 8. 413.)

Samarium hydroxide, $\text{Sm}_2(\text{OH})_6$.

Insol. in alkalis; easily sol. in acids, and decomposes ammonium salts (Cleve, C. N. 51. 145.)

Samarium oxide, Sm_2O_3 .

Easily sol. in acids. (Cleve, C. N. 51. 145.)

Samarium peroxide, Sm_4O_9 .

Precipitate. (Cleve.)

Samarium oxychloride, SmOCl .

(Matignon, A. ch. 1906, (8) 8. 412.)

Samarium sulphide, Sm_2S_3 .

(Matignon, A. ch. 1906, (8) 8. 415.)

Scandium, Sc.

Element has not been isolated

Scandium bromide, $\text{Sc}_2\text{Br}_6 + 3\text{H}_2\text{O}$, and $+12\text{H}_2\text{O}$.

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium chloride, $\text{Sc}_2\text{Cl}_6 + 3\text{H}_2\text{O}$, and $+12\text{H}_2\text{O}$.

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium hydroxide.

Easily sol. in conc. HNO_3 or $\text{HCl} + \text{Aq}$. (Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium oxide, Sc_2O_3 .

Easily sol by boiling with conc. HNO_3 or $\text{HCl} + \text{Aq.}$

Scandium sulphide, Sc_2S_3 .

Decomp by H_2O and by acids with evolution of H_2S (Wirth, Z. anorg. 1914, 87. 5.)

Selenantimonic acid.

Sodium selenantimonate, $\text{Na}_3\text{SbSe}_4 + 9\text{H}_2\text{O}$.

Sol in 2 pts cold H_2O . Insol. in alcohol. (Hofacker, A. 107. 6.)

Sl. sol. in H_2O ; unstable (Pouget, A. ch. 1899, (7) 18. 562.)

Selenantimonous ac d.

Potassium orthoselenantimonite, K_2SbSe_3 .

Ppt. Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 560.)

Potassium paraselenantimonite, $\text{K}_2\text{Sb}_4\text{Se}_7 + 3\text{H}_2\text{O}$.

Sl. sol in H_2O ; unstable. (Pouget, A. ch. 1899, (7) 18. 560.)

Sodium orthoselenantimonite, $\text{Na}_3\text{SbSe}_3 + 9\text{H}_2\text{O}$.

Very sol in H_2O . Aqueous solution on standing deposits red crystals of sodium selenantimonate, $\text{Na}_3\text{SbSe}_4 + 9\text{H}_2\text{O}$. (Pouget, A. ch. 1899, (7) 18. 562.)

Sodium paraselenantimonite, $\text{Na}_2\text{Sb}_4\text{Se}_7$.

(Pouget, A. ch. 1899, (7) 18. 561.)

Selenic acid, H_2SeO_4 .

Very sol in H_2O with evolution of heat.

If aqueous solution is evaporated at temp. of 165° , acid has 2.524 sp. gr.; at temp. of 267° , acid has 2.60 sp. gr.; at temp. of 285° , acid has 2.625 sp. gr. Decomp. to H_2SeO_3 at higher temp. (Mitscherlich, Pogg. 9. 623.)

By evaporation at 265° acid of 2.609 sp. gr. containing 95% H_2SeO_4 is obtained. If brought at same temp in vacuo over H_2SO_4 , acid of 2.627 sp. gr. with 97.5% H_2SeO_4 is obtained. (Fabian, A. Suppl. 1. 243.)

Sp. gr. of $\text{H}_2\text{SeO}_4 + \text{Aq.}$

% H_2SeO_4	Sp. gr.	% H_2SeO_4	Sp. gr.
99.73	2.6083	90.0	2.3848
99.50	2.6051	89.0	2.3568
99.00	2.6975	88.0	2.3291

(Diemer and Lenher. J. phys. Chem. 1909, 13. 509.)

Sol. in conc. or fuming H_2SO_4 .
Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)Decomp. by alcohol.
+ H_2O . (Cameron and Macallan, C. N. 59. 232.)
+ $2\text{H}_2\text{O}$, and + $6\text{H}_2\text{O}$ (?). (C. and M.)
+ $4\text{H}_2\text{O}$. (Kremann and Hofmeier, M. 1908, 29. 1117.)

Selenates.

All the neutral and acid salts of H_2SeO_4 are sol. in H_2O , except BaSeO_4 , SrSeO_4 , CaSeO_4 , and PbSeO_4 , which are nearly or quite insol. in H_2O or $\text{HNO}_3 + \text{Aq}$.Aluminum selenate, $\text{Al}_2(\text{SeO}_4)_3$.

Resembles in every way aluminum sulphate. (Berzelius.)

Aluminum ammonium selenate,

More sol. in H_2O than the corresponding sulphate. (Wohlwill, A. 114. 191.)Aluminum caesium selenate, $\text{Al}_2\text{Cs}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

(Peterson, B. 9. 1563.)

Much more sol. in H_2O than the corresponding sulphate. (Fabre, C. R. 105. 114.)Aluminum potassium selenate, $\text{Al}_2\text{K}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.More sol. in H_2O than common alum. (Weber, Pogg. 108. 615.)Aluminum rubidium selenate, $\text{Al}_2\text{Rb}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

(Peterson, B. 9. 1563.)

Much more sol. in H_2O than the corresponding sulphate. (Fabre, C. R. 105. 114.)Aluminum sodium selenate, $\text{Al}_2\text{Na}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.Sl. efflorescent. Very sol. in H_2O . (Wohlwill, A. 114. 191.)Aluminum thallium sulphate, $\text{Al}_2\text{Tl}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.Sol. in H_2O . (Fabre, C. R. 105. 114.)Aluminum selenate potassium sulphate, $\text{Al}_2(\text{SeO}_4)_3, \text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$.Sol. in H_2O . (v. Gerichten, A. 168. 222.)Ammonium selenate, $(\text{NH}_4)_2\text{SeO}_4$.Easily sol. in H_2O .100 g. H_2O dissolve 117 g. $(\text{NH}_4)_2\text{SeO}_4$ at 7° ; 164 g. at 59° ; 197 g. at 100° . (Tutton, Proc. Roy. Soc. 1907, 79, A. 351.)
Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 826.)Ammonium hydrogen selenate, NH_4HSeO_4 .Sol. in H_2O . (Topsoe.)Ammonium cadmium selenate, $(\text{NH}_4)_2\text{SeO}_4, \text{CdSeO}_4 + 2\text{H}_2\text{O}$.Sol. in H_2O . (Topsoe, W. A. B. 66. 2. 2.)
+ $6\text{H}_2\text{O}$. Efflorescent. Very easily sol. in H_2O . (Topsoe.)

Ammonium cerous selenate,
 $(\text{NH}_4)_2\text{Ce}_2(\text{SeO}_4)_4 + 9\text{H}_2\text{O}$.

Easily sol. in H_2O . (Jolin.)

Ammonium chromium selenate,
 $(\text{NH}_4)_2\text{Cr}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

Sol in H_2O . (Fabre, C. R. 105. 114)

Ammonium cobaltous selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{CoSeO}_4 + 6\text{H}_2\text{O}$.

Easily sol in H_2O . (Topsoë.)

Ammonium cupric selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{CuSeO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoë.)

Ammonium didymium selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{Di}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve.)

+10 H_2O . (Cleve, Bull. Soc. (2) 43. 363.)

Ammonium erbium selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{Er}_2(\text{SeO}_4)_3 + 4\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve)

Ammonium ferrous selenate, $(\text{NH}_4)_2\text{Fe}(\text{SeO}_4)_2$
+6 H_2O .

Easily sol. in H_2O . (Topsoë.)

+2 H_2O .

Ammonium lanthanum selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{La}_2(\text{SeO}_4)_3 + 9\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

Ammonium magnesium selenate,
 $(\text{NH}_4)_2\text{Mg}(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Topsoë.)

Ammonium manganous selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{MnSeO}_4 + 6\text{H}_2\text{O}$.

Not deliquescent. Easily sol. in H_2O .
(Topsoë.)

Ammonium nickel selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{NiSeO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoë.)

Ammonium samarium selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{Sm}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve.)

Ammonium thallium selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{Tl}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Fortini, C. C. 1903, II. 706.)

Ammonium uranyl selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $(\text{UO}_2)\text{SeO}_4 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O . (Sendtner.)

Ammonium yttrium selenate, $(\text{NH}_4)_2\text{SeO}_4$,
 $\text{Y}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$.

Very sol. in H_2O . (Cleve.)

Ammonium zinc selenate,
 $(\text{NH}_4)_2\text{SeO}_4$, $\text{ZnSeO}_4 + 6\text{H}_2\text{O}$.

Sol in H_2O . (Topsoë)

Antimony selenate.

Insol. in H_2O . Not very sol. in acids. Sol.
in H_2SeO_4 . (Cameron and Macallan.)

Barium selenate, BaSeO_4 .

Somewhat more sol in H_2O and dil. acids
than BaSO_4 . (Rose.) 100 ccm. H_2O dissolve
11.8 mg. in the cold, and 13.8 mg. at 100°.
(Petersson, Z. anal. 12. 287.)

Not decomp. by H_2SO_4 . Insol. in HNO_3 +
Aq (Berzelius), but decomp. by solution of
alkali carbonates at ordinary temp.

Very slowly decomp. by HCl + Aq. (Rose,
Pogg. 95. 426.)

Bismuth selenate.

Insol. in, and not decomp. by cold or hot
 H_2O . (Cameron and Macallan)

Cæsium selenate, Cs_2SeO_4 .

Sol. in H_2O . (Petersson, B. 9. 1561.)

100 g. H_2O at 12° dissolve 244.8 g. Cs_2SeO_4 .
(Tutton, Chem. Soc. 1897, 71. 850.)

Sp. gr. of Cs_2SeO_4 + Aq at 20° compared
with H_2O at 4°, containing:

% Cs_2SeO_4	45.94	53.43
Sp. gr.	1.5841	1.7432

(Tutton.)

Cæsium hydrogen selenate, CsHSeO_4 .

Ppt. Very hygroscopic. (Norris, Am. Ch.
J. 1901, 26. 322.)

Cæsium chromic selenate, $\text{Cs}_2\text{Cr}_2(\text{SeO}_4)_4$ +
24 H_2O .

Sol. in H_2O . (Fabre, C. R. 105. 114.)

Cæsium cobaltous selenate, $\text{Cs}_2\text{Co}(\text{SeO}_4)_2$ +
6 H_2O .

Sol. in H_2O . (Topsoë.)

Cæsium indium selenate, $\text{CsIn}(\text{SeO}_4)_2$ +
12 H_2O .

Efflorescent; sol. in H_2O . (Mathers, J.
Am. Chem. Soc. 1908, 30. 215.)

Cæsium iron (ferric) selenate, $\text{Cs}_2\text{Fe}_2(\text{SeO}_4)_4$
+24 H_2O .

Sl. sol. in H_2O . (Roncogliolo, Gazz. ch.
it. 1905, 35. (2) 553.)

Cæsium magnesium selenate, Cs_2SeO_4 ,
 $\text{MgSeO}_4 + 6\text{H}_2\text{O}$.

(Tutton, Chem. Soc. 1905, 87, 1163.)

Cæsium zinc selenate, $\text{Cs}_2\text{Zn}(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$.

(Tutton, Zeit. Kryst. 1900, 33. 14.)

Cadmium selenate, $\text{CdSeO}_4 \cdot 2\text{H}_2\text{O}$.

Very sol. in H_2O . (v. Hauer, W. A. B. 39. 299.)

Cadmium potassium selenate, $\text{CdSeO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Sol. in H_2O ; can be recrystallized without decomp. (v. Hauer, W. A. B. 54. 209.)

Calcium selenate, $\text{CaSeO}_4 \cdot 2\text{H}_2\text{O}$.

Less sol. in hot than in cold H_2O . (v. Hauer, J. pr. 80. 214.)

Sat. $\text{CaSeO}_4 + \text{Aq}$ contains at:

—1°	+5°	20°	37°	67°
7.4	7.3	7.6	6.8	5.1%

CaSeO_4 (Étard, A. ch. 1894, (7) 2. 551.)

Cerous selenate, $\text{Ce}_2(\text{SO}_4)_3 \cdot 6\text{H}_2\text{O}, 9\text{H}_2\text{O}$, or $12\text{H}_2\text{O}$.

More sol. in cold than hot H_2O (Jolin.)

+4 H_2O . Very easily in cold, sl. sol. in hot H_2O . (Cingolani, C. C. 1908, I. 1606.)

Stable above 100°.

+5 H_2O . Stable at 92–100°.

+7 H_2O . Stable at 80–92°.

+8 H_2O . Stable at 50–78°.

+10 H_2O . Stable at 34–40°.

+11 H_2O . Stable at 12–28°.

+12 H_2O . Stable at 0–12°. (Cingolani, C. A. 1908. 2658.)

Solubility of $\text{Ce}_2(\text{SeO}_4)_3$ in H_2O at t°.

(G. salt calculated as anhydrous $\text{Ce}_2(\text{SO}_4)_3$ dissolved in 100 cc. H_2O .)

t°	Using $\text{Ce}_2(\text{SeO}_4)_3$ +11 H_2O	Using $\text{Ce}_2(\text{SeO}_4)_3$ +4 H_2O	t°	Using $\text{Ce}_2(\text{SeO}_4)_3$ +11 H_2O	Using $\text{Ce}_2(\text{SeO}_4)_3$ +4 H_2O

(Cingolani, l. c.)

Cerous potassium selenate, $\text{Ce}_2(\text{SeO}_4)_3, 5\text{K}_2\text{SeO}_4$.

More sol. in H_2O than the corresponding sulphate. (John.)

Cerous sodium selenate, $\text{Ce}_2(\text{SeO}_4)_3, \text{Na}_2\text{SeO}_4 + 5\text{H}_2\text{O}$.

Quite sol. in H_2O . (Jolin.)

Chromic potassium selenate, $\text{Cr}_2\text{K}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

Resembles the sulphate in every particular.

Chromic rubidium selenate, $\text{Cr}_2\text{Rb}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O .

Chromic sodium selenate, $\text{Cr}_2\text{Na}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O (Fabre, C. R. 105. 114.)

Chromic thalious selenate, $\text{Cr}_2\text{Th}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Fabre, C. R. 105. 114.)

Chromic selenate potassium sulphate, $\text{Cr}_2(\text{SeO}_4)_3, \text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O . (v. Gerichten.)

Cobaltous selenate, basic, $4\text{CoO}, 3\text{SeO}_3 + \text{H}_2\text{O}$.

Insol. in H_2O ; sol. in acids. (Bogdan, Bull. Soc. (3) 9. 586.)

$\text{Co}_3(\text{OH})_2(\text{SeO}_4)_3$. Insol. in H_2O . Sol. in acids. (Bogdan, C. C. 1895. 630.)

Cobaltous selenate, $\text{CoSeO}_4 + 5\text{H}_2\text{O}$

Easily sol. in H_2O . (Topsoë.)

+6 H_2O . Easily sol. in H_2O . (Topsoë.)

+7 H_2O . Efflorescent. Extremely sol. in H_2O . (Topsoë.)

+18 H_2O . Very unstable. (Copaux, A. ch. 1905, (8) 6. 553.)

Cobaltous potassium selenate, $\text{CoSeO}_4, \text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$.

More sol. in H_2O than corresponding sulphate. (v. Hauer, W. A. B. 39. 837.)

Cobaltous rubidium selenate, $\text{CoRb}_2(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$

Sol. in H_2O . (Topsoë.)

Cobaltous thalious selenate, $\text{CoTh}_2(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoë.)

Cupric selenate, basic, $3\text{CuO}, 2\text{SeO}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in acids. (Bogdan, Bull. Soc. (3) 9. 588.)

+5 H_2O . Sl. sol. in cold H_2O (Metzner, C. R. 1898, 127. 55.)

Cupric selenate, $\text{CuSeO}_4 + 5\text{H}_2\text{O}$

Solubility in H_2O :—

257 g. salt in 1 l. sat. solution at 15°.

346 " " " 1 l. " " " 35°.

435 " " " 1 l. " " " 55°.

Aq. solution decomp. at 70°. (Metzner, C. R. 1898, 127. 55.)

+ H_2O , and +2 H_2O . (Metzner.)

Cupric hydrazine selenate, $\text{N}_2\text{H}_4 \cdot \text{H}_2\text{SeO}_4, \text{CuSeO}_4 + \frac{1}{2}\text{H}_2\text{O}$.

Decomp. in aq. solution. (Rimini, C. C. 1907, I. 86.)

Cupric magnesium selenate , $\text{CuMg}_3(\text{SeO}_4)_4 + 28\text{H}_2\text{O}$ Sol. in H_2O . (Wohlwill.)	Glucinum selenate , $\text{GlSeO}_4 + 4\text{H}_2\text{O}$. Very sol. in H_2O . (Atterberg.)
Cupric nickel selenate , CuSeO_4 , $\text{NiSeO}_4 + 14\text{H}_2\text{O}$. Sol. in H_2O (Wohlwill)	Gold (auric) selenate , $\text{Au}_2(\text{SeO}_4)_3$. Insol. in H_2O . Sol. in hot conc. $\text{H}_2\text{SeO}_4 + \text{Aq}$ Somewhat sol. in H_2SO_4 and $\text{HNO}_3 + \text{Aq}$. Decomp by $\text{HCl} + \text{Aq}$ (Lenher, J. Am. Chem. Soc. 1902, 24. 355)
Cupric potassium selenate , CuSeO_4 , $\text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$. Sl. sol. in H_2O . (Topsoe.)	Indium selenate , $\text{In}_2(\text{SeO}_4)_3 + 10\text{H}_2\text{O}$. Hydrosopic; easily sol in H_2O . (Mathers, J. Am Chem. Soc. 1908, 30. 214.)
Cupric zinc selenate , $\text{CuZn}_3(\text{SeO}_4)_4 + 28\text{H}_2\text{O}$. Sol. in H_2O . (Wohlwill)	Iron (ferrous) selenate , $\text{FeSeO}_4 + 5\text{H}_2\text{O}$. Sol. in H_2O . (Wohlwill, A. 114. 169.) $+ 7\text{H}_2\text{O}$. Efflorescent, and sol. in H_2O . (Topsoe.)
Cupric selenate ferrous sulphate , 2CuSeO_4 , $3\text{FeSO}_4 + 35\text{H}_2\text{O}$. Sol. in H_2O . (Wohlwill.)	Iron (ferrous) potassium selenate , FeSeO_4 , $\text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$. Easily sol. in H_2O . Solution decomp. somewhat on standing. (Topsoe.)
Cupric selenate magnesium sulphate , CuSeO_4 , $3\text{MgSO}_4 + 28\text{H}_2\text{O}$. Sol. in H_2O . (Wohlwill.)	Iron (ferric) rubidium selenate , $\text{Rb}_2\text{Fe}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ Sl. sol. in H_2O . (Roncogliolo, Gazz. ch. it. 1905, 35. (2) 553.)
Cupric selenate zinc sulphate , CuSeO_4 , $3\text{ZnSO}_4 + 28\text{H}_2\text{O}$. Sol. in H_2O . (Wohlwill)	Iron (ferric) selenate potassium sulphate , $\text{Fe}_2(\text{SeO}_4)_3$, $\text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$. Sol. in H_2O . (v. Gerichten.)
Didymium selenate , $\text{Di}_2(\text{SeO}_4)_3 + 5\text{H}_2\text{O}$, and $6\text{H}_2\text{O}$. Sol. in H_2O . $+ 8\text{H}_2\text{O}$. Easily sol in H_2O . (Cleve.) $+ 10\text{H}_2\text{O}$. Sol. in H_2O . (Cleve)	Lanthanum selenate , $\text{La}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$, and $10\text{H}_2\text{O}$. Easily sol. in cold H_2O . (Cleve.) $+ 12\text{H}_2\text{O}$ (Frerichs and Smith, A. 191. 355.)
Didymium potassium selenate , $\text{Di}_2(\text{SeO}_4)_3$, $\text{K}_2\text{SeO}_4 + 9\text{H}_2\text{O}$. Not deliquescent. Easily sol in H_2O . (Cleve.)	Lanthanum potassium selenate , $\text{La}_2(\text{SeO}_4)_3$, $\text{K}_2\text{SeO}_4 + 9\text{H}_2\text{O}$. Quite sol. in H_2O . (Cleve.)
Didymium sodium selenate , $\text{Di}_2(\text{SeO}_4)_3$, $\text{Na}_2\text{SeO}_4 + 4\text{H}_2\text{O}$. Easily sol. in H_2O . (Cleve.)	Lanthanum sodium selenate , $\text{La}_2(\text{SeO}_4)_3$, $\text{Na}_2\text{SeO}_4 + 4\text{H}_2\text{O}$. Easily sol. in H_2O . (Cleve.)
Dysprosium selenate , $\text{Dy}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$. Easily sol. in H_2O ; insol. in alcohol. (Jantsch, B. 1911, 44. 1275.)	Lead selenate, basic , 2PbO , SeO_3 . Decomp. by acids with separation of PbSeO_4 3PbO , $\text{PbSeO}_4 + \text{H}_2\text{O}$. Ppt. (Strömhölm, Z. anorg. 1904, 38. 443.)
Erbium selenate , $\text{Er}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$, and $9\text{H}_2\text{O}$. Easily sol. in H_2O . (Topsoe.)	Lead selenate , PbSeO_4 . Insol. in H_2O or $\text{HNO}_3 + \text{Aq}$. (Schafarik, W. A. B. 47. 256) Min. <i>Kerstenite</i> .
Erbium potassium selenate , $\text{Er}_2(\text{SeO}_4)_3$, $\text{K}_2\text{SeO}_4 + 8\text{H}_2\text{O}$. Easily sol. in H_2O . (Cleve.)	Lithium selenate , $\text{Li}_2\text{SeO}_4 + \text{H}_2\text{O}$. Not deliquescent. Easily sol. in H_2O . (Topsoe.)
Gadolinium selenate , $\text{Gd}_2(\text{SeO}_4)_3 + 10\text{H}_2\text{O}$. Decomp. in the air. (Benedicks, Z. anorg. 1900, 22. 410.)	
Gadolinium potassium selenate , $\text{Gd}_2(\text{SeO}_4)_3$, $3\text{K}_2\text{SeO}_4 + 4\text{H}_2\text{O}$. Sol. in H_2O . (Benedicks, Z. anorg. 1900, 22. 412.)	

Magnesium selenate, $\text{MgSeO}_4 + 6\text{H}_2\text{O}$.

Solubility resembles closely that of MgSO_4 (Topsoe.)

Magnesium potassium selenate, $\text{MgK}_2(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Topsoë)

Magnesium rubidium selenate, $\text{MgSeO}_4, \text{Rb}_2\text{SeO}_4 + 6\text{H}_2\text{O}$.

(Tutton, Chem. Soc. 1905, 87. 1163)

Manganous selenate, $\text{MnSeO}_4 + 2\text{H}_2\text{O}$.

Easily sol. in H_2O (Topsoe)
+ $5\text{H}_2\text{O}$. Easily sol. in H_2O . Solution
decomp. on warming or standing. (Topsoe.)

Manganous potassium selenate, $\text{K}_2\text{SeO}_4, \text{MnSeO}_4$.

Not deliquescent. Easily sol. in H_2O . (Topsoe)

Mercurous selenate, $6\text{Hg}_2\text{O}, 5\text{SeO}_3$.

Very sl. sol. in H_2O . Sl. attacked by boiling HNO_3 . Insol. in $\text{HCl} + \text{Aq}$. (Köhler, Pogg. 89. 146)

Hg_2SeO_4 . Very sl. sol. in H_2O ; insol. in $\text{HCl} + \text{Aq}$ (Cameron and Davy, C. N. 44. 63.)

Mercuric selenate, basic, $6\text{HgO}, 2\text{SeO}_3 + \text{H}_2\text{O}$.

Insol. in H_2O , or cold $\text{HNO}_3 + \text{Aq}$. Sol. in hot HNO_3 or $\text{HCl} + \text{Aq}$. (Köhler.)

$\text{HgSeO}_4, 2\text{HgO}$. Sol. in 10,330 pts. H_2O . (Cameron and Davy.)

Mercuric selenate, $\text{HgSeO}_4 + \text{H}_2\text{O}$.

Decomp. by H_2O with formation of basic salt. (Köhler.)

Sol. in $\text{H}_2\text{SeO}_4, \text{H}_2\text{SO}_4, \text{HNO}_3$, or $\text{HCl} + \text{Aq}$, but decomp. by H_2O to $2\text{HgO}, \text{HgSeO}_4$. (Cameron and Davy, C. N. 44. 63.)

Nickel selenate, $\text{NiSeO}_4 + 6\text{H}_2\text{O}$.

Very easily sol. in H_2O . (v. Hauer, W. A. B. 39. 305.)

Nickel potassium selenate, $\text{NiSeO}_4, \text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoë.)

Nickel thallium selenate, $\text{NiSeO}_4, \text{Tl}_2\text{SeO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Petersson.)

Platinum selenate.

Sol. in boiling H_2O . Sol. in $\text{HCl} + \text{Aq}$. Insol. in alcohol. (Cameron and Macallan, Lond. R. Soc. Proc 46. 13.)

Potassium selenate, K_2SeO_4 .

Nearly equally sol. in cold and hot H_2O . (Mitscherlich, Pogg. 9. 623.)

100 g. H_2O dissolve 110.5 g. K_2SeO_4 at 0° ; 112.8 g. at 20° ; 122.2 g. at 100° . (Étard, C. R. 1888, 106. 741.)

Sat. $\text{K}_2\text{SeO}_4 + \text{Aq}$ contains at:

-20°	-5°	$+5^\circ$
51.5	51.7	52.0% K_2SeO_4 ,

18°	97°
52.6	54.9% K_2SeO_4 .

(Étard, A. ch. 1894, (7) 2. 550.)

100 g. H_2O at 12° dissolve 115.0 g. K_2SeO_4 . (Tutton, Chem. Soc. 1897, 71. 850)

Sp. gr. of $\text{K}_2\text{SeO}_4 + \text{Aq}$ at 20° compared with H_2O at 4° , containing:

% K_2SeO_4	35.76	41.79	50.00
Sp. gr.	1.3591	1.4385	1.5590

(Tutton, Chem. Soc. 1897, 71. 851.)

Potassium hydrogen selenate, KHSeO_4 .

Sol. in H_2O .

Potassium praseodymium selenate, $3\text{K}_2\text{SeO}_4, \text{Pr}_2(\text{SeO}_4)_3 + 4\text{H}_2\text{O}$.

Sl. sol. in H_2O . (von Scheele, Z. anorg. 1898, 18. 361.)

Potassium samarium selenate, $\text{K}_2\text{SeO}_4, \text{Sm}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Cleve, Bull. Soc. (2) 43. 166.)

Potassium sodium selenate, $3\text{K}_2\text{SeO}_4, \text{Na}_2\text{SeO}_4$.

Sol. in H_2O . (Topsoë)

Potassium thallium selenate, $\text{K}_2\text{SeO}_4, \text{Tl}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$.

Very sol. in dil. acids. (Fortini, C. C. 1903, II. 706.)

Potassium uranyl selenate, $\text{K}_2\text{SeO}_4, (\text{UO}_2)\text{SeO}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in cold, easily in hot H_2O . (Sendtner.)

Potassium yttrium selenate, $\text{K}_2\text{SeO}_4, \text{Y}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$.

Very sol. in H_2O . (Cleve.)

Potassium zinc selenate, $\text{K}_2\text{SeO}_4, \text{ZnSeO}_4 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoe.)
+ $6\text{H}_2\text{O}$. Sol. in H_2O . (Topsoë.)

Potassium selenate aluminum sulphate, $\text{K}_2\text{SeO}_4, \text{Al}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$.

Sol. in H_2O (v. Gerichten.)

Potassium selenate chromic sulphate,
 $K_2SeO_4, Cr_2(SO_4)_3 + 24H_2O$.
 Sol. in H_2O . (v. Gerichten.)

Potassium selenate ferric sulphate, $K_2SeO_4,$
 $Fe_2(SO_4)_3 + 24H_2O$.
 Sol. in H_2O . (v. Gerichten.)

Potassium selenate manganous sulphate,
 $K_2SeO_4, MnSO_4 + 6H_2O$.
 Sol. in H_2O . (v. Gerichten, A. 168. 225.)

Potassium selenate manganic sulphate,
 $K_2SeO_4, Mn_2(SeO_4)_3 + 24H_2O$.
 Sol. in H_2O . (v. Gerichten.)

Praseodymium selenate, $Pr_2(SeO_4)_2$.
 Sol. in H_2O . (von Schule, Z. anorg. 1898,
 18. 360.)
 $+8H_2O$. Sl. sol. in H_2O ; sol. in H_2SO_4 .
 (von Schule.)

Rubidium selenate, Rb_2SeO_4 .
 Sol. in H_2O . (Pettersson)
 100 g. H_2O at 12° dissolve 158.9 g. Rb_2SeO_4 .
 (Tutton, Chem. Soc. 1897, 71. 850.)
 Sp. gr. of $Rb_2SeO_4 + Aq$ at 20° compared
 with H_2O at 4° , containing:

% Rb_2SeO_4	40.60	47.07
Sp. gr.	1.4688	1.5806

 (Tutton.)

Rubidium hydrogen selenate, $RbHSeO_4$
 Sol. in equal pts. H_2O ; very hygroscopic.
 (Norris, Am. Ch. J. 1901, 26. 321.)

Rubidium zinc selenate, $Rb_2Zn(SeO_4)_2 + 6H_2O$.
 (Tutton, Zeit. Kryst. 1900, 33. 8.)

Samarium selenate, $Sm_2(SeO_4)_3 + 8H_2O$.
 More sol. in H_2O than $Sm_2(SO_4)_3$.
 $+12H_2O$. Efflorescent. (Cleve.)

Scandium selenate, $Sc_2(SeO_4)_3 + 2H_2O$, and
 $+8H_2O$.
 (Crookes, Roy. Soc. Proc. 1908, 80, A.
 518.)

Silver selenate, Ag_2SeO_4
 As Ag_2SO_4 . (Mitscherlich, Pogg. 12. 138.)

Silver selenate ammonia, $Ag_2SeO_4, 4NH_3$.
 Easily sol. in H_2O or $NH_4OH + Aq$ without
 decomp. (Mitscherlich, Pogg. 12. 141.)

Sodium selenate, Na_2SeO_4 .
 Very sol. in H_2O , forming supersat. solu-
 tions. Cryst. also with $10H_2O$, which
 effloresce. Maximum point of solubility is
 at 33° . (Mitscherlich.)

Solubility in H_2O at t° .

t°	% Na_2SeO_4	Mols H_2O to 1 mol Na_2SeO_4	Mols. anhy- drous salt to 100 mols H_2O
35 2	45 47	12 59	7 94
39 5	45 26	12 70	7 87
50	44.49	13 10	7 63
75	42 83	14 00	7 14
100	42 14	14 42	6 93

(Funk, B. 1900, 33. 3697)

 $+10H_2O$. Solubility in H_2O at t° .

t°	% Na_2SeO_4	Mols H_2O to 1 mol. Na_2SeO_4	Mols. anhy- drous salt to 100 mols. H_2O
0	11 74	79 08	1 26
15	25 01	31 48	3 18
25 2	36 91	17 95	5.57
27	39 18	16 30	6 13
30	44 05	13 33	7 50

(Funk.)

Sp. gr. of sat. solution at $18^\circ = 1.315$.
 (Funk.)

Sodium selenate vanadate.
 Se_2^4 Selenovanadate, sodium.

Strontium selenate, $SrSeO_4$.

Insol. in H_2O or $HNO_3 + Aq$; decomp. by
 long boiling with $HCl + Aq$.

Tellurium selenate, $2TeO_2, SeO_3$.

As sulphate. (Metzner, A. ch. 1898, (7)
 15. 203.)

Thalious selenate, Tl_2SeO_4 .

Sl. sol. in cold, much more in hot H_2O .
 Insol. in alcohol and ether (Kuhlmann.)

100 g. H_2O dissolve 2.13 g. at 9.3° ; 2.4 g.
 at 12° ; 10.86 g. at 100° . (Tutton, Proc.
 Roy. Soc. 1907, 79. A. 351.)

2.8 g. are sol. in 100 g. H_2O at 20° ; 8.5 g.
 at 80° . (Glauser, Z. anorg. 1910, 66. 437.)

Thalious hydrogen selenate, $HTlSeO_4 + 3H_2O$.

(Oettinger.)

Thalious zinc selenate, $Tl_2SeO_4, ZnSeO_4 + 6H_2O$.

Easily sol. in H_2O , but less than the cor-
 responding sulphate (Werther, Bull. Soc.
 1865. 60.)

Thorium selenate, $Th(SeO_4)_4 + 9H_2O$.

100 pts. H_2O dissolve 0.498 pt. $Th(SeO_4)_4$
 at 0° , and 1.972 pts. at 100° . (Cleve.)

Tin (stannic) selenate, basic, $\text{SnO}(\text{SeO}_4) + \text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Ditte, C. R. 104. 231.)

Uranyl selenate, $(\text{UO}_2)\text{SeO}_4, \text{H}_2\text{SeO}_4 + 18\text{H}_2\text{O}$

Very deliquescent.
 $2(\text{UO}_2)\text{SeO}_4, \text{H}_2\text{SeO}_4 + 12\text{H}_2\text{O}$. Efflorescent Sol in H_2O . (Sendtner, A. 195. 325.)

Ytterbium selenate, $\text{Yb}_2(\text{SeO}_4)_3$.

Anhydrous
 $+15\text{H}_2\text{O} (?)$, $+8\text{H}_2\text{O}$. Ppt. (Cleve, Z. anorg. 1902, 32. 145)

Yttrium selenate, $\text{Y}_2(\text{SeO}_4)_3$.

Anhydrous. Sol. in H_2O with hussing and evolution of heat. (Popp.)
 $+8\text{H}_2\text{O}$. Easily sol in H_2O . (Cleve.)
 $+9\text{H}_2\text{O}$. Efflorescent.

Zinc selenate, $\text{ZnSeO}_4 + 5\text{H}_2\text{O}$.

Sol. in H_2O . (Topsoë.)
 $+6\text{H}_2\text{O}$. Sol. in H_2O . (Topsoë.)
 $+7\text{H}_2\text{O}$. Sol. in H_2O .

Selenious acid, H_2SeO_3 .

Deliquescent in moist, efflorescent in dry air. Very sol. in cold, and in nearly every proportion in hot H_2O . Easily sol. in alcohol. (Berzelius.)

Sp. gr. of H_2SeO_3 and of $\text{H}_2\text{SeO}_3 + \text{Aq}$ at t° .
 Two series of experiments.

	t°	Sp gr. at t°
$\text{H}_2\text{SeO}_3 + \text{Aq}$ (A)	18.0	1.4386
1 vol. A + 0.5 vol. H_2O	18.0	1.3179
" + 1.0 "	17.7	1.2337
" + 1.5 "	16.6	1.2045

" + 3.0 "	14.2	1.1678

(de Connck, C. C. 1905, I. 1693.)

See also **Selenium dioxide**.

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

Selenites.

Alkali selenites are sol. in H_2O . The other neutral selenites are insol. in H_2O , but sol. in $\text{HNO}_3 + \text{Aq}$, Pb, and Ag salts slowly. The

neutral salts are insol. in $\text{HCl} + \text{Aq}$. The acid salts of the heavy metals are sol. in H_2O .

Aluminum selenite, basic, $4\text{Al}_2\text{O}_3, 9\text{SeO}_2 + 36\text{H}_2\text{O}$.

Precipitate. (Nilson, Upsala, 1875.)

Aluminum selenite, $\text{Al}_2(\text{SeO}_3)_3$.

Precipitate. (Berzelius.)
 $+7\text{H}_2\text{O}$. Sl. sol. in H_2O . (Nilson.) Sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$.
 $+3\text{H}_2\text{O}$. Insol. in H_2O ; sol. in acids. (Boutzoureano, A. ch. (6) 17. 289.)

Aluminum selenite, acid, $\text{Al}_2\text{O}_3, 4\text{SeO}_2 + 3\text{H}_2\text{O}$.

(Boutzoureano.)
 $2\text{Al}_2\text{O}_3, 9\text{SeO}_2 + 12\text{H}_2\text{O}$. Sol. in H_2O . (Nilson.)
 $\text{Al}_2\text{O}_3, 6\text{SeO}_2$. Very sol. in H_2O . (Berzelius.)
 $+5\text{H}_2\text{O}$. (Nilson.)
 $+2\text{H}_2\text{O}$. (Boutzoureano.)

Ammonium selenite, $(\text{NH}_4)_2\text{SeO}_3$.

Deliquescent. Very sol. in H_2O .
 Precipitated from aqueous solution by alcohol. Insol. in ether. (Muspratt, A. 70. 275.)

Ammonium hydrogen selenite, NH_4HSeO_3 .

Not deliquescent. Sol. in H_2O . (Berzelius.)

Ammonium trihydrogen selenite,
 $\text{NH}_4\text{H}_3(\text{SeO}_3)_2$

Deliquescent. (Berzelius.)

Ammonium vanadium selenite.

See **Vanadioselenite, ammonium**.

Ammonium uranyl selenite, $(\text{NH}_4)_2\text{SeO}_3, (\text{UO}_2)\text{SeO}_3$.

Completely insol. in H_2O . (Sendtner.)

Antimony selenite, $\text{Sb}_2(\text{SeO}_3)_3, \text{SeO}_2$.

(Nilson, Bull. Soc. (2) 23. 494.)

Barium selenite, BaSeO_3 .

Sl. sol. in H_2O . Sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$. So in acids. (Nilson.)
 $+ \text{H}_2\text{O}$. (Nilson.)

Barium pyroselenite, BaSe_2O_6 .

Very sl. sol. in cold, more in warm H_2O . (Berzelius.)

Bismuth selenite, $\text{Bi}_2(\text{SeO}_3)_3, \text{H}_2\text{SeO}_3$.

(Nilson.)
 $\text{Bi}_2(\text{SeO}_3)_3$ (Nilson.)

Cadmium selenite, CdSeO_3 .

Insol. in H_2O . Sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Muspratt, Chem. Soc. 2. 65.)

2CdO , $3\text{SeO}_2 + \text{H}_2\text{O}$. Insol. in H_2O ; sol. in acids. (Boutzoureano.)
 $+ \frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O ; sol. in dil. acids. (Boutzoureano.)

Cadmium selenite ammonia, CdSeO_3 , NH_3 .
 Insol. in cold or hot H_2O . (Boutzoureano, A. ch. (6) 17. 289.)

Calcium selenite, $\text{CaSeO}_3 + \frac{1}{3}\text{H}_2\text{O}$.
 Very sl. sol. in H_2O . (Berzelius.) More sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$.
 $+ 2\text{H}_2\text{O}$. (Nilson.)

Calcium hydrogen selenite, $\text{CaH}_2(\text{SeO}_3)_2 + \text{H}_2\text{O}$.
 Quite sol. in H_2O . (Nilson.)
 $\text{Ca}_2\text{H}_2\text{Se}_4\text{O}_{11}$. Easily sol. in H_2O . (Nilson.)

Cerous selenite, basic, $2\text{Ce}_2\text{O}_3$, $5\text{SeO}_2 + 30\text{H}_2\text{O}$.
 Precipitate. (Nilson.)

Cerous selenite, $\text{Ce}_2(\text{SeO}_3)_3 + 3\text{H}_2\text{O}$.
 Insol. in H_2O . Sol. in much selenious acid. (Jolin.)
 $+ 12\text{H}_2\text{O}$. (Nilson.)

Cerous selenite, acid, Ce_2O_3 , $4\text{SeO}_2 + 5$, or $6 \text{H}_2\text{O}$.
 Insol. in H_2O , but sol. in selenious, and other acids. (Jolin.)
 Ce_2O_3 , $6\text{SeO}_2 + 5\text{H}_2\text{O}$. Not decomp. by H_2O . (Nilson.)

Ceric selenite, $\text{Ce}(\text{SeO}_3)_2$.
 Insol. in H_2O .
 Sl. sol. in conc. HNO_3 . Sol. in dil. acids. Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$. (Barbieri, B. 1910, 43. 2215.)

Chromium selenite, basic, $4\text{Cr}_2\text{O}_3$, $9\text{SeO}_2 + 64\text{H}_2\text{O}$.
 Precipitate. (Nilson.)

Chromic selenite, $\text{Cr}_2(\text{SeO}_3)_3 + 3\text{H}_2\text{O}$.
 (Boutzoureano.)
 $+ 15\text{H}_2\text{O}$. (Nilson.)
 Very sl. sol. or insol. in H_2O ; sl. sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$; sol. in hot conc. $\text{HCl} + \text{Aq}$. (Taquet, C. R. 96. 107.)

Chromic selenite, acid, Cr_2O_3 , $4\text{SeO}_2 + 13\text{H}_2\text{O}$.
 Slowly sol. in $\text{HCl} + \text{Aq}$. Insol. in H_2O . (Nilson.)
 Cr_2O_3 , $5\text{SeO}_2 + 9\text{H}_2\text{O}$. Insol. in H_2O . (Nilson.)

Chromic diselenite.
 Insol. in H_2O ; sol. in acids. (Taquet, C. R. 97. 1435.)

Cobaltous selenite, CoSeO_3 .
 Insol. in H_2O . (Berzelius.)
 $+ \frac{1}{3}\text{H}_2\text{O}$ Insol. in H_2O ; sol. in acids. (Boutzoureano, A. ch. (6) 17. 289.)

Cobaltous hydrogen selenite, $\text{CoH}_2(\text{SeO}_3)_2$.
 Sol. in H_2O . (Berzelius.)
 $+ 2\text{H}_2\text{O}$. Sol. in H_2O with decomp. (Boutzoureano)

Cuprous selenite.
 Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Berzelius.)

Cupric selenite, basic, 2CuO , SeO_2 .
 Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Boutzoureano.)
 Sol. in acids.

Cupric selenite, $\text{CuSeO}_3 + \frac{1}{2}\text{H}_2\text{O}$.
 Insol. in H_2O or $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Berzelius.)
 $+ \text{H}_2\text{O}$, and $2\text{H}_2\text{O}$. (Boutzoureano.)
 $+ 2\text{H}_2\text{O}$. Min. *Chalcomenite*. Insol. in H_2O or $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Friedel and Sarasin, Zeit. Kryst. 1881, 6. 300.)

Cupric selenite, acid, CuO , $2\text{SeO}_2 + \text{H}_2\text{O} = \text{CuH}_2(\text{SeO}_3)_3$.
 Insol. in H_2O . Sol. in acids. (Nilson.)
 $+ 2\text{H}_2\text{O}$. As above. (Boutzoureano.)
 $+ 4\text{H}_2\text{O}$. As above. (B)

Cupric selenite ammonia, CuSeO_3 , $\text{NH}_3 + \text{H}_2\text{O}$.
 Decomp. by H_2O . (Boutzoureano, A. ch. (6) 17. 289)

Didymium selenite, basic, $3\text{Di}_2\text{O}_3$, $8\text{SeO}_2 + 28\text{H}_2\text{O}$.
 Precipitate. (Nilson.)
 $+ 21\text{H}_2\text{O}$. Insol. in H_2O . (Cleve, Bull. Soc. (2) 43. 363.)

Didymium selenite, $\text{Di}_2(\text{SeO}_3)_3 + 6\text{H}_2\text{O}$.
 Precipitate. (Smith.)

Didymium selenite, acid, Di_2O_3 , $4\text{SeO}_2 + 5\text{H}_2\text{O}$.
 Precipitate. (Cleve.)
 Composition is $\text{Di}_2(\text{SeO}_3)_3 + 6\text{H}_2\text{O}$. (Smith.)
 $+ 9\text{H}_2\text{O}$. (Nilson.)
 $2\text{Di}_2\text{O}_3$, $9\text{SeO}_2 + 18\text{H}_2\text{O}$. (Nilson.)

Erbium selenite, $\text{Er}_2(\text{SeO}_3)_3 + 5\text{H}_2\text{O}$, and $9\text{H}_2\text{O}$.
 Precipitate. (Nilson.)

Erbium hydrogen selenite, $\text{Er}_2\text{H}_2(\text{SeO}_3)_4 + 4\text{H}_2\text{O}$.
 Decomp. by hot H_2O .

<p>Gadolinium hydrogen selenite, $Gd_2(SeO_3)_3, H_2SeO_3 + 6H_2O$. Ppt. (Benedicks, Z. anorg. 1900, 22. 413.)</p>	<p>Iron (ferric) selenite, acid, $Fe_2O_3, 6SeO_2 + xH_2O$. Insol. in H_2O. Sol. in $HCl + Aq$. (Berzelius.) $+ 2H_2O$. (Boutzoureano, A. ch. (6) 17. 289.) $Fe_2O_3, 4SeO_2 + H_2O$. Insol. in H_2O; sol. in acids. (Boutzoureano.)</p>
<p>Glucinum selenite, basic, $5GfO, 2SeO_2 + 10H_2O$. Precipitate. (Nilson.) According to Atterberg, is $7GfO, 3SeO_2 + 14H_2O$. $2GfO, SeO_2 + 4H_2O$ (Atterberg, Bull. Soc. (2) 19. 497.) $3GfO, 2SeO_2 + 6H_2O$. Insol. in H_2O (Atterberg.)</p>	<p>Lanthanum selenite, basic, $3La_2O_3, 8SeO_2 + 28H_2O$. Precipitate. (Nilson.)</p>
<p>Glucinum selenite, $GfSeO_4 + 2H_2O$. Sol. in little H_2O, decomp. by excess. (Nilson.)</p>	<p>Lanthanum selenite, $La_2(SeO_3)_3 + 9H_2O$, or $12H_2O$. Insol. in H_2O. (Nilson.)</p>
<p>Glucinum selenite, acid. (a) $3GfO, 5SeO_2 + 3H_2O$; (b) $GfO, 2SeO_2 + H_2O$; (c) $3GfO, 7SeO_2 + 5H_2O$; (d) $GfO, 3SeO_2 + 2H_2O$. All are very sl. sol. in cold or warm H_2O. a, b, and c are sol. in warm H_2O containing HCl; d is sol. only in boiling dil. $HCl + Aq$. (Nilson.)</p>	<p>Lanthanum selenite, acid, $La_2H_4(SeO_3)_5 + 4H_2O$. (Nilson.) $La_2H_5(SeO_3)_5 + 2H_2O$. (Cleve.)</p>
<p>Indium selenite, basic, $In_3Se_9O_{30} + 64H_2O$. (Nilson.)</p>	<p>Lead selenite, $PbSeO_3$. Scarcely sol. in H_2O, even when it contains H_2SeO_3. Sl. sol. in $HNO_3 + Aq$. (Berzelius.)</p>
<p>Indium selenite, $In_2(SO_3)_3 + 6H_2O$. Sl. sol. in H_2O. (Nilson.)</p>	<p>Lithium selenite, $Li_2SeO_3 + H_2O$. Difficultly sol. in H_2O. (Nilson, Bull. Soc. (2) 21. 253.)</p>
<p>Indium hydrogen selenite, $In_2(SeO_3)_3, 3H_2SeO_3 + 4H_2O$. Sol. in H_2O. (Nilson.) $2In_2(SeO_3)_3, 3H_2SeO_3 + 12H_2O$. Sol. in H_2O. (Nilson.)</p>	<p>Lithium hydrogen selenite, $LiHSO_3$. Very sol. in H_2O. (Nilson.)</p>
<p>Iron (ferrous) selenite. Ppt. Sol. in $HCl + Aq$ with partial separation of Se. (Berzelius.)</p>	<p>Lithium trihydrogen selenite, $LiH_3(SeO_3)_2$. Not deliquescent. Sol. in H_2O. (Nilson.)</p>
<p>Iron (ferrous) hydrogen selenite. Sl. sol. in H_2O. (Berzelius.)</p>	<p>Lithium vanadium selenite. <i>See Vanadioselenite, lithium.</i></p>
<p>Iron (ferric) selenite, basic, $2Fe_2O_3, 3SeO_2 + xH_2O$. Insol. in H_2O. (Berzelius.) $Fe_2O_3, 2SeO_2$. Insol. in H_2O, easily sol. in acids. (Boutzoureano, A. ch. (6) 17. 289.) $3Fe_2O_3, 8SeO_2 + 28H_2O$. Insol. in H_2O. (Nilson.)</p>	<p>Magnesium selenite, $MgSeO_3 + 2H_2O$. Insol. in H_2O; sol. in dil. acids, especially if warm, also in $H_2SeO_3 + Aq$. (Boutzoureano, A. ch. (6) 18. 302.) $+ 3H_2O$. Very sl. sol. in hot H_2O. (Berzelius.) $+ 6H_2O$. As the $2H_2O$ salt. (Boutzoureano.) $+ 7H_2O$. Sl. sol. in H_2O. Easily sol. in acetic, and mineral acids. (Hilger, Z. anal. 13. 132.)</p>
<p>Iron (ferric) selenite, $Fe_2(SeO_3)_3 + 4H_2O$. Insol. in H_2O. (Muspratt, Chem. Soc. 2. 52.) $+ H_2O$. Insol. in H_2O. (Boutzoureano, A. ch. (6) 17. 289.) $+ 3H_2O$. Insol. in H_2O. (B.) $+ 10H_2O$. Insol. in H_2O. (B.)</p>	<p>Magnesium hydrogen selenite, $MgH_2(SeO_3)_2 + 3H_2O$. Very deliquescent. Easily sol. in H_2O. (Nilson.) Insol. in alcohol. (Muspratt.) $MgO, 2SeO_2$. Insol. in H_2O; sol. in acids. (Boutzoureano.)</p>
	<p>Magnesium tetrahydrogen selenite, $MgH_4(SeO_3)_3$, and $+ 3H_2O$. Sol. in H_2O. (Nilson.)</p>

Manganous selenite, $\text{MnSeO}_3 + \text{H}_2\text{O}$.

Precipitate (Nilson)
 $+ 2\text{H}_2\text{O}$. Insol. in H_2O . (Berzelius.)
 Sol. in cold $\text{HCl} + \text{Aq}$. (Muspratt)
 $+ \frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O ; sol. in dil acids
 (Boutzoureano.)

Manganous selenite, acid, MnSe_2O_5 .

Sol. in H_2O . (Berzelius; Nilson.)
 MnO , $2\text{SeO}_2 + \text{H}_2\text{O} = \text{MnH}_2(\text{SeO}_3)_2$.
 (Boutzoureano, A. ch. (6) 17. 289)
 $+ 5\text{H}_2\text{O}$. Decomp. by H_2O to MnSeO_3 .
 (Boutzoureano.)

Manganic selenite, basic, $\text{Mn}_2\text{O}_3, 2\text{SeO}_2$.

Insol. in H_2O , cold H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$;
 insol. in hot dil. H_2SO_4 or $\text{HNO}_3 + \text{Aq}$.
 (Laugier, C. R. 104. 1508.)
 Sol. in warm $\text{HCl} + \text{Aq}$ with decomp.

Manganic selenite, $\text{Mn}_2(\text{SeO}_3)_3 + 5\text{H}_2\text{O}$
 (Laugier.)

Manganic selenite, acid, $\text{Mn}_2\text{O}_3, 4\text{SeO}_2$

Insol. in H_2O , cold H_2SO_4 , and $\text{HNO}_3 + \text{Aq}$.
 Insol. in dil. hot H_2SO_4 , and $\text{HNO}_3 + \text{Aq}$. Sol.
 in cold $\text{HCl} + \text{Aq}$; and in $\text{H}_2\text{SO}_3 + \text{Aq}$ with
 separation of Se. (Laugier, C. R. 104. 1508.)

Mercurous selenite, basic, $3\text{Hg}_2\text{O}, 2\text{SeO}_2 + 5\text{H}_2\text{O}$.

(Boutzoureano.)

Mercurous selenite, Hg_2SeO_3

Insol. in H_2O or $\text{H}_2\text{SeO}_3 + \text{Aq}$ Sol. in hot
 $\text{HNO}_3 + \text{Aq}$. (Köhler, Pogg. 89. 146.)
 Sl. sol. in $\text{HCl} + \text{Aq}$, and $\text{KOH} + \text{Aq}$. (Berzelius.)

Mercurous selenite, acid, $3\text{Hg}_2\text{O}, 4\text{SeO}_2$.

Insol. in H_2O or $\text{H}_2\text{SeO}_3 + \text{Aq}$. Sl. sol. in
 boiling $\text{HNO}_3 + \text{Aq}$. (Köhler.)

Mercuric selenite, basic, $7\text{HgO}, 4\text{SeO}_2$.

Insol. in H_2O . Sl. sol. in $\text{HNO}_3 + \text{Aq}$.
 Easily sol. in $\text{HCl} + \text{Aq}$. (Köhler, Pogg. 89. 146.)

Mercuric selenite, HgSeO_3 .

Insol. in H_2O . (Berzelius.) Nearly insol.
 in $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{K}_2\text{SeO}_3 + \text{Aq}$. (Divers, Chem. Soc. 48. 585.)

Insol. in dil. $\text{HNO}_3 + \text{Aq}$; sol. in $\text{HCl} + \text{Aq}$.
 (Rosenheim and Pritze, Z. anorg. 1909, 63. 278.)

Solubility in $\text{Na}_2\text{SeO}_3 + \text{Aq}$ at 25° .

$\text{Na}_2\text{SeO}_3 + \text{Aq}$ Normality	% HgSeO_3
2.0	2.73
1.0	1.39
0.5	0.70
0.25	0.53
0.125	0.32
0.0625	0.18

(Rosenheim and Pritze, Z. anorg. 1909, 63. 281.)

$\text{HgSeO}_3, \text{H}_2\text{SeO}_3$. Easily sol. in H_2O ; very
 sl sol in alcohol (Berzelius.)
See also selenium dioxide.

Mercuric sodium selenite, $\text{HgSeO}_3, \text{Na}_2\text{SeO}_3$.

Decomp. by H_2O and alkalis with pptn.
 of HgSeO_3 . (Rosenheim and Pritze, Z.
 anorg. 1909, 63. 279.)

Mercuric selenite sodium chloride,

$\text{HgSeO}_3, \text{NaCl} + 2\text{H}_2\text{O}$.

Decomp. by H_2O (Rosenheim and Pritze,
 Z. anorg. 1909, 63. 280.)

Nickel selenite, $\text{NiSeO}_3 + \text{H}_2\text{O}$.

Insol. in H_2O ; sol. in $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Muspratt, Chem. Soc. 2. 52.)
 $+ \frac{1}{2}\text{H}_2\text{O}$ Insol. in H_2O (Boutzoureano,
 A. ch. (6) 17. 28)

Nickel selenite, acid.

Sol. in H_2O . (Berzelius.)

Potassium selenite, $\text{K}_2\text{SeO}_3 + \text{H}_2\text{O}$.

Very deliquescent. Sol. in nearly all pro-
 portions in H_2O Insol. in alcohol, which
 separates it as oil from aqueous solution.
 (Muspratt, Chem. Soc. 2. 52)

Potassium hydrogen selenite, KHSeO_3

Very deliquescent. Very sl. sol in alcohol.
 (Muspratt, Chem. Soc. 2. 52)

Potassium trihydrogen selenite, $\text{KH}_3(\text{SeO}_3)_3$.

Very deliquescent. Pptd from H_2O by
 alcohol. (Muspratt.)
 Not deliquescent. (Nilson.)

Potassium hydrogen pyroselenite, $\text{KHSe}_2\text{O}_5 + \text{H}_2\text{O}$.

(Muthmann, B. 1893, 26. 1015.)

Potassium uranyl selenite, K_2SeO_3 ,

$(\text{UO}_2)\text{SeO}_3$.

Absolutely insol. in H_2O . (Sendtner.)

Praseodymium hydrogen selenite,

$\text{Pr}_2(\text{SeO}_3)_3, \text{H}_2\text{SeO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (von Scheele, Z. anorg.
 1898, 18. 362.)

Samarium selenite, basic, $3\text{Sm}_2\text{O}_3, 8\text{SeO}_2 + 7\text{H}_2\text{O}$.

Precipitate. (Cleve.)

Samarium selenite, acid, $\text{Sm}_2\text{O}_3, 4\text{SeO}_2 + 5\text{H}_2\text{O}$.

Precipitate. (Cleve.)

Scandium selenite, $\text{Sc}_2(\text{SeO}_3)_3 + \text{H}_2\text{O}$.

Insol. precipitate.

- Scandium hydrogen selenite**, $\text{Sc}_2(\text{SeO}_3)_3$, $3\text{H}_2\text{SeO}_3$
 Insol. in H_2O . Not attacked by cold dil. acids, but easily if warmed.
- Silver selenite**, Ag_2SeO_3 .
 Very sl. sol. in cold, somewhat more sol. in hot H_2O . Easily sol. in hot $\text{HNO}_3 + \text{Aq}$, from which it is precipitated by H_2O (Berzelius.)
 Insol. in $\text{K}_2\text{SeO}_3 + \text{Aq}$; sl. sol. in dil $\text{HNO}_3 + \text{Aq}$. (Drivers, Chem. Soc. 49. 585)
- Silver selenite ammonia**, Ag_2SeO_3 , NH_3 .
 Insol. in boiling H_2O . (Boutzoureano, A. ch. (6) 17. 289.)
- Sodium selenite**, Na_2SeO_3
 Very sol. in H_2O . Insol. in alcohol. (Berzelius.)
 $+5\text{H}_2\text{O}$.
- Sodium selenite acid**, NaHSeO_3 .
 Permanent. Sol in H_2O .
 Na_2SeO_3 Sol in H_2O . (Sacc, A. ch. (3) 21. 119)
 $\text{NaHS}(\text{SeO}_3)_2$. Not deliquescent. Sol. in H_2O
- Sodium vanadium selenite**.
See Vanadioselenite, sodium.
- Strontium selenite**, $\text{SrSeO}_3 + 7\text{H}_2\text{O}$.
 Precipitate. Insol. in H_2O . Sol. in $\text{HNO}_3 + \text{Aq}$. (Muspratt.)
- Strontium hydrogen selenite**, $\text{SrH}_2(\text{SeO}_3)_2$.
 Easily sol. in hot or cold H_2O . (Nilson.)
 Nearly insol in hot or cold H_2O . (Berzelius.)
- Thalious selenite**, Tl_2SeO_3 .
 Easily sol. in H_2O . Insol. in alcohol and ether. (Kuhlmann, Bull. Soc. (2) 1. 330)
- Thalious hydrogen selenite**, TiHSeO_3 .
 More sol. in H_2O than the above comp. (Kuhlmann.)
- Thallic selenite**, $\text{Ti}_2(\text{SeO}_3)_3$.
 Insol. in H_2O . Sol. in dil. HNO_3 .
 Easily decomp. by HCl and H_2SO_4 . (Marino, Z. anorg. 1909, 62. 177.)
- Thorium selenite**, $\text{Th}(\text{SeO}_3)_2 + \text{H}_2\text{O}$, or $8\text{H}_2\text{O}$.
 Insol. in H_2O ; easily sol. in $\text{HCl} + \text{Aq}$. (Nilson.)
- Thorium selenite acid**, 2ThO_2 , $7\text{SeO}_2 + 16\text{H}_2\text{O}$.
 ThO_2 , $5\text{SeO}_2 + 8\text{H}_2\text{O}$. (Nilson.)
- Tin (stannic) selenite**.
 Insol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$, from which it is pptd. by H_2O (Berzelius.)
- Uranic selenite**, U_2O_3 , SeO_2 .
 Insol. in H_2O (Boutzoureano)
 $+2\text{H}_2\text{O}$. (B.)
- Uranic selenite acid**, $2\text{U}_2\text{O}_3$, $3\text{SeO}_2 + 7\text{H}_2\text{O}$.
 Insol. in H_2O . (Boutzoureano, A. ch. (6) 17. 289.)
- Uranyl selenite**, $(\text{UO}_2)\text{SeO}_3 + 2\text{H}_2\text{O}$.
 Precipitate. (Nilson.)
- Uranyl selenite acid**, 3UO_3 , $5\text{SeO}_2 + 7\text{H}_2\text{O}$, or $9\text{H}_2\text{O}$.
 Insol. in H_2O .
 UO_3 , $2\text{SeO}_2 + \text{H}_2\text{O} = (\text{UO}_3)_2\text{H}_2(\text{SeO}_3)_2$.
 Absolutely insol. in H_2O and $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Sendtner, A. 195. 325.)
- Vanadium selenite**.
See Vanadioselenious acid.
- Ytterbium selenite**, $\text{Yb}_2(\text{SeO}_3)_2$.
 Insol. precipitate.
- Ytterbium hydrogen selenite**, $\text{Yb}_2\text{H}_2(\text{SeO}_3)_4 + 4\text{H}_2\text{O}$.
 Insol. in H_2O .
- Yttrium selenite**, $\text{Y}_2(\text{SeO}_3)_3 + 12\text{H}_2\text{O}$.
 Insol. in H_2O or $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Berzelius.)
 Sol. in hot $\text{H}_2\text{SeO}_3 + \text{Aq}$. (Nilson.)
- Yttrium hydrogen selenite**, $\text{Y}_2\text{H}_2(\text{SeO}_3)_4 + 3\text{H}_2\text{O}$.
 Sl. sol in H_2O . Easily sol. in HCl or $\text{HNO}_3 + \text{Aq}$. (Cleve.)
- Zinc selenite**, ZnSeO_3 .
 Insol. in H_2O ; sol. in acids. (Boutzoureano, A. ch. (6) 18. 289.)
 $+2\text{H}_2\text{O}$. Insol. in H_2O . Sol. in H_2SeO_3 , or $\text{HNO}_3 + \text{Aq}$ (Muspratt, Chem. Soc. 2. 52)
- Zinc hydrogen selenite**, $\text{ZnH}_2(\text{SeO}_3)_2$.
 Easily sol. in H_2O . (Berzelius.)
 $+2\text{H}_2\text{O}$. Sol. in cold H_2O . (Boutzoureano.)
 ZnO , $4\text{SeO}_2 + 3\text{H}_2\text{O}$. Easily sol. in H_2O . (Wöhler, A. 63. 279.)
- Zinc selenite ammonia**, ZnSeO_3 , NH_3 .
 Insol. in cold or hot H_2O . (Boutzoureano, A. ch. (6) 17. 289.)
- Zirconium selenite basic**, 4ZrO_2 , $3\text{SeO}_2 + 18\text{H}_2\text{O}$.
 Precipitate. Sl. sol. in $\text{HCl} + \text{Aq}$. (Nilson.)

Zirconium selenite, $Zr(SeO_3)_2$

Absolutely insol. in H_2O , difficultly sol. in boiling $HCl + Aq.$ (Nilson.)
 $+ H_2O.$ (Nilson.)

Selenium, Se.

Insol. in H_2O . Schultz (J. pr. (2) 32. 390) has obtained a soluble colloidal modification which can be isolated by dialysis.

Insol. in $HCl + Aq.$ Decomp. by $HNO_3 + Aq.$ Sol. in fuming H_2SO_4 . (Schultz-Sellac, B. 4. 113)

1000 pts. CS_2 dissolve 1 pt. cryst. Se at boiling-point (46.6°), and 0.16 pt. at 0° (Mitscherlich, J. B. 1855. 314.) Solubility of Se in CS_2 is variable—1 pt. Se is sol. in 1376–2464–3746 pts. CS_2 at 20° (Rammelsberg, B. 7. 669) Cryst. Se, which is sol. in CS_2 , becomes insol. in CS_2 after heating to 110° , but after fusion is again sol. (Otto.)

Four modifications.—(1) Amorphous red, (2) crystalline red; (3) granular gray; (4) laminated. 1 and 2 are sol. in CS_2 , 3 and 4 are insol. in CS_2 . All forms are sol. in $SeCl_2$, from which crystallizes a black modification, insol. in CS_2 . CCl_4 with trace of CS_2 dissolves red Se slightly, black Se not at all. $Se(C_2H_5)_2$ dissolves all modifications in small but apparently equal quantities. (Rathke, A. 152. 181.)

According to Saunders (J. phys. Chem. 1900, 4. 428) selenium exists in three modifications.

1 Liquid, including vitreous, amorphous, and colloidal selenium.

a. Vitreous.

Sol. in liquid NH_3 at 25° . (Franklin, Am. Ch. J. 1898, 20. 820.)

Insol. in liquid NH_3 between -30° and $+10^\circ$. Franklin's results are due to impure selenium and not completely dry NH_3 . (Hugot, A. Ch. 1900, (7) 21. 5.)

Almost insol. in CS_2 . (Schützenberger *Chimie générale* 1. 438)

Action of light increases solubility in CS_2 . (Saunders, J. phys. Chem. 1900, 4. 456.)

Solubility in methylene iodide at 12° is 1.3 pts in 100. (Retgers, Z. anorg. 1893, 3. 343.)

Sol. in $SeSe_2$, ethyl selenide, and in ethyl sulphide.

Very sol. in Se_2Cl_2 . (Rathke, A. 1869, 152. 181)

b. Amorphous.

Completely sol. in CS_2 at ord. temp. if Se has not been heated. If heated or extracted with warm CS_2 it becomes partly insol. (Peterson, Z. phys. Chem. 1891, 81. 612)

Passes into red crystalline form in solution in CS_2 , C_6H_6 , isobutyric acid, acetophenone, acetone, $CHCl_3$, thiophene, toluene, benzonitrile, ethyl acetate, and alcohol. (Saunders, J. phys. Chem. 1900, 4. 463.)

Solution in quinoline, aniline, pyridine,

etc., cause conversion into gray metallic form

c. Colloidal.

Forms colloidal solution with H_2O .

A colloidal solution of Se in H_2O can be obtained. It is not decomp. by boiling, but is decomp. by electrolytes with separation of red selenium. (Guthier, Z. anorg. 1902, 32. 106.)

2. Red crystalline.

Sol. in CS_2 .

3. Gray, crystalline or metallic.

Sol. in selenium chloride and other solvents as vitreous Se. (Rathke, A. 1869, 152. 181.)

Sl. sol. in CS_2 , toluene, nitrobenzene, quinoline, aniline, and KOH . Pptd from conc $KOH + Aq$ in long needles with mpt. 219° . (Coste, C. R. 1909, 149. 674.)

Sol. in many organic substances at high temp. as quinoline, ethyl benzoate, aniline and naphthalene. (Saunders, J. phys. Chem. 1900, 4. 469.)

Completely insol. in CS_2 . (Saunders, J. phys. Chem. 1900, 4. 474)

Solubility of the two modifications of gray crystalline Se in CS_2 .

100 cc. boiling CS_2 dissolve mg. Se.

I	II	III
Mg. Se	Mg. Se	Mg. Se
3.2	4.1	2.7
2.8	4.0	2.2
3.6	2.9	1.9
3.3	2.8	1.0
2.2	2.9	2.0
	4.0	

I. Se heated 1 hr. at 140° . Modification A.

II. Modification A.

III. Se heated 48 hrs. at 190° – 200° . Modification B.

(Marc, Z. anorg. 1907, 53. 302.)

Se_2Br_2 dissolves 22% Se. (Schneider, Pogg. 128. 327.)

Red Se is sol. in $(NH_4)_2SO_3 + Aq.$ (Uelsmann, A. 116. 122.)

Sol. in alkalis and Mg sulphites + $Aq.$

365 pts. $K_2SO_3 + Aq$ dissolve 102 pts. Se.

360 pts. $MgSO_3, 3H_2O + Aq$ dissolve 116 pts. Se.

Insol. in $BaSO_3 + Aq.$ (Rathke and Zschiesche, J. pr. 92. 145.)

Sol. in $KCN + Aq$ with formation of $KSeCN$. (Franklin, Am. Ch. J. 1898, 20. 830.)

100 pts. methylene iodide dissolve 1.3 pts. Se at 12° . (Retgers, Z. anorg. 3. 343.)

Sol. in quinoline, but reacts with the solvent with evolution of H_2 . (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Selenium monobromide, Se_2Br_2 .

Insol. in H_2O , but gradually decomp thereby. Decomp. by absolute alcohol and benzene. Sol. in $\text{C}_2\text{H}_5\text{I}$, but soon decomposed. Miscible with CS_2 ; less sol in CHCl_3 and $\text{C}_2\text{H}_5\text{Br}$ (Schneider, Pogg. 128. 327.)

Selenium tetrabromide, SeBr_4 .

Sol. in H_2O with decomp. Decomp. by alcohol. Sol. in $\text{HCl} + \text{Aq}$; sl sol. in CS_2 , CHCl_3 , and $\text{C}_2\text{H}_5\text{Br}$. (Schneider, Pogg. 129. 450)

Decomp. by $\text{C}_2\text{H}_5\text{I}$.

Selenium bromotrichloride, SeCl_3Br

Insol. in CS_2 (Fvans and Ramsay, Chem. Soc. 45. 62.)

Selenium tetrabromide sulphur trioxide, $\text{SeBr}_4, 2\text{SO}_3$.

Decomp. by H_2O . (Prandtl, Z. anorg 1909, 62. 242.)

Selenium tribromochloride, SeClBr_3 .

See Selenium chlorotribromide.

Selenium monochloride, Se_2Cl_2 .

Gradually decomp. by H_2O . Dissolves all modifications of selenium on heating (Rathke, A. 152. 181). Insol. in conc H_2SO_4 , easily sol. in fuming H_2SO_4 . Sol. in CHCl_3 , C_6H_6 , CCl_4 . Gradually decomp. by H_2O , alcohol, and ether. (Divers and Shimose, B. 17. 862.) Sol. in CS_2 . (Evans and Ramsay, Chem Soc. 45. 62.)

Selenium tetrachloride, SeCl_4 .

Deliquescent on moist air. Decomp. with H_2O . (Berzelius, A. ch. 9. 225) Insol in CS_2 . Easily sol. in hot POCl_3 , from which it crystallizes on cooling. (Michaelis, Zeit Chem (2) 6. 460) Very sl. sol in CS_2 . (Evans and Ramsay, Chem. Soc. 45. 62.)

Selenium dichlorobromide, SeCl_2Br_2 .

(Evans and Ramsay, Chem. Soc. 45. 62.)

Selenium chlorotribromide, SeClBr_3 .

Very sl. sol in CS_2 (Evans and Ramsay.)

Selenium trichlorobromide, SeCl_3Br .

See Selenium bromotrichloride.

Selenium fluoride.

Sol. in conc. $\text{HF} + \text{Aq}$. Decomp. immediately by H_2O . (Knox.)

Selenium monoiodide, Se_2I_2 .

Decomp. by H_2O . All solvents of iodine dissolve out that element (Schneider, Pogg. 129. 627.)

Selenium tetraiodide, SeI_4 .

Slowly decomp. by much H_2O . Iodine is dissolved out by all solvents of that element. (Schneider, Pogg. 129. 627.)

Selenium nitride.

See Nitrogen selenide.

Selenium monoxide, SeO (?)

Sl sol. in H_2O . (Berzelius.)

Does not exist. (Sacc)

Selenium dioxide, SeO_2 .

Deliquescent. Easily sol. in H_2O and alcohol. Sol in glacial $\text{HC}_2\text{H}_3\text{O}_2$ (Hinsberg, A. 260. 40)

Solubility in H_2O between -3° and $+36^\circ$ $= 45.0 + 0.7692t$. (Etard, C. R. 1888, 106. 742.)

1 pt. is sol. in 2.67 pts. H_2O at 11.3°

1 pt. " " " 2.60 " " " 14°

1 pt. " " " 2.54 " " " 15.6°

(de Coninck, C. R. 1906, 142. 571.)

Sp. gr. of $\text{SeO}_2 + \text{Aq}$ at t° .

t°	% SeO_2	Sp gr
15 1	1	0.9923
15 3	2	1.0068
13 0	3	1.0200
13 0	4	1.0302
14 5	5	1.0346
14 8	6	1.0402
14 1	7	1.0535
15 0	8	1.0571
15.6	9	1.0719
15 2	10	1.0743

. (de Coninck, C. R. 1906, 142. 571.)

See also Selenious acid.

1 pt. SeO_2 is sol. in 9.84 pts. alcohol (93°) at 14°

1 pt. SeO_2 is sol. in 15.0 pts. methyl alcohol at 11.8°

1 pt. SeO_2 is sol. in 23.0 pts. acetone at 15.3°

1 pt. SeO_2 is sol. in 90.0 pts. acetic acid at 12.9° (de Coninck, C. R. 1906, 142. 572.)

Traces dissolve in acetic anhydride. Sol. in phenyl mercaptan. (Hinsberg, A. 1890, 260. 40.)

Insol. in pure C_6H_6 . (Clausnizer, A. 1879, 196. 271)

See Selenious acid.

Selenium trioxide, SeO_3 .

Not obtained in a pure state. (Cameron and Macallan.)

See Selenic acid.

Selenium dioxide hydrobromic acid, SeO_2 , 4HBr

Decomp. at 55° (Ditte, A. ch. (5) 10. 82.)

SeO_2 , 5HBr . Decomp. at 65° (Ditte, A. ch. (5) 10. 82.)

Selenium dioxide hydrochloric acid, SeO_2 , 2HCl

Decomp. at 26° .

SeO_2 , 4HCl . Decomp. at 0° . Sol. in H_2O without evolution of gas. (Ditte, A. ch. (5) 10. 82.)

Selenium dioxide sulphur trioxide, SeO_2 , SO_3

Decomp. violently by H_2O (Weber, B. 19. 3185.)

Composition may be $(\text{SeO})\text{SO}_4$ (?).

Selenium oxy-compounds.

See Selenyl compounds.

Selenium diphosphide, P_2Se .

See Phosphorus monoselenide.

Selenium tetraphosphide, P_4Se .

See Phosphorus semiselenide.

Selenium monosulphide, SeS .

Insol. in H_2O and ether. Sol. in CS_2 . Decomp. by alcohol (Ditte, C. R. 73. 625; 660.)

Other compounds of Se and S are probably mixtures of the two elements.

Selenium disulphide, SeS_2 .

Compound of this formula is a mixture of SeS and S . (Ditte, C. R. 73. 625, 660.)

Selenium sulphoxide, SeSO_3

Decomp. by H_2O . Sol. in fuming H_2SO_4 , conc. H_2SO_4 . Sol. in H_2SO_4 of 1.806 sp. gr. without decomp. (Weber, Pogg. 156. 531.)

Decomp. by H_2O ; sol. in H_2SO_4 . (Divers and Shimosé, B. 17. 858.)

Seleniuretted hydrogen, H_2Se .

See Hydrogen selenide.

Selenoarsenic acid.

Potassium selenoarsenate, $\text{KAsSe}_3 + 2\text{H}_2\text{O}$.

Only sl. sol. in cold H_2O ; sol. in warm H_2O with decomp.; more stable in $\text{KOH} + \text{Aq}$ (Clever, Z. anorg. 1895, 10. 132.)

Sodium selenoarsenate, $\text{Na}_3\text{AsSe}_4 + 9\text{H}_2\text{O}$

Very sol. in H_2O ; very unstable. (Szarvasy, B. 1895, 28. 2658.)

Selenoarsenious acid.

Sodium selenoarsenite, $\text{Na}_3\text{AsSe}_3 + 9\text{H}_2\text{O}$.

Moderately sol. in H_2O . (Clever and Muthmann, Z. anorg. 1895, 10. 139)

Selenobismuthous acid.

Potassium metaselenobismuthite, Bi_2Se_3 , K_2Se or KBiSe_2 .

Insol. in cold dil. $\text{HCl} + \text{Aq}$. Sol. on warming, with evolution of H_2Se . (Hilger and van Scherpenberg, Mitt. Pharm. II. 4)

Selenocyanhydric acid, HSeCN .

Known only in aqueous solution.

Ammonium selenocyanide, NH_4SeCN .

Very deliquescent, and sol. in H_2O .

Barium —, $\text{Ba}(\text{SeSCN})_2$.

Very sol. in H_2O .

Lead —, $\text{Pb}(\text{SeCN})_2$.

Sl. sol. in cold, sol. with sl. decomp. in boiling H_2O . Insol. in alcohol.

Mercurous —, $\text{Hg}_2(\text{SeCN})_2$.

Ppt.

Mercuric —, $\text{Hg}(\text{SeCN})_2$.

Sl. sol. in cold H_2O . Easily sol. in MCN , MSCN , or $\text{MSeCN} + \text{Aq}$; also sol. in hot $\text{HgCl}_2 + \text{Aq}$. (Cameron and Davy, C. N. 44. 63.)

Decomp. by hot H_2O (Rosenheim, Z. anorg. 1909, 63. 276.)

Mercuric potassium —, $\text{Hg}(\text{SeCN})_2$, KSeCN .

Easily sol. in H_2O . Sl. sol. in cold alcohol. (Cameron and Davy, C. N. 44. 63.)

Mercuric selenocyanide chloride,

$\text{Hg}(\text{SeCN})_2$, HgCl_2 .

Sol. in boiling H_2O and in abs. alcohol.

Decomp. by long boiling with H_2O . (Rosenheim and Pritze, Z. anorg. 1909, 63. 276.)

Platinum potassium — (Potassium platinum-selenocyanide), $\text{K}_2\text{Pt}(\text{SeCN})_2$.

Sol. in H_2O and alcohol. (Clarke, B. 11. 1325.)

Potassium —, KSeCN .

Very deliquescent, and sol. in H_2O with absorption of heat. More sol. in H_2O than KSCN . Sol. in alcohol.

Potassium — mercuric bromide, KSeCN , HgBr_2 .

Sl. sol. in cold, more easily in hot H_2O or alcohol. (Cameron and Davy, C. N. 44. 63.)

Potassium selenocyanide mercuric chloride,
 KSeCN , HgCl_2 .

As the bromide

Potassium — mercuric iodide, KSeCN ,
 HgI_2 .

Sl. sol in cold, easily in hot H_2O or alcohol
 (Cameron and Davy.)

Potassium — mercuric sulphocyanide,
 KSeCN , $\text{Hg}(\text{SCN})_2$.

Sl. sol in cold, much more in hot H_2O or
 alcohol. Somewhat sol. in ether. (Cameron
 and Davy)

Silver —, AgSeCN

Insol. in H_2O . Almost insol. in NH_4OH +
 Aq or cold dil acids. Quickly decomp by
 hot conc. acids.

Sodium —, NaSeCN .

Very sol. in H_2O .

Selenomolybdc acid.

Potassium selenomolybdate, $5\text{K}_2\text{O}$, 6SeO_2 ,
 17MoO_3 .

Readily sol. in H_2O without decomp.
 (Gibbs, Am. Ch. J 1895, 17. 177.)

Selenopentathionic acid.

Sodium selenopentathionate, $\text{Na}_2\text{S}_4\text{SeO}_6$.

A dil. solution may be boiled for some time
 without change (Norris and Fay, Am. Ch.
 J. 1900, 23. 121.)

Selenophosphoric acid.

Ammonium selenophosphate,
 $2(\text{NH}_4)_2\text{O}$, P_2O_5 , $2\text{SeO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland, B.
 1903, 36. 1402)

Potassium selenophosphate,
 $2\text{K}_2\text{O}$, P_2O_5 , $2\text{SeO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O with decomp.
 $3.5\text{K}_2\text{O}$, P_2O_5 , $5\text{SeO}_3 + 5.5\text{H}_2\text{O}$. Easily
 sol. in H_2O . (Weinland.)

Rubidium selenophosphate,
 $2\text{Rb}_2\text{O}$, P_2O_5 , $2\text{SeO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland.)

Triselenophosphorous acid.

Potassium triselenophosphite,
 $\text{K}_2\text{HPSe}_3 + 2\frac{1}{2}\text{H}_2\text{O}$.

Decomp. by moist air and dil. acids; sol.
 in conc. KOH + Aq.; sl. sol. in cold, easily sol.
 in hot H_2O . (Muthmann, Z. anorg. 1897,
 13. 198.)

Selenosamic acid, HSeO_2NH_2 .

Known only in its salts.

Ammonium selenosamate, $(\text{NH}_4)\text{SeO}_2\text{NH}_2$.

Deliquescent. Decomp. slowly by H_2O
 into $(\text{NH}_4)_2\text{SeO}_3$

1 pt. is sol. in 116 pts. cold alcoholic am-
 monia at 12° . More sol. in hot alcoholic
 ammonia. Sl. attacked by cold HCl or HNO_3 .
 (Cameron and Macallan, C. N. 1888, 57. 163.)

Ammonium hydrogen selenosamate,
 $\text{NH}_4\text{H}(\text{SeO}_2\text{NH}_2)_2$.

Deliquescent. Sol in 14 pts alcohol at
 14° . (Cameron and Macallan, Proc. Roy.
 Soc. 44. 112.)

Selenostannic acid.

Ammonium selenostannate, 3SnSe_2 , $(\text{NH}_4)_2\text{Se}$
 $+ 3\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. 95. 641)

Platinum potassium —, K_2Se , 3PtSe , SnSe_2 .

Insol. in hot or cold H_2O , NH_4OH , or
 KOH + Aq. Not attacked by hot HCl + Aq
 (Schneider, J. pr. (2) 44. 507.)

Platinum sodium —, Na_2Se , 3PtSe , SnSe_2 .

Properties as the corresponding K salt.
 (Schneider)

Potassium —, $\text{K}_2\text{SnSe}_3 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O . (Ditte, C. R. 95. 441.)

Selenosulphantimonic acid.

Sodium selenosulphantimonate, $\text{Na}_3\text{SbSeS}_3 +$
 $9\text{H}_2\text{O}$.

Sol. in H_2O . (Hofacker, A. 107. 6)
 $\text{Na}_3\text{SbS}_{1.5}\text{Se}_{2.5} + 9\text{H}_2\text{O}$. Somewhat sol. in
 H_2O . (Pouget, A. ch 1899, (7) 18. 564.)

Selenosulphantimonous acid.

Potassium selenosulphantimonite,
 $\text{Sb}_4\text{S}_3\text{Se}_3\text{K}_{10} + 4\text{H}_2\text{O}$.

Sol. in H_2O . (Pouget, A. ch. 1899, (7)
 18. 563.)

Sodium selenosulphantimonite, $\text{Na}_3\text{SbS}_{1.5}\text{Se}_{1.5}$
 $+ 9\text{H}_2\text{O}$.

Sol. in H_2O . (Pouget, A. ch. 1899, (7) 18.
 564.)

Selenosulpharsenic acid.

Potassium selenosulpharsenate, $3\text{K}_2\text{S}$, As_2Se_3
 $+ 12\text{H}_2\text{O}$.

Very unstable in the air. Very sol. in H_2O .
 Fairly stable in aqueous solution. Decomp.
 by acids. (Clever, Z. anorg. 1895, 10. 134.)

Sodium selenosulpharsenate, $\text{Na}_3\text{AsS}_3\text{Se} + 8\text{H}_2\text{O}$.

Decomp. by acids; stable in dry air. (Messinger, B. 1897, 30. 801.)

$3\text{Na}_2\text{S}_2\text{As}_2\text{Se}_3 + 18\text{H}_2\text{O}$. Quite sol in H_2O ; quite stable in air. (Clever, Z. anorg. 1895, 10. 140.)

$\text{Na}_3\text{As}_2\text{S}_3\text{Se}_3 + 16\text{H}_2\text{O}$. Sl. sol. in H_2O ; decomp. by acids (Messinger, B. 1897, 30. 803.)

$\text{Na}_3\text{As}_2\text{S}_7\text{Se} + 16\text{H}_2\text{O}$. Stable in dry air; easily sol. in H_2O ; decomp. by acids. (Messinger, B. 1897, 30. 800.)

$\text{Na}_3\text{As}_2\text{S}_2\text{Se}_2 + 9\text{H}_2\text{O}$. Decomp. in aq. solution by dil. acids. (Messinger, B. 1897, 30. 802.)

$\text{Na}_3\text{AsSSe}_3 + 9\text{H}_2\text{O}$. Sol in H_2O ; decomp. by aq acids; hygroscopic. (Messinger.)

Selenosulphophosphorous acid.

Potassium selenosulphophosphite, $2\text{K}_2\text{S}_2\text{P}_2\text{Se}_3 + 5\text{H}_2\text{O}$.

Sol. in H_2O ; decomp. by acids. (Muthmann, Z. anorg. 1897, 13. 198.)

Selenosulphostannic acid.

Ammonium selenosulphostannate, $(\text{NH}_4)_2\text{S}_3\text{SnSe}_2 + 3\text{H}_2\text{O}$.

Easily decomp. (Ditte, C. R. 1882, 95. 643.)

Potassium —, $\text{K}_2\text{SnSe}_2\text{S} + 3\text{H}_2\text{O}$.

Very easily sol. in H_2O . (Ditte, C. R. 95. 641.)

Sodium —, $\text{Na}_2\text{SnSe}_2\text{S} + 3\text{H}_2\text{O}$

Sol. in H_2O . (Ditte, C. R. 95. 641.)

Selenosulphoxyarsenic acid.

Sodium selenosulphoxyarsenate, $\text{Na}_3\text{AsO}_2\text{SSe} + 10\text{H}_2\text{O}$.

Easily sol. in H_2O but solution rapidly decomp (Messinger, B. 1897, 30. 798.)

$\text{Na}_6\text{As}_2\text{S}_3\text{SeO}_3 + 24\text{H}_2\text{O}$. Sol. in H_2O . (Messinger.)

$\text{Na}_6\text{As}_2\text{SeS}_3\text{O}_4 + 20\text{H}_2\text{O}$. Stable in dry air. Sl. sol. in H_2O ; decomp. by dil. acids (Messinger.)

$\text{Na}_6\text{As}_2\text{S}_3\text{Se}_2\text{O}_3 + 20\text{H}_2\text{O}$. Ppt (Messinger.)

$\text{Na}_6\text{As}_3\text{S}_2\text{Se}_2\text{O}_3 + 36\text{H}_2\text{O}$. Decomp. by aq. acids; sol in H_2O ; quite stable. (Messinger.)

Selenosulphur trioxide, SeSO_3 .

See Selenium sulphoxide.

Selenosulphuric acid, H_2SeSO_3 .

Known only in its salts.

Potassium selenosulphate, $\text{K}_2\text{SeSO}_3 + x\text{H}_2\text{O}$.

Deliquescent in moist air; decomp by H_2O . (Rathke, J. pr. 95. 1.)

Selenotriithionic acid, $\text{H}_2\text{S}_2\text{SeO}_3$.

Known only in solution, which is stable in dark. (Schulze, J. pr. (2) 32. 390.)

Barium selenotriithionate.

Sol. in H_2O . (Rathke.)

Potassium —, $\text{K}_2\text{SeS}_2\text{O}_3$.

Sol. in H_2O with gradual decomp (Rathke J. pr. 95. 8; 97. 56.)

Diselenotriithionic acid, $\text{H}_2\text{SSe}_2\text{O}_3$.

Exceedingly unstable (Schulze.)

Selenovanadic acid.

Lithium selenovanadate, $4\text{Li}_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 30\text{H}_2\text{O}$.

Very sol. in H_2O . (Prandtl and Lustig, Z. anorg. 1907, 53. 401.)

Potassium selenovanadate, $2\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $12\text{SeO}_2 + 12\text{H}_2\text{O}$.

(Prandtl and Lustig.)

$3\text{K}_2\text{O}$, $5\text{V}_2\text{O}_5$, $16\text{SeO}_2 + 40\text{H}_2\text{O}$. (Prandtl and Lustig.)

$4\text{K}_2\text{O}$, $6\text{V}_2\text{O}_5$, $21\text{SeO}_2 + 37\text{H}_2\text{O}$. (Prandtl and Lustig.)

$5\text{K}_2\text{O}$, $10\text{V}_2\text{O}_5$, $26\text{SeO}_2 + 43\text{H}_2\text{O}$. (Prandtl and Lustig.)

Sodium selenovanadate, $4\text{Na}_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 20\text{H}_2\text{O}$.

Very sol. in H_2O . Solution decomp. gradually (Prandtl and Lustig.)

$2\text{Na}_2\text{O}$, $7\text{V}_2\text{O}_5$, $10\text{SeO}_2 + 13\text{H}_2\text{O}$. (Prandtl and Lustig.)

$2\text{Na}_2\text{O}$, $7\text{V}_2\text{O}_5$, $12\text{SeO}_2 + 45\text{H}_2\text{O}$, and $+90\text{H}_2\text{O}$. (Prandtl and Lustig.)

Selenoxyarsenic acid.

Ammonium selenoxyarsenate, $2(\text{NH}_4)_2\text{O}$, 2SeO_3 , $\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland, B. 1903, 36. 1403.)

Barium sodium selenoxyarsenate, $\text{BaNaAsO}_3\text{Se} + 9\text{H}_2\text{O}$.

Ppt. (Weinland, Z. anorg. 1897, 14. 56.)

Potassium selenoxyarsenate, $2\text{K}_2\text{O}$, 2SeO_3 , $\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland and Bartlingck, B. 1903, 36. 1403.)

$7\text{K}_2\text{O}$, 10SeO_3 , $2\text{As}_2\text{O}_3 + 11\text{H}_2\text{O}$. Very sol. in H_2O . (Weinland and Bartlingck.)

$3\text{K}_2\text{O}$, $\text{As}_2\text{Se}_3 + 10\text{H}_2\text{O}$. Easily decomp. by

- moisture. Very sol. in H_2O (Clever, Z. anorg. 1895, 10. 126.)
- Rubidium selenoxyarsenate**, $2\text{Rb}_2\text{O}$, 2SeO_3 , $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$.
Sol in H_2O with decomp (Weinland and Barttlingek.)
- Sodium selenoxyarsenate**, $\text{Na}_3\text{AsSeO}_3$.
Fairly stable in air and in aq solution. (Weinland, B. 1896, 29. 1010.)
 $\text{Na}_3\text{AsSeO}_3 + 12\text{H}_2\text{O}$ Stable in the air when pure; sol. in H_2O with decomp (Weinland, Z. anorg. 1897, 14. 50.)
 $\text{Na}_3\text{AsSeO}_3 + 12\text{H}_2\text{O}$ Very sol in H_2O ; very unstable. (Szarvasy, B. 1895, 28. 2657.)
 $3\text{Na}_2\text{O}$, $3\text{Na}_2\text{Se}$, $\text{As}_2\text{O}_5 + 50\text{H}_2\text{O}$ Easily sol. in H_2O . Solution may be boiled for a long time without decomp. (Clever, Z. anorg. 1895, 10. 136.)
- Selenoxyphosphoric acid**.
- Ammonium triselenmonoxyphosphate**, $(\text{NH}_4)_3\text{PSe}_3\text{O} + 10\text{H}_2\text{O}$.
Ppt. (Ephraim, B. 1910, 43. 280.)
- Ammonium hydrogen triselenmonoxyphosphate**, $(\text{NH}_4)_2\text{H}(\text{PSe}_3\text{O})_2 + 18\text{H}_2\text{O}$.
Ppt. (Ephraim)
- Barium hydrogen diselendioxyphosphate**, $\text{BaHPSe}_2\text{O}_2 + 14\text{H}_2\text{O}$
Decomp in moist air. (Ephraim)
- Potassium selenoxyphosphate**, $\text{K}_3\text{PSe}_2.5\text{O}_{1.5} + \text{H}_2\text{O}$
Decomp. by HNO_3 Insol. in alcohol and ether. (Ephraim.)
- Sodium monoselentrioxyphosphate**, $\text{Na}_3\text{PSeO}_3 + 20\text{H}_2\text{O}$.
Decomp. by H_2O . (Ephraim.)
- Sodium triselenmonoxyphosphate**, $\text{Na}_3\text{PSe}_3\text{O} + 10\text{H}_2\text{O}$.
Sol. in H_2O . Decomp. in aq. solution. Easily sol. in conc. $\text{NaOH} + \text{Aq}$. (Muthmann, Z. anorg. 1897, 13. 199.)
- Selenyl bromide**, SeOBr_2 (?).
(Schneider, Pogg. 129. 450.)
- Selenyl bromide sulphur trioxide**, SeOBr_2 , SO_3 .
(Prandtl, Z. anorg. 1909, 62. 242.)
- Selenyl chloride**, SeO_2Cl_2 .
Easily decomp. by H_2O . (Weber, Pogg. 118. 615.)
- Selenyl sulphur chloride**.
See Sulphoselenyl chloride.
- Selenyl stannic chloride**, 2SeOCl_2 , SnCl_4 .
Extremely deliquescent. Completely sol. in H_2O . (Weber, B. A. B. 1865. 154.)
- Selenyl titanium chloride**, 2SeOCl_2 , TiCl_4 .
Decomp. by H_2O with separation of an insol. residue. Decomp. by $\text{NH}_4\text{OH} + \text{Aq}$. (Weber, B. A. B. 1865. 154.)
- Sesquiauramine**.
See Sesquiauramine.
- Sesquihydraurylamine**, $(\text{HOAu})_3\text{N}$, NH_3 .
See Sesquihydraurylamine.
- Silicic acid**, SiO_2 , $x\text{H}_2\text{O}$.
See also Silicon dioxide.
Silicic acid is sol in 1000 pts pure H_2O . (Kirwan.)
When pptd. from alkali silicates + Aq by CO_2 , 0.021 pt. SiO_2 remains dissolved in 100 pts. H_2O . (Struckmann, A. 94. 341.)
When pptd. as above, 100 pts. H_2O dissolve 0.09 pt. SiO_2 in 3 days; 100 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ dissolve 0.078 pt. SiO_2 in 3 days. But if heated much more dissolves, the jelly itself becoming liquid, such jelly containing 2.49 pts. SiO_2 to 100 pts. H_2O . This solution is not pptd. by considerable quantities of alcohol, but conc. $(\text{NH}_4)_2\text{CO}_3$, NaCl , or $\text{CaCl}_2 + \text{Aq}$, etc, cause gelatinization (Maschke, J. pr 68. 234.)
Solubility in H_2O depends on the amt. of H_2O , in presence of which the silicic acid is set free by dil. acids, CO_2 , or alkali salts + Aq . If H_2O is present in sufficient quantity to retain the silicic acid, much more will remain in solution than can be dissolved by digesting the gelatinous acid with H_2O afterwards 1 pt. SiO_2 can thus be held in solution by 500 pts. H_2O . Presence of NH_4OH , $(\text{NH}_4)_2\text{CO}_3$, or NH_4Cl (in solutions of which SiO_2 is remarkably insol.) diminishes the power of H_2O to retain SiO_2 in solution. SiO_2 is always more sol. in dil. than conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Liebig, A. 94. 373.)
Silicic acid from the coagulation of the colloidal form (see p. 802) is sol. in about 5000 pts. H_2O when formed from a 1% solution, and 10,000 pts. when formed from a 5% solution, but is insol. after being dried. (Graham, A. 121. 36.)
Silicic acid is more sol. in dil. acids than in H_2O , because, when acid is added in excess to moderately dil. $\text{K}_2\text{SiO}_3 + \text{Aq}$, the solution remains clear, but if only enough acid is added to neutralize the base present, silicic acid will gradually separate out. If acid is added to conc. $\text{K}_2\text{SiO}_3 + \text{Aq}$, silicic acid separates out insol. in excess of acid, but if 20–30 pts. H_2O are present to 1 pt. K_2SiO_3 , and an excess of acid added at once, the silicic acid will remain in solution. This result is obtained with HCl , HNO_3 , H_2SO_4 , or

$\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ These solutions may dissolve a neutral salt until saturated and no silicic acid will separate out. Therefore it is the acid that holds the SiO_2 in solution, and not the H_2O . (C. J. B. Karsten, (1826) Pogg. 6. 353.)

Even CO_2 has the power of holding SiO_2 in solution. (Karsten, *l. c.*)

Solubility in acids of silicic acid of Struckmann (*see above*): 100 pts. dil. $\text{HCl} + \text{Aq}$ of 1.088 sp. gr. dissolve 0.0172 g. SiO_2 in 11 days; 100 pts. H_2O sat. with CO_2 dissolve 0.0136 g. SiO_2 in 7 days

Silicic acid obtained by passing SiF_4 into H_2O is sol. while still moist in 11,000 pts. cold, and 5500 pts. boiling $\text{HCl} + \text{Aq}$ of 1.115 sp. gr. (Fuchs, A. 82. 119.)

Silicic acid at the moment of separation (as in dissolving cast-iron, steel, etc.) is abundantly sol. in aqua regia (3 pts. $\text{HCl} + \text{Aq}$ of sp. gr. 1.13 and 1 pt. $\text{HNO}_3 + \text{Aq}$ of sp. gr. 1.33). (Wittstein, Z. anal. 7. 433.)

The aq. solution obtained by the hydrolysis of ethyl silicate is more stable in acids + Aq or alkali than in pure H_2O . (Jordis, Z. anorg. 1903. 35. 16)

$\text{NH}_4\text{OH} + \text{Aq}$ dissolves considerable freshly precipitated silicic acid, $(\text{NH}_4)_2\text{CO}_3$ only a very little. (Karsten, Pogg. 6. 357.)

Dry or ignited SiO_2 is sol. in $\text{NH}_4\text{OH} + \text{Aq}$. 100 pts. $\text{NH}_4\text{OH} + \text{Aq}$ containing 10% NH_3 dissolve: 0.714 pt. SiO_2 from gelatinous silicic acid; 0.303 pt. from artificially dried silicic acid; 0.377 pt. from amorphous SiO_2 ; 0.017 pt. from quartz. (Pribram, Z. anal. 6. 119.)

$\text{NH}_4\text{OH} + \text{Aq}$ dissolves 0.382 pt. SiO_2 from dry silicic acid; 0.357 pt. from ignited SiO_2 ; 0.00827 pt. from quartz. (Souhay, Z. anal. 11. 182.)

Silicic acid precipitated from alkali silicates + Aq with CO_2 is sol. as follows: 100 pts. pure H_2O dissolve 0.021 pt. SiO_2 ; 100 pts. $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ containing 5% $(\text{NH}_4)_2\text{CO}_3$, 0.020 pt.; 100 pts. containing 1% $(\text{NH}_4)_2\text{CO}_3$, 0.062 pt.; 100 pts. $\text{NH}_4\text{OH} + \text{Aq}$ containing 19.2% NH_3 , 0.071 pt.; 100 pts. containing 1.6%, 0.0986 pt. (Struckmann, A. 94. 341.)

100 pts. $\text{NH}_4\text{OH} + \text{Aq}$ (10% NH_3) dissolve of: crystallised SiO_2 , 0.017 pt.; amorphous SiO_2 , ignited, 0.38 pt.; amorphous 3SiO_2 , $4\text{H}_2\text{O}$, 0.21 pt.; amorphous silicic acid in form of jelly, 0.71 pt. Upon evaporation no ppt. is formed, even when 80 mols. SiO_2 are present to 1 mol. NH_3 . (Wittstein, J. B. 1866. 192.)

Sol. in KOH or $\text{NaOH} + \text{Aq}$, especially if warm. (Dumas.)

Sol. in K_2SiO_3 or $\text{Na}_2\text{SiO}_3 + \text{Aq}$. (Fuchs.)

Easily sol. in boiling $\text{Na}_2\text{CO}_3 + \text{Aq}$, separating as a jelly on cooling. (Pfaff.)

NH_4Cl or other NH_4 salts ppt. SiO_2 from solution in $\text{Na}_2\text{CO}_3 + \text{Aq}$.

100 pts. Ti_2O in H_2O dissolve 4.17 pts. amorphous SiO_2 in 24 hours' boiling. (Flemming, Jena. Zeit. 4. 36.)

Sol. in butyl amine. (Wurtz, A. ch (3) 42. 166.)

Not more sol. in H_2O containing sugar than in pure H_2O . (Petzholdt, J. pr. 60. 368.)

Soluble silicic acid.

Colloidal form by dialysis Solutions containing 4.9% SiO_2 may be evaporated until they contain 14% SiO_2 . The SiO_2 is separated from its solution thus made in many ways—

(1) By standing. This happens the more easily the more conc. the solution is, and is hastened by heat. A 10–12% solution gelatinizes at ordinary temp. in a few hours, and immediately upon heating. A 5–6% solution may be kept 5–6 days, a 2% solution, 2–3 months, and a 1% solution may be kept 2 or more years without gelatinizing.

(2) When the solution is evaporated to dryness in vacuo at 15° a transparent glass is left which is insol. in H_2O

(3) The coagulation of colloidal silicic acid is accelerated by powdered graphite and other indifferent bodies, and it is brought about in a few minutes by a solution of the alkali carbonates, even when only $\frac{1}{10,000}$ pt. of the carbonate is present (Graham, A. 121. 36.)

(4) Coagulation is also brought about by passing CO_2 through the solution. (Liebig.)

CO_2 does not cause coagulation. (Maschke.)

Coagulation is not caused by H_2SO_4 , HCl , HNO_3 , $\text{HC}_2\text{H}_3\text{O}_2$, $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, or $\text{NH}_4\text{OH} + \text{Aq}$, or by neutral or acid salts + Aq . (Graham.)

NaCl and $\text{Na}_2\text{SO}_4 + \text{Aq}$ coagulate the solution. (Maschke)

Alcohol, sugar, glycerine, or caramel do not coagulate.

Soluble $\text{Al}_2\text{O}_3\text{H}_3$, $\text{Fe}_2\text{O}_3\text{H}_6$, albumen, and casein precipitate soluble SiO_2 . (Graham, A. 121. 36.)

The jelly from colloidal SiO_2 is very sol. in slightly alkaline H_2O . 1 pt. NaOH in 10,000 pts. H_2O dissolves in an hour at 100° an amt. of the jelly corresponding to 200 pts. SiO_2 . (Graham.)

Other colloidal forms.

Various solutions of silicic acid may be obtained as follows:

The jelly formed when SiF_4 is passed through H_2O dissolves in a large amt. of H_2O , and SiO_2 separates out on evaporation. This is still sol. in H_2O , but is made insol. by evaporation with HCl or H_2SO_4 . (Berzelius.)

When SiF_4 is absorbed by crystallized H_3BO_3 , and the HF and H_3BO_3 removed by a large excess of $\text{NH}_4\text{OH} + \text{Aq}$, a silicic acid is obtained which is very sol. in H_2O . The solution is not decomp. by boiling, but on evaporation an insol. powder remains. (Berzelius, A. ch. 14. 366.)

When $\text{K}_2\text{SiO}_3 + \text{Aq}$ is precipitated by CuCl_2 , the precipitate washed and dissolved in $\text{HCl} + \text{Aq}$, the solution treated with H_2S filtered and boiled, a solution of silicic acid is obtained

which gelatinizes with KOH or $\text{NH}_4\text{OH} + \text{Aq.}$ (Doveri, A. ch. (3) 21. 40.)

When $\text{Na}_2\text{SiO}_3 + \text{Aq}$ containing at most 3% SiO_2 is saturated with $\text{HCl} + \text{Aq}$ of 1.10 sp. gr., and Na_2SiO_3 added until the solution is slightly opalescent and carefully warmed to 30° , a gelatinous mass is obtained which will dissolve in H_2O by 12–16 hours' boiling if treated before being exposed to the air. The solution is slightly opalescent. The solution can be evaporated by heat until it contains 6% SiO_2 . In a vacuum or over H_2SO_4 , solutions containing 10% may be obtained. The electric current, freezing, alcohol, or H_2SO_4 precipitate or coagulate the solution (Kühn, J. pr. 59. 1)

SiS_2 with H_2O gives off H_2S , and forms a solution of SiO_2 which, after dilution, can be kept for months. But when boiled or evaporated, or when a sol silicate is added, it becomes gelatinous. It leaves an insol. residue when evaporated to dryness (Fremy, A. ch. (3) 38. 314)

Various forms of silicic acid have been described as definite compounds of SiO_2 with varying amounts of H_2O , but it is doubtful if any true definite compounds exist, as the percentage of H_2O varies with the moisture of the air to which it is exposed. (See Ebelmen, A. ch. (3) 16. 129, Doveri, A. ch. (3) 21. 40, Fuchs, A. 82. 19; Merz, J. pr. 99. 177, van Bemmelen, B. 11. 2232, etc.)

Silicates.

The silicates are insol. in H_2O with the exception of the alkali salts, and these are sol. only when the ratio of the base to the acid is above a certain limit.

Aluminum silicate, $2\text{Al}_2\text{O}_3, \text{SiO}_2 + 10\text{H}_2\text{O}$.

Min. *Collyrite*. Sol. in acids, with formation of $\text{SiO}_2, x\text{H}_2\text{O}$. Becomes transparent in H_2O and is decomp.

$4\text{Al}_2\text{O}_3, 3\text{SiO}_2$. Min. *Dillinite*.

$\text{Al}_2\text{O}_3, \text{SiO}_2$. Min. *Andalusite*, *Chastolite*, *Sillimanite*, *Disthene* or *Cyanite*. Insol. in acids.

+5-7 H_2O . Min. *Allophane*. Completely sol. in dil. acids; decomp. by conc. acids with separation of $\text{SiO}_2, x\text{H}_2\text{O}$.

$2\text{Al}_2\text{O}_3, 3\text{SiO}_2 + 4\text{H}_2\text{O}$. Min. *Pholerite*. Insol. in $\text{HNO}_3 + \text{Aq.}$

+6 H_2O . Min. *Glagerite*.

$\text{Al}_2\text{O}_3, 2\text{SiO}_2 + 2\text{H}_2\text{O}$. Min. *Kaolin*, *Clay*. Insol. in dil. HCl or $\text{HNO}_3 + \text{Aq.}$; moderately dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ when heated to evaporation, extracts Al_2O_3 and some SiO_2 , and leaves the rest of the SiO_2 sol. in boiling $\text{Na}_2\text{CO}_3 + \text{Aq.}$ All the Al_2O_3 is dissolved by heating with 5-6 pts. $\text{H}_2\text{SO}_4 + 1 \text{ pt. H}_2\text{O}$ until H_2SO_4 evaporates, and then treating with H_2O .

Quickly attacked by $\text{H}_2\text{SiF}_6 + \text{Aq.}$

Decomp. by boiling $\text{KOH} + \text{Aq.}$ with residue of SiO_2 . (Rammelsberg.)

$\text{KOH} + \text{Aq}$ extracts $\frac{1}{4}$ of the SiO_2 (Mala-

guti); is converted thereby into double silicates of K and Al, which are sol. in $\text{HCl} + \text{Aq}$ (Lemberg)

Solubility in KOH and HCl increased if first heated to a low glow. (Glinka, C. C. 1899, II. 1063.)

Colloidal clay (Schlosing, C. R. 79. 473.) +4 H_2O . *Halloysite*. Decomp. by acids.

$4\text{Al}_2\text{O}_3, 9\text{SiO}_2 + 12\text{H}_2\text{O}$. Min. *Porcelain clay* from Passau.

$\text{Al}_2\text{O}_3, 3\text{SiO}_2 + 3\text{H}_2\text{O}$. Min. *Razoumoffskine*.

$\text{Al}_2\text{O}_3, 4\text{SiO}_2 + 7\text{H}_2\text{O}$. Min. *Montmorillonite*. Not decomp. by $\text{HCl} + \text{Aq.}$ but by hot H_2SO_4 .

+ H_2O . Min. *Pyrophyllite*. Not decomp. by H_2SO_4 .

+3 H_2O . Min. *Anauxite*

$2\text{Al}_2\text{O}_3, 9\text{SiO}_2 + 6\text{H}_2\text{O}$. Min. *Cimolite*.

"Aluminum silicate" is insol in acetone. (Naumann, B. 1904, 37. 4328); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Aluminum barium silicate, $\text{Al}_2\text{O}_3, \text{BaO}, 2\text{SiO}_2 + \text{H}_2\text{O}$ (?).

Min. *Edingtonite*. Decomp. by $\text{HCl} + \text{Aq}$ with separation of $\text{SiO}_2, x\text{H}_2\text{O}$

$5\text{Al}_2\text{O}_3, 4\text{BaO}, 10\text{SiO}_2$ (Fremy and Feil, C. R. 85. 1033.)

$2\text{Al}_2\text{O}_3, 4\text{BaO}, 7\text{SiO}_2$. Min. *Barylite*. Very sl. decomp. by alkali carbonates + Aq (Blomstrand.)

Aluminum barium potassium silicate,

$\text{Al}_2\text{O}_3, (\text{Ba}, \text{K}_2)\text{O}, 5\text{SiO}_2 + 2\text{H}_2\text{O}$.

Min. *Harmotome*. When finely powdered, difficultly decomp. by $\text{HCl} + \text{Aq}$ with separation of pulverulent $\text{SiO}_2, x\text{H}_2\text{O}$.

$\text{Al}_2\text{O}_3, (\text{Ba}, \text{K}_2)\text{O}, 4\text{SiO}_2$. Min. *Hagalophane*. Scarcely attacked by acids.

Aluminum caesium silicate, $\text{H}_2\text{Cs}_2\text{Al}_2\text{Si}_5\text{O}_{15}$ (?)

Min. *Pollucite*. Very sl. decomp. by $\text{HCl} + \text{Aq.}$

Aluminum calcium silicate, $\text{Al}_2\text{O}_3, \text{CaO}, 2\text{SiO}_2$.

Min. *Anorthite*. Completely decomp. by $\text{HCl} + \text{Aq}$ with separation of pulverulent $\text{SiO}_2, x\text{H}_2\text{O}$.

Min. *Barsowite*. Instantaneously decomp. by $\text{HCl} + \text{Aq.}$ with separation of gelatinous $\text{SiO}_2, x\text{H}_2\text{O}$.

+4 H_2O . Min. *Gismondite*. Gelatinizes with $\text{HCl} + \text{Aq.}$

$\text{Al}_2\text{O}_3, \text{CaO}, 3\text{SiO}_2 + 3\text{H}_2\text{O}$. Min. *Scolezite*. Easily sol. in $\text{HCl} + \text{Aq.}$ without formation of gelatinous SiO_2 . Sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ with pptn. of CaC_2O_4 .

Decomp. by, and sol. to a certain extent in $\text{H}_2\text{CO}_3 + \text{Aq.}$ and decomp. also even by pure H_2O . (Rogers, Am. J. Sci. (2) 5. 408.)

+5 H_2O . Min. *Levyite*. Decomp. by acids without gelatinizing.

$\text{Al}_2\text{O}_3, \text{CaO}, 4\text{SiO}_2 + 3\text{H}_2\text{O}$. Min. *Caporcinite*, *Leonhardtite*. Efflorescent. Easily

sol. in acids, with pptn. of gelatinous SiO_2 , $x\text{H}_2\text{O}$.

Al_2O_3 , CaO , $4\text{SiO}_2 + 4\text{H}_2\text{O}$. Min. *Laumontite*. Easily gelatinizes with HCl or HNO_3 + Aq , but is not affected by H_2SO_4 unless hot.

Al_2O_3 , CaO , $6\text{SiO}_2 + 5\text{H}_2\text{O}$. Min. *Epsilbite*. Gelatinizes with conc HCl + Aq (Goldschmidt, Z. anal 17. 267)

Scarcely decomp. by boiling conc. HCl + Aq (Jannasch and Tenne, Miner Jahrb. 1880, 1. 43)

+ $6\text{H}_2\text{O}$ *Stilbite* *Heulandite* Slowly but completely gelatinized by HCl + Aq

Al_2O_3 , 2CaO , $3\text{SiO}_2 + \text{H}_2\text{O}$. Min. *Prehnite*. Imperfectly decomp. by acids before ignition, but easily afterwards.

Al_2O_3 , 3CaO , 3SiO_2 *Lime alumina garnet* *Grossularite* Partially decomp. by acids before ignition, but easily afterwards.

$2\text{Al}_2\text{O}_3$, CaO , $2\text{SiO}_2 + \text{H}_2\text{O}$. *Margarite*. Not attacked by acids.

$3\text{Al}_2\text{O}_3$, 4CaO , $6\text{SiO}_2 + \text{H}_2\text{O}$. *Zoisite* Partially decomp. by HCl + Aq .

$4\text{Al}_2\text{O}_3$, 6CaO , 9SiO_2 . Min. *Meionite* Completely sol. in HCl + Aq .

Aluminum calcium ferric silicate, $2\text{Al}_2\text{O}_3$, 4CaO , Fe_2O_3 , $6\text{SiO}_2 + \text{H}_2\text{O}$.

Min. *Epidote*. Only sl. attacked by HCl + Aq before ignition.

Aluminum calcium ferric magnesium silicate, $\text{H}_{14}(\text{Ca}, \text{Mg})_{40}(\text{Al}_2, \text{Fe}_2)_{10}\text{Si}_{35}\text{O}_{147}$.

Min. *Vesuvianite*, *Idrocrase* Only partially decomp. by HCl + Aq before ignition.

Aluminum calcium iron, etc., silicate borate, $\text{H}_2\text{R}_2^+(\text{Al}_2, \text{B}_2)_3\text{Si}_3\text{O}_{32}$.

Min. *Aznite*. Not attacked by HCl + Aq before ignition.

Aluminum calcium magnesium silicate, $4\text{H}_4\text{Ca}_2\text{Mg}_5\text{Si}_6\text{O}_{24}$, $5\text{H}_2\text{CaMgAl}_6\text{O}_{12} = 15\text{Al}_2\text{O}_3$, 13CaO , 37MgO , $24\text{SiO}_2 + 13\text{H}_2\text{O}$.

Min. *Clintonite*. Completely decomp. by HCl + Aq without gelatinization.

$3\text{H}_4\text{Ca}_2\text{Mg}_5\text{Si}_6\text{O}_{24}$, $4\text{H}_2\text{CaMgAl}_6\text{O}_{12}$. Min. *Brandite*. Not attacked by HCl + Aq Slowly decomp. by boiling conc. H_2SO_4

$5\text{H}_4\text{Ca}_2\text{Mg}_5\text{Si}_6\text{O}_{24}$, $8\text{H}_2\text{CaMgAl}_6\text{O}_{12}$. Min. *Xanthophyllite*. Very sl decomp. by hot HCl + Aq .

$3(\text{Ca}, \text{Mg})\text{O}$, Al_2O_3 , 2SiO_2 Min. *Gehlenite* Easily decomp. by acids.

Aluminum calcium potassium silicate, $(\text{H}, \text{K})_2\text{CaAl}_2\text{Si}_6\text{O}_{15} + 6\text{H}_2\text{O}$.

Min. *Chabasite*. Decomp. by HCl + Aq . $(\text{K}_2, \text{Ca})\text{Al}_2\text{Si}_6\text{O}_{10} + 4\text{H}_2\text{O}$. Min. *Zeagonite*. Completely sol. in HCl + Aq .

Aluminum calcium sodium silicate, $3\text{Al}_2\text{O}_3$, 8CaO , Na_2O , 9SiO_2 .

Min. *Sarcokite* Decomp. by acids.

$2\text{Al}_2\text{O}_3$, $12(\text{Ca}, \text{Na}_2)\text{O}$, 9SiO_2 (?) Min. *Mellilite*. Gelatinized by acids

$\text{Na}_2\text{CaAl}_4\text{Si}_2\text{O}_{12}$ (?) Min. *Margarite* $\text{Na}_2\text{CaAl}_4\text{Si}_{10}\text{O}_{38}$. Min. *Faujasite*. Decomp. by HCl + Aq

$(\text{Na}_2, \text{Ca})\text{Al}_2\text{Si}_4\text{O}_{12}$ Min. *Gmelinite*. Decomp. by HCl + Aq

$(\text{Ca}, \text{Na}_2)\text{Al}_2\text{Si}_6\text{O}_{19} + 6\text{H}_2\text{O}$. Min. *Foersite*. Difficultly decomp. by HCl + Aq .

$(\text{Ca}, \text{Na}_2)\text{Al}_2\text{Si}_2\text{O}_8 + 2\frac{1}{2}\text{H}_2\text{O}$. Min. *Thomsonite* Gelatinizes with HCl + Aq

$x\text{Na}_2\text{Al}_2\text{Si}_6\text{O}_{16}$, $y\text{CaAl}_2\text{Si}_2\text{O}_8$. Min. *Oligoclase*, *Labradorite* Sl. decomp. by acids, more easily the larger the amt. of Ca present

Aluminum calcium sodium silicate sulphate, $2(\text{Na}_2, \text{Ca})\text{Al}_2(\text{SiO}_4)_2$, $(\text{Na}_2, \text{Ca})\text{SO}_4$.

Min. *Hauyn*. Gelatinizes with HCl + Aq .

Aluminum glucinum silicate, Al_2O_3 , 3GfO , 6SiO_2 .

Min. *Beryl* Emerald Not decomp. by acids, excepting partially by H_2SO_4 after being ignited

Al_2O_3 , 2GfO , $2\text{SiO}_2 + \text{H}_2\text{O}$. Min. *Euclase*. Not attacked by acids

Aluminum ferrous silicate, $\text{Al}_2\text{Fe}(\text{SO}_4)_3$.

Min. *Garnet*. Sl decomp. by HCl + Aq $\text{H}_2\text{FeAl}_2\text{SiO}_7$. Min. *Chloritoid* Not attacked by HCl + Aq . Completely decomp. by H_2SO_4 .

Al_2O_3 , 3FeO , $3\text{SiO}_2 + 3\text{H}_2\text{O}$. Min. *Voigtite*.

Aluminum iron lithium potassium silicate, $\text{K}_3\text{Li}_3\text{Fe}_4\text{Al}_{12}\text{Si}_{20}\text{O}_{65}$.

Min. *Zinnwaldite*. Sl decomp. by acids.

Aluminum ferrous magnesium silicate, $6\text{Al}_2\text{O}_3$, $3(\text{Mg}, \text{Fe})\text{O}$, $6\text{SiO}_2 + \text{H}_2\text{O}$.

Min. *Staurolite*. Not attacked by acids.

Aluminum ferric magnesium silicate, $2(\text{Al}_2, \text{Fe}_2)\text{O}_3$, 2MgO , 5SiO_2 .

Min. *Cordierite* Sl. attacked by acids + $x\text{H}_2\text{O}$. Min. *Esmarkite*, *Chlorophyllite*.

Aluminum ferrous manganous silicate, Al_2O_3 , FeO , 2MnO , 3SiO_2 .

Min. *Partschinite*.

Aluminum ferrous sodium, etc., silicate borate, $\text{R}_2^+(\text{Al}_2)(\text{B}_2)\text{Si}_4\text{O}_{20} + \text{R}_2^+(\text{Al}_2)(\text{B}_2)\text{Si}_4\text{O}_{20}$, etc.

Min. *Tourmaline*. Not decomp. by HCl + Aq ; very sl decomp. by H_2SO_4 .

Aluminum lithium silicate, Al_2O_3 , Li_2O , 5SiO_2 . Not attacked by acids. (Hautefeuille, C. R. 90. 541.)

Al_2O_3 , Li_2O , 6SiO_2 . Al_2O_3 , Li_2O , 4SiO_2 . [Min. *Spodumene*. Not attacked by acids.

$4\text{Al}_2\text{O}_3, 3\text{Li}_2\text{O}, 30\text{SiO}_2$. Min. *Petalite*. Not attacked by acids.

Aluminum lithium potassium silicate,
 $(\text{Li}, \text{K})_{10}\text{Al}_{10}\text{Si}_{16}\text{O}_{52}$

Min. *Lepidolite*. Sl decomp. by acids.

Aluminum magnesium silicate, $5\text{Al}_2\text{O}_3, 4\text{MgO}, 2\text{SiO}_2$

Min. *Sapphirine*.

Aluminum magnesium potassium silicate,
 $x\text{H}_4\text{K}_2\text{Al}_6\text{Si}_6\text{O}_{24}, y\text{Mg}_{12}\text{Si}_6\text{O}_{21}$.

Min. *Lepidomelane*. Easily decomp. by HCl or $\text{HNO}_3 + \text{Aq}$, with residue of a skeleton of SiO_2 .

$3\text{Al}_2\text{O}_3, 12\text{MgO}, 2\text{K}_2\text{O}, 12\text{SiO}_2 + \text{H}_2\text{O}$. Min. *Anomite*.

$7\text{Al}_2\text{O}_3, 35\text{MgO}, 7\text{K}_2\text{O}, 36\text{SiO}_2$. Min. *Phlogopite*.

Aluminum manganous silicate, $2\text{Al}_2\text{O}_3, 6\text{MnO}, 6\text{SiO}_2$.

Not decomp. by very dil. HCl + Aq. (Gorgeu, C. R. 97. 1303)

Aluminum potassium silicate, $\text{Al}_2\text{O}_3, \text{K}_2\text{O}, \text{SiO}_2$

Very slowly decomp by cold H_2O ; 12% is dissolved by hot H_2O . Sol. in alkali hydroxides + Aq, but insol in carbonates + Aq.

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 2\text{SiO}_2$. Insol in cold H_2O , but 6% dissolves on boiling. Sol in dil acids. Insol in alkali hydroxides or carbonates + Aq (Gorgeu, A. ch. (6) 10. 45)

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 3\text{SiO}_2 + 3\text{H}_2\text{O}$. Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Deville, A. ch. (3) 61. 313.)

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 4\text{SiO}_2$. Min. *Leucite*. Decomp. by HCl + Aq with separation of pulverulent SiO_2

$+ 4\text{H}_2\text{O}$. Ppt. (Deville, C. R. 54. 324.)

$\text{H}_2\text{K}_2\text{Al}_6\text{Si}_6\text{O}_{24}$. Min. *Muscovite*, "Mica."

Not attacked by HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$.

$\text{K}_2\text{Al}_4\text{Si}_5\text{O}_{17} + 3\text{H}_2\text{O}$. Min. *Pinitite*. Partly decomp. by HCl + Aq.

$\text{K}_2\text{Al}_2\text{Si}_6\text{O}_{18}$. Min. *Orthoclase Feldspar*. Scarcely attacked by acids. Slowly sol. in H_2SO_4 or HCl + Aq when finely powdered. (Rogers.)

Aluminum potassium sodium silicate,
 $\text{K}_2\text{Al}_2(\text{SiO}_3)_4, 5\text{Na}_2\text{Al}_2(\text{SiO}_4)_2 (?)$

Min. *Nepheline*. Decomp by HCl + Aq.

Aluminum silver silicate, $\text{Al}_2\text{Ag}_6\text{Si}_2\text{O}_6$.

Insol in $\text{NH}_4\text{OH} + \text{Aq}$. (Silber, B. 14. 941.)

$\text{Al}_2\text{Ag}_2\text{Na}_4\text{Si}_6\text{O}_4$. As above. (Silber.)

Aluminum sodium silicate, $\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, \text{SiO}_2$.

Insol. in cold H_2O , but 38–40% dissolves in hot H_2O . (Gorgeu.)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 2\text{SiO}_2$. Insol. in cold H_2O ; boiling H_2O dissolves 1–2%. Sol. in HCl or HNO_3 diluted with 10–20 vols. H_2O . Insol.

in alkali hydroxides or carbonates + Aq. (Gorgeu, A. ch. (6) 10. 145.)

Not attacked by H_2O . (Silber, B. 14. 941.)
 $+ 3\text{H}_2\text{O}$. Easily sol. in HCl + Aq (v. Ammon.)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 3\text{SiO}_2 + 3\text{H}_2\text{O}$. Decomp. by acids (Deville, A. ch. (3) 61. 326)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 4\text{SiO}_2 + 3\text{H}_2\text{O}$. Easily sol. in HCl + Aq (v. Ammon.)

$2\text{Al}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{SiO}_2$. Insol. in cold H_2O , but 27–30% dissolves on boiling. (Gorgeu.)

$\text{H}_4\text{Na}_2\text{Al}_6\text{Si}_6\text{O}_{24}$. Min. *Paragonite*. Decomp by conc. H_2SO_4 .

$\text{Na}_2\text{Al}_2\text{Si}_4\text{O}_{12} + 2\text{H}_2\text{O}$. Min. *Anaclite*. Readily decomp. by HCl + Aq

$\text{Na}_2\text{Al}_2\text{Si}_3\text{O}_{10} + 2\text{H}_2\text{O}$. Min. *Natrolite*. Sol. in H_2O with separation of SiO_2 . Also sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$.

$\text{Na}_2\text{Al}_2\text{Si}_6\text{O}_{18}$. Min. *Albite*. Not attacked by acids

Aluminum sodium silicate chloride,
 $3\text{Na}_2\text{Al}_2(\text{SiO}_4)_2, 2\text{NaCl}$.

Min. *Sodalite*. Easily decomp. by HCl, and $\text{HNO}_3 + \text{Aq}$.

Aluminum sodium silicate sulphate,
 $3\text{Na}_2\text{Al}_2(\text{SiO}_4)_2, \text{Na}_2\text{SO}_4$.

Min. *Nosean*. Easily decomp. by HCl + Aq

Aluminum sodium silicate sulphide.
See Ultramarine.

Barium silicate, BaSiO_3 .

Somewhat sol in boiling H_2O . Completely sol. in dil HCl + Aq. (v. Ammon.)

$+ 6\text{H}_2\text{O}$, or $7\text{H}_2\text{O}$. Boiling H_2O decomposes, and dissolves about $\frac{1}{2}$ the weight of this substance. (le Chatelier, C. R. 92. 931.)

$2\text{BaO}, \text{SiO}_2$. Decomp by H_2O into $\text{BaSiO}_3 + 6\text{H}_2\text{O}$ (Laudrin.)

Bismuth silicate, $2\text{Bi}_2\text{O}_3, 3\text{SiO}_2$.

Min. *Eulytite*. Decomp. by HCl + Aq.

Bismuth ferric silicate, $\text{Bi}_2\text{Fe}_4\text{Si}_4\text{O}_{17}$.

Min. *Bismuthoferrite*.

Boron calcium silicate.

See Borate silicate, calcium, and Silicate borate, calcium.

Cadmium silicate, $\text{CdSiO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in HCl + Aq with deposition of pulverulent $\text{SiO}_2, x\text{H}_2\text{O}$. (Rousseau and Tite, C. R. 114. 1262.)

Cæsium silicate, Cs_2SiO_3 .

(Kahlenberg, J. phys. Chem. 1898, 2. 82.)

Calcium silicate, CaSiO_3

Slowly sol. in H_2O ; sol. in $\text{HCl} + \text{Aq}$

Sol. in about 100,000 pts H_2O (Gorgeu, A. ch. 1885, (6) 4. 550.)

100 cc. sat. aq. solution of air dried calcium silicate contains 0.0046 g. $\text{CaO} = 0.0095$ g. CaSiO_3 at 17° . (Weisberg, Bull. Soc. 1896, (3) 15. 1097.)

100 cc. sat. solution of air dried calcium silicate in 10% sugar solution at 17° contains 0.0065 g. $\text{CaO} = 0.0135$ g. CaSiO_3 ; 20% sugar solution, 0.0076 g. $\text{CaO} = 0.0175$ g. CaSiO_3 .

After boiling and filtering hot, 10% sugar solution contains 0.0094 g. $\text{CaO} = 0.0195$ g. CaSiO_3 ; 20% sugar solution, 0.0120 g. $\text{CaO} = 0.0249$ g. CaSiO_3 . (Weisberg.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

4 CaO , 3 SiO_2 . (Laudrm.)

5 CaO , 3 $\text{SiO}_2 + 5\text{H}_2\text{O}$. When freshly precipitated is somewhat sol. in H_2O and easily decomp. by $\text{HCl} + \text{Aq}$. (v. Ammon.)

CaO , 3 $\text{SiO}_2 + 2\text{H}_2\text{O}$. (Hjeldt, J. pr. 94. 129.)

2 CaO , 9 $\text{SiO}_2 + 3\text{H}_2\text{O}$. Ppt.

CaSiO_3 Min. *Wollastonite* Gelatinizes with $\text{HCl} + \text{Aq}$.

$\text{CaSiO}_3 + 2\text{H}_2\text{O}$. Min. *Okenite*. Easily decomp. by cold $\text{HCl} + \text{Aq}$ when powdered.

Calcium glucinum silicate sodium fluoride,

(Ca , Gl) $_{10}\text{Si}_{14}\text{O}_{43}$, 6 NaF .

Min. *Leucophane*.

7(Ca , Gl) $_3\text{Si}_2\text{O}_7$, 6 NaF . Min. *Melinophane*.

Calcium ferrous silicate, CaSiO_3 , FeSiO_3 .

Min. *Hedenbergite*, *Pyroxene*. Sl. decomp. by acids.

Calcium ferric silicate, $\text{Ca}_2\text{Fe}_2(\text{SiO}_4)_3$.

Min. *Garnet*. Sl. decomp. by $\text{HCl} + \text{Aq}$

2 CaSiO_3 , 11 $\text{Fe}_2(\text{SiO}_3)_3$ Min. *Szaboite*. Sl. attacked by $\text{HCl} + \text{Aq}$, and still less by $\text{H}_2\text{SO}_4 + \text{Aq}$.

Calcium ferroferric silicate, 2CaO , 4FeO , Fe_2O_3 , $4\text{SiO}_2 + \text{H}_2\text{O} = \text{H}_2\text{Ca}_2\text{Fe}_4\text{Fe}_2\text{Si}_4\text{O}_{13}$.

Min. *Lieuvrite*, *Ivavite*. Easily gelatinizes with $\text{HCl} + \text{Aq}$.

Calcium ferrous magnesium silicate,

(Ca , Fe , Mg) SiO_3 .

Min. *Amphibole*, *Hornblende*, *Asbestos*, *Actinolite*, *Tremolite*. Only sl. attacked by acids.

Calcium ferroferric sodium silicate, CaSiO_3 , FeSiO_3 , $\text{Fe}_2(\text{SiO}_3)_3$, Na_2SiO_3 .

Min. *Aegirite*.

Calcium magnesium silicate, CaO , MgO , 4SiO_2 .

(Mutschler, A. 176. 86.)

Ca_2SiO_4 , Mg_2SiO_4 . Min. *Monticellite*. Completely sol. in dil. $\text{HCl} + \text{Aq}$

(Ca , Mg) SiO_3 Min. *Diopside*, *Pyroxene*. Very sl. attacked by acids.

Calcium manganous silicate, CaSiO_3 , 2MnSiO_3 .

Min. *Bustamite*.

Calcium potassium silicate.

See under Glass.

Calcium sodium silicate, (Ca , Na_2 , H_2) SiO_3 .

Min. *Pectolite*. Decomp. by $\text{HCl} + \text{Aq}$. See under glass.

Calcium sodium silicate zirconate,

$\text{Na}_4\text{Ca}(\text{Si}_1\text{Zr})_9\text{O}_{21} + 9\text{H}_2\text{O}$.

Min. *Wohlerite*. Decomp. by $\text{HCl} + \text{Aq}$.

Calcium uranyl silicate, 3CaO , 5UO_3 , $6\text{SiO}_2 + 18\text{H}_2\text{O}$.

Min. *Uranophane*. Gelatinizes with acids. CaO , 3UO_3 , $3\text{SiO}_2 + 9\text{H}_2\text{O}$. Min. *Uranotile*.

Calcium silicate chloride, 2CaO , SiO_2 , CaCl_2 .

Insol. in H_2O or alcohol Sol. in $\text{HCl} + \text{Aq}$. (le Chatelier, C. R. 97. 1510.)

Calcium silicate fluoride, 2CaO , 3SiO_2 , 6CaF_2 .

(Deville, C. R. 52. 110.)

Calcium silicate potassium fluoride,

$4\text{H}_2\text{CaSi}_2\text{O}_6$, $\text{KF} + 4\text{H}_2\text{O}$.

Min. *Apophyllite*. Decomp. by $\text{HCl} + \text{Aq}$.

Calcium silicate stannate.

See Silicostannate, calcium.

Calcium silicate titanate, CaO , SiO_2 , TiO_2 .

(Hautefeuille, A. ch. (4) 4. 154.)

Min. *Titanite*. Incompletely decomp. by $\text{HCl} + \text{Aq}$, wholly by $\text{H}_2\text{SO}_4 + \text{Aq}$.

Cerous silicate, $\text{Ce}_2(\text{SiO}_3)_3$.

More or less attacked by HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$, according to the concentration. (Didier, C. R. 101. 882.)

Cerium didymium lanthanum silicate,

$2(\text{Ce}$, La , $\text{Di})_2\text{O}_3$, 3SiO_2 .

Min. *Cerite*. Gelatinizes with $\text{HCl} + \text{Aq}$.

Cerium glucinum yttrium silicate,

(Y , Ce , Gl) $_2\text{SiO}_5$.

Min. *Gadolinite*. Easily gelatinized by $\text{HCl} + \text{Aq}$.

Cerous silicate chloride, $2\text{Ce}_2\text{O}_3$, 3SiO_2 ,

$4\text{CeCl}_3 = \text{Ce}_4(\text{SiO}_4)_3$, 4CeCl_3 .

Insol. in H_2O , but slowly decomp. thereby. (Didier, C. R. 101. 882.)

Cobaltous silicate, Co_2SiO_4 .

Gelatinizes with $\text{HCl} + \text{Aq}$ (Bourgeois, C. R. 108. 1077)

Cupric silicate, CuH_2SiO_4 .

Min. *Diopside* Sol in HCl , HNO_3 , or $\text{NH}_4\text{OH} + \text{Aq}$ with separation of SiO_2 . Not attacked by $\text{KOH} + \text{Aq}$.

$\text{CuSiO}_3 + 2\text{H}_2\text{O}$ Min. *Chrysocolla*. Decomp. by $\text{HCl} + \text{Aq}$.

$+ 3\text{H}_2\text{O}$. Min. *Asperolite*. Easily decomp. by $\text{HCl} + \text{Aq}$.

"Cupric silicate" is insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Cupric silicate ammonia, $\text{CuSi}_2\text{O}_5, 2\text{NH}_3$.

Ppt. (Schiff, A. 123. 38)

Glucinum silicate, Gl_2SiO_4 .

Min. *Phenacite*. Not attacked by acids.

Glucinum ferrous manganous silicate ferrous manganous sulphide, $3(\text{Gl}, \text{Fe}, \text{Mn})_2\text{SiO}_4, (\text{Mn}, \text{Fe})\text{S}$.

Min. *Helvine*. Decomp. by $\text{HCl} + \text{Aq}$.

Iron (ferrous) silicate, Fe_2SiO_4 .

Min. *Fayalite*. Gelatinizes with $\text{HCl} + \text{Aq}$.

FeSiO_3 . Min. *Grunerite*

$+ 6\text{H}_2\text{O}$ Min. *Chlorophite*

$4\text{FeO}, \text{SiO}_2$ (Zobel, Dingl. 154. 111.)

Iron (ferric) silicate, $\text{Fe}_3\text{Si}_3\text{O}_9 + 5\text{H}_2\text{O}$.

Min. *Nontronite*. Gelatinizes with hot acids.

$4\text{Fe}_2\text{O}_3, 9\text{SiO}_2 + 18\text{H}_2\text{O}$. Min. *Hisingerite*.

$2\text{Fe}_2\text{O}_3, 9\text{SiO}_2 + 2\text{H}_2\text{O}$. Min. *Anthosiderite*.

Iron (ferroferric) magnesium silicate,

$(\text{Fe}, \text{Mg})_3\text{Fe}_3\text{Si}_3\text{O}_{10} + 4\text{H}_2\text{O}$.

Min. *Cronstadite*. Gelatinizes with acids.

Iron (ferroferric) sodium silicate, $5\text{Na}_2\text{SiO}_3,$

$2\text{FeSiO}_3, 4\text{Fe}_3(\text{SiO}_3)_3$.

Min. *Aknite*. Sl. decomp. by acids.

**Iron (ferrous) magnesium silicate, $\text{Fe}_2\text{SiO}_4,$
 Mg_2SiO_4**

Min. *Olivine, Chrysotile, Peridot*. Gelatinizes with HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$.

$(\text{Fe}, \text{Mg})\text{SiO}_3 + \frac{3}{2}\text{H}_2\text{O}$. Min. *Picrophyllite*.

$+ \frac{1}{2}\text{H}_2\text{O}$. Min. *Monradite*.

$(\text{Fe}, \text{Mg})\text{SiO}_3$. Min. *Bronzite, Hypersthene*.

Not attacked by acids.

$x\text{MgSiO}_3, y\text{FeSiO}_3$. Min. *Anthrophyllite*. Not attacked by acids.

**Iron (ferrous) manganous silicate, $\text{Fe}_2\text{SiO}_4,$
 Mn_2SiO_4 .**

Min. *Knebelite*. Gelatinizes with $\text{HCl} + \text{Aq}$.

Iron (ferrous) manganous silicate chloride, $7(\text{Fe}, \text{Mn})\text{SiO}_3, (\text{Fe}, \text{Mn})\text{Cl}_2 + 5\text{H}_2\text{O}$.

Min. *Pyrosmalite*. Completely decomp. by conc. $\text{HNO}_3 + \text{Aq}$.

**Iron (ferric) potassium silicate, $\text{Fe}(\text{SiO}_3)_3,$
 K_2SiO_3 .**

(Hautefeuille and Perrey, C. R. 107. 1150.)

Iron (ferric) sodium silicate, $\text{Na}_2\text{Fe}_2\text{Si}_4\text{O}_{11}$.

Min. *Crokydolite*. Not attacked by acids.

Lead silicate.

Insol. in acetone (Naumann, B. 1904, 37. 4329); methyl acetate. (Naumann, B. 1909, 42. 3790.)

See under Glass.

Lithium silicate, $\text{Li}_2\text{Si}_2\text{O}_{11}$.

Li_4SiO_4 .

Li_2SiO_3 . More stable towards H_2O than the other alkali metasilicates. (Rieke and Endell, C. C. 1911, I. 7.)

Decomp. by boiling H_2O and acids. (Friedel, C. C. 1901, II. 89.)

Scarcely attacked by cold H_2O . (Friedel, Bull Soc. Min. 1901, 24. 141.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601); methyl acetate (Naumann, B. 1909, 42. 3790.)

Magnesium silicate, $\text{Mg}_3\text{Si}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Min. *Serpentine*. Decomp. by $\text{HCl} + \text{Aq}$, more easily by H_2SO_4 .

Min. *Chrysotile*.

$\text{Mg}_3\text{Si}_2\text{O}_{10} + 6\text{H}_2\text{O}$. Min. *Gymnites, Soapstone*. Decomp. by H_2SO_4 .

MgSiO_3 . Not completely decomp. by $\text{HCl} + \text{Aq}$

$+ \frac{1}{2}\text{H}_2\text{O}$. Min. *Aphrodite*. Decomp. by hot acids.

$+ \frac{1}{2}\text{H}_2\text{O}$. Min. *Picrosmine*.

$+ 1\frac{2}{3}\text{H}_2\text{O}$. Sol in dil. acids. (v. Ammon.)

Min. *Forsterite*.

$3\text{MgO}, 4\text{SiO}_2 + \text{H}_2\text{O}$ or $4\text{MgO}, 5\text{SiO}_2 + \frac{3}{2}\text{H}_2\text{O}$. Min. *Talc* or *Steatite*. Not attacked by HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$.

$\text{Mg}_3\text{Si}_2\text{O}_{11} + 4\text{H}_2\text{O}$. Min. *Spadaite*. Decomp. by conc. $\text{HCl} + \text{Aq}$.

$\text{Mg}_3\text{Si}_2\text{O}_8 + 4\text{H}_2\text{O}$. Min. *Meerschaum*.

Decomp. by $\text{HCl} + \text{Aq}$.

"Magnesium silicate" is insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Magnesium potassium silicate,

$\text{MgO}, \text{K}_2\text{O}, 3\text{SiO}_2$.

Easily sol. in acids with decomp. (Duboin, C. R. 1895, 120. 681.)

**Magnesium silicate fluosilicate, $\text{Mg}_3\text{Si}_2\text{O}_9,$
 $\text{Mg}_6\text{Si}_2\text{F}_{18}$.**

Min. *Humite, Chondrodite*. Gelatinizes with HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$.

Manganous silicate, Mn_2SiO_4

Min. *Tephroite*. Decomp. by $HCl + Aq$ with formation of a stiff jelly

$MnSiO_3$. Min. *Rhodonite*, *Hermannite*

Not attacked by $HCl + Aq$

$Mn_2Si_2O_{10} + 2H_2O$ Min. *Friedelite*.

Easily gelatinized by $HCl + Aq$

"Manganous silicate" is insol in ethyl acetate (Naumann, B. 1910, 43. 314)

Manganous zinc silicate, $(Mn,Zn)_2SiO_4$

Min. *Troostite*.

Manganous silicate chloride, $MnSiO_3$, MnO , $MnCl_2$

Decomp. by H_2O . (Gorgeu.)

Nickel silicate, Ni_2SiO_4

Easily decomp by acids. (Bourgeois, C R. 108. 1077.)

Potassium silicate, K_2SiO_3

Completely sol. in H_2O . (Ordway, Sill. Am. J. (2) 33. 34.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

$K_2Si_2O_5$. Sol. in H_2O Conc $K_2Si_2O_5 + Aq$ contains 28% of the salt, and has sp. gr. 1.25. (Fuchs.)

Hydroscopic. Decomp. at once by H_2O . (Morey, J. Am. Chem. Soc. 1914, 36. 222.)

$K_2Si_5O_{17}$. Partially sol. in H_2O as K_2SiO_3

$K_2Si_2O_5 + 16H_2O$. Insol in H_2O . (Forchhammer.)

The K silicates are pptd. from their aqueous solution by alcohol with partial decomp., but less readily than Na silicates.

More sol. in H_2O than the corresponding Na salts. (Ordway, Sill. Am. J. (2) 32. 155.)

Solution can be obtained which is perfectly clear when $4\frac{1}{2}SiO_2$ are present to $1K_2O$, if there are no impurities present. (Ordway)

The K silicates resemble the Na salts, which see for further data.

Potassium hydrogen silicate, $KHSi_2O_5$

Not readily affected by H_2O , even by treatment at 100° for several hours.

Decomp. by heating with dil. HCl . (Morey, J. Am. Chem. Soc. 1914, 36. 222.)

Potassium zinc silicate.

Sol. in $KOH + Aq$. (Schindler.)

$K_2O, 6ZnO, 4SiO_2$. Sol. in $HCl + Aq$. (Duboin, C. R. 1905, 141. 255)

$8K_2O, 9ZnO, 17SiO_2$. Sol. in $HCl + Aq$. (Duboin.)

Potassium zirconium silicate, $K_2O, ZrO_2, 2SiO_2$

Decomp. by $HCl + Aq$. (Melliss.)

Rubidium silicate, Rb_2SiO_3

(Kahlenberg, J. phys. Chem. 1898, 2. 82.)

Silver silicate, Ag_2SiO_3

Decomp by all acids, sol. in $NH_4OH + Aq$. (Hawkins, Sill. Am. J. 139. 311.)

Sodium silicate, Na_2SiO_3

Rapidly decomp by H_2O . (Morey, J. Am. Chem. Soc. 1914, 36. 224)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790)

+5, 6, and $8H_2O$ Easily sol. in H_2O .

+ $9H_2O$ Solubility in $\frac{1}{2}$ -N $NaOH + Aq$

100 ccm. of the solution contain 25.56 g. $Na_2SiO_3 + 9H_2O$ at 17.5°

Sp. gr. of the solution = 1.129. (Vesterberg, C. C. 1913. 777.)

100 ccm. of a sat. solution of sodium silicate in $\frac{1}{2}$ -N. $NaCl + Aq$. contain 3.83 g. $Na_2SiO_3 + 9H_2O$ at 17.5° Sp gr. of solution = 1.15.

100 ccm. of a sat. solution of sodium silicate in sat. $NaCl + Aq$ contain 20.64 g $Na_2SiO_3 + 9H_2O$ at 17.5° . (Vesterberg.)

$Na_2Si_2O_5$. Sol in H_2O .

Slowly decomp. by cold H_2O . (Morey J Am Chem. Soc. 1914, 36. 223)

$Na_4Si_5O_{12}$

$Na_2Si_3O_7$.

$Na_2Si_4O_9$ Slowly sol. in H_2O

+ $12H_2O$.

Above compounds are all more or less indefinite.

Water glass $xNa_2O, ySiO_2 + zH_2O$. Sol. in H_2O , but solution is decomposed by all weak acids, even CO_2 .

Fused water glass is but little acted on by cold H_2O , but when pure, easily dissolves in H_2O by long boiling. (Ordway, Am. J. Sci. (2) 32. 337.)

When the SiO_2 is present in greater proportion than in $Na_2O, 3SiO_2$, it is very difficult to dissolve in H_2O .

Na silicate is less easily sol. in H_2O than the corresponding K compound.

Solubility of water glass in H_2O is much impaired by earthy impurities, so that traces have great effect in preventing the solubility.

NH_4 salts decomp. water glass solutions. A solution containing $\frac{1}{2}\%$ Na_2SiO_3 is scarcely precipitated by NH_4Cl , but easily by NH_4NO_3 . (Fluckinger.)

Precipitated by $NH_4OH + Aq$ as Na_2SiO_3 .

Many sodium and potassium salts, especially the chlorides and acetates, form precipitates in solutions of water glass; these precipitates are larger the more concentrated the solution is, and the greater amount of SiO_2 it contains. Heating hastens the precipitation by chlorides, nitrates, and sulphates, but delays that by acetates. $KOH + Aq$ does not precipitate.

Cold sat. $Na_2SO_4 + Aq$ does not precipitate even on heating, but 1 pt anhydrous Na_2SO_4 dissolved in 2 pts. H_2O precipitates a hot solution of Na_2SiO_3 .

NaNO_3 dissolved in 1 pt. H_2O precipitate $\text{Na}_2\text{SiO}_3 + \text{Aq}$ of 1.392 sp. gr.; NaNO_3 in 2 pts. H_2O when mixed with a solution of Na_2SiO_3 , as above, if the two are present in equal vols., causes no ppt. in the cold, but solidifies when warmed to 54° , and redissolves on cooling rapidly, but if 2 vols $\text{NaNO}_3 + \text{Aq}$ are present to 1 vol $\text{Na}_2\text{SiO}_3 + \text{Aq}$, the precipitate does not disappear on cooling.

If 1 pt $\text{NH}_4\text{OH} + \text{Aq}$ (0.921 sp gr.) is added to 10 pts. $\text{Na}_2\text{SiO}_3 + \text{Aq}$, no ppt forms, but by increasing the amt. of $\text{NH}_4\text{OH} + \text{Aq}$ to 2 pts., the greater pt. of the Na_2SiO_3 is pptd., but redissolves on heating to 90° , separating again on cooling. When 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ is added to 6–8 pts $\text{Na}_2\text{SiO}_3 + \text{Aq}$ and heated to 30° , a clear liquid is formed which separates into two layers at ordinary temp.

The most sol K, Na, Li, and NH_4 salts separate SiO_2 from conc. $\text{Na}_2\text{SiO}_3 + \text{Aq}$. Most of these salts lose this power by dilution, but the NH_4 salts and KSON keep this power until the solution is very dil. This is especially the case with NH_4Cl and NH_4NO_3 .

Bromine, chlorine, propyl amine, creosote, phenol dissolved in glycerine, chloral hydrate, dil albumen solution, and glue solution ppt SiO_2 from $\text{Na}_2\text{SiO}_3 + \text{Aq}$; but sugar, dextrine, glycerine, urea, sl alkaline solution of urea nitrate, conine, nicotine, saponine, convolvuline, jalappine, and colophonium dissolved in $\text{KOH} + \text{Aq}$ do not ppt SiO_2 (Fluckinger, Arch Pharm. (2) 144. 97).

Alcohol ppts water glass as such from its aqueous solution, even when this is very dil, but there is some decomposition, the alcohol tending to hold in solution a portion of a silicate more alkaline than that previously dissolved in H_2O , while the ppt formed contains more SiO_2 than the original silicate.

Many neutral K or Na salts ppt. water glass as such when added to aqueous solutions. Like alcohol, these solutions exert a decomposing action, the ppt. being always more siliceous than the original silicate. Na silicate yields a larger deposit than K silicate; when a silicate of one base is pptd. by a salt of the other, both bases enter into the composition of the ppt, and the relative proportion of Na and K is very nearly the same as in the average of the liquids mixed.

Different salts have very unequal pptg. power, the acetates and chlorides being particularly efficient. Heat increases the pptg. power of the chlorides, sulphates, and nitrates, and diminishes that of the acetates. The alkali acetates are somewhat more efficient than the chlorides, but $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$ gives only a slight ppt with Na_2O , $2\frac{1}{2}\text{SiO}_2$, even after some time.

NaNO_3 has but little effect on the more alkaline silicates.

Na_2SO_4 has still less power than NaNO_3 . Na_2CO_3 has no pptg. power, and Na_2AsO_4 or Na_3PO_4 have very little effect.

MHSO_4 , MHCOS_3 , M_2HPO_4 , M_2HASO_4 ppt SiO_2 . NH_4 salts also have that effect.

Pptd. water glass, as mentioned above, is much more sol in H_2O than ordinary water glass, and dissolves in H_2O without decomp. For numerous further details, see articles by Ordway in Sil Am J. Sci. vols. 32 and 33; also Storer's Dict.

Sp gr of water glass solution containing 14–15% SiO_2 , 13–14% Na_2O , and 70–72% H_2O is 1.30–1.35. (Hager, Comm. 1883.)

Sp gr. of sat. $\text{Na}_2\text{SiO}_3 + \text{Aq}$ freshly prepared at 18° is 1.2600, and 1 litre contains 4.5 gramme-equivalents $\frac{1}{2}\text{Na}_2\text{SiO}_3$.

Sp. gr. of sat solution of Na_2O , 3.4 SiO_2 is 1.366, and 1 litre contains 3.7 gramme-equivalents $\frac{1}{2}(\text{Na}_2\text{O}, 3.4\text{SiO}_2)$. (Kohlrausch, Z. phys. Ch. 12. 773.)

Sodium zirconium silicate, Na_2O , ZrO_2 , SiO_2 .

Decomp. by hot H_2O or $\text{HCl} + \text{Aq}$. (Gibbs, Pogg. 71. 559.)

Na_2O , 8 ZrO_2 , $\text{SiO}_2 + 11\text{H}_2\text{O}$ Decomp. by H_2SO_4 (Melliss)

Strontium silicate, SrSiO_3 .

(Stein, Z. anorg. 1907, 55. 164.)

$+ \text{H}_2\text{O}$ Sol. in H_2O (Jordis and Kanter, Z anorg. 1903, 35. 90)

Sr_2SiO_4 . (Stein, Z. anorg. 1907, 55. 167.)

3 SrO , SiO_2 Sl. sol. in H_2O Sol. in acids. (Vauquelin.)

Thallous silicate, 3 Tl_2O , 10 SiO_2 .

100 pts. of a solution of Tl_2O dissolve 4.17 pts. SiO_2 by 24 hours' boiling. Sol. in H_2O . (Flemming, J B 1868. 251)

Thorium silicate, ThO_2 , SiO_2 .

Insol in acids. Attacked by KHSO_4 . (Troost and Ouvrard, C. R 105. 255.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$. Min. *Thorite* Decomp. by $\text{HCl} + \text{Aq}$

ThO_2 , 2 SiO_2 . Insol. in acids or KHSO_4 . (T. and O.)

Yttrium silicate, Y_2O_3 , SiO_2 .

Attacked by HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$. (Duboin, C. R. 107. 99.)

Zinc silicate, ZnSiO_3 .

(Stein, Z. anorg. 1907, 55. 165.)

Zn_2SiO_4 . Min. *Willemite*. Gelatinizes with $\text{HCl} + \text{Aq}$; sol. in $\text{KOH} + \text{Aq}$.

Decomp. by cold sat. citric acid + Aq . (Bolton, C. N. 1881, 43. 34.)

$+ \text{H}_2\text{O}$. Min. *Calamine*. Sol. in $\text{HCl} + \text{Aq}$ with separation of gelatinous SiO_2 , $x\text{H}_2\text{O}$.

Sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, and $\text{KOH} + \text{Aq}$.

Insol. in $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (Brandhorst, Zeit. angew. Ch. 1904, 17. 513.)

ZnO , 3 SiO_2 . (Bornträger, Ch. Z. 1893, 8. 186)

Zirconium silicate, SiO_2 , ZrO_2 .

Min. *Zircon*. Insol. in acids, except H_2SO_4 , in which it is very slowly and sl. sol
 3SiO_2 , 2ZrO_2 Min. *Auerbachite*.

"Silicium oxide," $\text{Si}_3\text{H}_2\text{O}_5$.

(Geuther, J pr. 95: 430.) This substance is identical with silicoformic anhydride according to Otto-Graham's Handb. anorgan. Chem. 7te Aufl. 2. 953.

Siliciuretted hydrogen.

See Silicon hydride.

Silicobromoform, HSiBr_3 .

Fumes on air; decomp. by H_2O .

Silicochloroform, HSiCl_3 .

Decomp. by H_2O and alcohol
 Completely miscible with CS_2 , CCl_4 , CHCl_3 , C_6H_6 , SiCl_4 , SnCl_4 , TiCl_4 , and AsCl_3 (Ruff, B. 1905, 38. 2230.)

Silicoethane.

See Silicon hydride.

Silicofluoroform, SiHF_3 .

Decomp. by H_2O . Decomp. by NaOH and abs. alcohol with evolution of hydrogen. Decomp. by abs. ether. Sol. in toluene (Ruff, B. 1905, 38. 63)

Silicoformic anhydride,

Somewhat sol. in H_2O . Acids, even conc. HNO_3 + Aq. have no action, except HF , which dissolves it easily with evolution of hydrogen. Solutions of alkali hydrates, ammonium hydrate, and alkali carbonates + Aq. also dissolve with evolution of hydrogen. (Ruff and Wohler, A. 104. 101.)

Silicoiodoform, HSiI_3 .

Decomp. by H_2O . Sol. in CS_2 . (Friedel, A. 149. 96.)

Miscible with C_6H_6 and CS_2 . (Ruff, B. 1903, 41. 3739.)

Silicomethane, SiH_4 .

See Silicon hydride.

Silicomethyl chloride, SiH_3Cl .

Decomp. by H_2O and by alkalis. (Besson and Fournier, C. R. 1909, 148. 556)

Silicomethylene chloride, SiH_2Cl_2 .

Decomp. by H_2O and by alkalis. (Besson and Fournier, C. R. 1909, 148. 556.)

Silicomolybdic acid, SiO_2 , 12MoO_3 + $26\text{H}_2\text{O}$.

Very easily sol. in H_2O and dil. acids. (Parmentier, C. R. 94. 213.)

Forms a solution with a little ether, which separates into two layers by addition of H_2O or more ether. (Parmentier, C. R. 104. 686.) (Copaux, Bull. Soc. Min. 1906, 29. 79.)

+ $32\text{H}_2\text{O}$. Decomp. by alkali. (Asch, Z. anorg. 1901, 28. 293)

+ $33\text{H}_2\text{O}$. (Copaux, Bull. Soc. Min 1906, 29. 79.)

Aluminum silicomolybdate, $2\text{Al}_2\text{O}_3$, $3(\text{SiO}_2$, $12\text{MoO}_3)$ + $93\text{H}_2\text{O}$.

(Copaux, A. ch. 1906, (8) 7. 118.)

Aluminum sodium silicomolybdate, $4(\text{Na}_2\text{O}$, Al_2O_3 , $2\text{SiO}_2)$, Na_2MoO_4 + $7\text{H}_2\text{O}$.

Sol. in HCl + Aq. (Thugutt, Z. anorg. 1892, 2. 87.)

Ammonium silicomolybdate.

Sol. in H_2O . (Parmentier, C. R. 94. 213.)

Barium silicomolybdate, 2BaO , SiO_2 , 12MoO_3 + $16\text{H}_2\text{O}$.

(Copaux, A. ch 1906, (8) 7. 118)

+ $22\text{H}_2\text{O}$. Sol. in 4 pts H_2O . (Copaux, Bull. Soc. Min. 1906, 29. 80.)

+ $24\text{H}_2\text{O}$. Efflorescent. Very sol. in H_2O . (Asch, Z. anorg. 1901, 28. 282.)

+ $29\text{H}_2\text{O}$. Efflorescent. (Copaux, A. ch. 1906, (8) 7. 118.)

Cadmium silicomolybdate, 2CdO , SiO_2 , 12MoO_3 + $22\text{H}_2\text{O}$

Very unusually sol. in H_2O . (Copaux, A. ch. 1906, (8) 7. 140.)

Cæsium silicomolybdate.

Sl. sol. in H_2O ; insol. in silicomolybdic acid + Aq.

Calcium silicomolybdate, 2CaO , SiO_2 , 12MoO_3 + $24\text{H}_2\text{O}$.

Efflorescent. Very sol. in H_2O . (Asch, Z. anorg. 1901, 28. 282)

+ $26\text{H}_2\text{O}$. (Copaux, A. ch. 1906, (8) 7. 118.)

+ $31\text{H}_2\text{O}$. (Copaux)

Chromium silicomolybdate, $2\text{Cr}_2\text{O}_3$, $3(\text{SiO}_2$, $12\text{MoO}_3)$ + $93\text{H}_2\text{O}$.

(Copaux.)

Cupric silicomolybdate, 2CuO , SiO_2 , 12MoO_3 + $31\text{H}_2\text{O}$.

Very sol. in H_2O . (Copaux.)

Lithium silicomolybdate, $2\text{Li}_2\text{O}$, SiO_2 , 12MoO_3 + $29\text{H}_2\text{O}$.

Very sol. in H_2O . (Copaux.)

Magnesium silicomolybdate, 2MgO , SiO_2 , 12MoO_3 + $30\text{H}_2\text{O}$.

(Asch, Z. anorg. 1901, 28. 282)

+ $31\text{H}_2\text{O}$. Very efflorescent and sol. in H_2O . (Copaux.)

Potassium silicomolybdate, $2K_2O, SiO_2, 12MoO_3 + 16H_2O$

Efflorescent. Very sol in H_2O . (Asch, Z anorg. 1901, **28**, 282)

$1.5K_2O, SiO_2, 12MoO_3 + 14H_2O$ (Asch)
Sol in H_2O with decomp (Copaux)

Potassium silver silicomolybdate, $K_2O, 3Ag_2O, 2(SiO_2, 12MoO_3) + 14H_2O, + 22H_2O, + 30H_2O$.

Sol in H_2O with decomp. Sol. unchanged in dil mother liquor (Copaux, Bull. Soc. Min 1907, **30**, 293)

Rubidium silicomolybdate.

Sl. sol. in H_2O .

Silver silicomolybdate, $1.5Ag_2O, SiO_2, 12MoO_3 + 11H_2O$.

Sol. in cold H_2O . (Asch.)

$2Ag_2O, SiO_2, 12MoO_3 + 12H_2O$ Decomp. by boiling H_2O . Sol. in $NH_4OH + Aq.$
 $4Ag_2O, SiO_2, 12MoO_3 + 15H_2O$ (Asch.)

Sodium silicomolybdate, $2Na_2O, SiO_2, 12MoO_3 + 14H_2O$

(Copaux)

$2Na_2O, SiO_2, 12MoO_3 + 21H_2O$ Very sol in H_2O . Efflorescent. (Asch)
 $+ 22H_2O$. (Copaux.)

$1.5Na_2O, SiO_2, 12MoO_3 + 17H_2O$. (Asch)
 $3Na_2O, 2(SiO_2, 12MoO_3) + 17H_2O$. (Copaux.)

Strontium silicomolybdate, $2SrO, SiO_2, 12MoO_3 + 26H_2O$

(Copaux.)

Zinc silicomolybdate, $2ZnO, SiO_2, 12MoO_3 + 31H_2O$

Extremely sol. in H_2O . (Copaux.)

Silicon, Si.

Amorphous Insol. in H_2O . Sol. before igniting in cold HF. Insol. in other mineral acids and aqua regia. Sol in conc. KOH + Aq. When amorphous Si is ignited, it becomes insol. in HF and KOH + Aq.

Amorphous Si is sol. in aqua regia and in a mixture of HNO_3 and HF. (Vigouroux-Moissan, C. R. 1895, **120**, 367.)

Insol. in liquid CO_2 . (Buchner, Z. phys. Ch. 1906, **54**, 674.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 830.)

Graphitic. Sol. in $HNO_3 + HF$. (Berzelius, A. 49, 247)

Crystalline. Insol. in all acids, except a mixture of HF and HNO_3 . Sol. in moderately conc. KOH + Aq even when cold. (Deville.)

Although it has been generally understood that crystallized Si is not attacked by HF, it is now found that this applies only to HF +

Aq Gaseous HF readily attacks cryst Si. (Newth, C. N. 1896, **72**, 287)

Si cryst. from Ag is incompletely sol. in HF. According to the temp. to which the Ag Si mixture has been heated, the following percentages of Si are dissolved in HF: 970° , 58.02%; 1150° , 27.66%; 1250° , 19%; 1470° , 16%. (Moissan and Siemens, C. R. 1904, **138**, 657, 1300)

Insol in liquid NH_3 (Gore, Am. Ch. J. 1898, **20**, 830)

Silicon amide, $Si(NH_2)_4$.

Unstable; decomp. by H_2O and partially decomp. by HNO_3 ; sol. in most organic solvents. (Lengfeld, Am. Ch. J. 1899, **21**, 531.)

Decomp. by H_2O ; insol. in liquid NH_3 . (Vigouroux, C. R. 1903, **136**, 1670.)

Silicon triboride, SiB_3

Slowly attacked by HNO_3 . Decomp. by hot conc H_2SO_4 or fused KOH. (Moissan, C. R. 1900, **131**, 142.)

Silicon hexaboride, SiB_6

Readily attacked by HNO_3 . Slowly decomp. by hot conc. H_2SO_4 . Not attacked by fused KOH (Moissan, C. R. 1900, **131**, 142.)

Silicon tribromide, Si_2Br_6 .

Decomp. by KOH + Aq. (Friedel and Ladenburg, A. **203**, 253)

$HSiBr_3$. See **Silicobromoform**.

Silicon tetrabromide, $SiBr_4$.

Rapidly decomp. by H_2O ; decomp. in several days by H_2SO_4 . (Friedel and Ladenburg, A. **147**, 362.)

Silicon bromide, Si_2Br_3 .

(Besson, C. R. 1910, **151**, 1056.)

Si_4Br_{10} . (Besson.)

Disilicon hydrogen pentabromide, HSi_2Br_5 or Si_2Br_5 (?)

Decomp. by H_2O (Mahn, Zeit. Chem. (2) **5**, 279.)

Silicon tetrabromide ammonia, $SiBr_4, 6NH_3$.

Decomp. by H_2O . (Lay, Dissert. 1910.)

$SiBr_4, 7NH_3$. Decomp by H_2O . (Besson, C. R. **110**, 240)

Silicon bromoiodide, $SiIBr_3$.

Decomp. by H_2O . Sol in CS_2 . (Friedel, B. **2**, 60.)

$SiBr_2I_2$. As above. (F.)

$SiBrI_3$. As above. (F.)

Silicon bromosulphide, $SiSBr_2$.

Decomp. in moist air. Violently decomp. by H_2O . Sol. in CS_2 and other organic solvents. (Blix, B. 1903, **36**, 4218)

Silicon carbide, SiC.

Very stable, insol. in H_2SO_4 and HNO_3 ; sol. in fused KOH at red heat (Moissan, Bull Soc. 1894, (3) 11. 997)

Cryst. modification. Insol. in acids; sol. in fused alkalis (Moissan, C. R. 1893, 117. 427.)

Insol in all acids; sol. in molten alkalis (Muhlhaeuser, Z anorg 1894, 5. 116)

See Silundum.

Silicon subchloride, SiCl_2 (?)

Decomp. by H_2O . (Troost and Hautefeuille, A. ch. (5) 7. 463)

Silicon trichloride, Si_2Cl_6 .

Decomp. by H_2O and alkalis. (Troost and Hautefeuille, A. ch. (5) 7. 459.)

SiHCl_3 . See Silicochloroform.

Silicon tetrachloride, SiCl_4 .

Decomp. by H_2O and alcohol.

Silicon octochloride, Si_2Cl_8 .

"Perchlorsilicopropane." Decomp. by H_2O . (Gattermann, B. 1894, 27. 1947)

Silicon chloride, $\text{Si}_4\text{Cl}_{10}$.

(Besson, C. R. 1909, 149. 36.)

Si_2Cl_6 . "Perchlorsilicobutane." Decomp. by H_2O . Fumes in the air. (Besson.)

$\text{Si}_6\text{Cl}_{14}$. "Perchlorsilicohexane." Decomp. by H_2O . (Besson, C. R. 1909, 148. 841.)

Silicon trichloride ammonia, Si_2Cl_6 , 5NH_3

Slowly decomp by H_2O . (Besson, C. R. 110. 516.)

Silicon tetrachloride ammonia, SiCl_4 , 6NH_3 .

Decomp by H_2O (Persoz, A. ch. 44. 319.)

Silicon tetrachloride hydrazine, SiCl_4 , $4\text{N}_2\text{H}_4$.

Extremely hygroscopic and quickly decomp. by H_2O . (Lay, Dissert 1910.)

Silicon chlorobromide, SiCl_3Br .

Decomp. by H_2O . (Friedel and Ladenburg, A. 145. 187.)

SiCl_2Br_2 As above. (Friedel and Ladenburg.)

SiBr_3Cl . Decomp. by H_2O . (Reynolds, Chem. Soc. 51. 590)

Silicon chlorobromide ammonia, $2\text{SiCl}_3\text{Br}$, 11NH_3 .

Decomp. by H_2O (Besson, C. R. 112. 788.)

SiCl_2Br_2 , 5NH_3 . As above. (B.)

2SiClBr_3 , 11NH_3 . As above. (B.)

Silicon chlorohydrosulphide, SiCl_3SH .

Decomp. by H_2O or alcohol. (Pierre, A. ch. (3) 24. 286)

Silicon chloriodide, SiCl_3I .

Decomp. by H_2O . (Besson, C. R. 112. 611.)

SiCl_2I_2 . As above. (B.)

SiClI_3 . As above. (B.)

Silver chloriodide ammonia, $2\text{SiCl}_3\text{I}$, 11NH_3 . (Besson)

SiCl_2I_2 , 5NH_3 .

Silicon chloronitride, $\text{Si}_5\text{N}_6\text{Cl}_2$.

(Schützenberger, C. R. 92. 1508.)

Silicon chlorosulphide, $\text{Si}_2\text{Cl}_2\text{S}_2$.

Decomp. violently by H_2O . Sol. in CCl_4 . (Besson, C. R. 113. 1040.)

SiSCl_2 . Violently decomp. by H_2O ; sol. in CS_2 . (Blix, B. 1903, 36. 4223)

Silicon difluoride, SiF_2 (?)

Decomp by H_2O or $\text{NH}_4\text{OH} + \text{Aq}$ (Troost and Hautefeuille, A. ch. (5) 7. 464.)

Silicon tetrafluoride, SiF_4 .

Abundantly absorbed by H_2O with decomp. 100 pts. H_2O absorb 140.6 pts SiF_4 in 24 hours (Berzelus); 124.1 pts SiF_4 in 24 hours (Davy).

Absorbed abundantly by $\text{HNO}_3 + \text{Aq}$. (Kuhlmann, A. 39. 319.)

Absorbed abundantly by alcohol, without separation of silicic acid, if the alcohol contains less than 8% of water.

Sol. in conc. $\text{HF} + \text{Aq}$. Absorbed by ether. Sl. sol. in naphtha, and oil of turpentine.

Silicon hydrogen fluoride, H_2SiF_6 .

See Fluosilicic acid.

Silicon fluoride with MF.

See Fluosilicate, M.

Silicon fluoride ammonia, SiF_4 , 2NH_3 .

Decomp. by H_2O . (Davy.)

Silicon hydride, SiH_4 .

Insol. in H_2O . Decomp. by $\text{KOH} + \text{Aq}$. Not changed by $\text{NH}_4\text{OH} + \text{Aq}$, $\text{H}_2\text{SO}_4 + \text{Aq}$, or $\text{HCl} + \text{Aq}$.

Si_2H_2 . "Silicoacetylene."

Sol. in 20% $\text{NaOH} + \text{Aq}$. with evolution of H_2 . (Bradley, C. N. 1900, 82. 149.)

Si_2H_6 . "Silicoethane." (Lebeau, C. R. 1909, 148. 44.)

Sl. sol. in H_2O . Best solvent is ethyl orthosilicate. (Moissan, Bull Soc. 1903, (2) 29. 443.)

Silicon nitrogen hydride, SiHN .

Decomp. by H_2O and NaOH . (Ruff, B. 1905, 38. 2241.)

Silicon hydroxide, $\text{SiO}_2, x\text{H}_2\text{O}$.

See Silicic acid.

$\text{Si}_2\text{H}_2\text{O}_4$. See Silicooxalic acid.

$\text{Si}_3\text{H}_2\text{O}_5$. See Silicoformic anhydride.

$\text{Si}_4\text{H}_4\text{O}_3$. See Silicone.

Silicon imide, $(\text{Si}(\text{NH}))_2$.

Decomp. by H_2O . (Vigouroux, C. R. 1903, 136. 1671)

Silicondiimide, $\text{Si}(\text{NH})_2$.

Decomp. by H_2O with evolution of much heat. (Blx, B. 1903, 36. 4224.)

Silicon imide hydrochloride, $\text{Si}(\text{NH})_2, 2\text{HCl}$

Rather stable in air. (Blx, B. 1903, 36. 4225.)

Silicon diiodide, SiI_2 .

Insol. in CS_2 , CHCl_3 , C_6H_6 , and SiCl_4 (Friedel and Ladenburg, A. 203. 247.)

Silicon triiodide, SiI_3 .

Decomp with H_2O even at 0° .

100 pts CS_2 dissolve 19 pts. SiI_3 at 19° , 26 pts SiI_3 at 27° . (Friedel and Ladenburg, Bull Soc. (2) 12. 92)

HSiI_3 . See Siliciodoform.

Silicon tetraiodide, SiI_4 .

Decomp by H_2O . Acts on alcohol and ether.

1 pt. CS_2 dissolves 2.2 pts. SiI_4 at 27° . (Friedel, A. 149. 96.)

Silicon nitride, Si_3N_4 .

Partially decomp by boiling with conc. H_2SO_4 .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65. 89.)

Si_2N_3 . Partially decomp. by boiling with conc. H_2SO_4 .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65. 89.)

Si_3N_4 . Not attacked by H_2O .

Partially decomp. by boiling with conc. H_2SO_4 .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65. 89.)

Silicon nitrimide, $\text{Si}_2\text{N}_3\text{H}$.

"Silicam."

Sol. in HF, and rapidly in $\text{KOH} + \text{Ac}$. (Schutzenberger, C. R. 92. 1508.)

Decomp. by cold, more rapidly by hot H_2O and much more rapidly by alkalis. Sol. in $\text{HF} + \text{Aq}$. Not attacked by HNO_3 . Decomp. by conc. H_2SO_4 . (Lay, Dissert. 1910.)

Not decomposed by H_2O .

Sol. in hot alkalis + Aq with decomp. (Blx, B. 1903, 36. 4227)

Silicon suboxide, Si_3O_2 .

(Homgtschmid, M. 1909, 30. 509.)

Silicon monoxide, SiO .

Much less easily sol. in $\text{HF} + \text{Aq}$ but more easily sol. in alkalis + Aq than SiO_2 . (Potter, C. C. 1907, II. 1952.)

Silicon dioxide, SiO_2 .

See also Silicic acid.

(a) *Crystalline*. Min. Quartz, Tridymite.

Insol. in H_2O , and acids, except HF.

Sl. sol. in boiling $\text{K}_2\text{CO}_3 + \text{Aq}$, and $\text{KOH} + \text{Aq}$; see below.

Insol. in cold $\text{KOH} + \text{Aq}$, extremely slowly sol. in boiling $\text{KOH} + \text{Aq}$ (Fuchs.)

Sol. in HF with formation of SiF_4 and H_2O .

Insol. in sugar + Aq, contrary to assertion of Verdel and Rissler. (Petzholdt, J. pr. 60. 368)

(b) *Amorphous*. Min. Opal, etc.

Insol. in H_2O , and acids except HF.

100 pts. H_2O containing CO_2 dissolve 0.078 pt amorphous SiO_2 (Maschke); 0.0136 pt. (Struckmann.)

100 pts. cold $\text{HCl} + \text{Aq}$ of 1.088 sp. gr. dissolve 0.017 pt. SiO_2 . (Struckmann.) 100 pts. $\text{HCl} + \text{Aq}$ of 1.115 sp. gr. dissolve in the cold 0.009 pt. SiO_2 , and 0.018 pt. on boiling. 100 pts $\text{NH}_4\text{OH} + \text{Aq}$ (containing 10% NH_3) dissolve 0.017 pt. quartz and 0.38 pt. ignited SiO_2 . (Pribram, Z. anal. 6. 119.)

Sol. in boiling K_2CO_3 or $\text{Na}_2\text{CO}_3 + \text{Aq}$, separating out on cooling as a gelatinous mass. (Pfaff, Schw. J. 29. 383.) The different forms of SiO_2 have different degrees of solubility in $\text{K}_2\text{CO}_3 + \text{Aq}$. Unignited amorphous SiO_2 from SiF_4 dissolves most readily, then come opal, ignited amorphous SiO_2 , fused SiO_2 , and tridymite; quartz powder is the most difficultly soluble. (Rose) A similar behaviour is shown to $\text{KOH} + \text{Aq}$.

Opal is much more sol. in $\text{KOH} + \text{Aq}$ than quartz, and hyalite is the least sol. of the varieties of opal. (Fuchs.)

Opal is easily sol. in $\text{KOH} + \text{Aq}$, even after ignition. (Schaffgotsch, Pogg. 68. 147)

Rammelsberg (Pogg. 112. 177) made the following experiments on the solubility of SiO_2 in $\text{KOH} + \text{Aq}$. The $\text{KOH} + \text{Aq}$ used contained 1 pt. KOH to 3 pts. H_2O . 1 pt. of the powdered mineral was boiled half an hour in a silver dish with such an amount of the $\text{KOH} + \text{Aq}$ that 20 pts. KOH were present.

7.75% of milky white quartz was dissolved by repeating the above process three times. 12.8-15% of gray hornstone was dissolved by twice boiling; 2.43% of moderately finely powdered agate of 2.661 sp. gr. was dissolved by once boiling; 9.7% of unignited hyalite remained undissolved after thrice boiling;

21% of ignited hyalite remained undissolved after thrice boiling; 7.21% of semi-opal of 2.101 sp. gr. remained undissolved after thrice boiling; 18.5-19.2% of impure semi-opal of 2.101 sp. gr. remained undissolved after thrice boiling; 79.9% of chalcedony of 2.624 sp. gr. remained undissolved after thrice boiling; 6.12% of chalcedony of 2.567 sp. gr. remained undissolved after fourth boiling; 14.4% chrysoprase of 2.623 sp. gr. remained undissolved after once boiling; 49.41% of chrysoprase of 2.635 sp. gr. remained undissolved after thrice boiling; 6.62% of flint of 2.606 sp. gr. remained undissolved after twice boiling; 38.1% of fire-opal of 2.625 sp. gr. remained undissolved after fourth boiling; 26.6% of fire-opal of 2.625 sp. gr. remained undissolved after fifth boiling.

Insol in liquid CO₂ (Büchner, Z phys Ch. 1906, **54**, 674.)

Insol in acetone (Naumann, B. 1904, **37**, 4329.)

The solubility of crystals of quartz on different faces in HF has been determined by Lebrun. (Belg. Acad Bull 1913, 953.)

Silicon thorium oxide.

See Silicate, thorium.

Silicon zirconium oxide.

See Silicate, zirconium.

Silicon oxychloride, Si₂OCl₂.

Decomp. by H₂O and alcohol. Miscible with CS₂, SiCl₄, CCl₄, CHCl₃, or ether. (Friedel and Ladenburg, A. 147, 355.)

Si₂O₃Cl₁₀; Si₄O₄Cl₃; Si₈O₁₀Cl₁₂; (Si₂O₃Cl₂)_n. Si₄O₇Cl₂. Sol. in above oxychlorides. (Troost and Hautefeuille, Bull Soc. (2) **35**, 360.)

Silicon oxyfluorhydrin, Si₂O₃F^{OH}.

(Landolt, A Suppl. **4**, 27.)

Silicon selenide, SiSe₂.

Decomp by H₂O or KOH + Aq. (Sabatier, C. R. **113**, 132.)

Silicon sulphide, SiS₂.

Sol. in H₂O with decomp. Acts on alcohol or ether in the cold. (Fremy, A. ch. (3) **38**, 314.)

SiS. Decomp. by H₂O; easily sol. in dil. alkalies. (Schützenberger, Bull. Soc. (2) **38**, 56.)

Silicon sulphodiamide, SiS(NH₂)₂.

Slowly decomp. in the air. Insol. in cold liquid NH₃. (Blix, B. 1903, **36**, 4219.)

Silicon sulphobromide.

See Silicon bromosulphide.

Silicon sulphochloride.

See Silicon chlorosulphide.

Silicon sulphourea, SiS(NH₂)₂.

Slowly decomp. in air.

Decomp. by H₂O.

Insol. in cold liquid NH₃. (Blix, B 1903, **36**, 4219.)

Silicone, Si₄H₄O₃.

Insol in H₂O, but gives off hydrogen when warmed therewith. Not attacked by chlorine or nitric or sulphuric acids even on heating, but is gradually sol. in HF. Decomp. by alkalies, even by the most dil. NH₄OH + Aq, with greatest violence and evolution of heat and hydrogen gas. Insol. in alcohol, SiCl₄, PCl₃, or CS₂. (Wohler, A. **127**, 257.)

H₂Si₂O₃. Decomp. by H₂O and by dil. acids. Violently decomp. by fuming HNO₃. Not attacked by conc. H₂SO₄. Very slowly decomp by conc. HCl, rapidly by alkalies + Aq and by pyridine. (Honigschmid, M. 1909, **30**, 509.)

Insol in H₂O, alcohol. SiCl₄, PCl₃, and CS₂. Not attacked by acids except HF. (Donath and Liesner, C. C. **1909**, II. 1707.)

H₁₂Si₁₀O₈. Scarcely attacked by acids, but easily decomp. by hot H₂O, NaOH + Aq etc but not by NH₄OH + Aq. (Kolb, Z. anorg. **1909**, **64**, 353.)

H₁₀Si₁₀O₈. (Kolb.)

H₈Si₈O₁₃. As H₁₂Si₁₀O₈. (Kolb.)

Silicomesoxalic acid, Si(OH)₂(SiO.OH)₂.

Insol. in cold H₂O, decomp. by hot H₂O. (Gattermann, B. 1899, **32**, 1116.)

Silicooxalic acid, Si₂H₂O₄ = Si₂O₂(OH)₂.

Decomp. by bases with evolution of hydrogen. Takes up HNO₃ to form compound, but not HCl or H₂SO₄. (Troost and Hautefeuille, A. ch. (5) **7**, 463.)

Silicophosphoric acid, SiO₂, P₂O₅.

Slowly decomp. by H₂O. Unchanged by alcohol. Exists also in two modifications which are not attacked by H₂O. (Hautefeuille and Margottet, C. R. **99**, 789.)

SiO₂, 2P₂O₅ + 4H₂O. Decomp by moist air. Sol. in H₂O at 0°, but decomp. by warming to ordinary temp. (Hautefeuille and Margottet, C. R. **104**, 56.)

Calcium silicophosphate.

See Phosphate silicate, calcium.

Silicostannic acid.

Calcium silicostannate, Ca(Si,Sn)O₃.

Not attacked by acids, KHSO₄, or alkalies + Aq. (Bourgeois, Bull. Soc. (2) **47**, 297.)

Silicodectungstic acid, $H_8W_{10}SiO_{38} + 3H_2O = 4H_2O, SiO_2, 10WO_3 + 3H_2O$.

Sometimes sol. in H_2O , but usually separates out gelatinous silica. (Marignac, A. ch. (4) 3. 55.)

See also **Silicoduodectungstic acid**.

Ammonium silicodectungstate, $(NH_4)_8W_{10}SiO_{38} + 8H_2O$.

Sol. in 4.5 pts. H_2O at 18° . Very sol. in hot H_2O . (Marignac, A. ch. (4) 3. 59.)
 $(NH_4)_8H_2W_{10}SiO_{38} + 9H_2O$. (Marignac.)

Ammonium potassium —, $(NH_4)_3K_4HSiW_{10}O_{38} + 15H_2O$. (Marignac)

Barium —, $Ba_4SiW_{10}O_{38} + 22H_2O$.
 Precipitate. Insol in H_2O . (Marignac)

Potassium —, $K_8SiW_{10}O_{38} + 17H_2O$.
 Sol in H_2O (Marignac.)
 $K_4H_4SiW_{10}O_{38} + 8H_2O$. Sol. in H_2O . (Marignac.)

Potassium — **silicotungstate** (?), $K_8SiW_{11}O_{39} + 14H_2O$
 $K_4H_4SiW_{11}O_{39} + 10H_2O$. (Marignac.)

Silver —, $Ag_8W_{10}SiO_{38} + 3H_2O$.
 Not appreciably sol. in cold H_2O . (Marignac, A. ch. (4) 3. 65.)

Silicotungstic acid or Silicoduodectungstic acid, $H_8SiW_{12}O_{42}$.

$(H_4SiW_{12}O_{40})_2$, according to Copaux. (Bull. Soc. 1908, (4) 3. 101.)
 $+20H_2O$. Sol in H_2O ; very sol. in alcohol; behaves with ether as the acid with $22H_2O$ (Marignac, A. ch. (4) 3. 10.)

$+22H_2O$. Solubility as acid with $29H_2O$. 100 pts. deliquesce with 13 pts. ether. To this mixture 20–25 pts. of ether can be added, but a further quantity no longer mixes with, but floats above the mixture. Ethereal solution is miscible with H_2O . Ether is taken up by a saturated aqueous solution with evolution of heat, until the volume has become doubled; more ether floats on the mixture. By warming the latter a liquid separates out which forms a layer between the two original layers. Alcoholic solution of the acid mixes with an equal vol. of ether, but on adding more ether a conc. ethereal solution separates as a syrupy layer. (Marignac, A. ch. (4) 3. 10.)

$+29H_2O$. Efflorescent. Sol. in H_2O . Saturated solution at 18° contains 1 pt. crystallized acid to 0.104 pt. H_2O , and has 2.843 sp. gr. Melts in crystal H_2O . Easily sol. in absolute alcohol and anhydrous ether.
 $+xH_2O$. (Drechsel, B. 1887, 20. 1452.)

Aluminum silicotungstate, $Al_4H_{12}(SiW_{12}O_{42})_3 + 75H_2O$.

Not deliquescent; very sol. in H_2O . (Marignac.)

$Al_4(SiW_{12}O_{40})_3 + 60H_2O$. (Wyruboff. Chem. Soc. 1897, 72, (2) 174.)

$+87H_2O$. (Wyruboff.)
 $+93H_2O$. Very efflorescent. (Wyruboff.)

Aluminum ammonium —,
 $Al_4(NH_4)_{12}(SiW_{12}O_{42})_3 + 75H_2O$.
 Sol in H_2O . (Marignac.)

Ammonium —, basic, $(NH_4)_4SiW_{12}O_{40} + 4NH_4OH + 14H_2O$.
 (Wyruboff, Chem. Soc. 1897, 72, (2) 174.)

Ammonium —, $(NH_4)_8SiW_{12}O_{42} + 16H_2O$.
 Very sol. in hot H_2O . (Marignac, A. ch. (4) 3. 17.)

$(NH_4)_4H_4SiW_{12}O_{42} + 6H_2O$. Less soluble in H_2O than the preceding salt (Marignac)
 $(NH_4)_4SiW_{12}O_{40} + 8H_2O$. (Wyruboff, Chem. Soc. 1897, 72, (2) 174.)

Barium —, $Ba_2H_4SiW_{12}O_{42} + 14H_2O$
 Sol. in H_2O
 $+22H_2O$. Gradually efflorescent. (Marignac.)

Sol. in cold H_2O , 1 : 0.7 pts (Copaux, Bull. Soc. Min. 1906, 29. 80.)

Sol in 4 pts. cold H_2O . (Wyruboff, Bull. Soc. Min. 1896, 19. 278.)

$Ba_4SiW_{12}O_{42} + 27H_2O$. Nearly insol. in cold, sl. sol. in hot H_2O . (Marignac.)
 $Ba_2SiW_{12}O_{40} + 16H_2O$. (Wyruboff.)

Barium potassium —, $Ba_2K_2SiW_{12}O_{40} + 17H_2O$.
 (Wyruboff, Chem. Soc. 1897, 72, (2) 176.)

Barium sodium —, $Na_2Ba_2SiW_{12}O_{42} + 28H_2O$.

H_2O gradually dissolves out sodium silicotungstate.

Cadmium —, $Cd_2SiW_{12}O_{40} + 23H_2O$, and $+27H_2O$.

(Wyruboff.)
 $4CdO, 3(SiO_2, 12WO_3) + 4H_2O$. (Wyruboff.)

Cæsium —, $Cs_8SiW_{12}O_{42}$.

100 pts. H_2O dissolve only 0.005 pt. at 20° ; 0.52 pt. at 100° .

Completely insol. in alcohol, and $HCl + Aq$. Somewhat sol. in dil. $NH_4OH + Aq$. (Godefroy, B. 9. 1363.)

Cadmium hydrogen —, $2Cd_2SiW_{12}O_{40}, H_4SiW_{12}O_{40} + 42H_2O$.
 (Wyruboff.)

Calcium silicotungstate, $\text{Ca}_2\text{H}_4\text{SiW}_{12}\text{O}_{42} + 20\text{H}_2\text{O}$.

Not deliquescent Extremely easily sol. in H_2O (Marignac)

$\text{Ca}_2\text{SiW}_{12}\text{O}_{40} + 18, 24$ and $27\text{H}_2\text{O}$. (Wyruboff.)

Calcium silicotungstate nitrate, $\text{Ca}_2\text{SiW}_{12}\text{O}_{40}, \text{Ca}(\text{NO}_3)_2 + 15\text{H}_2\text{O}$ (Wyruboff.)

Cerous —, $\text{Ce}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}$.

(Wyruboff.)

$\text{Ce}_2\text{SiW}_{12}\text{O}_{40}, \text{CeH}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$. (Wyruboff.)

Chromium —, $\text{Cr}_7(\text{SiW}_{12}\text{O}_{40})_3 + 60, 87$ and $93\text{H}_2\text{O}$ (Wyruboff.)

Cupric —, $\text{Cu}_2\text{SiW}_{12}\text{O}_{40} + 18, 27$ and $29\text{H}_2\text{O}$. Very efflorescent (Wyruboff.)

Didymium —, $\text{Di}_2\text{SiW}_{12}\text{O}_{40} + 26$ and $27\text{H}_2\text{O}$. (Wyruboff.)

$\text{Di}_2\text{SiW}_{12}\text{O}_{40}, \text{DiH}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$. (Wyruboff.)

Gallium —, $\text{Ga}_4(\text{SiW}_{12}\text{O}_{40})_3 + 60, 87,$ and $93\text{H}_2\text{O}$. (Wyruboff.)

Glucinum —, $\text{Gl}_4(\text{SiW}_{12}\text{O}_{40})_3 + 45, 87$ and $93\text{H}_2\text{O}$. (Wyruboff.)

Indium —, $\text{In}_2\text{O}_3, \text{H}_2\text{O}, 2(\text{SiO}_2, 12\text{WO}_3) + 40\text{H}_2\text{O}$.

(Wyruboff.)

$2\text{In}_2\text{O}_3, 3(\text{SiO}_2, 12\text{WO}_3) + 63$ and $93\text{H}_2\text{O}$. (Wyruboff.)

Iron (ferric) —, $\text{Fe}_4(\text{SiW}_{12}\text{O}_{40})_3 + 60$ and $93\text{H}_2\text{O}$. (Wyruboff.)

Lanthanum —, $\text{La}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}$.

Efflorescent. (Wyruboff.)

$\text{La}_2\text{SiW}_{12}\text{O}_{40}, \text{LaH}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$. (Wyruboff.)

Lead —, basic, $\text{Pb}_2\text{SiW}_{12}\text{O}_{40}, 2\text{PbO} + 20\text{H}_2\text{O}$. Sl. sol. in H_2O . (Wyruboff.)

Lead —, $\text{Pb}_2\text{SiW}_{12}\text{O}_{40} + 21 \text{H}_2\text{O}$. Sol. in H_2O . (Wyruboff.)

Lithium —, $\text{Li}_2\text{O}, \text{SiO}_2, 12\text{WO}_3 + 14$ and $24\text{H}_2\text{O}$. (Wyruboff.)

Magnesium —, $\text{Mg}_2\text{H}_4\text{SiW}_{12}\text{O}_{42} + 16\text{H}_2\text{O}$. Stable on the air. (Marignac.)

Mercurous silicotungstate, basic, $\text{Hg}_4\text{SiW}_{12}\text{O}_{40}, 2\text{Hg}_2\text{O} + 5\text{H}_2\text{O}$.

Insol in H_2O . Insol. in dil. HNO_3 . Slowly sol in conc. warm HNO_3 . (Wyruboff.)

Mercurous —, $\text{Hg}_2\text{SiW}_{12}\text{O}_{42}$.

Insol in H_2O . Scarcely sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Marignac, A. ch. (4) 3. 43.)

Mercuric —, $\text{Hg}_2\text{SiW}_{12}\text{O}_{40} + 15\text{H}_2\text{O}$

Very sol. in H_2O . Solution decomp. on boiling (Wyruboff.)

Potassium —, basic, $\text{K}_4\text{SiW}_{12}\text{O}_{40}, 4\text{KOH} + 12\text{H}_2\text{O}$.

1 pt. is sol in 10 pts. H_2O at 18° . (Wyruboff.)

Potassium —, $\text{K}_3\text{SiW}_{12}\text{O}_{42} + 14\text{H}_2\text{O}$.

Sol. in 10 pts. H_2O at 18° , and less than 3 pts. at 100° . (Marignac.)

$+ 20\text{H}_2\text{O}$ Much less sol. in cold than hot H_2O . Extremely sol. in hot H_2O . More sol. than above comp. (Marignac)

$\text{K}_4\text{H}_4\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$. Solubility as preceding salt.

$\text{K}_4\text{H}_2\text{SiW}_{12}\text{O}_{42} + 16\text{H}_2\text{O}$. Sol. in 3 pts. H_2O at 20° .

$\text{K}_6\text{H}_9(\text{SiW}_{12}\text{O}_{42})_2 + 25\text{H}_2\text{O}$ Decomp. by dissolving in H_2O . (Marignac)

$\text{K}_4\text{SiW}_{12}\text{O}_{40} + 6$ and $15\text{H}_2\text{O}$ (Wyruboff.)

$\text{K}_4\text{SiW}_{12}\text{O}_{40}, \text{K}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 29\text{H}_2\text{O}$ (Wyruboff.)

Rubidium —, $\text{Rb}_3\text{SiW}_{12}\text{O}_{42}$.

Sol in 145–150 pts. H_2O at 20° and in 19–20 pts. at 100° . Insol. in alcohol; difficultly sol. in acidified, but extremely easily in ammoniacal H_2O . (Godefroy, B. 9. 1363)

$\text{Rb}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 5\text{H}_2\text{O}$. (Wyruboff.)

$\text{Rb}_4\text{SiW}_{12}\text{O}_{40}, \text{Rb}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 22\text{H}_2\text{O}$. (Wyruboff.)

Silver —, $\text{Ag}_4\text{H}_4\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$.

Very sl. sol. in H_2O ; sol. in dil. $\text{HNO}_3 + \text{Aq}$ (Marignac.)

Sl. sol. in H_2O . (Wyruboff.)

Sodium —, basic, $\text{Na}_4\text{SiW}_{12}\text{O}_{40}, 4\text{NaOH} + 5\text{H}_2\text{O}$.

(Wyruboff.)

Sodium —, $\text{Na}_3\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$.

The saturated solution at 19° contains 0.21 pt. H_2O to 1 pt. of the salt dried at 100° , and has sp. gr. = 3.05. (Marignac.)

$\text{Na}_4\text{H}_4\text{SiW}_{12}\text{O}_{42} + 11\text{H}_2\text{O}$. Stable on air.

$+ 18\text{H}_2\text{O}$. Efflorescent. (Marignac.)

$\text{Na}_2\text{H}_6\text{SiW}_{12}\text{O}_{42} + 14\text{H}_2\text{O}$ Decomp by dissolving in H_2O . (Marignac.)

$\text{Na}_2\text{SiW}_{12}\text{O}_{40} + 14, 16$ and $20\text{H}_2\text{O}$. (Wyruboff.)

Sodium silicotungstate nitrate,
 $3\text{Na}_4\text{H}_4\text{SiW}_{12}\text{O}_{42}, 4\text{NaNO}_3 + 39\text{H}_2\text{O}.$

Slightly deliquescent. (Marignac)

Strontium —, $\text{Sr}_2\text{SiW}_{12}\text{O}_{40} + 16, 17, 23$ and $27\text{H}_2\text{O}.$

(Wyrouboff.)

Thallium —, $\text{Tl}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 9\text{H}_2\text{O}.$

(Wyrouboff.)

Thorium —, basic.

Insol. in $\text{H}_2\text{O}.$ (Wyrouboff.)

Thorium —, $\text{Th}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}.$

Very sol. in $\text{H}_2\text{O}.$ (Wyrouboff.)

$\text{Th}_2\text{SiW}_{12}\text{O}_{40}, 2\text{H}_4\text{SiW}_{10}\text{O}_{40} + 45\text{H}_2\text{O}.$
 (Wyrouboff.)

Uranium —.

Thirteen salts are described by Wyrouboff.

Uranyl —.

Seven salts are described by Wyrouboff.

Zinc —, $\text{Zn}_2\text{SiW}_{12}\text{O}_{40} + 18, 27$ and $29\text{H}_2\text{O}.$

(Wyrouboff.)

Silicovanadiomolybdic acid.

Ammonium silicovanadiomolybdate,
 $3(\text{NH}_4)_2\text{O}, \text{SiO}_2, \text{V}_2\text{O}_5, 9\text{MoO}_3 + 20\text{H}_2\text{O}.$

Sp. gr. of sat. solution containing 0.32016 g. salt in 1 ccm. at $18^\circ = 1.21322.$ (Friedheim, B. 1900, 33. 1624.)

$3(\text{NH}_4)_2\text{O}, \text{SiO}_2, \text{V}_2\text{O}_5, 10\text{MoO}_3 + 21\text{H}_2\text{O}$
 Sp. gr. of sat. solution containing 0.35026 g. of salt in 1 ccm. at $18^\circ = 1.25275.$ (Friedheim.)

$3(\text{NH}_4)_2\text{O}, \text{V}_2\text{O}_5, \text{SiO}_2, 11\text{MoO}_3 + 27\text{H}_2\text{O}.$
 Sp. gr. of sat. solution containing 0.38086 g. salt in 1 ccm. at $18^\circ = 1.29266.$ (Friedheim.)

$3(\text{NH}_4)_2\text{O}, \text{V}_2\text{O}_5, \text{SiO}_2, 15\text{MoO}_3 + 24\text{H}_2\text{O}.$
 Sp. gr. of sat. solution containing 0.48997 g. salt in 1 ccm. at $18^\circ = 1.43761.$ (Friedheim.)

Ammonium potassium —, $(\text{NH}_4)_2\text{O}, 2\text{K}_2\text{O},$
 $\text{SiO}_2, \text{V}_2\text{O}_5, 9\text{MoO}_3 + 20\text{H}_2\text{O}.$

Sp. gr. of sat. solution containing 0.24021 g. salt in 1 ccm. at $18^\circ = 1.17031.$ (Friedheim.)

$(\text{NH}_4)_2\text{O}, 2\text{K}_2\text{O}, \text{SiO}_2, \text{V}_2\text{O}_5, 10\text{MoO}_3 + 21\text{H}_2\text{O}.$ Sp. gr. of sat. solution containing 0.25914 g. salt in 1 ccm. at $18^\circ = 1.19184$ (Friedheim.)

$(\text{NH}_4)_2\text{O}, 2\text{K}_2\text{O}, \text{SiO}_2, \text{V}_2\text{O}_5, 11\text{MoO}_3 + 12\text{H}_2\text{O}.$ Sp. gr. of sat. solution containing 0.27914 g. salt in 1 ccm. at $18^\circ = 1.21378.$ (Friedheim.)

Ammonium zinc —, $4(\text{NH}_4)_2\text{O}, 2\text{ZnO},$
 $2\text{SiO}_2, 3\text{V}_2\text{O}_5, 18\text{MoO}_3 + 15\text{H}_2\text{O}.$

Sl. sol. in $\text{H}_2\text{O}.$ (Blum, Dissert. 1904.)

Silicovanadiotungstic acid.

Ammonium silicovanadiotungstate, $3(\text{NH}_4)_2\text{O},$
 $\text{SiO}_2, \text{V}_2\text{O}_5, 9\text{WO}_3 + 24\text{H}_2\text{O}.$

Can be cryst. from $\text{H}_2\text{O}.$ (Friedheim, B. 1902, 35. 3244)

$(\text{NH}_4)_2\text{SiV}_2\text{W}_{10}\text{O}_{40} + 21\text{H}_2\text{O}.$ 1 cc. of sat. solution in H_2O at 17.5° contains 0.6652 g. of the hydrated salt. Sp. gr. of this solution = 1.4505. Decomp. by conc. acid and alkali. (Friedheim.)

Ammonium barium potassium —,

$(\text{NH}_4)_2\text{K}_2\text{BaSiV}_2\text{W}_{10}\text{O}_{40} + 25\text{H}_2\text{O}.$

Sl. sol. in $\text{H}_2\text{O}.$ Decomp. by conc. acids and alkalies. (Friedheim.)

Ammonium potassium —,

$(\text{NH}_4)_2\text{K}_5\text{SiV}_3\text{W}_{10}\text{O}_{40} + 23\text{H}_2\text{O}.$

1 ccm. of sat. solution at 17.5° contains 0.5072 g. of the salt. Sp. gr. of the solution at $20^\circ = 1.3462.$ Can be cryst from $\text{H}_2\text{O}.$ Decomp. by conc. acids and alkalies. (Friedheim.)

Barium —, $\text{Ba}_2\text{SiV}_2\text{W}_{10}\text{O}_{40} + 28\text{H}_2\text{O}.$

1 ccm. of the sat. solution in H_2O at 17.5° contains 0.0384 g. of the salt Sp. gr. of the solution = 1.0307. Decomp. by conc. acids and alkalies. (Friedheim, B. 1902, 35. 3245.)

$6\text{BaO}, 2\text{SiO}_2, 3\text{V}_2\text{O}_5, 18\text{WO}_3 + 50\text{H}_2\text{O}.$
 Sl. sol. in $\text{H}_2\text{O}.$ (Friedheim.)

$7\text{BaO}, 2\text{SiO}_2, 3\text{V}_2\text{O}_5, 18\text{WO}_3 + 83\text{H}_2\text{O}.$
 Sl. sol. in $\text{H}_2\text{O}.$ (Friedheim.)

Potassium —, $\text{K}_2\text{SiV}_2\text{W}_{10}\text{O}_{40} + 22\text{H}_2\text{O}.$

Sol. in $\text{H}_2\text{O}.$ Can be cryst. from H_2O without decomp. Decomp. by conc. acids and alkalies. (Friedheim.)

$6\text{K}_2\text{O}, 2\text{SiO}_2, 3\text{V}_2\text{O}_5, 18\text{WO}_3 + 31\text{H}_2\text{O}.$ Sol. in $\text{H}_2\text{O}.$ (Friedheim.)

$7\text{K}_2\text{O}, 2\text{SiO}_2, 3\text{V}_2\text{O}_5, 18\text{WO}_3 + 42\text{H}_2\text{O}.$ Sol. in $\text{H}_2\text{O}.$ (Friedheim.)

Sodium —, $\text{Na}_2\text{SiV}_2\text{W}_{10}\text{O}_{40} + 29\text{H}_2\text{O}.$

Very sol. in $\text{H}_2\text{O}.$ Decomp. by conc acids and alkalies. (Friedheim.)

Silundum, Si_2C_7

Not attacked by hot Cl or conc. acids. (Amberg, Z. Elektrochem. 1909, 15. 725.)

Silver, Ag.

Not attacked by $\text{H}_2\text{O}.$ Absolutely insol. in HCl or $\text{HCl}_3\text{H}_2\text{O}_2 + \text{Aq}.$ (Lea, Sill. Am. J. 144. 444.) Easily sol in $\text{HNO}_3 + \text{Aq}$ on warming, if not too conc. Only a minute trace is dissolved in an hour by cold dil. $\text{HNO}_3 + \text{Aq}$ (1 pt. $\text{HNO}_3 + \text{Aq}$ of sp. gr. 1.40 : 10 pts. $\text{H}_2\text{O}.$) (Lea.) Sol. in hot conc. H_2SO_4 with evolution of $\text{SO}_2.$ Sl. sol in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ (1 : 4), but with more dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ the different forms of Ag behave differently. (Lea.)

Sol. in $\text{HI} + \text{Aq}$ at ordinary temperature.

Sol. in KI+Aq with access of air Sol in hot KCN+Aq. (Christomanos, Z anal 7. 301.)

Sol. in chromic, iodic, chloric and bromic acids Dil. H_2SO_4 alone is incapable of dissolving finely divided Ag, and the seeming solvent action is due to the oxygen of the air, oxygen dissolved in the acid, or derived from some external source. (Hendrixson, J. Am Chem Soc 1903, 25. 637.)

Boiling H_2SO_4 dissolves pure Ag only when concentration equals 60° B. More dil acid dissolves only the impure metal. (Pannani, Gazz. ch. it. 1909, 39. (2) 234.)

Slowly decomp. into AgCl by alkali chlorides+Aq; also by CuCl_2 , etc.+Aq.

Somewhat sol. in NH_4OH +Aq in presence of O. (Lea, Sill. Am. J. 144. 444.)

Sol. in KMnO_4 +dil. H_2SO_4 +Aq. (Friedheim, B. 20. 2554.)

Sol. in $\text{Fe}_2(\text{SO}_4)_3$ +Aq, especially on heating, but completely insol. in FeSO_4 +Aq. (Vogel.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Allotropic forms—(a) Very sol in H_2O Solution is pptd by saline solutions or almost any neutral substance. Alkali sulphates, nitrates, and citrates ppt it in a sol form, while MgSO_4 , CuSO_4 , FeSO_4 , NiSO_4 , $\text{K}_2\text{Cr}_2\text{O}_7$, $\text{K}_4\text{Fe}(\text{CN})_6$, $\text{Ba}(\text{NO}_3)_2$, and even AgNO_3 +Aq ppt. it in an insol form, which, however, may be made sol again by treatment with many substances, as $\text{Na}_2\text{B}_4\text{O}_7$, K_2SO_4 , or Na_2SO_4 +Aq. NaNO_2 +Aq ppts. the Ag from its solution in a perfectly insol. form.

(8). The ppt from aqueous solution by salts is sol in NH_4OH +Aq (Lea, Sill. Am. J. 137. 476.)

Many other allotropic forms exist. (Lea.) Pure colloidal silver is also sol. in alcohol. (Schneider, B. 25. 1164.)

Entirely sol. in H_2O , even when dry. (Schneider, Z. anorg 1894, 7. 339.)

Silver acetylide, Ag_2C_2

Sol. in KCN+Aq with evolution of C_2H_2 . Decomp. by HCl+Aq. (Arth, C. R. 1897, 124. 1535.)

Silver amide, AgNH_2 .

Ppt.; sol in ammonium salts+Aq and in excess of potassium amide. Sol. in liquid NH_3 . Insol. in Ag salts+Aq. (Franklin, J. Am. Chem. Soc. 1905, 27. 833.)

Sol. in excess of KNH_2 . (Franklin, Z. anorg 1905, 46. 16.)

Silver antimonide, Ag_3Sb or Ag_2Sb .

Min. *Diserasite*. Sol. in HNO_3 +Aq. Ag_3Sb . Insol. in HCl+Aq; decomp. by HNO_3 +Aq. (Christoffe.)

Silver azoimide, AgN_3 .

Insol. in hot or cold H_2O or dil. acids; sol. in conc. mineral acids. Sol in NH_4OH +Aq. (Curtius, B. 23. 3023.)

Silver bromide, AgBr.

Insol. in H_2O , or H_2O acidulated with HNO_3 , H_2SO_4 , or $\text{HC}_2\text{H}_3\text{O}_2$ between 0° and 33°. If flocculent or pulverulent, it is sensibly sol. therein above 33°, but if granular only above 50°, and then very slightly. (Stas, A. ch (5) 3. 289.) Ag can be detected as AgBr in 10,000,000 pts H_2O (Stas.)

Calculated from the electrical conductivity of AgBr+Aq, AgBr is sol in 1,971,658 pts. H_2O at 26.2°, and 775,400 pts at 38°. (Holleman, Z. phys. Ch. 12. 133.)

By same method Kohlrausch and Rose calculate that 1 l. H_2O dissolves 0.4 mg. AgBr at 18° (Z phys Ch 12. 240.)

Solubility in H_2O =0.109 mg per l. (Prudhomme, J. chim Phys 9. 519.)

Solubility in H_2O = 6.6×10^{-7} at 25°. (Goodwin, Z. phys Ch 1894, 13. 645.)

Solubility of AgBr in H_2O at 25° equals 8.1×10^{-7} g. mols. per l. (Thiel, Z. anorg. 1900. 24. 57.)

Aq solution sat. at 21.1° contains 0.57 $\times 10^{-6}$ gr equiv. per litre. (Kohlrausch, C. C. 1901, II. 1299.)

1 l. H_2O dissolves 0.000137 g. AgBr at 25°. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

0.84×10^{-4} g. are dissolved per liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O dissolves 0.107 mg. AgBr at 21°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

3.7 mg. AgBr are contained in 1 liter of sat. solution at 100°. (Böttger, Z. phys. Ch. 1906, 56. 93.)

1 mg. in 1 l. of sat. solution at 21°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Solubility in H_2O = 8.8×10^{-7} g. mol. per litre at 25°. (A. E. Hill, J. Am Chem. Soc 1908, 30. 74.)

Boiling H_2O dissolves 0.00003502 of its weight of AgBr. HNO_3 +Aq (1% HNO_3) dissolves 0.00000543 of its weight of AgBr at 100° with sl. decomposition. The solution is pptd. by AgNO_3 +Aq or HBr (or MBr)+Aq, but not completely. 1 pt. of AgBr in solution requires 3 pts. of Br as MBr (or HBr), or of Ag as AgNO_3 in order to be wholly precipitated. (Stas.)

Not attacked by boiling HNO_3 +Aq; sl. sol in conc. HBr or HCl+Aq (Löwig). Boiling conc. H_2SO_4 decomposes it (Balard), hardly acts on it (Dumas), dissolves a small quantity, which is repptd. by H_2O (Berzelius.)

Very sl. sol. in dil., easily in conc. NH_4OH +Aq. 100 pts. NH_4OH +Aq (0.986 sp. gr.) dissolve 0.51 pt. AgBr (dried at 100°) at 80°, and about double that amount of freshly pptd. AgBr. (Pohl, W. A. B. 41. 267.)

1 g. freshly pptd. AgBr is sol. in 250 ccm. 10% NH_4OH +Aq, but insol. in an ammoniacal solution of AgCl. (Semer, Pharm. J. Trans. (3) 14. 1.)

1 g. AgBr dissolves in 8779.4 g. 5% NH_4OH +Aq (sp. gr.=0.998) at 12°, and in 288.5 g.

10% $\text{NH}_4\text{OH} + \text{Aq}$ (sp gr = 0.96) at 12° (Longi, Gazz. ch it 13. 87.)

Solubility of AgBr in $\text{NH}_4\text{OH} + \text{Aq}$ at 15° .
G. mols. per l.

NH_3	AgBr	Sp gr 15°
1.085	0.0011	0.9932
2.365	0.0031	0.9853
3.410	0.0050	0.9793
4.590	0.0074	0.9720
5.725	0.0101	0.9655

(Bodlander, Z. phys. Ch. 1892, 9. 734.)

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 0° .

10 ccm. of the solution contain g. NH_3 and mg. AgBr .

g. NH_3	Mg AgBr	g NH_3	Mg AgBr
0.307	8.0	2.627	106.7
0.488	9.6	3.126	156.8
0.669	17.2	3.389	198.7

0.000386	0.118
0.000276	0.0764
0.000264	0.0777

(Whitney and Melcher, J. Am. Chem. Soc. 1903, 25. 79.)

Sol. in hot $\text{NH}_4\text{Cl} + \text{Aq}$. Very sl. sol. in NH_4 carbonate, sulphate, or succinate + Aq , and still less in nitrate. (Wittstein.) Not very easily sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ when suspended in much H_2O , and is separated out again by $\text{KBr} + \text{Aq}$. (Field, C. N. 3. 17.)

Sol. in $\text{KCN} + \text{Aq}$. Sl. sol. in conc. KCl

KBr , NaCl , NaBr , NH_4Cl , or $\text{NH}_4\text{Br} + \text{Aq}$; but insol. when dilute.

Traces only dissolve in alkali nitrates + Aq . (Fresenius, Quant. Anal.)

Abundantly sol in $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$. 100 ccm. H_2O containing 10 ccm. normal $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ dissolve 0.0383 g. AgBr . (Stas.)

Solubility of AgBr in $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ at 25° .
G. mols. per l.

$\text{Hg}(\text{NO}_3)_2$ HNO_3	AgBr	$\text{Hg}(\text{NO}_3)_2$ HNO_3	AgBr
1	0.03660	0.025	0.00459
0.10	0.00873	0.0125	0.00329
0.05	0.00639	0.0100	0.00306

HNO_3 was present in all cases, and it was found that there was no difference in solubility of AgBr with concentrations between 0.1N and 2N HNO_3 . Cryst. and amorphous AgBr showed the same solubility. (Morse, Z. phys. Ch. 1902, 45. 708.)

Difficultly sol. in hot conc $\text{AgNO}_3 + \text{Aq}$. (Risse, A. 111. 39.)

100 ccm. of a 3-N solution of AgNO_3 dissolve 0.04 g. AgBr at 25° . Much less sol. in $\text{AgNO}_3 + \text{Aq}$ than AgI . (Hellwig, Z. anorg. 1900, 25. 176.)

Solubility in $\text{AgNO}_3 + \text{Aq}$.

Volumetric measurements

At 25°, 1 l. ethylamine+Aq containing 0.483 g. mol. C₂H₅NH₂ dissolves 0.00231 g. mol. AgBr; 0.200 g. mol. C₂H₅NH₂, 0.0097 g. mol. AgBr. (Bodlander and Eberlein, B. 1903, 36. 3948.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014); (Naumann, B. 1904, 37. 4329)

Sol. in alcoholic thiourea (Reynolds, Chem. Soc. 1892, 61. 251.)

Insol. in methyl acetate (Bezold, Dissert. 1906); (Naumann, B. 1909, 42. 3790) ethyl acetate. (Hamers, Dissert. 1906); (Naumann B. 1910, 43. 314.)

1.49 g. AgBr is dissolved in 1 l. of 1% thio-carbamide+Aq. (Mees and Piper, Photog. J. 1912, 36. 239.)

Insol. in warm pyridine.

Mol. wt. determined in piperidine. (Werner, Z. anorg. 1897, 15. 16.)

Min. *Bromyrite*, *Bromite*.

Silver bromide ammonia, AgBr, NH₃.

(Joannis and Crozier, C. R. 894, 118. 1150.)

AgBr, 1½NH₃. (Jarry, A. ch. 1899, (7) 17. 356.)

2AgBr, 3NH₃. (Joannis and Crozier)

AgBr, 3NH₃. Decomp. by H₂O. Sl. sol in liquid NH₃. (Jarry)

AgBr, 5NH₃. (Jarry, C. R. 1898, 126. 1141)

Silver carbide, Ag₂C.

(Gay-Lussac)

Ag₂C(?). Sol in HNO₃+Aq with residue of C. (Liebig, A. 38. 129)

Ag₂C₂. Sol in HNO₃+Aq with residue of C (Regnault, A. 19. 153.)

Silver subchloride, Ag₂Cl₃.

NH₄OH+Aq dissolves the greater part, the residue (20%) being sol. in HNO₃+Aq. KCN dissolves the greater part; H₂SO₄ dissolves about 2%; acetic acid and KOH are without action. (Bibra, J pr 1875, (2) 12. 52)

Argentous chloride, Ag₂Cl

Obtained in a pure state by Guntz (C. R. 112. 861). Dil. HNO₃+Aq does not attack but warm conc. HNO₃+Aq decomp. Easily sol in KCN+Aq. (Guntz, C R. 112. 1212.)

The following data are for a more or less impure Ag₂Cl.

Boiling conc. HCl+Aq, NaCl+Aq, or NH₄OH+Aq dissolve out AgCl, and leave Ag (Scheele, Wetzlar, Dulk, Wohler)

According to Berthollet, wholly sol in NH₄OH+Aq. Sol for the most part in NH₄OH+Aq, and the residue is sol. in HNO₃+Aq (=Ag+AgCl). (v Bibra, B. 7. 741)

Silver chloride, AgCl.

Nearly insol in H₂O.

When AgCl is left in contact for some hours with pure H₂O at 20-22°, and especially at 75°, traces go into solution; more Cl is dissolved than Ag. When 1 pt. Ag is pptd. as AgCl in presence of 1 million pts H₂O a slight bluish milkiness is observed; but in order to have a distinct ppt. 4 pts. Ag should be present.

Dil HNO₃+Aq does not increase the solubility of AgCl, but AgCl is not absolutely insol. in stronger HNO₃+Aq. (Mulder)

1 pt. AgNO₃, when mixed with HCl+Aq in presence of 120,000 (Pfaff), 240,000 (Harting), pts H₂O, causes an opalescence.

1 pt. Ag gives a slight turbidity with HCl+Aq in presence of 200,000 pts H₂O, a scarcely opalescent cloudiness with 400,000 pts. H₂O, and the same after the lapse of 15 minutes in presence of 800,000 pts H₂O. (Lassaigne.)

1 pt. Ag can be detected as AgCl in 1 million parts H₂O at ordinary temp., but not in 2 million parts. In NaNO₃+Aq containing 0.79 pt. NaNO₃ in 200,000 pts H₂O, 1 pt. Ag can be detected as AgCl. This dissolves at 75°, and is visible again on cooling.

If the same liquid contains 1574 pts. NaNO₃, the AgCl remains in solution after cooling.

In 100 cem. H_2O containing 0.787 g $NaNO_3$, 13 drops of $NaCl$ and silver solution, each drop of which contains 0.05 mg. Ag, cause a precipitate at 5°, 20 drops at 15-17°, 60 drops at 45-55°.

$AgCl$ is somewhat less sol in $HNO_3 + Aq$ than in $NaNO_3 + Aq$ when the amount of H_2O remains the same.

Therefore, if HCl is used instead of $NaCl$, about $\frac{1}{2}$ less $AgCl$ remains in solution.

In 100,000 pts. of H_2O , which contain HNO_3 and an amount of HCl corresponding to the amount of Ag salt, 1 596 pts. $AgCl$ dissolve at 25°. The solution is precipitated by either $AgNO_3$ or HCl . (Mulder, Silber Probir-methode, Leipzig, 1859. 62)

(For further older data, see Storer's Dictionary.)

White flaky $AgCl$ is appreciably sol in hot H_2O , 1000 cem. boiling H_2O dissolving about 2 mg. $AgCl$. Far less sol. in H_2O containing $AgNO_3$, being practically insol. in H_2O containing 0.1 g. $AgNO_3$ in a litre. Solubility is also diminished one-half by addition of HCl (Cooke, Sil Am. J (3) 21. 220.)

Solubility in H_2O rapidly diminishes as the temp. falls (Cooke, l. c.)

Not completely insol in H_2O . According to Stas (C. R. 73. 998) there are four modifications: (1) gelatinous; (2) cheesy-flocculent, (3) pulverulent; (4) granular, crystalline, or fused. (4) is almost absolutely insol in H_2O at the ordinary temp., but the solubility increases with the temp., and is considerable at 100°; (2), which is formed by the precipitation of a cold dilute Ag solution, has the greatest solubility in pure H_2O , and it changes its solubility by standing, or if made pulverulent by shaking with H_2O ; (3) is also sol. in H_2O ; the solution of (2) or (3) in pure H_2O , or H_2O acidified with HNO_3 , is precipitated by $AgNO_3$ or $NaCl + Aq$.

In order to ppt 1 pt. $AgCl$ in above solution 3 pts. of Cl as chloride or Ag as nitrate are necessary; the pptn. is then complete.

Solubility of granular variety in boiling H_2O is proportionately large, and pptn. is brought about by 3 pts. Cl or Ag as above, but the pptn. in this case is not complete.

The salts formed simultaneously with the $AgCl$ have no influence on the solubility of the $AgCl$. Presence of HNO_3 does not increase the solubility of (2), but has that effect on (3) in proportion to the amt. of HNO_3 present. (Stas, C. R. 73. 998.)

Further determination by Stas are as follows:—

Between 0° and 30° granular $AgCl$ is insol. in pure H_2O , or H_2O acidulated with HNO_3 .

Between 0° and 30° the flocculent and pulverulent forms of $AgCl$ dissolve without alteration in pure H_2O , in acidulated H_2O , in alkali acetates + Aq , and in $Hg(C_2H_3O_2)_2 + Aq$ containing an alkali acetate. Their degree of solubility is a function of the state of the chloride, of the temp., and of the nature

and quantity of the solvent within these limits of temp. (0°-30°). These solvents, if they contain either Ag in the state of an Ag salt, or Cl as chloride or HCl in an amount *three times* that which they can dissolve as $AgCl$, exercise no solvent action on any of the modifications of $AgCl$. And reciprocally sat. $AgCl + Aq$ is pptd. instantly by a decinormal solution of $AgNO_3$ or MCl (or HCl). The $AgCl$ is wholly pptd. when the quantity of the Ag or Cl thus added is equal to three times the quantity of the Ag or Cl dissolved as $AgCl$.

Between 50° and 100°, however, decinormal solutions of Ag or chlorides, which cause instant ppts. in solutions sat with any of the modifications of $AgCl$, do not eliminate all the dissolved $AgCl$. At 100°, they only ppt. 60% of the amt dissolved. (Stas, A. ch. (5) 3. 323.)

Calculated from electrical conductivity of $AgCl + Aq$, $AgCl$ is sol in 715,800 pts. H_2O at 13 8°, and 384,100 pts. at 26 5°. (Holleman, Z. phys. Ch. 12. 132.)

Calculated in the same way, 1. l H_2O dissolves 0.76 mg at 2°; 0.97 mg. at 10°; 1.52 mg. at 18°; 2.24 mg. at 26°; 3.03 mg. at 34°; 4.05 mg. at 42° (Kohlrausch and Rose, Z. phys. Ch. 12. 242.)

Solubility in $H_2O = 1.25 \times 10^{-5}$ mol /l. at 25°. (Goodwin, Z. phys. Ch. 1894, 13. 645)

Solubility of $AgCl$ in H_2O at 25° is 1.41×10^{-5} (in normality). (Thiel, Z. anorg. 1900, 24. 57)

2.16×10^{-5} moles are sol. in 1 liter H_2O at 25°. (Noyes and Kohr, Z. phys. Ch. 1903, 42. 341.)

1.53×10^{-3} g. per liter are dissolved in sat. aq. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O dissolves 1.6 mg. $AgCl$ at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

21.8 milligrams are dissolved in 1 liter of sat solution at 100°. (Eöttger, Z. phys. Ch. 1906, 56. 93.)

1.34 mg. are contained in 1 l. of sat. solution at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

1 l. sat. solution at t° contains mg. $AgCl$.

t°	mg $AgCl$	t°	mg $AgCl$
1.55	0.56	17.51	1.31
4.68	0.66	25.86	1.935
9.97	0.89	34.12	2.74

(Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Solubility in $H_2O = 1.6 \times 10^{-5}$ g.-mol. per litre at 25°. (A. E. Hill, J. Am Chem. Soc. 1908, 30. 74.)

1 l. H_2O dissolves 0.00154 g. $AgCl$ at 21°; 0.0217 g. at 100°. (Whitby, Z. anorg. 1910, 67. 108)

Calculated from electrical conductivity of AgCl + Aq, 1 l. H₂O dissolves:

0.0105 milli-equivalents AgCl at 18°
0.0365 " " " " 50°.
0.147 " " " " 100°.

(Melcher, J. Am. Chem. Soc. 1910, **32**, 55.)

1 l. H₂O dissolves 1.02×10^{-5} g. equiv. at 18°; 1.429×10^{-5} g. equiv. at 25°. (van Rossen, C. C. 1912, I. 1539.)

The most probable average value for solubility of AgCl in H₂O is 1.04×10^{-5} g. equiv. per l. at 18°, and 1.43×10^{-5} g. equiv. per l. at 25°. (van Rossen, C. C. 1912, II. 1807.)

1.20×10^{-5} g. AgCl are sol. in 1 l. H₂O at 18°. (Glowczynski, C. A. 1915, 741.)

More sol in H₂O than AgSCN. (Normand, Chem. Soc. 1912, 101. 1853.)

Sol in conc. HCl + Aq, and also when not very conc.; thus the solution of 1 pt. AgNO₃ + Aq in 15,000 pts. H₂O is clouded by a little HCl + Aq, but clears up by the addition of more. (Reinsch, J. pr. 13. 133.)

1 pt. AgCl dissolves in 200 pts. conc. HCl + Aq and in 600 pts. HCl + Aq diluted with 2 pts. H₂O. (Pierre, J. Pharm. (3) 12. 237.)

Somewhat sol. in hot alcohol, to which HCl has been added, but is precipitated on cooling (Erdmann, J. pr. 19. 341.)

100 pts. sat. HCl + Aq (sp. gr. 1.165) dissolve 0.2980 pt. AgCl, or AgCl is sol. in 336 pts. HCl + Aq at ord temp.; 100 pts. HCl + Aq (sp. gr. 1.165) at b.-pt. dissolve 0.56 g. AgCl, or AgCl is sol. in 178 pts. HCl + Aq

Solubility of AgCl in dil. HCl + Aq. 100 ccm. HCl + Aq (sp. gr. 1.165), to which the given amt. H₂O has been added, dissolve g. AgCl

ccm. HCl	ccm. H ₂ O	g AgCl	Pts. HCl which dissolve 1 pt. AgCl
100	10	0.056	1,785
100	20	0.018	5,555
100	30	0.0089	11,235
100	50	0.0035	18,571

(Vogel, N. Rep. Pharm. **23**, 335.)

If HCl is added to a solution in which $\frac{1}{1,000,000}$ pt. Ag is suspended, the milkiness disappears. Solubility in HCl + Aq increases with the temp, the AgCl separating out on cooling. (Mulder.)

The amounts of AgCl which dissolve in HCl + Aq are directly proportional to the volumes of acid (of fixed concentration) used. (Barlow, J. Am. Chem. Soc. 1906, **28**, 1448.)

1 l. 1% HCl dissolves 0.0002 g. AgCl at 21°.

1 l. 5% HCl dissolves 0.0033 g. AgCl at 21°.

1 l. 10% HCl dissolves 0.0555 g. AgCl at 21°.

(Whitby, Z. anorg 1910, 67. 108.)

Solubility in HCl + Aq at 25°.

HCl g.-equivalents per l.	Ag $\times 10^{-3}$ g.-equivalents per l
0.649	0.032
1.300	0.126
1.911	0.266
2.149	0.374
2.569	0.610
2.975	0.814
3.576	1.358
4.182	2.147
4.735	3.168
5.508	4.126

(Forbes, J. Am. Chem. Soc. 1911, **33**, 1941.)

Solubility in 20% HCl + Aq.

HCl	N/10 AgNO ₃ ccm	Opalescent at t°	G AgCl to 100 g. anhydrous HCl
20 g. of 20% acid	1.0		
	1.1	0.0	0.39

	3.0	51.5	1.076
	3.75	70.0	1.346
	4.25	82.0	1.525
	4.75	90.0	1.74
	5.80	107.0	2.08

(Lowry, Roy, Soc. Proc. 1914, **91**, A. 62.)

Sl. sol. in conc. HBr + Aq. (Löwig.)

Insol. in HNO₃ + Aq. (Wackenroder.)

Entirely unacted upon by HNO₃ of 1.43 sp. gr. (Wurtz, Am. J. Sci. (2) **25**, 382.)

Solubility in dil. HNO₃ + Aq is the same as solubility in H₂O, i. e. $\frac{1}{2,000,000}$ pt. of Ag cannot be detected in H₂O with or without HNO₃, but $\frac{1}{1,000,000}$ pt. can be detected in both cases. (Mulder.)

1 pt. Ag in the form of AgCl dissolves at 25° in 83,000 pts. H₂O containing free HNO₃ and 0.33 pt. of HCl (Mulder.)

100,000 pts. conc. HNO₃ + Aq dissolve about 2 pts. AgCl, and solubility is not sensibly affected by lower nitrogen oxides. (Thorpe, Chem. Soc. (2) **10**, 453.)

Solubility of AgCl in HNO₃ + Aq at 25°.

G. per liter			
HNO ₃	AgCl	HNO ₃	AgCl
0.0315	0.001647	18.9	0.00225
0.063	0.001705	94.5	0.0245
0.630	0.00176		

(Glowczynski, Kolloidchem. Beih. 1914, **6**, 147.)

Insol. in cold conc. H_2SO_4 , but on boiling is in part decomp. and in part dissolved, and does not separate on cooling.

AgCl is not more sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ than in dil. $\text{HNO}_3 + \text{Aq}$.

Unacted upon by cold $\text{H}_2\text{SO}_3 + \text{Aq}$, and but slightly decomp. on heating. (Vogel.)

Abundantly sol. in $\text{H}_2\text{PtCl}_4 + \text{Aq}$ without decomp. (Birnbbaum, Z. Ch. 1867, 520.)

Insol. in cold dil. caustic alkalies + Aq but decomp. by hot conc. solutions. (Gregory.)

Decomp. by $\text{K}_2\text{CO}_3 + \text{Aq}$.

Sl. sol. in cold $\text{K}_2\text{CO}_3 + \text{Aq}$.

Easily sol. even in dil. $\text{NH}_4\text{OH} + \text{Aq}$.

1 pt. AgCl dissolves in 1283 pts. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.89 sp. gr. (Wallace and Lamont, Chem. Gaz. 1893, 137.)

100 pts. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.986 sp. gr. dissolve at 80° 1.492 pts. AgCl , dried at 100° . (Pohl, W. A. B. 41, 627.)

1 l. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.949 sp. gr. dissolves 51.6 g. Ag as freshly precipitated AgCl , and 47.6 g. when diluted with 1 l. H_2O .

1 l. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.924 sp. gr. dissolves 58 g. Ag as freshly precipitated AgCl ; 1 l. $\text{NH}_4\text{OH} + \text{Aq}$ of 0.899 sp. gr. dissolves 49.6 g.; 0.5 l. $\text{NH}_4\text{OH} + \text{Aq}$ (of 0.049 sp. gr.) + 0.5 l. saturated $\text{NaCl} + \text{Aq}$ dissolves 20.8 g.;

0.5 l. $\text{NH}_4\text{OH} + \text{Aq}$ (of 0.949 sp. gr.) + 0.5 l. saturated $\text{KCl} + \text{Aq}$ dissolves 20.4 g.; 0.5 l. $\text{NH}_4\text{OH} + \text{Aq}$ (of 0.949 sp. gr.) + 0.5 l. saturated $\text{NH}_4\text{Cl} + \text{Aq}$ dissolves 22.4 g. Ag as freshly pptd. AgCl . (Millon and Commaulle, C. R. 56, 309.)

1 g. AgCl dissolves in 428.64 g. 5% $\text{NH}_4\text{OH} + \text{Aq}$ (sp. gr. 0.998) at 12° ; 1 g. AgCl dissolves in 12.76 g. 10% $\text{NH}_4\text{OH} + \text{Aq}$ (sp. gr. 0.96) at 18° . (Longi, Gazz. ch. it. 13, 87.)

1 g. freshly pptd. AgCl is sol in 17 ccm. 10% $\text{NH}_4\text{OH} + \text{Aq}$. Solubility is diminished by presence of AgBr . (Senier, Pharm. J. Trans. (3) 14, 1.)

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 0° .

G. per 100 g. solution.

At 25° , 1 l. $\text{NH}_4\text{Cl} + \text{Aq}$ containing 0.00053 g. NH_4Cl dissolves 0.001604 g. AgCl ; 0.00530 g. NH_4Cl , 0.002379 g. AgCl . (Glowczynski, Kolloidchem. Beih. 1914, 6. 147.)

See also Forbes, page 826.

1 l. $\text{KClO}_3 + \text{Aq}$ dissolves 1.8 mg. (Guye, J. Chim. Phys. 10. 145)

Sl. sol. in conc. $\text{KCl} + \text{Aq}$, $\text{NaCl} + \text{Aq}$, and certain other chlorides

NaCl , KCl , NH_4Cl , CaCl_2 , $\text{ZnCl}_2 + \text{Aq}$, etc., dissolve appreciable quantities of AgCl , especially if hot and concentrated, but it separates out for the most part on cooling.

Sol. in solutions of all the metallic chlorides which are sol. in H_2O , thus NaCl , KCl , CaCl_2 , SrCl_2 , and $\text{BaCl}_2 + \text{Aq}$ all dissolve AgCl , especially if hot. MgCl_2 , NH_4Cl , and HgCl_2 (least) also dissolve AgCl . (Mulder.)

Sol. in conc $\text{CaCl}_2 + \text{Aq}$. (Wetzlar.)

Sol. in roseocobaltic chloride + Aq (Gibbs and Genth.)

Insol. in SnCl_4 , HgCl_2 , CuCl_2 , ZnCl_2 , CdCl_2 , NiCl_2 , or $\text{CoCl}_2 + \text{Aq}$. (Vogel.)

Solubility of AgCl in sat. solutions of chlorides at ordinary temperatures.

(Hahn, Wyandotte Silver Smelting Works, 1877.)

1 l. 4-N $\text{KCl} + \text{Aq}$ dissolves 0.915 g. KCl at 25° . (Hellwig, Z. anorg. 1900, 25. 166.)

Solubility in $\text{KCl} + \text{Aq}$ at t° .

t°	G. equiv per l	
	$\text{Ag} \times 10^{-3}$	KCl
1 0	1 734	3.325
25 0	2 415	3.083
35 0	2 786	2.955

(Forbes, J. Am. Chem. Soc. 1911, 33. 1937.)

Solubility in $\text{KCl} + \text{Aq}$ at 25° .

G. per liter.

KCl	AgCl	KCl	AgCl
0.00236	0.00184	0 01491	0.00305
0.00471	0.00218	0.02984	0 00321

(Glowczynski, Kolloidchem. Beih. 1914, 6. 147.)

Solubility in $\text{CaCl}_2 + \text{Aq}$.

t°	G equiv. per l.	
	$\text{Ag} \times 10^3$	$\frac{\text{CaCl}_2}{2}$
1.0	0.964	3 512
25.0	1.514	3.320
35.0	1.806	3.221

(Forbes, l. c.)

Sat. $\text{CuCl}_2 + \text{Aq}$ at 0° dissolves 2.835 g. AgCl per l; at 100° , 8.147 g. Solubility in sat. $\text{MgCl}_2 + \text{Aq}$ is still greater. (Hahn, Eng. Min. J. 65. 434.)

More sol. in $\text{HgCl}_2 + \text{Aq}$ than in H_2O . (Finzi, Gazz. ch. it. 1902, 32. (2) 324.)

At 15° , 100 g. NaCl in 280 ccm. H_2O dissolve 485 mg. AgCl ; 100 g. KCl in 300 ccm. H_2O dissolve 334 mg; 100 g. NH_4Cl in 280 ccm. H_2O dissolve 1051 mg

The solubility decreases with dilution rapidly at first until about an equal vol of H_2O has been added, and then much more slowly to a minimum quantity, when the dilution is 1 : 10 for NaCl and KCl , and 1 : 20 for NH_4Cl .

100 g. NaCl in 280 ccm. H_2O dissolve 2170 mg. AgCl at 109° ; 100 g. NH_4Cl in 280 ccm. H_2O dissolve 4000 mg. AgCl at 110° ; 100 g. NaCl in 620 ccm. H_2O (14% solution) dissolve 15 mg. AgCl at 15° , and 774 mg. at 104° (Schierholz, W. A. B. 101, 2b. 4.)

The solubility of AgCl in $\text{NaCl} + \text{Aq}$ decreases with diminishing concentration of $\text{NaCl} + \text{Aq}$. (Barlow, J. Am. Chem. Soc. 1906, 28. 1448.)

Solubility in $\text{NaCl} + \text{Aq}$.

	2.676	1 274
	3 260	2 366

(Forbes, J. Am. Chem. Soc. 1911, 33, 1940).

Sol. in NaNO₃, KNO₃, Ca(NO₃)₂, Mg(NO₃)₂, and NH₄NO₃ + Aq; sl sol at ord temp., but solubility is much increased by heat

Solubility in NaNO₃ + Aq at 15–20°.

ccm. H ₂ O	g NaNO ₃	mg. AgCl dissolved
100	0 787	1 33
200	0 787	1.93
300	2 361	3 99
100	2.787	2 53

Solubility increases with ascending temp.

Temp.	ccm H ₂ O	g NaNO ₃	mg. AgCl dissolved
5°	100	0 787	0.86
15–17°	100	0 787	1 33
18°	100	0 787	1.46
30°	100	0.787	2.33
45–55°	100	0 787	3.99

(Mulder.)

At 25° 100,000 pts. H₂O containing a little free HNO₃ and 0.787 g. NaNO₃ dissolve 2.128 mg. AgCl. By adding 2 g more NaNO₃ to above solution, 2.5269 mg. ($\frac{1}{5}$ more) AgCl are dissolved. (Mulder.)

Solubility in H₂O is not appreciably influenced by $\frac{1}{10}$ N to N-KNO₃ or NH₄NO₃ + Aq. (van Rossen, C. C. 1912, II. 1807.)

In presence of NaNO₃ and excess of HCl, 1 l H₂O dissolves 0.03 mg. AgCl. (Richards and Wells.)

Hg(NO₃)₂ + Aq dissolves considerable quantities of AgCl, but the other nitrates do not. (Mulder.)

Much more sol. in hot than in cold Hg(NO₃)₂ + Aq, and much more sol. therein than in NH₄NO₃ + Aq. NaCl ppts. AgCl from this solution; much less sol. therein in

presence of NaC₂H₃O₂ or NH₄OH + Aq. AgCl is pptd from above solution by NaC₂H₃O₂ + Aq. (Mulder.)

Sol. in Hg(NO₃)₂ + Aq (Wackenroder, A. 41. 317); in considerable amount (Liebig, A. 81. 128), and is precipitated by HCl, NH₄Cl, NaCl, KC₂H₃O₂ (Debray, C. R. 70. 849); incompletely precipitated by AgNO₃ and not by HNO₃ (Wackenroder).

Solubility of AgCl in Hg(NO₃)₂ + Aq at 25°.
(G. mols. per l.)

Hg(NO ₃) ₂ HNO ₃	AgCl	Hg(NO ₃) ₂ HNO ₃	AgCl
0.0100	0.00432	0.050	0.00914
0 0125	0.00499	0 100	0 01395
0.025	0.00690	1.000	0.04810

HNO₃ was present in all cases, and it was found that there was no difference in solubility of AgCl with concentrations between 0.1N and 2N HNO₃. (Morse, Z. phys. Ch. 1902, 45. 708.)

Not sol. to appreciable extent in Cu(NO₃)₂, Fe₂(NO₃)₆, Mn(NO₃)₂, Co(NO₃)₂, Zn(NO₃)₂, or Ni(NO₃)₂ + Aq; insol. or exceedingly sl. sol. in Pb(NO₃)₂ + Aq. (Mulder.)

Imperfectly sol. in AgNO₃ + Aq. (Wackenroder.)

Conc. AgNO₃ + Aq dissolves AgCl perceptibly.

Less sol. in AgNO₃ + Aq than AgBr. (Risse, A. 111. 39.)

Solubility in 0.02N AgNO₃ + Aq = 0.15×10^{-7} g. mols. per l. (Böttger.)

100 ccm. of 3-N solution of AgNO₃ dissolve 0.08 g. AgCl at 25°. More dil. solutions dissolve very slight amounts of AgCl (Hellwig, Z anorg. 1900, 25. 177.)

Solubility in 2-N AgNO₃ + Aq at ord. temp. = 0.03×10^{-3} g equiv. AgCl. (Forbes, J. Am. Chem. Soc. 1912, 33. 1946.)

Solubility in AgNO₃ + Aq at t°.

(Det. by volumetric method.)

(Valenta, M. 1894, 15. 250.)

Solubility in salts $+ \text{Aq}$.

31.71 cc. of a solution of sodium thiosulphate containing 31.869 g. $\text{Na}_2\text{S}_2\text{O}_3$ per liter (i. e. 5 g. of the hydrate in 100 cc. of the solution) dissolve 0.6124 g. AgCl .

21.88 cc. of a solution of ammonium thiosulphate containing 50 g. $(\text{NH}_4)_2\text{S}_2\text{O}_3$ per liter dissolve 0.7024 g. AgCl .

27.34 cc. of a solution of potassium cyanide containing 49.511 g. KCN per liter dissolve

1.4926 g. AgCl. (Cohn, Z. phys. Ch. 1895, 18. 63.)

Solubility of AgCl in sodium thiosulphate and potassium cyanide solutions may be determined without reference to experimental data (Cohn.)

Sl. sol in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol in moderately dil. $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$.
10 ccm. normal $\text{Hg}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ containing 0.1 g. Hg dissolve 0.01892 g. AgCl at 15° (Stas.)

100 ccm. of a solution of a mixture of Na and Hg acetates dissolve 0.00175 g. AgCl. (Stas, A. ch. (5) 3. 145.)

Only sl. sol. in liquid NH_3 .

Solubility curve for AgCl, AgCl , 3NH_3 , AgCl , 5NH_3 . (Jarry, A. ch. 1899, 17. 342.)

Insol in alcoholic ammonia. (Bodlander, Z. phys. Ch. 1892, 9. 731.)

Nearly insol. in ether. (Mylius and Huttner, B. 1911, 44. 1316.)

Perceptibly sol. on warming with solution of tartaric acid, but nearly the whole is deposited on cooling.

Insol in acetone. (Naumann, B. 1904, 37. 4329); insol in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Hamers, Dissert. 1906; Naumann, B. 1910, 43. 314.)

Sol. in methylamine + Aq (Wurtz, A. ch. (3) 30. 453.)

Solubility of AgCl in methylamine at 11.5°.

% CH_3NH_2	% AgCl	% CH_3NH_2	% AgCl

Silver hydride, AgH.Not decomp. by H_2O . (Bartlett, Am. Ch. J. 1896, **19**. 52.)**Argentous hydroxide, $\text{Ag}_2\text{O}_2\text{H}_2$.**Sol. in H_2O . Known only in solution. (Weltzein, A. **142**. 105.)**Silver hydroxide, AgOH.**Decomp. into Ag_2O and H_2O above -40° .

See Silver oxide.

Argentous iodide, Ag₂I.

(Guntz, C. R. 112. 861.)

Silver imidosulphamide, AgN(SO₂NH₂)₂+1½H₂O.

Decomp. slowly in the air. Somewhat sol. in hot, more sol. in boiling H₂O, from which it cryst unchanged on cooling. In aqueous solution is stable toward alkali. Decomp. by acids. Difficultly sol. in dry pyridine; easily sol. in pyridine+aq. (Hantzsch, B. 1905, 38. 1035.)

(SO₂)₃N₃H₃Ag₃+5½H₂O Nearly insol in hot H₂O. (Ephraim and Michel, B. 1909, 42. 3845.)

(SO₂)₄N₇H₃Ag₅+4H₂O (Ephraim and Michel)

(SO₂)₄N₃HAg₃+1½, 11, and 28 H₂O

Easily sol. in HNO₃ and NH₄OH+aq. Sl. sol. in pyridine. Very sol. in pyridine containing pyridine nitrate and can be recryst. therefrom. (Ephraim and Michel.)

(SO₂)₄N₃Ag₇+8H₂O. (Ephraim and Michel.)

Silver iodide, AgI.

Insol. in H₂O.

Calculated from electrical conductivity of AgI+aq, AgI is sol in 1,074,040 pts. H₂O at 28.4°, and 420,260 pts. at 40°. (Holleman, Z. phys. Ch. 12. 130.)

1 l. H₂O dissolves 0.1 mg. AgI at 18°. (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Solubility in H₂O=1×10⁻⁸N. (Rolla.)

Solubility in H₂O=0.97×10⁻⁸ g. mols. per l. at 25°. (Goodwin, Z. phys. Ch. 1894, 13. 645.)

Solubility of AgI in H₂O at 25° is 1.05×10⁻⁸ (in normality). (Thiel, Z. anorg. 1900, 24. 57.)

A sat. aq. solution at 20.8° contains 0.0020×10⁻⁶ g. equiv. per l. (Kohlrausch, C. C. 1901, II. 1299.)

1 l. H₂O dissolves 0.0035 mg. AgI at 21°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

1 l. H₂O dissolves 0.00253 mg. AgI at 60°. (Sammet, Z. phys. Ch. 1905, 53. 644.)

Solubility in H₂O=1.23×10⁻⁸ g.-mol. per litre at 25°. (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

0.003 mg. are contained in 1 l. of sat. solution at 21°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Insol. in dil. HNO₃+aq or H₃PO₄+aq. Decomp. by hot. conc. HNO₃+aq or H₂SO₄. Easily sol. in conc. HI+aq.

1 pt. AgI dissolves in 2510 pts. NH₄OH+aq of 0.96 sp. gr. (Martini, Schw. J. 56. 154); in 2483 pts of 0.89 sp. gr. (Wallace and Lamont, Ch. Gaz. 1859. 137.)

1 g. AgI dissolves in 26,300 g. 10% NH₄OH+aq (sp. gr.=0.96) at 12°. Insol. in 5% NH₄OH+aq. (Longi, Gazz. ch. it. 13. 87.)

Coefficient of solubility in NH₄OH+aq (density, 0.926) is found lower than previously obtained and of the order of 1/60000 at 16°. (Baubigny, Bull. Soc. 1908, (4) 3. 772.)

According to Field, insol. in cold conc. KCl or NaCl+aq, and only in traces on boiling, and separates out on cooling.

100 g. NaCl in conc. NaCl+aq dissolve 0.95 mg. AgI at 15°, 100 g. NH₄Cl in conc. NH₄Cl+aq dissolve 2.9 mg. AgI at 15°; 95 g. NaCl+10 g. KBr in conc. solution dissolve 1.2 mg. AgI at 15°; 100 g. KBr+225 g. H₂O dissolve 430 mg. AgI at 15°; 100 g. KBr in conc. KBr+aq dissolve 525 mg. AgI at 15°; 100 g. KI+69 g. H₂O dissolve 89.8 g. AgI at 15°; 100 g. KI+92 g. H₂O dissolve 54.0 g. AgI at 15°; 100 g. KI+366 g. H₂O dissolve 7.25 g. AgI at 15°. (Schierholz, W. A. B. 101, 2b. 4.)

Sol in conc. KI+aq, from which it is precipitated by H₂O. (Field, C. N. 3. 17.)

KI gives a ppt. with AgNO₃ in presence of 30,000 pts H₂O. (Harting.)

(Hellwig, Z anorg. 1900, 25. 171.)

Solubility of AgI in 25% AgNO₃ + Aq reaches a maximum at about 60° and at the point of maximum solubility the quantity dissolved amounts to about 5 g. AgI per 100 g. AgNO₃. (Lowry, Roy. Soc. Proc. 1914, 91, A, 66.)

Sol. in hot Hg(NO₃)₂ + Aq, from which it crystallizes on cooling.

Solubility of AgI in Hg(NO₃)₂ + Aq at 25°.

Mols Hg(NO ₃) ₂ per l	g AgI per l.	Mols Hg(NO ₃) ₂ per l	g AgI per l.
0.010	0.800	0.050	1.737
0.0125	0.841	0.100	2.730
0.025	1.113	1.000	25.160

Solubility is not affected by presence of 0.1 to 2N HNO₃.

(Morse, Z. phys. Ch. 1902, 41. 708.)

Sol. in KCN + Aq.

Sl. sol. in Na₂S₂O₃ + Aq when suspended in much H₂O, but separates again on addition of KI + Aq. (Field.)

Insol. in Na₂S₂O₃ + Aq. (Fogh, C. R. 1890, 110. 711.)

Solubility in salts + Aq.

(Valenta, M. 1894, 15. 250.)

Very sol in liquid NH_3 . (Franklin, Am Ch. J. 1898, 20. 829; Jarry, A. ch. 1899, (7) 17. 370.)

Easily sol. in liquid NH_3 . (Ruff and Geisel, B. 1905, 38. 2662.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014); (Naumann, B. 1904, 37. 4329)

Insol. in methyl acetate. (Bezold, Dissert. 1906); (Naumann, B. 1909, 42. 3790.)

Insol. in CS_2 . (Arctowski, Z. anorg. 1894, 6. 257.)

Much less sol. in hot alcoholic thiourea than AgCl and AgBr. (Reynolds, Chem. Soc. 1892, 61. 253.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Slowly sol. in piperidine at 100° . (Varet, C. R. 1892, 115. 336.)

0.10 pts. is sol. in 100 pts. pyridine at 10° . 8.60 pts. are sol. in 100 pts. pyridine at 121° . (Laszczyński, B. 1894, 27. 2288.)

Mol wt. determined in piperidine. (Werner, Z. anorg. 1897, 15. 16.)

Min. *Iodhydrate*.

Silver hydrogen iodide, 3AgI , $\text{HI} + 7\text{H}_2\text{O}$.

(Berthelot, C. R. 91. 1024.)

Silver sodium iodide, 2AgI , NaI .

Very sol. in acetone. (Marsh, Chem. Soc. 1913, 103. 784.)

AgI , $\text{NaI} + 3\frac{1}{2}\text{H}_2\text{O}$. (Krym, J. Russ. Phys. Chem. Soc. 1909, 41. 382.)

See $\text{AgI} + \text{NaI}$ under AgI .

Silver iodide ammonia, AgI , NH_3 .

Sol. in liquid NH_3 . (Jarry, A. ch. 1899, (7) 17. 371.)

2AgI , NH_3 . (Rammelsberg, Pogg. 48. 170.)

Composition is AgI , NH_3 . (Longi, Gazz. ch. it. 13. 86.)

Sol. in liquid NH_3 . (Jarry, A. ch. 1899, (7) 17. 371.)

AgI , 2NH_3 . (Terreil, C. R. 98. 1279.)

Silver nitride, Ag_3N .

Berthollet's "knallsilber." Very explosive. Insol. in H_2O . Sol. in $\text{KCN} + \text{Aq}$. Slowly sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Raschig, A. 233. 93.) (Angeli, Chem. Soc. 1894, 66. (2) 93.)

Argentous oxide, Ag_2O .

Insol. in H_2O Decomp. by acids into argentic oxide and silver. Insol in $\text{NH}_4\text{OH} + \text{Aq}$ or $\text{HC}_2\text{H}_3\text{O}_2$. (v. der Pfordten, B. 20. 1458.)

Contains H, and is a hydroxide $\text{Ag}_4\text{H}_2\text{O}$. (v. der Pfordten, B. 21. 2288.)

The above substance is a mixture, according to Friedheim (B. 20. 2557.)

Silver oxide, Ag_2O .

Somewhat sol. in H_2O . (Bucholz.)

Sol in 3000 pts H_2O (Bineau, C. R. 41. 509); sol in 96 pts H_2O . (Abl)

Sol. in 15,360 pts. H_2O . (Levi, Gazz. ch. it. 1901, 31. (1) 1.)

Solubility in H_2O at $25^\circ = 2.16 \times 10^{-4}$ mols. AgOH per litre (Noyes, J. Am. Chem. Soc. 1902, 24. 1147.)

1 liter sat. aqueous solution at 19.96° contains 2.14×10^{-2} g; at 24.94° contains 2.5×10^{-2} g. Ag_2O . (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O at 25° dissolves 1.8×10^{-4} gram—atoms of silver. Determined from its solubility in NH_3 . (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

1 l. H_2O dissolves 0.0215 g. Ag_2O at 20° . (Whitby, Z. anorg. 1910, 67. 108.)

The solubility of Ag_2O in H_2O varies with the method of preparation.

Solubility of Ag_2O (prepared by action of NaOH , freshly prepared by the solution of Na in H_2O , on a dil. solution of AgNO_3) = 2.16×10^{-4} g-mol. in 1 l. H_2O at 25° ; 2.97×10^{-4} g-mol. at 50° .

Solubility of Ag_2O (prepared by action of aqueous barium hydroxide on AgNO_3) = 2.23×10^{-4} g-mol. in 1 l. H_2O at 25° ; 3.09×10^{-4} g-mol. in 1 l. H_2O at 50° .

Solubility of Ag_2O (prepared by action of conc. $\text{NaOH} + \text{Aq}$ on moist, freshly pptd. AgCl) = 2.32×10^{-4} g-mol. in 1 l. H_2O at 25° ; 3.55×10^{-4} g-mol. at 50° .

Solubility of Ag_2O (prepared by action of conc. $\text{NaOH} + \text{Aq}$ on moist, freshly pptd. Ag_2CO_3) = 2.95×10^{-4} g-mol. in 1 l. H_2O at 25° ; 3.89×10^{-4} g-mol. at 50° . (Rebière, Bull. Soc. 1915, (4) 7. 311.)

Sol. in acids, NH_4OH , and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Decomp. by alkali chlorides, bromides,

and iodides + Aq. Sol. in alkali cyanides, and thiosulphates + Aq. Sl. sol. in nitrates + Aq; insol. in sulphates + Aq. When freshly pptd., sol. in NH_4SCN + Aq. Sl. sol. in NH_4NO_3 + Aq. Abundantly sol. in $\text{Ba}(\text{NO}_3)_2$ + Aq without pptn. of BaO_2H_2 . Sol. in boiling $\text{Mn}(\text{NO}_3)_2$, $\text{Ni}(\text{NO}_3)_2$, $\text{Co}(\text{NO}_3)_2$, $\text{Cu}(\text{NO}_3)_2$, and $\text{Ce}_2(\text{NO}_3)_6$ + Aq with pptn. of oxides. (Persoz.)

Insol. in KOH , and NaOH + Aq. Sl. sol. in BaO_2H_2 + Aq (Berzelius (?)).

Solubility in NH_4OH + Aq at 25° .

(Euler.)

Silver peroxide, Ag_2O_2 .

Sol. in conc. H_2SO_4 (Rose), and in pure HNO_3 + Aq without decomp. Sol. in NH_4OH + Aq. (Schönbein, J. pr. 41. 321.)

Sol. in HNO_3 and H_2SO_4 with decomp. (Mulder, R. t. c. 1898, 17. 151.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Silver oxide ammonia.

See Silver nitride.

Silver oxybromide, Ag_7OBr_7 .

Insol. in H_2O . Insol. in HNO_3 . Sol. in hot ammonia and in NaOCl + Aq. (Seyewetz, C. R. 1912, 154. 357.)

Silver oxyfluoride, AgF , AgOH

Decomp. by H_2O with separation of Ag_2O . (Pfaundler.)

Silver per oxyfluoride, $2\text{Ag}_3\text{O}_4$, AgF .

(Tanatar, Z. anorg. 1901, 28. 335.)

$4\text{Ag}_3\text{O}_4$, 3AgF . (Tanatar, Z. anorg. 1901, 28. 335.)

Silver oxyiodide, Ag_2O , Ag_5I_7 .

(Seyewitz, Bull. Soc. 1894, (3) 11. 452.)

Silver phosphide, AgP_2 .

Sol. in HNO_3 . Attacked by aqua regia. (Granger, C. R. 1897, 124. 897.)

Ag_4P_6 . Insol. in HCl + Aq; easily sol. in HNO_3 + Aq. (Schrötter, J. B. 1849. 247.)

Ag_2P_5 . (Hackspill, C. R. 1913, 157. 720.)

Ag_3P (?). (Fresenius and Neubauer, Z. anal. 1. 340.)

Silver phosphoselenide, Ag_2Se , P_2Se .

Insol. in H_2O or HCl + Aq. Sol. in HNO_3 + Aq. Insol. in cold, decomp. by hot alkalis + Aq. (Hahn, J. pr. 93. 436.)

$2\text{Ag}_2\text{Se}$, P_2Se_3 . Insol. in H_2O , HCl , or HNO_3 + Aq; slowly sol. in red fuming HNO_3 . (Hahn, J. pr. 93. 440.)

$2\text{Ag}_2\text{Se}$, P_2Se_5 . Sol. only in fuming HNO_3 . (Hahn.)

Silver phosphosulphide, $2\text{Ag}_2\text{S}$, P_2S .

Ag_2S , P_2S . (Berzelius, A. 46. 254.)

$2\text{Ag}_2\text{S}$, P_2S_2 . Easily sol. in HNO_3 + Aq without separation of P. (Berzelius.)

$\text{Ag}_4\text{P}_2\text{S}_7$. (Berzelius.)

Ag_4PS_3 . Easily attacked by hot conc. HCl . Sl. decomp. Insol. in hot HNO_3 . Decomp. by aqua regia. (Ferrand, A. ch. 1899, (7) 17. 413.)

Silver selenide, Ag_2Se .

Sol. in boiling HNO_3 + Aq as Ag_2SeO_3 , which separates out by dilution with H_2O . (Berzelius.)

Insol. in $\text{Hg}_2(\text{NO}_3)_2$ + Aq. (Wackenroder, A. 41. 327.)

Min. *Naumannite*. Insol. in dil., but sol in conc $\text{HNO}_3 + \text{Aq}$.

Silver sulphamide (silver thionyl amide), $\text{SO}_2(\text{NHAg})_2$.

Insol in pyridine. (Hantzsch and Holl, B 1901, 34. 3436.)

+ H_2O (Ephraim and Gurevitch, B 1910, 43. 146.)

Argentous sulphide, Ag_2S .

Easily sol. in warm dil. $\text{HNO}_3 + \text{Aq}$, and in conc. H_2SO_4 without separation of S. Sol. in conc. $\text{KCN} + \text{Aq}$. (v. der Pfordten, B 20. 1458; Guntz, C. R. 112. 861.)

Silver sulphide, Ag_2S .

Less sol. in H_2O than AgI . (Lucas, Z. anorg. 1904, 41. 210.)

1 l. H_2O dissolves about 4×10^{11} g. at. Ag as Ag_2S at 18° . (Bernfeld, Z. phys. Ch. 1898, 25. 72.)

1 l. H_2O dissolves 0.8×10^6 g. mols at $16-18^\circ$. (Biltz, Z. phys. Ch 1907, 58. 291.)

1 l. H_2O dissolves 0.552×10^6 g. mols. Ag_2S at 18° . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Sol. in conc $\text{HNO}_3 + \text{Aq}$ with separation of S. Sol. in hot conc. $\text{HCl} + \text{Aq}$. Not decomp. by $\text{CuCl}_2 + \text{Aq}$, but by $\text{CuCl}_2 + \text{NaCl} + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in $\text{H}_2\text{SO}_4 + \text{Aq}$, or in $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$.

Insol. in H_2O , dil. acids, alkalies, and alkali sulphides + Aq . (Fresenius.)

Sol. in $\text{HCN} + \text{Aq}$. (Hahn, C. C. 1870. 240.)

Pptd. Ag_2S is very sol. in HNO_3 containing more than 5% HNO_3 . (Gruener, J. Am. Chem. Soc. 1910, 32. 1032.)

Only very sl. sol. in $\text{AgNO}_3 + \text{Aq}$, even at 100° . (Lowry, Roy. Soc. Proc. 1914, 91, A. 70.)

Sol. in $\text{KCN} + \text{Aq}$. (Hahn, C. C. 1870. 240.)

Difficultly sol. in $\text{KCN} + \text{Aq}$; less difficultly if Ag_2S is pptd. from a very dil. solution. Amt. of KCN present also has influence on the solubility. Ag_2S dissolved in conc. $\text{KCN} + \text{Aq}$ separates out on dilution. (Béchamp, J. pr. 60. 64.)

Insol. in NH_4Cl or $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Brett.)

Min. *Argentite*. *Acanthite*. Sol. in conc. $\text{HNO}_3 + \text{Aq}$ with separation of S.

Sol. in citric acid + Aq with addition of KNO_3 . (Bolton, C. N. 37. 48.)

Silver disulphide, Ag_2S_2 .

Sol. in H_2O with decomp.; also sol. with decomp. in HCl , HNO_3 . CS_2 does not dissolve out S. (Hantzsch, Z. anorg. 1898, 19. 105.)

Silver sodium sulphide, $3\text{Ag}_2\text{S}$, $\text{Na}_2\text{S} + 2\text{H}_2\text{O}$.

Sol. in conc. $\text{Na}_2\text{S} + \text{Aq}$ with decomp.; sol. in H_2O with decomp. (Ditte, C. R. 1895, 120. 93.)

Silver zinc sulphide, Ag_2S , 3ZnS . (Schneider, J. pr. (2) 8. 29.)

Silver sulphimide (silver thionyl imide), SO_2NAg .

Very sl. sol. in cold, more sol. in hot H_2O .

Very sol. in dil HNO_3 (Traube, B 1892, 25. 2474.)

Silver sulphophosphide.

See **Silver phosphosulphide**.

Silver telluride, Ag_2Te .

Min. *Hessite*. Sol. in warm $\text{HNO}_3 + \text{Aq}$.

Sodammonium, $\text{Na}_2(\text{NH}_3)_2$.

100 g. liq. NH_3 dissolve 60.5 g. at -23° ; 56.4 g. at 0° ; 56 g. at $+5^\circ$; 55 g. at 9° . (Joannis A. ch. 1906, (8) 7. 41.)

Sodium, Na_2 .

Violently decomposes H_2O , alcohol, etc. Insol in hydrocarbons. Easily sol. in acids with violent action

Solubility in fused NaOH .

G sol in 100 g. fused NaOH at temp.

t°	G per 100 g. NaOH
480	25.3
600	10.1
610	9.9
670	9.5
760	7.9
800	6.9

(Hevesy, Z. Elektrochem. 1909, 15. 531.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

1 gram atom dissolves.—

at $+22^\circ$ in 6.14 mol. liquid NH_3 .

“ 0 “ 5.87 “ “ “

“ -30° “ 5.52 “ “ “

“ -50° “ 5.39 “ “ “

“ -70° “ 5.20 “ “ “

“ -105° “ 4.98 “ “ “

(Ruff, B. 1906, 39. 839.)

$\frac{1}{2}$ ccml. oleic acid dissolves 0.0449 g. Na in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Insol. in ethylamine and in secondary and tertiary amines. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

Sodium acetylde acetylene, Na_2C_2 , C_2H_2 .

Very deliquescent. Decomp. by H_2O and by absolute alcohol. Insol. in ether, ligroin, etc. (Moissan, C. R. 1898, 127. 915.)

Sodium amalgam.

NaHg_8 . Stable in contact with the liquid amalgam from 0° – 40.5° . Can be cryst. from Hg without decomp. at any temp. between these limits.

NaHg_5 . Stable in contact with the liquid amalgam from 40.5° – 150° . Can be cryst. from Hg without decomp. at any temp. between these limits. (Kerp, Z. anorg. 1900, 25. 68.)

Sodium amide, NaNH_2 .

Decomp. by H_2O and alcohol.

Sodium amidochloride, $\text{Na}_2\text{NH}_2\text{Cl}$.

Sol. in H_2O with decomp. (Joannis, C. R. 112. 392)

Sodium arsenide, Na_3As .

Decomp. H_2O . (Lebeau, C. R. 1900, 130. 504.)

Sodium arsenide ammonia, $\text{Na}_3\text{As}, \text{NH}_3$.

Easily sol. in liquid NH_3 (Lebeau, C. R. 1900, 130. 502.)

Sl. sol. in liquid NH_3 (Hugot, C. R. 1898, 127. 554.)

Sodium azoimide, NaN_3 .

Not hygroscopic. Sol in H_2O . Insol in alcohol and ether. (Curtius, B. 24. 3344)

40.16 pts. are sol. in 100 pts. H_2O at 10° .

40.7 " " " " 100 " H_2O " 15 2.

41.7 " " " " 100 " H_2O " 17 0.

0.3153 pt. is sol. in 100 pts. abs. alcohol at 16° .

Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 279.

Sodium bromide, NaBr , and $+2\text{H}_2\text{O}$.

Not deliquescent. Solubility in H_2O differs according as NaBr or $\text{NaBr}+2\text{H}_2\text{O}$ is used. The following data for anhydrous NaBr were found.

Pts. NaBr dissolved by 100 pts. H_2O at t° .

t°	Pts. NaBr	t°	Pts. NaBr	t°	Pts. NaBr
44 1	115.6	74.5	118.4	97 2	119.9
51.5	116.2	80.5	118.6	100.3	120.6
55.1	116.8	86.0	118.8	110.6	122.7
60.3	117.0	90.5	119.7	114.3	124.0
64.5	117.3

Solubility is represented by a straight line of the formula $S=110.34+0.1075t$.

Below 50° the salt usually crystallizes with

$2\text{H}_2\text{O}$, of which the solubility in 100 pts. H_2O was found to be as follows.

t°	Pts. NaBr	t°	Pts. NaBr	t°	Pts. NaBr
–21	71.1	+5	82.0	30	97.3
–20	71.4	10	84.5	35	101.3
–15	73.1	15	87.3	40	105.8
–10	75.1	20	90.3	45	110.6
–5	77.1	25	93.8	50	116.0
0	79.5

(Coppet, A. ch. (5) 30. 420.)

If solubility S =pts. NaBr in 100 pts. solution, $S=40.0+0.1746t$ from -20° to $+40^\circ$; $S=52.3+0.0125t$ from 50° to 150° . (Étard, C. R. 98. 1432.)

100 pts. H_2O dissolve. at 0° , 77.5 pts NaBr ; at 20° , 88.4 pts.; at 40° , 104.2 pts.; at 60° , 111.1 pts.; at 80° , 112.4 pts.; at 100° , 114.9 pts. (Kremers.)

Sat. solution boils at 121° . (Kremers, Pogg. 97. 14.)

Sat. $\text{NaBr}+\text{Aq}$ contains at

–22°	–10°	+140°	163°
40.1	42.5	56.5	57.5% NaBr ,

180°	180°	210°	212°	230°
59.5	59.0	60.9	61.0	62.0% NaBr .

(Étard, A. ch 1894, (7) 2. 539)

100 g. sat. $\text{NaBr}+\text{Aq}$ at 16.4° contain 47 g. NaBr . (Greenish, Pharm. J. 1900, 65. 190.)

Solubility of $\text{NaBr}+2\text{H}_2\text{O}$ in H_2O at 30° = 65.5% anhydrous NaBr (Cocheret, Dissert. 1911.)

Sp. gr. of $\text{NaBr}+\text{Aq}$ at 19.5° containing:

5	10	15	20	25 % NaBr ,
1.040	1.080	1.125	1.174	1.226

30	35	40	45	50 % NaBr .

(Jones and Pearce, Am Ch. J. 1907, 38. 728.)

Sol. in H_2SO_4 . (Walden, Z. anorg. 1902, 29. 384.)

100 pts. NaBr+Aq sat. at 18-19° contain 46.05 pts. NaBr, 100 pts. NaBr+NaCl+Aq sat. at 18-19° contain 46.59 pts. of the two salts; 100 pts. NaBr+NaI+Aq sat at 18-19° contain 63.15 pts. of the two salts; 100 pts. NaBr+NaCl+NaI+Aq sat. at 18-19° contain 63.20 pts. of the three salts. (v. Hauer, J. pr. 98. 137.)

Solubility of NaBr in NaOH+Aq at 17°.

(G per 100 g. H_2O)

NaOH	NaBr	NaOH	NaBr
0 0	91 38	22 35	59 60
3 26	79 86	24 74	55 03
9 24	68 85	28 43	48 00
13.43	64 90	36.61	38 41
17 17	63 06	46 96	29 37
19 12	62.51	54 52	24 76

(Ditte, C R. 1897, 124. 30.)

Easily sol. in liquid HIF . (Franklin, Z. anorg. 1905, 46. 2.)

Very sl. sol. in alcohol.

NaBr+2 H_2O is sol. in 1.10 pts. H_2O at 15°; in 159 pts. absolute alcohol at 15°; in 1200 pts. absolute ether at 15°. (Eder, Dngl. 221. 89.)

NaBr+2 H_2O is sol. in 2.25 pts. 60% alcohol, and 7 pts. 90% alcohol. NaBr is sol. in 3 pts. 60% alcohol, and 10 pts. 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 17.35 pts. at 19.5°. (de Bruyn, Z. phys. Ch. 10. 783.)

100 g. NaBr+ CH_3OH contain 0.9 g. NaBr at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, 72. 437.)

At room temp., 1 pt. NaBr by weight is sol. in:

4.6 pts. methyl alcohol	D^{15} 0.7990.
14.0 " ethyl	D^{15} 0.8100.
49.7 " propyl	D^{15} 0.8160.

(Rohland, Z. anorg. 1898, 18. 325.)

Solubility in ethyl alcohol at 30°.

(Herz and Kuhn, Z. anorg. 1908, 60. 159.)

2.05 g. are sol. in 100 g. propyl alcohol. (Schlamp, Z. phys. Ch. 1894, 14. 276.)

Sl sol. in acetone (Krug and M'Elroy, J. Anal Ch. 6. 184.)

100 g. 95% formic acid dissolve 22.3 g. NaBr at 18.5°. (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314); benzonitrile. (Naumann, B. 1914, 47. 1370)

The composition of the hydrates formed by NaBr at different dilutions is calculated from determinations of the lowering of the frpt. produced by NaBr and of the conductivity and sp. gr. of NaBr+Aq. (Jones, Am. Ch. J. 1905, 34. 303)

Sodium stannic bromide.

See Bromostannate, sodium.

Sodium uranous bromide, Na₂UBr₃.

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264)

Sodium zinc bromide, NaBr, ZnBr₂+H₂O.

Hygroscopic. (Ephraim, Z. anorg. 1908, 59. 63.)

2NaBr, ZnBr₂+5H₂O. Hygroscopic (Ephraim.)

Sodium carbide, Na₂C₂.

Insol. in all neutral solvents; decomp. on heating and by H₂O. (Matignon, C. R. 1897, 125. 1034.)

Sodium carbonyl, Na₂C₂O₂.

Decomp. by H₂O with explosion (Joannis, C. R. 116. 1518.)

Sodium subchloride, Na₄Cl₂.

Decomp. by H₂O into NaCl and NaOH+Aq. (Kreutz, B. 1897, 30. 403.)

Sodium chloride, NaCl.

Sol. in H₂O.

(Richmond, Analyst, 1893, **18**. 142)

If NaCl is dissolved in 15 pts. H₂O, heat is absorbed if the temp. is 15°, but much less if temp. is 86°; at 100° there is neither absorption nor evolution of heat. (Berthelot, C. R. **78**. 1722.)

36 pts. NaCl mixed with 100 pts. H₂O at 12.6° lower the temp. 2.5°. (Rudorff, B. **2**. 68.)

33 pts. NaCl with 100 pts. snow at -1° give a temp. of -21.3°. (Rudorff, Pogg. **122**. 337.)

The freezing-point of NaCl+Aq is lowered 0.60° for every gram NaCl up to 10 g. When more conc. the freezing-point sinks proportional to NaCl, 2H₂O, 0.342° for every gram of that salt. (Rudorff, Pogg. **113**. 163.)

Insol. in conc. HCl+Aq.

Solubility of NaCl in HCl+Aq at 0°. NaCl = mols. NaCl (in milligrams) dissolved in 10 ccm. of liquid; HCl = mols. HCl (in milligrams) dissolved in 10 ccm. of liquid.

The presence of other salts increases the solubility of NaCl in H₂O.

Sol. in sat. NH₄Cl+Aq with pptn. of NH₄Cl. When the reaction is complete, the solution has sp. gr. 1.1788, and contains 32.62% mixed salts; or 100 pts. H₂O dissolve 48.42 pts. mixed salts, viz., 26.36 pts. NaCl and 22.06 pts. NH₄Cl. (Karsten.) (*See under NH₄Cl.*)

Sol. in sat. BaCl₂+Aq with pptn. of BaCl₂ until a state of equilibrium is reached, when 100 pts. H₂O at 17° dissolve 38.6 pts. of mixed salts, of which 4.1 pts. are BaCl₂. (Karsten.) (*See under BaCl₂.*)

Insol. in sat. CaCl₂+Aq. (Vauquelin, *Ann. de Chim.* **13**, 95.)

Much more sol. in hot than in cold H₂O containing MgCl₂ or CaCl₂; but NaCl is pptd. from sat. NaCl+Aq when that solution is mixed with MgCl₂ or CaCl₂+Aq. (Fuchs and G. Reichenbach, 1826.) (*See under MgCl₂.*)

Less sol. in conc. CaCl₂+Aq than in H₂O. (Hermann.)

Solubility of NaCl+CaCl₂ in H₂O at 25°.G. per 100 g. H₂O.

NaCl	CaCl ₂	Sp gr 25°/25°	Solid phase
0	84	1.4441	CaCl ₂ , 6H ₂ O
1.846	78.49	1.4441	" + NaCl

"	10.0	354.6
30	0.0	360.3
"	13.9	358.1
45	0.0	356.0
"	0.23	361.5

(Fedotieff, *Z. phys. Ch.* 1904, **49**, 170.)

Sol. in sat. KClO₃+Aq, the solution can then dissolve more KClO₃. (Marguerite, *C. R.* **38**, 305.)

In solution containing Na, K, Cl and NO₃ ions, the solubility—relations between the four salts NaCl, KCl, NaNO₃ and KNO₃ have been studied. (Uyeda, *Z. anorg.* 1911, **71**, 2.)

Sol. in sat. NH₄NO₃+Aq, without causing pptn. (Karsten.)

Sol. in sat. NH₄NO₃+Aq, from which solution it is not pptd. by salts which would cause its pptn. in aqueous solution. (Marguerite, *C. R.* **38**, 307.)

Sol. in sat. Ba(NO₃)₂+Aq without causing pptn.

Insol. in Ca(NO₃)₂+Aq.

Sol. in Mg(NO₃)₂+Aq with pptn. of small portion of Mg(NO₃)₂.

Sol. in sat. KNO₃+Aq, the mixed solution having the power to dissolve more KNO₃, and the solubility of the KNO₃ apparently increasing in the same ratio as the amount of NaCl present. (Foureroy and Vauquelin, *Ann. de Chim.* **11**, 130.)

Sol. in sat. KNO₃+Aq; the solution thus

obtained at 18-13° contains 40.34% of the mixed salts, or 100 pts. H₂O dissolve 67.72 pts. of the mixed salts, viz., 38.25 pts. NaCl and 29.45 pts. KNO₃. (Karsten.)

Solubility of NaCl in KNO₃+Aq at 25°. KNO₃=g. KNO₃ in 100 cc. of solution. NaCl=g. mol. per l.

KNO ₃	NaCl	KNO ₃	NaCl
0	5.44	12	5.28
4	5.52	16	5.21
8	5.45	20	5.15

(Ritzel, Z. Krist. 1911, 49. 152.)
(See also under KNO₃.)

Solubility of NaCl in NaNO₃+Aq at 15.5°

Sp. gr.	g per 100 cc sat. solution

180	16.4	30.0

(Étard, A. ch. 1894, (7) 3. 277.)

(See under KCl.)

100 pts. NaCl+NaI+Aq sat. at 18-19° contain 62.33 pts. of the two salts. (v. Hauer.)

Sol. in sat. Al₂(SO₄)₃+Aq with no pptn. (Vauquelin.)

Sol. in sat. (NH₄)₂SO₄+Aq with pptn. of considerable amt. of (NH₄)₂SO₄+Aq (Vauquelin.)

Sol. in sat. CuSO₄+Aq

100 pts. H₂O dissolve 36.71 pts. NaCl and 7.19 pts. K₂SO₄ at 15°, and solution has sp. gr. 1.24. (Page and Keightley.)

NaCl is sol. in K₂SO₄+Aq, and vice versa, without separation of a salt.

100 pts. H₂O dissolve 7.03 pts. K₂SO₄ and 37.60 pts. NaCl, when warmed and cooled to 14°. (Rüdorff.)

Solubility of NaCl and K₂SO₄ in H₂O at t°. 100 pts. H₂O contain pts. NaCl, K₂SO₄, and KCl.

t°	Pts. NaCl	Pts. K ₂ SO ₄	Pts. KCl
10	33.43	8.10	3.18
20	34.01	8.90	3.06
30	34.56	9.56	2.95

90	35.86	12.42	6.98
100	35.63	12.56	8.79

(Precht and Wittgen, B. 15. 1666.)

Sol in cold sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ at first without pptn., afterwards Na_2SO_4 separates out. (Karsten.)

Solubility in $\text{Na}_2\text{SO}_4 + \text{Aq}$ containing 7.45 g. Na_2SO_4 in 100 g. of the solution.

t°	g NaCl in 100 g of the solution
14 80	23.30
17.90	23.33
24 85	23.45
25.60	23.485
27.75	23.525
32 18	23.55
34 28	23.68

(Marie and Marquis, C. R. 1903, 136. 684.)

See also under Na_2SO_4 .

Sol. in sat. $\text{ZnSO}_4 + \text{Aq}$ with separation of Na_2SO_4 , ZnSO_4 (Karsten)

Insol. in liquid CO_2 (Buchner, Z. phys. Ch. 1906, 54. 674.)

Moderately sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

12.2 pts. NaCl are sol. in 1 pt. hydrazine at 12.5–13°. (de Bruyn, R. t. c. 1899, 18. 297.)

100 g. hydroxylamine dissolve 14.7 g. NaCl at 17.5°. (de Bruyn, Z. phys. Ch. 1892, 10. 782.)

100 g. 95% formic acid dissolve 5.8 g. at 19.7°. (Aschan, Ch. Ztg. 1913, 37. 1117.)

Solubility in alcohol.

100 pts. alcohol of 0.900 sp. gr. dissolve 5.8 pts. NaCl, of 0.872 sp. gr. dissolve 3.67 pts. NaCl, of 0.834 sp. gr. dissolve 0.5 pt. NaCl. (Kirwan.)

100 pts. alcohol containing given % by weight of absolute alcohol dissolve pts. NaCl at 25°.

% alcohol	Pts. NaCl	% alcohol	Pts. NaCl	% alcohol	Pts. NaCl
0.0	35.70	33.4	16.08	66.9	5.95
8.4	30.49	41.8	13.28	75.2	3.75
16.7	24.84	50.2	11.28	83.6	1.59
25.1	19.30	58.5	7.96	.	..

(Kopp, A. 40. 206.)

100 pts. alcohol of 75% by weight dissolve at.

14°	15.2°	38°	71.5°
0.661	0.700	0.736	1.033 pts. NaCl.

100 pts. alcohol of 95.5% by weight dissolve at

15°	77.2°
0.174	0.171 pts. NaCl.

(Wagner, A. 64. 293.)

100 pts. alcohol containing % alcohol by weight dissolve pts. NaCl at 15°, or 100 pts. solution contain % NaCl.

10	20	30	40 % alcohol,
28.53	22.55	17.51	13.25 pts. NaCl,
22.2	18.4	14.9	11.7 % NaCl,

50	60	80 % alcohol,
9.77	5.93	1.22 pts. NaCl,
8.9	5.6	1.2 % NaCl.

(Schiff, A. 118. 365.)

Solubility of NaCl in alcohol increases with the temperature.

100 pts. (by weight) of alcohol of 0.9282 sp. gr. (50.5% by weight) dissolve at:

4°	10°	13°	23°	32°
10.9	11.1	11.43	11.9	12.3 pts. NaCl,

33°	44°	51°	60°
12.5	13.1	13.8	14.1 pts. NaCl.

(Gerardin, A. ch. (4) 5. 146.)

Solubility in alcohol at 13°.

Sp. gr.	100 cem. contain in g.

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, 36. 1127.)

Solubility in glycol at 14.8° = 31.7%. (de Coninck, Belg. Acad. Bull. 1905. 275.)

Sol. in glycerine. (Pclouze.)

Solubility of NaCl in glycerine+Aq at 25°. G = g. glycerine in 100 g. glycerine+Aq. NaCl = millimols NaCl in 100 cc. of the solution.

G	NaCl	Sp. gr.
0	545 6	1.1960
13.28	501.1	1.2048
25 98	448.4	1.2133
45.36	370.2	1.2283
54 23	333.9	1.2381
83.84	220.8	1.2696
100	167.1	1 2964

(Herz and Knoch, Z. anorg. 1905, 45. 267.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Solubility of NaCl in solutions of HgCl₂ in ethyl acetate.

100 mols ethyl acetate dissolve			
Mols. HgCl ₂	Mols. NaCl	Mols. HgCl ₂	Mols. NaCl
40.0	20.0	18.0	5.1
38.1	19.6	16.4	4.3
36.0	19.2	14.1	3.8
34.9	18.5	13.2	2.9
34.8	18.3	12.4	2.3
32.1	13.8	12.0	1.6
28.0	9.1	12.2	1.3
22.8	7.0	12.9	0.8
22.9	7.0

(Linebarger, Am. Ch. J. 1894, 16. 215.)

Solubility of NaCl in urea + Aq at 25°.

% urea	% NaCl	% urea	% NaCl
0	31.80	18	27.65
5	30.63	23	27.24
9.6	29.05	23	26.56
13	28.46		..

(Ritzel, Z. Kryst. Min. 1911, 49. 152.)

Solubility of NaCl in urea + Aq at (?)°.

g = g. urea in 100 cc. of solution.

sol. = increase of solubility of NaCl in g. per 100 cc. of the solution

g.	sol	g.	sol
5	0.044	30	0.709
10	0.124	35	0.910
15	0.234	40	1.134
20	0.372	45	1.370
25	0.529	50	1.602

(Fastert, N. Jahrb. Min. Beil. Bd. 1912, 23. 286.)

Solubility of NaCl in formamide + Aq at 25°.

% HCONH ₂	% NaCl	% HCONH ₂	% NaCl
0	31.80	11	29.11
2.3	30.98	15	28.52
5.3	30.86	18.8	27.76
8	30.40

(Ritzel, Z. Kryst. Min. 1911, 49. 152.)

Insol. in anhydrous and in 97% pyridine
 Very sl. sol. in 95% pyridine + Ac. SI sol.
 in 93% pyridine + Aq. (Kahlenberg, J. Am.
 Chem. Soc. 1908, 30. 1107.)

Insol. in oil of turpentine (T. S. Hunt,
 Am. J. Sci. (2) 19. 417.)

100 g. H₂O dissolve 236.3 g. sugar + 42.3 g.
 NaCl at 31.25°, or 100 g. sat. aq. solution
 contain 62.17 g. sugar + 11.13 g. NaCl
 (Köhler, Z. Ver. Zuckerind. 1897, 47. 447.)

Solubility of NaCl in glucose + Aq at 25°.

Conc. = concentration of glucose + Aq in g.
 mol. per 1,000 g. H₂O.

Sol. = Solubility in 1,000 g. H₂O.

Conc.	Sol.	Molecular solubility
0	361.40	6.18
0.25	364.15	6.22
0.50	364.30	6.23
1.0	369.90	6.32

(Armstrong and Eyre, Proc. R. Soc. 1910,
(A) 84. 127.)

Min. Halite.

+ 2H₂O. Efflorescent below 0°; sl. deli-
 quescient at temps. above 0°. (Fuchs, 1826.)

The solubility in H₂O at -12.25° corre-
 sponds to 32.9 pts. of NaCl per 100 pts. H₂O
 (Matignon, C. R. 1909, 148. 551.)

Sodium stannic chloride, 2NaCl, SnCl₄ + 6H₂O

See Chlorostannate, sodium.

Sodium thallic chloride, 3NaCl, TlCl₃ + 12H₂O.

Very sol in H₂O. (Pratt, Am. J. Sci.
 1895, (3) 49. 404.)

Sodium uranyl chloride, 2NaCl, UCl₄.

Non volatile and not hygroscopic. (Mois-
 san, C. R. 1896, 122. 1089.)

Sol. in H₂O. (Colani, A. ch 1907, (8) 12.
 59)

Sodium uranyl chloride, Na₂(UO₂)Cl₄.

As K salt (Aloy, Bull. Soc. 1899, (3) 21.
 264)

Sodium zinc chloride, 2NaCl, ZnCl₂ + 3H₂O.

Deliquescent. Easily sol in H₂O. (Schind-
 ler, Mag. Pharm. 36. 48.)

Sodium zirconium chloride, 2NaCl, ZrCl₄.

(Paykull.)

Sodium chloroiodide, NaCl₄I + 2H₂O.

Easily decomp. by alcohol or ether. (Wells
 and Wheeler, Sill. Am. J. 143. 42.)

Sodium fluoride, NaF.

Very sl. sol. in cold, and not more abund-
 antly in boiling H₂O. (Rose.)

100 pts. H₂O dissolve 4.78 pts. at 16° (Ber-
 zelius.)

100 pts. H₂O dissolve 4 pts. at 15°. (Fremy,
 A. ch. (3) 47. 32.)

Sp. gr. of aqueous solutions containing in
 100 pts. H₂O:

1.1081	2.2162	3.3243 pts. NaF.
1.0110	1.0221	1.0333

Sat. solution has sp. gr. 1.0486. (Gerlach,
 Z. anal. 27. 277.)

Sp. gr. of solution sat. at 18° = 1.044, con-
 taining 4.3% NaF. (Mylus and Funk, B.
 1897, 30. 1718.)

Solubility of NaF in HF + Aq at 21°.

g. per 1000 g. H ₂ O		g. per 1000 g. H ₂ O	
HF	NaF	HF	NaF
0.0	41.7	83.8	22.9
10.0	41.4	129.7	23.8
45.8	22.5	596.4	48.8
56.5	22.7	777.4	81.7

(Ditte, C. R. 1896, 123. 1282.)

Easily sol. in liquid HF. (Franklin, Z.
 anorg. 1905, 46. 2.)

Sl. sol. in conc. KC₂H₃O₂ + Aq. (Strom-
 eyer.)

Almost insol. in alcohol. (Berzelius, Pogg.
 1. 13.)

Insol. in methyl acetate. (Naumann, B.
 1909, 42. 3790.)

Sodium hydrogen fluoride, NaHF_2 .

Rather difficultly sol. in cold, more easily in hot H_2O (Berzelius, Pogg. 1. 13)

Sodium tantalum fluoride.

See Fluotantalate, sodium.

Sodium tin (stannous) fluoride, 2NaF , 3SnF_2

Sol in H_2O . (Wagner, B. 19. 896)

Sodium tin (stannic) fluoride.

See Fluostannate, sodium.

Sodium tantalum fluoride.

See Fluotantalate, sodium.

Sodium tellurium fluoride, NaF , TeF_4 .

Decomp. by H_2O (Berzelius.)

Sodium titanium fluoride.

See Fluotitanate, sodium.

Sodium tungstyl fluoride.

See Fluoxytungstate, sodium.

Sodium uranium fluoride, NaF , UF_4 (?).

Somewhat soluble in H_2O . (Bolton.)

Sodium uranyl fluoride.

See Fluoxyuranate, sodium.

Sodium vanadium sesquifluoride.

See Fluovanadate, sodium.

Sodium zinc fluoride, NaF , ZnF_2 .

Sol. in H_2O . (R. Wagner.)

Sodium zirconium fluoride, 5NaF , 2ZrF_4 .

See Fluozirconate, sodium.

Sodium fluoride vanadium pentoxide.

See Fluoxyvanadate, sodium.

Sodium hydrazide, NH_2 , NHNa .

Decomp. by H_2O with explosive violence.

Decomp. by alcohol. (Schlenk, B 1915, 48. 670.)

Sodium hydride, NaH .

Decomp. by H_2O and by acids.

Sol. in fused Na or Na amalgam. Insol. in liquid NH_3 . Insol. in CS_2 , CCl_4 , C_6H_6 , and terphenylene. (Moissan, C. R. 1902, 134. 73.)

Na_2H_4 . Decomp. violently by H_2O .

Sodium hydrosulphide, NaSH .

Deliquescent. Sol. in H_2O and alcohol.

+ $3\text{H}_2\text{O}$. Difficultly sol. in H_2O . (Darbois, C. C. 1835. 36.)

Sodium hydroxide, NaOH .

Very deliquescent. 100 pts. NaOH under a bell jar with H_2O at 16–20° absorb 552 pts. in 56 days. (Mulder.)

Very sol. in H_2O with evolution of much heat. Sol. in 0.47 pt. H_2O . (Bineau, C. R. 41. 509.)

Solubility of NaOH in H_2O .

42.6	16.4	"
47.2	17.7	" + NaOH, H ₂ O
49.5	9.1	NaOH, H ₂ O
54.3	0	"

(Donk, Chem. Weekbl. 1908, 5. 529, 629, 767.)

Easily sol in alcohol or wood spirit, sol in fusel-oil. Sol. in an aqueous solution of mannite (Favre, A. ch. (3) 11. 76.)

Easily sol. in glycerine

Sol to a certain extent in ether.

Insol in acetone. (Eidmann, C. C. 1899, II. 1014, Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1904, 37. 3602), benzonitrile. (Naumann, B. 1914, 47. 1370)

+H₂O. 100 g. solution in H₂O sat at 25° contain 42 g. Na₂O. (Schreinemakers, Arch. Néer. Sc. 1910, (2) 15. 81.)

Mpt. 64.3°. (See above.)

+1½H₂O (Cripps, Pharm J Trans. (3) 14. 833.)

+2H₂O. See above.

+3½H₂O. Deliquescent. Sol. in H₂O with absorption of much heat Melts at 6° (Hermes.)

Mpt. 15.5°. (See above.)

+4, 5 and 7H₂O. (See above)

The composition of the hydrates formed by NaOH at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by NaOH and of the conductivity and sp. gr. of NaOH + Aq. (Jones, Am. Ch. J. 1905, 34. 336)

Sodium perhydroxide, NaO₂H.

"Natrily hydroxide."

Decomp. by H₂O. Sol in cold alcoholic acetic acid. (Tafel, B. 1894, 27. 2300)

Sodium iodide, NaI, and +2H₂O.

Solubility of NaI and of NaI + 2H₂O in H₂O differ. Below 65°, NaI + 2H₂O usually separates out, and above that temp NaI separates.

Solubility of NaI in 100 pts. H₂O at t°.

t°	Pts NaI	t°	Pts NaI	t°	Pts NaI
71.3	294.4	92.4	300.2	124.7	317.5
74.1	295.3	97.1	300.3	132.5	317.3
81.6	296.8	101.7	302.5	138.1	319.2
86.4	298.3	110.7	306.2

Solubility is represented by a straight line of the formula $S = 264.19 + 0.3978t$.

Solubility of NaI + 2H₂O in 100 pts. at t°.

t°	Pts NaI	t°	Pts NaI	t°	Pts NaI
-17	149.4	15	173.7	45	215.6
-15	150.3	20	178.7	50	227.8
-5	155.4	25	184.2	55	241.2
0	158.7	30	190.3	60	256.8
5	163.6	35	197.0	65	278.4
10	168.6	40	205.1		

(Coppet, A. ch. (5) 50. 424.)

If solubility S = pts. NaI in 100 pts. solution, $S = 61.3 + 0.1712t$ from 0° to 80°; $S = 75 + 0.0258t$ from 80° to 160° (Étard, C. R. 98. 1432)

NaI + 2H₂O is sol in 0.55 pt. H₂O at 15° (Eder, Dingl. 221. 89.)

100 pts. NaI + Aq at 18–19° contain 62.98 pts. NaI. (v Hauer, J. pr 98. 137.)

100 pts. H₂O dissolve at:

0°	20°	40°	60°
158.7	178.6	208.4	256.4 pts NaI,
80°	100°	120°	140°
303	312.5	322.5	333.3 pts. NaI.

(Kremers, Pogg 97. 14.)

Transition pt. for NaI + 2H₂O to NaI is 64.3°, and sat. solution containing 74.4% NaI. (Panfiloff, J. Russ. Phys. Chem. Soc. 1893, 25. 162.)

100 g. H₂O dissolve 172.4 g. NaI at 15°, and sp. gr. of sat. solution = 1.8937. (Greenish, Pharm J. 1900, 65. 190.)

100 g solution of NaI + 2H₂O sat. at 30° contains 65.5 g. anhyd. NaI. (Cocheret, Dissert 1910.)

Sp gr. of NaI + Aq at 19.5° containing:

5	10	15	20	25	30 % NaI,
1.040	1.082	1.128	1.179	1.234	1.294

35	40	45	50	55	60 % NaI.
1.360	1.432	1.510	1.60	1.70	1.81

(Gerlach, Z. anal. 8. 285.)

Sat. solution boils at 141°.

Sol. in liquid SO₂. (Walden, B. 1899, 32. 2864.) POCl₃. (Walden, Z. anorg. 1900, 25. 212.)

Very easily sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

Sol in 12.0 pts. absolute alcohol; in 360 pts. ether. (Eder, Dingl. 221. 89.)

Sol. in 3 pts. 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 77.7 pts. NaI at 22.5°; ethyl alcohol, 43.1 pts. (de Bruyn, Z. phys. Ch. 10. 783.)

Very sol. in abs. methyl alcohol and is not pptd. therefrom on the addition of a large volume of abs. ether, while wet ether produces immediate separation. (Loeb, J. Am. Chem. Soc. 1905, 27. 1020.)

Solubility of NaI in ethyl alcohol
(g. NaI in 100 g. alcohol.)

t°	NaI	t°	NaI
10	43.77	200	42.3
30	44.25	220	38.5
50	44.50	230	36.2
80	45.0	240	32.7
100	45.1	250	26.2

37.49	55.37	NaI, 2H ₂ O + NaI
35.65	59.24	NaI
33.24	61.78	"
30.90	63.70	"

(Cocheret, Dissert. 1911.)

At room temp. 1 pt. by weight is sol in:

- 1.2 pts. methyl alcohol D¹⁵ 0.7990.
1.7 " ethyl " D¹⁵ 0.8100.
3.8 " propyl " D¹⁵ 0.8160.

(Rohland, Z. anorg. 1898, 18. 325.)

100 g. methyl alcohol dissolve 90.35 g. NaI at 25°.

100 g. ethyl alcohol dissolve 46.02 g. NaI at 25°.

100 g. propyl alcohol dissolve 28.22 g. NaI at 25°.

100 g. isoamyl alcohol dissolve 16.30 g. NaI at 25°.

(Turner and Bissett, Chem. Soc. 1913, 103. 1909.)

Solubility in methyl alcohol + ethyl alcohol at 25°.

P = % methyl alcohol in the solvent
G = g. NaI in 10 cm. of the solution.
S = Sp. gr. of the sat. solution at 25°.

P	G	S 25°/4°
0.00	3.515	1.0806

100	2.411	0.9968

(Herz and Kuhn, Z. anorg. 1908, 60. 159.)

Sol. in normal propyl alcohol. (Loeb, J. Am. Chem. Soc. 1905, 27. 1020.)

28.74 g. are sol. in 100 g. propyl alcohol. (Schlamp, Z. phys. Ch. 1894, 14. 276.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Sol. in ethyl acetate. (Casaseca, C. R. 30. 821.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Solubility in organic solvents at t°.

C=pts. by wt. of NaI in 100 ccm. of the sat. solution.

L=no. of liters which at the saturation temp. hold in solution 1 mol NaI.

Solvent	t°	C	L
Furfurol	25	25 10	0.597
Acetonitrile	25	18.43	0.813

Propionitrile	25	6 230	2.406
"	0	9 091	1 649
Nitromethane	25	0 478	31.36
"	0	0.339	44 27

(Walden, Z. phys. Ch. 1906, 55. 718.)

Very sol. in acetone. (Walden.)
+5H₂O. Transition point of NaI+5H₂O to NaI+2H₂O is -13.5°, and sat. solution contains 60.2% NaI. (Panfiloff, J. Russ. Phys. Chem. Soc. 1893, 25. 162.)

Sodium tin (stannous) iodide, NaI, SnI₂.

Very sol. in H₂O. When treated with little H₂O, NaI is dissolved out, but a larger amt. of H₂O dissolves it completely (Boullay, A. ch. (2) 34. 375.)

Sodium zinc iodide, 2NaI, ZnI₂+3H₂O.

Deliquescent.

NaZnI₃+2H₂O. Very hygroscopic. (Ephraim, Z. anorg. 1910, 67. 383.)

Sodium nitride,

Decomp. by heat. (Franz Fisher, B. 1910, 43. 1468.)

Sodium suboxide, Na₂O.

Decomp. by H₂O. (de Forcrand, C. R. 1898, 127. 365.)

Sodium oxide, Na₂O.

Very deliquescent, and sol. in H₂O with evolution of heat.

See Sodium hydroxide.

Sodium peroxide, Na₂O₂.

Deliquescent, and very sol. in H₂O with partial decomp.

Solution decomp. on boiling.

Cryst. with 2H₂O, and 8H₂O. (Fairley, Chem. Soc 1877. 125.)

Forms hydrate Na₂O₂(OH)₄+4H₂O.

Easily sol. in H₂O or dil. acids without decomp. (Schöne, A. 193. 241.)

Sodium peroxide carbonate, Na₂CO₄.

Easily decomp. (Woffenstein, B. 1908. 41. 285.)

Sodium peroxide dicarbonate, Na₂C₂O₆.

Easily decomp. (Woffenstein, B. 1908, 41. 287.)

Sodium trioxide, NaO₃.

Sol. in H₂O forming a solution of Na₂O₂. (Joannis, C. R. 1893, 116. 1371.)

Sodium trioxide carbonate, Na₂CO₃

(Woffenstein, B. 1908, 41. 296.)

Sodium trioxide dicarbonate, NaHCO₄

Two isomeric modifications. (Woffenstein, B. 1908, 41. 390)

Sodium trioxide hydrate, NaO.OH.

See Sodium perhydroxide.

Isomeric with Tafel's sodyl hydroxide.

O Na.OH. (B. 27, 2297)

Insol. in alcohol.

Very unstable. (Woffenstein, B. 1908, 41. 290.)

Sodium phosphide, NaP₃.

Easily decomp. by H₂O. (Hugot, C. R. 1895, 121. 208.)

Sodium hydrogen phosphide, NaH₂P.

Decomp. by H₂O. (Joannis, C. R. 1894, 119. 558.)

Na₂H₃P₂ Decomp. by acids and H₂O. (Hugot, C. R., 1898, 126. 1721.)

Sodium selenide, Na₂Se.

Very deliquescent. Decomp. by H₂O. (Uelsmann, A. 116. 127.)

Insol. in liquid NH₃; sol. in air free H₂O to a colorless liquid. (Hugot, C. R. 1899, 129. 299.)

Cryst. with 16H₂O, 9H₂O, and 1/2H₂O. (Fabre, C. R. 102. 613.)

+10H₂O. Very sol. in H₂O; very unstable in the air. (Clever, Z. anorg. 1895, 10. 145.)

Sodium diselenide, Na₂Se₂.

(Jackson, B. 7. 1277.)

Sodium triselenide, Na₂Se₃.

Sol. in H₂O. (Mathewson, J. Am. Chem. Soc. 1907, 29. 873.)

Sodium hexaselenide, Na₂Se₆.

Sol. in H₂O. (Mathewson, J. Am. Chem. Soc. 1907, 29. 873.)

Sodium monosulphide, Na₂S.

Sol in H₂O. Much less sol. in alcohol than in H₂O. Insol. in ether. (Roussin.)

+5H₂O. Tr. pt. from Na₂S+5½H₂O, 94°.

+5½H₂O.

The sat. solution contains:—

28.48%	anhydrous salt at	50°
29 27	" " "	55°
29 92	" " "	60°
31 38	" " "	70°
33 95	" " "	80°
37 20	" " "	90°

Labile from 48.9–91.5°; stabile from 91.5–96°.

(Parravano and Fornaini, C. C. 1908, I. 5.)

+6H₂O. Less efflorescent than with 9H₂O. Sol. in H₂O and alcohol.

The sat. solution contains:—

26 7	% anhydrous salt at	50°
28.1	" " "	60°
30 22	" " "	70°
32 95	" " "	80°
36 42	" " "	90°

Tr. pt. to Na₂S+5½H₂O, 91.5°.

(Parravano and Fornaini.)

+9H₂O. Efflorescent. Much less sol. in alcohol than H₂O. When dissolved in H₂O, temp. sinks from +22 to –6.1° (Finger, Pogg. 128. 635)

The sat. solution contains:—

9 34	% anhydrous Na ₂ S at	–10°
13 36	" " "	+10°
14.36	" " "	15°
15 30	" " "	18°
16.2	" " "	22°
17 73	" " "	28°
19 09	" " "	32°
20 98	" " "	37°
24 19	" " "	45°

Tr. pt. to Na₂S+5½H₂O, 48.9°.

(Parravano and Fornaini.)

Sodium disulphide, Na₂S₂.

Sol. in H₂O and alcohol.

+5H₂O. Not efflorescent.

Sodium trisulphide, Na₂S₃.

Sol. in H₂O with decomp.

Cryst. with 3H₂O from an alcoholic solution. (Böttger, A. 223. 355.)

Sodium tetrasulphide, Na₂S₄+6H₂O.

Very deliquescent, and sol. in H₂O. Difficultly sol. in absolute alcohol. Insol. in ether. (Schöne.)

+8H₂O. Efflorescent. (Böttger.)

Sodium pentasulphide, Na₂S₅+6H₂O.

Sol. in H₂O. (Schöne.)

Sol. in alcohol.

+8H₂O. (Böttger.)

Solution is easily decomp. by warming. (Jones, Chem. Soc. 37. 461.)

Sodium tellurium sulphide.

See Sulphotellurate, sodium.

Sodium stannic sulphide.

See Sulphostannate, sodium.

Sodium yttrium sulphide, Na₂S, Y₂S₃.

Decomp. by dil. acids, even by HC₂H₃O₂+Aq. (Duboin, C. R. 107. 243)

Sodium zinc sulphide, Na₂S, 3ZnS.

Not so stable as the corresponding K salt. (Schneider, J. pr. (2) 8. 29)

Sodium sulphoselenide, Na₂SSe₂+5H₂O.

Hydroscopic, and decomp. in the air. (Meesinger, B. 1897, 30. 806.)

Sodium telluride, Na₂Te.

Sol. in H₂O. (Demarçay, Bull. Soc. (2) 40. 99.)

Sodium tritelluride, Na₂Te₃.

Sol. in H₂O.

Sol. in liquid NH₃. (Hugot, C. C. 1899, II. 580.)

Stannic acid, H₂SnO₃.

Insol. in H₂O. Sol. in HCl, and H₂SO₄+Aq, even when dil. (Fremy) Easily sol. in acids, from which solution it may be pptd. by dilution or boiling. While moist it is sol. in HNO₃+Aq, but gradually separates on standing, and coagulates at once when heated to 50°. If NH₄NO₃ be added to the solution, it remains clear at ord. temp. (Berzelius.)

Easily sol. in HNO₃+Aq, when previously treated with NH₄OH+Aq. (Thénard.)

Easily sol. in KOH+Aq, but addition of large excess ppts. K₂SnO₃, insol. in KOH+Aq.

Easily sol. in NaOH+Aq, and not pptd. by an excess of that reagent. (Barford, J. B. 1867. 267.)

Sl. sol. in NH₄OH+Aq or (NH₄)₂CO₃+Aq.

Completely sol. in K₂CO₃+Aq, but not in Na₂CO₃+Aq.

Insol. in alkali hydrogen carbonates or NH₄Cl+Aq.

Sol. in alkali sulphides+Aq. (Berzelius.)

Sol. in triethyltoluanyl ammonium hydrate+Aq.

Not pptd. by NH₄OH+Aq in presence of Na citrate+Aq.

SnO₂, 2H₂O. (Weber, Pogg. 122. 358.)

"*α*-Orthostannic acid." Easily sol. in HCl+Aq. (Neumann, M. 12. 515.)

H₁₀Sn₃O₁₅ (?)

Metastannic acid. Insol. in H₂O, HNO₃, or H₂SO₄+Aq. Insol. in HCl+Aq, but converted thereby into metastannic chloride, which dissolves after excess of HCl has been removed. (Fresenius.) Insol. in HCl+Aq of sp. gr. 1.1. (Barford.) Sol. in large amount

of conc HCl+Aq. (Allen, Chem. Soc. (2) 10. 274.)

In contact with HCl+Aq, metastannic acid is converted into stannic acid. (Barfoed.)

Insol. in HNO₃+Aq even after treatment with NH₄OH+Aq.

Insol. in NH₄OH+Aq.

Sol. in KOH or NaOH+Aq with formation of metastannates, which are insol. in dil. NaOH+Aq, but sol. in H₂O or KOH+Aq, therefore KOH+Aq dissolves metastannic acid, while NaOH+Aq does not, but if the clear solution in KOH+Aq is treated with a large excess of that reagent, a further pptn. occurs (Barfoed, J pr 101. 368.)

Insol. in K₂CO₃+Aq (Rose), alkali carbonates+Aq (Fremy.)

Insol. in NH₄Cl+Aq even after long boiling.

Sol. in Fe(NO₃)₃+Aq containing HNO₃. (Lepéz and Storch, W. A. B. 98, 2b. 270.)

Also in Cr(NO₃)₃+Aq, but not in Ce(NO₃)₃, Al(NO₃)₃, Co(NO₃)₂+Aq, etc. (L. and S.)

A colloidal metastannic acid sol. in H₂O can be obtained. (Lepéz and Storch.)

According to Weber (Pogg. 122. 358), stannic and metastannic acids are only different hydrates of same oxide, and it is not a case of allotropic modification.

Colloidal. H₂SnO₃ in colloidal state can be obtained in aqueous solution containing 5.164 g. SnO₂ in a litre. This solution is coagulated by HNO₃+Aq only when in great excess; easily by dil H₂SO₄+Aq, but not by conc HCl+Aq. NH₄OH+Aq in large excess causes coagulation; also NH₄Cl, NaOH, NaCl, Na₂SO₄, etc. (Schneider, Z. anorg. 5. 83.)

Parastannic acid, H₂Sn₂O₁₁+3H₂O.

(Engel, C. R. 1897, 125. 711.)

Stannates.

Stannates of alkali metals are sol. in H₂O, others are insol. All metastannates, excepting Na, K, and NH₄ salts, are insol. in H₂O. (Fremy, A. ch. (3) 12. 474.)

Ammonium stannate, (NH₄)₂O, 2SnO₂.

Sol. in H₂O Insol in dil. NH₄OH+Aq. (Berzelius.)

+xH₂O. (Moberg, 1838.)

Ammonium cupric stannate, (NH₄)₂O, CuSnO₃+2H₂O.

Insol. in H₂O. Sol. in acids (Ditte, C. R. 96. 701.)

Barium stannate, BaSnO₃+6H₂O.

Ppt. Sol. in HCl+Aq. (Moberg.)

Ba₂SnO₄+10H₂O. Insol. in H₂O. Sol. in acids. (Ditte, C. R. 95. 641.)

Calcium stannate, CaSnO₃+4H₂O.

Ppt. (Moberg.)

+5H₂O. Insol in H₂O Sol. in acids. (Ditte, C. R. 96. 701.)

2CaO, SnO₂. (Zulkowski, Chem. Ind. 1901, 24. 422.)

Cobaltous stannate, CoSnO₃+6H₂O

Insol. in H₂O. Sol. in acids. (Ditte.)

Cupric stannate, CuSnO₃+3H₂O.

(Moberg.)

+4H₂O Insol. in H₂O. (Ditte.)

Cuprous stannous stannate, Cu₂O, 3SnO, SnO₂+5H₂O.

Slowly decomp. by dil acids, and NH₄OH+Aq; completely decomp. by conc. acids. (Lennsen, J. pr. 79. 90.)

Gold (aurous) stannate.

See Gold purple.

Lead stannate, RbSn(OH)₆.

Ppt. (Bellucci, Chem. Soc. 1905, 88. (2) 40.)

Lithium stannate hexatungstate, 2Li₂O, SnO₂, 6WO₃=Li₂SnO₃, Li₂W₆O₁₉.

Insol. in H₂O. (Knorre, J. pr. (2) 27. 49.)

Magnesium stannate.

Ppt. (Moberg.)

Manganous stannate.

Ppt. (Moberg.)

Mercurous stannate, Hg₂SnO₃+5H₂O.

Ppt

Mercuric stannate, HgSnO₃+6H₂O.

Ppt (Moberg, J. pr. 28. 231.)

Nickel stannate, NiSnO₃+5H₂O.

Insol. in H₂O. Sol. in acids. (Ditte, C. R. 96. 701.)

Platinous sodium stannous stannate, 2PtO, Na₂O, SnO, SnO₂(?).

(Schneider, Pogg. 136. 105.)

Platinous stannous stannate, PtO, 2SnO, SnO₂.

Decomp. by conc. alkalis. (Schneider, Pogg. 136. 105.)

Potassium stannate, K₂SnO₃+3H₂O.

100 pts. H₂O dissolve 106.6 pts. at 10°, solution has sp. gr.=1.618; 100 pts. dissolve 110.5 pts. at 20°, solution has sp. gr.=1.627. (Ordway, Sill. Am. J. (2) 40. 173.)

Very sl. sol in conc. KOH + Aq.
Insol. in KCl + Aq. (Fremy.)
Insol. in alcohol.

Pptd. from aqueous solution by the addition of any soluble salt, especially those of K, Na, and NH_4 (Fremy); by NH_4Cl , but not by KCl or NaCl (Ordway).

Insol in acetone. (Naumann, B. 1904, 37. 329)

Potassium metastannate, K_2O , 10SnO_2

K_2O , $7\text{SnO}_2 + 3\text{H}_2\text{O}$. Sol. in H_2O . Solution gelatinises on heating (Rose.)

K_2O , $6\text{SnO}_2 + 5\text{H}_2\text{O}$ Sol in H_2O , but loses its solubility by drying. (Fremy, A. ch (3) 12. 475.)

K_2O , $5\text{SnO}_2 + 4\text{H}_2\text{O}$. Completely sol. in H_2O . Insol. in alcohol. (Fremy, A. ch (3) 23. 396.)

K_2O , $3\text{SnO}_2 + 3\text{H}_2\text{O}$. Deliquescent. (Fremy.)

Silver stannate, Ag_2SnO_3 .

Insol. in H_2O . Unacted upon by NH_4OH or HCl + Aq. (Ditte.)

Silver (argentous) stannous stannate (?), Ag_3O , SnO , $3\text{SnO}_2 + 3\text{H}_2\text{O}$ (?)

Cold dil. HNO_3 + Aq slowly dissolves all Ag, hot HNO_3 + Aq rapidly.

Easily sol. in boiling conc. H_2SO_4 . (Schulze, J. B. 1857. 257.)

Sodium stannate, $\text{Na}_2\text{SnO}_3 + 3\text{H}_2\text{O}$.

More easily sol. in cold than in hot H_2O . (Fremy.)

Sol. in 2 pts. H_2O at 20° and 100° (Marignac.)

100 pts. H_2O dissolve 67.4 pts. at 0° , 61.3 pts. at 20° , and solutions have sp. gr. = 1.472 and 1.438 at 15.5° . (Ordway, Sil. Am. J. (2) 40. 173.)

Pptd. from Na_2SnO_3 + Aq by salts of K, Na, and NH_4 .

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ $4\text{H}_2\text{O}$. (Prandtl, B. 1907, 40. 2129.)

+ $8\text{H}_2\text{O}$. (Haeffely, J. B. 1857. 650.)

+ $9\text{H}_2\text{O}$. (Jones, C. C. 1865. 607.)

+ $10\text{H}_2\text{O}$. Very efflorescent. (Scheurer-Kestner, Bull. Soc. (2) 8. 389.)

Sodium metastannate, Na_2O , $9\text{SnO}_2 + 8\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in NaOH + Aq or alcohol. (Barfoed, J. B. 1867. 267.)

Na_2O , 5SnO_2 . Very difficultly sol. in H_2O . (Fremy, A. ch. (3) 23. 399.)

Insol. in KOH + Aq.

+ $8\text{H}_2\text{O}$. (Haeffely, Chem. Gaz. 1855. 59.)

Sodium stannate vanadate,

Na_2SnO_3 , $3\text{Na}_2\text{VO}_4 + 32\text{H}_2\text{O}$.

Na_2SnO_3 , $4\text{Na}_2\text{VO}_4 + 48\text{H}_2\text{O}$.

Na_2SnO_3 , $5\text{Na}_2\text{VO}_4 + 64\text{H}_2\text{O}$.

Na_2SnO_3 , $6\text{Na}_2\text{VO}_4 + 80\text{H}_2\text{O}$. (Prandtl, B. 1907, 40. 2128.)

Strontium stannate, 3SrO , $2\text{SnO}_2 + 10\text{H}_2\text{O}$.

Ppt. Insol. in H_2O . Sol. in acids. (Ditte, C. R. 95. 641.)

$\text{SrSn}(\text{OH})_6$. (Belluci, Chem. Soc. 1905, 88 (2) 40.)

Tin (stannous) stannate, SnO , $6\text{SnO}_2 + 5\text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by HNO_3 + Aq into metastannic acid. (Schiff, A. 120. 53.)

Sol. in HCl + Aq, and in KOH + Aq.

Tin (stannous) metastannate, SnO , 7SnO_2 .

SnO , $6\text{SnO}_2 + 9\text{H}_2\text{O}$. Sol. in KOH + Aq or in HCl + Aq. (Fremy.)

+ $4\text{H}_2\text{O}$. (Schiff.)

Zinc stannate, $\text{ZnSnO}_3 + 2\text{H}_2\text{O}$.

Ppt. (Moberg, 1838.)

3ZnO , $2\text{SnO}_2 + 10\text{H}_2\text{O}$. Insol. in H_2O . Sol. in acids. (Ditte.)

Perstannic acid, $\text{H}_2\text{Sn}_2\text{O}_7$.

See Perstannic acid.

Stannophosphomolybdic acid.

Ammonium stannophosphomolybdate,

$3(\text{NH}_4)_2\text{O}$, 4SnO_2 , $3\text{P}_2\text{O}_5$, $16\text{MoO}_3 + 28\text{H}_2\text{O}$.

Quite insol. even in boiling H_2O . (Gibbs, Am. Ch. J. 7. 392.)

Stannophosphotungstic acid.

Ammonium stannophosphotungstate,

$2(\text{NH}_4)_2\text{O}$, 2SnO_2 , P_2O_5 , $22\text{WO}_3 + 15\text{H}_2\text{O}$.

Precipitate. Sl. sol. in boiling H_2O . (Gibbs, Am. Ch. J. 7. 319.)

Stannosulphuric acid.

See Sulphate, stannic.

Stibine.

See Hydrogen antimonide.

Strontium, Sr.

Decomp. by H_2O with violence. Dil. H_2SO_4 , and HCl + Aq decomp. and dissolve; cold H_2SO_4 attacks slowly. Fuming HNO_3 has scarcely any action even when boiling. (Franz, J. pr. 107. 253.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 829.)

Sol. in excess of liquid NH_3 at -60° forming $\text{Sr}(\text{NH}_3)_6$. (Roederer, C. R. 1905, 140. 1252.)

Strontium amalgam, SrHg_{12} .

Stable below 30° . Above 30° the composition of the amalgam varies. Can be cryst. from Hg at any temp. below 30° . (Kerp, Z. anorg. 1900, 25. 68.)

Strontium amide, $\text{Sr}(\text{NH}_2)_2$.

(Roederer, Bull. Soc. 1906, (3) 35. 715.)

Strontium arsenide, Sr_3As_2 .

Decomp. by H_2O . (Lebeau, C. R. 1899, 129. 47.)

Strontium azoimide, SrN_2 .

Hydroscopic.

45.83 pts. are sol. in 100 pts. H_2O at 16° .

0.095 " " " " 100 " abs. alcohol at 16° .

Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 287.)

Strontium boride, SrB_2 .

Sol. in fused oxidizing agents; not decomp. by H_2O ; insol. in aq. acids; sl. sol. in conc. H_2SO_4 ; sol. in dil. and conc. HNO_3 . (Moissan, C. R. 1897, 125. 633.)

Strontium bromide, SrBr_2 , and $+6\text{H}_2\text{O}$.

100 pts. H_2O dissolve at:

0° 20° 38° 59° 83° 110°
87.7 99 112 133 182 250 pts. SrBr_2 .

(Kremers, Pogg. 103. 65.)

Sat. $\text{SrBr}_2 + \text{Aq}$ contains at:

-11° -1° $+7^\circ$ 18°
43.1 46.85 48.2 51.7% SrBr_2 ,

20° 93° 97° 107°
51.8 68.5 68.7 69.8% SrBr_2 .

(Étard, A. ch. 1894, (7) 2. 540.)

Sp. gr. of $\text{SrBr}_2 + 19.5^\circ$ containing:

5 10 15 20 25 % SrBr_2 ,
1.046 1.094 1.146 1.204 1.266

30 35 40 45 50 % SrBr_2 .
1.332 1.41 1.492 1.59 1.694

(Kremers, Pogg. 99. 444; calculated by Gerlach, Z. anal. 8. 235.)

Somewhat sol. in absolute alcohol. (Löwig.)

Solubility of anhydrous SrBr_2 in alcohol is practically constant between 0° and 40° , 100 ccm. of abs. alcohol dissolving about 64.5 g. of the anhydrous salt and forming a solution having a sp. gr. = 1.210 at 0° . (Fonze-Diacon, Chem. Soc. 1895, 66 (2) 223.)

Much more sol. than BaBr_2 in boiling amyl alcohol.

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Strontium stannic bromide.

See Bromostannate, strontium.

Strontium bromide ammonia, $2\text{SrBr}_2 \cdot \text{NH}_3$.

Sol. in H_2O . (Rammelsberg, Pogg. 55. 238.)

Strontium bromide hydrazine, $\text{SrBr}_2 \cdot 3\text{N}_2\text{H}_4$.

Very sol. in H_2O . (Franzen, Z. anorg. 1908, 60. 290.)

Strontium bromofluoride, $\text{SrF}_2 \cdot \text{SrBr}_2$.

Decomp. by H_2O . (Defacqz, A. ch. 1904, (8) 1. 356.)

Strontium carbide, SrC_2 .

Easily decomp. by H_2O and dil. acids. (Moissan, Bull. Soc. 1894, (3) 11. 1008.)

Strontium carbonyl, $\text{Sr}(\text{CO})_2$.

(Roederer, Bull. Soc. 1906, (3) 35. 725.)

Strontium chloride, SrCl_2 , and $+6\text{H}_2\text{O}$.

Deliquescent in moist air.

Sol in 1.5 pts H_2O at 15° , and 0.8 pt at boiling (Dumas), in 1996 pts H_2O at 15° (Gerlach)

1 pt anhydrous SrCl_2 is sol. in 227 pts H_2O at 0° , in 188 pts at 20° , in 154 pts at 40° , in 118 pts. at 60° , in 108 pts at 80° , in 98 pt at 100° . (Kremers, Pogg. 103. 66)

100 pts. H_2O dissolve 106.2 pts. $\text{SrCl}_2 + 6\text{H}_2\text{O}$ at 0° , and 205.8 pts. at 40° . (Tilden, Chem. Soc. 45. 409.)

Solubility in 100 pts. H_2O at t°

(Engel, A. ch. 1888, (6) **13**, 376.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 829.)

Sol. in 6 pts alcohol of 0.833 sp gr at 15° . (Vauquelin)

Sol. in 24 pts absolute alcohol at 15° , and in 19 pts at boiling (Bucholz) Sol in 2.5 pts of boiling alcohol.

Anhydrous SrCl_2 is sol. in 111.6–116.4 pts. alcohol of 99.3% at 14.5° , and in 26.2 pts. of the same alcohol at boiling. (Fresenius, A. **59**, 127.)

100 pts. alcohol of given sp. gr. at 0° dissolve pts. SrCl_2 at 18° .

0.990 0.985 0.973 0.966 0.953 sp. gr.
49.81 47.0 39.6 35.9 30.4 pts. SrCl_2 ,

0.939 0.909 0.846 0.832 sp. gr.
26.8 19.2 4.9 3.2 pts. SrCl_2 .

Insol. in absolute alcohol. (Gerardin, A. ch. (4) **5**, 156.)

100 pts. absolute methyl alcohol dissolve 63.3 pts. $\text{SrCl}_2 + 6\text{H}_2\text{O}$ at 6° ; ethyl alcohol, 3.8 pts. (de Bruyn, Z. phys. Ch. **10**, 787.)

Sl. sol. in boiling amyl alcohol. (Browning, Sill. Am. J. **144**, 459.)

100 g. 95% formic acid dissolve 23.8 g. SrCl_2 at room temp. (Aschan, Ch. Ztg. 1913, **37**, 1117.)

Absolutely insol. in acetic ether. (Cann, C. R. **102**, 363.)

Very sl. sol. in acetone. (Krug and M'Elroy.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in benzonitrile (Naumann, B. 1914, **47**, 1370.)

Sl. sol. in anhydrous pyridine. Sol in 97%, 95% and 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, **30**, 1107)

+ $2\text{H}_2\text{O}$ Tr. pt. from + $6\text{H}_2\text{O}$ is 61.5° . (Richards and Churchill, Z. phys. Ch. 1899, **28**, 313.)

+ $6\text{H}_2\text{O}$. See above.

Strontium thallic chloride, $\text{SrCl}_2, 2\text{TiCl}_3 + 6\text{H}_2\text{O}$

(Gewecke, A. 1909, **366**, 223.)

Strontium tin (stannous) chloride, $\text{SrCl}_2, \text{SnCl}_2 + 4\text{H}_2\text{O}$.

Sol in H_2O . (Poggiale, C. R. **20**, 1183.)

Strontium tin (stannic) chloride.

See Chlorostannate, strontium.

Strontium uranium chloride, $\text{SrCl}_2, \text{UCl}_4$.

Decomp. by H_2O . (Aloy, Bull. Soc. 1899, (3) **21**, 265.)

Strontium zinc chloride, $\text{SrZnCl}_4 + 4\text{H}_2\text{O}$.

Very sol. in H_2O . (Ephraim, Z. anorg. 1910, **67**, 380.)

Strontium chloride ammonia, $\text{SrCl}_2, 8\text{NH}_3$.

Decomp by H_2O . (Rose, Pogg. **20**, 155.)

Strontium chloride hydrazine, $\text{SrCl}_2, 2\text{N}_2\text{H}_4 + \text{H}_2\text{O}$.

Hydroscopic. (Franzen, Z. anorg. 1908, **60**, 289.)

Strontium chloride hydroxylamine, $2\text{SrCl}_2, 5\text{NH}_2\text{OH} + 2\text{H}_2\text{O}$.

As Ca comp. (Antonow, J. Russ. Phys. Chem. Soc. 1905, **37**, 482.)

Strontium hydrogen chloride hydroxylamine, $2\text{SrCl}_2, 3\text{HCl}, 9\text{NH}_2\text{OH} + \text{H}_2\text{O}$.

(Antonow, J. Russ. Phys. Chem. Soc. 1905, **37**, 482.)

Strontium chlorofluoride, $\text{SrF}_2, \text{SrCl}_2$.

Decomp. by H_2O , by very dil. HCl , HNO_3 , or acetic acid, by hot dil. or conc. H_2SO_4 .

Sol. in conc. HCl or HNO₃. Insol. in, and not decomp. by cold or boiling alcohol. (Defacqz, A. ch. 1904, (8) 1. 355.)

Strontium fluoride, SrF₂.

Somewhat sol. in H₂O (Fr. Röder)
1 l. H₂O dissolves 113.5 mg. SrF₂ at 0.26°;
117.3 mg. at 17.4°; 119.3 mg. at 27.4°.
(Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Insol. in HF + Aq. (Berzelius)
Boiling HCl + Aq. dissolves; sl. attacked by boiling HNO₃ + Aq; decomp. by hot H₂SO₄ (Poulenc, C. R. 116. 987.)

Strontium stannic fluoride.

See Fluostannate, strontium.

Strontium titanium fluoride.

See Fluotitanate, strontium.

Strontium fluoiodide, SrF₂, SrI₂.

Decomp. by cold H₂O, more rapidly by hot H₂O. Decomp. by dil. HCl, dil. HNO₃, dil. H₂SO₄ or conc. H₂SO₄, also by alcohol and by ether, if not absolute. (Defacqz, A. ch. 1904, (8) 1. 358.)

Strontium hydride, SrH.

Decomp. by H₂O or HCl + Aq (Winkler, B. 24. 1976.)

SrH₂. Decomp. by H₂O. (Gautier, C. R. 1902, 134. 100.)

Strontium hydroselenide.

Sol. in H₂O.

Strontium hydrosulphide, Sr₂H₂S.

Sol. in H₂O; decomp. by boiling.

Strontium hydroxide, SrO₂H₂, and +8H₂O.

Deliquescent.

Sol. in 50 pts. cold, and 2.4 pts. boiling H₂O (Bucholz); in 50 pts. H₂O at 15.50° (Dalton); in 51.4 pts. H₂O at 15.50°, and 2 pts. at 100° (Hope), in 52 pts. H₂O at 15°, and 2.4 pts. at 100° (Berzelius); in 48 pts. H₂O at 18.75° (Abl.).

100 pts. H₂O at 20° dissolve 1.49 pts. SrO. (Bineau, C. R. 41. 509.)

100 pts. aqueous solution of SrO₂H₂ contain pts. SrO and pts. SrO₂H₂+8H₂O at t°.

t°	Pts. SrO	Pts. SrO ₂ H ₂ +8H ₂ O	t°	Pts. SrO	Pts. SrO ₂ H ₂ +8H ₂ O

(Étard, A. ch. 1894, (7) **2**, 543.)

Sp. gr. of SrI_2 + Aq at 19.5° containing:

5	10	20	30 % SrI_2 .
1.045	1.091	1.200	1.330

40	50	60	65 % SrI_2 .
1.491	1.695	1.955	2.150

(Kremers, Pogg. **103**, 67; calculated by Gerlach, Z. anal. **8**, 285.)

Sat solution in abs. ethyl alcohol contains at:

-20°	+4°	39°	82°
2.6	3.1	4.3	4.7% SrI_2 .

(Étard, A. ch. 1894, (7) **2**, 565.)

Strontium periodide, $\text{SrI}_3 + 15\text{H}_2\text{O}$.

(Mosmer, A. ch. 1897, (7) **12**, 399.)

SrI_4 . (Herz and Bulla, Z. anorg. 1911, **71**, 255.)

Strontium stannous iodide.

Very sol. in H_2O . (Boullay.)

Strontium zinc iodide, $\text{SrZnI}_4 + 9\text{H}_2\text{O}$.

Hydroscopic. (Ephraim, Z. anorg. 1910, **67**, 385.)

Strontium nitride, Sr_2N_3 .

Decomp. H_2O violently, but not alcohol. (Maquenne, A. ch. (6) **29**, 225.)

Strontium oxide, SrO .

Decomp by H_2O to SrO_2H_2 , which see

Sol in 160 pts H_2O at 15 56° (Dalton), in 50 pts. at 100° (Dalton), in 130 pts. at 20° (Bineau), in 40 pts. cold, and 20 pts hot H_2O (Dumas).

Very sl. sol. in alcohol. Insol. in ether.

1 l methyl alcohol dissolves 11.2 g SrO . (Neuberg and Rewald, Biochem. Z. 1908, **9**, 540.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329; Eidmann, C. C. 1899, II 1014.)

Sol. in cane sugar + Aq.

Solubility in H_2O containing 10 g. sugar at t°.

t°	g. SrO	t°	g SrO
8	1.21	24	1.87
15	1.48	40	3.55

(Sidersky, C. C. **1886**, 57.)

See also Strontium hydroxide.

Strontium peroxide, SrO_2 .

Sl. sol. in H_2O . Easily sol in acids and NH_4Cl + Aq. Insol. in NH_4OH + Aq. (Conroy, Chem. Soc. (2) **11**, 812.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329; Eidmann, C. C. 1899, II. 1014.)

Strontium oxybromide, $\text{SrBr}_2 \cdot \text{SrO} + 9\text{H}_2\text{O}$.

Not hygroscopic; sol. in H_2O . (Tassilly, C. R. 1895, **120**, 1339.)

Strontium oxychloride, $\text{SrCl}_2 \cdot \text{SrO} + 9\text{H}_2\text{O}$.

Very easily decomp. by H_2O and alcohol. (André, A. ch. (6) **3**, 76.)

Strontium oxyiodide, $2\text{SrI}_2 \cdot 5\text{SrO} + 30\text{H}_2\text{O}$.

Not hygroscopic; sol. in H_2O . (Tassilly, C. R. 1895, **120**, 1339.)

Strontium oxysulphide, $\text{Sr}_2\text{OS}_4 + 12\text{H}_2\text{O}$.

Decomp. by H_2O .

Insol in alcohol, ether, and CS_2 . (Schöne.)

Mixture of SrS_2O_3 and SrS_2 . (Geuther, A. **224**, 178.)

Strontium phosphide, Sr_3P_2 .

Crystallized. Sol. in dil. acids; insol. in conc. acids; decomp. by H_2O . Insol. in organic solvents at ord. temp. (Jaboin, C. R. 1899, **129**, 764.)

Strontium selenide, SrSe .

Sl. sol. in H_2O (Fabre, C. R. **102**, 1469.)

Strontium silicide, SrSi_2 .

Decomp. by H_2O . (Bradley, C. N. 1900, **82**, 150.)

- Strontium sulphide, SrS**
Sol in H_2O with decomp into SrO_2H_2 and SrS_2H_2
Insol in acetone (Eidmann, C C 1899, II, 1014; Naumann, B. 1904, 37. 4329.)
Insol in methyl acetate (Naumann, B. 1909, 42. 3790.)
- Strontium tetrasulphide, SrS_4**
Very deliquescent, and sol. in H_2O and alcohol. Aqueous solution decomp on air. Cryst. with 2, or $6\text{H}_2\text{O}$. (Schöne, Pogg. 117. 58)
- Strontium pentasulphide, SrS_5**
Known only in solution
- Strontium stannic sulphide.**
See Sulphostannate, strontium.
- Sulphalumonic acid.**
- Silver sulphaluminate, $4\text{Ag}_2\text{S}, 5\text{Al}_2\text{S}_3$**
(Cambi, Real. Ac. Line. 1912, (5) 21, II. 837.)
- Sulphamic acid, HOSO_2NH_2**
See Amidodisulphonic acid.
- Ammonium sulphamate, $2\text{NH}_3, \text{SO}_3$**
(Woronin.)
Is ammonium imidosulphonate, which see. (Berglund.)
- Ammonium sulphamate, acid, $3\text{NH}_3, 2\text{SO}_3$**
(Woronin.)
Is basic ammonium imidosulphonate, which see. (Berglund.)
- Barium sulphamate, basic, $2\text{BaO}, 3\text{SO}_3, 2\text{NH}_3$**
Somewhat sol in H_2O , easily in $\text{HCl} + \text{Aq}$. (Jacquelin, A. ch. (3) 8. 304.)
 $\text{BaS}_2\text{O}_6(\text{NH}_2)_2$. Sl. sol. in H_2O . Decomp. by heating with H_2O . (Woronin, J. B. 1860. 80)
Is barium imidosulphonate. (Berglund.)
- Sulphamide, $\text{SO}_2(\text{NH}_2)_2$**
Very sol. in H_2O . (Regnault, A. ch. 69. 170; Monte, A. 248. 287.)
Insol. in alcohol, ether, etc. (Traube, B. 26. 607.)
Very sol. in H_2O .
Sl. sol. in abs. alcohol.
Sl. sol. in dry ether. (Divers and Ogawa, Chem. Soc. 1902, 81. 504.)
Very sol. in liquid NH_3 . (Franklin and Stafford, Am. Ch. J. 1902, 28. 95.)
Sol. in alcohol; very sol. in H_2O . (Hantzsch, B. 1901, 34. 3436.)
- Silver sulphamide, $\text{SO}_2(\text{NHAg})_2$**
Sl. sol. in cold H_2O . Sol. in HNO_3 , and $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Traube, B. 26. 607.)
 $3\text{NH}_3, 2\text{SO}_3$. (Jacquelin.)
Is basic ammonium imidosulphonate, which see. (Berglund.)
- Sulphamidic acid.**
(Freym.)
See Imidosulphonic acid.
- Sulphaminoplatinous acid.**
- Ammonium tetrasulphaminoplatinite,**
 $[\text{Pt}(\text{SO}_3\text{NH}_2)_4](\text{NH}_4)_2 + 6\text{H}_2\text{O}$.
Sl. sol. in cold H_2O . (Ramberg, B. 1912, 45. 1512.)
- Potassium —, $[\text{Pt}(\text{SO}_3\text{NH}_2)_4]\text{K}_2 + 2\text{H}_2\text{O}$**
Very sl. sol. in cold H_2O . (Ramberg.)
- Sodium —.**
Easily sol. in cold H_2O . (Ramberg.)
- Sulphammonic, and Metasulphammonic acids.**
(Freym.)
See Nitrilosulphonic acid.
- Monosulphammonic acid.**
(Claus.)
See Amidodisulphonic acid.
- Disulphammonic acid.**
(Claus.)
See Imidosulphonic acid.
- Trisulphammonic acid.**
(Claus.)
See Nitrilosulphonic acid.
- Tetrasulphammonic acid.**
(Claus.)
Does not exist. *See Nitrilosulphonic acid.*
- Sulphammonium, $\text{S}(\text{NH}_2)_2, 2\text{NH}_3$**
Sol. in liquid NH_3 .
Sol. in abs. alcohol and anhydrous ether. (Moissan, C. R. 1901, 132. 517.)
- Sulphantimonic acid.**
- Sulphantimonates.**
The alkali sulphantimonates are sol. in H_2O , but the solutions decomp. on the air; most of the other sulphantimonates are insol. in H_2O ; all sulphantimonates are insol. in alcohol. (Rammelsberg.)

Ammonium sulphantimonate, $(\text{NH}_4)_3\text{SbS}_4$ Sol. in H_2O .Sol. in dil. acids with decomp. (Stanek, Z. anorg. 1898, 17, 122.)
+4 H_2O . (Stanek.)Solubility of $(\text{NH}_4)_3\text{SbS}_4 + 4\text{H}_2\text{O}$ in H_2O at t° .

Sodium sulphantimonate thiosulphate,
 $\text{Na}_3\text{SbS}_4, 2\text{Na}_2\text{S}_2\text{O}_3 + 20\text{H}_2\text{O}$.Efflorescent, and decomp. by H_2O . (Unger, Arch. Pharm. (2) 147. 193.)No double salt exists. See Donk, $\text{Na}_3\text{SbS}_4 + \text{Na}_2\text{S}_2\text{O}_3$ under Na_3SbS_4 .

Strontium sulphantimonate.

Sol. in H_2O ; pptd. by alcohol.

Uranium sulphantimonate.

Ppt

Zinc sulphantimonate, $\text{Zn}_3(\text{SbS}_4)_2$.Ppt. Sol. in hot $\text{Na}_3\text{SbS}_4 + \text{Aq}$; insol. in $\text{ZnSO}_4 + \text{Aq}$. Partially sol. in $\text{KOH} + \text{Aq}$; sol in hot $\text{HCl} + \text{Aq}$ (Rammelsberg, Pogg. 52. 233.)

Sulphantimonous acid.

Ammonium metasulphantimonite, NH_4SbS_2 .Insol. in H_2O . (Rouget, C. R. 1898, 126. 1145.)+ $2\text{H}_2\text{O}$. Insol in H_2O and alcohol.

Decomp. in the air. (Stanek, Z. anorg. 1898, 17. 119.)

Ammonium orthosulphantimonite,
 $(\text{NH}_4)_3\text{SbS}_3$.Easily decomp. Stable only in presence of $(\text{NH}_4)_2\text{S}$. Sol. in H_2O . Insol. in alcohol, by which it is pptd. from aqueous solution. (Pouget, A. ch. 1899, (7) 18. 536.)Ammonium parasulphantimonite,
 $(\text{NH}_4)_2\text{Sb}_4\text{S}_7$.

Stable in the air.

Insol. in H_2O .

Decomp. by acids. (Stanek, Z. anorg. 1898, 17. 120.)

Stable; cryst. from hot solutions. (Pouget C. R. 1898, 126. 1145.)

Ammonium silver orthosulphantimonite, $\text{NH}_4\text{Ag}_2\text{SbS}_3$.

Decomp. by H_2O (Pouget, A. ch. 1899, (7) 18. 551.)

Barium metasilphantimonite, BaSb_2S_4
+ $4\frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O . (Pouget, A. ch. 1899, (7) 18. 541.)

Barium orthosulphantimonite, $\text{Ba}_2\text{Sb}_2\text{S}_6$
+ $8\text{H}_2\text{O}$.

Decomp. in the air and by H_2O . Somewhat sol. in $\text{BaS} + \text{Aq}$. (Pouget, C. R. 1898, 126. 1792.)

Barium pyrosulphantimonite, $\text{Ba}_2\text{Sb}_2\text{S}_6$
+ $8\text{H}_2\text{O}$.

Decomp. by H_2O .

Nearly insol. in $\text{BaS} + \text{Aq}$. (Rouget.)

Barium sulphantimonite, $\text{Ba}_3\text{Sb}_3\text{S}_9 + 10\text{H}_2\text{O}$.

Pptd. from aq. solution of ortho and pyrobarium salts. (Pouget.)

$\text{Ba}_3\text{Sb}_3\text{S}_{11} + 16\text{H}_2\text{O}$. (Pouget, A. ch. 1899, (7) 18. 538.)

Calcium sulphantimonite basic, $\text{Ca}(\text{OH})\text{SbS}_2$.

Insol. in H_2O .

Sol. in conc. HCl . (Pouget, A. ch. 1899, (7) 18. 544.)

Calcium pyrosulphoantimonite, $\text{Ca}_3\text{Sb}_2\text{S}_6$
+ $15\text{H}_2\text{O}$.

Sol. in H_2O without decomp. (Pouget, C. R. 1898, 126. 1793.)

Cobaltous orthosulphantimonite, $\text{Co}_3\text{Sb}_2\text{S}_6$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 554.)

Cuprous metasilphantimonite, CuSbS_2 .

Sol. in mixture of HNO_3 and tartaric acid with separation of S.

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by hot KOH and alkali sulphides + Aq . (Sommerlad, Z. anorg. 1898, 18. 430.)

Min. *Wolfsberite*. Sol. in $\text{HNO}_3 + \text{Aq}$ with separation of S and Sb_2O_3 .

Cuprous orthosulphantimonite, Cu_2SbS_3 .

(Sommerlad, Z. anorg. 1898, 18. 432.)

Ppt. Insol. in H_2O . Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 556.)

Cuprous sulphantimonite, $\text{Cu}_2\text{Sb}_4\text{S}_7$.

Min. *Guejarite*.

Cupric orthosulphantimonite, $\text{Cu}_2\text{Sb}_2\text{S}_6$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 557.)

Cuprous lead sulphantimonite, Cu_2SbS_3 ,
 2PbSbS_3 .

Min. *Bournonite*. Decomp. by $\text{HNO}_3 + \text{Aq}$, and aqua regia.

Cuprous potassium orthosulphantimonite,
 Cu_2KSbS_3 .

Ppt.; easily decomp. by H_2O . (Pouget, C. R. 1899, 129. 104.)

+ $3\text{H}_2\text{O}$. Ppt., decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 556.)

Iron (ferrous) orthosulphantimonite,
 $\text{Fe}_3(\text{Sb}_2\text{S}_6)_2$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 554.)

Min. *Berthierite*. Sl. sol. in $\text{HCl} + \text{Aq}$; easily sol. in aqua regia.

Lead orthosulphantimonite, $\text{Pb}_2(\text{Sb}_2\text{S}_6)_2$.

Ppt. Very sl. sol. in H_2O . Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 553.)

Min. *Boulangerite*. Completely sol. in hot $\text{HCl} + \text{Aq}$; decomp. by $\text{HNO}_3 + \text{Aq}$.

Lead sulphantimonite.

Sol. in boiling conc. $\text{HNO}_3 + \text{Aq}$. (Fournet.)

$\text{Pb}(\text{SbS}_2)_2$. Min. *Zurkenite*. Decomp. by hot $\text{HCl} + \text{Aq}$.

4PbS , Sb_2S_3 . Min. *Plagionite*.

2PbS , Sb_2S_3 . Min. *Jamesonite*. Decomp. by hot $\text{HCl} + \text{Aq}$.

4PbS , Sb_2S_3 . Min. *Menegephinite*.

5PbS , Sb_2S_3 . Min. *Geokronite*.

6PbS , Sb_2S_3 . Min. *Kibrikenite* (?).

Lead potassium orthosulphantimonite,
 PbKSbS_3 .

Very sl. sol. in H_2O .

Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 554.)

Lead silver sulphantimonite, $(\text{Ag}_2, \text{Pb})_2\text{Sb}_4\text{S}_{11}$.

Min. *Frieslebenite*.

Lithium orthosulphantimonite, Li_3SbS_3
+ $3\text{H}_2\text{O}$.

Very deliquescent.

Very sol. in H_2O . (Pouget, A. ch. 1899, (7) 18. 530.)

Lithium parasulphantimonite,

$\text{Li}_2\text{Sb}_4\text{S}_7 + 3\text{H}_2\text{O}$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 531.)

Lithium silver orthosulphantimonite,

$\text{LiAg}_2\text{SbS}_3$.

Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 551.)

Manganous orthosulphantimonite, $\text{Mn}_2\text{Sb}_2\text{S}_6$.

Ppt. Sl. sol. in H_2O . (Pouget, A. ch. 1899, (7) 18. 553.)

Manganous potassium orthosulphantimonite,
 MnKSbS_3 .

Sl. sol. in H_2O . Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 553.)

Nickel orthosulphantimonite, $\text{Ni}_3\text{Sb}_2\text{S}_6$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 554.)

Potassium metasulphantimonite, KSbS_2 .

Insol. in cold H_2O . Decomp. by hot H_2O . (Pouget, A. ch. 1899, (7) 18. 513.)

+ $1\frac{1}{2}\text{H}_2\text{O}$. Sol in H_2O , but decomp quickly.

Sol. in H_2O . (Stanek, Z. anorg. 1898, 17. 119.)

Potassium orthosulphantimonite, K_3SbS_3

Very deliquescent

Very sol in H_2O

Decomp. by acids. (Pouget, A. ch. 1899, (7) 18. 518.)

Potassium sulphantimonite, $\text{K}_2\text{Sb}_4\text{S}_7 + 3\text{H}_2\text{O}$.

Sl. sol. in H_2O and not decomp. thereby. (Pouget, A. ch. 1899, (7) 18. 522.)

Decomp. in the air

Sol. in $\text{K}_2\text{S} + \text{Aq}$. (Stanek, Z. anorg. 1898, 17. 120)

$2\text{K}_2\text{S}$, Sb_2S_3 . Sol. in H_2O . (Ditte, C R. 102. 68.)

$x\text{K}_2\text{S}$, $y\text{Sb}_2\text{S}_3$. Deliquescent. When K_2S is in excess, sol. in H_2O ; when Sb_2S_3 is in excess, partially sol. Aqueous solution is decomp. by all acids, even CO_2 , and by K_2CO_3 , Na_2CO_3 , NaHCO_3 , KHCO_3 , $\text{NH}_4\text{HCO}_3 + \text{Aq}$. Insol. in absolute alcohol. (Kohl.)

Potassium hydrogen sulphantimonite, KHSb_4S_7 .

(Pouget, A. ch. 1899, (7) 18. 522)

Potassium silver orthosulphantimonite, Ag_2KSbS_3 .

Decomp. by boiling H_2O . (Pouget, C. R. 1897, 124. 1519)

Potassium zinc orthosulphantimonite, KZnSbS_3 .

Decomp. by H_2O . (Pouget, A. ch. 1899, (7) 18. 552.)

Silver orthosulphantimonite, Ag_3SbS_3 .

Ppt. Sl. sol. in H_2O . (Pouget, A. ch. 1899, (7) 18. 547.)

Min. *Pyrargyrite*. Sol. in $\text{HNO}_3 + \text{Aq}$ with residue of S and Sb_2O_3 . $\text{KOH} + \text{Aq}$ dissolves out Sb_2S_3 .

Silver sulphantimonite.

AgSbS_2 . Min. *Miargyrite*.

$5\text{Ag}_2\text{S}$, Sb_2S_3 . Min. *Stephanite*. Easily decomp. by warm $\text{HNO}_3 + \text{Aq}$.

$12\text{Ag}_2\text{S}$, Sb_2S_3 . Min. *Polyargyrite*.

Silver sodium orthosulphantimonite, $\text{Ag}_2\text{NaSbS}_3$.

Decomp. by H_2O . Pouget, A. ch. 1899, (7) 18. 551.)

Sodium metasulphantimonite, NaSbS_2 .

Deliquescent. Decomp. by hot H_2O . When Na_2S is in excess, sol. in H_2O , but partially sol. if Sb_2S_3 is in excess (Unger, Arch Pharm. (2) 143. 1.)

Ppt. Insol in H_2O . (Pouget, C. R. 1898, 126. 1145.)

Sodium orthosulphantimonite, $\text{Na}_3\text{SbS}_3 + 9\text{H}_2\text{O}$.

Decomp. in solution in H_2O . (Pouget, C. R. 1898, 126. 1144.)

Sodium sulphantimonite, $\text{Na}_2\text{Sb}_4\text{S}_7 + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Pouget, C. R. 1898, 126. 1145.)

$\text{Na}_2\text{Sb}_4\text{S}_7$. (Pouget, C R. 1898, 126. 1144.) $4\text{Na}_2\text{S}$, $3\text{Sb}_2\text{S}_3 + 3\text{H}_2\text{O}$. Permanent; sol. in H_2O . Insol. in alcohol and ether. (Kohl.)

Strontium orthosulphantimonite, $\text{Sr}_3\text{Sb}_2\text{S}_6 + 10\text{H}_2\text{O}$.

Sol. in H_2O . (Pouget, C. R. 1898, 126. 1793.)

Strontium pyrosulphantimonite, $\text{Sr}_2\text{Sb}_2\text{S}_5 + 15\text{H}_2\text{O}$.

Sol in H_2O without essential decomp. (Pouget, C. R. 1898, 126. 1793.)

Zinc orthosulphantimonite, $\text{Zn}_3\text{Sb}_2\text{S}_6$.

Ppt. (Pouget, A. ch. 1899, (7) 18. 552.)

Orthosulpharsenic acid, H_3AsS_4 .

Ppt. Loses H_2S by prolonged boiling with H_2O . (Nilson, J. pr. (2) 14. 145.)

See also Sulphoxyarsenic acid.

Ammonium sulpharsenate, $(\text{NH}_4)_4\text{As}_2\text{S}_7$.

Known only in solution in H_2O . Decomp. on boiling into—

NH_4AsS_4 . Sol. in alcohol.

$(\text{NH}_4)_3\text{AsS}_4$. Sol. in H_2O . Precipitated by alcohol.

$(\text{NH}_4)_2\text{S}$, $12\text{As}_2\text{S}_5$. Ppt. Insol. in H_2O .

Ammonium magnesium sulpharsenate, $(\text{NH}_4)_2\text{S}$, MgS , As_2S_5 .**Ammonium sodium sulpharsenate, $(\text{NH}_4)_3\text{AsS}_4$, Na_3AsS_4 .**

Much more sol. in H_2O than Na_3AsS_4 ; sl. sol. in cold, more sol. in hot alcohol. (Berzelius.)

Barium sulpharsenate, $\text{Ba}(\text{AsS}_4)_2$.

Sol in H_2O and alcohol. Decomp. by evaporation.

$\text{Ba}_2\text{As}_2\text{S}_7$. Sol. in H_2O in all proportions with decomp. Decomp. by alcohol.

$\text{Ba}_3(\text{AsS}_4)_2$. Sol. in H_2O . Insol. in alcohol.

BaS , $3\text{As}_2\text{S}_5$. Ppt. Insol. in H_2O .

- Barium potassium sulpharsenate**, $\text{KBaAsS}_4 + 6\text{H}_2\text{O}$.
Easily sol. in H_2O .
Decomp. by acids with separation of As_2S_5 .
(Glatzel, Z. anorg. 1911, 71. 209.)
- Barium sulpharsenate sulpharsenite**, $\text{Ba}_3(\text{AsS}_4)_2$, $\text{Ba}_2\text{As}_2\text{S}_5 + 4\text{H}_2\text{O}$.
Sl. sol. in cold, more easily in hot H_2O .
(Nilson.)
- Bismuth sulpharsenate**, $2\text{Bi}_2\text{S}_3$, $3\text{As}_2\text{S}_5$.
Sol. in $\text{Na}_3\text{AsS}_4 + \text{Aq}$.
 Bi_2S_3 , $3\text{As}_2\text{S}_5$. As above. (Berzelius.)
- Cadmium sulpharsenate**.
Ppt. (Berzelius, Pogg. 7. 88.)
- Calcium sulpharsenate**, $\text{Ca}_2\text{As}_2\text{S}_7$.
Sol. in H_2O and alcohol
 $\text{Ca}_3(\text{AsS}_4)_2$. Easily sol. in H_2O . Insol. in alcohol.
 $+10\text{H}_2\text{O}$. Easily sol. in H_2O . (Nilson, J. pr. (2) 14. 169.)
 5CaS , $2\text{As}_2\text{S}_5 + 6\text{H}_2\text{O}$. Easily sol. in H_2O .
(Nilson, J. pr. (2) 14. 163.)
- Cerous sulpharsenate**, $\text{Ce}_2\text{As}_2\text{S}_7$.
Ppt.
 $\text{Ce}_3(\text{AsS}_4)_2$. Ppt.
 $\text{Ce}_4(\text{As}_2\text{S}_7)_3$. Ppt.
- Cobaltous sulpharsenate**, $\text{Co}_2\text{As}_2\text{S}_7$.
Ppt. Sol. in excess of sodium sulpharsenate + Aq.
- Cuprous sulpharsenate**, Cu_3AsS_4 .
Ppt. (Preis, A. 257. 201.)
Min. *Enarquite*. *Clarite*. Not wholly decomp. by $\text{HCl} + \text{Aq}$. Sol. in $\text{HCl} + \text{Aq}$ with residue of As_2O_3 . Not attacked by $\text{KOH} + \text{Aq}$.
- Cupric sulpharsenate**, $\text{Cu}_2\text{As}_2\text{S}_7$.
Ppt. Sol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$. Decomp. by $\text{NH}_4\text{OH} + \text{Aq}$. (Berzelius.)
 $\text{Cu}_3(\text{AsS}_4)_2$. Ppt. (Preis, A. 257. 201.)
- Glucinum sulpharsenate**.
Sl. sol. in H_2O .
- Gold sulpharsenate**, AuAsS_4 .
Sol. in pure H_2O . Insol. in $\text{Na}_3\text{AsS}_4 + \text{Aq}$.
 $2\text{Au}_2\text{S}_3$, $3\text{As}_2\text{S}_5$. Sol. in H_2O . (Berzelius.)
- Iron (ferrous) sulpharsenate**, $\text{Fe}_2\text{As}_2\text{S}_7$.
Ppt. Sol. in $\text{Na}_3\text{AsS}_4 + \text{Aq}$. (Berzelius.)
- Iron (ferric) sulpharsenate**, $\text{Fe}_3(\text{As}_2\text{S}_7)_2$.
Ppt. Sol. in $\text{Na}_3\text{AsS}_4 + \text{Aq}$. (Berzelius.)
- Lead sulpharsenate**, $\text{Pb}_2\text{As}_2\text{S}_7$.
Ppt. (Berzelius.)
 $\text{Pb}_3(\text{AsS}_4)_2$. Ppt.
- Lithium sulpharsenate**, Li_3AsS_4 .
Easily sol. in hot, less sol. in cold H_2O .
Insol. in alcohol.
 $\text{Li}_4\text{As}_2\text{S}_7$. Completely sol. in H_2O . Decomp. by alcohol.
 LiAsS_3 . Known only in acid solution.
- Magnesium sulpharsenate**, $\text{Mg}_2\text{As}_2\text{S}_7$.
Sol. in all proportions of H_2O , and in alcohol.
 $\text{Mg}_3(\text{AsS}_4)_2$. Sol. in H_2O . Decomp. alcohol.
 3MgS , As_2S_5 . Nearly insol. in H_2O .
 5MgS , $2\text{As}_2\text{S}_5 + 15\text{H}_2\text{O}$. Very sol. in H_2O . (Nilson.)
- Manganous sulpharsenate**, $\text{Mn}_2\text{As}_2\text{S}_7$.
Sl. sol. in H_2O .
 $\text{Mn}_3(\text{AsS}_4)_2$. Permanent. Sl. sol. in H_2O .
 6MnS , As_2S_5 . Sl. sol. in H_2O .
- Mercurous sulpharsenate**, $(\text{Hg}_2)_2\text{As}_2\text{S}_7$.
Ppt.
- Mercuric sulpharsenate**, $\text{Hg}_2\text{As}_2\text{S}_7$.
Ppt. (Berzelius, Pogg. 7. 29.)
 $\text{Hg}_3(\text{AsS}_4)_2$. Ppt. (Preis, A. 257. 200.)
- Nickel sulpharsenate**, $\text{Ni}_3(\text{AsS}_4)_2$.
Ppt. Not decomp. by $\text{HCl} + \text{Aq}$. Sol. in $\text{Na}_3\text{AsS}_4 + \text{Aq}$. (Berzelius.)
 2NiS , As_2S_5 . As above.
- Potassium sulpharsenate**, KAsS_3 .
Known only in alcoholic solution.
 $\text{K}_4\text{As}_2\text{S}_7$. Deliquescent. Sol. in H_2O , from which alcohol ppts. K_3AsS_4 .
 K_3AsS_4 . Deliquescent. Very sol. in H_2O , from which it is precipitated by alcohol.
 $+ \text{H}_2\text{O}$. Very deliquescent. (Nilson, J. pr. (2) 14. 159.)
- Potassium sodium sulpharsenate**.
Sol. in H_2O .
- Silver sulpharsenate**, Ag_3AsS_4 .
Ppt. (Berzelius, Pogg. 7. 29.)
 $\text{Ag}_2\text{As}_2\text{S}_7$. Ppt.
- Sodium sulpharsenate**, NaAsS_3 .
Known only in alcoholic solution.
 $\text{Na}_4\text{As}_2\text{S}_7$. Sol. in H_2O . Alcohol ppts. Na_3AsS_4 from H_2O solution.
 $\text{Na}_3\text{AsS}_4 + 7\frac{1}{2}\text{H}_2\text{O}$. Easily sol. in H_2O , from which it is precipitated by alcohol.
 $+ 8\text{H}_2\text{O}$. Insol. in alcohol; very sol. in H_2O . (McCay, Z. anal. 1895, 34. 726.)
 $+ 9\text{H}_2\text{O}$. (Nilson, J. pr. (2) 14. 160.)
 Na_2S_2 , $12\text{As}_2\text{S}_5$ (?). Insol. in H_2O .
- Sodium zinc sulpharsenate**, $\text{NaZnAsS}_4 + 4\text{H}_2\text{O}$.
Sol. in hot H_2O with decomp. (Preis, A. 257. 202.)

Strontium sulpharsenate, $\text{Sr}_3(\text{AsS}_4)_2$.

Easily sol. in H_2O ; insol. in alcohol.
 $\text{Sr}_2\text{As}_2\text{S}_7$. Easily sol. in H_2O , from which alcohol ppts. $\text{Sr}_3(\text{AsS}_4)_2$.

Strontium sulpharsenate sulpharsenite,

$\text{Sr}_3(\text{AsS}_4)_2, \text{Sr}_2\text{As}_2\text{S}_6 + 4\text{H}_2\text{O}$.
 Easily sol. in H_2O . (Nilson, J. pr. (2) 14. 162.)

Thalious sulpharsenate, Tl_3AsS_4 .

Not decomp. by H_2O . Decomp. by dil. acids. Insol. in dil. alkali sulphides. Partially decomp. by boiling with a conc. solution of sodium sulphide. (Hawley, J. Am. Chem. Soc. 1907, 29. 1013.)

Tin (stannous) sulpharsenate.

Ppt.

Tin (stannic) sulpharsenate.

Ppt.

Uranic sulpharsenate, $2\text{U}_2\text{S}_3, \text{As}_2\text{S}_5$.

Ppt. Sol. in $\text{Na}_2\text{AsS}_4 + \text{Aq}$.

Zinc sulpharsenate, $\text{Zn}_3(\text{AsS}_4)_2$.

Ppt. (Berzelius.)
 $2\text{ZnS}, \text{As}_2\text{S}_5$. Ppt. (Berzelius.)
 $\text{ZnS}, \text{As}_2\text{S}_5$. (Wohler.)

Disulpharsenic acid.

See Disulphoxyarsenic acid.

Sulpharseniosulphomolybdic acid.**Ammonium sulpharseniosulphomolybdate,**

$(\text{NH}_4)_4\text{As}_2\text{S}_7(\text{MoS}_3)_2 + 5\text{H}_2\text{O}$.
 Very unstable.
 Sol. in H_2O with decomp. (Weinland, Z. anorg. 1897, 15. 49.)

Barium —, $\text{Ba}_2\text{As}_2\text{S}_7(\text{MoS}_3)_2 + 14\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland.)

Potassium —, $\text{KAsS}_3(\text{MoS}_3) + 4\text{H}_2\text{O}$.

(Weinland.)
 $\text{K}_4\text{As}_2\text{S}_7(\text{MoS}_3)_2 + 8\text{H}_2\text{O}$. Sol. in H_2O . Decomp. by mineral acids. Insol. in alcohol. (Weinland.)

Sodium —, $\text{NaAsS}_3(\text{MoS}_3) + 6\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in dil. NaOH and $\text{NH}_3 + \text{Aq}$. (Weinland.)
 $\text{Na}_4\text{As}_2\text{S}_7(\text{MoS}_3)_2 + 14\text{H}_2\text{O}$. Sol. in H_2O . Decomp. by mineral acids. (Weinland.)

Sulpharseniosulphoxymolybdic acid.**Barium sulpharseniosulphoxymolybdate,**

$\text{Ba}_2\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_3\text{O}_3) + 12\text{H}_2\text{O}$.
 Sol. in H_2O . (Weinland, Z. anorg. 1897, 15. 60.)

Magnesium sulpharseniosulphoxymolybdate,

$\text{Mg}_2\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_3\text{O}_3) + 16\text{H}_2\text{O}$.
 Very sol. in H_2O . (Weinland.)

Potassium —, $\text{KAsS}_3(\text{MoSO}_2) + 2\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Weinland.)
 $\text{K}_4\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_3\text{O}_3) + 6\text{H}_2\text{O}$. Very sol. in H_2O . (Weinland.)
 $+ 10\text{H}_2\text{O}$. (Weinland.)

Sodium —, $\text{NaAsS}_3(\text{MoSO}_2) + 5\text{H}_2\text{O}$.

Sl. sol. in cold, very sol. in hot H_2O . (Weinland.)
 $\text{Na}_4\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_3\text{O}_3) + 15\text{H}_2\text{O}$. Very sol. in H_2O . (Weinland.)

Sulpharsenious acid.**Ammonium sulpharsenite, $\text{NH}_4\text{As}_2\text{S}_5 + 2\text{H}_2\text{O}$.**

Insol. in H_2O . Ppt. Sol. in KOH or $\text{NH}_4\text{OH} + \text{Aq}$. Sl. attacked by boiling $\text{HCl} + \text{Aq}$. (Nilson, J. pr. (2) 14. 42.)
 $(\text{NH}_4)_4\text{As}_2\text{S}_5 = 2(\text{NH}_4)_2\text{S}, \text{As}_2\text{S}_3$. Sol. in H_2O , from which alcohol ppts. $(\text{NH}_4)_3\text{AsS}_3$.
 $(\text{NH}_4)_3\text{AsS}_3 = 3(\text{NH}_4)_2\text{S}, \text{As}_2\text{S}_3$. Decomp. on air; sol. in H_2O . Insol. in alcohol.
 $(\text{NH}_4)_5\text{As}_3\text{S}_{10}$. Sol. in H_2O . (Nilson, J. pr. (2) 14. 160.)

Barium sulpharsenite, $\text{Ba}_2\text{As}_2\text{S}_5$.

Sl. sol. in H_2O . Decomp. by alcohol.
 $+ 5\text{H}_2\text{O}$. Sl. sol. in H_2O . (Nilson, J. pr. (2) 14. 46.)
 $+ 15\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Nilson.)
 $\text{Ba}_3(\text{AsS}_3)_2$. Sl. sol. in H_2O . Precipitated by alcohol.
 $+ 14\text{H}_2\text{O}$. Sl. sol. in cold, easily in hot H_2O . (Nilson.)
 $\text{Ba}(\text{AsS}_2)_2 + 2\text{H}_2\text{O}$. Insol. in H_2O . (Nilson, J. pr. (2) 14. 44.)
 $\text{BaAs}_{12}\text{S}_{18}$. Insol. in $\text{HCl} + \text{Aq}$. (Nilson.)

Bismuth sulpharsenite, $2\text{Bi}_2\text{S}_3, \text{As}_2\text{S}_3$.

Ppt.

Cadmium sulpharsenite.

Ppt. (Berzelius, Pogg. 7. 146.)

Calcium sulpharsenite, $\text{Ca}_2\text{As}_2\text{S}_5$.

Sol. in H_2O , from which alcohol ppts. $\text{Ca}_3(\text{AsS}_3)_2$.
 $\text{Ca}_3(\text{AsS}_3)_2$. Sol. in H_2O .
 $+ 15\text{H}_2\text{O}$. Precipitated by alcohol.
 $\text{Ca}(\text{AsS}_2)_2 + 10\text{H}_2\text{O}$. Sol. in H_2O . (Nilson, J. pr. (2) 14. 54.)
 $\text{CaAs}_2\text{S}_{13} + 10\text{H}_2\text{O}$ (?). Insol. in cold H_2O . Decomp. by hot H_2O . (Nilson.)
 $\text{CaAs}_{18}\text{S}_{28} + 10\text{H}_2\text{O}$ (?). Sl. sol. in hot H_2O . (Nilson.)
 $\text{Ca}_7\text{As}_2\text{S}_{10} + 25\text{H}_2\text{O}$. Sl. sol. in cold or hot H_2O . (Nilson.)

Cerous sulpharsenite, $\text{Ce}_2\text{As}_2\text{S}_5$.

Ppt.

Chromic sulpharsenite, $2\text{Cr}_2\text{S}_3, 3\text{As}_2\text{S}_3$
Ppt. Insol in $\text{Na}_2\text{S} + \text{Aq}$

Cobaltous sulpharsenite, $2\text{CoS}, \text{As}_2\text{S}_3$.
Ppt. Sol. in excess of sodium sulpharsenite + Aq.

Cuprous sulpharsenite,
 $3\text{Cu}_2\text{S}, 2\text{As}_2\text{S}_3 = \text{Cu}_4\text{As}_4\text{S}_4$.
Min. *Bunnite*. Decomp. by hot acids and $\text{KOH} + \text{Aq}$.
 $2\text{Cu}_2\text{S}, \text{As}_2\text{S}_3 = \text{Cu}_4\text{As}_2\text{S}_5$ Decomp. by acids, KOH and $\text{K}_2\text{S} + \text{Aq}$. (Sommerlad, Z. anorg. 1898, 18. 434)

Cupric sulpharsenite, Cu_2AsS_3
Insol in H_2O or $\text{HCl} + \text{Aq}$. Sol. in $\text{Na}_3\text{AsS}_3 + \text{Aq}$
 $\text{Cu}_2\text{As}_2\text{S}_3$. Ppt (Berzelius.)

Glucinum sulpharsenite, $2\text{GIS}, \text{As}_2\text{S}_3$.
Ppt. Sol. in acids; partly sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Gold sulpharsenite, $2\text{Au}_2\text{S}_3, 3\text{As}_2\text{S}_3$.
Ppt. (Berzelius.)

Iron (ferrous) sulpharsenite.
Ppt Sol in $\text{Na}_3\text{AsS}_3 + \text{Aq}$. (Berzelius.)

Iron (ferric) sulpharsenite.
Ppt. Sol. in excess of a ferric salt, or $\text{Na}_3\text{AsS}_3 + \text{Aq}$. (Berzelius.)

Lead sulpharsenite, $\text{Pb}_2\text{As}_2\text{S}_6$.
Ppt. Min *Dufrenoyite*.
 $\text{Pb}(\text{AsS}_2)_2 = \text{PbS}, \text{As}_2\text{S}_3$. Min. *Sartorite*.
 $\text{Pb}_4\text{As}_2\text{S}_7$. Min. *Jordanite*.

Lithium sulpharsenites.
Resemble K salts.

Magnesium sulpharsenite, $\text{Mg}_2\text{As}_2\text{S}_6$.
Almost completely sol. in H_2O . Easily sol. in alcohol. (Berzelius.)
 $+ 8\text{H}_2\text{O}$. Sl. sol. in H_2O . (Nilson.)
 $\text{Mg}(\text{AsS}_2)_2 + 5\text{H}_2\text{O}$. Slowly sol. in both cold and hot H_2O . (Nilson, J. pr. (2) 14. 59.)
 $\text{Mg}_3(\text{AsS}_2)_2 + 9\text{H}_2\text{O}$. (Nilson.)

Manganous sulpharsenite, $\text{Mn}_2\text{As}_2\text{S}_6$.
Ppt. Decomp. by $\text{HCl} + \text{Aq}$.

Mercurous sulpharsenite, $(\text{Hg}_2)_2\text{As}_2\text{S}_6$.
Ppt. (Berzelius.)

Mercuric sulpharsenite, $\text{Hg}_2\text{As}_2\text{S}_6$.
Ppt.
 $\text{Hg}(\text{AsS}_2)_2$. Ppt. (Berzelius, Pogg. 7. 149.)

Nickel sulpharsenite, $\text{Ni}_2(\text{AsS}_2)_3$.
Ppt. (Berzelius.)

Platinum sulpharsenite, $\text{Pt}_2\text{As}_2\text{S}_6$
Ppt.

Potassium sulpharsenite, $\text{K}_4\text{As}_2\text{S}_6$.
Decomp. by H_2O or alcohol. (Berzelius)
 K_3AsS_3 Sol in H_2O . Insol. in alcohol. (Berzelius)
 $\text{K}_2\text{As}_4\text{S}_7$. Sol. in H_2O and alcohol. (Berzelius)
 K_2AsS_2 Decomp. by H_2O . (Berzelius.)
 $+ 2\frac{1}{2}\text{H}_2\text{O}$. Not wholly sol. in H_2O . (Nilson, J. pr. (2) 14. 30.)
 $\text{K} \cdot \text{AsS}_2 + 8\text{H}_2\text{O}$. (Nilson.)
 $\text{KAs}_2\text{S}_5 + \text{H}_2\text{O}$. Insol. in H_2O . Slowly attacked by hot $\text{HCl} + \text{Aq}$. Sol. in $\text{KOH} + \text{Aq}$. (Nilson.)

Silver sulpharsenite, $12\text{Ag}_2\text{S}, \text{As}_2\text{S}_3$.
Ppt (Sommerlad, Z. anorg. 1898, 18. 428.)
 $5\text{Ag}_2\text{S}, \text{As}_2\text{S}_3 = \text{Ag}_5\text{AsS}_4$ (Sommerlad.)
 Ag_3AsS_3 . Min. *Proustite*. Sol. in $\text{HNO}_3 + \text{Aq}$ $\text{KOH} + \text{Aq}$ dissolves out Sb_2S_3 . (Senarmont, A. ch. (3) 32. 129, Wöhler, A. 27. 159.)
 $2\text{Ag}_2\text{S}, \text{As}_2\text{S}_3$ Partially sol. in $\text{HNO}_3 + \text{Aq}$. (Berzelius.)
 AgAsS_2 . (Berzelius, Pogg. 7. 150.)

Sodium sulpharsenite, $\text{NaAsS}_2 + \frac{1}{2}\text{H}_2\text{O}$.
Attacked by $\text{HCl} + \text{Aq}$ with difficulty. (Nilson, J. pr. (2) 14. 37.)
 $+ 1\frac{1}{2}\text{H}_2\text{O}$. Forms coagulum with cold, sol. in hot H_2O . (Nilson)
 $\text{Na}_2\text{As}_4\text{S}_7 + 6\text{H}_2\text{O}$. Sol. in much H_2O ; not easily decomp. by $\text{HCl} + \text{Aq}$. (Nilson.)
 $\text{NaAs}_2\text{S}_6 + 4\text{H}_2\text{O}$. Ppt. (Nilson, J. pr. (2) 14. 3.)

Strontium sulpharsenite, $3\text{SrS}, \text{As}_2\text{S}_3 + 15\text{H}_2\text{O}$.
Sol. in $\text{H}_2\text{O} + \text{Aq}$; insol. in alcohol. (Voigt and Gottling.)
 $2\text{SrS}, \text{As}_2\text{S}_3$. Sol. in H_2O ; decomp. by alcohol.
 $+ 15\text{H}_2\text{O}$. (Nilson, J. pr. (2) 14. 53.)
 $\text{Sr}(\text{AsS}_2)_2 + 2\frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in H_2O . (Nilson.)

Thalious sulpharsenite, TlAsS_2 .
Ppt. Decomp. by $\text{KOH} + \text{Aq}$. (Gunning, J. B. 1868. 247.)
Above compound is a mixture of As_2S_3 and Tl_2S . (Hawley, J. Am. Chem. Soc. 1907, 29. 1012.)
Min. *Lorandite*. (Kuenner and Loetzka, C. C. 1904, II. 844.)

Tin (stannous) sulpharsenite, $\text{Sn}_2\text{As}_2\text{S}_6$.
Ppt.

Tin (stannic) sulpharsenite, SnAs_2S_6 .
Ppt. (Berzelius, Pogg. 7. 147.)

Uranic sulpharsenite, $2\text{U}_2\text{S}_3, \text{As}_2\text{S}_3$.
Ppt.

Zinc sulpharsenite.

Ppt. (Berzelius, Pogg. 7. 145.)

Zirconium sulpharsenite, $2\text{Zr}_2\text{S}_3, \text{As}_2\text{S}_3$.

Ppt. Insol in solutions of alkali sulpharsenites. Sl. sol in Na_2S Aq. Not decomp. by acids. (Berzelius)

"Sulphatammon," $2\text{NH}_3, \text{SO}_3$.

(Rose)

Is ammonium imidosulphonate, which see. (Berglund.)

"Parasulphatammon," $3\text{NH}_3, 2\text{SO}_3$.

(Rose.)

Is basic ammonium imidosulphonate, which see. (Berglund.)

Sulphatiodic acid.

Potassium sulphatiodate, $\text{K}_2\text{HO}_3\text{SiO}_4$ or $\text{KIO}_3, \text{KHSO}_4$.

Decomp. by H_2O . (Blomstrand, J. pr (2) 40. 317)

See Iodate sulphate, potassium.

Sulphatoctamine cobaltic carbonate

Sol. in H_2O (Vortmann and Blasberg, B. 22. 2650.)

$(\text{SO}_4)_2\text{Co}_2(\text{NH}_3)_8(\text{CO}_3)_2 + 3\text{H}_2\text{O}$. Sol. in H_2O . (V. and B.)

See Carbonatotetramine cobaltic sulphate. (Jørgensen.)

Sulphatoplatinamine sulphate,

Easily sol. in H_2O . Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$.

Sulphatoplatindiamine sulphate,

Insol in H_2O .

Sulphatopurpleocobaltic bromide,

Sol. in H_2O , from which it is precipitated by conc. $\text{HBr} + \text{Aq}$. (Jørgensen, J. pr. (2) 25. 94)

— carbonate, $[(\text{SO}_4)\text{Co}(\text{NH}_3)_5]_2\text{CO}_3 + 4\text{H}_2\text{O}$.

Sol. in H_2O . (Vortmann and Blasberg, B. 22. 2648.)

— chloroplatinate, $2\text{Co}(\text{SO}_4)(\text{NH}_3)_5\text{Cl}$, $\text{PtCl}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . (Jørgensen.)

— nitrate, $\text{Co}(\text{SO}_4)(\text{NH}_3)_5(\text{NO}_3)$.

Somewhat sl. sol. in cold H_2O . (Jørgensen.)

Sulphatopurpleocobaltic sulphate,

Very easily sol in H_2O . (Jørgensen, J. pr. (2) 25. 94.)

$\text{Co}(\text{SO}_4)(\text{NH}_3)_5(\text{HSO}_4) + 2\text{H}_2\text{O}$. Sol. in about 25 pts of cold H_2O . Sol. in dil., insol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (Jørgensen.)

Sulphazic acid, $\text{H}_2\text{S}_2\text{N}_2\text{O}_9 =$ 

Known only in its salts. (Raschig, A. 241. 161.)

Potassium sulphazate, $\text{K}_2\text{HS}_2\text{N}_2\text{O}_9 =$ 

Sol. in H_2O , but decomp. on standing. (Raschig, A. 241. 161.)

Sulphazidic acid.

(Fremy.)

See Hydroxylamine monosulphonic acid.

Sulphazilinic acid.

See Oxyulphazotic acid.

Metasulphazilinic acid.

See Trisulphoxyazotic acid.

Sulphazinous acid.

(Fremy.)

See Dihydroxylamine sulphonic acid.

Sulphazotic acid, $\text{H}_4\text{N}_2\text{S}_2\text{O}_{14} =$ 

Known only in its salts. (Claus, A. 158. 52 and 194). Has the formula

(Raschig, A. 241. 161.)

Lead potassium sulphazotate.

Insol. in cold, decomp. by hot H_2O . Insol. in alcohol and ether. (Fremy, A. ch. (3) 15. 439.)

Potassium sulphazotate, $\text{K}_2\text{HN}_2\text{S}_2\text{O}_{14} + \text{H}_2\text{O}$ 

Very sol. in hot, less in cold H_2O . (Raschig, A. 241. 161.) Decomp. gradually by boiling. (Claus.) Insol. in alcohol or ether. (Fremy, A. ch. (3) 15. 428.)

True composition is $\text{HON}(\text{SO}_3\text{K})_2, \text{KON}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$. Potassium hydroxylamine disulphonate. (Divers and Haga, Chem. Soc. 1900, 77. 432.)

Forms basic salt

$(\text{SO}_3\text{K})_2\text{NK}<\overset{\text{O}}{\underset{\text{O}}{\text{N}}}>\text{NK}(\text{SO}_3\text{K})_2$, which is easily sol. and decomp. by H_2O . (Raschig.)

Potassium sodium sulphazotate,

Quite easily sol. in H_2O . (Raschig, A. 241. 161.)

Disulphhydroxyazotic acid, $\text{ONH}(\text{SO}_2\text{H})_2$.

Known only in its salts. (Claus, A. 158. 52 and 194.) Correct composition is hydroxylamine sulphonic acid $\text{HON}(\text{SO}_2\text{H})_2$, which see. (Raschig, A. 241. 161.)

Sulphhydroxylamic acid.

(Claus)

See Hydroxylamine monosulphonic acid.

Disulphhydroxyazotic acid.

(Claus)

See Hydroxylamine disulphonic acid.

Sulphides.

The sulphides of the alkali metals are sol. in H_2O ; those of the alkali-earth metals are much less sol., and are decomp. upon solution into hydrosulphide and hydroxide.

The other sulphides are insol. in H_2O .

For each sulphide, see under the respective element.

Sulphimide, SO_2NH .

See Imidosulphamide.

Trisulphimide, $\text{OHSO} \begin{smallmatrix} \text{NSO.OH} \\ \text{NSO.OH} \end{smallmatrix} \text{N}$
(SO_2NH)₃.

Sol. in methyl alcohol; sl. sol. in ether; insol. in chloroform and benzene. (Hantzsch B. 1901, 34. 3440.)

Ammonium sulphimide, $\text{SO}_2\text{N}(\text{NH}_4)$.

Sol. in H_2O ; insol. in alcohol. (Traube.)

Barium —, $(\text{SO}_2\text{N})_2\text{Ba} + 2\text{H}_2\text{O}$.

Sol. in H_2O . (Traube.)

Potassium —, SO_2NK .

Not very sol. in H_2O .

Silver —, SO_2NAg .

Sol. in 500–600 pts. cold, more easily in hot H_2O . Sol. in acids.

Sodium —, SO_2NNa .

Very sol. in H_2O .

"Sulphitammon," NH_3 , SO_2 .

See Thionamic acid.

Sulphobismuthous acid.**Cuprous sulphobismuthite**, AuBiS_2 .

Min. *Emplectite*. Sol. in $\text{HNO}_3 + \text{Aq}$.

$\text{Cu}_2\text{Bi}_2\text{S}_3$. Min. *Klaprothite*. Completely sol. in $\text{HCl} + \text{Aq}$.

Cu_2BiS_3 . Min. *Wittichenite*. Sol. in $\text{HCl} + \text{Aq}$ and in $\text{HNO}_3 + \text{Aq}$.

Cuprous lead sulphobismuthite, Cu_2S , 2PbS , Bi_2S_3 .

Min. *Patrimite*

Sol. in $\text{HNO}_3 + \text{Aq}$ with residue of S and PbSO_4 .

Lead —, 2PbS , Bi_2S_3 .

Min. *Cosalite*

2PbS , $3\text{Bi}_2\text{S}_3$. Min. *Chiviatite*.

Potassium —, KBiS .

Decomp. by H_2O .

Sol. in $\text{HCl} + \text{Aq}$. (Schneider, Pogg. 1869, 136. 464.)

Metasulphoboric acid, $\text{B}_2\text{S}_3\text{H}_2\text{S}$.

Decomp. by H_2O and alcohol.

1 pt. is sol. in 5 pts. benzene

1 pt. is " 5 " CS_2

Very sl. sol. in CS_2 at -20° . (Stock, B. 1901, 34. 401.)

Sulphocarbonic acid.**Ammonium cuprous sulphocarbonate**, CS_3CuNH_4 .

This salt was formerly described as cupric sulphocarbonate ammonia, CS_3Cu , NH_3 . (Hofmann, B. 1903, 36. 1146.)

Cuprous potassium sulphocarbonate, CS_3CuK .

Nearly insol. in cold H_2O .

Somewhat sol. in hot H_2O , NaOH and $\text{NH}_4\text{OH} + \text{Aq}$. (Hofmann.)

Cupric sulphocarbonate ammonia, CS_3Cu , NH_3 .

Very sl. sol. in strong $\text{NH}_4\text{OH} + \text{Aq}$; insol. in cold H_2O , sl. sol. in hot H_2O . (Hofmann, Z. anorg. 1897, 14. 295.)

Is ammonium cuprous sulphocarbonate. (Hofmann, B. 1903, 36. 1146.)

Cuprous sulphocarbonate potassium cyanide, CS_3Cu_2 , $2\text{KCN} + 2\text{H}_2\text{O}$.

Sol. in H_2O and dil. alkalis on warming. (Hofmann, B. 1903, 36. 1148.)

Zinc sulphocarbonate ammonia, CS_3Zn , 2NH_3 .

Ppt. (Hofmann, Z. anorg. 1897, 14. 277.)

Sulphochromic acid, H_2CrO_4 , SO_2 (?).

Sol. in H_2O . (Bolley, A. 56. 113.)

$(\text{SO}_2)_4\text{Cr}_2\text{O}_2(\text{OH})_2$. Sol. in H_2O . All salts even alkali salts are insol. in H_2O . (Recoura, Bull. Soc. 1896, (3) 15. 315.)

$(\text{Cr}_2\text{O}_2(\text{OH})_4(\text{SO}_2)_4\text{O}_3$, $\text{Cr}_2\text{O}(\text{OH})_2(\text{SO}_2)_3(\text{OH})$)-(OH)₂. Sol. in H_2O . (Wyruboff, Bull. Soc. 1902, (3) 27. 721.)

Chromium sulphochromate,
 $\text{Cr}_2\text{O}_2(\text{OH})_4(\text{SO}_4)_2\text{O}_2(\text{OH})_2\text{Cr}_2(\text{OH})_6$.

Ppt.; decomp. by boiling H_2O . (Wyrout-
 boff, Bull. Soc. 1902, (3) 27. 720)

Sulphochromous acid.

Ferrous sulphochromite, FeCr_2S_4

Insol. in H_2O , and nearly so in $\text{HCl} + \text{Aq}$.
 (Gröger, W. A. B. 81, 2. 531.)

Manganous —, MnCr_2S_4 .

Insol. in H_2O and $\text{HCl} + \text{Aq}$. (Gröger.)

Potassium —, $\text{K}_2\text{Cr}_2\text{S}_4$.

Insol. in H_2O and in hot $\text{HCl} + \text{Aq}$.

Easily sol. in aqua regia. Slowly sol. in
 cold, rapidly sol. in hot dil. $\text{HNO}_3 + \text{Aq}$
 (Milbauer, Z. anorg. 1904, 42. 443.)

$\text{K}_2\text{Cr}_2\text{S}_7$. Stable in the air; sol. in HNO_3
 and aqua regia with decomp. (Schneider,
 J. pr. 1897, (3) 56. 407.)

Silver —, $\text{Ag}_2\text{Cr}_2\text{S}_4$.

Not attacked by $\text{HCl} + \text{Aq}$ even on heat-
 ing. Decomp. by conc. HNO_3 . (Schneider,
 J. pr. 1897, (2) 56. 401.)

Sodium —, $\text{Na}_2\text{Cr}_2\text{S}_4$.

Insol. in H_2O . Sl. attacked by dil. HCl or
 $\text{H}_2\text{SO}_4 + \text{Aq}$. Sol. in cold conc. HNO_3 or
 aqua regia. Sol. in hot dil. $\text{HNO}_3 + \text{Aq}$.
 (Gröger.)

Sol. in acids with decomp. (Schneider,
 J. pr. 1897, (3) 56. 415.)

Zinc —, ZnCr_2S_4

Insol. in H_2O , sol. in traces in boiling conc.
 HCl or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$; sol. in $\text{HNO}_3 + \text{Aq}$.
 (Gröger, W. A. B. 81, 2. 531)

Sulphocyanhydric acid, HSCN .

Sol. in H_2O .

Sat. $\text{HSCN} + \text{Aq}$ has sp. gr. = 1.022. (Por-
 rett, 1814.) $\text{HSCN} + \text{Aq}$ containing 12.7%
 HSCN has sp. gr. 1.040 at 12° . (Hermes,
 Z. Ch. 1866. 417)

Sulphocyanides.

Most sulphocyanides are sol. in H_2O , but
 Cu, Pb, Hg, and Ag sulphocyanides are insol.

Aluminum sulphocyanide, $\text{Al}(\text{SCN})_3$.

Known only in solution.

$\text{Al}(\text{SCN})_2(\text{OH})_4$. Known only in solution
 (Suida.)

Aluminum potassium sulphocyanide,

$\text{K}_3\text{Al}(\text{SCN})_6 + 4\text{H}_2\text{O}$.

Very hygroscopic.

Sol. in H_2O and alcohol. (Rosenheim, Z.
 anorg. 1901, 27. 302.)

Ammonium sulphocyanide, NH_4SCN .

Deliquescent, and very sol. in H_2O .

100 pts. H_2O dissolve 128.1 pts. at 0° and
 162.2 pts. at 20° .

$\text{NH}_4\text{SCN} + \text{Aq}$ sat. at ord. temp. has
 density of 1.138 and 100 cc. contains 69.16 g.
 NH_4SCN (Klason, J. pr. 1887, (2) 36. 67.)

By dissolving 90 g. NH_4SCN in 90 g. H_2O
 at 17° , the temp. falls to -12° . (Clowes, Z.
 Ch. 1866. 190)

133 pts. $\text{NH}_4\text{SCN} + 100$ pts. H_2O at 13.2°
 lower the temp. 31.2° . (Rudorff, B. 2. 68.)

Sol. in liquid SO_2 . (Walden, B. 1899, 32.
 2864)

Difficultly sol. in AsBr_3 . (Walden, Z.
 anorg. 1902, 29. 374.)

Very easily sol. in liquid NH_3 . (Franklin,
 Am. Ch. J. 1898, 20. 826)

Easily sol. in alcohol

Easily sol. in acetone. (Krug and M'Elroy.

Sl. sol. in benzonitrile. (Naumann, B.
 1914, 47. 1369)

Sol. in methyl acetate. (Naumann, B.
 1909, 42. 3789.)

Difficultly sol. in ethyl acetate. (Nau-
 mann, B. 1910, 43. 314.)

Ammonium bismuth sulphocyanide,

$(\text{NH}_4)_3\text{Bi}(\text{SCN})_3$.

As K salt. (Rosenheim and Vogelgesang
 Z. anorg. 1906, 48. 215.)

Ammonium cadmium sulphocyanide,

$(\text{NH}_4)_2\text{Cd}(\text{SCN})_4 + 2\text{H}_2\text{O}$.

Somewhat deliquescent.

Melts in crystal H_2O at 25° .

Insol. in alcohol. (Grossmann, B. 1902,
 35. 2667.)

Ammonium cadmium molybdenyl sulphocyanide,
 NH_4SCN , $\text{Cd}(\text{SCN})_2$,

$\text{Mo}(\text{OH})(\text{SCN})_3 + 3\text{H}_2\text{O}$.

(Maas and Sand, B. 1908, 41. 1513.)

Ammonium cobaltous sulphocyanide,

$(\text{NH}_4)_2\text{Co}(\text{SCN})_4$.

Decomp. in moist air.

Cannot be recryst. from H_2O . (Treadwell,
 Z. anorg. 1901, 26. 109.)

$+ 4\text{H}_2\text{O}$. Sol. in H_2O .

Sol. in methyl, ethyl and amyl alcohol,
 in acetone and in ether + Aq.

Can be recryst. from H_2O or alcohol with-
 out decomp. (Rosenheim and Cohn, Z.
 anorg. 1901, 27. 289.)

Ammonium iron (ferric) sulphocyanide,

$9\text{NH}_4\text{SCN}$, $\text{Fe}(\text{SCN})_3 + 4\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O . (Krüss and
 Morah, A. 260. 207.)

$3\text{NH}_4\text{SCN}$, $\text{Fe}(\text{SCN})_3$. Extremely deli-
 quescent.

Ammonium mercuric sulphocyanide,

$2\text{NH}_4\text{SCN}$, $\text{Hg}(\text{SCN})_2$.

Easily sol. in H_2O . (Fleischer, A. 179.
 228.)

- $\text{NH}_4\text{Hg}(\text{SCN})_3$ Insol. in cold, sol. in hot H_2O . (Rosenheim, Z. anorg. 1901, 27. 284.)
- Ammonium molybdenyl sulphocyanide,**
 $3\text{NH}_4\text{SCN}$, $\text{Mo}(\text{OH})(\text{SCN})_3 + 3\text{H}_2\text{O}$.
 (Sand and Maas, B. 1907, 40. 4507.)
- Ammonium nickel sulphocyanide,**
 $(\text{NH}_4)_2\text{Ni}(\text{SCN})_6 + 4\text{H}_2\text{O}$.
 Sol in H_2O with decomp.
 Sl sol in cold; easily sol in hot alcohol
 (Rosenheim, Z. anorg. 1901, 27. 292.)
- Ammonium silver sulphocyanide,** NH_4SCN ,
 AgSCN .
 Decomp. by H_2O .
- Ammonium vanadium sulphocyanide,**
 $\text{V}(\text{SCN})_3$, $3\text{NH}_4\text{SCN} + 4\text{H}_2\text{O}$.
 Sol. in H_2O ; sol. in alcohol; sl. sol. in ether.
 (Ciocci, Z. anorg. 1898, 19. 311)
- Ammonium vanadyl sulphocyanide,**
 $(\text{NH}_4)_2\text{VO}(\text{SCN})_4 + 5\text{H}_2\text{O}$.
 Sol. in H_2O , alcohol, ether, acetone, amyl
 alcohol and ethyl acetate. (Koppel, Z.
 anorg. 1903, 36. 290.)
- Ammonium zinc sulphocyanide,**
 $(\text{NH}_4)_2\text{Zn}(\text{SCN})_4 + 3\text{H}_2\text{O}$
 Easily sol in H_2O and in alcohol. (Walden,
 Z. anorg. 1900, 23. 374.)
 $+ 4\text{H}_2\text{O}$. Easily sol. in cold H_2O , acetone,
 alcohols and ether. (Rosenheim and Huld-
 schinsky, B. 1901, 34. 3913.)
- Ammonium sulphocyanide mercuric bromide,**
 NH_4SCN , HgBr_2 .
 Very sol. in H_2O .
 Sol. in alcohol. (Grossmann, B. 1902, 35.
 2945.)
 $2\text{NH}_4\text{SCN}$, $\text{HgBr}_2 + \text{H}_2\text{O}$. Somewhat de-
 liquescent.
 Very sol. in H_2O .
 Sol. in alcohol. (Grossmann.)
- Arsenic sulphocyanide,** $\text{As}(\text{SCN})_3$.
 Decomp. by H_2O . Insol. in all ordinary
 solvents. (Miguel, A. ch. (5) 11. 341.)
- Barium sulphocyanide,** $\text{Ba}(\text{SCN})_2 + 2\text{H}_2\text{O}$.
 Deliquescent. Easily sol. in H_2O and
 alcohol. Boiling solution in alcohol contains
 32.8% anhydrous salt. Solution sat. at 20°
 contains 30%. (Tscherniak, B. 16. 349.)
 Cryst. with $3\text{H}_2\text{O}$. (Tscherniak, B. 25.
 2627.)
- Barium cadmium sulphocyanide,**
 $4\text{Ba}(\text{SCN})_2$, $\text{Cd}(\text{SCN})_2 + 10\text{H}_2\text{O}$.
 Deliquescent. (Grossmann, B. 1902, 36
 2669.)
- Barium caesium cuprous sulphocyanide,**
 $\text{Ba}(\text{SCN})_2$, 3CsSCN , 2CuSCN .
 Rapidly decomp. by H_2O . (Wells, Am.
 Ch. J. 1902, 28. 273.)
- Barium caesium silver sulphocyanide,**
 $\text{Ba}(\text{SCN})_2$, 3CsSCN , 2AgSCN .
 100 pts. H_2O dissolve 92 pts. at 19° .
 Decomp. by much H_2O . (Wells, Am. Ch.
 J. 1902, 28. 272.)
- Barium cobaltous sulphocyanide,**
 $\text{BaCo}(\text{SCN})_4 + 8\text{H}_2\text{O}$.
 Ppt. (Rosenheim, Z. anorg 1901, 27.
 290.)
- Barium mercuric sulphocyanide,**
 $\text{BaHg}(\text{SCN})_4$
 Very sol. in H_2O and in alcohol. (Rosen-
 heim, Z. anorg. 1901, 27. 286.)
 $\text{BaHg}(\text{SCN})_3 + 2\text{H}_2\text{O}$. Ppt. Nearly in-
 sol. in cold; easily sol. in hot H_2O . (Rosen-
 heim.)
- Barium potassium silver sulphocyanide,**
 $\text{Ba}(\text{SCN})_2$, 4KSCN , $2\text{AgSCN} + \text{H}_2\text{O}$.
 Very sol. in a little H_2O . Decomp. by
 much H_2O . (Wells, Am. Ch. J. 1902, 28.
 283.)
- Barium rubidium silver sulphocyanide,**
 $\text{BaRb}_2\text{Ag}_2(\text{SCN})_6 + 2\text{H}_2\text{O}$.
 Very sol. in H_2O . (Wells, Am. Ch. J.
 1903, 30. 186.)
 $\text{BaRb}_4\text{Ag}_2(\text{SCN})_8 + \text{H}_2\text{O}$ Sol. in H_2O .
 (Wells.)
- Barium silver sulphocyanide,** $\text{Ba}(\text{SCN})_2$,
 $2\text{AgSCN} + 2\text{H}_2\text{O}$.
 Stable in the air. (Wells, Am. Ch. J.
 1902, 28. 269.)
- Barium zinc sulphocyanide,** $\text{BaZn}(\text{SCN})_4$
 $+ 3\text{H}_2\text{O}$.
 Easily sol. in alcohol. (Walden, Z. anorg.
 1900, 23. 374.)
- Barium sulphocyanide mercuric bromide,**
 $\text{Ba}(\text{SCN})_2$, $2\text{HgBr}_2 + 5\text{H}_2\text{O}$.
 Very sol. in H_2O . (Grossmann, Z. anorg.
 1903, 37. 420.)
- Bismuth sulphocyanide, basic,**
 $\text{Bi}(\text{OH})(\text{SCN})_2 + 5\text{H}_2\text{O}$.
 (Rosenheim and Vogelgesang, Z. anorg.
 1906, 48. 214.)
 $\text{Bi}(\text{SCN})_3$, $2\text{Bi}_2\text{O}_3$. Insol. in H_2O , but
 when recently pptd. decomp. by boiling
 therewith. Insol. in $\text{HSCN} + \text{Aq}$. (Meitzen-
 dorf.)
- Bismuth sulphocyanide,** $\text{Bi}(\text{SCN})_3$.
 Insol. or sl. sol. in H_2O . Sol. in HNO_3 ,
 HCl , and $\text{HSCN} + \text{Aq}$. (Meitzendorf, Pogg.
 56. 83.)

- Decomp. by cold H_2O . (Bender, B. 20 723)
 $+14\text{H}_2\text{O}$. Extremely deliquescent.
 Decomp. by H_2O . (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 214.)
- Bismuth potassium sulphocyanide,**
 $\text{K}_3\text{Bi}(\text{SCN})_6$.
 Decomp. by H_2O . (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 215.)
 Not hygroscopic.
 Decomp. by H_2O .
 Easily sol. in alcohol. (Vanino, Z. anorg. 1901, 28. 220.)
 $\text{Bi}(\text{SCN})_3$, 9KSCN. Very hygroscopic
 Decomp. by H_2O .
 Sol. in alcohol (Vanino, Z. anorg. 1901, 28. 221.)
- Bismuth sodium sulphocyanide,**
 $\text{Na}_3\text{Bi}(\text{SCN})_6$.
 As K salt. (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 215)
- Boron sulphocyanide,** $\text{B}(\text{SCN})_3$.
 Sol. in benzene and ether. (Cocksedge, Chem. Soc. 1908, (2) 93. 217.)
- Cadmium sulphocyanide,** $\text{Cd}(\text{SCN})_2$.
 Sl. sol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with combination.
- Cadmium caesium sulphocyanide,**
 $\text{CsCd}(\text{SCN})_2$.
 Recryst. from H_2O . (Wells, Am. Ch. J. 1903, 30. 148.)
 $\text{Cs}_2\text{Cd}(\text{SCN})_6 + 2\text{H}_2\text{O}$. Very sol. in H_2O .
 Can be recryst. from conc. solution but decomp. on dilution to $\text{CsCd}(\text{SCN})_2$. (Wells.)
- Cadmium caesium silver sulphocyanide,**
 $\text{Cs}_2\text{CdAg}_2(\text{SCN})_6$.
 (Wells.)
 $+2\text{H}_2\text{O}$. (Wells.)
 $(\text{Cs}_2\text{CdAg}_4(\text{SCN})_8 + 2\text{H}_2\text{O})$. (Wells.)
 $\text{Cs}_4\text{Cd}_3\text{Ag}_{10}(\text{SCN})_{20} + 6\text{H}_2\text{O}$. (Wells.)
- Cadmium mercuric sulphocyanide,** $\text{Cd}(\text{SCN})_2$,
 $\text{Hg}(\text{SCN})_2$.
 Very sol. in hot H_2O . (Grossmann, Z. anorg. 1903, 37. 414)
- Cadmium molybdenum sulphocyanide,**
 $\text{Cd}(\text{SCN})_2$, $\text{Mo}(\text{SCN})_4 + 2\text{H}_2\text{O}$.
 (Maas and Sand, B. 1908, 41. 1513.)
 $+3\text{H}_2\text{O}$. (Maas and Sand.)
- Cadmium molybdenyl potassium sulphocyanide,** KSCN, $4\text{Cd}(\text{SCN})_2$,
 $3\text{Mo}(\text{OH})(\text{SCN})_3 + 18\text{H}_2\text{O}$.
 (Mass and Sand, B. 1908, 41. 1513.)
- Cadmium molybdenyl sulphocyanide ammonia,** $3\text{Cd}(\text{SCN})_2$, $2\text{Mo}(\text{OH})(\text{SCN})_3$,
 13NH_3 .
 (Mass and Sand, B. 1908, 41. 1512.)
 $+2\text{H}_2\text{O}$. (Maas and Sand.)
- Cadmium potassium sulphocyanide,**
 $\text{K}_2\text{Cd}(\text{SCN})_4 + 2\text{H}_2\text{O}$.
 Very sol. in H_2O . (Grossmann, B. 1902, 35. 2668)
- Cadmium rubidium sulphocyanide,**
 $\text{Rb}_2\text{Cd}(\text{SCN})_4 + 2\text{H}_2\text{O}$.
 Very sol. in H_2O . (Grossmann, B. 1902, 35. 2668.)
- Cadmium sodium sulphocyanide,**
 $\text{NaCd}(\text{SCN})_3 + 3\text{H}_2\text{O}$.
 (Grossmann, B. 1902, 35. 2668)
- Cadmium sulphocyanide ammonia,** $\text{Cd}(\text{SCN})_2$,
 NH_3 .
 Decomp. by H_2O . (Grossmann, B. 1902, 35. 2666.)
 $\text{Cd}(\text{SCN})_2$, 2NH_3 . Decomp. by pure H_2O . (Grossmann.)
- Cadmium sulphocyanide ammonium bromide,**
 $\text{Cd}(\text{SCN})_2$, $\text{NH}_4\text{Br} + \text{H}_2\text{O}$.
 Can be recryst. from H_2O . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 425.)
 $\text{Cd}(\text{SCN})_2$, $2\text{NH}_4\text{Br}$. Easily splits off NH_4Br . (Grossmann.)
- Cadmium sulphocyanide ammonium chloride,**
 $\text{Cd}(\text{SCN})_2$, $2\text{NH}_4\text{Cl}$.
 Can be recryst. from H_2O . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 423.)
- Cadmium sulphocyanide potassium bromide,**
 $\text{Cd}(\text{SCN})_2$, $\text{KBr} + \text{H}_2\text{O}$.
 Recryst. from H_2O . (Grossmann, Z. anorg. 1903, 37. 425.)
 $\text{Cd}(\text{SCN})_2$, 2KBr . Recryst. from H_2O . (Grossmann.)
- Cadmium sulphocyanide potassium chloride,**
 $\text{Cd}(\text{SCN})_2$, 2KCl .
 Recryst. from H_2O . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 423.)
- Cadmium sulphocyanide potassium iodide,**
 $\text{Cd}(\text{SCN})_2$, 2KI .
 Recryst. from H_2O . (Grossmann.)
- Caesium calcium silver sulphocyanide,**
 2CsSCN , $\text{Ca}(\text{SCN})_2$, $2\text{AgSCN} + 2\text{H}_2\text{O}$.
 Recryst. from H_2O . (Wells, Am. Ch. J. 1902, 28. 275.)

Cæsium chromium sulphocyanide.*See Chromisulphocyanide, cæsium.***Cæsium cobaltous sulphocyanide,**

Stable in the air. (Shinn and Wells, Am. Ch. J. 1903, 29. 476.)

Cæsium cobaltous silver sulphocyanide,Slowly attacked by H_2O ; decomp. by boiling H_2O . Very sl. sol. in CsSCN or $\text{Co}(\text{SCN})_2$ + Aq. (Shinn and Wells, Am. Ch. J. 1903, 29. 478.)**Cæsium cuprous sulphocyanide, CsSCN , CuSCN .** H_2O separates CuSCN . (Roberts, Am. Ch. J. 1902, 28. 262.)**Cæsium cuprous nickel sulphocyanide,**Sl. sol. in H_2O . (Roberts and Wells, Am. Ch. J. 1902, 28. 277.)**Cæsium cuprous strontium sulphocyanide,**

As Ba salt. (Wells, Am. Ch. J. 1902, 28. 275.)

Cæsium magnesium silver sulphocyanide,

As Ca comp. (Wells, Am. Ch. J. 1902, 28. 275.)

Cæsium manganous silver sulphocyanide,Rather sl. sol. in H_2O . (Wells.)**Cæsium mercuric sulphocyanide, CsSCN , $\text{Hg}(\text{SCN})_2$.**Sl. sol. in hot H_2O . (Bristol and Wells, Am. Ch. J. 1902, 28. 260.)**Cæsium mercuric sulphocyanide, 2CsSCN , $\text{Hg}(\text{SCN})_2 + \text{H}_2\text{O}$.**Moderately sol. in H_2O , especially when warm. Recryst. without decomp. (Bristol and Wells, Am. Ch. J. 1902, 28. 260.)**Cæsium nickel silver sulphocyanide,**Slowly decomp. by hot H_2O . (Wells, Am. Ch. J. 1902, 28. 277.)**Cæsium silver sulphocyanide, CsSCN , AgSCN .**

Easily forms supersat. solution. (Wells, Am. Ch. J. 1902, 28. 264.)

 $2\text{CsSCN}, \text{AgSCN}$. Stable in the air. (Wells.) $3\text{CsSCN}, \text{AgSCN}$. Stable in the air. (Wells.)**Cæsium silver strontium sulphocyanide,**

As Ba comp. (Wells.)

Cæsium silver zinc sulphocyanide,

(Wells.)

 $\text{Cs}_2\text{ZnAg}(\text{SCN})_6$. Ppt. Stable in the air. (Wells.) $\text{CsZn}_2\text{Ag}_3(\text{SCN})_9$. Decomp. by cold, more rapidly by hot H_2O . (Wells.) $\text{CsZn}_2\text{Ag}_4(\text{SCN})_9$. Slowly decomp. by H_2O . (Wells.)**Cæsium zinc sulphocyanide, $\text{Cs}_2\text{Zn}(\text{SCN})_4 + 2\text{H}_2\text{O}$.**Moderately sol. in H_2O and can be recryst. therefrom. (Wells.)**Calcium sulphocyanide, $\text{Ca}(\text{SCN})_2 + 3\text{H}_2\text{O}$.**Deliquescent. Very sol. in H_2O and alcohol.**Calcium silver sulphocyanide, $\text{Ca}(\text{SCN})_2$, $2\text{AgSCN} + 2\text{H}_2\text{O}$.**

(Wells.)

Calcium stannic sulphocyanide, $\text{CaSn}(\text{SCN})_6 + 7\text{H}_2\text{O}$.Very sol. in H_2O . Can be recryst. therefrom. Sol. in alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62. 258.)**Cerous sulphocyanide, $\text{Ce}(\text{SCN})_3 + 7\text{H}_2\text{O}$.**Deliquescent. Sol. in H_2O and alcohol. (Jolin, Bull. Soc. (2) 21. 534.)**Chromous sulphocyanide with MSCN .***See Chromosulphocyanide, M.***Chromic sulphocyanide, $\text{Cr}(\text{SCN})_3$.**Deliquescent, and sol. in H_2O .

Somewhat sol. in organic solvents. (Speransky, C. C. 1897, I. 141.)

*See also Chromisulphocyanhydric acid.***Chromic sulphocyanide with MSCN .***See Chromisulphocyanide, M.***Cobaltous sulphocyanide, $\text{Co}(\text{SCN})_2 + \frac{1}{2}\text{H}_2\text{O}$.**Sol. in H_2O and alcohol; also in ether. Sol. in liquid SO_2 . (Walden, B. 1899, 32. 2864.)

Sol. in acetone. (Krug and M'Elroy.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

 $+3\text{H}_2\text{O}$. Sol. in H_2O and in alcohol. (Rosenheim and Cohn, Z. anorg. 1901, 27. 288.)**Cobaltous mercuric sulphocyanide, $\text{Co}(\text{SCN})_2$, $\text{Hg}(\text{SCN})_2$.**Very sl. sol. in H_2O and dil. $\text{HCl} + \text{Aq}$. Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Cleve, J. pr. 91. 227.)

Cobaltous potassium sulphocyanide,
 $\text{CoK}_3(\text{SCN})_4$.Decomp. by H_2O . (Treadwell, Z. anorg 1901, **26**, 109.)+4 H_2O . Sol. in H_2O . Sol. in methyl, ethyl and amyl alcohol, in acetone and in ether+ Aq . Can be recryst. from H_2O or alcohol without decomp. (Rosenheim and Cohn, Z. anorg. 1901, **27**, 289.)**Cobaltous silver sulphocyanide, $\text{CoAg}(\text{SCN})_2$**
+2 H_2O .Decomp. by H_2O . (Shinn and Wells, Am Ch. J. 1903, **29**, 476.) $\text{Ag}_2\text{Co}(\text{SCN})_4$. Almost insol. in H_2O and in alcohol. (Rosenheim, Z. anorg. 1901, **27**, 291.)**Cobaltous sodium sulphocyanide,**
 $\text{Na}_2\text{Co}(\text{SCN})_4 + 8\text{H}_2\text{O}$.Sol. in H_2O and in alcohol (Rosenheim)**Cobaltous sulphocyanide ammonia, $\text{Co}(\text{SCN})_2$,**
2 NH_3 and $\text{Co}(\text{SCN})_2$, 6 NH_3 .(Peters, B. 1908, **41**, 3178.) $\text{Co}(\text{SCN})_2$, 4 NH_3 . Sol. in H_2O and alcohol. (Sand, B. 1903, **36**, 1439.)**Cobaltous sulphocyanide mercuric chloride,**
2 $\text{Co}(\text{SCN})_2$, 2 HgCl_2 .(Hantzsch and Shibata, Z. anorg. 1912, **73**, 320.)2 $\text{Co}(\text{SCN})_2$, 3 HgCl_2 . Easily decomp. (Hantzsch and Shibata.)**Cuprous sulphocyanide, CuSCN .**1 l. H_2O at 18° dissolves 0.004 mg. mols. or 0.5 mg. CuSCN (Kohlrausch and Rose, Z. phys. Ch. 1893, **12**, 241.)Insol. in dil. acids. Sl. sol. in cold, easily in warm conc. $\text{HCl} + \text{Aq}$. Decomp. by conc. H_2SO_4 or $\text{HNO}_3 + \text{Aq}$. Sol. with combination in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in $\text{KSCN} + \text{Aq}$.Less sol. in H_2SO_4 and $\text{H}_2\text{SO}_4 + \text{Aq}$ than in HNO_3 . (Kuhn, Ch. Z. 1908, **32**, 1056.)Sol. in $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$. (Johnson, J. Soc. Chem. Ind. 1889, **8**, 603.) $\text{KSCN} + \text{Aq}$ (85–90 g. in 50 g. H_2O) dissolves 18 g. CuSCN . (Thurnauer, B. 1890, **23**, 770.)Sol. in ether. (Skey, C. N. 1867, **16**, 201.)**Cupric sulphocyanide, $\text{Cu}(\text{SCN})_2$.**Decomp. by H_2O to cuprous salt. Sol. in warm HCl , H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{MSCN} + \text{Aq}$, but solutions decomp. by dilution. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° and at 40°.

At 25°.

(Horn, Am. Ch. J. 1907, **37**, 471.)Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)**Cuprocupric sulphocyanide, $\text{Cu}(\text{SCN})_2$,**
 $\text{Cu}_2(\text{SCN})_2$.Not attacked by hot $\text{HCl} + \text{Aq}$. Insol. in $\text{KSCN} + \text{Aq}$.

Cupric mercuric sulphocyanide, CuHg(SCN)_4 .
Almost insol. in cold H_2O and in alcohol;
sl. sol. in boiling H_2O . (Rosenheim, Z. anorg.
1901, 27. 286.)

**Cuprous potassium sulphocyanide, CuSCN ,
 6KSCN .**

Deliquescent. Decomp. by H_2O . (Thurn-
auer, B. 1890, 23. 770.)

**Cuprous sulphocyanide ammonia, $\text{Cu}_2(\text{SCN})_2$,
 2NH_3 .**

Decomp. in the air. (Richards, Z. anorg.
1898, 17. 247.)

$\text{Cu}_2(\text{SCN})_2$, 5NH_3 . Very unstable in the
air. (Richards.)

**Cupric sulphocyanide ammonia, Cu(SCN)_2 ,
 2NH_3 .**

Sol. in little H_2O , but decomp. by dilution
with pptn. of basic salt. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

By long standing a small amount dissolves
in H_2O with separation of CuSCN . (Litter-
scheid, Arch. Pharm. 1901, 239. 337.)

Insol. in H_2O . Sol. in H_2O containing
a small amount of ammonia. (Horn, Am.
Ch. J. 1907, 37. 477.)

Cu(SCN)_2 , 4NH_3 . Very unstable in the
air.

Sol. in H_2O , but decomp. by much H_2O
with pptn. of a basic salt. (Horn.)

100 pts. $\text{N}/10 \text{ NH}_4\text{OH} + \text{Aq}$ dissolve 10.4
pts. anhydrous salt at 25° . (Pudschies, Dis-
sert.)

Loses NH_3 in the air.

Sol. in H_2O . (Kohlschütter, B. 1904, 37.
1156.)

Decomp. in the air and by H_2O and dil.
and conc. acids; sol. in cold conc. HNO_3 and
 $\text{NH}_4\text{OH} + \text{Aq}$. Sol. in boiling conc. HCl .
(Richards, Z. anorg. 1898, 17. 250.)

Didymium sulphocyanide, $\text{Di(SCN)}_2 + 6\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O .

Erbium sulphocyanide, $\text{Er(SCN)}_2 + 6\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O . (Höglund.)

Glucinum sulphocyanide, Gl(SCN)_2 (?)

Sol. in H_2O . (Hermes, J. pr. 97. 465.)

**Gold (aurous) potassium sulphocyanide,
 AuSCN , KSCN .**

Easily sol. in H_2O , less in absolute alcohol.
(Cleve, J. pr. 94. 16.)

**Gold (aurous) potassium sulphocyanide
ammonia, KAu(SCN)_2 , 5NH_3 .**

(Peters, B. 1908, 41. 3178.)

**Gold (auric) potassium sulphocyanide am-
monia, KAu(SCN)_4 , 4NH_3 .**

(Peters.)

**Gold (aurous) silver sulphocyanide, AuSCN ,
 AgSCN .**

Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Gold (auric) potassium sulphocyanide.

Sol. in H_2O , alcohol, and ether. (Cleve.)

**Gold (aurous) sulphocyanide ammonia,
 AuSCN , NH_3 .**

Very sl. sol. in cold, decomp. by hot H_2O .

Iron (ferrous) sulphocyanide, $\text{Fe(SCN)}_2 + 3\text{H}_2\text{O}$.

Very sol. in H_2O , alcohol, or ether.

Sol. in acetone. (Krug and M'Elroy.)

Iron (ferric) sulphocyanide, $\text{Fe(SCN)}_3 + 3\text{H}_2\text{O}$.

Deliquescent. Very sol. in H_2O , alcohol,
or ether. Ether extracts the salt from
 $\text{Fe(SCN)}_3 + \text{Aq}$. Decomp. by much H_2O
if pure. Not decomp. by monobasic acids,
but conc. H_2SO_4 , and H_3PO_4 , also oxalic,
tartaric, malic, etc., acids destroy the colour.

**Iron (ferric) lithium sulphocyanide, Fe(SCN)_3 ,
 $9\text{LiSCN} + 4\text{H}_2\text{O}$.**

More deliquescent than the other ferric
sulphocyanides. (Kruss and Moraht.)

**Iron (ferrous) mercuric sulphocyanide,
 Fe(SCN)_2 , $\text{Hg(SCN)}_2 + 2\text{H}_2\text{O}$.**

Moderately sol. in hot H_2O . (Cleve, J.
pr. 91. 227.)

**Iron (ferric) potassium sulphocyanide,
 Fe(SCN)_3 , $3\text{KSCN} + x\text{H}_2\text{O}$.**

Extremely deliquescent, and sol. in H_2O .
(Krüss and Moraht.)

Fe(SCN)_3 , $9\text{KSCN} + 4\text{H}_2\text{O}$. Hygroscopic.
Sol. in H_2O without decomp. Insol. in pure
anhydrous ether, but decomp. by ether con-
taining traces of H_2O into Fe(SCN)_3 and
 KSCN . (Kruss and Moraht, A. 260. 204.)

**Iron (ferrous) sodium sulphocyanide,
 $\text{Na}_4\text{Fe(SCN)}_6 + 12\text{H}_2\text{O}$.**

Sol. in H_2O and alcohol. (Rosenheim, Z.
anorg. 1901, 27. 299.)

**Iron (ferric) sodium sulphocyanide, Fe(SCN)_3 ,
 $9\text{NaSCN} + 4\text{H}_2\text{O}$.**

Less deliquescent than the corresponding
 NH_4 or K salt. (Krüss and Moraht.)

$\text{Na}_4\text{Fe(SCN)}_6 + 12\text{H}_2\text{O}$. (Rosenheim, Z.
anorg. 1901, 27. 297.)

Lanthanum sulphocyanide, $\text{La(SCN)}_3 + 7\text{H}_2\text{O}$.

Deliquescent; sol. in H_2O . (Cleve.)

**Lead sulphocyanide, basic,
 6PbO , $\text{Pb(SCN)}_2 + 2\text{H}_2\text{O}$. Ppt.**

Pb(SCN)_2 , $\text{PbO} + \text{H}_2\text{O}$. Insol. in H_2O .
(Strömholm, Z. anorg. 1904, 38. 440.)

Lead sulphocyanide, $\text{Pb}(\text{SCN})_2$.

Nearly insol. in cold, decomp. by boiling H_2O . (Liebig.)

Sl. sol. in H_2O .

4.5×10^{-1} g. are dissolved in 1 liter of sat solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

Lead sulphocyanide bromide, $\text{Pb}(\text{SCN})_2 \cdot 8\text{PbBr}_2$.

(Grissom and Thorp, Am. Ch. J. 10. 219.)

Lead sulphocyanide chloride, PbSCNCl .

Sl. sol. in cold, easily sol. in hot H_2O . (Murtry, Chem. Soc. 55. 50.)

Sol. in H_2O . (Grissom and Thorp, Am. Ch. J. 10. 229.)

Lead sulphocyanide iodide, $3\text{Pb}(\text{SCN})_2 \cdot \text{PbI}_2$.

Sol. in H_2O . (Grissom and Thorp, Am. Ch. J. 10. 229.)

Lithium sulphocyanide, LiSCN .

Very deliquescent. Sol. in H_2O and alcohol. (Hermes, Z. Ch. 1866. 417.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Magnesium sulphocyanide, $\text{Mg}(\text{SCN})_2 + 4\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O and alcohol.

Magnesium stannic sulphocyanide, $\text{MgSn}(\text{SCN})_6 + 6\text{H}_2\text{O}$.

Hygroscopic. Sol. in H_2O , alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62. 258.)

Manganous sulphocyanide, $\text{Mn}(\text{SCN})_2 + 3\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O and alcohol.

Mercurous sulphocyanide, $\text{Hg}_2(\text{SCN})_2$.

Insol. in H_2O . Sol. in hot $\text{HCl} + \text{Aq}$. Slowly decomp. by hot aqua regia. Sol. in hot $\text{KSCN} + \text{Aq}$.

Mercuric sulphocyanide, basic, $\text{Hg}(\text{SCN})_2 \cdot 3\text{HgO}$.

Insol. in H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. Insol. in H_2SO_4 or $\text{HNO}_3 + \text{Aq}$. (Fleischer.)

$\text{Hg}(\text{SCN})_2 \cdot 2\text{HgO}$. Insol. in H_2O . Sl. attacked by acids. (Claus, J. pr. 15. 401.)

Mercuric sulphocyanide, $\text{Hg}(\text{SCN})_2$.

Very sl. sol. in cold, much more easily in hot H_2O . Easily sol. in dil. $\text{HCl} + \text{Aq}$. (Crookes, Chem. Soc. 4. 18.)

Solubility in $\text{H}_2\text{O} = 0.00218$ mol. in 1 l. (Grossmann, Z. anorg. 1904, 43. 358.)

More sol. in H_2O than in alcohol. (Peters, B. 1908, 41. 3180.)

Very sl. sol. in H_2O at 25° . Appreciably sol. only in boiling H_2O . (Jander, Dissert. 1902.)

Sol. in $\text{Hg}(\text{NO}_3)_2$ or $\text{KSCN} + \text{Aq}$, also in $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in many sulphocyanides + Aq .

Easily sol. in cold HCl , NH_4Cl , KCl or $\text{BaCl}_2 + \text{Aq}$. (Hermes, J. pr. 1866, (1) 97. 477.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Mercuric hydrogen sulphocyanide, $\text{Hg}(\text{SCN})_2 \cdot 2\text{HSCN}$.

Easily decomp. (Hermes, Dissert. 1866.)

Mercuric nickel sulphocyanide, $\text{Hg}(\text{SCN})_2 \cdot \text{Ni}(\text{SCN})_2 + 2\text{H}_2\text{O}$.

Moderately sol. in hot H_2O . (Cleve, J. pr. 91. 227.)

Very sol. in $\text{MSCN} + \text{Aq}$. (Orloff, C. C. 1906, I. 1411.)

Mercuric potassium sulphocyanide, $\text{Hg}(\text{SCN})_2 \cdot \text{KSCN}$.

Sol. in cold, more easily in hot H_2O . Sol. in alcohol and ether. Very sol. in NH_4Cl or $\text{KCl} + \text{Aq}$. (Claus.)

$\text{K}_2\text{Hg}(\text{SCN})_4$. Very sol. in H_2O ; sol. in alcohol.

Insol. in anhydrous ether. (Rosenheim, Z. anorg. 1901, 27. 285.)

Mercuric rubidium sulphocyanide, $\text{Hg}(\text{SCN})_2 \cdot \text{RbSCN}$.

Sol. in alcohol without decomp. Decomp. by H_2O .

$\text{Hg}(\text{SCN})_2 \cdot 2\text{RbSCN} + \frac{1}{2}\text{H}_2\text{O}$. Easily sol. in H_2O without decomp. (Grossmann, B. 1904, 37. 1259.)

Mercuric sodium sulphocyanide, $\text{Na}_2\text{Hg}(\text{SCN})_3$.

Very hygroscopic. (Rosenheim, Z. anorg. 1901, 27. 286.)

Mercuric zinc sulphocyanide, $\text{Hg}(\text{SCN})_2 \cdot \text{Zn}(\text{SCN})_2$.

Scarcely sol. in cold H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. (Cleve.)

Mercuric sulphocyanide ammonia, $2\text{Hg}(\text{SCN})_2 \cdot 3\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Decomp. by H_2O and alcohol. $\text{Hg}(\text{SCN})_2 \cdot 4\text{NH}_3$. (Peters, B. 1908, 41. 3178.)

Mercuric sulphocyanide ammonium bromide, $\text{Hg}(\text{SCN})_2 \cdot \text{NH}_4\text{Br}$.

Decomp. by H_2O . Sol. in alcohol. (Grossmann, Z. anorg. 1903, 37. 418.)

Mercuric sulphocyanide ammonium chloride, $\text{Hg}(\text{SCN})_2, \text{NH}_4\text{Cl}$.

Decomp. by H_2O . Sol. in warm alcohol from which it can be cryst. (Grossmann.)

Mercuric sulphocyanide bromide, HgSCNBr .

Insol. in cold H_2O ; sol. in hot H_2O and in alcohol. (Rosenheim, Z. anorg. 1901, 27. 282.)

Mercuric sulphocyanide chloride, HgSCNCl .

Insol. in cold H_2O

Sol. in hot H_2O and alcohol. (Rosenheim)

Mercuric sulphocyanide potassium bromide, $\text{Hg}(\text{SCN})_2, 2\text{KBr}$.

Very sol. in H_2O . (Grossmann, Z. anorg. 1903, 37. 418)

Mercuric sulphocyanide potassium chloride, $\text{Hg}(\text{SCN})_2, \text{KCl}$.

Decomp. by H_2O .

Not decomp. by recryst. from warm alcohol (Grossmann.)

Molybdenum sulphocyanide, $\text{Mo}(\text{SCN})_3(?)$.

Sol. in H_2O and ether. (Braun, Z. anal. 6. 86.)

Molybdenum potassium sulphocyanide, $\text{K}_2\text{Mo}(\text{SCN})_6 + 4\text{H}_2\text{O}$.

Cryst. from boiling H_2O and alcohol. (Chilesotti, Gazz. ch. it. 1904, 34. (2) 493.)

Molybdenum sodium sulphocyanide, $\text{Na}_2\text{Mo}(\text{SCN})_6 + 12\text{H}_2\text{O}$.

(Rosenheim, B. 1909, 42. 154.)

Molybdenum thallos sulphocyanide, $\text{MoTi}_2(\text{SCN})_6$.

(Rosenheim and Garfunkel, B. 1908, 41. 2388.)

Molybdenum sulphocyanide zinc amine, $2\text{Mo}(\text{SCN})_6, 3\text{Zn}(\text{NH}_3)_4$.

(Rosenheim and Garfunkel, B. 1908, 41. 2390.)

$2\text{Mo}(\text{SCN})_6(\text{OH})_2, \text{Zn}_3(\text{NH}_3)_{11}$. Can be cryst. from boiling $\text{NH}_4\text{OH} + \text{Aq}$. Air-dried salt probably has the composition $2\text{Mo}(\text{SCN})_6(\text{OH})_2, 3\text{Zn}(\text{NH}_3)_4 + 2\text{H}_2\text{O}$. (Maas and Sand, B. 1908, 41. 1510.)

$2\text{Mo}(\text{SCN})_6(\text{OH})_2, \text{Zn}_3(\text{NH}_3)_{13}$. (Maas and Sand.)

Nickel sulphocyanide, $\text{Ni}(\text{SCN})_2$.

Sol. in H_2O . (Grossmann, B. 1904, 37. 565.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O and alcohol. Insol. in acetone. (Krug and M'Elroy.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . (Rosenheim and Cohn, Z. anorg. 1901, 27. 292.)

Nickel potassium sulphocyanide, $\text{K}_4\text{Ni}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Sol. in H_2O with decomp.

Sl. sol. in cold, easily sol. in hot alcohol. (Rosenheim, Z. anorg. 1901, 27. 292.)

Nickel sodium sulphocyanide, $\text{NiNa}_2(\text{SCN})_4 + 8\text{H}_2\text{O}$.

Sol. in H_2O with decomp.

Sl. sol. cold, readily sol. hot alcohol. (Rosenheim, Z. anorg. 1901, 27. 292.)

Nickel sulphocyanide ammonia, $\text{Ni}(\text{SCN})_2, 3\text{NH}_3$

(Peters, B. 1908, 41. 3178.)

$\text{Ni}(\text{SCN})_2, 4\text{NH}_3$. Decomp. by H_2O .

Platinous sulphocyanide, $\text{Pt}(\text{SCN})_2(?)$.

Insol in H_2O .

See *Platinosulphocyanides, and Platinosulphocyanides*.

Potassium sulphocyanide, KSCN .

Deliquescent. Very sol. in H_2O . 100 pts. H_2O dissolve 177.2 pts. at 0° , and 217.0 pts at 20° .

100 g. sat. $\text{KSCN} + \text{Aq}$ contain 70.5 g. KSCN at 25° . (Foote, Z. phys. Ch. 1903, 46. 81.)

150 pts. $\text{KSCN} + 100$ pts. H_2O at 10.8° lower the temp. 34.5° . (Rudorff, B. 2. 68.)

Solubility of $\text{KSCN} + \text{AgSCN}$ at 25° .

KSCN	AgSCN	Solid phase
70.53	0.00	KSCN
66.55	9.32	KSCN + 2KSCN, AgSCN
64.47	10.62	2KSCN, AgSCN
61.25	11.76	"
58.34	13.55	"
53.21	17.53	"
50.68	20.43	2KSCN, AgSCN + KSCN, AgSCN
49.43	20.32	KSCN, AgSCN
32.51	18.34	"
24.68	16.41	"
23.86	16.07	KSCN, AgSCN + AgSCN

(Foote, Z. phys. Ch. 1903, 46. 81.)

See also AgSCN .

Sol. in alcohol, especially easily if boiling.

Sol. in acetone. (Krug and M'Elroy.)

Sol. in liquid SO_2 . (Walden, Z. anorg. 1902, 30. 160.)

100 g. acetone dissolve 20.75 g. KSCN at 22° , and 20.40 g. at 58° .

100 g. amyl alcohol dissolve 0.18 g. KSCN at 13° ; 1.34 g. at 65° ; 2.14 g. at 100° ; 3.15 g. at 133.5° .

100 g. ethyl acetate dissolve 0.44 g. KSCN at 0° ; 0.40 g. at 14° ; 0.20 g. at 79° .

100 g. pyridine dissolve 6.75 g. KSCN at 0° ; 6.15 g. at 20° ; 4.97 g. at 58° ; 3.88 g. at

97°; 3.21 g. at 115°. (Laszcynski, B. 1894, 27. 2285.)

100 g. acetonitrile dissolve 11.31 g. KSCN at 18°. (Naumann and Schier, B. 1914, 47. 249.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Potassium molybdenyl sulphocyanide,
 $3\text{KSCN}, \text{Mo}(\text{OH})(\text{SCN})_3 + 4\text{H}_2\text{O}.$

Sol. in H_2O . (Sand and Maas, B. 1908, 41. 1506.)

Potassium silver sulphocyanide, KSCN, AgSCN.

Decomp. by H_2O .

See Donk under KSCN.

$2\text{KSCN}, \text{AgSCN}$. Stable in the air. (Wells, Am. Ch. J. 1902, 28. 265.)

See Donk under KSCN.

$3\text{KSCN}, \text{AgSCN}$. (Wells.)

Potassium stannic sulphocyanide,
 $\text{K}_2\text{Sn}(\text{SCN})_6 + 4\text{H}_2\text{O}.$

Very sol. in H_2O .

Sol. in alcohol and acetone. (Weinland and Bames, Z. anorg. 1909, 62. 258.)

Potassium titanyl sulphocyanide,
 $2\text{KSCN}, \text{TiO}(\text{SCN})_2 + \text{H}_2\text{O}.$

Sol. in cold H_2O without immediate decomp. but slowly decomp. (Rosenheim and Cohn, Z. anorg. 1901, 28. 169.)

Potassium vanadium sulphocyanide,
 $3\text{KSCN}, \text{V}(\text{SCN})_3 + 4\text{H}_2\text{O}.$

Sol. in H_2O . Sol. in alcohol with a green color. Sl. sol. in ether. (Ciocci, Z. anorg. 1898, 19. 309.)

Sol. in H_2O with decomp.; stable in aq. solution in the presence of an excess of KSCN; sol. in alcohol. (Locke, Am. Ch. J. 1898, 20. 604.)

Potassium vanadyl sulphocyanide,
 $\text{K}_2\text{VO}(\text{SCN})_4 + 5\text{H}_2\text{O}.$

Sol. in H_2O , alcohol, ether, amyl alcohol and ethyl acetate. (Koppel, Z. anorg. 1903, 36. 292.)

Potassium zinc sulphocyanide, $2\text{KSCN}, \text{Zn}(\text{SCN})_2 + 3\text{H}_2\text{O}.$

Easily sol. in alcohol. (Walden, Z. anorg. 1900, 23. 374.)

Potassium sulphocyanide mercuric bromide,
KSCN, HgBr_2 .

Very sol. in H_2O .

Sol. in alcohol. (Grossmann, B. 1902, 35. 2945.)

$2\text{KSCN}, \text{HgBr}_2$. Very sol. in H_2O . Sol. in alcohol. (Grossman.)

Potassium sulphocyanide mercuric iodide,
 $2\text{KSCN}, \text{HgI}_2$.

Undecomp. by solution in conc. alcohol, or in KSCN + Aq. (Grossmann, Z. anorg. 1903, 37. 421.)

+ $2\text{H}_2\text{O}$. Decomp. by H_2O . (Philipp, Pogg, 1867, 131. 94.)

Silicon sulphocyanide, $\text{Si}(\text{SCN})_4$.

Decomp. by H_2O and alcohol.

Sol. in CS_2 , CHCl_3 and ligroin. (Reynolds, Proc. Chem. Soc. 1906, 22. 17.)

Silver sulphocyanide, AgSCN.

1 l. H_2O dissolves 1.08×10^{-6} g. mols. AgSCN at 25°. (Küster and Thiel, Z. anorg. 1902, 33. 139.)

1 l. H_2O dissolves 1.25×10^{-6} gram-atoms of silver at 25°. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Sl. sol. in H_2O . 1 liter of sat. solution at 19.96° contains 1.37×10^{-4} g. (Böttger, Z. phys. Ch. 1903, 46. 603.)

6.4 milligrams are dissolved in 1 liter of sat. solution at 100°. (Böttger, Z. phys. Ch. 1906, 56. 93.)

Solubility product of AgSCN is 0.49 and 1.16×10^{-12} mols. per l. at 18° and 25° respectively. (Kirschner, Z. phys. Ch. 1912, 79. 245.)

Solubility in $\text{H}_2\text{O} = 1.2 \times 10^{-6}$ g. mol. per liter at 25°. (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

1 l. H_2O dissolves 0.00025 g. AgSCN at 21°. (Whitby, Z. anorg. 1910, 67. 108.)

Insol. in acids, excepting conc. H_2SO_4 or HNO_3 . Insol. in dil., sol. in conc. NH_4OH + Aq. Sol. in KSCN + Aq. Insol. in AgNO_3 or NH_4SCN + Aq. Sol. in $\text{Hg}_2(\text{NO}_3)_2$ + Aq.

Solubility in KSCN at 25°.

Mol KSCN in 1 litre	g. AgSCN in 1 litre
1 25	22 34
1 20	19 93
1 12	16 18
1 066	14 10
0.626	2 80
0 573	2 06

(Hellwig, Z. anorg. 1900, 25. 184.)

Solubility in N/10 KSCN + Aq at 18° = 2.5×10^{-4} . (Kirschner, Z. phys. Ch. 1912, 79. 247.)

See also KSCN.

1 l. of a 3-N solution of AgNO_3 dissolves 0.432 g. AgSCN at 25°. Nearly insol. in less dil. solution. (Hellwig, Z. anorg. 1900, 25. 179.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Hamers, Dissert. 1906; Naumann, B. 1910, 43. 314.)

Silver strontium sulphocyanide, 2AgSCN , $\text{Sr}(\text{SCN})_2 + 2\text{H}_2\text{O}$.

Stable in the air. (Wells, Am. Ch. J. 1902, 28. 270.)

Silver zinc sulphocyanide, 2AgSCN , $\text{Zn}(\text{SCN})_2$.

Decomp. by hot H_2O . (Wells.)

Silver sulphocyanide ammonia, AgSCN , 2NH_3 .

Decomp. by H_2O .

Samarium sulphocyanide, $\text{Sm}(\text{SCN})_3 + 6\text{H}_2\text{O}$.

Very deliquescent. (Cleve.)

Sodium sulphocyanide, NaSCN .

Very deliquescent. Very sol. in H_2O and alcohol.

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Sodium stannic sulphocyanide, $\text{Na}_2\text{Sn}(\text{SCN})_6 + 6\text{H}_2\text{O}$.

Very sol. in H_2O . Sol. in alcohol and acetone (Weinland and Barnes, Z. anorg. 1909, 62. 257.)

Sodium vanadium sulphocyanide, 3NaSCN , $\text{V}(\text{SCN})_3 + 12\text{H}_2\text{O}$.

Very hygroscopic. Sol. in H_2O and alcohol. (Ciocci, Z. anorg. 1898, 19. 313.)

Strontium sulphocyanide, $\text{Sr}(\text{SCN})_2 + 3\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O and alcohol.

Strontium stannic sulphocyanide, $\text{SrSn}(\text{SCN})_6 + 12\text{H}_2\text{O}$.

Sol. in H_2O , alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62. 259.)

Thallium sulphocyanide, TlSCN .

Sl. sol. in H_2O . 3.15 g. are contained in 1 liter of sat. solution at 20° ; 3.905 g. at 25° ; 7.269 g. at 39.75° . Insol. in alcohol. (Böttger, Z. phys. Ch. 1903, 46. 603.)

Titanyl sulphocyanide, $\text{TiO}(\text{SCN})_2 + 2\text{H}_2\text{O}$.

Sol. in cold H_2O .

Tin (stannous) sulphocyanide, $\text{Sn}(\text{SCN})_2$.

Sol. in H_2O and alcohol. (Classen, J. pr. 96. 349.)

Sol. in cold H_2O . (Rosenheim, Z. anorg. 1901, 28. 168.)

Yttrium sulphocyanide, $\text{Y}(\text{SCN})_3 + 6\text{H}_2\text{O}$.

Not deliquescent. Very sol. in H_2O , alcohol, or ether.

Zinc sulphocyanide, $\text{Zn}(\text{SCN})_2$.

Less sol. in H_2O and alcohol than most other cyanides.

Zinc sulphocyanide ammonia, $\text{Zn}(\text{SCN})_2$, 12NH_3 .

Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$

Sulphocyanoplatinic acid.

See Platinosulphocyanhydric acid.

Sulphocyanoplatinous acid.

See Platinosulphocyanhydric acid.

Sulphohypophosphoric acid.

Aluminum sulphohypophosphate, $\text{Al}_2(\text{PS}_2)_3$.

Unstable in the air. Sol. in H_2O with decomp. (Friedel, C. R. 1894, 119. 262.)

Cadmium —, $\text{Cd}_2\text{P}_2\text{S}_6$.

Partially decomp. in moist air. Decomp. by H_2O , cold HNO_3 or alkalis + Aq. (Ferrand, A. ch. 1899, (7) 17. 423; Bull. Soc. 1895, (3) 13. 116.)

Chromium —, $\text{Cr}_2\text{P}_2\text{S}_6$.

Insol. in HNO_3 . Very sl. attacked by aqua regia. (Ferrand.)

Cupric —, $\text{Cu}_2\text{P}_2\text{S}_6$.

Ppt. (Friedel, C. R. 1894, 119. 262.)

Iron (ferrous) —, $\text{Fe}_2\text{P}_2\text{S}_6$.

Sol. in HNO_3 and in a mixture of HNO_3 with KClO_3 . (Friedel.)

Lead —, $\text{Pb}_2\text{P}_2\text{S}_6$.

Not decomp. by boiling H_2O . (Friedel.)

Mercuric —, $\text{Hg}_2\text{P}_2\text{S}_6$.

Slowly decomp. by boiling H_2O , more rapidly by $\text{KOH} + \text{Aq.}$ (Friedel.)

Nickel —, $\text{Ni}_2\text{P}_2\text{S}_6$.

Not attacked by boiling H_2O or hot or cold acids. Sl. attacked by aqua regia. (Ferrand, A. ch. 1899, (7) 17. 416.)

Silver —, $\text{Ag}_4\text{P}_2\text{S}_6$.

Ppt. (Friedel, C. R. 1894, 119. 263.)

Tin (stannous) hypophosphate —, SnP_2S_6 .

Decomp. by boiling H_2O . Sol. in dil. $\text{KOH} + \text{Aq.}$ (Friedel, C. R. 1894, 119. 264.)

Tin (stannic) —, SnP_2S_6 .

Easily decomp. by boiling H_2O . Sol. in dil. $\text{KOH} + \text{Aq.}$ (Friedel.)

Zinc sulphohypophosphate, $Zn_2P_2S_6$.

Decomp. in moist air. Insol. in H_2O . Partially decomp. by boiling H_2O . Violently attacked by HNO_3 . Sol. in aqua regia. Not attacked by HCl . (Ferrand, A. ch. 1899, (7) 17. 421.)

Zinc —, $Zn_2P_2S_6$.

Insol. in H_2O . Partly decomp. by boiling H_2O . Not decomp. by HCl or HNO_3 but by aqua regia. (Ferrand, Bull. Soc. 1895, (3) 13. 115.)

Sulphomolybdic acid.**Ammonium sulphomolybdate, $(NH_4)_2MoS_4$.**

Easily sol. in H_2O ; very sl. sol. in alcohol. (Berzelius, Pogg. 83. 261.)

Ammonium cupric sulphomolybdate.

Sl. sol. in H_2O . (Debray, C. R. 96. 1616.)

Barium sulphomolybdate, $BaMoS_4$.

More sol. in H_2O than $BaMo_3S_{10}$. Known only in solution. (Berzelius.)

BaS , $3MoS_3 = BaMo_3S_{10}$. Sl. sol. in cold, easily sol. in hot H_2O . Not decomp. by conc. cold $HNO_3 + Aq$, but more easily by dil. $HNO_3 + Aq$. (Berzelius.)

Cadmium sulphomolybdate.

Insol. in H_2O . (Berzelius.)

Cæsium sulphomolybdate, Cs_2S , $3MoS_4 + 7H_2O$.

As Rb comp. (Herschfinkel, Dissert. 1907.) $3Cs_2S$, $5MoS_4$ (Herschfinkel.)

Calcium sulphomolybdate, CaS , $3MoS_3$.

Sol. in H_2O . (Berzelius.)

$CaMoS_4$. More sol. in H_2O than CaS , $3MoS_3$. Known only in solution. (Berzelius.)

Cerium sulphomolybdate.

Precipitate. (Berzelius.)

Cobalt sulphomolybdate, $CoMoS_4$.

Sol. in $K_2MoS_4 + Aq$. (Berzelius.)

Cupric sulphomolybdate.

(Debray, C. R. 96. 1616.)

Ferrous sulphomolybdate, $FeMoS_4$.

Sol. in H_2O . (Berzelius.)

Ferric sulphomolybdate, $Fe_2(MoS_4)_3$.

Sol. in $K_2MoS_4 + Aq$.

Lead sulphomolybdate.

Ppt. (Berzelius.)

Lithium sulphomolybdate.

Not deliquescent, but very easily sol. in H_2O . (Berzelius.)

Magnesium sulphomolybdate, $MgMoS_4$.

Sol. in $K_2MoS_4 + Aq$. (Berzelius.)

Manganous sulphomolybdate, $MnMoS_4$.

Sol. in H_2O . (Berzelius.)

Mercurous sulphomolybdate, Hg_2MoS_4 (?)

Ppt.

Mercuric sulphomolybdate, $HgMoS_4$.

Insol. in $K_2MoS_4 + Aq$.

Nickel sulphomolybdate, $NiMoS_4$.

Sol. in $K_2MoO_4 + Aq$. (Berzelius.)

Potassium sulphomolybdate, basic, $K_6Mo_9S_9$.

Easily sol. in H_2O . Insol. in alcohol and ether. (Kruss, B. 16. 2050.)

Potassium sulphomolybdate, K_2MoS_4 .

Sol. in H_2O , from which it is precipitated by alcohol. (Berzelius.)

Rubidium sulphomolybdate, $3Rb_2S$, $8MoS_3 + 30H_2O$.

Very sl. sol. in H_2O . Sol. by addition of NH_3 . (Herschfinkel, Dissert. 1907.) $5Rb_2S$, $6MoS_2$. (Herschfinkel.)

Silver sulphomolybdate, Ag_2MoS_4 .

Ppt.

Sodium sulphomolybdate, Na_2MoS_4 .

Sol. in H_2O , and not precipitated by alcohol from aqueous solution. (Berzelius.)

Strontium sulphomolybdates.

Exactly analogous to the Ba salts, which see. (Berzelius.)

Zinc sulphomolybdate.

Ppt. Insol. in H_2O . (Berzelius.)

Monosulphomolybdic acid.]**Sodium monosulphomolybdate, Na_2MoO_2S .**

Rather hygroscopic. Sol. in H_2O ; forms deep blue solution with H_2SO_4 . Sol. in $HC_2H_3O_2 + Aq$. (Kruss, A. 225. 1.)

Disulphomolybdic acid.**Ammonium disulphomolybdate, $(NH_4)_2MoO_2S_2$.**

Sl. sol. in cold, easily in hot H_2O . Insol. in sat. $NH_4Cl + Aq$ and absolute alcohol. Aqueous solution is decomp. by boiling. (Bodenstab, J. pr. 78. 186.)

Potassium disulphomolybdate, $K_2MoO_2S_2$.

Very sol. in H_2O and alcohol. Sol. in $HC_2H_3O_2 + Aq.$ (Kruss, B. 16. 2046.)

Trisulphomolybdic acid.**Ammonium hydrogen trisulphopyromolybdate, $NH_4HMo_2O_4S_3$.**

Precipitate. Insol. in alcohol or CS_2 . (Kruss, B. 16. 2047.)

Potassium hydrogen trisulphopyromolybdate, $KHMo_2O_4S_3$.

Very easily sol. in H_2O . (Kruss, B. 16. 2048.)

Sodium hydrogen trisulphopyromolybdate, $NaHMo_2O_4S_3$.

Precipitate. Much more sol. in H_2O than the NH_4 compound. (Kruss, B. 16. 2047.)

Potassium sulphomolybdate, $K_2Mo_4S_6O_7$.

Sol. in H_2O , $HC_2H_3O_2$, and H_2SO_4 . (Kruss, B. 17. 1771.)

Pentasulphomolybdic acid.**Potassium pentasulphomolybdate, $KMoS_5$.**

Sol. in warm H_2O . (Hofmann, Z. anorg. 1896, 12. 62.)

Persulphomolybdic acid, H_2MoS_5 .

Precipitate. Insol. in H_2O , alcohol, ether, CS_2 , and acetic acid.

Decomp. slowly by hot H_2SO_4 . Sol. in warm $KOH + Aq.$ and cold $K_2S + Aq.$ Not attacked by cold $KSH + Aq.$ but dissolves on warming. (Kruss, B. 17. 1773.)

Ammonium persulphomolybdate, $(NH_4)_2MoS_5$.

Very sl. sol. in cold, more easily in hot H_2O . Insol. in $NH_4OH + Aq.$ (Berzelius.)

Barium —, $BaMoS_5$.

Insol. in boiling H_2O or dil. $HCl + Aq.$ (Berzelius.)

Calcium —.

Difficultly sol. in H_2O . (Berzelius.)

Cerium —.

Precipitate. (Berzelius.)

Ferrous —.

Insol. in Fe salts $+ Aq.$ but sol. in $K_2MoS_5 + Aq.$ (Berzelius.)

Ferric —.

Ppt.

Lithium persulphomolybdate.

Sl. sol. in cold, easily sol. in hot H_2O . (Berzelius.)

Magnesium —.

Insol. precipitate. (Berzelius.)

Nickel —.

Ppt. Sol. in $K_2MoS_5 + Aq.$ from which it separates in 24 hours. (Berzelius.)

Potassium —, K_2MoS_5 .

Almost insol. in cold, more sol. in hot H_2O . Insol. in cold $KOH + Aq.$ (Berzelius.)

Potassium hydrogen —, $KHMoS_5$.

Sol. in H_2O . (Kruss.)

Sodium —, Na_2MoS_5 .

Sl. sol. in cold, easily in hot H_2O . (Berzelius.)

Sodium hydrogen —, $NaHMoS_5$.

(Kruss.)

Persulphomolybdic acid, $HMoS_5$.

Sol. in H_2O . (Hofmann, Z. anorg. 1896, 12. 59.)

Ammonium —, $NH_4MoS_5 + H_2O$.

Sl. sol. in H_2O and in alcohol with decomp. (Hofmann.)

Cæsium —, $CsMoS_5$.

Almost insol. in H_2O . (Hofmann.)

Potassium —, $KMoS_5$.

Sol. in H_2O . (Hofmann.)

Thallium —, $TlMoS_5$.

Insol. in H_2O . (Hofmann.)

Sulphonosmic acid.**Potassium sulphonosmate,**

$7K_2O, 4OsO_3, 10SO_2$.

Sol. in H_2O . (Rosenheim, Z. anorg. 1899, 21. 127.)

$+ 3H_2O$. Sol. in H_2O . (Rosenheim.)

$+ 7H_2O$. Easily sol. in H_2O ; decomp. in aq. solution at 70° . (Rosenheim.)

$11K_2O, 4OsO_3, 14SO_2 + 7H_2O$. Sol. in H_2O . (Rosenheim.)

Sodium sulphonosmate,

$3Na_2O, OsO_3, 4SO_2 + 5H_2O$.

Easily sol. in H_2O ; decomp. in aq. solution. (Rosenheim.)

Sulphopalladic acid.

Potassium palladious sulphopalladate, $K_2S, Pd_2S, PdS_2 = K_2Pd_3S_4$.

Insol. in H_2O . Moderately conc. $HCl + Aq$ dissolves out K without evolution of H_2S . (Schneider, Pogg. 141. 526.)

Silver sulphopalladate, Ag_2PdS_3 .
(Schneider.)

Silver palladious sulphopalladate, $Ag_2S, Pd_2S, PdS_2 = Ag_2Pd_3S_4$.
Extraordinarily stable. (Schneider.)

Sodium sulphopalladate, Na_2PdS_3 .
Slowly sol. in H_2O . Insol. in alcohol. (Schneider, Pogg. 141. 520.)

Sulphophosphide of M.
See M phosphosulphide.

Sulphophosphamic acid, $PS^{(OH)}_{NH_2}(?)$.
See Thiophosphamic acid.

Sulphophosphodiamic acid, $PS^{OH}_{(NH_2)_2}(?)$.
See Thiophosphodiamic acid.

Sulphophosphotriamide, $PS(NH_2)_3$.
See Thiophosphoryl triamide.

Sulphophosphoric acid, H_3PSO_3 .
See Thiophosphoric acid.
 H_2PS_4 . Known only in its salts.

Ammonium sulphophosphate, $(NH_4)_3PS_4$.
Stable in the air. (Ephraim, B. 1911, 44. 3408.)

Antimony sulphophosphate, $SbPS_4$.
Insol. in H_2O , alcohol, ether, CS_2 , $HCl + Aq$, dil. $H_2SO_4 + Aq$, C_2H_5 , or $HC_2H_3O_2$. Decomp. by boiling with conc. $HNO_3 + Aq$, H_2SO_4 , aqua regia, KOH , $NaOH$ or $NH_4OH + Aq$. (Glatzel, B. 24. 3886.)

Arsenic sulphophosphate, $AsPS_4$.
Insol. in H_2O , alcohol, $HCl + Aq$, etc. Decomp. by warm HNO_3 , aqua regia, dil. H_2SO_4 ; also sol. in KOH or $NH_4OH + Aq$. (Glatzel, Z. anorg. 4. 186.)

Barium sulphophosphate, $Ba_3(PS_4)_2 + xH_2O$.
(Ephraim, B. 1911, 44. 3409.)

Bismuth sulphophosphate, $BiPS_4$.
Insol. in H_2O , alcohol, ether, CS_2 , benzene, $HC_2H_3O_2$, or dil. $H_2SO_4 + Aq$. Decomp. by boiling $HCl + Aq$, conc. H_2SO_4 , HNO_3 , or aqua regia; also by $NaOH$, KOH , or $NH_4OH + Aq$. (Glatzel, Z. anorg. 4. 186.)

Cadmium sulphophosphate, $Cd_3(PS_4)_2$.

Insol. in H_2O , alcohol, ether, benzene, CS_2 , and $HC_2H_3O_2$. Decomp. by hot $HCl + Aq$. Very sl. attacked by dil. $H_2SO_4 + Aq$. Slowly sol. in hot HNO_3 , rapidly in aqua regia or hot conc. H_2SO_4 . (Glatzel, Z. anorg. 4. 186.)

Cuprous sulphophosphate, Cu_3PS_4 .

Insol. in H_2O , alcohol, etc.; also in HCl or dil. $H_2SO_4 + Aq$. Decomp. by HNO_3 , aqua regia, etc., not by KOH or $NaOH + Aq$. (Glatzel.)

Ferrous sulphophosphate, $Fe_3(PS_4)_2$.

Insol. in H_2O , alcohol, ether, etc.; insol. in HCl or hot dil. $H_2SO_4 + Aq$. Decomp. by HNO_3 , aqua regia, or conc. H_2SO_4 . Not attacked by KOH or $NH_4OH + Aq$. (Glatzel.)

Lead sulphophosphate, $Pb_3(PS_4)_2$.

Insol. in H_2O , alcohol, etc. Decomp. by warm $HCl + Aq$, conc. $HNO_3 + Aq$; not attacked by $NH_4OH + Aq$; sl. decomp. by $KOH + Aq$. (Glatzel.)

Manganous sulphophosphate, $Mn_3(PS_4)_2$.

Insol. in H_2O , alcohol, ether, benzene, CS_2 , or $HC_2H_3O_2$. Not attacked by $HCl + Aq$. Sol. in HNO_3 or aqua regia, with separation of S . Not attacked by dil. $H_2SO_4 + Aq$. (Glatzel, Z. anorg. 4. 186.)

Mercuric sulphophosphate, $Hg_3(PS_4)_2$.

Insol. in H_2O , alcohol, etc.; also in HCl , dil. HNO_3 , or $H_2SO_4 + Aq$. Not attacked by conc. HNO_3 or aqua regia; easily sol. in $HNO_3 + Br_2 + Aq$. (Glatzel.)

Nickel sulphophosphate, $Ni_3(PS_4)_2$.

As the ferrous salt. (Glatzel.)

Potassium sulphophosphate, $K_3PS_4 + H_2O$.

Easily sol. in H_2O . (Ephraim, B. 1911, 44. 3407.)

Silver sulphophosphate, Ag_3PS_4 .

Insol. in H_2O , alcohol, etc.; also in HCl , HNO_3 , or dil. $H_2SO_4 + Aq$. Decomp. by conc. H_2SO_4 , and aqua regia. (Glatzel.)

Sodium sulphophosphate, $Na_3PS_4 + 8H_2O$.

Decomp. by H_2O .
Sol. in $Na_2S + Aq$. (Glatzel, Z. anorg. 1905, 44. 65.)

Thalious sulphophosphate, Tl_3PS_4 .

Insol. in H_2O , alcohol, etc. Sol. in HCl , dil. $H_2SO_4 + Aq$, etc. Not attacked by $NH_4OH + Aq$; sl. decomp. by conc. $KOH + Aq$. (Glatzel.)

Tin (stannous) sulphophosphate, $\text{Sn}_3(\text{PS}_4)_2$.
 Insol. in H_2O , alcohol, etc. Insol. in dil. H_2SO_4 or $\text{HCl} + \text{Aq}$. Decomp. by $\text{HNO}_3 + \text{Aq}$, aqua regia, NH_4OH , or $\text{KOH} + \text{Aq}$. (Glatzel.)

Zinc sulphophosphate, $\text{Zn}_3(\text{PS}_4)_2$.

Insol. in H_2O , alcohol, ether, etc. Sol. in $\text{HCl} + \text{Aq}$ or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily attacked by $\text{KOH} + \text{Aq}$; sl. decomp. by $\text{NH}_4\text{OH} + \text{Aq}$. (Glatzel.)

Sulphopyrophosphoric acid.

Aluminum sulphopyrophosphate, $\text{Al}_2\text{P}_2\text{S}_7$.

Decomp. in moist air.
 Violently decomp. by H_2O or acids. (Ferrand, A. ch. 1899, (7) 429.)

Cadmium —, $\text{Cd}_2\text{P}_2\text{S}_7$.

Decomp. in moist air.
 Not attacked by cold acids. (Ferrand.)

Chromium —, $\text{Cr}_2\text{P}_2\text{S}_7$.

Decomp. in moist air.
 Not readily attacked by acids. (Ferrand.)

Cuprous —, $\text{Cu}_4\text{P}_2\text{S}_7$.

Not attacked by cold H_2SO_4 or boiling HCl . (Ferrand.)
 Sol. in hot conc. HNO_3 . (Ferrand.)
 Sol. in alkalis, and in all acids except HCl . (Ferrand, C. R. 1896, 122. 886.)

Ferrous —, $\text{Fe}_2\text{P}_2\text{S}_7$.

Insol. in cold acids.
 Sl. attacked by boiling HCl or hot $\text{KOH} + \text{Aq}$.
 Decomp. by fused KOH . (Ferrand, A. ch. 1899, (7) 17. 410.)

Lead —, $\text{Pb}_2\text{P}_2\text{S}_7$.

Not attacked by cold HNO_3 . (Ferrand,)

Mercurous —, $\text{Hg}_4\text{P}_2\text{S}_7$.

Decomp. by moist air or hot HNO_3 . (Ferrand.)
 Almost insol. in acids; decomp. by H_2O and moist air. (Ferrand, C. R. 1896, 122. 888.)

Nickel —, $\text{Ni}_2\text{P}_2\text{S}_7$.

Decomp. by H_2O and by conc. HNO_3 at 150° in a sealed tube. (Ferrand, A. ch. 1899, (7) 17. 418.)

Silver —, $\text{Ag}_4\text{P}_2\text{S}_7$.

Not decomp. by H_2O .
 Decomp. by aqua regia.
 Not attacked by HNO_3 . (Ferrand.)

Zinc —, $\text{Zn}_2\text{P}_2\text{S}_7$.

Decomp. in moist air.
 Decomp. by H_2O .

Violently attacked by cold HNO_3 . (Ferrand.)

Sulphophosphorous acid,

See Thiophosphorous acid.

H_3PS_3 . Known only in its salts.

Aluminum sulphophosphite, $\text{Al}_3(\text{PS}_3)_2$.

Very unstable.
 Decomp. in the air. (Ferrand, C. R. 1896, 122. 622.)

Barium sulphophosphite, $\text{Ba}_3(\text{PS}_3)_2 + x\text{H}_2\text{O}$.

Sol. in dil. acids.
 Insol. in alcohol. (Ephraim, B. 1911, 44. 3412.)

Chromous sulphophosphite, $\text{Cr}_3(\text{PS}_3)_2$.

Easily attacked by hot conc. HNO_3 or aqua regia.
 Decomp. by boiling $\text{NaOH} + \text{Aq}$. (Ferrand, A. ch. 1899, (7) 17. 419.)
 Quite stable in moist air; very slowly attacked by acids. (Ferrand, C. R. 1896, 122. 622.)

Cuprous sulphophosphite, Cu_3PS_3 .

Not attacked by H_2O or hot conc. HCl .
 Sl. attacked by cold fuming HNO_3 .
 Violently attacked by HNO_3 , aqua regia and boiling conc. H_2SO_4 .
 Not attacked by boiling $\text{NaOH} + \text{Aq}$. (Ferrand, A. ch. 1899, (7) 17. 398.)
 Fairly stable decomp. by damp air. (Ferrand, C. R. 1896, 122. 621.)

Iron (ferrous) sulphophosphite, $\text{Fe}_3(\text{PS}_3)_2$.

Very stable and resists the action of alkalis and acids. (Ferrand, C. R. 1896, 122. 622.)
 Insol. in cold acids or hot NCl .
 Sol. in hot fuming HNO_3 .
 Insol. in hot 40% $\text{KOH} + \text{Aq}$. (Ferrand, A. ch. 1899, (7) 17. 412.)

Mercuric sulphophosphite, $\text{Hg}_3(\text{PS}_3)_2$.

Decomp. in moist air.
 Not attacked by cold HNO_3 . Decomp. by hot HNO_3 . (Ferrand.)
 Unstable in the air.
 Very slowly attacked by acids. (Ferrand, C. R. 1896, 122. 622.)

Nickel sulphophosphite, $\text{Ni}_3(\text{PS}_3)_2$.

Unstable in the air.
 Attacked slowly by HNO_3 . (Ferrand.)

Silver sulphophosphite, Ag_3PS_3 .

Insol. in most reagents. (Ferrand, C. R. 1896, 122. 622.)
 Not decomp. by H_2O .
 Not easily attacked by acids. (Ferrand, A. ch. 1899, (7) 17. 414.)

Sodium sulphophosphite, $\text{Na}_3\text{PS}_3 + x\text{H}_2\text{O}$.

Very sol. in H_2O , probably with decomp. (Ephraim, B. 1911, 44. 3410.)

Zinc sulphophosphite, $\text{Zn}_3(\text{PS}_3)_2$.

Decomp. in moist air.

Sl. attacked by H_2O .

Decomp. by HNO_3 . (Ferrand, A. ch. 1899, (7) 17. 422.)

Very unstable in the air, and attacked violently by acids. (Ferrand, C. R. 1896, 122. 622.)

Sulphoplatinic acid, $\text{H}_2\text{Pt}_3\text{S}_6$.

Insol. in H_2O , but decomp. on air.

(Schneider, Pogg. 138. 604.)

$\text{H}_4\text{Pt}_3\text{S}_6$. Insol. in H_2O , but decomp. very rapidly on air. (Schneider.)

Copper sulphoplatinate, 2CuS , 2PtS , PtS_2 .

Insol. in H_2O . HCl , HNO_3 , or aqua regia dissolve out part of the Cu. (Schneider, Pogg. 139. 661.)

Lead sulphoplatinate, 2PbS , 2PtS , PtS_2 .

Insol. in hot or cold H_2O or $\text{HCl} + \text{Aq}$. $\text{HNO}_3 + \text{Aq}$ dissolves out Pb partly; aqua regia dissolves completely with difficulty. (Schneider, Pogg. 139. 662.)

Mercuric sulphoplatinate chloride, 2HgS , 2PtS , PtS_2 , 2HgCl .

Insol. in H_2O , not attacked by $\text{HCl} + \text{Aq}$, and only partially sol. in boiling aqua regia. (Schneider.)

Potassium sulphoplatinate, $\text{K}_2\text{Pt}_3\text{S}_6$.

Insol. in H_2O . $\text{HCl} + \text{Aq}$ dissolves out K without evolution of H_2S .

Composition its potassium platinous sulphoplatinate, K_2S , 3PtS , PtS_2 . (Schneider, Pogg. 138. 604.)

K_2PtS_2 .

Silver sulphoplatinate, $2\text{Ag}_2\text{S}$, 2PtS , PtS_2 .

Insol. in H_2O or $\text{HCl} + \text{Aq}$. $\text{HNO}_3 + \text{Aq}$ dissolves out Ag on warming. Aqua regia decomp. with formation of AgCl . (Schneider, Pogg. 138. 664.)

Sodium sulphoplatinate, $\text{Na}_4\text{Pt}_3\text{S}_6 = 2\text{Na}_2\text{S}$, 2PtS , PtS_2 .

Decomp. by hot H_2O , with residue of PtS_2 . (Schneider.)

$\text{Na}_2\text{Pt}_3\text{S}_6 = \text{Na}_2\text{S}$, PtS , 2PtS_2 . Insol. in H_2O . (Schneider, J. pr. (2) 48. 418.)

Thallium sulphoplatinate, $2\text{Tl}_2\text{S}$, 2PtS , PtS_2 .

Insol. in cold H_2O . Dil. acids dissolve out all the thallium. (Schneider, Pogg. 138. 626.)

Sulphoplatinous acid, H_2PtS_2

Known only in solution in H_2O , which soon decomposes. (Schneider, J. pr. (2) 48. 424.)

Sodium sulphoplatinite, Na_2PtS_2 .

Sol. in H_2O with decomp. (Schneider, J. pr. (2) 48. 420.)

$\text{H}_4\text{N}_2(\text{PtS}_2)_2$. Sol. in H_2O , from which it is pptd. by alcohol. (Schneider.)

Sulphoselenantimonous acid.

See Selenosulphantimonous acid.

Sulphoselenarsenic acid.

See Selenosulpharsenic acid.

Sulphoselenostannic acid.

See Selenosulphostannic acid.

Sulphoselenoxyarsenic acid.

See Selenosulphoxyarsenic acid.

Sulphoselenyl chloride, SSeO_3Cl_4 .

Deliquescent; decomposed by H_2O . (Clausnitzer, B. 11. 2007.)

Metasulphosilicic acid.**Sodium metasulphosilicate, Na_2SiS_3 .**

Decomp. by H_2O (Hempel, Z. anorg. 1900, 23. 41.)

Sulphostannic acid, H_2SnS_3 .

Ppt. (Kühn, A. 84. 110.)

Does not exist (Storch, W. A. B. 98. 2b. 236.)

Ammonium sulphostannate, $(\text{NH}_4)_2\text{S}$, $3\text{SnS}_2 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O , and easily decomp. (Ditte, C. R. 95. 641.)

$(\text{NH}_4)_2\text{SnS}_3 + 3\text{H}_2\text{O}$, and $+7\text{H}_2\text{O}$. Decomp. by acid. (Stanek, Z. anorg. 1898, 17. 124.)

Barium sulphostannate, $\text{BaSnS}_3 + 8\text{H}_2\text{O}$.

Sol. in cold H_2O . (Ditte, C. R. 95. 641.)

Calcium sulphostannate, 2CaS , $\text{SnS}_2 + 14\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. 95. 641.)

Tetraplatinous sulphostannate, 4PtS , SnS_2 .

Not decomp. by acids. (Schneider, J. pr. (2) 7. 214.)

Platinum potassium sulphostannate, 3PtS , K_2S , SnS_2 .

Insol. in cold H_2O . Dil. HCl or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ dissolves out all the potassium. (Schneider, Pogg. 136. 109.)

<p>Platinum sodium sulphostannate, 3PtS, Na_2S, SnS_2. Insol. in cold H_2O. (Schneider, Pogg. 136. 109.)</p> <p>Potassium sulphostannate, K_2SnS_3. Sol. in H_2O. (Kuhn, A. 84. 110.) + $3\text{H}_2\text{O}$. (Ditte, C. R. 95. 641.) $\text{K}_2\text{SnS}_4 + 4\text{H}_2\text{O}$. Sol. in H_2O pptd. by alcohol (Weinland, Z. anorg. 1898, 17. 419.)</p> <p>Sodium sulphostannate, $\text{Na}_2\text{SnS}_3 + 2\text{H}_2\text{O}$. Sl sol in H_2O. (Kuhn, A. 84. 110.) + $3\text{H}_2\text{O}$. (Ditte, C. R. 95. 641.) + $7\text{H}_2\text{O}$. Sol. in H_2O. (Höring, Zeitsch. Pharm. 1851. 120.) $\text{Na}_4\text{SnS}_4 + 12\text{H}_2\text{O}$. Melts in crystal H_2O on heating. Very sol. in H_2O. (Kuhn.)</p> <p>Strontium sulphostannate, $\text{SrSnS}_3 + 12\text{H}_2\text{O}$. Sol. in H_2O. (Ditte, C. R. 95. 641.)</p> <p>Thallium sulphostannate, Tl_4SnS_4. Ppt. Practically insol. in H_2O. (Hawley, J. Am Chem. Soc. 1907, 29. 1011.)</p> <p>Disulphopersulphuric acid.</p> <p>Sodium disulphopersulphate, $\text{Na}_2\text{S}_4\text{O}_8$. Sol. in H_2O. Cryst. in cold with $2\text{H}_2\text{O}$. (Villiers, C. R. 106. 851, 1354.) Contains 4H more and is sodium tetrathionate, $\text{Na}_2\text{S}_4\text{O}_6$, $2\text{H}_2\text{O}$ (Villiers, C. R. 108. 402.)</p> <p>Sulphotelluric acid.</p> <p>Mercurous sulphotellurate, $3\text{Hg}_2\text{S}$, TeS_2. Ppt.</p> <p>Mercuric —, 3HgS, TeS_2. Ppt. (Berzelius.)</p> <p>Potassium —, K_2TeS_4. Sol. in H_2O. (Oppenheim, J. pr. 71. 279.)</p> <p>Sodium —. Sol. in H_2O. (Oppenheim.)</p> <p>Sulphotellurous acid.</p> <p>Ammonium sulphotellurite, $3(\text{NH}_4)_2\text{S}$, TeS_2. Decomp. on air. Sol. in H_2O.</p> <p>Barium —. Very slowly sol. in H_2O.</p> <p>Calcium —. Somewhat sol. in H_2O.</p> <p>Cerium —. Insol. ppt.</p>	<p>Cobalt sulphotellurite, Co_2TeS_5. Ppt.</p> <p>Copper —, Cu_2TeS_5. Ppt.</p> <p>Ferrous —. Ppt.</p> <p>Ferric —. Ppt.</p> <p>Lead —. Ppt.</p> <p>Lithium —. Sol. in H_2O.</p> <p>Magnesium —. ---	---

Copper sulphotungstate, CuWS_4 .
Ppt.

Glucinum —, GIWS_4 .
Sol. in H_2O (?).

Ferrous —, FeWS_4 .
Sol. in H_2O .

Ferric —.
Ppt.

Lead —, PbWS_4 .
Ppt. (Berzelius.)

Magnesium —, MgWS_4 .
Easily sol. in H_2O or alcohol.

Manganous —, MnWS_4 .
Sol. in H_2O . (Berzelius.)

Mercurous —.
Ppt. (Berzelius.)

Mercuric —, HgWS_4 .
Ppt. (Berzelius.)

Nickel —, NiWS_4 .
Ppt. (Berzelius.)

Potassium —, K_2WS_4 .
Sol. in H_2O . Alcohol precipitates from aqueous solutions, but is not entirely insol. in alcohol. (Berzelius.)
Very sol. in H_2O . (Corleis, A. 232. 264.)

Potassium — nitrate, K_2WS_4 , KNO_3 .
Very sol. in cold or hot H_2O , from which it is precipitated by alcohol. (Berzelius.)

Potassium — tungstate, $\text{K}_2\text{WO}_2\text{S}_2 = \text{K}_2\text{WS}_4, \text{K}_2\text{WO}_4$.
Easily sol. in H_2O . Not precipitated by alcohol. (Berzelius.)
Is potassium *trisulphotungstate*, K_2WOS_3 , which see. (Corleis, A. 232. 244.)

Silver —, Ag_2WS_4 .
Ppt. (Berzelius.)

Sodium —, Na_2WS_4 .
Very sol. in H_2O ; less sol. in alcohol. (Berzelius.)
Very deliquescent. (Corleis, A. 232. 264.)

Strontium —.
Sol. in H_2O , and in $\text{SrS} + \text{Aq}$.

Stannous —, SnWS_4 .
Ppt. (Berzelius.)

Stannic —, SnWS_5 .
Ppt. (Berzelius.)

Zinc sulphotungstate, ZnWS_4 .

Sol. in H_2O with subsequent pptn (Berzelius.)

Monosulphotungstic acid.

Potassium monosulphotungstate,
 $\text{K}_2\text{WOS} + \text{H}_2\text{O}$
Deliquescent in moist air Very sol. in H_2O . (Corleis, A. 232. 244.)

Disulphotungstic acid.

Ammonium disulphotungstate, $(\text{NH}_4)_2\text{WO}_2\text{S}_2$.
Sol. in H_2O and alcohol. (Berzelius.)
Decomp easily when moist. (Corleis, A. 232. 264.)

Trisulphotungstic acid.

Potassium trisulphotungstate, $\text{K}_2\text{WOS}_3 + \text{H}_2\text{O}$.

Hygroscopic. Effloresces on dry air and easily decomposed. Easily sol. in H_2O . (Corleis, A. 232. 244.)

Sulphovanadic acid, $\text{V}_2\text{O}_5, 3\text{SO}_3 + 3\text{H}_2\text{O}$.
See Vanadiousulphuric acid, and Sulphate, vanadium.

Sulphovanadates.

Alkali sulphovanadates are sol. in H_2O . Ca, Sr, and Ba sulphovanadates are sl. sol. in H_2O , and all other sulphovanadates are insol. in H_2O . (Berzelius.)

Ammonium sulphovanadate, $(\text{NH}_4)_3\text{VS}_4$.

Easily sol. in H_2O . Very sl. sol. in conc. $\text{NH}_4\text{SH} + \text{Aq}$. Insol. in ether, CS_2 , or CHCl_3 . (Kruss and Ohnmais, A. 263. 46.)
See also Sulphoxyvanadic acid.

Sodium pentasulphopyrovanadate, $\text{Na}_4\text{V}_4\text{O}_{25}\text{S}_5$.

Hydroscopic; sol. in H_2O with rapid decomp. (Locke, Am. Ch. J. 1898, 20. 375.)

Sulphoxyantimononic acid.

Potassium sulphonyantimonate, $\text{K}_2\text{HSbO}_2\text{S}_2 + 2\text{H}_2\text{O}$.

Sol. in hot, less sol. in cold H_2O . Decomp. by cold H_2O . (Weinland and Gutmann, Z. anorg. 1898, 17. 414.)

Sulphoxyarsenic acid, $\text{H}_3\text{AsO}_3\text{S}$.

Known only in aqueous solution. (McCay, Am. Ch. J. 10. 459.)

Ammonium monosulphoxyarsenate,
 $(\text{NH}_4)_3\text{AsSO}_3 + 3\text{H}_2\text{O}$.

Decomp. in the air; sol. in H_2O , decomp. on boiling. (Weinland, B. 1896, 29. 1009.)

Very sol. in H_2O ; insol. in alcohol; decomp. in aq. solution and also in the air. (Weinland, Z. anorg. 1897, 14. 53.)

Decomp. in the air. (McLauchlan, B. 1901, 34. 2166.)

Ammonium hydrogen monosulphoxyarsenate, $(\text{NH}_4)_2\text{HASO}_3$.

Ppt. (McLauchlan, B. 1901, 34. 2168.)

Barium monosulphoxyarsenate, $\text{BaHASO}_3 + 10\text{H}_2\text{O}$.

(Preis, A. 257. 184.)

$\text{Ba}_3(\text{AsSO}_3)_2 + 6\text{H}_2\text{O}$. Ppt (Weinland, Z. anorg. 1897, 14. 54.)

Barium disulphoxyarsenate, $\text{Ba}_3(\text{AsS}_2\text{O}_2)_2 + 4\text{H}_2\text{O}$.

Ppt. (Preis, A. 257. 185.)

$+6\text{H}_2\text{O}$. (Weinland and Rumpf, Z. anorg. 1897, 14. 64.)

Barium potassium trisulphoxyarsenate, $\text{KBaAsS}_3\text{O} + 7\text{H}_2\text{O}$.

Ppt. (McCay, Z. anorg. 1904, 41. 469.)

Barium sodium monosulphoxyarsenate, $\text{BaNaAsSO}_3 + 9\text{H}_2\text{O}$.

Ppt. (Weinland, Z. anorg. 1897, 14. 55.)

Barium sodium sulphoxyarsenate, $\text{Ba}_7\text{Na}_2\text{As}_5\text{O}_7\text{S}_{14} + 12\text{H}_2\text{O}$.

(McCay and Foster, Z. anorg. 1904, 41. 467.)

Calcium trisulphoxyarsenate, $\text{Ca}_3(\text{AsS}_3\text{O})_2 + 20\text{H}_2\text{O}$.

Ppt. (McCay and Foster, Z. anorg. 1904, 41. 463.)

Potassium monosulphoxyarsenate, K_3AsSO_3 .
Hydroscopic. (Weinland, B. 1896, 29. 109.)

Sol. in conc. $\text{KOH} + \text{Aq}$, free from carbonate; very hydroscopic. (Weinland, Z. anorg. 1897, 14. 51.)

Potassium hydrogen monosulphoxyarsenate, $\text{K}_2\text{HASO}_3 + 2\frac{1}{2}\text{H}_2\text{O}$.

Very hygroscopic. (Weinland and Rumpf, Z. anorg. 1897, 14. 59.)

KH_2AsSO_3 . Sol. in H_2O ; solution slowly decomp. on standing. (McCay, Am. Ch. J. 10. 459.)

Formula given by Bouquet and Cloez (A. ch. (3) 13. 44) is $\text{K}_2\text{H}_4\text{As}_2\text{S}_2\text{O}_6$.

Potassium disulphoxyarsenate, $\text{K}_2\text{AsS}_2\text{O}_2 + 10\text{H}_2\text{O}$.

Very hydroscopic; decomp. by H_2O . (Weinland, Z. anorg. 1897, 14. 63.)

Potassium trisulphoxyarsenate, $\text{K}_3\text{AsS}_3\text{O} + 7\text{H}_2\text{O}$.

Yellow oil which cryst. at -20° . (McCay and Foster, Z. anorg. 1904, 41. 468.)

Sodium monosulphoxyarsenate, $\text{Na}_3\text{AsSO}_3 + 12\text{H}_2\text{O}$.

Easily sol. in H_2O . (Preis, A. 257. 180.) (McLauchlan, B. 1901, 34. 2170.)

Sol. in H_2O . (Weinland, B. 1896, 29. 1009.)

Sl. efflorescent. Insol in alcohol. (McCay, Z. anorg. 1902, 29. 42.)

Sol. in $\text{NaOH} + \text{Aq}$; decomp. by boiling with conc. NaOH . (Weinland, Z. anorg. 1897, 14. 49.)

Sodium hydrogen monosulphoxyarsenate, $\text{NaH}_2\text{AsSO}_3$.

Decomp. by H_2O ; insol. in alcohol. (Weinland, Z. anorg. 1897, 14. 58.)

$\text{Na}_2\text{HASO}_3 + 8\text{H}_2\text{O}$. Easily sol. in H_2O . (Preis.)

Sodium disulphoxyarsenate, $\text{Na}_3\text{AsS}_2\text{O}_2 + 10\text{H}_2\text{O}$.

Easily sol in H_2O . (Preis.)

Sol. in H_2O ; pptd. by alcohol. (McCay, B. 1899, 32. 2472.)

Not decomp. by boiling $\text{NaOH} + \text{Aq}$. (Weinland, Z. anorg. 1897, 14. 62.)

Insol. in alcohol. (McCay, Z. anorg. 1900, 25. 461.)

$+11\text{H}_2\text{O}$. (McLauchlan, B. 1901, 34. 2170.)

Insol. in alcohol. (McCay, Z. anorg. 1902, 29. 46.)

Sodium trisulphoxyarsenate, $\text{Na}_3\text{AsS}_3\text{O} + 11\text{H}_2\text{O}$.

Decomp. by H_2O . (McCay and Foster, Z. anorg. 1904, 41. 454.)

Sodium trisulphoxydiarsenate, $\text{As}_2\text{O}_2\text{S}_3$, $3\text{Na}_2\text{O} + 24\text{H}_2\text{O}$.

Easily sol. in H_2O . (Geuther, A. 240. 208.)

$2\text{As}_2\text{O}_2\text{S}_3$, $\text{Na}_2\text{O} + 7\text{H}_2\text{O}$. Sol. in H_2O .

(Nilson, J. pr. (2) 14. 14.)

Correct composition is $\text{Na}_8\text{As}_{18}\text{S}_{24}\text{O}_7 + 30\text{H}_2\text{O}$. (Preis.)

Sodium sulphoxyarsenate, $\text{Na}_2\text{As}_{18}\text{S}_{24}\text{O}_7 + 30\text{H}_2\text{O} = 4\text{Na}_2\text{O}$, $6\text{As}_2\text{S}_3$, $3\text{As}_2\text{S}_4\text{O} + 30\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in NH_4OH or $\text{KOH} + \text{Aq}$. (Preis, A. 257. 187.)

= Sodium oxytrisulpharsenate of Nilson.

Sodium pentasulphoxytetraarsenate, $\text{Na}_{12}\text{As}_4\text{S}_5\text{O}_{11} + 48\text{H}_2\text{O}$.

Less sol. in H_2O than other sulphoxyarsenates. (Preis.)

Sodium strontium trisulphoxyarsenate, $\text{NaSrAsS}_3\text{O} + 10\text{H}_2\text{O}$.

Unstable. (McCay and Foster, Z. anorg. 1904, 41. 462.)

Trisulphoxyazotic acid, $\text{ON}(\text{SO}_3\text{H})_3$.

Known only in its salts. (Claus, A. 158. 52 and 194.)

Has the formula $(\text{SO}_3\text{H})_3\text{N} < \overset{\text{O}}{\underset{\text{O}}{\text{O}}} > \text{N}(\text{SO}_3\text{H})_3$.
(Raschig, A. 241. 161.)

Potassium trisulphoxyazotate, $\text{ON}(\text{SO}_3\text{K})_3 +$ 

Easily sol. in H_2O without decomp., even on boiling. (Claus, A. 157. 210.)

Sulphoxyphosphorous acid,

See Thiophosphorous acid.

Sulphoxyvanadic acid.**Ammonium pyrohexasulphoxyvanadate**,
 $(\text{NH}_4)_4\text{V}_2\text{S}_6\text{O}$.

Sol. in H_2O . (Kruss and Ohnmais, A. 263. 53.)

Potassium pyrohexasulphoxyvanadate,
 $\text{K}_4\text{V}_2\text{S}_6\text{O} + 3\text{H}_2\text{O}$.

Melts in crystal H_2O . (Kruss and Ohnmais.)

$\text{K}_4\text{V}_2\text{S}_{10}\text{O}_2 + 3\text{H}_2\text{O}$. More sol. in H_2O than preceding comp. (K. and O.)

Sodium orthotrisulphoxyvanadate, $\text{Na}_3\text{VS}_3\text{O} + 5\text{H}_2\text{O}$.

Very deliquescent, and easily sol. in H_2O . Somewhat sol. in alcohol. (Kruss and Ohnmais.)

Sodium orthomonosulphoxyvanadate,
 $\text{Na}_2\text{VSO}_3 + 10\text{H}_2\text{O}$.

Less sol. in H_2O than other sulphoxyvanadates. (K. and O.)

Sulphur, S.

The various modifications of sulphur have been classified in many different ways, and there is a difference of opinion as to whether certain forms are true allotropic modifications or not.

The data, as far as concerns the solubility, may be arranged as follows:—

A. Sol. in CS_2 . 1. Rhombic, octahedral, or alpha sulphur, ordinary sulphur. Easily sol. in CS_2 , etc. See below for solubility in various solvents.

2. Prismatic, monoclinic, or beta sulphur. Sol. in CS_2 , but is converted into A. 1. Prismatic sulphur obtained by melting brimstone is not wholly sol. in CS_2 on account of admixture of gamma sulphur.

Monoclinic modification is more sol. than rhombic in CHCl_3 , ether and benzene. (Meyer C. C. 1903, II. 481.)

3. Soft sulphur, milk of sulphur.

4. Amorphous sol. sulphur is also a separate modification, according to Berthollet.

B. Soft sulphur, obtained by strongly heating and quickly cooling, is sol. in CS_2 , but becomes insol. therein by repeatedly dissolving and evaporating. More easily sol. in CS_2 than A. 1.

C. Insol. in CS_2 . 1. By action of strong light on S in CS_2 .

2. By heating to b.-pt, cooling suddenly, and allowing to stand until hard. Has been called gamma sulphur, but is a mixture of $\frac{2}{3}$ A. 4 and $\frac{1}{3}$ insol. S.

3. Insol. S in flowers of sulphur. Converted into A. 1 by standing 3 days with alcohol.

According to Berthelot (A. ch. (3) 49. 430) there are only two varieties of S. I. "Octahedral," II. "Amorphous."

I. Octahedral. Sol. in CS_2 . Scarcely acted upon by $\text{KHSO}_3 + \text{Aq}$. Converted by oxidising agents into II.

II. Amorphous. Insol. in neutral solvents, viz. H_2O , alcohol, ether, CS_2 , etc.

Sol. with tolerable rapidity in $\text{KHSO}_3 + \text{Aq}$. By long action of $\text{Na}_2\text{S} + \text{Aq}$, a portion is dissolved, and the remainder converted into I. Less easily oxidised by $\text{HNO}_3 + \text{Aq}$ than I. Some varieties of this modification are sol. to a certain extent in alcohol and ether, and by boiling the rest of the sulphur is converted into I; also by long-continued contact with cold alcohol. Berthelot holds that the modification is changed before dissolving. Solutions of the alkalis, alkali salts, and alkali sulphides change insol. into sol. sulphur. (Berthelot.)

Elastic sulphur obtained by pouring molten sulphur at a temp. of over 260° into H_2O contains 35%, or more of a modification of S which is insol. in CS_2 , hot or cold, but sol. in absolute alcohol; this modification can be converted back into ord. sulphur by heating to 100° . (Pelouze and Fremy.) (See C. 2.)

This modification can be obtained also by action of HCl on thiosulphates. (Fordos and Gélis.)

The soft pasty sulphur obtained by decomposition of H_2S by SO_2 forms an almost clear emulsion (pseudo-solution) with H_2O , from which it is pptd. by various salts and substances which have no chemical affinity for it. 23 pts. S combine in this way with 100 pts. H_2O . When pptd. by saline solutions, some of the S remains in solution. When solution is exposed to the light, S gradually separates out; also on boiling the same takes place. The above pseudo-solution is pptd. by mineral acids, and the pptd. S may still be dissolved in fresh water, if not left in contact for some time with the acid. Also pptd. by K salts, with loss of power of forming pseudo-solutions. Pptd. by NH_4 and Na salts without losing that power.

Alkali hydrates, carbonates, or sulphides convert it into insol S.

The solution may be mixed with alcohol without change. Decomp. by long shaking with naphtha or oil of turpentine. The pseudo-solution combines with CS_2 , forming an emulsion which subsequently decomposes. The S itself is only partially sol. in CS_2 . (Selmi, J. pr. 57 49)

By treatment of amorphous "insoluble" S with CS_2 or CCl_4 , a small part goes into solution, the amount being dependent on the time of contact with the temp., and nature of the solvent, but independent of the amount of the solvent. It is assumed that this is due to a partial change of the "insoluble" into soluble S. (Wigand, Z. phys. Ch. 1910, 75. 235.)

"Delta" sulphur. Partly sol in H_2O . (Debus, Chem. Soc. 53. 18.)

A colloidal form wholly sol. in H_2O exists, which, however, decomposes very easily. (Engel, C. R. 112. 866)

Black sulphur. Insol. in alcohol, ether, CS_2 , fatty oils even at 200° , cold alkali hydroxides + Aq, H_2SO_4 , HNO_3 , or aqua regia. (Knapp, J. pr. (2) 43. 305.)

Green modification. Five times more sol. than ordinary sublimed sulphur in a mixture of salicylaldehyde and benzene (Orloff, C. C. 1902, 1. 1264.)

The following data relate to octahedral or ordinary sulphur (A. 1):—

Sol. in warm liquid H_2S (Niemann); warm P_2S_5 , SBr_2 , SCl_2 , Br_2 , NCl_3 , BaS +Aq (Dumas); in alcoholic solution of K_2S_8 , but is reprecip. by addition of H_2O to sat. solution.

Sol. in liquid SO_2 .

Sol. in aqueous solution of alkali sulphates, especially when hot. Sl. sol. in boiling conc. HSCN +Aq, from which it mostly separates on cooling.

Na_2CO_3 +Aq (5.6% Na_2CO_3) dissolves no S at 20° ; 0.06775% at 100° . (Pohl, Dingl. 197. 508.)

The solubility of S in Na_2S +Aq between 0° and 50° diminishes slightly with increase in temp., but increases with dilution of the solution, having its largest value in a N/16 solution of Na_2S +Aq when the relation of Na_2S to dissolved S equals about 1:4. (Küster, Z. anorg. 1905, 43. 56.)

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, 84. 27.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 822.)

Sol. in liquid NH_3 . 1 gr. S is sol. in 3-4 cc. liquid NH_3 . (Hugot, A. ch. 1900, (7) 21. 32.)

The solubility of S in liquid NH_3 is constant from -23° to -84° and equals 39%. (Ruff, Z. angew. Ch. 1910, 23. 1830.)

Solubility in liquid NH_3 (g. S in 100 g. solution)

t°	S ¹	t°	S
-78	38 6	16 4	25 65
-20 5	38 1	30	21 0
0	32 34	40	18 5

(Ruff and Hecht, Z. anorg. 1911, 70. 62)

Sl. sol. in liquid NO_2 . (Frankland, Chem. Soc. 1901, 79. 1361.)

S_2Cl_2 dissolves 66.74% S at ord. temp. to form a liquid of 1.7 sp. gr. (Rose.)

Solubility of S in S_2Cl_2 varies according to the variety of sulphur used. Aten has published an extended investigation on the subject, which see for details. (Z. phys. Ch. 1905-14, 54. 86, 124; 81. 268; 83. 443; 86. 1; 88. 321.)

Solubility in SnCl_4 .

100 g. SnCl_4 dissolve at:

99°	101°	110°	110°
5.8	6.2	8.7	9.1 pts. solid S,
112°	112°	121°	
9.4	9.9	17.0 pts. liquid S.	

(Gerardin.)

Sol. in alkalis+Aq with decomp.

Sol. in 1926.7 pts. absolute alcohol at 15° . (Pohl, W. A. B. 6. 600.)

Sol. in 20 pts. hot nearly absolute alcohol, less sol. in weaker alcohol. (Laurogaia)

Sol. in 600 pts. boiling alcohol of 40° B. (Chevallier, J. ch. m&f. 2. 547), in 500 pts. alcohol (Meissner), 200 pts. alcohol (Pelouze and Fremy).

100 pts. absolute alcohol dissolve 0.42 pt. at b.-pt., and 0.12 pt. S at 16° ; 100 pts. ether dissolve 0.54 pt. at b.-pt., and 0.19 pt. S at 16° ; 100 pts. benzene dissolve 17.04 pts. at b.-pt., and 1.79 pts. S at 16° ; 100 pts. oil of turpentine dissolve 16.16 pts. at b.-pt., and 1.35 pts. S at 16° ; 100 pts. CS_2 dissolve 73.46 pts. at b.-pt., and 38.70 pts. S at 16° ; 100 pts. naphtha dissolve 10.56 pts. at b.-pt., and 2.77 pts. S at 16° ; 100 pts. tar-oil dissolve 26.98 pts. at b.-pt., and 1.51 pts. S at 16° . (Payen, C. R. 34. 456.)

100 pts. absolute methyl alcohol dissolve 0.028 pt. at 18.5° ; 100 pts. absolute ethyl alcohol dissolve 0.053 pt. at 18.5° . (de Bruyn, Z. phys. Ch. 10. 781.)

Solubility in amyl alcohol.

95°	110°	110°
1.5	2.1	2.2 pts. solid S,

112°	112°	120°	131°
2.6	2.7	3.0	5.3 pts. liquid S.

(Gerardin, A. ch. (4) 5. 134.)

Quickly sol. in 12.5 pts. ether. (Favre.)

100 pts. benzene dissolve 0.965 pt. S at 26° ; 100 pts. benzene dissolve 4.377 pts. S at 71° ; 100 pts. toluene dissolve 1.479 pts. S at 23° ; 100 pts. ethyl ether dissolve 0.972 pt. S at

23.5°; 100 pts. chloroform dissolve 1.205 pts. S at 22°; 100 pts. phenol dissolve 16.35 pts. S at 174°; 100 pts. aniline dissolve 85.27 pts. S at 130°. (Cossa, B. 1. 139.)

Solubility in benzene at t°.

t°	g S in 10 g. of solution
15.17	0.1480
19.29	0.1692

(Bronsted, Z. phys. Ch. 1906, 55. 377.)

A mixture of S and toluene separates into two layers, containing 33 and 92.5% S respectively. (Haywood, J. phys. Ch. 1897, 1. 232.)

CS₂ dissolves 0.35 pt ordinary sulphur; some varieties of S, however, are not entirely sol. in CS₂, thus—

Variety of Sulphur	Pts sol in 1 pt. CS ₂	Fraction of original wt insol in CS ₂
Octahedral, from Sicily	0.335	0.000
Crystallised in dry way, recently prepared	0.415	0.029
Do., prepared 8 years	0.33	0.004
Do., prepared 9 years		0.020
Do., prepared 15 years		0.051
Red needles, recently prepared	0.382	0.023
Soft yellow, do.		0.353
Do., prepared 2 years	0.316	0.157

(Deville, A. ch. (3) 47. 99.)

The pt. insol in CS₂ is sol. in hot absolute alcohol, crystallising on cooling; less sol. in chloroform or ether. (Deville)

100 pts pure CS₂ dissolve pts. S at t°.

t°	Pts S	t°	Pts. S
-11	16.54	22	46.05
-6	18.75	38	94.57
0	23.99	48.5	146.21
+15	37.15	55	181.34
18.5	41.65		

(Cossa, B. 1. 138.)

Neither ordinary stick S nor flowers of S is completely sol. in CS₂. Pptd. S is completely sol. in 5 pts. CS₂. (Tittenger, C. C. 1894, II. 267.)

2.99 g. S are sol. in 100 grams CS₂ at -116°. (Arctowski, C. R. 1895, 121. 124.)

Solubility in CS₂.

100 g. of the sat. solution contain at:

-77°	-84.5°	-89°	-116°
4.84	4.46	4.29	2.99 g. S.

(Arctowski, Z. anorg. 1896, 11. 274.)

When 20 pts. S dissolve in 50 pts. CS₂ at 22° the temp. is lowered 5°. (Cossa)

Sat. solution of S in CS₂ boils at 55°. (Cossa.)

Sp. gr. of S dissolved in CS₂ at 15°.

(Pts S per 100 pts. CS₂.)

121.4	40.04	85.02
130.0	49.71	80.07
134.2	56.20	72.23

Above 134.2° sulphur is miscible with

benzyl chloride in all proportions; below this temp. two layers are formed (Bogusky, J. Russ. Phys. Chem. Soc. 1905, 37. 92-99; C. C. 1905, I. 1207.)

Easily sol. in boiling acetic anhydride. (Rosenfeld, B. 13. 1475.)

Sol. in considerable amount in warm conc. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ but very sl. sol. if dil. (Liebmann, B. 10. 866.)

Sol. in stearic acid + Aq. (Vulpus, Arch. Pharm. (3) 13. 38.)

Acetic ether dissolves 6% S. (Favre.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Sl. sol. in benzonitrile at ord. temp., much more sol. at higher temp. (Naumann, B. 1914, 47. 1369.)

Sol. in 12 pts. hot petroleum from Amiano, but nearly insol. in cold. (de Saussure.)

100 pts. nicotine at 100° dissolve 10.58 pts. S, but this separates out as the solution cools. (Klever, C. C. 1872. 434.)

Sol. in warm aniline. (Barral, A. ch. (3) 20. 352.)

Easily sol. in hot, less sol. in cold aniline. (Fritzsche.)

Very sol. in aniline and quinoline, especially when warm. (Hofmann.)

Sol. in quinoline but reacts with the solvent with evolution of H. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0335 g. S in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Sol. in 2.6 pts. of boiling, sl. sol. in cold creosote.

Sol. by digestion in 2 pts. oil of turpentine.

Sol. in hot oil of copaiba, crystallising on cooling.

Sol. in hot oil of mandarin, crystallising on cooling.

Sol. in hot oil of caraway, crystallising on cooling.

Somewhat sol. in hot, less in cold wood-spirit.

Sl. sol. in lignone, bromoform, cold benzene, but easily in hot benzene. (Mansfield, Chem. Soc. 1. 262.)

Sol. in ethyl sulphide, and carbon chloride. (Rathke, A. 152. 187.)

Sol. in mercuric methyl.

Sol. in 20 pts. ethyl nitrate, from which is is not pptd. by H_2O .

Sol. in naphtha, aldehyde, iodal, bromal, chloroform, warm chloral, sinkaline + Aq, ethyl chloride, warm benzoyl chloride.

100 pts. methylene iodide dissolve 10 pts. S at 10° . Melted sulphur is miscible with hot methylene iodide. (Retgers, Z. anorg. 3. 343.)

S dissolves in 2000 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 81.)

Glycerine dissolves 0.10% S. (Klever, C. C. 1872. 434.)

100 g. glycerine dissolve 0.14 g. at 15.5°.
(Ossendowski, Pharm. J. 1907, 79. 575)

Sol. in butyl sulphhydrate, and warm retinole.

Sol. in ethyl sulphhydrate.

Very sol. in conine, hexyl alcohol, warm allyl sulphocyanide, cacodyl oxide. Somewhat sol. in hot styrene, separating out on cooling.

Readily sol. in warm, less readily in cold toluene or resin-oil.

Sol. in olive oil at 115°, from which it mostly separates on cooling.

Sol. in hot oil of amber, crystallising upon cooling. Sol. in 2 pts. hot, sl. sol. in cold caoutchouin.

Insol. in valerianic acid, amyl valerate, valeryl hydride.

Linseed oil dissolves $\frac{1}{2}$ S at t°.

t°	$\frac{1}{2}$ S	t°	$\frac{1}{2}$ S	t°	$\frac{1}{2}$ S
25	0.630	95	2.587	160	9.129

(Pelouze, C. R. 69. 56.)

Sulphur bromide, S₂Br₂.

Decomp. gradually with H₂O. Dissolves S on warming, which crystallises out on cooling. Sol. in CS₂.

Decomp. by current of dry air into S and Br. (Hannay, Chem. Soc. 35. 16.)

Decomp. slowly by cold H₂O, rapidly by hot H₂O. Decomp. by dil. KOH + Aq or NaHCO₃ + Aq. (Korndörfer, Arch. Pharm. 1904, 242. 156.)

A study of the mpt. curve of a series of mixtures of sulphur and bromine gave no evidence for the existence of the compounds SBr₂ and SBr₄. (Ruff, B. 1903, 36. 2446.)

Sulphur monochloride, S₂Cl₂.

Slowly decomp. by H₂O. Miscible with CS₂ and C₆H₆. Sol. in alcohol and ether with subsequent decomposition. Sol. in oil of turpentine.

Moderately sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 830.)

Sol. in CCl₄ and C₆H₆. (Oddo, Gazz. ch. it. 1899, 29. (2) 318.)

Sulphur dichloride, SCl₂.

Decomp. slowly with H₂O, immediately by alcohol or ether.

Sulphur tetrachloride, SCl₄.

Violently decomp. by H₂O. Decomp. at temperatures above -22°. (Michaelis, A. 170. 1.)

Sulphur stannic chloride, 2SnCl₄, SnCl₄.

Decomp. by H₂O. Sol. in dil. HNO₃ + Aq. Forms a mass with fuming HNO₃ which is sol. in HNO₃ + Aq. Sol. in POCl₃. (Casselmann.)

Very hygroscopic. Fumes in moist air. Very easily sol. in dry abs. ether and in benzene. Sol. in CHCl₃, SO₂Cl₂, CS₂, POCl₃, ligroin and petroleum ether. (Ruff, B. 1904, 37. 4517.)

Sulphur titanium chloride, SCl₄, 2TiCl₄.

Very deliquescent. Easily sol. in dil. HNO₃ + Aq. (Weber, Pogg. 132. 454.)

SCl₄, TiCl₄. Sol. in SO₂Cl₂, CHCl₃, CS₂ and petroleum ether. (Ruff, B. 1904, 37. 4516.)

Sulphur chloride ammonia, S₂Cl₂, 4NH₃.

Insol. in H₂O, but gradually decomp. thereby; sol. without decomp. in absolute alcohol, from which it is pptd. by H₂O. (Mertens.)

Does not exist. (Fordos and Gélis, C. R. 31. 702.)

SCl₂, 2NH₃. Decomp. by H₂O. Sol. in alcohol or ether. (Soubeiran, A. ch. 67. 71.) Not a true chemical compound, but a mixture. (Fordos and Gélis, C. R. 31. 702.)

SCl_2 , 4NH_3 . Decomp. by H_2O . Sl. sol. in absolute alcohol and ether (Soubeiran, A. ch. 67. 71); mixture (Fordos and Gélis).

Sulphur chloride nitrogen sulphide.

See Nitrogen sulphochloride.

Sulphur perfluoride, SF_6 .

Very sl. sol. in H_2O ; sl. sol. in alcohol. (Moissan, C. R. 1900, 130. 868.)

Sulphur moniodide, S_2I_2 .

Insol. in H_2O . Decomp. by alcohol, which dissolves out I_2 . Sl. sol. in cold caoutchouin, the solution decomposing when boiled. Freely sol. in glycerine. Sol. in 60 pts. glycerine, and 82 pts. olive oil. (Cap and Garot, J. Pharm. (3) 26. 81.)

Very sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 830.)

Sol. in CS_2 . (Linebarger, Am. Ch. J. 1895, 17. 58.)

Sulphur hexiodide, SI_6 .

Decomp. on air. Alcohol or alkalis dissolve out iodine. (vom Rath, Pogg. 110. 116.)

Does not exist. (M'Leod, Rep. Brit. Assn. Advn. Sci. 1892. 690.)

Sulphur stannic iodide.

See Tin sulphur iodide.

Sulphur sesquioxide, S_2O_3 .

Deliquescent. Violently decomp. by H_2O at ordinary temp. Sol. in fuming H_2SO_4 . Insol. in SO_2 . Decomp. by alcohol or other. (Weber, Pogg. 156. 531.)

Sulphur dioxide, SO_2 .

Liquid. Insol. in H_2O if brought in contact therewith below the b-pt. of SO_2 .

Sol. in 3 vols. CS_2 on warming, separating out on cooling. Dissolves some P, little S, and no sulphuric or phosphoric acids.

Dissolves ether, chloroform, P, Br, S, I, CS_2 , colophonium, and other gums; also benzene when warmed. (Sestini, Bull. Soc. (2) 10. 226.)

Miscible with liquid SO_3 , but not with H_2SO_4 .

Gas.

1 vol H_2O absorbs 30 vols SO_2 gas at 18° (Davy), 20 vols at ord temp. (Dalton), 43.78 vols. at ord temp (de Saussure), 50 vols at 20° and 760 mm (Pelouze and Fremy), 33 vols. at ord. temp. (Thomson)

1 pt SO_2 (by weight) is sol. in 0.1429 pt. H_2O at 5° , and the solution has 1 020 sp. gr.

1 pt SO_2 is sol in 0.0400 pt. H_2O at ord. temp. (Prestley), in 0.0909 pt H_2O at 16° , and sp. gr. of the solution = 1.0513 (Thomson).

Sol in 2 pts H_2O at 10° . (Pierre, A. ch. (3) 23. 421.)

100 vols H_2O at 18° and 760 mm. absorb 4378 vols. SO_2 gas, 100 vols alcohol of 0.84 sp. gr. at 760 mm. absorb 11,577 vols (de Saussure, 1814.)

Solubility of SO_2 gas in H_2O . t° = temp.; V = vols SO_2 reduced to 0° and 760 mm contained in 1 vol sat $\text{SO}_2 + \text{Aq}$; V_1 = vols. SO_2 gas reduced to 0° and 760 mm. dissolved by 1 vol H_2O under 760 mm pressure

(Schönfeld, A. 95. 5.)

This table may be formulated as follows:

1 vol. H_2O absorbs $79.789 - 2.6077t + 0.029349t^2$ vols. SO_2 at temp. between 0° and 20° , or 1 vol. sat. solution contains $68.861 - 1.87025t + 0.01225t^2$ vols. SO_2 . Coefficient of absorption between 21° and $40^\circ = 75.182 - 2.1716t + 0.01903t^2$ vols. SO_2 or 1 vol. sat. solution between 21° and 40° contains 60.952 — $1.38898t + 0.00726t^2$ vols. SO_2 .

Solubility of SO_2 in H_2O at various temps. and 760 mm t° = temp; G = grammes SO_2 dissolved in 1 g. H_2O ; V = vols. SO_2 dissolved in 1 g. H_2O .

(Sims, A. 118. 340.)

Solubility of SO_2 in H_2O at various pressures
 P = "partial pressure," e the total pressure minus the tension of aqueous vapour at given temp; G at P = weight SO_2 in grammes, which is dissolved in 1 g. H_2O at pressure P , G at 760 = calculated weight SO_2 that would be contained in 1 g. H_2O at 760 mm. if the absorption were proportional to the pressure; V = the volume of G grammes of SO_2 at 0° and 760 mm.

(Bunsen's Gasometry.)

100 pts. absolute methyl alcohol dissolve 247 pts. SO_2 at 0° and 760 mm.; 47 pts. at 26° and 760 mm.; 100 pts. absolute ethyl alcohol dissolve 115 pts. SO_2 at 0° and 760 mm.; 32.3 pts. at 26° and 760 mm. (de Bruyn, Z. phys. Ch. 10. 783.)

Sol. in ether.

Absorbed by oil of turpentine.

Rapidly absorbed by anhydrous aldehyde in the cold, 11 pts. aldehyde absorbing 19 pts. SO_2 .

Absorption coefficient of aldehyde for SO_2 is 1.4 times greater than that of alcohol, and 7 times greater than that of H_2O . (Geuther and Cartmell, Proc. Roy. Soc. 10. 111.)

1 pt. camphor dissolves 0.880 pt. by weight (=308 vols) SO_2 at 0° and 725 mm.; 1 pt. glacial $\text{HC}_2\text{H}_3\text{O}_2$ dissolves 0.961 pt. by weight (=318 vols.) SO_2 at 0° and 725 mm.; 1 pt. formic acid dissolves 0.821 pt. by weight (=351 vols.) SO_2 at 0° and 725 mm.; 1 pt. acetone dissolves 2.07 pts. by weight (=589 vols.) SO_2 at 0° and 725 mm.; 1 pt. sulphuryl chloride dissolves 0.323 pt. by weight (=187 vols.) SO_2 at 0° and 725 mm. (Schulze, J. pr. (2) 24. 168.)

Solubility of SO_2 in CHCl_3 .

C=g. SO_2 in 1 cc of the solution.

P=Pressure in mm. Hg.

(McCrae, Z. anorg. 1903, 35. 14.)

Sulphur dioxide ammonia, SO_2, NH_3 .

Very hygroscopic. Easily sol. in H_2O with decomp. (Schumann, Z. anorg. 1900, 23. 49.)

$\text{SO}_2, 2\text{NH}_3$. Somewhat hygroscopic.

Sol. in H_2O with evolution of NH_3 . (Schumann, Z. anorg. 1900, 23. 50.)

$5\text{SO}_2, 4\text{NH}_3$. Very deliquescent.

Very sol. in H_2O . (Divers and Ogawa, Chem. Soc. 1901, 79. 1103.)

Sulphur trioxide, SO_3 .

Fumes on air. Miscible with H_2O , with evolution of much heat. Sol. in H_2SO_4 . De-comp. by alcohol and ether.

Exists in two modifications, one of which is liquid and miscible with H_2SO_4 , while the solid form is only slowly sol. therein.

Miscible with CS_2 at 30° , but at 15° CS_2 dissolves only $1\frac{1}{2}$ pt. SO_3 , and SO_3 , $\frac{1}{8}$ pt. CS_2 . (Schultz-Sellack, Pogg. 139. 480.)

There is only one modification, the liquid, which absorbs H_2O and becomes solid. (Rebs, A. 246. 356.)

Miscible with liquid SO_2 . (Schultz-Sellack.)

See also Sulphuric acid.

Sulphur heptoxide, S_2O_7 .

Fumes on air. Slowly decomp. at 0° , instantaneously on warming. Sol. in conc. H_2SO_4 . (Berthelot, J. pr. (2) 17. 48.)

Forms compound $\text{S}_2\text{O}_7 \cdot 2\text{H}_2\text{O}$.

Formula is SO_4 , according to Traube (B. 24. 1764), and S_2O_7 is $\text{SO}_3 + \text{SO}_4$.

See also Marshall (Chem. Soc. 59. 771).

Traube (B. 26. 148) denies the existence of SO_4 .

Sulphur oxybromide, $\text{S}(\text{O})\text{Br}_2$.

See Thionyl bromide.

Sulphur oxychloride, SOCl_2 .

See Thionyl chloride.

SO_2Cl_2 . See Sulphuryl chloride.

$\text{S}_2\text{O}_2\text{Cl}_2$. See Pyrosulphuryl chloride.

HSO_3Cl . See Sulphuryl hydroxyl chloride.

S_2OCl_4 . Decomp. by H_2O and alcohol. (Ogier, C. R. 94. 446.)

Mixture of about $17\text{SOCl}_2 + 2\text{SOCl}_2$ and $5\text{SO}_2\text{Cl}_2$. (Knoll, B. 1898, 31. 2183.)

Sulphur oxytetrachloride, $\text{S}_2\text{O}_4\text{Cl}_4$.

Violently decomp. by H_2O , dil. acids, or alcohol. (Millon, A. ch. (3) 29. 327.)

Sol. in warm S_2Cl_2 . (Carius, A. 106. 295.)

Decomp. violently with CS_2 .

Sulphur oxyfluoride, SO_2F_2 .

See Sulphuryl fluoride.

SOF_2 . See Thionyl fluoride.

Sulphur diphosphide, P_2S_3 .

See Phosphorus monosulphide.

Sulphur tetraphosphide, P_4S_3 .

See Phosphorus semisulphide.

Sulphuretted hydrogen, H_2S .

See Hydrogen sulphide.

Sulphuric acid, H_2SO_4 .

Miscible with H_2O in all proportions.

Sp gr of $\text{H}_2\text{SO}_4 + \text{Aq}$

(Bineau A. ch. (3) 26. 124)

The sp gr found at t° can be reduced to sp. gr. at 0° by multiplying by $\frac{144.38}{144.38-t}$, or by using the following table. (Bineau.)

Correction of sp gr for temperature, to be added for a lowering of the temp of 10° , or subtracted for a corresponding increase

Sp gr of acid at 0°	Corr	Sp. gr of acid at 0°	Corr	Sp gr of acid at 0°	Corr
1 04	0 002	1 15	0 005	1 45	0 008
1 07	0 003	1 20	0 006	1 70	0 009
1 10	0 004	1 30	0 007	1 85	0 0096

(Bineau)

Sp gr of $\text{H}_2\text{SO}_4 + \text{Aq}$ at 15° a = $\frac{c}{100}$; b = sp. gr. if % is SO_3 , c = sp. gr. if % is H_2SO_4 .

(Pictet, C. R. 1894, 119. 645)

Sulphuric acid, anhydrous, SO₃.

See Sulphur trioxide.

Disulphuric (Pyrosulphuric) acid, H₂S₂O₇.

Very deliquescent. Miscible with H₂O. Sol. in fuming H₂SO₄. Miscible in liquid SO₂. (Schultz-Sellaack.)

H₂S₂O₇, 2H₂SO₄. Fumes on air. (Jacquelin, A. ch. (3) 30. 343.)

Tetrasulphuric acid, H₂S₄O₁₃.

Fumes on air. (Weber, Pogg. 159. 313.)

Sulphates.

Most sulphates are easily sol. in H₂O; but Ag₂SO₄, Hg₂SO₄, and CaSO₄ are only sl. sol., while BaSO₄, SrSO₄, and PbSO₄ are nearly insol. therein. All sulphates are sol. in conc. H₂SO₄. Basic sulphates are insol. in H₂O. Most sulphates are insol. in alcohol.

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 823.)

Aluminum sulphate, basic, 2Al₂O₃.SO₃+5H₂O.

Slowly sol. in 10 mols. HC₂H₃O₂. (Schlumberger, Bull. Soc. 1895, (3) 13. 41.) +7H₂O. Easily sol. in 8 mols. dil. HCl + Aq. or in 10 mols. 10% acetic acid in 24 hours. (Schlumberger.)

+10H₂O. Insol. in H₂O; easily sol. in cold dil. mineral acids, and HC₂H₃O₂+Aq. (Crum, A. 89. 174.)

Min. *Felsobanyite*.

+15H₂O. Min. *Paraluminate*.

8Al₂O₃, 5SO₃+25H₂O. Insol. in H₂O; sol. in dil. acids. (Lowe, J. pr. 79. 423.)

5Al₂O₃, 3SO₃+20H₂O. Easily sol. in acids. (Debray, Bull. Soc. (2) 7. 9.)

3Al₂O₃, 2SO₃+9H₂O. Nearly insol. in conc. H₂SO₄. (Bayer, Dingl. 263. 211.)

+20H₂O. Ppt.

4Al₂O₃, 3SO₃+36H₂O. Insol. in H₂O. Easily sol. in dil. mineral acids, and hot

HC₂H₃O₂+Aq. (Debray, Bull. Soc. (2) 7. 1.)

Al₂O₃, SO₃+6H₂O = (AlO)₂SO₄+H₂O.

Insol. in H₂O or HC₂H₃O₂+Aq. Sl. sol. in hot HCl, easily sol. in warm KOH+Aq. (Bottlinger, A. 244. 225.)

+9H₂O. (Athanasesco, C. R. 103. 27.)

Min. *Aluminate*.

[Al₂(OH)₅]SO₄+2H₂O.

Sol. in HCl+Aq. in the cold with decomp. Very unstable. (Schlumberger, Bull. Soc. 1895, (3) 13. 60.)

3Al₂O₃, 4SO₃+9H₂O. (Athanasesco, C. R. 103. 271.)

+30H₂O. Sol. in 144 pts. cold, and 30.8 pts. boiling H₂O. Easily sol. in HCl, and

HNO₃+Aq. (Rammelsberg, Pogg. 43. 583.)

2Al₂O₃, 3SO₃. Decomp. by H₂O into 3Al₂O₃, SO₃ and Al₂(SO₄)₃. (Maus.)

Al₂O₃, 2SO₃=Al₂O(SO₄)₂.

Min. *Alumaine*.

+H₂O. Sol. in small quantity of H₂O, but decomp. by a large quantity into (AlO)₂SO₄ and Al₂(SO₄)₃. (Maus, Pogg. 11. 80.)

+12H₂O. Easily sol. in hot or cold H₂O. Sat. solution contains 45% salt at 15°, which crystallises unchanged on evaporating. (Marguerite, C. R. 90. 354.)

Above basic compounds are mixtures. (Pickering, C. N. 45. 121, 133, 146.)

Aluminum sulphate, Al₂(SO₄)₃.

100 pts. H₂O dissolve (a) pts. Al₂(SO₄)₃, and (b) pts. Al₂(SO₄)₃+18H₂O at:

	0°	10°	20°	30°	40°	50°

1 1/2 "	1.0068

(Wagner, Z. phys. Ch. 1890, 5. 35.)

100 pts. of a mixture of 1 vol. $\text{H}_2\text{SO}_4 + 2$ vols. H_2O dissolve only 6.45 pts. $\text{Al}_2(\text{SO}_4)_3$. (Baud, C. R. 1903, 137. 494.)

$\text{Al}_2(\text{SO}_4)_3$ is completely pptd. from $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$ by an excess of glacial $\text{HC}_2\text{H}_3\text{O}_2$. (Persoz, A. ch. (2) 63. 444.)

Solubility of $\text{Al}_2(\text{SO}_4)_3 + (\text{NH}_4)_2\text{Al}_2(\text{SO}_4)_4$. See under $(\text{NH}_4)_2\text{Al}_2(\text{SO}_4)_4$.

Solubility of $\text{Al}_2(\text{SO}_4)_3 + \text{K}_2\text{Al}_2(\text{SO}_4)_4$. See under $\text{K}_2\text{Al}_2(\text{SO}_4)_4$.

Solubility in $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$ at 25° .

100 g. of the solution contain	
g. $\text{Al}_2(\text{SO}_4)_3$	g. $\text{Fe}_2(\text{SO}_4)_3$
27.82	0
26.01	6.064

0.00	28.0	"

(Schreinemakers and de Waal, Ch. Weekbl. 1906, 3. 539.)

100 g. of sat. solution of $\text{Al}_2(\text{SO}_4)_3$ in glycol contain 14.4 g. $\text{Al}_2(\text{SO}_4)_3$. (de Coninck, Bull. Ac. Roy. Belg. 1905. 359.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

+ $6\text{H}_2\text{O}$. Very slowly sol. in cold, completely sol. in hot H_2O .

+ $8\text{H}_2\text{O}$. (Margueritte-Delarcharbondy, C. R. 112. 229.)

+ $10\text{H}_2\text{O}$. Deliquescent. (v. Hauer, W. A. B. 13. 449.)

+ $16\text{H}_2\text{O}$. Sol. in conc. H_2SO_4 . (Baud, C. R. 1903, 137. 494.)

+ $17\text{H}_2\text{O}$. (Gawalowski, C. C. 1885. 721.)

+ $18\text{H}_2\text{O}$. Permanent. (Berzelius.)

100 g. of the aqueous solution contain 27.82 g. $\text{Al}_2(\text{SO}_4)_3$ at 25° . (Wirth, Z. anorg. 1913, 79. 361.)

Solubility of $\text{Al}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$ in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

$\text{H}_2\text{SO}_4 + \text{Aq}$ % H_2SO_4	100 g. of the solution contain g. $\text{Al}_2(\text{SO}_4)_3$
0	27.82

25.50	15.40
40.70	5.07
52.25	1.216
63.70	1.243
73.64	2.915

(Wirth, Z. anorg. 1913, 79. 361.)

Hydrous salt is scarcely sol. in alcohol. (Berzelius.)

Min. *Alumogen*.

+ $27\text{H}_2\text{O}$. Efflorescent. (Margueritte-Delarcharbondy, C. R. 99. 800.)

Aluminum sulphate, acid, $\text{Al}_2\text{O}_3, 4\text{SO}_3 + 4\text{H}_2\text{O}$.

Extremely slowly sol. in cold, more rapidly in hot H_2O . (Baud, C. R. 1903, 137. 493.)
 $\text{Al}_2\text{O}_3, 6\text{SO}_3 + 10\text{H}_2\text{O}$. Sol. in H_2O ; solution soon decomp. into $\text{Al}_2(\text{SO}_4)_3 + \text{H}_2\text{SO}_4$. (Silberberger, M. 1904, 25. 221.)

Aluminum ammonium sulphate (Ammonia alum), $(\text{NH}_4)_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

100 pts. H_2O dissolve 2.9 pts. anhydrous salt at 0° ; 207.7 pts. anhydrous salt at 110.6° . (Mulder.)

100 pts. H_2O dissolve 8.74 pts. anhydrous salt at 17.5° (Pohl, W. A. B. 6. 597.)

100 pts H ₂ O at t° dissolve pts. (NH ₄) ₂ Al ₂ (SO ₄) ₄ .		
t°	Pts. (NH ₄) ₂ Al ₂ (SO ₄) ₄	Pts (NH ₄) ₂ Al ₂ (SO ₄) ₄ + 24H ₂ O

(Mulder, Poggiale, Locke; Marino, Gazz ch. it. 1905, 35. II, 351; Berkeley, Trans Roy. Soc. 1904, 203. A, 214, calc. by Seidell, Solubilities.)

B.-pt. of sat. solution is 110.6°.

M.-pt. of (NH₄)₂Al₂(SO₄)₄+24H₂O=92°. (Tilden, Chem. Soc. 45. 409.); =95°. (Locke, l. c.)

Sp. gr. of aqueous solution at 15° contain ing:

3% 6% 9%
1.0423 1.0141 1.0282 hydrous salt.

(Gerlach, Z. anal. 28. 495.)

Solubility of NH₄ alum in presence of (NH₄)₂SO₄ and Al₂(SO₄)₃.

Mixture used	100 g sat solution contains	
	g (NH ₄) ₂ SO ₄	g Al ₂ (SO ₄) ₃
Sat. NH ₄ alum at 18 5°	1 42	3 69
20 cc. above solution + 6 g. cryst Al ₂ (SO ₄) ₃	0.45	16 09
20 cc. above solution + 4g. (NH ₄) ₂ SO ₄	20.81	0 29

(Rüdorff, 1885, B. 18. 1160.)

Insol. in alcohol. (Mulder.)

Solubility of Al(NH₄)₂(SO₄)₂+12H₂O in a mixture of 93.3 g. H₂O and 23.33 g. glycerine = 6.15 g. (Dunlop, Pharm. J. 1910, 85. 6.)

Solubility in 93.3 g. H₂O + 23.3 g. glycerine + 3 9 g. phenol = 5.59 g. Al(NH₄)₂(SO₄)₂ + 12H₂O. (Dunlop.)

Min. *Tschermigite*.

Aluminum ammonium chromium sulphate, Al₂(SO₄)₃, (NH₄)₂SO₄, Cr₂(SO₄)₃ + 48H₂O.

Sol. in H₂O; decomp. by boiling. (Vohl, A. 94. 71.)

Aluminum caesium sulphate, Al₂Cs₂(SO₄)₄ + 24H₂O.

100 pts. H₂O at 17° dissolve 0.619 pt. caesium alum. (Redtenbacher, J. pr. 94. 442.)

Solubility in 100 pts. H₂O at t° (calculated for salt dried at 130°).

t°	Pts alum	t°	Pts alum	t°	Pts. alum
0	0.19	25	0.49	65	2 38
10	0.29	35	0.69	80	5.20
17	0.38	50	1 235		

(Setterberg, A. 211. 104.)

Values from 0–7° obtained by interpolation using Setterberg's values for 0° (A. 1882, 211. 100).

From 80–100° they were calculated by extrapolation.

(Hart and Huseilton, J. Am. Chem. Soc. 1914, 36. 2084.)

Melts in crystal H_2O at 106° (Tilden, Chem. Soc. 45. 409); at 120.5° (Erdmann); at 122° (Locke.)

Aluminum calcium sulphate, basic, Al_2O_3 , 6CaO , $3\text{SO}_3 + 32\text{H}_2\text{O}$.

Min. Ettringite. Mostly sol. in H_2O ; sol. in $\text{HCl} + \text{Aq.}$

Aluminum chromium sulphate, $\text{Al}_2\text{Cr}_2(\text{SO}_4)_6$.

Insol. in H_2O .
 $\text{Al}_2\text{Cr}_2(\text{SO}_4)_6 \cdot \text{H}_2\text{SO}_4$. Insol. in H_2O . (Étard C. R. 86. 1400.)

Aluminum chromium potassium sulphate, $\text{Al}_2(\text{SO}_4)_3$, $\text{Cr}_2(\text{SO}_4)_3$, $2\text{K}_2\text{SO}_4 + 48\text{H}_2\text{O}$.

Sol. in H_2O , but decomp. on boiling. (Vohl.)

Aluminum copper sulphate, $2\text{Al}_2\text{O}_3$, 9CuO , $3\text{SO}_3 + 21\text{H}_2\text{O}$.

Min. *Cyanotrichite*. (Percy, Phil. Mag. (3) 36. 103.)

Aluminum hydroxylamine sulphate, $\text{Al}_2(\text{SO}_4)_3$, $(\text{NH}_2\text{OH})_2\text{SO}_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Meyeringh, B. 10. 1946.)

Aluminum iron (ferrous) sulphate, $\text{Al}_2(\text{SO}_4)_3$, $\text{FeSO}_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Klauer, A. 14. 261.)

Min. *Halotrichite*.

$\text{Al}_2(\text{SO}_4)_3$, $2\text{FeSO}_4 + 27\text{H}_2\text{O}$. Sol. in H_2O .

(Berthier.)

Al_2O_3 , 2SO_3 , 6FeSO_4 . Easily sol. in H_2O .

(Phillips.)

$\text{Al}_2(\text{SO}_4)_3$, 2FeSO_4 , H_2SO_4 . Insol. in H_2O .

(Étard, C. R. 87. 602.)

Aluminum iron (ferric) sulphate, $\text{Al}_2(\text{SO}_4)_3$, $\text{Fe}_2(\text{SO}_4)_3$.

Insol. in H_2O . (Étard, C. R. 86. 1399.)

$\text{Al}_2(\text{SO}_4)_3$, $\text{Fe}_2(\text{SO}_4)_3$, H_2SO_4 . As above

(Étard.)

See $\text{Al}_2(\text{SO}_4)_3 + \text{Fe}_2(\text{SO}_4)_3$, under $\text{Al}_2(\text{SO}_4)_3$

and $\text{Fe}_2(\text{SO}_4)_3$.

Aluminum ferrous potassium sulphate, $\text{Al}_2(\text{SO}_4)_3$, 12FeSO_4 , $2\text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$.

Permanent. Sl. sol. in H_2O . (Dufrenoy.)

Aluminum lead sulphate, $\text{Al}_2\text{Pb}_2(\text{SO}_4)_8 + 20\text{H}_2\text{O}$.

Permanent; insol. in H_2O . (G. H. Bailey J. Chem. Soc. Ind. 6. 415.)

Aluminum lithium sulphate, $\text{Li}_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

Sol. in 24 pts. cold, and 0.87 pt. hot H_2O .

(Kralovansky, Schw. J. 54. 349.)

Does not exist. (Rammelsberg, J. B. 1847-48. 394; Arfvedson; Gmelin.)

Aluminum lithium potassium sulphate (?).

Sol. in H_2O , from which it crystallises on cooling. (Joss, J. pr. 1. 142.)

Aluminum magnesium sulphate, MgSO_4 , $\text{Al}_2(\text{SO}_4)_3 + 22\text{H}_2\text{O}$.

Min. *Pickeringite*.

2MgSO_4 , $\text{Al}_2(\text{SO}_4)_3 + 22\text{H}_2\text{O}$. Min. *Pickeringite*.

3MgSO_4 , $\text{Al}_2(\text{SO}_4)_3 + 36\text{H}_2\text{O}$. Very sol. in H_2O . (Klauer, A. 14. 264.)

Aluminum magnesium manganous sulphate, $\text{Al}_2(\text{SO}_4)_3, \text{MgSO}_4, \text{MnSO}_4 + 25\text{H}_2\text{O}$.

As sol. in H_2O as K alum. (Kane.) Very sol. in H_2O . (Smith, *Sill. Am. J.* (2) 18. 379.)
Min. *Bosjemanite*.

Aluminum manganous sulphate, $\text{Al}_2(\text{SO}_4)_3, \text{MnSO}_4 + 25\text{H}_2\text{O}$.

Sol. in H_2O . (Berzelius)
+ $24\text{H}_2\text{O}$. Min. *Apjohnite*.

Aluminum manganic sulphate, $2\text{Al}_2(\text{SO}_4)_3, \text{Mn}_2(\text{SO}_4)_3$.

Insol. in H_2O . (Étard, C. R. 86. 1399.)

Aluminum nickel sulphate, $\text{Al}_2(\text{SO}_4)_3, 2\text{NiSO}_4, \text{H}_2\text{SO}_4$.

Insol. in H_2O , but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Aluminum potassium sulphate, basic, $3(\text{Al}_2\text{O}_3, \text{SO}_3), \text{K}_2\text{SO}_4 + 6\text{H}_2\text{O} = \text{K}_2\text{SO}_4, 3\text{Al}_2(\text{SO}_4)_3(\text{OH})_4$.

Min. *Alumite*. Insol. in H_2O . Insol. in conc. $\text{HCl} + \text{Aq}$.

Sol. in boiling H_2SO_4 of 1.845 sp. gr., but more easily in a mixture of 12 g. H_2SO_4 and 1.5 g. H_2O , and also in weaker acids, if heated to 210° . (Mitscherlich, J. pr. 81. 108.)

+ $9\text{H}_2\text{O}$. Min. *Lowigite*. Sl. sol. in boiling $\text{HCl} + \text{Aq}$. (Mitscherlich, J. pr. 83. 455.)

Nearly insol. in HCl or conc. $\text{HNO}_3 + \text{Aq}$, but sol. in a mixture of 1 pt. H_2SO_4 and 1 pt. H_2O . (Debray, *Bull. Soc.* (2) 7. 9.)

$\text{Al}_2\text{O}(\text{SO}_4)_2, \text{K}_2\text{SO}_4$. Sol. in H_2O , but decomp. by heating.

With varying composition. Precipitates. Insol. in H_2O . Very sl. sol. in cold, gradually in hot acids. (Bley, J. pr. 39. 17.) Very difficultly sol. in warm conc. $\text{HCl} + \text{Aq}$, but easily sol. in $\text{KOH} + \text{Aq}$. (Naumann, B. 8. 1630.)

Aluminum potassium sulphate (Potash alum), $\text{KAl}(\text{SO}_4)_2 + 12\text{H}_2\text{O}$ or $\text{K}_2\text{Al}_2(\text{SO}_4)_4 = \text{K}_2\text{SO}_4, \text{Al}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$.

Sol. in H_2O with absorption of heat.

When 100 pts. H_2O at 10.8° are mixed with 14 pts. alum, the temp. is lowered 1.4° . (Rüdorff, B. 2. 68.)

Burnt alum is very slowly sol. in H_2O .

100 pts. H_2O at t° dissolve P pts. $\text{K}_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$

t°	P	t°	P
12 5	7 6	50 0	48 7
21 25	10 4	62 5	230 0
25 0	22 0	75 0	920 0
37 5	44 1	87 5	1566 6

(Brandes, 1822.)

Sol in 18 pts. cold, and 1.6 pts. boiling H_2O (Fourcroy); in 14 12 pts. cold, and 0.75 pt. boiling H_2O (Bergmann), in 15 pts. cold, and 0.75 pt. boiling H_2O (Dumas), in 11.7 pts. H_2O at 18.75° (Abt).

100 pts. H_2O dissolve 14.79 pts. alum at 15.56° , and 133.33 pts. at 100° . (Ure's Diet)

$\text{K}_2\text{Al}_2(\text{SO}_4)_4 + \text{Aq}$ sat at 15° contains 10.939 pts. alum in every 100 pts. H_2O (Michel and Kraft)

$\text{K}_2\text{Al}_2(\text{SO}_4)_4 + \text{Aq}$ sat. in cold contains 5.2% alum (Fourcroy), 6.7% (Boerhave).

100 pts. H_2O dissolve (a) pts. anhydrous alum, and (b) pts. crystallised at t° .

	0°	10°	20°	30°	40°	50°
a	2.62	4.50	6.57	9.05	12.35	15.9

b	51.3	71.97	103.1	187.8	421.9

(Poggiale, A. ch. (3) 8. 467.)

According to Locke (Am. Ch. J. 1901, 26. 174), Poggiale's tables for NH_4 and K alums are evidently transposed, and the above data are applied by Poggiale to NH_4 alum.

100 pts. H_2O dissolve $\text{K}_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ corresponding to pts anhydrous $\text{K}_2\text{Al}_2(\text{SO}_4)_4$

Temp	Pts $\text{K}_2\text{Al}_2(\text{SO}_4)_4$	Temp	Pts $\text{K}_2\text{Al}_2(\text{SO}_4)_4$
0	3 0	60	25
5	3 5	70	40
10	4 0	80	71
15	5 0	90	109
20	5 9	92 5	119.5
30	7 9	100	154
40	11 7	110	200
50	17 0	111 9	210 6

(Mulder, Scheik Verhandel 1864. 90.)

100 pts. H_2O at 17° dissolve 13.5 pts. $\text{K}_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$, or 7.36 pts. $\text{K}_2\text{Al}_2(\text{SO}_4)_4$. (Redtenbacher, J. pr. 94. 442.)

Forms supersaturated solutions very easily. Supersat. solutions are brought to crystallisation by addition of a crystal of alum or an isomorphous substance, as chrome or iron alum. Other substances as NaCl , etc. have no action. (Thomson, Chem. Soc. 35. 199.)

1 l. H_2O dissolves 72.3 g. anhydrous, or 138.4 g. hydrated salt, or 0.28 g. mol. of anhydrous salt at 25° . (Locke, Am. Ch. J. 1901, 26. 175.)

Solubility in H_2O at t° .

Solubility in ethyl alcohol + Aq.

Upper layer			
Temp.	g. H_2O	g. alcohol	g salt
16.6°	52.80	40.21	6 99
33.0°	47.99	46 75	5.26
41.8°	47.34	47.67	4.99
55.7°	45 90	49 47	4.63
Lower layer			
16.6°	60 33	10.19	29.48
33.0°	61.02	9.80	29 18
41.8°	61.16	9.74	29.10
55 7°	61.59	9 46	28.95

Solubility of $(\text{NH}_4)_2\text{SO}_4$ in alcohol at 30° .

Two liquid layers are formed between alcohol concentrations of 5.8 and 62° .

Composition of layers

Upper layer			Lower layer		
% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O	% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O
2.2	56.6	41.2	37.1	5.8	57.1
2.6	54.5	42.9	35.7	6.3	58
3.4	52.3	44.3	33.8	7.4	58.8
13.2	31.8	55	21.7	18.4	59.9
17	25	58	17	25	58

At concentration of 62% alcohol, the liquid is homogeneous and contains 1.3% $(\text{NH}_4)_2\text{SO}_4$.

(Wibaut, Chem. Weekbl. 1909, 6. 401.)

Solubility of $(\text{NH}_4)_2\text{SO}_4$ in alcohol at 60° .

% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O
43.02	2.32	54.66
41.1	4.1	54.8
1.2	64.5	34.3
0.2	75.5	24.3

Between 4.1° and 64.5° , two liquid layers are formed.

Composition of layers.

Upper layer			Lower layer		
% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O	% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O
1.2	64.5	34.3	41.1	4.1	54.8
1.6	60	38.4	36.8	6	57.2
3.8	50	46.2	30.8	9	60.2
7.4	40	52.6	26.6	12	61.4
10	34.4	55.6	23.6	15	61.4

(Schreinemakers, Z. phys. Ch. 1907, 59. 641.)

Solubility in alcohol + Aq at 0° .

% $(\text{NH}_4)_2\text{SO}_4$	% alcohol	% H_2O
41.4	0	58.6
30.0	9.41	60.59
..
..
0.14	73.03	26.83

Two layers are formed between alcohol concentrations of 9.41 and 73.03%.

(de Waal, Dissert. 1910.)

Solubility in propyl alcohol + Aq at 20° .

% propyl alcohol	% $(\text{NH}_4)_2\text{SO}_4$
20	6.7
30	4.8
40	3.2
50	2.0
60	1.0
70	0.4

(Linebarger, Am. Ch. J. 1892, 14. 389.)

100 g. 95% formic acid dissolve 25.4 g. $(\text{NH}_4)_2\text{SO}_4$ at 16.5° . (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329). Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in CS_2 . (Arcetowski, Z. anorg. 1894, 6. 257.)

Ammonium hydrogen sulphate, NH_4HSO_4 .

Sl. deliquescent. Sol. in 1 pt. cold H_2O . (Link.)

Very sl. sol. in alcohol. (Gerhardt, A. ch. (3) 20. 255.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

$(\text{NH}_4)_2\text{H}(\text{SO}_4)_2$. Not deliquescent. Sol. in H_2O . (Mitscherlich, Pogg. 39. 198.)

$(\text{NH}_4)_2\text{SO}_4 \cdot 3\text{H}_2\text{SO}_4$. D'Ans and Schreiner, Z. anorg. 1913, 80. 241.)

Ammonium pyrosulphate, $(\text{NH}_4)_2\text{S}_2\text{O}_7$.

Decomp. by H_2O . (Schulze.)

$\text{NH}_4\text{HS}_2\text{O}_7$. (D'Ans and Schreiner, Z. anorg. 1913, 80. 241.)

Ammonium octosulphate, $(\text{NH}_4)_2\text{S}_8\text{O}_{25}$.

Decomp. by H_2O . (Weber, B. 17. 2497.)

Ammonium antimony sulphate,

$(\text{NH}_4)_2\text{SO}_4 \cdot \text{Sb}_2(\text{SO}_4)_3$.

Behaves toward H_2O and abs. alcohol as a mixture of the components. (Metzl, Z. anorg. 1905, 48. 152.)

Decomp. very slowly by H_2O . (Gutmann, Arch. Pharm. 1898, 236. 479.)

Ammonium bismuth sulphate, $\text{NH}_4\text{Bi}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$.

Easily sol. in HCl , and HNO_3 + Aq; less sol. in conc. H_2SO_4 , and hot dil. acids. Slowly decomp. by cold $\text{HCl} \cdot \text{H}_2\text{O}_2$, and dil. H_2SO_4 + Aq. (Lüddecke, A. 140. 277.)

Ammonium cadmium sulphate, $(\text{NH}_4)_2\text{SO}_4 \cdot \text{CdSO}_4 \cdot 6\text{H}_2\text{O}$.

Can be recrystallised from a little H_2O . (v. Hauer.)

1 l. H_2O dissolves 723 g. anhydrous salt at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

$3(\text{NH}_4)_2\text{SO}_4$, $\text{CdSO}_4 + 10\text{H}_2\text{O}$. (André, C. R. 104. 987)

Ammonium calcium sulphate,
 $(\text{NH}_4)_2\text{Ca}(\text{SO}_4)_2 + \text{H}_2\text{O}$

Decomp. by H_2O . (Fassbender, B. 11. 1968)

Sol. in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$ (Rose, Pogg. 110. 292)

This double salt is stable between 0° and 100° in solutions containing an excess of $(\text{NH}_4)_2\text{SO}_4$. It is not formed if the solution contains less than 35% $(\text{NH}_4)_2\text{SO}_4$. (Barre, C. R. 1909, 148. 1605.)

$(\text{SO}_4)_2\text{Ca} \cdot (\text{NH}_4)_2$. Decomp. by H_2O . (D'Ans, B. 1907, 40. 192.)

This double salt is formed in the presence of an excess of CaSO_4 and at temp. above 80° . (Barre, C. R. 1909, 148. 1605.)

$\text{Ca}_3(\text{NH}_4)_2(\text{SO}_4)_6 + \text{H}_2\text{O}$. Decomp. by H_2O . (D'Ans, B. 1907, 40. 192.)

Ammonium calcium cupric sulphate,
 $(\text{NH}_4)_2\text{Cu}(\text{NH}_4)_2(\text{SO}_4)_2 + 2\text{H}_2\text{O}$.

Very stable. (D'Ans, B. 1908, 41. 1778.)

Ammonium calcium potassium sulphate,
 $\text{NH}_4\text{CaK}(\text{SO}_4)_2 + \text{H}_2\text{O}$.

Decomp. by cold H_2O . (Fassbender, B. 11. 1968.)

Ammonium cerous sulphate, $(\text{NH}_4)_2\text{Ce}_2(\text{SO}_4)_4 + 8\text{H}_2\text{O}$.

More sol. in cold than in hot H_2O . (Czudnowicz).

100 g. H_2O dissolve at:

22 3° 22.35° 35.1° 45 2°

5 331 5.328 5 184 4.993 g anhydrous salt,

45° 55 3° 55 2°

2 994 2.240 2.187 g. anhydrous salt,

75 4° 85. 2°

1.492 1.184 g. anhydrous salt.

(Wolff, Z. anorg. 1905, 45. 102.)

$5(\text{NH}_4)_2\text{SO}_4$, $\text{Ce}_2(\text{SO}_4)_3$. (Barre, C. R. 1910, 151. 873.)

Ammonium ceric sulphate, $3(\text{NH}_4)_2\text{SO}_4$,
 $\text{Ce}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$.

Slightly efflorescent. Easily sol. in H_2O . (Mendelejeff, A. 168. 50.)

$3(\text{NH}_4)_2\text{SO}_4$, $2\text{Ce}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$. Sl. sol. in H_2O . (Mendelejeff.)

Ammonium chromous sulphate, $\text{NH}_4\text{Cr}(\text{SO}_4)_2$.

0.407 g. mol. anhydrous salt is sol. in 1 l. H_2O at 25° . (Locke, Am. Ch. J. 1901, 26. 175.)

+ $6\text{H}_2\text{O}$. 100 ccm. of sat. aqueous solution contain 55 g. of the salt at 20° . Insol. in alcohol. (Laurent, C. R. 1911, 131. 112.)

Ammonium chromic sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $\text{Cr}_2(\text{SO}_4)_3$.

Not attacked by boiling H_2O or conc. $\text{HCl} + \text{Aq.}$ Very slowly attacked by boiling $\text{KOH} + \text{Aq.}$ (sp. gr. = 1.3). Insol. in $\text{CrCl}_2 + \text{Aq.}$ or $\text{SnCl}_2 + \text{Aq.}$ (Klobb, Bull. Soc. (3) 9. 664.)

+ $5\text{H}_2\text{O}$. Is ammonium chromosulphate, which see.

+ $24\text{H}_2\text{O}$ **Chrome Alum.**

Violet modification. Efflorescent. Sol. in cold H_2O , but solution is decomp. on heating with formation of green modification. The dil. solution of green modification is gradually converted into violet modification by standing. Alcohol ppts. it from aqueous solution. (Schrotter, Pogg. 53. 526)

100 cc. H_2O dissolve 10.78 g. anhydrous, or 21.21 g. hydrated salt at 25° . Melts in crystal H_2O at 45° . (Locke, Am. Ch. J. 1901. 26. 174)

Solubility in H_2O .

Saturation is very slowly reached owing to transition between violet and green modifications. If time of saturation is taken at $2\frac{1}{2}$ hours, 100 g. of the solution contain at:

0°	30°	40°
3.77	10.6	15.5 g. $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4$.

This is assumed to be the solubility of the violet modification

In 300 hours, 15.96 g. salt are dissolved at 30° , and 24.64 g. in 250 hours at 40° . (Koppel, B. 1906, 39. 3741)

Calc. from electrical conductivity measurements, a solution containing 3.8 g. of the sulphate in 100 g. contains 48% of the green compound at 40° and 61% at 55° . With solutions of 6-7 times the above concentration equilibrium is reached at 40° with 30-40% green alum. (Koppel.)

Sp. gr. of aqueous solution of violet modification at 15° , containing:

4	8	12%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.
1.020	1.0405	1.0610	

Sat. solution at 15° has sp. gr. = 1.070. (Gerlach.)

Green modification. Sol. in H_2O and alcohol. When in aqueous solution, it gradually changes to violet modification.

Sp. gr. of aqueous solution of green modification at 15° , containing:

10	20	30%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$,
1.044	1.091	1.142	

40	50	60%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$,
1.197	1.255	1.317	

70	80	90%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.
1.384	1.456	1.532	

(Gerlach, Z. anal. 28. 498.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$3(\text{NH}_4)_2\text{SO}_4$, $\text{Cr}_2(\text{SO}_4)_3$. Only sl. attacked by boiling H_2O . Not attacked by boiling conc. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$ (Klobb, Bull. Soc. (3) 9. 663.)

Ammonium cobaltous sulphate,
 $(\text{NH}_4)_2\text{Co}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$.100 pts. H_2O dissolve at:

0° 10° 18° 23° 35°

8.9 11.6 15.2 17.1 19.6 pts. anhydrous salt,

40° 45° 50° 60° 75°

22.3 25 28.7 34.5 43.3 pts. anhydrous salt.
(Tobler, A. 95. 193.)

100 pts. saturated solution contain at:

20° 40° 60° 80°

14.9 20.8 25.6 33 pts. anhydrous salt.
(v. Hauer, J. pr. 74. 433.)1 l. H_2O dissolves 147.2 g. anhydrous salt at 25°. Tobler's results are inaccurate.
(Locke, Am. Ch. J. 1902, 27. 459.)

Pptd. from aqueous solution by alcohol.

Ammonium cobaltic sulphate,
 $(\text{NH}_4)_2\text{Co}_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$.Sol. in H_2O with decomp (Marshall, Chem. Soc 59. 760.)**Ammonium cobaltous cupric sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{CuSO}_4 \cdot 12\text{H}_2\text{O}$ Quite easily sol. in hot H_2O , but on long boiling a basic salt is pptd. (Vohl, A. 94. 58.)**Ammonium cobaltous ferrous sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{FeSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cobaltous magnesium sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{MgSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cobaltous manganous sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{MnSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cobaltous nickel sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{NiSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cobaltous zinc sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CoSO}_4, \text{ZnSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cupric sulphate, $(\text{NH}_4)_2\text{SCu}_2$, $\text{CuSO}_4 \cdot 6\text{H}_2\text{O}$.**

Efflorescent in warm air.

Sol. in 1.5 pts boiling H_2O , and separates almost wholly on cooling. (Vogel, J. pr. 2. 194)
Sol. in 1.55 pts. H_2O at 18.75°. (Abl.)100 pts. H_2O at 19° dissolve 26.6 pts., and sat. solution has sp. gr. = 1.1337. (Schiff, A. 109. 426)

100 g. sat. solution at 30° contain 30.36 g. anhydrous salt. (Schreinemakers, Arch. Néer. Sci. 1910, (2) 15. 92.)

Solubility of $(\text{NH}_4)_2\text{Cu}(\text{SO}_4)_2, 6\text{H}_2\text{O} + (\text{NH}_4)_2\text{Ni}(\text{SO}_4)_2, 6\text{H}_2\text{O}$ in H_2O at 13-14°. Mols per 100 mols. H_2O .

Cu salt	Ni salt	% Cu salt in solid phase
0	0 521	0
0 1476	0 295	10 29
0 2664	0 2089	30 59
0 4165	0.1449	52 23
0 4785	0 1202	78 80
1 0350	0	100

(Fock, Z. Kryst. Min. 1897, 28. 365.)

Solubility of $(\text{NH}_4)_2\text{Cu}(\text{SO}_4)_2, 6\text{H}_2\text{O} + \text{K}_2\text{Cu}(\text{SO}_4)_2, 6\text{H}_2\text{O}$ in H_2O at 13-14°. Mols. per 100 mols. H_2O .

K salt	NH_4 salt	% K salt in solid phase

(Fock.)

 $(\text{NH}_4)_2\text{SO}_4, 2\text{CuSO}_4$. Very sol. in H_2O (Klobb, C. R. 115 230.)**Ammonium cupric ferrous sulphate.**Sol. in H_2O without decomposition. (Vohl, A. 94. 61.)**Ammonium cupric magnesium sulphate,**
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{MgSO}_4 \cdot 12\text{H}_2\text{O}$.Sol. in H_2O . (Vohl, A. 94. 57.)**Ammonium cupric magnesium potassium sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 \cdot 12\text{H}_2\text{O}$.**Sol. in H_2O . (Schiff.) $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, 2\text{MgSO}_4, \text{K}_2\text{SO}_4 + 18\text{H}_2\text{O}$. Sol. in H_2O . (Schiff.)

Ammonium cupric manganous sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{MnSO}_4 + 12 \text{H}_2\text{O}$.
 Sol. in H_2O (Vohl, A. 94. 57.)

Ammonium cupric nickel sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{NiSO}_4 + 12 \text{H}_2\text{O}$.
 Sol. in H_2O . (Vohl.)

Ammonium cupric potassium sulphate,
 $\text{NH}_4\text{KSO}_4, \text{CuSO}_4 + 6 \text{H}_2\text{O}$.
 Sol. in H_2O (Schiff.)

Ammonium cupric zinc sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{ZnSO}_4 + 12 \text{H}_2\text{O}$.
 Sol. in H_2O . (Vohl.)

Ammonium cupric sulphate ammonia,
 $(\text{NH}_4)_2\text{SO}_4, \text{CuO}, 2\text{NH}_3$
 Sol. in 1.5 pts. cold H_2O , but decomp. on exposure to air or dilution. Insol. in alcohol. (Kühn.)

Ammonium didymium sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $\text{Di}_2(\text{SO}_4)_3 + 8 \text{H}_2\text{O}$.
 Sol. in 18 pts. H_2O , and less easily in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$ (Marignac.)
 Moderately sol. in H_2O (Cleve, Bull. Soc (2) 43. 362.)

Ammonium erbium sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $\text{Er}_2(\text{SO}_4)_3 + 8 \text{H}_2\text{O}$.
 Sol. in H_2O . (Cleve.)

Ammonium gallium sulphate,
 $(\text{NH}_4)_2(\text{Ga}_2(\text{SO}_4)_4 + 24 \text{H}_2\text{O})$.
 Sol. in cold water and dilute alcohol. Conc solution clouds up on boiling, but clears on cooling. Dil. solution separates out a basic salt, insol. in hot or cold H_2O . (Boisbaudran.)

Ammonium glucinum sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $(\text{GlSO}_4)_2 + 2 \text{H}_2\text{O}$.
 Sol. in H_2O . (Atterberg.)

Ammonium indium sulphate,
 $(\text{NH}_4)_2\text{In}_2(\text{SO}_4)_4 + 24 \text{H}_2\text{O}$.
 100 pts. H_2O dissolve 200 pts. salt at 16° , and 400 pts. at 30° .
 Insol. in alcohol.
 Melts in crystal H_2O at 36° . (Rössler, J. pr. (2) 7. 14.)
 $+ 8 \text{H}_2\text{O}$. (Rössler.)

Ammonium iridium sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $\text{Ir}_2(\text{SO}_4)_3 + 24 \text{H}_2\text{O}$.
 Easily sol. in H_2O . (Marino, Z. anorg. 1904, 42. 221.)

Ammonium iron (ferrous) sulphate,
 $(\text{NH}_4)_2\text{Fe}(\text{SO}_4)_2 + 6 \text{H}_2\text{O}$.
 Much less sol. in H_2O than $\text{FeSO}_4 + 7 \text{H}_2\text{O}$. (Vogel, J. pr. 2. 192.)

100 pts. H_2O dissolve at:
 $0^\circ \quad 12^\circ \quad 20^\circ \quad 30^\circ \quad 36^\circ$
 12.2 17.5 21.6 28.1 31.8 pts. anhydrous salt,
 $45^\circ \quad 55^\circ \quad 60^\circ \quad 65^\circ \quad 75^\circ$
 36.2 40.3 44.6 49.8 56.7 pts. anhydrous salt.
 (Tobler, A. 95. 193.)

100 pts. H_2O at 16.5° dissolve 35.9 pts. hydrous salt.

1 l. H_2O dissolves 351 pts. or 1.044 g. mol. anhydrous salt at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

Sol. in H_2O without decomp. Aq. solution at 30° contains 13.13% FeSO_4 and 11.45% $(\text{NH}_4)_2\text{SO}_4$. (Schreinemakers, C. C. 1910, I. 801.)

Sp gr of $(\text{NH}_4)_2\text{FeSO}_4 + \text{Aq}$ at 19°
 $\% = \%(\text{NH}_4)_2\text{FeSO}_4 + 6 \text{H}_2\text{O}$.

%	Sp gr	%	Sp. gr	%	Sp gr.
1	1.006	11	1.066	21	1.130
2	1.013	12	1.073	22	1.136

(Schiff calculated by Gerlach, Z. anal. 8. 280.)

Insol. in acetone.

Ammonium ferric sulphate, basic.

Extremely difficultly sol. in $\text{HCl} + \text{Aq}$. Not decomp. by $\text{KOH} + \text{Aq}$. (Berzelius.)
 $5(\text{NH}_4)_2\text{O}, 3\text{Fe}_2\text{O}_3, 12\text{SO}_3 + 18 \text{H}_2\text{O}$ or $2(\text{NH}_4)_2\text{O}, \text{Fe}_2\text{O}_3, 4\text{SO}_3 + 4 \text{H}_2\text{O}$. Sol. in 2.4 pts. cold H_2O . (Maus, Pogg. 11. 79.)

Ammonium iron (ferric) sulphate, $(\text{NH}_4)_2\text{SO}_4$,
 $\text{Fe}_2(\text{SO}_4)_3$.

Attacked slowly by cold H_2O . (Lachaud and Lepierre.)

Nearly insol. in H_2O . (Weinland, Z. anorg. 1913, 84. 363.)

$+ 24 \text{H}_2\text{O}$. Iron alum. Sol. in 3 pts. H_2O at 15° . (Forechhammer, Ann. Phil. 5. 406.)

100 cc. H_2O dissolve 44.15 g. anhydrous, or 124.40 g. hydrated salt at 25° , or 1.659 g. mols. anhydrous salt are sol. in 1 l. H_2O at 25° . (Locke, Am. Ch. J. 1901, 26. 174.)

Sp. gr. of aqueous solution at 15° containing:

5 10 15% $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24 \text{H}_2\text{O}$,
 1.023 1.047 1.071

20 25 30% $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24 \text{H}_2\text{O}$,
 1.096 1.122 1.148

35 40% $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24 \text{H}_2\text{O}$.
 1.175 1.203

40% solution is sat. at 15°. (Gerlach, Z. anal. 28. 496.)

Melts in crystal H_2O at 40°. (Locke.)
 $3(\text{NH}_4)_2\text{SO}_4, \text{Fe}_2(\text{SO}_4)_3$. Insol. in cold H_2O . (Lachaud and Lepierre.)

Ammonium iron (ferroferrie) sulphate,
 $4(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{Fe}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$.

Sl. sol. in cold H_2O ; decomp. into basic salt by hot H_2O ; insol. in alcohol. (Lachaud and Lepierre, C. R. 114. 916.)

Ammonium ferrous magnesium sulphate,
 $4(\text{NH}_4)_2\text{SO}_4, 3\text{FeSO}_4, \text{MgSO}_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O . (Schiff, A. 107. 64.)
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{MgSO}_4 + 12\text{H}_2\text{O}$. Sol in H_2O . (Vohl, A. 94. 57)

Ammonium ferrous manganous sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{MnSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium ferrous nickel sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium ferrous zinc sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Bette, A. 14. 286.)

Ammonium lanthanum sulphate, $(\text{NH}_4)_2\text{SO}_4,$
 $\text{La}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Marignac.)
 Quite sol. in H_2O . (Cleve.)
 $+ 2\text{H}_2\text{O}$. (Barre, C. R. 1910, 151. 872.)
 $5(\text{NH}_4)_2\text{SO}_4, 2\text{La}_2(\text{SO}_4)_3$. Sl. sol. in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ of concentrations above 60%. (Barre, A. ch. 1911, (8) 24. 246.)
 $5(\text{NH}_4)_2\text{SO}_4, \text{La}_2(\text{SO}_4)_3$. (Barre.)

Ammonium lead sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{PbSO}_4$.

Decomp. by H_2O into its constituents.

(Wöhler and Litton, A. 43. 126.)

Decomp. by H_2O . Only stable in contact with solutions containing.

13.86 pts. $(\text{NH}_4)_2\text{SO}_4$ per 100 pts. H_2O at 20°.

19.25 pts. $(\text{NH}_4)_2\text{SO}_4$ per 100 pts. H_2O at 50°.

24.31 pts. $(\text{NH}_4)_2\text{SO}_4$ per 100 pts. H_2O at 75°.

29.42 pts. $(\text{NH}_4)_2\text{SO}_4$ per 100 pts. H_2O at 100°.

(Barre, C. R. 1909, 149. 294.)

Ammonium lithium sulphate, NH_4LiSO_4 .

Solubility in $\text{H}_2\text{O} = 35.25\%$ at -10° and 36.18% at 70° . (Schreinemakers, C. C. 1906, I. 217.)

This is the only double salt which $(\text{NH}_4)_2\text{SO}_4$ forms with Li_2SO_4 below 100° . (Spielrein, C. R. 1913, 157. 48.)

Ammonium magnesium sulphate,
 $(\text{NH}_4)_2\text{Mg}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$.

100 pts. H_2O dissolve 15.9 pts. anhydrous double salt at 13° . (Mulder)

100 pts. H_2O dissolve at:

0° 10° 15° 20° 30°

9.0 14.2 15.7 17.9 19.1 pts. anhydrous salt,

45° 50° 55° 60° 75°

25.6 30.0 31.9 36.1 45.3 pts. anhydrous salt.

(Tobler, A. 96. 193.)

More sol. in H_2O than $(\text{NH}_4)_2\text{SO}_4$ or MgSO_4 (Graham.)

1 l. H_2O dissolves 199 pts. anhydrous salt at 25° . Tobler's results are inaccurate. (Locke, Am. Ch. J. 1902, 27. 459.)

100 g. H_2O dissolve at:

34° 41°F .

18.22 20.72 g. $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$.

50° 59°F .

22.48 24.08 g. $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$,

60° 70°F .

24.81 28.26 g. $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$,

81°F .

33.33 g. $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$.

(Lothian, Pharm. J. 1910, (4) 30. 546.)

Lothian's results for solubility in H_2O probably incorrect because of inaccuracy of experimental method. (Seidell, Pharm. J. 1911, (4) 33. 846.)

Solubility of $(\text{NH}_4)_2\text{Mg}(\text{SO}_4)_2$ in H_2O at t° .

t°	g anhydrous salt per 100 g	
	solution	H_2O
0	10.58	11.83
10	12.75	14.61
20	15.23	17.96
25	16.45	19.69
30	17.84	21.71
40	20.51	25.86
50	23.18	30.17
60	26.02	35.17
80	32.58	48.32
100	39.66	65.72

(Porlezza, Att. Acc. Linc. 1914, (5) 23. II, 509.)

Min. *Cerbolite*.

Ammonium magnesium nickel sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium magnesium potassium zinc sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, 3\text{MgSO}_4, 3\text{K}_2\text{SO}_4, 2\text{ZnSO}_4 + 30\text{H}_2\text{O}$.

Sol. in H_2O . (Schiff, A. 107. 64.)

$(\text{NH}_4)_2\text{SO}_4, 2\text{MgSO}_4, 2\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 18\text{H}_2\text{O}$. Sol. in H_2O . (Schiff.)

$(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$ Sol. in H_2O . (Schiff.)

Ammonium magnesium zinc sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.
 Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium manganous sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{MnSO}_4 + 6\text{H}_2\text{O}$.

Deliquescent. Easily sol. in H_2O . (Jahn)
 1 l. H_2O dissolves 372 g. anhydrous salt
 at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)
 $(\text{NH}_4)_2\text{SO}_4, 2\text{MnSO}_4$. Readily decomp. by
 H_2O . (Lepierre, C. R. 1895, 120. 924.)

Ammonium manganic sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{Mn}_2(\text{SO}_4)_3$.

Decomp. by H_2O . Insol. in ether, C_6H_6 , and
 conc. H_2SO_4 . Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Le-
 pierre, Bull. Soc. 1895, (3) 13. 596.)
 $+ 24\text{H}_2\text{O}$. Decomp. by H_2O . (Mitscher-
 lich.)

Ammonium manganous nickel sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{MnSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$.
 Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium manganous zinc sulphate,
 $2(\text{NH}_4)_2\text{SO}_4, \text{MnSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.
 Sol. in H_2O . (Vohl.)

Ammonium mercuric sulphate, $(\text{NH}_4)_2\text{SO}_4, 3\text{HgSO}_4 + 2\text{H}_2\text{O}$.

(Hirzel, J. B. 1850. 333.)
 $(\text{NH}_4)_2\text{SO}_4, \text{HgSO}_4$. Difficultly sol. in
 H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$.

Ammonium mercurous sulphate ammonia,
 $3\text{Hg}_2\text{O}, 2(\text{NH}_4)\text{HgSO}_4, 2\text{NH}_3$.

Insol. in hot or cold, dil. or conc. H_2SO_4
 and HNO_3 . Sol. in HCl . (Tarugi, Gazz.
 ch. it. 1903, 33. (1) 131.)

Ammonium nickel sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{NiSO}_4 + 6\text{H}_2\text{O}$.

Sol. in 4 pts. cold H_2O . (Lank, 1796.)

100 pts. H_2O dissolve at:

3.5° 10° 16° 20° 30°
 1.8 3.2 5.8 5.9 8.3 pts. anhydrous salt,

40° 50° 59° 68° 85°
 11.5 14.4 16.7 18.8 28.6 pts. anhydrous salt.
 (Tobler, A. 95. 193.)

100 pts. sat. solution contain at 20° , 9.4;
 at 40° , 13.2; at 60° , 18.6; at 80° , 23.1 pts.
 anhydrous salt. (v. Hauer, J. pr. 74. 433.)

1 l. H_2O dissolves 75.7 g. anhydrous salt
 at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

Nearly insol. in a weak acid solution of
 $(\text{NH}_4)_2\text{SO}_4$. (Thompson, C. C. 1863. 957.)

Ammonium nickel zinc sulphate, $2(\text{NH}_4)_2\text{SO}_4, \text{NiSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Ammonium nickel sulphate ammonia,
 $(\text{NH}_4)_2\text{SO}_4, \text{NiSO}_4, 6\text{NH}_3 + 3\text{H}_2\text{O}$.
 (André, C. R. 106. 936.)

Ammonium platinic sulphate, $2(\text{NH}_4)_2\text{SO}_4, \text{Pt}_3(\text{SO}_4)_2 + 25\text{H}_2\text{O}$.

Sol. in H_2O . (Prost, Bull. Soc. (2) 46. 156.)

Ammonium potassium sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{K}_2\text{SO}_4 + 4\text{H}_2\text{O}$.

Soluble in H_2O . 100 pts. H_2O at 16° dis-
 solve 13.68 pts. salt. (Thomson, 1831.)
 Min. *Taylorite*.

Ammonium praseodymium sulphate,
 $(\text{NH}_4)_2\text{SO}_4, \text{Pr}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Sl. sol. in H_2O . (von Scheele, Z. anorg.
 1898, 18. 359.)

Ammonium rhodium sulphate,
 $(\text{NH}_4)_2\text{SO}_4, \text{Rh}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$.

Very sol. H_2O ; melts in crystal H_2O at
 $102-103^\circ$. (Piccini, Z. anorg. 1901, 27. 67.)

Ammonium samarium sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{Sm}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Cleve, Bull. Soc. (2) 43.
 166.)

Ammonium scandium sulphate, $(\text{NH}_4)_2\text{SO}_4, \text{Sc}_2(\text{SO}_4)_3$.

Sol. in H_2O . (Cleve.)
 Sol. in H_2O and in dil. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$.
 (R. J. Meyer, Z. anorg. 1914, 86. 279.)

Ammonium sodium sulphate, $\text{NH}_4\text{NaSO}_4 + 2\text{H}_2\text{O}$.

100 pts. H_2O dissolve 46.6 pts. of cryst. salt
 at 15° , and the solution has a sp. gr. of 1.1749.

Sp. gr. of aqueous solution containing:
 $31.8 \quad 24.44 \quad 15.9\%$ $\text{NH}_4\text{NaSO}_4 + 2\text{H}_2\text{O}$,
 1.1749 1 1380 1.0849
 $12.72 \quad 6.36 \quad \%$ $\text{NH}_4\text{NaSO}_4 + 2\text{H}_2\text{O}$.
 1.0679 1.0337

(Schiff, A. 114. 68.)

Ammonium strontium sulphate.

Insol. in excess of $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. (Rose,
 Pogg. 110. 296.)

$(\text{NH}_4)_2\text{SO}_4, \text{SrSO}_4$. This double salt is
 only stable in contact with nearly sat. solu-
 tions of $(\text{NH}_4)_2\text{SO}_4$. (Barre, C. R. 1909, 149.
 293.)

Ammonium tellurium sulphate,
 $(\text{NH}_4)\text{HSO}_4, 2\text{TeO}_2, \text{SO}_3 + 2\text{H}_2\text{O}$.

As K salt. (Metzner, A. ch. 1898, (7)
 15. 203.)

Ammonium thallic sulphate, $\text{NH}_4\text{Ti}(\text{SO}_4)_2$.

(Marshall, C. C. 1902, II. 1089.)
 $+ 4\text{H}_2\text{O}$. Decomp. by H_2O . Easily sol.
 in dil. acids. (Fortini, Gazz. ch. it. 1905, 35.
 (2) 450.)

Ammonium thorium sulphate, $2(\text{NH}_4)_2\text{SO}_4$, $\text{Th}(\text{SO}_4)_2$.

Easily sol. in H_2O and sat. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$ (Cleve.)
 $+2\text{H}_2\text{O}$. (Barre.)
 $(\text{NH}_4)_2\text{SO}_4$, $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$. (Barre, A. ch. 1911, (8) 24. 240.)
 $3(\text{NH}_4)_2\text{SO}_4$, $\text{Th}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$. (B.)

Ammonium titanium sulphate,
 $(\text{NH}_4)_2\text{SO}_4$, TiO , $\text{SO}_4 + \text{H}_2\text{O}$.

Very sol. in H_2O with decomp.
 Insol. in conc. H_2SO_4 . (Rosenheim, Z. anorg. 1901, 26. 252.)
 $(\text{NH}_4)_2\text{O}$, 2TiO_2 , $2\text{SO}_3 + 3\text{H}_2\text{O}$. Slowly decomp. by H_2O . (Blondel, Bull. Soc. 1899, (3) 21. 262.)

Ammonium titanium sesquisulphate,
 $(\text{NH}_4)_2\text{SO}_4$, $3\text{Ti}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in HCl .
 Insol. in H_2SO_4 . Decomp. by boiling with conc. H_2SO_4 . (Stahler, B. 1905, 38. 2623.)

Ammonium uranous sulphate, $2(\text{NH}_4)_2\text{SO}_4$, $\text{U}(\text{SO}_4)_2$.

Easily sol. in H_2O . (Rammelsberg.)
 Sol. in H_2O but solution rapidly decomp. (Kohlschütter, B. 1901, 34. 3630.)

Ammonium uranyl sulphate, $(\text{NH}_4)_2\text{SO}_4$, $(\text{UO}_2)\text{SO}_4 + 2\text{H}_2\text{O}$.

Quite difficultly sol. in H_2O . (Arfvedson.)

Ammonium vanadous sulphate,
 $(\text{NH}_4)_2\text{SO}_4$, $\text{VSO}_4 + 6\text{H}_2\text{O}$.

Decomp. in the air.
 Sol. in H_2O . (Piccini, Z. anorg. 1899, 19. 205.)

Less sol. in H_2O than $\text{VSO}_4 + 7\text{H}_2\text{O}$. (Piccini and Marino, Z. anorg. 1902, 32. 60.)

Ammonium vanadic sulphate,
 $(\text{NH}_4)_2\text{SO}_4$, $\text{V}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$.

Insol. in H_2O .
 Insol. in H_2SO_4 . Decomp. by boiling with conc. H_2SO_4 .

Sol. in HCl . (Stahler, B. 1905, 38. 3980.)
 $+24\text{H}_2\text{O}$. Very sol. in H_2O ; decomp. in the air. (Piccini, Z. anorg. 1896, 11. 103.)

100 pts. H_2O dissolve 39.76 pts. salt at 10° .
 Sp. gr. of sat. solution at $4^\circ/20^\circ = 1.687$. (Piccini, Z. anorg. 1897, 13. 446.)

1 l. H_2O dissolves 31.69 g. anhydrous or 78.51 g. hydrated salt at 25° , or 1.210 g. mols. anhydrous salt are sol. in 1 l. H_2O at 25° .

Mpt. of crystals = 45° . (Locke, Am. Ch. J. 1901, 26. 175.)

Ammonium vanadyl sulphate,
 $(\text{NH}_4)_2\text{SO}_4$, $\text{VOSO}_4 + 3\frac{1}{2}\text{H}_2\text{O}$.

Easily sol. in H_2O and in a mixture of alcohol and conc. H_2SO_4 , but cannot be recryst. therefrom. (Koppel and Behrendt, Z. anorg. 1903, 35. 176.)

$(\text{NH}_4)_2\text{SO}_4$, $2\text{VOSO}_4 + \text{H}_2\text{O}$. Deliquescent. Slowly but abundantly sol. in H_2O , but cannot be recryst. from it except by addition of H_2SO_4 . (Koppel and Behrendt, Z. anorg. 1903, 35. 172.)

Ammonium yttrium sulphate, $2(\text{NH}_4)_2\text{SO}_4$, $\text{Y}_2(\text{SO}_4)_3 + 9\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

Ammonium zinc sulphate, $(\text{NH}_4)_2\text{SO}_4$, $\text{ZnSO}_4 + 6\text{H}_2\text{O}$.

100 pts. H_2O dissolve pts. $(\text{NH}_4)_2\text{SO}_4$, ZnSO_4 at:

0°	10°	13°	15°	20°
7 3	8 8	10 0	12 5	12.6 pts. salt,
30°	45°	60°	75°	85°
16 5	21 7	29.7	37 8	46 2 pts. salt.

(Tobler, A. 95. 193.)

1 l. H_2O dissolves 140.8 g. anhydrous salt at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

$+7\text{H}_2\text{O}$. (André, C. R. 104. 987.)

Ammonium zirconium sulphate.

Sol. in cold or hot H_2O or in acids. (Berzelius.)

Ammonium sulphate antimony fluoride,
 $(\text{NH}_4)_2\text{SO}_4$, 2SbF_3 .

Very sol. in H_2O . (Mayer, B. 1894, 27. R. 922.)

Ammonium sulphate chromic chloride,
 $2(\text{NH}_4)_2\text{SO}_4$, $\text{CrCl}_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Weinland, B. 1907, 40. 3768.)

Ammonium sulphate hydrogen peroxide,
 $(\text{NH}_4)_2\text{SO}_4$, H_2O_2 .

Efflorescent in air.

Easily sol. in H_2O . (Willstätter, B. 1903, 36. 1829.)

Antimony sulphate basic, $7\text{Sb}_2\text{O}_3$, $2\text{SO}_3 + 3\text{H}_2\text{O}$.

Insol. in, and not decomp. by hot or cold H_2O . (Adie, Chem. Soc. 57. 540.)

$5\text{Sb}_2\text{O}_3$, $2\text{SO}_3 + 7\text{H}_2\text{O}$. Insol. in H_2O . (Hensgen, R. t. c. 4. 401.)

$2\text{Sb}_2\text{O}_3$, $\text{SO}_3 + 7\text{H}_2\text{O}$. Not decomp. by cold H_2O . (Adie.)

Sb_2O_3 , $\text{SO}_3 = (\text{SbO})_2\text{SO}_4$. Decomp. by hot H_2O . (Peligot, J. B. 1847. 426.)

$+ \text{H}_2\text{O}$. As above. (Adie.)

Sb_2O_3 , 2SO_3 , and $+ \text{H}_2\text{O}$, and $+ 2\text{H}_2\text{O}$. Scarcely decomp. by cold, slowly by boiling H_2O . Slowly sol. in dil. $\text{HCl} + \text{Aq.}$ (Adie.)

Antimony sulphate, $\text{Sb}_2(\text{SO}_4)_3$.

Very deliquescent. Combines with H_2O to a hard mass with evolution of heat; with more H_2O it becomes liquid, and by repeated treat-

ment with much boiling H_2O it is wholly decomp. into H_2SO_4 and Sb_2O_3 . (Hensgen, R. t. c. 4. 401.)

Antimony sulphate, acid, $\text{Sb}_2\text{O}_3, 4\text{SO}_3$,

Decomp. by H_2O . (Adie.)

$\text{Sb}_2\text{O}_3 + \text{S}$, or 9SO_3 Decomp. by H_2O . (Adie.)

Antimony barium sulphate,

$\text{Sb}_2(\text{SO}_4)_3, \text{BaSO}_4 + 6\text{H}_2\text{O}$.

As Ca comp. (Kuhl, Z. anorg. 1907, 54. 257.)

Antimony caesium sulphate, $\text{SbCs}(\text{SO}_4)_2$.

Slowly decomp. by cold H_2O . (Gutman, Arch. Pharm. 1908, 246. 188.)

Antimony calcium sulphate,

$\text{Sb}_2(\text{SO}_4)_3, \text{CaSO}_4 + 6\text{H}_2\text{O}$.

Decomp. by H_2O . (Kuhl, Z. anorg. 1907, 54. 257.)

Antimony lithium sulphate, $\text{SbLi}(\text{SO}_4)_2$.

Decomp. by H_2O . (Gutman, Arch. Pharm. 1908, 246. 187.)

Antimony potassium sulphate, $\text{KSb}(\text{SO}_4)_2$.

Decomp. by H_2O . (Gutmann, Arch. Pharm. 1898, 236. 478.)

Antimony rubidium sulphate, $\text{SbRb}(\text{SO}_4)_2$.

Slowly decomp. by cold H_2O . (Gutman.)

Antimony silver sulphate, $\text{SbAg}(\text{SO}_4)_2$.

Slowly decomp. by H_2O . (Kühl, Z. anorg. 1907, 54. 258.)

Slowly decomp. by cold H_2O . (Gutman Arch. Pharm. 1908, 246. 189.)

Antimony sodium sulphate, $\text{NaSb}(\text{SO}_4)_2$.

Easily decomp. by H_2O . (Gutmann, Arch. Pharm. 1898, 236. 478.)

Antimony strontium sulphate, $\text{Sb}_2(\text{SO}_4)_3, \text{SrSO}_4 + 6\text{H}_2\text{O}$.

As Ca comp. (Kühl, Z. anorg. 1907, 54. 257.)

Antimony thallium sulphate, $\text{SbTl}(\text{SO}_4)_2$.

Slowly decomp. by cold H_2O . Decomp. by conc. H_2SO_4 . (Gutman, Arch. Pharm. 1908, 246. 189.)

Arsenic sulphate.

See Arsenic sulphur trioxide.

Barium sulphate, BaSO_4 .

Sol. in 43,000 pts. H_2O (Kirwan); in 200,000 pts. H_2O (Margueritte, C. R. 38. 308.)

100 pts H_2O dissolve 0.002 pt. BaSO_4 . (Ure's Dict.)

$\text{BaCl}_2 + \text{Aq}$ containing 1 pt. BaO to 71,000 pts H_2O , when treated with H_2SO_4 , becomes turbid in $\frac{1}{2}$ hour (Harting, J. pr. 22. 52.)

$\text{Ba}(\text{NO}_3)_2 + \text{Aq}$ containing 1 pt. BaO to 25,000 pts H_2O gives a distinct cloud with H_2SO_4 or $\text{Na}_2\text{SO}_4 + \text{Aq}$, with 50,000–100,000 pts H_2O a slight turbidity is produced; with 200,000–400,000 pts H_2O the mixture becomes turbid in a few minutes, while with 800,000 pts H_2O no action is visible (Lassaigne, J. Chim. Méd. 8. 526.)

Sol. in 800,000 pts H_2O (Calvert); in 400,000 pts. cold or hot H_2O (Fresenius).

Calculated from the electrical conductivity of the solution, BaSO_4 is sol. in 429,700 pts. H_2O at 18.4° , and 320,000 pts. at 37.7° . (Holleman, Z. phys. Ch. 12. 131.)

1 l. H_2O dissolves 1.72 mg. at 2° ; 1.97 mg. at 10° ; 2.29 mg. at 19.0° ; 2.60 mg. at 26° ; 2.91 mg. at 34° . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Calculated from the electrical conductivity of the solution, BaSO_4 is sol. in 425,000 pts. H_2O at 18.3° . Results of Fresenius and Hintz (Z. anal. 1896, 35. 170) are incorrect. (Küster, Z. anorg. 1896, 12. 267.)

Sat. aq. solution contains 2.29 mg. BaSO_4 per liter at 25° when particles of salt are not less than 1.8μ in diameter.

Sat. aq. solution contains 4.15 mg. BaSO_4 per liter at 25° when particles of salt are 0.1μ in diameter. ($\mu = 0.0001$ cm.) (Hulett, Z. phys. Ch. 1901, 37. 398–9.)

In general the influence of the size of the grain on the solubility of the substance is negligible when the solubility exceeds 2%. The increase of normal solubility by using finely divided solids, amounts to 80% in the case of BaSO_4 . (Hulett, Z. phys. Ch. 1904, 47. 366.)

1 l. H_2O dissolves 2.3 mg. BaSO_4 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

Calculated from electrical conductivity of $\text{BaSO}_4 + \text{Aq}$.

0.0190 milli-equivalents are sol. in 1 liter H_2O at 18° ; 0.0212 at 25° ; 0.0288 at 50° ; 0.0334 at 100° .

(Melcher, J. Am. Chem. Soc. 1910, 32. 55.)

Not attacked by cold HCl or $\text{HNO}_3 + \text{Aq}$ after several hours, and only in traces after several days. On boiling, traces of BaSO_4 dissolve, and the liquid after cooling can be precipitated by BaCl_2 or $\text{H}_2\text{SO}_4 + \text{Aq}$, but not by H_2O alone. (Rose, Pogg. 95. 108.)

By washing BaSO_4 long enough with H_2O containing HCl or HNO_3 [$\text{HC}_2\text{H}_3\text{O}_2$ (Siegle)], the filtrate can be precipitated by H_2SO_4 or BaCl_2 . (Piria, J. B. 1856. 334.)

1000 pts. 3% $\text{HCl} + \text{Aq}$ dissolve 0.06 pt. BaSO_4 in the cold, and still more on boiling.

230 cc. $\text{HCl} + \text{Aq}$ of 1.02 sp. gr. dissolve 0.048 g. BaSO_4 from 0.679 g. BaSO_4 when boiled $\frac{1}{4}$ hour.

168 cc. $\text{HCl} + \text{Aq}$ of 1.03 sp. gr. dissolve 0.0075 g. BaSO_4 from 0.577 g. BaSO_4 when boiled 5 minutes. (Siegle, J. pr. 69. 142.)

Solubility of BaSO_4 in $\text{HCl} + \text{Aq}$

No. cc. $\text{HCl} + \text{Aq}$ containing 1 mg equiv. HCl	Mg BaSO_4 per 1 mg equiv. of HCl	g per 100 cc solution	
		HCl	BaSO_4
2 0	0 133	1 82	0 0067
1 0	0 089	3 65	0 0089
0 5	0 056	7.29	0 0101
0.2	0 017	18 23	0 0086

(Banthisch, J. pr. 1884, 29. 54)

100,000 pts. H_2O dissolve 0.124 pt. BaSO_4 ; 1000 pts. $\text{HNO}_3 + \text{Aq}$ of 1.167 sp. gr. dissolve 2 pts. BaSO_4 ; 1000 pts. $\text{HNO}_3 + \text{Aq}$ of 1.032 sp. gr. dissolve 0.062 pt. BaSO_4 . (Calvert, Chem. Gaz. 1856. 55.)

When 0.4 g. BaSO_4 is heated $\frac{1}{4}$ hour with 150 cc. $\text{HNO}_3 + \text{Aq}$ of 1.02 sp. gr., 0.165 g. is dissolved. (Siegle, J. pr. 69:142.)

Solubility of BaSO_4 in $\text{HNO}_3 + \text{Aq}$.

No. cc. $\text{HNO}_3 + \text{Aq}$ containing 1 mg equiv HNO_3	Mg BaSO_4 per 1 mg. equiv of BaSO_4	G per 100 cc solution	
		HNO_3	BaSO_4
2 0	0 140	3 15	0 0070
1 0	0 107	6 31	0 0107
0 5	0 085	12 61	0 0170
0 2	0 048	31 52	0 0241

(Banthisch, J pr. 1884, 29. 54)

Acetic acid has less solvent power than other acids. 80 cc. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ of 1.02 sp. gr. boiled with 0.4 g. BaSO_4 $\frac{1}{4}$ hour dissolve 0.002 g. (Siegle, J. pr. 69. 142.)

Sol. in boiling conc. H_2SO_4 . (See $\text{BaH}_2(\text{SO}_4)_2$.)

Sol. in fuming H_2SO_4 . (See BaS_2O_7 .)

Sol. in 2500 pts. boiling 40% $\text{HBr} + \text{Aq}$; in 6000 pts. boiling 40% $\text{HI} + \text{Aq}$. (Haslam, C. N. 53. 87.)

Sol. in considerable amount in metaphosphoric acid + Aq . (Scheerer and Drechsel, J. pr. (2) 7. 68.)

Not attacked by boiling conc. $\text{KOH} + \text{Aq}$ if CO_2 is not present. (Rose, Pogg. 95. 104.)

Very sl. decomp. by standing a long time with cold conc. alkali carbonates + Aq .

Decomp. by boiling Na_2CO_3 or $\text{K}_2\text{CO}_3 + \text{Aq}$, not by $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (See Storer's Dict. for analytical data.)

Very sl. sol. in $\text{NH}_4\text{Cl} + \text{Aq}$, 1 pt. dissolving in 230,000 pts. sat. $\text{NH}_4\text{Cl} + \text{Aq}$.

500 cc. sat. $\text{NH}_4\text{NO}_3 + \text{Aq}$ with 50 cc. sat. $\text{NH}_4\text{Cl} + \text{Aq}$ dissolve 2 g. BaSO_4 . 100 cc. sat. $\text{NH}_4\text{NO}_3 + \text{Aq}$ with 100 cc. sat. $\text{NH}_4\text{Cl} + \text{Aq}$ dissolve only 0.08 g. BaSO_4 , therefore above solubility is due to free chlorine. (Mittentzwey, J. pr. 75. 214.)

BaSO_4 cannot be precipitated from solutions containing free Cl_2 . (Erdmann, J. pr. 75. 215.)

Pptn. is retarded sl. by tartaric and racemic acids. (Spiller.)

Na metaphosphate prevents pptn. of BaSO_4 , but not ortho- or pyrophosphate. (Scheerer, J. pr. 75. 114.)

Not precipitated in presence of alkali citrates. (Spiller.)

Much less sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ than in $\text{NH}_4\text{NO}_3 + \text{Aq}$. Insol. in warm conc. $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Diehl, J. pr. 79. 431.)

Not appreciably sol. in H_2O containing ammonium or sodium chloride. (Brett, Wittstein, Wackenroder.)

Not appreciably sol. in H_2O at 250° , or in H_2O containing Na_2S (Senarmont.)

Solubility is increased by alkali nitrates, but not appreciably by NaCl , KClO_3 , or $\text{Ba}(\text{NO}_3)_2$. (Fresenius, Z. anal. 9. 52.) Scarcely sol. in boiling conc. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$. (Fresenius.)

Solubility in H_2O increased by presence of MgCl_2 (Fresenius), cerium salts (Marignac).

Sol. in $\text{Fe}_2\text{Cl}_3 + \text{Aq}$. (Lunge, Z. anal. 19. 141.)

Solubility in various salts + Aq at $20-25^\circ$.

g salt per l	Mg BaSO_4 dissolved per l in		
	FeCl_3	AlCl_3	MgCl_2
1	58	33	30
2 5	72	43	30
5	115	60	33
10	123	94	33
25	150	116	50
50	160	170	50
100	170	175	50

(Fraps, Am Ch J. 1902, 27. 290)

Solubility in sat. solution of various salts + Aq .

Salt	G BaSO_4 sol in 1 l of the solvent
NaNO_3	0 2940
NaCl	0 00783
NH_4Cl	0 00827

(Ehlert, Z. Elektrochem, 1912, 18. 728.)

Conc. $\text{CrCl}_3 + \text{Aq}$ dissolves 40-120 times as much BaSO_4 as H_2O , when boiled therewith for 5 days; conc. $\text{CrCl}_3 + \text{Aq}$ acidified with HCl , 450 times as much in 10 days. (Kuster, Z. anorg. 1905, 43. 348.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1893, 20. 827.)

Sol. in $\text{H}_2\text{O}_2 + \text{Aq}$. (Gawalowski, C. C. 1906, II. 7.)

100 cc. 95% formic acid dissolve 0.01 g. BaSO_4 at 18.5° . (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Min. Barite.

Barium hydrogen sulphate, $\text{BaH}_2(\text{SO}_4)_2$.

100 pts. H_2SO_4 dissolve 2.22 pts. BaSO_4 (Lies-Bodart and Jacquemin, C. R. **46**, 1206); 5.69 pts. BaSO_4 (Struve, Z. anal. **9**, 34)

Boiling H_2SO_4 dissolves 10–12% freshly precipitated BaSO_4 without separating crystals on cooling. H_2SO_4 at 100° dissolves more than boiling H_2SO_4 , and becomes cloudy if heated to boiling. (Schultz, Pogg. **133**, 146.)

1 g. BaSO_4 pptd. from BaCl_2 is sol. in 3153 g. 91% H_2SO_4 ; from $\text{Ba}(\text{NO}_3)_2$ is sol. in 1519 g. 91% H_2SO_4 . (Varenne and Pauleau, C. R. **93**, 1016.)

100 pts. hot conc. H_2SO_4 dissolve approx. 6 pts. BaSO_4 . (Rohland, Z. anorg. **1910**, **66**, 206.)

10 ccm. of sat. BaSO_4 + absolute H_2SO_4 contain approx. 2.851 g. BaSO_4 . (Bergius, Z. phys. Ch. **1910**, **72**, 355.)

Equilibrium in the system $\text{BaSO}_4 + \text{H}_2\text{SO}_4 + \text{H}_2\text{O}$ at 25° .

Composition of the solution		
(% H_2SO_4)	g BaSO_4 per l	Solid phase
73.83	0.030	BaSO_4
78.04	0.135	"
80.54	0.285	"
83.10	0.800	"
85.78	3.215	$\text{BaSO}_4, 2\text{H}_2\text{SO}_4 \cdot \text{H}_2\text{O}$
88.08	12.200	"
93.17	49.665	$\text{BaSO}_4, \text{H}_2\text{SO}_4$

(Volkhonski, C. C. **1910**, I. **1954**; C. A. **1911**, 617.)

Decomp. by H_2O , alcohol, or ether.

+ $2\text{H}_2\text{O}$. (Schultz.)

$\text{BaSO}_4, 2\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$. (Volkhonski.)

Barium pyrosulphate, BaS_2O_7 .

100 pts. fuming H_2SO_4 dissolve 15.89 pts. BaSO_4 . (Struve, Z. anal. **9**, 34.)

Very deliquescent.

Decomp. with H_2O with hissing. (Schultz-Sellaack, B. **4**, 111.)

Barium calcium sulphate, $3\text{BaSO}_4, \text{CaSO}_4$.

Min. *Dreelite*.

Barium platonic sulphate (?).

Insol. in H_2O or boiling HCl or HNO_3 + Aq. Sol. in hot conc. H_2SO_4 or aqua regia. (E. Davy.)

Barium tin (stannic) sulphate, $\text{BaSO}_4, \text{Sn}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.

Decomp. by H_2O . Insol. in HCl . (Weinland and Kuhl, Z. anorg. **1907**, **54**, 249.)

Barium titanium sulphate, $2\text{BaSO}_4, 3\text{Ti}(\text{SO}_4)_2$.

Ppt. Decomp. by H_2O , giving titanic acid. (Weinland, Z. anorg. **1907**, **54**, 255.)

Barium sulphate potassium chloride, $3\text{BaSO}_4, \text{KCl}$.

Ppt. (Silberberger, M. **1904**, **25**, 233.)

Bismuth sulphate, basic, $(\text{BiO})_2\text{SO}_4$.

Insol. in H_2O . Sol. in HNO_3 or H_2SO_4 + Aq.

+ $2\text{H}_2\text{O}$. (Heintz, Pogg. **63**, 55.)

$4\text{Bi}_2\text{O}_3, 3\text{SO}_3 + 15\text{H}_2\text{O}$. Insol. in H_2O . (Leist.)

$(\text{BiO})\text{HSO}_4 + \text{H}_2\text{O}$. Insol. in H_2O . Sol. in dil. H_2SO_4 + Aq.

+ $2\text{H}_2\text{O}$. Decomp. by H_2O with separation of $(\text{BiO})_2\text{SO}_4 + 2\text{H}_2\text{O}$. (Heintz.)

$3\text{Bi}_2\text{O}_3, 2\text{SO}_3 + 2\text{H}_2\text{O}$. Insol. in H_2O . (Athanasesco, C. R. **103**, 271.)

$5\text{Bi}_2\text{O}_3, 11\text{SO}_3 + 17\text{H}_2\text{O}$. This sulphate crystallizes out from sulphuric acid of any strength between $\text{H}_2\text{SO}_4, 6\text{H}_2\text{O}$ and $\text{H}_2\text{SO}_4, 12\text{H}_2\text{O}$. (Adie, Proc. Chem. Soc. **1899**, **15**, 226.)

$\text{Bi}_2\text{O}_3, 2\text{SO}_3, 2\frac{1}{2}\text{H}_2\text{O}$ is in equilibrium at 50° with 5.4–51.4% H_2SO_4 + Aq.

$\text{Bi}_2\text{O}_3, \text{SO}_3$ is in equilibrium at 50° with acid solutions weaker than 5.4% H_2SO_4 . (Allan, Am. Ch. J. **1902**, **27**, 287.)

Bismuth sulphate, $\text{Bi}_2(\text{SO}_4)_3$.

Very hygroscopic. Takes up H_2O with strong evolution of heat to form $2\text{Bi}_2(\text{SO}_4)_3 + 7\text{H}_2\text{O}$, which becomes $\text{Bi}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$ at 100° . Decomp. by boiling H_2O into $\text{Bi}_2\text{O}_3, \text{SO}_3 + \text{H}_2\text{O}$. (Hensgen, J. B. **1885**, 552.)

Insol. in methyl acetate. (Naumann, B. **1909**, **42**, 3790.)

Bismuth sulphate, acid, $\text{Bi}_2\text{O}_3, 4\text{SO}_3$.

$\text{Bi}_2\text{O}_3, 4\text{SO}_3$ is in equilibrium at 50° with 51.4–90% H_2SO_4 + Aq. (Allan, Am. Ch. J. **1902**, **27**, 287.)

+ H_2O . Crystallizes out from sulphuric acid at temp. above 170° . (Adie, Proc. Chem. Soc. **1899**, **15**, 226.)

+ $3\text{H}_2\text{O}$. Crystallizes from sulphuric acid of any strength between $\text{H}_2\text{SO}_4, \text{H}_2\text{O}$ and $\text{H}_2\text{SO}_4, 2\text{H}_2\text{O}$. (Adie.)

+ 7, or $9\text{H}_2\text{O} = \text{BiH}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$. Insol. in H_2O . Easily sol. in acids, especially HCl , and HNO_3 + Aq. (Leist, A. **160**, 29.)

+ $7\text{H}_2\text{O}$. Crystallizes out from sulphuric acid of any strength between $\text{H}_2\text{SO}_4, 3\text{H}_2\text{O}$ and $\text{H}_2\text{SO}_4, 5\text{H}_2\text{O}$.

+ $10\text{H}_2\text{O}$. Crystallizes out from sulphuric acid at temp. below 170° . (Adie.)

Bismuth potassium sulphate, $\text{Bi}_2(\text{SO}_4)_3, 3\text{K}_2\text{SO}_4$ (?).

Decomp. by H_2O ; insol. in sat. K_2SO_4 + Aq. (Heintz.)

$\text{Bi}_2(\text{SO}_4)_3, 2\text{K}_2\text{SO}_4$.

$\text{BiK}(\text{SO}_4)_2 = \text{Bi}_2(\text{SO}_4)_3, \text{K}_2\text{SO}_4$. Insol. in cold H_2O ; decomp. by boiling. (Brigham, Am. Ch. J. **14**, 170.)

Bismuth sodium sulphate, $\text{Bi}_4\text{Na}_6(\text{SO}_4)_8$.
(Ludecke, A. 140. 277.)

Boron sulphate.

See Borosulphuric acid.

Bromomolybdenum sulphate.

See under Bromomolybdenum compounds.

Cadmium sulphate, basic, 2CdO , SO_3 , and $+\text{H}_2\text{O}$.

Difficultly sol. in H_2O . (Stromeyer.) Sl. sol. in hot H_2O . (Habermann, M. 5. 432.) 4CdO , SO_3 . (Pickering, Chem. Soc. 1907, 91. 1987.)

Cadmium sulphate, CdSO_4 .

Sat. $\text{CdSO}_4 + \text{Aq}$ contains at:

0°	10°	24°	30°	65°
35.9	37.5	41.5	42.0	49.7% CdSO_4 ,
86°	94°	130°	165°	188°
43.5	91.6	27.7	14.7	7.1

2.3% CdSO_4 .
 CdSO_4 easily forms supersat. solutions. (Étard, A. ch. 1894, (7) 2. 552.)

Solubility in H_2O

t°	Per cent CdSO_4 in sat. solution	Solid phase

(Mylius and Funk, B. 1897, 30. 828.)

Cadmium caesium sulphate, CdSO_4 , Cs_2SO_4 +6H₂O.

Sol. in H₂O. (Tutton, Chem. Soc. 63. 337.)

1 l. H₂O dissolves 1399 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cadmium calcium potassium sulphate,
 $\text{Ca}_2\text{CdK}_2(\text{SO}_4)_4 + 2\text{H}_2\text{O}$.
 (D'Ans, B. 1908, 41. 1778.)

Cadmium cerium sulphate, $\text{CdSO}_4, \text{Ce}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$.
 Sol. in H_2O . (Wyruboff.)

Cadmium hydrazine sulphate,
 $\text{CdH}_2(\text{SO}_4)_2, 2\text{N}_2\text{H}_4$.

1 pt is sol in 202.5 pts. H_2O at 12° .
 Not attacked by dil. acids. Easily sol. in
 $\text{NH}_4\text{OH} + \text{Aq}$. (Curtius, J. pr. 1894, (2) 50.
 331.)

Cadmium magnesium sulphate, $\text{CdSO}_4,$
 $\text{MgSO}_4 + 14\text{H}_2\text{O}$.
 Very efflorescent. Sol. in H_2O . (Schiff, A.
 104. 325.)

Cadmium potassium sulphate, $\text{K}_2\text{SO}_4, \text{CdSO}_4$
 $+ 1\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O . (v. Hauer, Pogg. 133. 176.)
 100 pts. H_2O dissolve 42.50 pts. anhydrous
 salt at 26° .

100 pts. H_2O dissolves 42.80 pts. anhydrous
 salt at 31° .

100 pts. H_2O dissolve 43.45 pts. anhydrous
 salt at 40° .

100 pts. H_2O dissolve 44.90 pts. anhydrous
 salt at 64° . (Wyruboff, Bull. Soc. Min.
 1901, 24. 68.)

$+ 2\text{H}_2\text{O}$. 100 pts. H_2O dissolve 42.89 pts.
 anhydrous salt at 16° ; 46.82 pts. at 31° ;
 47.40 pts. at 40° . (Wyruboff.)

$+ 4\text{H}_2\text{O}$. Efflorescent. (Wyruboff, Bull.
 Soc. Min. 1891, 14. 235.)

$+ 6\text{H}_2\text{O}$. Very efflorescent, and easily
 decomp. (Schiff.)

Does not exist (Wyruboff.)

Cadmium rubidium sulphate, $\text{CdSO}_4,$
 $\text{Rb}_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Efflorescent. Sol. in H_2O . (Tutton.)
 1 l. H_2O dissolves 767 g. anhydrous salt
 at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

Cadmium sodium sulphate, $\text{CdSO}_4, \text{Na}_2\text{SO}_4 +$
 $2\text{H}_2\text{O}$.

Sol. in H_2O . (v. Hauer.)

Solubility of $\text{CdNa}_2(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ in 100 g.

Cadmium sulphate ammonia, $\text{CdSO}_4, 6\text{NH}_3$.
 Sol. in H_2O with separation of CdO . (Rose,
 Pogg. 20. 152.)

$\text{CdSO}_4, 4\text{NH}_3 + 4\text{H}_2\text{O}$. Decomp. by H_2O .
 (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

$+ 2\text{H}_2\text{O}$. Ppt. (André, C. R. 104. 987.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O with separation of
 basic sulphate. (Müller, A. 149. 70.)

$\text{CdSO}_4, 3\text{NH}_3$. (Isambert, C. R. 1870, 70.
 457.)

Cadmium sulphate cupric oxide, $\text{CdSO}_4,$
 $3\text{CuO} + x\text{H}_2\text{O}$.

(Recoura, C. R. 1901, 132. 1415.)

$2\text{CdSO}_4, 3\text{CuO} + 8\text{H}_2\text{O}$. (Mailhe, A. ch.
 1902, (7) 27. 383.)

$+ 12\text{H}_2\text{O}$. (Mailhe.)

$6\text{CdSO}_4, 20\text{CuO} + x\text{H}_2\text{O}$. (Recoura, C. R.
 1901, 132. 1415.)

Cadmium sulphate hydrazine, $\text{CdSO}_4,$
 $2\text{N}_2\text{H}_4$.

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$ but cannot be
 cryst. therefrom. (Franzen, Z. anorg. 1903,
 60. 282.)

Cadmium sulphate hydrogen chloride,
 $3\text{CdSO}_4, 4\text{HCl} + 4\text{H}_2\text{O}$.

Very deliquescent. (Baskerville and Harris,
 J. Am. Chem. Soc. 1901, **23**, 896.)
 $3\text{CdSO}_4, \text{SHCl}$. Very deliquescent. (Bas-
 kerville and Harris.)

Cæsium sulphate, Cs_2SO_4

Not deliquescent.

100 pts. H_2O dissolve 158.7 pts. Cs_2SO_4 at
 -2° .

100 cc. H_2O at $17-18^\circ$ dissolve 163.5 g.
 Cs_2SO_4 . (Tutton, Chem. Soc. 1894, **65**,
 632.)

Solubility in H_2O

(Berkeley, Trans. Roy. Soc. 1901, **203**, A.
 210.)

Solubility in $\text{Na}_2\text{SO}_4 + \text{Aq}$.

Sat. solution contains 54.7% $\text{Cs}_2\text{SO}_4 +$
 11.45% Na_2SO_4 at 25° . (Foote, J. Am.
 Chem. Soc. 1911, **33**, 467.)

Insol. in alcohol. (Bunsen.)

Insol. in methyl acetate. (Naumann, B.
 1909, **42**, 3790.)

Insol. in acetone. (Naumann, B. 1904, **37**,
 4329); (Eidmann, C. C. 1899, II, 1014.)

Solubility in glycol at ord. temp. = 3.0-
 3.2%. (de Coninck, Belg. Acad. Bull.
 1905, 359.)

Cæsium hydrogen sulphate, CsHSO_4

Sol. in H_2O .

Cæsium pyrosulphate, $\text{Cs}_2\text{S}_2\text{O}_7$

Decomp. by H_2O .

Cæsium orthosulphate, $\text{Cs}_2\text{S}_2\text{O}_8$

Decomp. by H_2O . (Weber, B. 17, 2497.)

Cæsium calcium sulphate, $\text{Ca}_2\text{Cs}_2(\text{SO}_4)_2$

Very stable, (D'Ans, B. 1908, **41**, 1776.)

**Cæsium chromium sulphate, $\text{Cs}_3\text{Cr}_2(\text{SO}_4)_4$
 $+ 24\text{H}_2\text{O}$**

Melts in crystal H_2O at 116° . (Locke.)

Solubility in H_2O

Temp	G. per litre	G. mols anhydrous salt per l.
25°	5.7	0.015
30°	9.6	0.025
35°	12.06	0.032
40°	15.3	0.0405

(Locke, Am. Ch. J. 1901, **26**, 180.)

**Cæsium cobaltous sulphate, $\text{Cs}_2\text{SO}_4, \text{CoSO}_4 +$
 $6\text{H}_2\text{O}$**

Sol. in H_2O . (Tutton, Chem. Soc. **63**,
 337.)

1 l. H_2O dissolves 418.8 g. anhydrous
 salt at 25° . (Locke, Am. Ch. J. 1902, **27**,
 459.)

**Cæsium cobaltic sulphate, $\text{Cs}_2\text{Co}_2(\text{SO}_4)_4 +$
 $24\text{H}_2\text{O}$**

Melts in crystal H_2O at 116° . (Locke,
 Am. Ch. J. 1901, **26**, 183.)

**Cæsium copper sulphate, $\text{Cs}_2\text{SO}_4, \text{CuSO}_4 +$
 $6\text{H}_2\text{O}$**

Sol. in H_2O . (Tutton.)

1 l. H_2O dissolves 460 g. anhydrous salt
 at 25° . (Locke, Am. Ch. J. 1902, **27**, 459.)

**Cæsium gallium sulphate, $\text{Cs}_2\text{Ga}_2(\text{SO}_4)_4 +$
 $24\text{H}_2\text{O}$**

(Soret, Arch. sc. phys. nat. 1888, (3) **20**,
 531.)

**Cæsium indium sulphate, $\text{Cs}_2\text{In}_2(\text{SO}_4)_4 +$
 $24\text{H}_2\text{O}$**

75.7 g. anhydrous (117.39 hydrated) salt
 or 0.172 g. mols of anhydrous salt are sol.
 in 1 l. H_2O at 25° . (Locke, Am. Ch. J. 1901,
26, 175.)

100 pts. H_2O dissolve 3.04 pts. at 16.5° .
 (Chabrière and Rengade, C. R. 1900, **131**, 1301.)

**Cæsium iridium sulphate, $\text{Cs}_2\text{SO}_4,$
 $\text{Ir}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$**

Mpt. $109-110^\circ$

Very sl. sol. in cold. More easily sol. in
 hot H_2O . (Marino, Z. anorg. 1904, **42**, 218.)

**Cæsium iron (ferrous) sulphate, $\text{Cs}_2\text{SO}_4,$
 $\text{FeSO}_4 + 6\text{H}_2\text{O}$**

Sol. in H_2O . (Tutton.)

1 l. H_2O dissolves 1011 g. anhydrous salt
 at 25° . (Locke, Am. Ch. J. 1902, **27**, 459.)

**Cæsium iron (ferric) sulphate, $\text{Cs}_2\text{Fe}_2(\text{SO}_4)_4$
 $+ 24\text{H}_2\text{O}$**

Melts in crystal H_2O at 71° . (Locke.)

La₂(SO₄)₃+2H₂O.

(Baskerville, J. Am. Chem. Soc. 1904,
26. 67.)
2Cs₂SO₄, 3La₂(SO₄)₃. (Baskerville.)

Cæsium magnesium sulphate, Cs₂SO₄,
MgSO₄+6H₂O.

Sol in H₂O. (Tutton.)
1 l. H₂O dissolves 533 g. anhydrous salt
at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cæsium manganous sulphate, Cs₂SO₄,
MnSO₄+8H₂O.

Sol. in H₂O. (Tutton.)
Sol. in H₂O and acids with decomp. (Pic-
cini, Z. anorg. 1899, 20. 14.)
1 l. H₂O dissolves 804 g. anhydrous salt
at 25°. (Locke, Am. Ch. J. 1902, 27. 45.)

Cæsium manganic sulphate, Cs₂SO₄,
Mn₂(SO₄)₃+24H₂O.

Decomp. by H₂O and dil. acids with sep-
aration of MnO₂. Sol. in 1:3 H₂SO₄+Aq and
in conc. HNO₃. Insol. in acetic acid. Sol.
in oxalic acid+Aq. (Christensen, Z. anorg.
1901, 27. 332.)

Cæsium neodymium sulphate, Cs₂SO₄,
Nd₂(SO₄)₃+3H₂O.

(Baskerville, J. Am. Chem. Soc. 1904, 26.
74.)

Cæsium nickel sulphate, Cs₂SO₄, NiSO₄+
6H₂O.

Sol. in H₂O. (Tutton.)
1 l. H₂O dissolves 255.8 g. anhydrous salt
at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cæsium praseodymium sulphate, Cs₂SO₄,
Pr₂(SO₄)₃+2H₂O.

(Baskerville, J. Am. Chem. Soc. 1904, 26.
73.)

+4H₂O. (Baskerville.)

Cæsium rhodium sulphate, Cs₂SO₄, Rh₂(SO₄)₃+
24H₂O.

Sl. sol. in cold, sol. in warm H₂O; mpt.
110-111°. (Piccini, Z. anorg. 1901, 27. 64.)

Cæsium thallic sulphate, CsTi(SO₄)₄+
1½H₂O.

Hygroscopic. (Locke, Am. Ch. J. 1902,
27. 283.)

+3H₂O. Very sl. sol. in cold; easily sol.
in hot H₂O. Can be recryst. from H₂SO₄+
Aq. The recryst. salt is at once decomp. by
H₂O or 95% alcohol (Locke.)

Cæsium thorium sulphate, Cs₂SO₄, Th(SO₄)₂+
2H₂O.

Sl. sol. in H₂O. (Manuelli, Gazz. ch. it.
1903, 32. (2) 523.)

Cæsium titanium sulphate, Cs₂SO₄, Ti₂(SO₄)₃+
24H₂O.

Deliquesces in the air and is decomp.
Sl. sol. in cold H₂O; decomp. by hot H₂O.
(Piccini, Gazz. ch. it. 1895, 25. 542.)

Sl. sol. in cold H₂O, more sol. in hot H₂O
acidified with H₂SO₄.

Decomp. in neutral aq. solution. (Piccini,
Z. anorg. 1898, 17. 356.)

Cæsium uranyl sulphate, Cs₂(UO₂)(SO₄)₂+
2H₂O.

As Na salt. (de Coninck, C. C. 1905,
I. 1306.)

Cæsium vanadium sulphate, Cs₂V₂(SO₄)₄+
24H₂O.

7.71 g. anhydrous (13.1 g. hydrated) salt,
or 0.0204 g. mols. of the anhydrous salt are
sol. in 1 l. H₂O at 25°. (Locke, Am. Ch. J.
1901, 26. 175.)

Sl. sol. in cold, easily sol. in hot H₂O. (Pic-
cini, Z. anorg. 1896, 11. 114.)

100 pts. H₂O dissolve 0.464 pts. of the salt
at 10° and sp. gr. of the solution at 4°/20°=
2.033. More sol. in hot H₂O than in cold.
(Piccini, Z. anorg. 1897, 13. 446.)

Cæsium zinc sulphate, Cs₂SO₄, ZnSO₄+
6H₂O.

Sol. in H₂O. (Bunsen and Kopp, Pogg.
113. 337.)

1 l. H₂O dissolves 386.3 g. anhydrous
salt at 25°. (Locke, Am. Ch. J. 1902, 27.
459.)

Cæsium zirconium sulphate, Zr₂O₃.(CsSO₄)₂+
11H₂O.

Ppt. (Rosenheim, B. 1905, 38. 815.)

Calcium sulphate, CaSO₄, and +2H₂O.

The older determinations of the solubility
of CaSO₄ in H₂O have little, but historical,
value, as the solutions were usually either
non-saturated or supersaturated. They may
be tabulated as follows.

A = pts H_2O required for dissolving 1 pt. CaSO_4 , and B for 1 pt. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ at t° .

t°	A	B	Authority
Hot or cold	500		Fourcroy
Cold	500		Bergmann
Boiling	450		"
All temp	322		Lassaigne
(?)	438		Anthon
(?)	250-300		Dumas
Hot or cold	578.5	461.5	Bucholz
Cold	480	380	Giese
Hot	491	388	"
15-20°	492	388	Tipp
12.5°	503	397	Lecoq

100 pts H_2O at t° dissolve pts CaSO_4 .

t°	Pts. CaSO_4	t°	Pts. CaSO_4	t°	Pts. CaSO_4
0	0.205	35	0.254	70	0.244
5	0.219	40	0.252	80	0.239
12	0.233	50	0.251	90	0.231
20	0.241	60	0.248	100	0.217
30	0.249				

(Poggiale, A. ch. (3) 8. 469.)

Poggiale worked with supersat. solutions. (Droeze, B 10. 330.)

H_2O dissolves CaSO_4 most abundantly at 35° (Poggiale); at 32-41° (Marignac).

1 pt. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ dissolves at:

0°	18°	24°	32°	38°
in 415	386	378	371	368 pts. H_2O ,
41°	53°	72°	86°	99°
in 370	375	391	417	451 pts. H_2O ,
or (by calculation) 1 pt. anhydrous CaSO_4 dissolves at:				
0°	18°	24°	32°	38°
in 525	488	479	470	466 pts. H_2O ,
41°	53°	72°	86°	99°
in 468	474	495	528	571 pts. H_2O .

The above nonsat. solutions are obtained by using a large excess of $\text{CaSO}_4 + 2\text{H}_2\text{O}$. The undissolved part retains its water of crystallisation. CaSO_4 , dehydrated at 130-140°, forms a supersaturated solution with H_2O in 10 minutes, containing 1 pt. CaSO_4 to 110 pts. H_2O , which soon deposits crystals. The undissolved part takes up its water of crystallisation. Ignited CaSO_4 dissolves very slowly in H_2O , so that in 24 hours the solution contains $\frac{1}{121}$ to $\frac{1}{388}$ anhydrous CaSO_4 . By longer contact solution continues with formation of supersaturated solutions, which contain after 10-30 days $\frac{1}{272}$ to $\frac{1}{333}$ CaSO_4 , but these become normal as the anhydrous CaSO_4 gradually takes up its water of crystallisation. The mineral anhydrite behaves similarly, water taking up $\frac{1}{333}$ CaSO_4 in 1 day, $\frac{1}{331}$ in 40 days, and $\frac{1}{437}$ in 8 months.

Supersaturated solutions are also obtained

by evaporation of a saturated solution. By evaporation with heat, solutions are obtained containing $\frac{1}{306}$ CaSO_4 , and in the cold with $\frac{1}{122}$ CaSO_4 , in the solution over the separated $\text{CaSO}_4 + 2\text{H}_2\text{O}$. Neutralising dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ with CaCO_3 gives a solution containing $\frac{1}{114}$ CaSO_4 , which crystallises out partly in 24 hours, leaving $\frac{1}{213}$ CaSO_4 dissolved.

Supersaturated solutions containing $\frac{1}{110}$ to $\frac{1}{156}$ CaSO_4 deposit crystals rapidly; those under $\frac{1}{350}$ do not crystallise spontaneously. A solution containing $\frac{1}{233}$ shows crystals in 14 days, and contains $\frac{1}{212}$ in 1 month, $\frac{1}{414}$ in 2 months, $\frac{1}{446}$ in 3 months, in spite of repeated shaking.

Boiling diminishes the supersaturation without however removing it entirely. (Marignac, A. ch. (5) 1. 274.)

1 pt. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ is sol. in 443 pts. H_2O at 13.7°; in 447 pts. H_2O at 14.2°; in 421 pts. H_2O at 20.2°; in 419 pts. H_2O at 21.2°; ind in 445 pts. $\text{H}_2\text{CO}_3 + \text{Aq}$ sat. at 18.7°. (Church, J. B 1867. 192.)

Church's solutions were not sat. (Droeze, B 10. 330.)

1000 pts H_2O dissolve 2.19 pts. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ at 16.5°; 2.352 pts. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ at 22° (Cossa, Gazz. ch. it. 1873. 135.)

Cossa's solutions were not saturated. (Droeze.)

$\text{CaSO}_4 + 2\text{H}_2\text{O}$ is sol. in 415 pts. H_2O at 0°; in 412 pts. H_2O at 5°; in 407 pts. H_2O at 10°; in 398 pts. H_2O at 15°; in 371 pts. H_2O at 20°; in 365 pts. H_2O at 25°; in 361 pts. H_2O at 30°; in 359 pts. H_2O at 35°. (Droeze, B 10. 330.)

Sol in 500 pts. H_2O at 12.5°. (From Marignac's and his own results, de Boisbaudran, A. ch. (5) 3. 477.)

CaSO_4 is sol. in 564.5 pts. H_2O at 0.8°; 506.27 pts at 14°; 472-3 pts. at 32.5-38.8°; 498.73 pts. at 64°; 533.92 pts. at 79.6°. (Raupenstrauch, M. 6. 563.)

According to Goldammer (C. C. 1888. 708) H_2O is fully saturated with CaSO_4 by shaking the finely-powdered substance 5 minutes therewith.

The following results were obtained. Figures denote pts H_2O in which 1 pt. CaSO_4 was dissolved at t° (a) from pptd. CaSO_4 "ipse fact.," (b) from pptd. CaSO_4 "gehe," (c) from "glacies mariae pulv.," (d) from "glacies Mariae pulv.," containing less than $2\text{H}_2\text{O}$.

t°	a	b	c	t°	d

100	556	557	534.5	100	547

Burnt gypsum easily forms supersat. solutions containing nearly 1% CaSO_4 . It forms supersat solutions more readily at 0° , and that tendency decreases with increase of temp., hence figures in (d) which contained burnt gypsum (Goldammer, C. C. 1888. 708.)

Calculated from electrical conductivity of $\text{CaSO}_4 + \text{Aq}$, 1 l. H_2O dissolves 2.07 g CaSO_4 at 18° . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

The anhydrous salt varies in solubility. Solubility depends (1) upon temp. and time of drying, (2) upon the relative amount of salt, (3) upon time of shaking. Possibly α and β modifications. (Potilizin, C. C. 1894, II. 515.)

2.04 gr. are dissolved in 1 liter of sat. solution at 20° . (Bottger, Z. phys. Ch. 1903, 46. 603.)

At 15° and after 5 minutes shaking, the highest degree of supersaturation which can be obtained with pure sol. calcium sulphate = 9.47 g. of the anhydrous salt or 11.976 g. $\text{CaSO}_4 + 2\text{H}_2\text{O}$ in 1 l. of H_2O . (Cavazzi, C. C. 1905, I. 1694.)

Solubility of CaSO_4 in 100 pts. H_2O at high temp

t°	Pts. CaSO_4	t°	Pts. CaSO_4	t°	Pts. CaSO_4
140	0.078	175-185	0.027	250	0.016

(Cousté, Ann. Min. (5) 5. 80.)

Solubility of CaSO_4 in H_2O at various pressures.

100 g. sat. $\text{CaSO}_4 + \text{Aq}$ at 1 atmos. pressure and 15° contain 0.206 g. CaSO_4 ; at 20 atmos. pressure and 15° contain 0.227 g. CaSO_4 ; at 1 atmos. pressure and 16.2° contain 0.213 g. CaSO_4 . (Möller, Pogg. 117. 386.)

Soluble anhydrite:

1 l. H_2O dissolves 22.8 milliequivalents at 100° .

1 l. H_2O dissolves 6.4 milliequivalents at 156° .

Anhydrite:

1 l. H_2O dissolves 9.2 milliequivalents at 100° .

1 l. H_2O dissolves 2.7 milliequivalents at 156° .

1 l. H_2O dissolves 0.7 milliequivalents at 218° .

(Melcher, J. Am. Chem. Soc. 1910, 32. 63.)

See also under gypsum, p. 953

Maximum solubility is at 37.5° . (Cameron, J. phys. Chem. 1901, 5. 572.)

Sp. gr. of sat. $\text{CaSO}_4 + \text{Aq}$ at $15^\circ = 1.0022$. (Stolba, J. pr. 97. 503.)

Sp. gr. of sat. $\text{CaSO}_4 + \text{Aq}$ at $31^\circ = 1.0031$.

1 pt. CaSO_4 is sol. in 218 pts. H_2O containing CO_2 . (Beyer, Arch. Pharm. (2) 150. 193.)

Sl. sol. in cold $\text{HCl} + \text{Aq}$; completely sol. in boiling dil. HCl or $\text{HNO}_3 + \text{Aq}$. (Rose, Pogg. 95. 108.)

Solubility of CaSO_4 in $\text{HCl} + \text{Aq}$

Solubility in NaCl + Aq at t°

When a sat. solution of NaCl is shaken with a mixture of solid NaCl and $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$, the calcium sulphate dissolved, calculated from the amount of CaO in solution, is always greater than that calculated from the sulphuric acid in solution. Similar results are obtained when solid calcium sulphate alone is shaken with a sat. solution of NaCl.

t°	In 100 g of the solution

(Bell and Taber, J. phys. Ch. 1907, 11. 637.)

$MgSO_4 + Aq.$

Insol. in sat. $MgSO_4 + Aq.$

1 g. $CaSO_4$ is sol in 1162 ccm. $\frac{1}{10}$ sat. $MgSO_4 + Aq$ at 13.5° . (Fassbender, B. 9. 1360.)

Sol. in 635 pts sat. $MgSO_4 + Aq$ at 19° (Karsten.)

Absolutely insol. in sat. $MgSO_4 + Aq.$ and pptd. from aqueous solution by the addition of $MgSO_4$. (Droeze, B. 10. 340.)

1 l. $\frac{1}{10}$ sat. $MgSO_4 + Aq$ dissolves 0.86 g $CaSO_4 + 2H_2O$. (Droeze.)

Solubility in $MgSO_4 + Aq$ at 25° .

(Cameron and Breazeale, J. phys. Chem. 1904, 8. 340.)

1 l. sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ at 25° containing 254.09, Na_2SO_4 dissolves 2.58 g. CaSO_4 . (Cameron and Brown, J. phys. Ch. 1905, 9 214.)

Hydration is retarded by dil. solutions and accelerated by conc. solution of sodium, potassium, ammonium and magnesium sulphates. (Rohland, Z. Elektrochem. 1908, 14. 422.)

More than 10 times as much CaSO_4 dissolves in sat. $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ as in H_2O . (Dichl. Gazz. Ch. it. 1901, 31. (2) 544.)

Insol. in alcohol. of 0.905 sp. gr. or less. (Anthon, J. pr. 14. 125.)

Solubility in 10% alcohol = 0.0970 g. CaSO_4 per 100 g. solution. (Magnanini, Gazz. Ch. it. 1901, 31. (2) 544.)

Sol. in dil. alcoholic solutions of NH_4NO_3 , KNO_3 , NaNO_3 , NH_4Cl , KCl , and NaCl . (Margueritte, C. R. 38. 308.)

Sol. to considerable extent in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$, especially if freshly pptd. More sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ than in $\text{NH}_4\text{Cl} + \text{Aq}$. (Weppen, J. pr. 11. 182.)

More sol. in $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ than in other NH_4 salts. (Cohn, J. pr. (2) 35. 43.)

More sol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$ or $\text{KCl} + \text{Aq}$ than in H_2O . (Mulder.)

Solubility in N 200 potassium hydrogen tartrate + Aq = 0.2323 g. CaSO_4 per 100 g. solution. (Magnanini, Gazz. ch. it. 1901, 31. (2) 544.)

72.61 millimols. per l. of $\text{CaSO}_4 + 2\text{H}_2\text{O}$ are sol. at 25° in ammonium citrate + Aq (concentration = 0.5 millimols. per l.)

36.39 millimols per l. of $\text{CaSO}_4 + 2\text{H}_2\text{O}$ are sol. at 25° in sodium citrate + Aq . (Concentration = 0.25 millimols per l. (Rindell, Z. phys. Ch. 1910, 70. 452.)

100 pts. glycerine dissolve 0.957 pt. $\text{CaSO}_4 + 2\text{H}_2\text{O}$, and solubility increases with the temp. (Asselin, C. R. 76. 884.)

100 g. glycerine (sp. gr. 1.256) dissolve 5.17 g. CaSO_4 at $15-16^\circ$. (Ossendowski, Pharm. J. 1907, 79. 575.)

Solubility in 10% alcoholic N/200 $\text{KHC}_2\text{H}_3\text{O}_2 + \text{Aq}$ = 0.0866 g. CaSO_4 per 100 g. solution.

Solubility in N/200 $\text{KHC}_2\text{H}_3\text{O}_2 + \text{Aq}$ + 5% tartaric acid = 0.2556 g. CaSO_4 per 100 g. solution.

Solubility in 10% alcoholic N/400 $\text{KHC}_2\text{H}_3\text{O}_2 + 5\%$ tartaric acid = 0.1086 g. CaSO_4 in 100 g. solution. (Magnanini.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethylacetate. (Naumann, B. 1910, 43. 314.)

Solubility in sugar + Aq at t° .

(Cameron and Breazeale, J. phys. Chem. 1903, **7**, 574.)

100 pts. hot conc. H_2SO_4 dissolve approx. 10 pts. CaSO_4 . (Rohland, Z. anorg. 1910, **66**, 206.)

Decomp. by H_2O .

Calcium hexahydrogen sulphate, $\text{CaH}_6(\text{SO}_4)_4$.
Decomp. by H_2O . (Schultz, Pogg. **133**, 137.)

Calcium cupric potassium sulphate,
 $\text{Ca}_2\text{K}_2\text{Cu}(\text{SO}_4)_4 + 2\text{H}_2\text{O}$.
(D'Ans, B. 1908, **41**, 1778.)

Calcium magnesium potassium sulphate,
 $2\text{CaSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Min. *Polyhalite*. Sol. in H_2O with residue of CaSO_4 .
 $4\text{CaSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$. Min. *Krugite*. Decomp. by H_2O .

Calcium potassium sulphate, $\text{CaK}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$.

Min. *Syngenite*. Sol. in 400 pts. H_2O . (Zepharovitch.) Less sol. than K_2SO_4 . Decomp. by heating with separation of CaSO_4 . Decomp. by H_2O until 25 g. K_2SO_4 are dissolved in a litre, after which there is no decomposition. (Ditte, C. R. **84**, 86.)
Easily sol. in dil. acids. (Phillips.)

Solubility of syngenite, $\text{CaK}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$ in $\text{K}_2\text{SO}_4 + \text{Aq}$ at 25° .

Wt of 1000 ccm of solution grams	g. K_2SO_4 per l.	g. CaSO_4 per l.
1013 08	16 31	*1.495
1015.78	19 87	1 529
1020 01	25.01	1.537
1024 54	30 83	1 565
1036 82	46 99	0 810
1058 10	75 45	0 451
1085 91	112 87	0.330

*In first four determinations syngenite completely decomposed.

(Cameron and Breazeale, J. phys. Chem. 1904, **8**, 339.)

This double salt is stable between 0° and 99° in the presence of an excess of either CaSO_4 or K_2SO_4 . In this temp. interval the double sulphate, $2\text{CaSO}_4, \text{K}_2\text{SO}_4, 3\text{H}_2\text{O}$ described by Ditte (C. R. **84**, 867) does not exist. (Barre, C. R. 1909, **148**, 1607.)

$\text{Ca}_2\text{K}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$. Decomp. by cold H_2O . (Ditte, C. R. **84**, 867.)

$5\text{CaSO}_4, \text{K}_2\text{SO}_4 + \text{H}_2\text{O}$. Slowly decomp. by H_2O . (van't Hoff and Geiger, B. A. B. **1904**, 935.)

Calcium potassium zinc sulphate,
 $\text{Ca}_2\text{K}_2\text{Zn}(\text{SO}_4)_4 + 2\text{H}_2\text{O}$.

(D'Ans, B. 1908, **41**, 1778.)

Calcium rubidium sulphate, $\text{Ca}_2\text{Rb}_2(\text{SO}_4)_4$.

(D'Ans, B. 1907, **40**, 4913.)

$+3\text{H}_2\text{O}$. Decomp. by H_2O . (Ditte, C. R. **84**, 86.)

$\text{CaRb}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$. (D'Ans.)

Calcium sodium sulphate, $\text{CaNa}_2(\text{SO}_4)_2$.

Min. *Glauberite*. Gradually sol. in H_2O , but crystals of $\text{CaSO}_4 + 2\text{H}_2\text{O}$ soon separate out. (Fritzsche.)

Insol. in alcohol, and conc. $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$; decomp. by H_2O . (Folkhard, C. N. 43. 6.)

$\text{CaNa}_4(\text{SO}_4)_3 + 2\text{H}_2\text{O}$. Decomp. by H_2O . (Fritzsche.)

Calcium titanium sulphate, $\text{CaSO}_4, \text{Ti}(\text{SO}_4)_2$.

Ppt.; decomp. by H_2O giving titanic acid. (Weinland, Z. anorg. 1907, 54. 254.)

Calcium uranium sulphate.

Min. *Uranocalcite*.

Min. *Medjidite*. Easily sol. in dil. $\text{HCl} + \text{Aq}$.

Cerous sulphate, $\text{Ce}_2(\text{SO}_4)_3$.

Anhydrous cerous sulphate is much more sol. in H_2O than the hydrated salt.

Easily sol. in cold H_2O if added thereto in small amounts. If large amount of $\text{Ce}_2(\text{SO}_4)_3$ is treated with a little H_2O it hardens with evolution of heat, and becomes very difficultly soluble. 100 pts. H_2O dissolve 161 pts. $\text{Ce}_2(\text{SO}_4)_3$ at 0° and 17.86 pts. at 19° .

$\text{Ce}_2(\text{SO}_4)_3 + \text{Aq}$ sat. in cold deposits $\text{Ce}_2(\text{SO}_4)_3$ at 75° , and only 2.25 pts. remain in solution at 100° . (Jolin, Bull. Soc. (2) 21. 536.)

100 pts. H_2O dissolve 8.31 pts. $\text{Ce}_2(\text{SO}_4)_3$ at 20° ; 8.08 pts. at 45° ; 4.95 pts. at 60° ; 0.504 pt. at 100° . (Buhrig, J. pr. (2) 12. 240.)

60 pts. anhydrous salt dissolve quickly at $0-3^\circ$ in 100 pts. H_2O .

At 15° the solution solidifies, and the mother liquor contains only 27.88% $\text{Ce}_2(\text{SO}_4)_3$. At 15° the maximum attainable strength is 31.62% $\text{Ce}_2(\text{SO}_4)_3$. (Brauner, Chem. Soc. 53. 357.)

100 pts. H_2O dissolve 10.747 pts. $\text{Ce}_2(\text{SO}_4)_3$ at 16° ; 9.648 pts. at 19° ; 6.949 pts. at 33° .

The solubility of $\text{Ce}_2(\text{SO}_4)_3$ in H_2O is diminished by the addition of $(\text{NH}_4)_2\text{SO}_4$, K_2SO_4 or Na_2SO_4 . (Barre, C. R. 1911, 151. 872.)

Sp. gr. of $\text{Ce}_2(\text{SO}_4)_3 + \text{Aq}$ was found to be constant whether $\text{Ce}_2(\text{SO}_4)_3$ or $\text{Ce}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ was used. The following results were obtained at 15° .

Pts. $\text{Ce}_2(\text{SO}_4)_3$ to 100 pts. H_2O	Sp. gr.	Pts. $\text{Ce}_2(\text{SO}_4)_3$ to 100 pts. H_2O	Sp. gr.
3.17	1.03005	12.66	1.11917

100 g. H₂O dissolve at:
 0° 18.8° 19.2°
 16.56 17.52 17.70 g. Ce₂(SO₄)₃.

Previous determinations are inaccurate. (Koppel.)

Ceroceric sulphate, Ce₂(SO₄)₃, 2Ce(SO₄)₂+24H₂O.

Decomp. by H₂O. Sol. in HCl+Aq with decomp. (Mendelejeff, A. 168. 45.)

Ce₂(SO₄)₃, 3Ce(SO₄)₂+31H₂O. (Jolin.)

Ceric sulphate, basic, CeO₂, SO₃+2H₂O.

Very sl sol. in H₂O.

Sol. in 2500 pts. H₂O. (Mosander.)

Boiling H₂O gradually dissolves out H₂SO₄. (Erk.)

Sol. in acids.
 8CeO₂, 7SO₃+12H₂O; 8CeO₂, 7SO₃+15H₂O; 6CeO₂, 5SO₃+5H₂O; 4CeO₂, 3SO₃+7H₂O; and 3Ce(SO₄)₂, 5Ce(OH)₄. All are insol. ppts.

Ceric sulphate, Ce(SO₄)₂.

Anhydrous. Very slowly sol. in cold, more rapidly in hot H₂O. When solution has once begun, almost unlimited quantities may be dissolved. Insol in conc. H₂SO₄. (Meyer, B. 1904, 37. 144.)

+4H₂O. Sol. in H₂O with immediate decomp. (Rammelsberg.)

Decomp. by H₂O. (Muthmann, B. 1900, 33. 1764.)

Cerous hydrogen sulphate, Ce₂(SO₄)₃, 3H₂SO₄.

Decomp. by H₂O. (Wyrouboff, Bull. Soc. (3) 2. 745; Brauner, Z. anorg. 1904, 38. 329.)

Ceroceric hydrogen sulphate, Ce₂H(SO₄)₄+13H₂O.

Sol. in H₂O. Forms very supersat. solutions.

Solubility in H₂SO₄ decreases with increase in concentration of the acid. (Meyer, B. 1904, 37. 146.)

Cerous potassium sulphate, $\text{Ce}_2(\text{SO}_4)_3$, $\text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$

Sl. sol. in H_2O ; insol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq.}$ (Czudnowicz, J. pr. 80. 26.)

$2\text{Ce}_2(\text{SO}_4)_3$, $3\text{K}_2\text{SO}_4$. As above. (Hermann, J. pr. 30. 188.)

$+8\text{H}_2\text{O}$. (Barre, A. ch. 1911, (S) 24. 249.)

$\text{Ce}_2(\text{SO}_4)_3$, $2\text{K}_2\text{SO}_4 + 3\text{H}_2\text{O}$. As above. (Jolin.)

$\text{Ce}_2(\text{SO}_4)_3$, $3\text{K}_2\text{SO}_4$. Sol. in about 56 pts. H_2O at $9-20^\circ$. Easily sol. in acidified H_2O .

Nearly insol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq.}$ (Jolin.)

$\text{Ce}_2(\text{SO}_4)_3$, $5\text{K}_2\text{SO}_4$. Insol. in $\text{K}_2\text{SO}_4 + \text{Aq.}$ (Barre, l.c.)

Ceric potassium sulphate, $\text{Ce}(\text{SO}_4)_2$, $2\text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$

Sl. sol. in H_2O with decomp. Insol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq.}$

Ceric silver sulphate, $10\text{Ce}(\text{SO}_4)_2$, $6\text{Ag}_2\text{SO}_4$.

Only sl. sol. in cold H_2O ; decomp. by hot H_2O in which it is readily sol. (Pozzi-Escot, C. R. 1913, 156. 1074.)

Cerous sodium sulphate, $\text{Ce}_2(\text{SO}_4)_3$, $\text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Very sl. sol. in H_2O , and still less in $\text{Na}_2\text{SO}_4 + \text{Aq.}$ 100 ccm. sat. $\text{Na}_2\text{SO}_4 + \text{Aq.}$ dissolve an amount corresponding to 6.2 mg. Ce_2O_3 . (Jolin.)

Sl. sol. in $\text{HCl} + \text{Aq.}$ (Czudnowicz.)

Cerous thalious sulphate, $\text{Ce}_2(\text{SO}_4)_3$, $3\text{Ti}_2\text{SO}_4$.

Ppt.

$\text{Ce}_2(\text{SO}_4)_3$, $\text{Ti}_2\text{SO}_4 + 2\text{H}_2\text{O}$. Sol. in H_2O . (Zschiesche, J. pr. 107. 98.)

$+4\text{H}_2\text{O}$. Very sl. sol. in cold, somewhat more in warm H_2O . (Wyruboff, Bull. Soc. Min. 14. 83.)

Cerous tin (stannic) hydrogen sulphate, $\text{CeHSn}(\text{SO}_4)_4$.

Decomp. by H_2O . Sol. in very dil. HCl . (Weinland, Z. anorg. 1907, 54. 251.)

Chromous sulphate, $\text{CrSO}_4 + 7\text{H}_2\text{O}$.

100 pts. H_2O dissolve 12.35 pts. $\text{CrSO}_4 + 7\text{H}_2\text{O}$. Aqueous solution can be boiled without decomp. Sl. sol. in alcohol.

$+ \text{H}_2\text{O}$. (Moissan, Bull. Soc. 37. 296.)

Chromic sulphate, basic, $3\text{Cr}_2\text{O}_3$, $2\text{SO}_3 + 12\text{H}_2\text{O} = 2\text{Cr}_2(\text{SO}_4)(\text{OH})_4$, $\text{Cr}_2(\text{OH})_6 + 5\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in acids. Slowly decomp. by $\text{KOH} + \text{Aq.}$ or $\text{K}_2\text{CO}_3 + \text{Aq.}$

$5\text{Cr}_2\text{O}_3$, 3SO_3 . Sol. in H_2O . (Recoura, C. R. 112. 1439.)

Cr_2O_3 , $\text{SO}_3 = \text{Cr}_2\text{O}_3(\text{SO}_4)$. Ppt. (Schiff, A. 124. 167.)

$+10\text{H}_2\text{O}$ or $[\text{Cr}(\text{OH})_2(\text{OH})_2]_2\text{SO}_4$. Nearly insol. in H_2O . (Werner, B. 1908, 41. 3451.)

$5\text{Cr}_2\text{O}_3$, 8SO_3 (?). (Siewert, A. 126. 97.)

Cr_2O_3 , $2\text{SO}_3 = \text{Cr}_2\text{O}(\text{SO}_4)_2$. Easily sol. in a little H_2O , but a precipitate is thrown down

by further addition of H_2O , which redissolves on evaporation

$5\text{Cr}_2\text{O}_3$, 12SO_3 (?). (Siewert.)

$2\text{Cr}_2\text{O}_3$, $5\text{SO}_3 + 15\text{H}_2\text{O}$. Sol. in H_2O , insol. in alcohol and acetone by which it is ppt. from aqueous solution. (Nicolardot, C. R. 1907, 145. 1338.)

Chromic sulphate, $\text{Cr}_2(\text{SO}_4)_3$.

Anhydrous. Insol. in H_2O , HNO_3 , HCl , H_2SO_4 , aqua regia, and $\text{NH}_4\text{OH} + \text{Aq.}$ Decomp. by boiling caustic alkalis, and slowly by alkali carbonates + Aq. (Schrotter.) According to Traube (A. 71. 92) and Siewert (A. 126. 94), Schrotter's salt is an acid sulphate, $\text{Cr}_2(\text{SO}_4)_3(\text{OSO}_3\text{OH})_2 = 2\text{Cr}_2(\text{SO}_4)_3$, H_2SO_4 . According to Étard (Bull. Soc. (2) 31. 200) both salts exist, and formula of above salt is $\text{Cr}_2(\text{SO}_4)_3\text{Cr}_2$. Formula is $2[(\text{Cr}_2\text{O}_3)_2, (\text{SO}_3)_6]$, $17\text{H}_2\text{SO}_4$ (?). (Cross and Higgins, Chem. Soc. 41. 113.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

$+6\text{H}_2\text{O}$ (?). *Green modification.* Readily sol. in H_2O or alcohol. Sol. in conc. H_2SO_4 . H_2O solution is converted into the violet modification by standing 3-4 weeks. (Schrotter.)

$+11\text{H}_2\text{O}$ (?). Extremely deliquescent; becomes liquid in moist air in 2 minutes. Not pptd. by $\text{BaCl}_2 + \text{Aq.}$ (Recoura, C. R. 113. 857.)

$+18\text{H}_2\text{O}$. *Violet modification.* Sol. in 0.833 pt. H_2O at 20° . When the H_2O solution is heated to $65-70^\circ$ it begins to be converted into the green modification. This conversion is also brought about by cold HNO_3 , H_2SO_4 , PCl_3 . (Étard, C. R. 84. 1090.)

Sp. gr. of aqueous solution of violet modification of $\text{Cr}_2(\text{SO}_4)_3$ containing:

5	10	20%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.0275	1.0560	1.1150	
30	40	50%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.1785	1.2480	1.3250	

Sp. gr. of aqueous solution of green modification of $\text{Cr}_2(\text{SO}_4)_3$ containing:

10	20	30%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.0510	1.1070	1.1680	
40	50	60%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.2340	1.3055	1.3825	

70	80%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.4650	1.5535	

(Gerlach, Z. anal. 28. 404.)

See also Chromosulphuric acid.

Chromic hydrogen sulphate, $\text{Cr}_2(\text{SO}_4)_3$, $\text{H}_2\text{SO}_4 + 16\text{H}_2\text{O}$.

Two modifications.

a. *Violet.* Decomp. by H_2O .

b. *Green.* Obtained from violet modification on heating. Sol. in H_2O . (Weinland, Z. anorg. 1906, 49. 157.)

+24H₂O. Decomp. by alcohol, giving the normal sulphate. (Weinland.)

Cr₂(SO₄)₃, 2H₂SO₄+18H₂O. Hygroscopic. Decomp. by H₂O. (Weinland.)

Correct composition of Cr₂(SO₄)₃ (Traube), which see.

See also Chromosulphuric acid.

Chromic cupric sulphate, Cr₂(SO₄)₂, 2CuSO₄, H₂SO₄

Insol. in H₂O, but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Insol. in H₂O. (Recoura, C. R. 1893, 117. 39.)

Chromous hydrazine sulphate, CrSO₄, 2N₂H₄, H₂SO₄.

Only sl. sol. in H₂O. Sol. in acids. (Traube B. 1913, 46. 1507.)

Chromic hydroxylamine sulphate, Cr₂(SO₄)₃, (NH₂OH)₂SO₄+24H₂O.

Sol. in H₂O. (Meyerinhg.)

Chromic iron (ferrous) sulphate, Cr₂(SO₄)₃, 2FeSO₄, H₂SO₄+2H₂O.

As above. (Étard, *l.c.*)

Chromic iron (ferric) sulphate, Cr₂(SO₄)₃, Fe₂(SO₄)₃.

Insol. in H₂O. (Étard, C. R. 86. 1399.)

Cr₂(SO₄)₃, Fe₂(SO₄)₃, H₂SO₄. Insol. in H₂O. (Étard.)

Chromic lithium sulphate, Cr₂(SO₄)₃, 3Li₂SO₄.

Resembles the corresponding K salt. (Wernicke.)

Chromic manganous sulphate, Cr₂(SO₄)₃, 3MnSO₄.

(Étard, C. R. 86. 1402.)

Chromic manganic sulphate, Cr₂(SO₄)₃, Mn₂(SO₄)₃.

Insol. in H₂O. (Étard, C. R. 86. 1399.)

Cr₂(SO₄)₃, Mn₂(SO₄)₃, 2H₂SO₄. Sl. deliquescent. Sol. in H₂O with decomp. (Étard.)

Chromic nickel sulphate, Cr₂(SO₄)₃, NiSO₄, 2H₂SO₄+3H₂O.

Insol. in H₂O, but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Chromous potassium sulphate, CrSO₄, K₂SO₄+6H₂O.

Sol. in H₂O; less sol. in alcohol. (Peligot, A. ch. (3) 12. 546.)

Chromic potassium sulphate, K₂Cr₂(SO₄)₄.

Anhydrous. α. Sol. in H₂O when not heated over 350°.

β. Insol. in cold H₂O and cold acids. When ignited is insol. in hot H₂O and acids, except slightly in boiling conc. H₂SO₄. (Fischer.)

+2H₂O (?). Insol. in cold H₂O or dil. acids. Sol. by long boiling with H₂O, and more quickly when HCl is added. (Hertwig.)

+4H₂O. Is potassium chromosulphate, which see.

+24H₂O. *Chrome-alum.* Violet modification. Efflorescent at 29°. Sol. in 6-7 pts. cold H₂O. When the H₂O solution is heated to 60-70° it is partially decomp. into a green modification, which is more sol. in H₂O. The green modification on standing in H₂O solution is very slowly converted back into violet modification. The green modification may also be formed by heating dry salt to 100°, at which temp. it melts in its crystal H₂O. When all crystal H₂O has been expelled at 300-350°, it still dissolves in hot H₂O, but when heated above 350° it becomes insol. in H₂O. (Löwel, A. ch. (3) 44. 313.)

125.1 g. anhydrous, or 243.9 g. hydrated salt, or 0.441 g. mols. anhydrous salt are sol. in 1 l. H₂O at 25°. (Locke, Am. Ch. J. 1901, 26. 175.)

Melts in crystal H₂O at 89°. (Tilden, Chem. Soc. 45. 409.)

Sp. gr. of aqueous solution of violet modification at 15° containing:

5	10	15%
1.02725	1.05500	1.08350

Sp. gr. of sat. solution at 15° = 1.0985.

Sp. gr. of aqueous solution of green modification at 15° containing:

10	20	30%
1.050	1.103	1.161
40	50	60%
1.225	1.295	1.371
70	80	90%
1.453	1.541	1.635

(Gerlach, Z. anal. 28. 497.)

Sp. gr. of chrome-alum solutions at 15° containing:

5	10	15	20	25	% salt,
1.0174	1.0342	1.0524	1.0746	1.1004	
30	35	40	45	50	% salt,
1.1274	1.1572	1.1896	1.2352	1.2894	

55	60	65	70	% salt.
1.3704	1.4566	1.5462	1.6362	

(Franz, J. pr. (2) 5. 298.)

Insol. in alcohol.

3K₂SO₄, Cr₂(SO₄)₃. Insol. in H₂O, acids, or dil. alkalis. Decomp. by boiling with conc. KOH+Aq. (Wernicke, Pogg. 159. 576.)

Chromic rubidium sulphate, Rb₂Cr₂(SO₄)₄+24H₂O.

Sol. in H₂O. (Petersson.)

Solubility in H₂O

Temp	G anhydrous salt per l	G mols of anhydrous salt per l
25°	25.7	0.079
30°	31.7	0.096
35°	41.1	0.128
40°	59.7	0.181

Melts in crystal H₂O at 107°.

(Locke, Am. Ch. J. 1901, 26. 180.)

Chromic sodium sulphate, Na₂Cr₂(SO₄)₄ + 10H₂O.

Is sodium chromosulphate, which see. +24H₂O. More efflorescent than K or NH₄ salt. Sol. in H₂O, and properties resemble the corresponding K salt.

Cr₂(SO₄)₃, 3Na₂SO₄. Resembles the corresponding K salt.

Chromic thalious sulphate, Tl₂Cr₂(SO₄)₄ + 24H₂O.

0.212 mols. of anhydrous salt are sol. in 1 l. H₂O at 25°. 1 l. H₂O dissolves 104.8 g. of anhydrous or 163.8 g. hydrated salt at 25°. Melts in crystal H₂O at 92°. (Locke, Am. Ch. J. 1901, 26. 175.)

Chromic sulphate chloride, Cr₂(SO₄)₂Cl₂ + 2H₂O.

Slightly hygroscopic. Sol. in H₂O. (Schiff, A. 124. 176.)

[CrSO₄, 5H₂O].Cl. Sol. in H₂O. (Weinland, Z. anorg. 1908, 58. 176.)

Chromyl sulphate, (CrO₂)SO₄.

Decomp. by H₂O. (Pictet and Karl, Bull. Soc. 1908, (4) 3. 1114.)

Cobaltous sulphate, basic.

Ppt. Insol. in H₂O. (Berzelius.) 6CoO, SO₃ + 10H₂O. (Athanasesco, C. R. 103. 271.)

5CoO, SO₃ + 4H₂O. Ppt. Very sl. sol. in H₂O. (Habermann, M. Ch. 5. 432.)

Cobaltous sulphate, CoSO₄.

100 pts. H₂O dissolve at:

3° 10° 20° 24° 29°
26.2 30.5 36.4 38.9 40 pts. anhydrous salt,

35° 44° 50° 60° 70°
46.3 50.4 55.2 60.4 65.7 pts. anhydrous salt.

(Tobler, A. 95. 193.)

100 pts. H₂O at 11–14° dissolve 23.88 pts. anhydrous salt. (v. Hauer, J. pr. 103. 114.)

Solubility in 100 pts. H₂O at t°, using CoSO₄ + 7H₂O.

t°	Pts CoSO ₄	t°	Pts CoSO ₄	t°	Pts CoSO ₄
0	24.6	36	43.5	72	65.0

2.4273	0.288	1.0263
1.2099	0.141	1.0131

(Charpy, A. ch. (6) 29. 26.)

Sp. gr. of $\text{CoSO}_4 + \text{Aq}$ at room temp. containing:

7.239	14.156	21.167% CoSO_4 .
1.0860	1.1591	1.2398

(Wagner, W. Ann. 1883, 18. 269.)

Sp. gr. of $\text{CoSO}_4 + \text{Aq}$ at 25°.

Concentration of $\text{CoSO}_4 + \text{Aq}$	Sp gr
1-normal	1.0750
$\frac{1}{2}$ - " "	1.0383
$\frac{1}{4}$ - " "	1.0193
$\frac{1}{8}$ - " "	1.0110

(Wagner, Z. phys. Ch. 1890, 5. 37.)

100 pts. sat. solution of CoSO_4 and CuSO_4 contain 22.70 pts. of the two salts.

Solubility of $\text{CoSO}_4, 7\text{H}_2\text{O} + \text{Na}_2\text{SO}_4, 10\text{H}_2\text{O}$ in H_2O at t°. 100 g. H_2O dissolve grams CoSO_4 and grams Na_2SO_4

t°	grams CoSO_4	grams Na_2SO_4
0	21.855	10.07
5	23.94	13.155
10	25.41	16.665

(Koppel, Z. phys. Ch. 1905, 52. 396.)

See also under $\text{CoNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

$\text{HC}_2\text{H}_3\text{O}_2$ ppts. it completely from $\text{CoSO}_4 + \text{Aq}$. (Persoz.)

100 pts. absolute methyl alcohol dissolve 1.04 pts. CoSO_4 at 18°. (de Bruyn, Z. phys. Ch. 10. 784.)

100 pts. absolute methyl alcohol dissolve 54.5 pts. $\text{CoSO}_4 + 7\text{H}_2\text{O}$ at 18°; 100 pts. absolute methyl alcohol dissolve 42.8 pts. $\text{CoSO}_4 + 7\text{H}_2\text{O}$ at 3°; 100 pts. 93.5% methyl alcohol dissolve 13.3 pts. $\text{CoSO}_4 + 7\text{H}_2\text{O}$ at 3°; 100 pts. 50% methyl alcohol dissolve 1.8 pts. $\text{CoSO}_4 + 7\text{H}_2\text{O}$ at 3°.

100 pts. absolute ethyl alcohol dissolve 2.5 pts. $\text{CoSO}_4 + 7\text{H}_2\text{O}$ at 3°. (de Bruyn, Z. phys. Ch. 10. 786.)

100 g. solution in glycol contain 2.5 g. CoSO_4 . (de Coninck, Bull. Ac. Belg. 1905. 359.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3602.)

+ H_2O . Sl sol. in cold, and only very slowly sol. in hot H_2O . (Vortmann, B. 15. 1888.)

+ H_2O (Fröhde, Arch. Pharm. (2) 127. 92.)

+ $6\text{H}_2\text{O}$. (Marignac.)

+ $7\text{H}_2\text{O}$ Sol in 24 pts cold H_2O Insol. in alcohol. (Persoz.)

Solubility of $\text{CoSO}_4 + 7\text{H}_2\text{O}$ in H_2O at t°. 100 g H_2O dissolve grams CoSO_4

t°	g CoSO_4	t°	g CoSO_4	t°	g CoSO_4
0	25.53	15	33.045	30	42.26
5	28.05	20	36.21	35	45.80
10	30.55	25	39.35	40	48.85

(Koppel, Z. phys. Ch. 1905, 52. 395.)

M-pt of $\text{CoSO}_4 + 7\text{H}_2\text{O} = 96-98^\circ$. (Tilden, Chem. Soc. 45. 409.)

Cobaltocobaltic sulphate, $\text{Co}_2\text{O}_3, 6\text{CoO}, \text{SO}_3 + 15\text{H}_2\text{O}$.

Precipitate. Insol. in boiling $\text{CoSO}_4 + \text{Aq}$ or $\text{NH}_4\text{OH} + \text{Aq}$. (Gentile, J. pr. 69. 130.)

Cobaltic sulphate, $\text{Co}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$.

Sol. in H_2O with immediate decomp. and liberation of O. Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ without immediate decomp. Sol. in conc. $\text{HNO}_3, \text{H}_2\text{SO}_4$, or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Marshall, Chem. Soc. 59. 760.)

Cobaltous cupric sulphate, $2\text{CoSO}_4, \text{CuSO}_4 + 21\text{H}_2\text{O}$.

Easily sol. in H_2O . (v. Hauer, Pogg. 125. 637.)

+ $36\text{H}_2\text{O}$. (Liebig)

$2\text{CoSO}_4, 2\text{CuSO}_4, \text{H}_2\text{SO}_4$. (Étard.)

Cobaltous cupric magnesium potassium zinc sulphate, $\text{CoSO}_4, \text{CuSO}_4, \text{MgSO}_4, 4\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 24\text{H}_2\text{O}$ (?).

Sol. in H_2O . (Vohl.)

Cobaltous cupric potassium sulphate, $\text{CoSO}_4, \text{CuSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ (?).

Sol. in H_2O . (Vohl.)

Does not exist. (Aston and Pickering, Chem. Soc. 49. 123.)

Cobaltous hydrazine sulphate, $\text{CoH}_2(\text{SO}_4)_2, 2\text{N}_2\text{H}_4$.

1 pt. is sol. in 305.16 pts. H_2O at 12°. Sol. in HNO_3 with decomp. Insol. in HCl . (Curtius, J. pr. 1894, (2) 50. 331.)

Cobaltous iron (ferrous) potassium sulphate, $\text{CoSO}_4, \text{Fe}_2\text{SO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

$2\text{CoSO}_4, 2\text{FeSO}_4, \text{H}_2\text{SO}_4$. (Étard.)

Cobaltous magnesium sulphate, $3\text{CoSO}_4, \text{MgSO}_4 + 28\text{H}_2\text{O}$.

Easily sol. in H_2O . (Winkelblech.)

Cobaltous magnesium potassium sulphate, $\text{CoSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Does not exist. (Aston and Pickering, Chem. Soc. 49. 123.)

Cobaltous manganous potassium sulphate, $\text{CoSO}_4, \text{MnSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Cobaltous nickel potassium sulphate, $\text{CoSO}_4, \text{NiSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Does not exist. (Thomson, Rep. Brit. Assn. Adv. Sci. 1877. 209.)

Cobaltous potassium sulphate, $\text{CoSO}_4, \text{K}_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Less sol. in H_2O than CoSO_4 .

100 pts. H_2O dissolve at:

0° 12° 15° 20° 25°
19.1 30 32.5 39.4 45.3 pts. anhydrous salt,

30° 35° 40° 49°
51.9 55.4 64.6 81.3 pts. anhydrous salt.
(Tobler, A. 96. 126.)

100 pts. saturated solution contain at:

20° 40° 60° 80°
14 19.5 24.4 31.8 pts. anhydrous salt.
(v Hauer, J. pr. 74. 433.)

1 l. H_2O dissolves 128.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cobaltic potassium sulphate, $\text{K}_2\text{Co}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Marshall, Chem. Soc. 59. 760.)

Cobaltous potassium zinc sulphate, $\text{CoSO}_4, 2\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Cobaltous rubidium sulphate, $\text{CoSO}_4, \text{Rb}_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Tutton.)

1 l. H_2O dissolves 92.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cobaltic rubidium sulphate, $\text{Rb}_2\text{Co}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in dil. HCl and H_2SO_4 . Decomp. by conc. HCl or H_2SO_4 . (Howe and O'Neal, J. Am. Chem. Soc. 1898, 20. 762.)

Melts in crystal H_2O at 47°. (Locke, Am. Ch. J. 1901, 28. 183.)

Cobaltous sodium sulphate, $\text{CoNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$.

Solubility of $\text{CoNa}_2(\text{SO}_4)_2, 4\text{H}_2\text{O}$ in H_2O at t°. 100 g H_2O dissolve grams CoSO_4 and grams Na_2SO_4

t°	g CoSO_4	g Na_2SO_4
20	26 65	24 91
25	25.365	23 325
30	23 13	21 61
35	22 55	20.85
40	20 975	20 055

(Koppel, Z phys Ch 1905, 52. 397.)

Solubility of $\text{CoNa}_2(\text{SO}_4)_2, 4\text{H}_2\text{O} + \text{CoSO}_4, 7\text{H}_2\text{O}$ in H_2O at t°. 100 g. H_2O dissolve grams CoSO_4 and grams Na_2SO_4

t°	g CoSO_4	g Na_2SO_4	t°	g CoSO_4	g Na_2SO_4
18.5	28 61	23.82	30	32.695	18.17
20	29.42	23 015	35	34 065	15.61
25	30 73	20 575	40	35.01	13.715

(Koppel, Z phys. Ch. 1905, 52. 397.)

Solubility of $\text{CoNa}_2(\text{SO}_4)_2, 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4, 10\text{H}_2\text{O}$ in H_2O at t°. 100 g. H_2O dissolve grams CoSO_4 and grams Na_2SO_4 .

t°	g CoSO_4	g Na_2SO_4
18 5	25 50	25 65
20	23 18	27.26
25	16.07	35.18
30	9 20	43.74

(Koppel.)

Solubility of $\text{CoNa}_2(\text{SO}_4)_2, 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$ (anhydrous) in H_2O at t°. 100 g. H_2O dissolve grams CoSO_4 and grams Na_2SO_4 .

t°	g. CoSO_4	g. Na_2SO_4
35	7 204	50 79
40	7.456	50.095

(Koppel.)

See also $\text{CoSO}_4 + \text{Na}_2\text{SO}_4$ under CoSO_4 .

Cobaltous zinc sulphate.

Efflorescent. Decomp. on air. (Link, Crell. Ann. 1790, 1. 32.)

Cobaltous sulphate ammonia, $\text{CoSO}_4, 6\text{NH}_3$.

Sol. in H_2O with separation of ppt. (Rose, Pogg. 20. 152.) Very easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Fremy.)

Decomp. by alcohol.

Cobaltous sulphate hydrazine, $\text{CoSO}_4, 3\text{N}_2\text{H}_4$.

Insol. in H_2O . Decomp. by boiling with H_2O . Very sol. in dil. acids and $\text{NH}_4 + \text{Aq.}$ (Franzen, Z. anorg. 1908, 60. 272.)

Cobaltous sulphate hydroxylamine, $\text{CoSO}_4 \cdot \text{NH}_2\text{OH} \cdot 2\text{H}_2\text{O}$.

Insol. in cold; sol. in hot H_2O with decomp. (Feldt, B. 1894, 27. 403.)

Columbium sulphate.

Sol. in H_2O . (Blomstrand.)

Cuprous sulphate, Cu_2SO_4 .

Decomp. by H_2O . Sol. in conc. HCl , in ammonia and sl. sol. in glacial acetic acid. (Recoura, C. R. 1909, 148. 1107.)

Cupric sulphate, basic, $10\text{CuO} \cdot \text{SO}_3$.

(Pickering, Chem. Soc. 1907, 91. 1984.)

$8\text{CuO} \cdot \text{SO}_3 + 12\text{H}_2\text{O}$. Ppt. (Kane, A. ch. 72. 269.)

$5\text{CuO} \cdot \text{SO}_3 + 6\text{H}_2\text{O}$. Ppt. (Smith, Phil. Mag. J. 23. 196.)

$4\text{CuO} \cdot \text{SO}_3 + 3\text{H}_2\text{O}$. Insol. in H_2O . (Roucher, J. Pharm. (3) 37. 50.)

Min. *Brochantite*. Sol. in acids and $\text{NH}_4\text{OH} + \text{Aq}$.

$+3\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O . Easily sol. in dil. acids, even $\text{HCl} \cdot \text{H}_2\text{O}_2 + \text{Aq}$. Sl. sol. in $\text{CuSO}_4 + \text{Aq}$. Insol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Cas-selmann, Z. anal. 4. 24.)

$+4\text{H}_2\text{O}$. Insol. in H_2O . (Proust.) Sol. in $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$, and more easily in NH_4Cl , and $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Lea.)

1 l. cold H_2O dissolves 0.017 g. (Pickering, C. N. 1883, 47. 182.)

$+5\text{H}_2\text{O}$. Min. *Langite*.

$+16\text{H}_2\text{O}$. (André, C. R. 100. 1138.)

$7\text{CuO} \cdot 2\text{SO}_3 + 5\text{H}_2\text{O}$. (Reindel, J. pr. 100. 1.)

$+6\text{H}_2\text{O}$. Wholly insol. in cold or hot H_2O . (Habermann, M. Ch. 5. 432.)

$+7\text{H}_2\text{O}$. Insol. in H_2O ; easily sol. in acids. Insol. in boiling $\text{CuSO}_4 + \text{Aq}$. (Reindel.)

$3\text{CuO} \cdot \text{SO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O ; easily sol. in acids. (Steinmann, B. 15. 1412.)

$+2\text{H}_2\text{O}$. Insol. in H_2O ; sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Shenstone, Chem. Soc. 47. 375.)

$+2\frac{1}{2}\text{H}_2\text{O}$. (Reindel, J. pr. 102. 204.)

$+4\text{H}_2\text{O}$. Insol. in H_2O . (Grimbert and Barré, J. Pharm. (5) 21. 414.)

$5\text{CuO} \cdot 2\text{SO}_3 + 3\text{H}_2\text{O}$. (Wibel, Dissert. 1864.)

$11\text{CuO} \cdot 4\text{SO}_3 + 8\text{H}_2\text{O}$. (Clowes, C. N. 1898, 78. 155.)

$8\text{CuO} \cdot 3\text{SO}_3 + 10\text{H}_2\text{O}$. (Marchlewski and Sachs, Z. anorg. 1892, 1. 405.)

$7\text{CuO} \cdot 3\text{SO}_3 + 12\text{H}_2\text{O}$. (Étard, C. R. 1887, 104. 1615.)

$5\text{CuO} \cdot 2\text{SO}_3 + 5\text{H}_2\text{O}$. (Sabatier, Gm. K. 5. 1, 839.)

$6\text{H}_2\text{O}$. Min. *Arnimite*. (Weisbach, J. B. 1886. 2253.)

$2\text{CuO} \cdot \text{SO}_3$. Decomp. by cold H_2O into CuSO_4 and $4\text{CuO} \cdot \text{SO}_3$. (Roucher.)

Insol. in H_2O . Decomp. by hot H_2O . Sol. in dil. acids. (Pozzi-Escot, Bull. Soc. 1913 (4) 13. 816.)

According to Pickering (C. N. 47. 181) only

$3\text{CuO} \cdot \text{SO}_3 + 2\frac{1}{2}\text{H}_2\text{O}$ and $4\text{CuO} \cdot \text{SO}_3 + 4\text{H}_2\text{O}$ are true chemical compounds.

There is at 25° no definite basic sulphate of copper, all the basic sulphates being solid solutions. The solutions in contact with these basic sulphates contain SO_3 and CuO in equivalent quantities and are all sl. acid in reaction. (Bell, J. phys. Chem. 1908, 12. 179.)

Cupric sulphate, CuSO_4

Anhydrous. Absorbs H_2O from the air. Combines with, and dissolves in H_2O with great evolution of heat

$+ \text{H}_2\text{O}$. Permanent. Sol. in H_2O (Étard, C. R. 87. 602.)

$+2\text{H}_2\text{O}$ (?) (Storer's Dict.)

$+3\text{H}_2\text{O}$. (Étard, C. R. 104. 1614.)

Does not exist. (Cross, C. N. 49. 220.)

See Foote, p. 965.

$+5\text{H}_2\text{O}$. Superficially efflorescent in dry air

Sol in 2 34 pts H_2O at 18° , and sat. solution has sp gr 1.2147 (Schiff, A. 109. 326.)

100 pts $\text{CuSO}_4 + \text{Aq}$ sat at b. pt, 102.2° , contain 4.5 pts of the dry salt, or 100 pts H_2O at 102.2° dissolve 81.82 pts CuSO_4 . (Griffiths, Q. J. Sci. 18. 40.)

Sol in less than 4 pts H_2O at ord temp, and much more sol in boiling H_2O (Bergmann)

Sol in 4 pts cold, and 2 pts hot H_2O (Schubarth)

100 pts H_2O dissolve 33.103 pts. $\text{CuSO}_4 + 5\text{H}_2\text{O}$ at 15° , and solution has sp. gr = 1.1839 (Michel and Krafft, A. ch. (3) 41. 478.)

$\text{CuSO}_4 + \text{Aq}$ sat at 8° has 1.17 sp gr (Anthon, A. 24. 210.)

1 pt $\text{CuSO}_4 + 5\text{H}_2\text{O}$ dissolves at

(Stortenbecker, Z. phys. Ch. 1900, 34. 112)

100 pts. sat. solution of CuSO_4 and NiSO_4 contain 31.03 pts. of the salts at $11-14^\circ$. (v. Hauer.)Solubility of $\text{CuSO}_4 + \text{NiSO}_4$ in H_2O .

g per 100 g H_2O			Mol % CuSO_4	
t°	CuSO_4	NiSO_4	Solution	Solid phase
35	9.62	583.9	1.57	0.35
	41.66	484.4	7.69	2.12
	75.39	553.5	11.66	4.77
	106.40	506.5	16.92	6.52
	172.0	483.8	25.6	13.88
67	186.9	468.8	27.90	18.77
				94.91
	20.04	729.3	2.65	0.93
	66.01	706.2	8.31	2.86
	88.08	501.6	13.55	3.92
	147.94	675.0	16.39	6.66
	249.9	747.8	24.46	23.32

(Fock, Z. Kryst. Min. 1897, 28. 387.)

More easily sol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq}$ than in Na_2SO_4 or $\text{MgSO}_4 + \text{Aq}$, forming a double sulphate, which separates out. (Karsten.) K_2SO_4 and CuSO_4 mutually displace each other in saturated solutions. (Rudorff, Pogg. 148. 555.)When K_2SO_4 and CuSO_4 , both in excess, are dissolved in H_2O , a maximum of solubility of 15.61 pts. of the two salts in 100 pts. H_2O at 25° is reached in 30 minutes, after which the solubility decreases. This result is obtained either by treating excess of the two salts with H_2O at 25° , or cooling solutions of the two salts sat. at higher temp. to 25° . The salts are in the proportion of 5.2 pts. K_2SO_4 to 10.4 pts. CuSO_4 . If present in the same proportion as in their saturated solutions, 5.41 pts. K_2SO_4 to 10.13 pts. CuSO_4 would be required.

If sat. solution of one salt is added to sat. solution of the other, $K_2Cu(SO_4)_2 + 6H_2O$ separates, as it is less sol. than either simple salt, until a state of equilibrium is reached, after which there is no separation, contrary to Rudorff (see above). (Trevor, Z. phys. Ch. 7. 486.)

Solubility of $CuSO_4$ in presence of Na_2SO_4 at 0°. 100 pts H_2O dissolve—

No	$CuSO_4$	Na_2SO_4	No	$CuSO_4$	Na_2SO_4
1	0	4.53	5	15.84	3.55
2	6.01	5.34	6	15.33	1.98
3	9.81	5.73	7	14.99	0
4	16.67	6.48			

In 1, 2, and 3, Na_2SO_4 was in excess and given amt. $CuSO_4$ added; in 4, both $CuSO_4$ and Na_2SO_4 were in excess; in 5, 6, and 7, $CuSO_4$ was in excess and Na_2SO_4 added. (Diacon, J. B. 1866. 61.)

100 pts. H_2O dissolve 8.038 pts. $CuSO_4$ and 6.31 pts. Na_2SO_4 at 0°. (Pfaff, A. 99. 224.)

100 pts. H_2O dissolve 20.7 pts. $CuSO_4$ and 15.9 pts. Na_2SO_4 at 15°. (Rüdorff, B. 6. 484.)

Solubility of $CuSO_4 + Na_2SO_4$.

1. Solid phase, 3 mol. $CuSO_4 + 1$ mol. Na_2SO_4 .

2. Solid phase, 1 mol. $CuSO_4 + 1$ mol. Na_2SO_4 .

3. Solid phase, 1 mol. $CuSO_4 + 3$ mol. Na_2SO_4 .

(G. in 100 g. H_2O .)

t°	1		2		3	
	$CuSO_4$	Na_2SO_4	$CuSO_4$	Na_2SO_4	$CuSO_4$	Na_2SO_4

1.01	4.72	0.267	5.77
		0.00	5.94

(Stortenbecker, Z. phys. Ch. 1897, 22. 62.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid CO_2 (Büchner, Z. phys. Ch. 1906, 54. 674.)

100 pts. of a sat. solution in 40% alcohol contains 0.25 pt. $CuSO_4 + 5H_2O$; 20% alcohol, 3.1 pts.; 10% alcohol, 13.3 pts. (Schiff, A. 118. 362.)

Anhydrous $CuSO_4$ is sol. in absolute methyl alcohol, but insol. in absolute ethyl alcohol. $CuSO_4 + xH_2O$ is insol. in methyl or ethyl alcohol. (Klepl, J. pr. (2) 25. 526.)

100 pts. absolute methyl alcohol dissolve 1.05 pts. anhydrous $CuSO_4$ at 18°.

100 pts. absolute methyl alcohol dissolve 15.6 pts. $CuSO_4 + 5H_2O$ at 18°; 100 pts. 93.5% methyl alcohol dissolve 0.93 pt. $CuSO_4 + 5H_2O$ at 18°; 100 pts. 50% methyl alcohol dissolve 0.4 pt. $CuSO_4 + 5H_2O$ at 18°; 100 pts. absolute methyl alcohol dissolve 13.4 pts. $CuSO_4 + 5H_2O$ at 3°.

100 pts. absolute ethyl alcohol dissolve 1.1 pts. $CuSO_4 + 5H_2O$ at 3°. (de Bruyn, Z. phys. Ch. 10. 786.)

Methyl alcohol dissolves 11.5% $CuSO_4 + 5H_2O$ at 0°. (Auger, C. R. 1906, 142. 1272.)

Glacial acetic acid precipitates $CuSO_4$ completely from $CuSO_4 + Aq$.

100 g. 95% formic acid dissolve 0.05 g. $CuSO_4 + 5H_2O$ at 18.5°. (Aschan, Ch. Ztg. 1913, 37. 1117.)

Sol. in glycerine (Pelouze), picoline (Unverdorben).

100 g. glycerine dissolve 36.3 g. $CuSO_4 + 5H_2O$ at 15–16°. (Ossendowski, Pharm. J. 1907, 79. 575.)

100 g. glycerine dissolve 30.0 g. $CuSO_4$ at 15.5°.

100 g. solution of $CuSO_4$ in glycol contain 7.6 g. at 14.6°. (de Coninck, Bull. Ac. Belg. 1905. 257.)

Anhydrous $CuSO_4$ is insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014); methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314); benzonitrile. (Naumann, B. 1914, 47. 1370.)

Min. *Chalcantite*.

Cupric glucinum sulphate, $\text{CuSO}_4, 4\text{GlSO}_4 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Klatzo, J. B. 1868. 205.)

Does not exist. (Marignac, A. ch. (4) 30. 45.)

$9\text{CuSO}_4, \text{GlSO}_4 + 50\text{H}_2\text{O}$. As above.

Does not exist. (Marignac, l. c.)

Cupric hydrazine sulphate, $\text{CuH}_2(\text{SO}_4)_2, 2\text{N}_2\text{H}_4$.

1 pt. is sol. in 1148 pts. H_2O at 10° .

Decomp. by acids.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ with decomp. (Cur-
tius, J. pr. 1894, (2) 50. 331.)

Cupric iron (ferrous) sulphate, $\text{CuSO}_4, \text{FeSO}_4$.

Insol. in H_2O . (Étard, C. R. 87. 602.)

$+ 2\text{H}_2\text{O}$ (Étard.)

$\text{CuSO}_4, 2\text{FeSO}_4 + 21\text{H}_2\text{O}$. Sol in H_2O . (v.
Hauer.)

$\text{CuSO}_4, 3\text{FeSO}_4 + 28\text{H}_2\text{O}$ 100 pts. H_2O dis-
solve 75 pts. salt at 7° (Lefort.)

$4\text{CuSO}_4, \text{FeSO}_4 + 34\text{H}_2\text{O}$. 100 pts. H_2O at
 15.5° dissolve 75.91 pts. (Thomson)

Cupric iron (ferric) sulphate, $\text{CuSO}_4, \text{Fe}_2(\text{SO}_4)_3$
 $+ 24\text{H}_2\text{O}$.

Sol. in H_2O . (Bastick.)

Cupric iron (ferrous) potassium sulphate,
 $\text{CuSO}_4, \text{FeSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl.)

Cupric lead sulphate, $\text{CuO}, \text{PbO}, \text{SO}_3 + \text{H}_2\text{O}$.
Min. *Lunarite*.

$3\text{CuO}, 7\text{PbO}, 5\text{SO}_3 + 5\text{H}_2\text{O}$. Min. *Caledon-
ite*. Sol. in $\text{HNO}_3 + \text{Aq}$.

Cupric magnesium sulphate, $\text{CuSO}_4, \text{MgSO}_4$
 $+ 14\text{H}_2\text{O}$.

Efflorescent. Sol. in H_2O . (Vohl, A. 94.
57.)

$+ 2\text{H}_2\text{O}$. (Arrot, 1834.)

$\text{CuSO}_4, 2\text{MgSO}_4 + 21\text{H}_2\text{O}$. Sol. in H_2O . (v.
Hauer, Pogg. 125. 638)

$\text{CuSO}_4, 7\text{MgSO}_4 + 56\text{H}_2\text{O}$. Sol in H_2O .
(Schiff, A. 107. 64.)

**Cupric magnesium manganous potassium
sulphate**, $\text{CuSO}_4, \text{MgSO}_4, \text{MnSO}_4$,
 $3\text{K}_2\text{SO}_4 + 18\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl)

Cupric magnesium potassium sulphate,
 $\text{CuSO}_4, \text{MgSO}_4, 2\text{K}_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Does not exist. (Aston and Pickering,
Chem. Soc. 49. 123.)

Cupric magnesium potassium zinc sulphate,
 $\text{CuSO}_4, \text{MgO}, 3\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 18\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl.)

Cupric manganous sulphate, 5CuSO_4 ,
 $2\text{MnSO}_4 + 35\text{H}_2\text{O}$.

Sol. in H_2O (Schauffele, J. B. 1852. 340)

$2\text{CuSO}_4, 3\text{MnSO}_4 + 25\text{H}_2\text{O}$ As above. (S.)

$\text{CuSO}_4, \text{MnSO}_4 + \text{H}_2\text{O}$ (Étard, C. R. 87.
602.)

Cupric manganous potassium sulphate,
 $\text{CuSO}_4, \text{MnSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl)

Cupric nickel sulphate, $\text{CuSO}_4, \text{NiSO}_4 + 3\text{H}_2\text{O}$.

(Étard, C. R. 87. 602)

$\text{CuSO}_4, 2\text{NiSO}_4 + 21\text{H}_2\text{O}$. Sol. in H_2O .
(v. Hauer)

$+ 18\text{H}_2\text{O}$. Sol. in H_2O . (Boisbaudran, C.
R. 66. 497.)

$2\text{CuSO}_4, 2\text{NiSO}_4, 3\text{H}_2\text{SO}_4$. (Étard)

Cupric nickel potassium sulphate, CuSO_4 ,
 $\text{NiSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl)

Sol in 4 pts H_2O , insol in alcohol (Bette.)

$4\text{CuSO}_4, \text{K}_2\text{SO}_4 + 4\text{H}_2\text{O}$ Very sl. sol. in
 H_2O .

$\text{K}_2\text{O}, 4\text{CuO}, 4\text{SO}_3 + 4\text{H}_2\text{O}$. Insol. in H_2O ,
but decomp by boiling H_2O into $3\text{CuO}, \text{SO}_3$.

Cupric potassium sulphate, $\text{K}_2\text{Cu}(\text{SO}_4)_2 +$
 $6\text{H}_2\text{O}$

100 pts H_2O dissolve 66.666 pts at 102.8° (Grif-
fiths)

Much more sol in hot than cold H_2O (Pierre)
Easily sol in H_2O , by boiling, de comp into basic salt.
(Persoz, A. ch (3) 25. 272)

100 pts. H_2O dissolve 11.14 pts anhydrous
salt at 25° (Trevor, Z. phys. Ch. 7. 470.)

1 l. H_2O dissolves 116.9 g. anhydrous
salt at 25° . (Locke, Am. Ch. J. 1902, 27.
459.)

See also $\text{CuSO}_4 + \text{K}_2\text{SO}_4$.

Min. *Cyanochroite*.

Cupric potassium zinc sulphate, CuSO_4 ,
 $2\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl.)

Cupric rubidium sulphate, $\text{CuSO}_4, \text{Rb}_2\text{SO}_4 +$
 $6\text{H}_2\text{O}$.

Sol. in H_2O . (Tutton.)

1 l. H_2O dissolves 102.8 g. anhydrous
salt at 25° . (Locke, Am. Ch. J. 1902, 27.
459.)

Cupric sodium sulphate, basic, Na_2SO_4 ,
 $\text{Cu}(\text{OH})_2, 3\text{CuSO}_4 + 2\text{H}_2\text{O}$.

Min. *Natrochalcite*.

Sl. sol. in H_2O ; easily sol. in acids. (Pa-
lache and Warren, Am. J. Sci. 1908, (4) 26.
346.)

Cupric sodium sulphate, $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Solubility of the pure double salt $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$

t°	100 grams solution contain	
	CuSO_4 grams	Na_2SO_4 grams
17.7	14.34	13.34
19.5	14.54	12.90
23	14.36	12.76
30	14.07	12.37
40.15	13.73	12.26

(Koppel, Z phys Ch. 1903, 42. 8)

Solubility of the mixture of $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + \text{H}_2\text{O}$ and CuSO_4

t°	100 g. solution contain	
	CuSO_4 grams	Na_2SO_4 grams
17.7	14.99	13.48?
19.5	15.62	12.06
23	16.41	11.35
30	17.97	9.95
40.15	20.56	8.00

(Koppel)

Solubility of the mixture of $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ and Na_2SO_4

t°	100 g. solution contain	
	CuSO_4 grams	Na_2SO_4 grams
18	13.53	13.844
19.5	11.847	15.116

35.3	1.471	32.072
37.2	1.494	31.96

(Koppel.)

Solubility of $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ in presence of varying amounts of Na_2SO_4 .

t°	100 g solution contain	
	CuSO_4 grams	Na_2SO_4 grams
30	5.38	22.17
30	5.41	21.92
30.1	3.69	25.37
40.15	3.97	23.90
30	1.57	32.09

(Koppel.)

Copper sulphate and sodium sulphate unite to form a double salt, $\text{CuSO}_4, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$, which is stable in the presence of the solution above 16.7° . In the presence of copper sulphate the solubility of $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ is greater than that of the pure salt. (Koppel.)

Cupric thallous sulphate, $\text{CuSO}_4, \text{Tl}_2\text{SO}_4 + 6\text{H}_2\text{O}$.

Decomp. by recrystallising from H_2O . (Willm, A. ch. (4) 5. 55.)

1 l. H_2O dissolves 81 g. anhydrous salt at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

Cupric zinc sulphate, $\text{CuSO}_4, 3\text{ZnSO}_4 + 28\text{H}_2\text{O}$

Efflorescent. 100 pts. H_2O dissolve 80 pts. salt at 8° . Sol. in all proportions in boiling H_2O . (Lefort.)

$\text{CuSO}_4, 2\text{ZnSO}_4 + 21\text{H}_2\text{O}$. (v. Hauer, Pogg. 125. 637.)

$\text{CuSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$. (Boisbaudran.)

$2\text{CuSO}_4, 2\text{ZnSO}_4, \text{H}_2\text{SO}_4$. (Étard.)

Cuprous sulphate ammonia, $\text{Cu}_2\text{SO}_4, 4\text{NH}_3$.

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$; decomp. by pure H_2O . (Péchar, C. R. 1903, 136. 504.)

$+ \text{H}_2\text{O}$. Decomp. by H_2O . (Foerster and Blankenburg, B. 1906, 39. 4434.)

Cupric sulphate ammonia, basic, $\text{CuSO}_4, 3\text{CuO}, 2\text{NH}_3 + 5\text{H}_2\text{O}$.

Decomp. by hot H_2O . (Pickering, Chem. Soc. 43. 336.)

Cupric sulphate ammonia (Cuprammonium sulphate), $\text{CuSO}_4, \text{NH}_3$.

Decomp. by H_2O . (Kane.)

Decomp. by H_2O giving a basic sulphate. (Bouzat, C. R. 1902, 135. 535.)

$\text{CuSO}_4, 2\text{NH}_3, [\text{CuSO}_4, 2\text{NH}_3 + 3\text{H}_2\text{O}]$. (Mendelejeff, B: 3. 422.). Decomp. by excess of H_2O into—

$\text{CuSO}_4, 4\text{NH}_3 + \text{H}_2\text{O}$. Sol. in 1.5 pts. H_2O , but decomp. by much H_2O . Insol. in alcohol. Insol. in conc. $\text{NH}_4\text{OH} + \text{Aq}$. (André, C. R. 100. 1138.)

Sol. in small quantity of H_2O ; decomp. in dil. solution. (Bouzat.)

100 g. H_2O dissolve 44.56 g. anhydrous comp. at 25° . (Pudschies, Dissert.)

100 g. H_2O dissolve 18.05 g. at $21-22^\circ$. (Horn and Taylor, Am. Ch. J. 1904, 32. 268.)

$\text{CuSO}_4, 5\text{NH}_3$. Completely sol. in H_2O . (Rose, Pogg. 20. 150.)

Sol. in small amt. of H_2O ; decomp. in dil. solution. Insol. in liquid NH_3 . (Bouzat, C. R. 1902, 135. 535.)

Cuprous sulphate carbon monoxide, $\text{Cu}_2\text{SO}_4, 2\text{CO} + \text{H}_2\text{O}$.

Very unstable. (Joannis, C. R. 1903, 136. 615.)

Cupric sulphate zinc oxide, $\text{CuSO}_4 \cdot 2\text{ZnO} + 2\text{H}_2\text{O}$.

(Larsen, Ch. Z. Repert. 1896, 20. 317.)

$2\text{CuSO}_4 \cdot 3\text{ZnO} + 12\text{H}_2\text{O}$. (Mailhe, A. ch. 1902, (7) 27. 169.)

Didymium sulphate, basic, $\text{Di}_2\text{O}_3 \cdot \text{SO}_3 = (\text{DiO})_2\text{SO}_4$

Insol. in cold or boiling H_2O (Marignac)

Slowly sol. in hot dil. $\text{HCl} + \text{Aq}$ Easily sol. in conc. acids

+ $8\text{H}_2\text{O}$ Precipitate. (Hermann.)

Composition is $2\text{Di}_2\text{O}_3 \cdot 3\text{SO}_3 + 3\text{H}_2\text{O}$ or $\text{Di}_2(\text{SO}_4)_3 + \text{Di}_2\text{O}_6\text{H}_6$. (Frerichs and Smith)

Composition is $5\text{Di}_2\text{O}_3 \cdot 3\text{SO}_3 + x\text{H}_2\text{O}$. (Cleve, B 11. 910.)

Didymium sulphate, $\text{Di}_2(\text{SO}_4)_3$.

Anhydrous By saturating cold H_2O and warming the solution, the following results were obtained—100 pts. H_2O dissolve at:

12° 18° 25° 38° 50°
43.1 25.8 20.6 13.0 11.0 pts. $\text{Di}_2(\text{SO}_4)_3$.

+ $6\text{H}_2\text{O}$ H_2O dissolves this salt very slowly; 100 pts. H_2O dissolve 13 pts. $\text{Di}_2(\text{SO}_4)_3$ in 24 hours, and 16.4 pts. in 2 days. If solution is evap. in vacuo until $\text{Di}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ separates out, 34 pts. $\text{Di}_2(\text{SO}_4)_3$ remain dissolved in 100 pts. H_2O

+ $5\text{H}_2\text{O}$ (Cleve.)

+ $8\text{H}_2\text{O}$. Solutions of this salt contain at:

19° 40° 50° 100°

11.7 8.8 6.5 1.6 pts. $\text{Di}_2(\text{SO}_4)_3$.

(Marignac, A. ch. (3) 38. 170.)

+ $9\text{H}_2\text{O}$. (Zschiesche, J. Pr. 107. 75.)

Didymium potassium sulphate, K_2SO_4 ,

$\text{Di}_2(\text{SO}_4)_3 + 2\text{H}_2\text{O}$.

Sol. in 63 pts. H_2O . Insol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq}$. (Marignac.)

$3\text{K}_2\text{SO}_4 \cdot \text{Di}_2(\text{SO}_4)_3$ Sol. in 83 pts. H_2O at 18°. Insol. in cold, sl. sol. in boiling sat. $\text{K}_2\text{SO}_4 + \text{Aq}$, 100 ccm. of which retain 55 mg. Di_2O_3 in solution (Cleve.)

$4\text{K}_2\text{SO}_4 \cdot \text{Di}_2(\text{SO}_4)_3$ (Cleve.)

$9\text{K}_2\text{SO}_4 \cdot 2\text{Di}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$. (Cleve.)

Didymium sodium sulphate, $\text{Di}_2(\text{SO}_4)_3$,

Na_2SO_4 and $+2\text{H}_2\text{O}$.

Sol. in 200 pts. H_2O (Marignac), and still less in sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$, 100 ccm. of which dissolve only 70 mg. Di_2O_3 at ord. temp. (Cleve.)

Didymium thallos sulphate, $(\text{Di}_2^*\text{SO}_4)_3$,

$3\text{Ti}_2\text{SO}_4$

Ppt.

$\text{Di}_2(\text{SO}_4)_3 \cdot \text{Ti}_2\text{SO}_4 + 2\text{H}_2\text{O}$. Sol. in H_2O . (Zschiesche, J. pr. 107. 98.)

Erbium sulphate, $\text{Er}_2(\text{SO}_4)_3$.

Anhydrous. Easily and rapidly sol. in H_2O . 100 pts. H_2O dissolve 43 pts. anhydrous salt at 0°.

+ $8\text{H}_2\text{O}$. Less sol. in H_2O than anhydrous salt. 100 pts. H_2O dissolve 30 pts. $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ (=23 pts. $\text{Er}_2(\text{SO}_4)_3$) at about 20°; at 100°, 100 pts. $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ remain dissolved. Sat. solution deposits crystals when heated to 55°. (Hoglund.)

100 g. of sat. solution of $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ at 25° in H_2O contains 11.94 g. anhyd. $\text{Er}_2(\text{SO}_4)_3$. (Wirth, Z. anorg. 1912, 76. 174.)

Solubility of $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ in H_2SO_4 at 25°.

N = equiv. g. H_2SO_4 in 1 l. of solvent.

C = g. oxide in 100 g. of solution

C¹ = g. anhyd. salt in 100 g. of solution.

2 16	3 04	5 018	15 15	0 145	0 239

(Wirth, Z. anorg. 1912, 76. 174.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Erbium potassium sulphate, $\text{Er}_2(\text{SO}_4)_3$, $3\text{K}_2\text{SO}_4$.

Slowly sol. in H_2O . (Hoglund.)

Erbium sodium sulphate, $\text{Er}_2(\text{SO}_4)_3$, $5\text{Na}_2\text{SO}_4$, $+7\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

Europium sulphate, $\text{Eu}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Stable in the air. (Urban and Lacombe, C. R. 1904, 138. 628.)

Gadolinium sulphate, $\text{Gd}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Solubility in H_2O .

(Wirth)

Sol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq.}$

Gadolinium potassium sulphate, $\text{Gd}_2(\text{SO}_4)_3 \cdot \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

100 grams. sat. solution in $\text{K}_2\text{SO}_4 + \text{Aq}$ contains 0.87—0.77 grams Gd_2O_3 . (Benedicks, Z. anorg. 1900, 22. 410.)

Gallium sulphate, $\text{Ga}_2(\text{SO}_4)_3$.

Not deliquescent, but very sol. in H_2O . Sol. in 60% alcohol; insol. in ether. (Boisbaudran.)

Aqueous solution decomp. into basic salt by boiling, which redissolves, however, on cooling.

Gallium potassium sulphate, $\text{Ga}_2\text{K}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

(Soret, Arch. sc. phys. nat. 1885, 14. 96.)

Gallium rubidium sulphate, $\text{Rb}_2\text{Ga}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

(Soret, Arch. sc. phys. nat. 1885, 14. 96.)

Glucinum sulphate, basic, $3\text{GfO}, \text{SO}_3 + 4\text{H}_2\text{O}$.

Sol. in H_2O , but decomp. by heating or dilution. (Berzelius.)

$2\text{GfO}, \text{SO}_3 + 3\text{H}_2\text{O}$. Sol in H_2O .

$9\text{GfO}, \text{SO}_3 + 14\text{H}_2\text{O}$ (?). Precipitate. Insol. in H_2O . (Berzelius.)

According to Debray, this salt when carefully washed is GfO_2H_2 .

Glucinum sulphate, GfISO_4 .

Anhydrous.

Nearly insol. in H_2O , but slowly attacked by cold, rapidly by hot H_2O , and is converted into $\text{GfISO}_4 + 4\text{H}_2\text{O}$ before dissolving. (Parsons, Z. anorg. 1904, 42. 253.)

Sp. gr. of $\text{GfISO}_4 + \text{Aq}$ at 25° .

Concentration of $\text{GfISO}_4 + \text{Aq}$	Sp. gr
1—normal	1.0451
$\frac{1}{2}$ —	1.0229
$\frac{1}{4}$ —	1.0114
$\frac{1}{16}$ —	1.0027

(Wagner, Z. phys. Ch. 1890, 5. 35.)

Solubility of GfISO_4 in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

$\text{H}_2\text{SO}_4 + \text{Aq}$ % H_2SO_4	100 g of the solution contain g. GfISO_4	Solid phase

(Levi-Malvano)

100 g. of the aqueous solution contain at 25°, 8.212 g. GISO₄. (Wirth, Z. anorg. 1913, 79. 358.)

Glucinum iron (ferrous) sulphate, GISO₄, FeSO₄+17½H₂O.

Sol. in H₂O. (Klatzo, J. B. 1868. 204.)

3GISO₄, FeSO₄+28H₂O. Sol. in H₂O. (Klatzo.)

Does not exist. (Marignac, A. ch. (4) 30. 45.)

Glucinum nickel sulphate, (Gl,Ni)SO₄+4H₂O, or 7H₂O.

(Klatzo, J. B. 1868. 205.)

Does not exist. (Atterberg, Sv. V. A. F. 1873, 4. 81.)

Glucinum potassium sulphate, GISO₄, K₂SO₄+2H₂O.

Sl. sol. in cold, slowly but more sol. in hot H₂O. (Debray.)

+3H₂O. (Klatzo.)

Glucinum potassium hydrogen sulphate, GH₂(SO₄)₂, 2K₂SO₄+4H₂O.

Easily sol. in H₂O. Partly decomp. by recrystallisation. (Atterberg.)

Glucinum sodium sulphate, 2GISO₄, 3Na₂SO₄+18H₂O.

Sol. in H₂O. (Atterberg.)

Glucinum zinc sulphate, 2GISO₄, 3ZnSO₄+35H₂O.

Sol. in H₂O. (Klatzo, J. B. 1868. 205.)

Does not exist. (Atterberg.)

Gold (auroauric) sulphate, Au₂(SO₄)₃.

Decomp. by moist air, H₂O, glacial acetic acid, or HNO₃+Aq (1.42 sp. gr.) Insol. in conc. H₂SO₄. (Schottländer, A. 217. 375.)

Gold (auric) sulphate, Au₂O₃, 2SO₃+H₂O, or Auryl hydrogen sulphate, (AuO)HSO₄.

Deliquescent. Decomp. by H₂O. Sol. in HCl+Aq; not attacked by conc. HNO₃+Aq. Sol. in 6 pts. conc. H₂SO₄. (Schottländer.)

Gold (auric) potassium sulphate, Au₂(SO₄)₃, K₂SO₄.

Not decomp. immediately by cold H₂O. (Schottländer.)

Hydrazine mercuric sulphate hydrazine, (N₂H₅)₂SO₄, 3HgSO₄, 2N₂H₄.

Insol. in H₂O. Sol. in H₂O containing HCl. (Ferratini, Gazz. ch. it. 1912, 42. (1) 142.)

Hydroxylamine uranyl sulphate, (NH₂OH)₂, H₂SO₄, 2(UO₂)SO₄+5H₂O.

Extremely sol. in H₂O from which it can be cryst. (Rimbach, Dissert. 1904.)

Indium sulphate, In₂(SO₄)₃.

Easily sol. in H₂O.

+9H₂O. Easily sol. in H₂O.

Indium hydrogen sulphate, InH(SO₄)₂+4H₂O.

Very deliquescent. (Meyer.)

Indium potassium sulphate, InK(SO₄)₂+4H₂O.

Sol. in H₂O, but decomp. by boiling. (Rössler, J. pr. (2) 7. 14.)

(InO)₃K(SO₄)₂+3H₂O. Insol. in H₂O. (Rössler.)

Indium rubidium sulphate, In₂(SO₄)₃, Rb₂SO₄+24H₂O.

44.28 pts. are sol. in 100 pts. H₂O at 15°. (Chabrie, C. R. 1901, 132. 473.)

Melts in crystal H₂O at 42°. (Locke, Am. Ch. J. 1901, 26. 183.)

Indium sodium sulphate, InNa(SO₄)₂+4H₂O.

Sol. in H₂O. (Rössler, J. pr. (2) 7. 14.)

Iodine sulphate, I₂(SO₄)₃.

Ppt. Decomp. by H₂O. (Fichter, Z. anorg. 1915, 91. 140.)

Iodyl sulphate, (IO)₂(SO₄)₃.

Possible composition of Weber's (B. 20. 86) I₂O₅, 3SO₃.

Iridium sulphate.

Sol. in H_2O or alcohol. (Berzelius.)
 $Ir(SO_4)_3$. Sol. in H_2O . (Rimbach, Z anorg. 1907, 52. 409.)

Iridium potassium sulphate, $Ir_2(SO_4)_3$, $K_2SO_4 + 24H_2O$.

Mpt. 102–103°.
 Easily sol. in H_2O . (Marino, Z. anorg. 1904, 42. 220.)
 $Ir_2(SO_4)_3, 3K_2SO_4$. Sol. in H_2O or dil. $H_2SO_4 + Aq$; nearly insol. in sat. $K_2SO_4 + Aq$. (Boisbaudran, C. R. 96. 1406.)

Iridium rubidium sulphate, $Ir_2(SO_4)_3.Rb_2$.

Sol. in cold; very sol. in hot H_2O . (Marino, Gazz. ch. it. 1903, 32, (2) 511.)
 Mpt. 108–109°. (Marino, Z. anorg. 1904, 42. 219.)

Iridium thallium sulphate, $Ir_2(SO_4)_3, Tl_2SO_4 + 24H_2O$.

Very sol. in H_2O . (Marino, Z. anorg. 1904, 42. 222.)

Iron (ferrous) sulphate, $FeSO_4$.

+ H_2O
 + $2H_2O$ Not more sol in H_2O than gypsum (Mitscherlich)
 + $3H_2O$. Sol. in H_2O . (Kane)
 + $4H_2O$. Separates from conc. $FeSO_4 + Aq$ at 80°.
 + $7H_2O$ Efflorescent at 33°.

1 pt $FeSO_4 + 7H_2O$ dissolves in 16 pts. cold, and 0.3 pt. boiling H_2O

1 pt $FeSO_4 + 7H_2O$ dissolves at

10° 15° 25° 33° 40° 60° 81° 90° 100°
 in 1 64 1 43 0.87 0 66 0 44 0 38 0 37 0 27 0 3 pts H_2O
 (Brandes and Firnhaber, Br. Arch. 7. 83)

When boiled with insufficient H_2O for solution a white hydrate is formed which separates out. Solubility increases up to 87.5°, and then diminishes, owing to the above separation. (Brandes, Pogg. 20. 581)

Sol. in 2 pts. cold, and 1 pt. boiling H_2O (Fourcroy), sol. in 2 pts. cold H_2O at 18.75° (Abl), sol. in 6 pts. H_2O at moderate heat, and 0.75 pt at 100° (Bergmann)
 100 pts H_2O at 15.5° dissolve 45–50 pts. (Ure's Dict.)

100 pts. H_2O dissolve pts $FeSO_4$ at t°

t°	Pts. $FeSO_4$	t°	Pts. $FeSO_4$	t°	Pts. $FeSO_4$
0	15.8	21	27.4	45	42.9

15 5	25 05	15 97

(Koppel, Z. phys. Ch. 1905, 52. 405)
See also under $\text{FeNa}_2(\text{SO}_4)_2$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in liquid CO_2 . (Büchner, Z. phys. Ch. 1906, 54. 674.)

100 pts. sat. solution of FeSO_4 in 40% alcohol contains 0.3% FeSO_4 . (Schiff.)

Insol. in alcohol of 0.905 sp. gr. or less. (Anthon, J. pr. 14. 125.)

Alcohol and H_2SO_4 precipitate FeSO_4 from $\text{FeSO}_4 + \text{Aq.}$ also glacial acetic acid.

Anhydrous FeSO_4 is insol. in acetone. (Krug and M'Elroy, 1893.)

Insol. in acetone. (Fidmann, C. C. 1899, II. 1014.)

100 g. sat. solution in glycol contain 6.0 g. FeSO_4 at ord. temp. (de Coninck.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Iron (ferrous) sulphate, acid, 2FeO , 3SO_3 , $2\text{H}_2\text{O}$.

This salt exists in contact with solutions containing $\text{SO}_3 + 1.637 \text{ H}_2\text{O}$ to about $\text{SO}_3 + 2.186 \text{ H}_2\text{O}$. (Kenrick, J. phys. Chem. 1908, 12. 704.)

FeO , $2\text{SO}_3 + \text{H}_2\text{O}$. This compd. exists with solutions containing $\text{SO}_3 + 1.342 \text{ H}_2\text{O}$ to (about) $\text{SO}_3 + 1.595 \text{ H}_2\text{O}$. (Kenrick.)

FeO , $4\text{SO}_3 + 3\text{H}_2\text{O}$. This compd. is stable with solutions containing from $\text{SO}_3 + 1.122 \text{ H}_2\text{O}$ to (about) $\text{SO}_3 + 1.342 \text{ H}_2\text{O}$. Rapidly sol in H_2O with ppt. of $\text{FeSO}_4 + \text{H}_2\text{O}$. (Kenrick.)

Min. *Melanterite*.

Iron (ferric) sulphate, basic, $10\text{Fe}_2\text{O}_3$, $\text{SO}_3 + \text{H}_2\text{O}$.

(Athanasesco, C. R. 103. 27.)

$6\text{Fe}_2\text{O}_3$, $\text{SO}_3 + 10\text{H}_2\text{O}$. Insol. in H_2O . Sl. sol. in warm $\text{HCl} + \text{Aq.}$ (Scheerer, Pogg. 45. 188.)

$4\text{Fe}_2\text{O}_3$, $\text{SO}_3 + 11\text{H}_2\text{O}$. (Anthon, Repert. 81. 237.)

$3\text{Fe}_2\text{O}_3$, $\text{SO}_3 + 4\text{H}_2\text{O}$. Insol. in H_2O . Rather easily sol. in acids. (Scheerer, Pogg. 44. 453; Meister, B. 8. 771.)

$2\text{Fe}_2\text{O}_3$, $\text{SO}_3 + 6\text{H}_2\text{O}$. When pptd. from cold solutions, is sol. in $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq.}$ but insol. therein when pptd. from hot solutions. (Maus.)

Only basic sulphate which is a true chemical compound. (Pickering, Chem. Soc. 37. 807.)

Min. *Glockerite*. Insol. in H_2O . Sol. in conc. H_2SO_4 .

+ $7\text{H}_2\text{O}$. (Meister.)

+ $8\text{H}_2\text{O}$. (Muhlhauser.)

+ $15\text{H}_2\text{O}$. Min. *Pissophanite*.

Fe_2O_3 , $\text{SO}_3 = (\text{FeO})_2\text{SO}_4 + 3\text{H}_2\text{O}$. Insol. in H_2O . (Soubeiran, A. ch. 44. 329.)

$3\text{Fe}_2\text{O}_3$, $4\text{SO}_3 + 9\text{H}_2\text{O}$. (Athanasesco.)

$2\text{Fe}_2\text{O}_3$, $3\text{SO}_3 + 8\text{H}_2\text{O}$. Insol. in H_2O . (Wittstein.)

+ $18\text{H}_2\text{O}$. Min. *Fibroferriite*. Sl. sol. in cold, more easily in hot H_2O .

Fe_2O_3 , $2\text{SO}_3 + 10\text{H}_2\text{O}$. Min. *Stypticite*.

+ $15\text{H}_2\text{O}$. Sol. in H_2O ; decomp. by heat or evaporation. (Muck, J. pr. 99. 103.)

$2\text{Fe}_2\text{O}_3$, $5\text{SO}_3 + 13\text{H}_2\text{O}$. Min. *Copiapite*

$\text{Fe}_2\text{S}_2\text{O}_7 + 18\text{H}_2\text{O} = 2\text{Fe}_2\text{O}_3$, $5\text{SO}_3 + 18\text{H}_2\text{O}$. *α -Copiapit.* This salt is in equilibrium at 25°

with solutions in which the molecular ratio $\text{Fe}_2\text{O}_3 : \text{SO}_3$ lies between 1 : 2.889 and 1 : 2.614. (Wirth, Z. anorg. 1914, 87. 37.)

$(\text{OH})\text{Fe}_2(\text{SO}_4)_3 + 13\text{H}_2\text{O}$. *β -Copiapit.* This salt is in equilibrium at 25° with solutions in which the molecular ratio $\text{Fe}_2\text{O}_3 : \text{SO}_3$ lies between 1 : 3.472 and 1 : 2.889. (Wirth, Z. anorg. 1914, 87. 37.)

According to Pickering (Chem. Soc. 37. 807), all basic ferric sulphates are mixtures excepting $2\text{Fe}_2\text{O}_3$, SO_3 .

Iron (ferric) sulphate, $\text{Fe}_2(\text{SO}_4)_3$.

Anhydrous. Slowly deliquescent. Nearly insol. in H_2O , and $\text{HCl} + \text{Aq.}$ Insol. in conc. H_2SO_4 . Very rapidly sol. in $\text{FeSO}_4 + \text{Aq.}$ even when very dil. (Barreswil, C. R. 20. 1366.)

Sp. gr. of $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq.}$ According to F = Franz at 17.5° (J. pr. (2) 5. 280); G = Gerlach at 15° (Z. anal. 28. 494); H = Hager at 18° (Z. anal. 27. 280).

See also under $\text{Al}_2(\text{SO}_4)_3$.

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 828.)

Completely pptd from $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$ by $\text{HC}_2\text{H}_3\text{O}_2$. Sol. to large extent in alcohol.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone.

$+x\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O . Conc. $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$ may be boiled without decomp., but dil. solutions are decomp. on heating. A solution containing 1 pt. salt to 100 pts. H_2O becomes turbid at 76° ; 1 pt. to 200 pts., at 56° ; 1 pt. to 400 pts., at 47° ; 1 pt. to 800 pts., at 40° ; 1 pt. to 1000 pts., at 38° ; 1 pt. to 10,000 pts., at 14° . (Scheerer.)

$+9\text{H}_2\text{O}$. Min. *Coquimbite*.

81.43 pts. are sol. in 18.57 pts. H_2O . (Wirth, Z. anorg. 1914, 87. 23.)

This salt is stable at 25° only in contact with solutions in which the molecular ratio $\text{Fe}_2\text{O}_3 : \text{SO}_3$ lies between 1 : 3.472 and 1 : 6.699. (Wirth, Z. anorg. 1914, 87. 35.)

$+10\text{H}_2\text{O}$. Slowly sol. in H_2O . (Oudemans, R. t. c. 3. 331.)

Iron (ferroferric) sulphate, 6FeSO_4 ,

$\text{Fe}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$.

Sol. in all proportions in H_2O . (Poumarède, C. R. 18. 854.)

$3\text{FeSO}_4, 2\text{Fe}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$. Decomp. by H_2O . Easily sol. in dil. $\text{HCl} + \text{Aq}$. Insol. in alcohol. (Abich, 1842.)

$\text{FeSO}_4, \text{Fe}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$. Min. *Voltante*. Difficultly sol. in H_2O .

$\text{FeO}, \text{Fe}_2\text{O}_3, 6\text{SO}_3 + 15\text{H}_2\text{O}$. Deliquescent. (Lefort, J. Pharm. (4) 10. 87)

Iron (ferrous) pyrosulphate, FeS_2O_7 .

Deliquescent. Decomp. by H_2O . (Bolas, Chem. Soc. (2) 12. 212.)

Iron (ferric) hydrogen sulphate, $\text{Fe}_2(\text{SO}_4)_3$, $\text{H}_2\text{SO}_4 + 8\text{H}_2\text{O}$.

This salt is in equilibrium at 25° only with solutions where the molecular ratio $\text{Fe}_2\text{O}_3 : \text{SO}_3$ is more acid than 1 : 6.699. (Wirth and Bakke, Z. anorg. 1914, 87. 34.)

Sat. solution of $\text{Fe}_2(\text{SO}_4)_3, \text{H}_2\text{SO}_4 + 8\text{H}_2\text{O}$ in abs. alcohol at 25° contains 8 g. $\text{Fe}_2\text{O}_3 + 17.18$ g. SO_3 per 100 g. sat. solution. (Wirth and Bakke.)

Decomp. by H_2O . (Recoura, C. R. 1903, 137. 118.)

In contact with solutions containing 25% to 28% SO_3 at 25° , the stable solid is $\text{Fe}_2\text{O}_3, 3\text{SO}_3 + 10\text{H}_2\text{O}$. In contact with solutions containing more than 28%, the stable solid is $\text{Fe}_2\text{O}_3, 4\text{SO}_3 + 10\text{H}_2\text{O}$. (Cameron and Robinson, J. phys. Chem. 1907, 11. 650.)

Iron (ferroferric) hydrogen sulphate,

$\text{Fe}_2(\text{SO}_4)_3, \text{FeSO}_4, 2\text{H}_2\text{SO}_4$.

Insol. in H_2O , but slowly decomp. thereby. Sol. in H_2SO_4 . (Étard, C. R. 87. 602.)

Iron (ferrous) hydrazine sulphate, $\text{FeH}_2(\text{SO}_4)_2, 2\text{N}_2\text{H}_4$.

1 pt. is sol. in 325 pts. H_2O at 12° . (Curtius, J. pr. 1894, (2) 50. 331.)

Iron (ferrous) magnesium sulphate, $\text{FeSO}_4, \text{MgSO}_4 + 4\text{H}_2\text{O}$.

Sol. in H_2O . (Schiff.)

Iron (ferric) magnesium sulphate, $\text{Fe}_2(\text{SO}_4)_3, \text{MgSO}_4 + 24\text{H}_2\text{O}$.

(Bastick.)

Iron (ferrous) magnesium potassium sulphate, $2\text{K}_2\text{SO}_4, \text{FeSO}_4, \text{MgSO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Iron (ferric) manganous hydrogen sulphate, $\text{Fe}_2(\text{SO}_4)_3, 2\text{MnSO}_4, \text{H}_2\text{SO}_4$.

Insol. in cold H_2O . (Étard.)

$\text{Fe}_2(\text{SO}_4)_3, 2\text{MnSO}_4, 3\text{H}_2\text{SO}_4$. Sol. in H_2O . (Étard, C. R. 86. 1399.)

Iron (ferric) manganic sulphate, $\text{Fe}_2(\text{SO}_4)_3, \text{Mn}_2(\text{SO}_4)_3$.

Insol. in cold H_2O ; decomp. by hot H_2O and $\text{HCl} + \text{Aq}$. (Étard.)

Iron (ferrous) manganous potassium sulphate, $\text{FeSO}_4, \text{MnSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Iron (ferrous) nickel sulphate, $2\text{FeSO}_4, 2\text{NiSO}_4, \text{H}_2\text{SO}_4$.

(Étard, C. R. 87. 602.)

Iron (ferric) nickel sulphate, $\text{Fe}_2(\text{SO}_4)_3, \text{NiSO}_4, 2\text{H}_2\text{SO}_4$.

Insol. in H_2O , but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Iron (ferrous) nickel potassium sulphate, $\text{FeSO}_4, \text{NiSO}_4, 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A. 94. 57.)

Iron (ferrous) potassium sulphate, $\text{FeSO}_4, \text{K}_2\text{SO}_4$.

$+2\text{H}_2\text{O}$. (Marignac, Ann. Min. (5) 9. 19.)

Solubility in H_2O at t° .

(Kuster and Thiel)

Iron (ferric) potassium sulphate, basic,
4Fe₂O₃, K₂O, 7SO₃+9H₂O=4(Fe₂O₃,
2H₂O, SO₃), K₂SO₄+7H₂O.

Insol. in boiling H₂O. Sl. sol. in HCl+aq,
more readily in aqua regia. (Rammelsberg.)
3Fe₂O₃, K₂O, 4SO₃+6H₂O=K(FeO)₃(SO₄)₂
+3H₂O. Min. *Jarosite*.

Fe₂O₃, H₂O, 2SO₃, 2K₂SO₄+5H₂O. Sol. in
6 pts. cold H₂O. Solution soon decomposes.
(Maus, Pogg. 11. 78.)

Sol. in 12.5 pts. H₂O at 10°. (Anthon, Re-
pert. 76. 361.)

Formula is given as 3Fe₂O₃, 5K₂O, 12SO₃+
18H₂O by Marignac.

3Fe₂O₃, 6SO₃, 2K₂SO₄+22H₂O. Sol. when
moist in H₂O. Solution soon decomposes.
Insol. in alcohol. (Soubeiran, A. ch. 44. 329.)

3Fe₂O₃, 7SO₃, 5K₂SO₄+12H₂O, and
+17H₂O. (Scheerer, Pogg. 87. 81.)

2Fe₂O₃, 5SO₃, 3K₂SO₄+9H₂O. (S.)
3Fe₂O₃, 8SO₃, 4K₂SO₄+20H₂O and 24H₂O.
(S.)

Iron (ferric) potassium sulphate, K₂SO₄,
2Fe₂(SO₄)₃.

Insol. in H₂O, but is gradually decomp.
thereby. (Grimm and Ramdohr, A. 98. 127.)
+2H₂O. Nearly insol. in H₂O. (Weinland,
Z. anorg. 1913, 84. 364.)

K₂Fe₂(SO₄)₄+24H₂O. *Iron alum*.

Sol. in 5 pts. H₂O at 12.5°. (Anthon.)

Aqueous solution is decomp. by heating.
Insol. in alcohol.

Sp. gr. of aqueous solution. According to

G=Gerlach, at 15° (Z. anal. 28. 496); F= Franz, at 17.5° (J. pr. (2) 5. 288), containing:

	5	10	15%	K ₂ Fe ₂ (SO ₄) ₄ +24H ₂ O,
F	1.0268	1.0466	1.0672	
G	1.025	1.0507	1.0773	

20 25 30% K₂Fe₂(SO₄)₄+24H₂O,
F 1.0894 1.1136 1.1422

G 1.1050 1.1340 1.1645

35 % K₂Fe₂(SO₄)₄+24H₂O.
G 1.1967.

Melts in crystal H₂O at 28°. (Locke, Am.
Ch. J. 1901, 26. 183.)

Fe₂(SO₄)₃, 3K₂SO₄. Insol. in H₂O, but
slowly decomp. thereby. (Etard, C. R. 84.
1089.)

Iron (ferric) potassium sulphate sulphite.

See Sulphite sulphate, ferric potassium.

Iron (ferrous) potassium zinc sulphate, FeSO₄,
2K₂SO₄, ZnSO₄+12H₂O.

Sol. in H₂O.

Iron (ferrous) rubidium sulphate, FeSO₄,
Rb₂SO₄+6H₂O.

Sol. in H₂O. (Tutton, Chem. Soc. 63. 337.)
1 l. H₂O dissolves 242 g. anhydrous salt
at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Iron (ferric) rubidium sulphate, Rb₂Fe₂
(SO₄)₂+24H₂O.

Solubility in H₂O.

Temp	G per litre	Gram mols. of anhydrous salt per litre
25	97 4	0 294
30	202 4	0 617
35	Basic salt formed	..

(Locke, Am. Ch. J. 1901, 26. 180.)

Iron (ferrous) sodium sulphate, FeSO₄,
Na₂SO₄+4H₂O.

Sol. in H₂O. (Marignac, Ann. Min. (5) 9.
25.)

Solubility of FeNa₂(SO₄)₂+4H₂O in 100 g.
H₂O at t°.

t°	Grams FeSO ₄	Grams Na ₂ SO ₄
21.8	24.34	22 51
24 92	23 62	22 04
34.95	23.91	21.83
40	24 01	22.62

(Koppel, Z. phys. Ch. 1905, 52. 406.)

Solubility of $\text{FeNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{FeSO}_4$
7H₂O in 100 g. H₂O at t°

t°	grams FeSO ₄	grams Na ₂ SO ₄	t°	grams FeSO ₄	grams Na ₂ SO ₄
18 8	26 63	20 28	31°	33 99	14 41

(Koppel)

Solubility of $\text{FeNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$
(anhydrous) in 100 g. H₂O at t°

t°	grams FeSO ₄	grams Na ₂ SO ₄
35	6 16	46 58
40	6 27	46 99

(Koppel.)

See also under FeSO₄.

Iron (ferric) sodium sulphate, basic, 2Na₂O,
Fe₂O₃, 4SO₃+7H₂O.

Only sl. sol. in H₂O with decomp. (Skrabal,
Z. anorg. 1904, 38. 319.)

+8H₂O. Min. *Urusite*. Insol. in H₂O;
easily sol. in HCl+Aq.

3Na₂O, Fe₂O₃, 6SO₃+6H₂O. Sol. in H₂O
with decomp. (Skrabal.)

4Fe₂O₃, Na₂O, 5SO₃+9H₂O.

Insol. in H₂O; difficultly sol. in HCl+Aq.
(Scheerer, Pogg. 45. 190.)

Iron (ferric) sodium sulphate, [Fe(SO₄)₃]Na₃
+3H₂O.

Ppt. Nearly insol. in H₂O. (Weinland, Z
anorg. 1913, 84. 365.)

Iron (ferrous) thallium sulphate, FeSO₄,
Tl₂SO₄+6H₂O.

Easily decomp. by solution in H₂O. (Willm,
A. ch. (4) 5. 56.)

Iron (ferric) thallium sulphate, Tl₂Fe₂(SO₄)₄
+24H₂O.

Not efflorescent. Very easily sol. in H₂O.

361.5 g. anhydrous, or 646 g. hydrated
salt are sol. in 1 l. H₂O at 25°, or 0.799 mol.
of the anhydrous salt is sol. in 1 l. H₂O at 25°.
Melts in crystal H₂O at 37°. (Locke, Am.
Ch. J. 1901, 26. 175)

Iron (ferrous) zinc sulphate, FeSO₄, ZnSO₃+14H₂O.

2FeSO₄, 2ZnSO₄, H₂SO₄. (Étard, C. R. 87.
602.)

Iron (ferric) zinc sulphate, Fe₂(SO₄)₃, ZnSO₄
+24H₂O.

(Bastick.)

Iron (ferrous) sulphate nitric oxide, FeSO₄,
NO.

The solubility of NO in FeSO₄+Aq is
diminished by the presence of H₂SO₄, HCl,
phosphoric acid and by the presence of cer-
tain salts. (Manchot, A 1910, 372. 157.)

Fe(NO)SO₄, FeSO₄+13H₂O. Decomp. in
the air. Sol. in water. (Manchot)

Lanthanum sulphate, basic, 2La₂O₃, 3SO₃+3H₂O.

Precipitate. (Frerichs and Smith.)

Formula is 3La₂O₃, SO₃+xH₂O. (Cleve,
B. 11. 910.)

Lanthanum sulphate, La₂(SO₄)₃.

Anhydrous. Much less sol. in warm than
in cold H₂O. 1 pt. is sol. in less than 6 pts.
H₂O, if added in small portions thereto at
2-3°, and the temperature not allowed to rise
to 13°; but if heated to 30°, La₂(SO₄)₃+9H₂O
separates out until the solution is solid.
(Mosander.)

100 pts. H₂O dissolve 2.208 pts. La₂(SO₄)₃
at 16.5°; 2.130 pts at 18°; 1.641 pts. at 34°.

See also under +9H₂O.

The solubility of La₂(SO₄)₃ in H₂O is dim-
inished by the presence of (NH₄)₂SO₄, K₂SO₄
or Na₂SO₄. (Barre, C. R. 1910, 151. 871.)

Solubility in (NH₄)₂SO₄+Aq at 18°

(Wirth, Z. anorg. 1912, 76, 189.)

Lanthanum hydrogen sulphate, $\text{La}(\text{SO}_4\text{H})_3$.

(Brauner, Z. anorg. 1904, 38, 330.)

Lanthanum potassium sulphate, $\text{La}_2(\text{SO}_4)_3, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

$\text{La}_2(\text{SO}_4)_3, 5\text{K}_2\text{SO}_4$. (Barre, C. R. 1910, 151, 872.)

$\text{La}_2(\text{SO}_4)_3, 3\text{K}_2\text{SO}_4$. Sl. sol. in H_2O . Insol. in sat. $\text{K}_2\text{SO}_4 + \text{Aq}$. (Cleve.)

$\text{La}_2(\text{SO}_4)_3, 4\text{K}_2\text{SO}_4$. As above. (Cleve.)
 $2\text{La}_2(\text{SO}_4)_3, 9\text{K}_2\text{SO}_4$. As above. (Cleve.)

Lanthanum rubidium sulphate,

$\text{La}_2(\text{SO}_4)_3, \text{Rb}_2\text{SO}_4$.

(Baskerville, J. Am. Chem. Soc. 1904, 26, 67.)

+2 H_2O . (Baskerville.)

$3\text{La}_2(\text{SO}_4)_3, 2\text{Rb}_2\text{SO}_4$. (Baskerville.)

Lanthanum sodium sulphate, $\text{La}_2(\text{SO}_4)_3, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Cleve.) (Barre, C. R. 1910, 151, 872.)

Lead sulphate, basic, $2\text{PbO}, \text{SO}_3$.

Not completely insol. in H_2O . Decomp. by acids, even dil. $\text{HCl}, \text{H}_2\text{O}_2 + \text{Aq}$, with formation of PbSO_4 . (Barfoed, 1869.)

0.050 millimole calc. as Pb is sol. in 1 l. H_2O at 18° . (Pleissner, C. C. 1907, II, 1056.)

$5\text{PbO}, 3\text{SO}_3$. (Frankland, Proc. Roy. Soc. 46, 364.)

$\text{Pb}_3\text{O}_4, 2\text{SO}_3$. (Frankland.)

$3\text{PbO}, \text{PbSO}_4 + \text{H}_2\text{O}$. Ppt (Strömholm, Z. anorg 1904, 38, 442.)

$\text{Pb}_4(\text{SO}_4)(\text{OH})_2$. 0.106 millimole calc. as Pb is sol. in 1 liter H_2O at 18° . (Pleissner, C. C. 1907, II, 1056.)

Lead sulphate, PbSO_4 .

Sol in 22,816 pts. H_2O at 11° . (Fresenius, A. 59, 125.)

Sol in 31,569 pts. H_2O at 15° . (Rodwell, C. N. 11, 50.)

Sol. in 13,000 pts. H_2O . (Kremers, Pogg. 85, 247.)

Calculated from electrical conductivity of $\text{PbSO}_4 + \text{Aq}$, 1 l. H_2O dissolves 46 mg. PbSO_4 at 18° . (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)

4.23×10^{-2} gr are dissolved in 1 liter of sat. solution at 20° ; 4.41×10^{-2} at 25° . (Böttger, Z. phys. Ch. 1903, 46, 604.)

1 l. H_2O dissolves 41 mg. PbSO_4 at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

0.126 millimole Pb is sol in 1 liter H_2O at 18° . (Pleissner, C. C. 1907, II, 1056.)

40 mg. are dissolved in 1 l of sat. solution at 18° . (Kohlrausch, Z. phys Ch. 1908, 64, 168.)

0.0824 g. PbSO_4 is sol. in 1000 cc. H_2O at 18° and also at 100° . The fact that PbSO_4 dissolves in H_2O is ascribed to hydrolysis, and in support of this it is shown that the solubility of hydrated oxide of lead, $\text{PbO}, \text{H}_2\text{O}$, in dil. H_2SO_4 is the same as the solubility of PbSO_4 in H_2O . (Sehnal, C. R. 1909, 148, 1395.)

1 l. H_2O dissolves 26 mg. at 18° ; 30 mg. at 25° ; 38 mg. at 37° . (Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, 34, 447.)

Solubility in H ₂ O at t° (Millimols per l.)	
t°	PbSO ₄
18	0 126
25	0 144
37	0 183

(Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, **34**, 446.)

Sol. in hot conc. HCl + Aq (Fresenius.)

Solubility of PbSO₄ in HCl + Aq.

Sp. gr. of HCl + Aq	% HCl in HCl + Aq	Pts. HCl + Aq for 1 pt. PbSO ₄
1 0519	10 602	681 89
1 0800	16 310	281 73
1 1070	22 010	105 65
1 1359	27 525	47 30
1 1570	31 602	35 03

(Rodwell, Chem. Soc. **15**, 59.)

Solubility of PbSO₄ in HCl + Aq at t°.
(Millimols. per l.)

t°	0 1N	0 2N	0 3N	0 4N
18	0 126	1 72	2 67	3 63
25	0 144	2 07	3 14	4 29
37	0 183	2 63	4 06	5 43

(Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, **34**, 446.)

Above measurements in HCl + Aq show solubility directly proportional to the hydrogen ions. (Beck and Stegmüller.)

Sol. in HNO₃ + Aq, and more sol. in hot or conc. than in cold or dil. HNO₃ + Aq.

Sol. in 172 pts. HNO₃ + Aq of 1.144 sp. gr. at 12.5°. (Bischof.)

Pptd. from HNO₃ solution by dil. H₂SO₄ + Aq and not by H₂O. (Bischof, **1827**.)

Solubility of PbSO₄ in HNO₃ + Aq.

Sp. gr. of HNO ₃ + Aq	% HNO ₃ in HNO ₃ + Aq	Pts. HNO ₃ + Aq for 1 pt. PbSO ₄
1 079	11 55	303.10
1 123	17 50	173.75
1 250	34 00	127.48
1 420	60.00	10282.78

(Rodwell, Chem. Soc. **15**, 59.)

Solubility in HNO₃ at 18°.
(Millimols per l.)

HNO ₃	PbSO ₄
0.1N	0.506
0.2N	0.844
0.3N	1.13
0.4N	1.44

(Beck and Stegmüller.)

Sol in 36,504 pts dil. H₂SO₄ + Aq. (Fresenius.) See also under solubility in alcohol.

Sl. sol. in conc. H₂SO₄, from which it is partially pptd by H₂O or completely by alcohol (Fresenius.)

100 pts conc. H₂SO₄ dissolve 6 pts PbSO₄ (Schultz, Pogg. **133**, 137.)

Conc. H₂SO₄ dissolves 0.005 pt. PbSO₄. (Ure.)

100 pts. H₂SO₄ dissolve 0.13 pt. PbSO₄, and 100 pts fuming H₂SO₄ dissolve 4.19 pts (Struve, Z anal. **9**, 31.)

More sol. in commercial H₂SO₄ than in the more conc. acid. (Hayes.)

100 pts. H₂SO₄ + Aq of 1.841 sp. gr. dissolve 0.039 pts. PbSO₄; of 1.793 sp. gr. dissolve 0.011 pt. PbSO₄; of 1.540 sp. gr. dissolve 0.003 pt. PbSO₄.

Presence of SO₂ does not increase the solubility; HNO₃ increases the solubility somewhat, i. e., 100 pts H₂SO₄ + Aq of 1.841 sp. gr. with 5 pts. HNO₃ of 1.352 sp. gr. dissolve 0.044 pt. PbSO₄; 100 pts H₂SO₄ of 1.749 sp. gr. with 5 pts. HNO₃ of 1.352 sp. gr. dissolve 0.014 pt. PbSO₄; 100 pts. H₂SO₄ of 1.512 sp. gr. with 5 pts HNO₃ of 1.352 sp. gr. dissolve only a trace.

Nitrous oxides do not increase the action. (Kolb, Dingl **209**, 268.)

Solubility in dil. H₂SO₄ + Aq at 18°.

(G. per l.)

H ₂ SO ₄	PbSO ₄	H ₂ SO ₄	PbSO ₄
0	0.0382	0 0245	0 0194
0.0049	0 0333	0 0490	0.0130
0 0098	0.0306	0 4904	0 0052

(Pleissner, Arb. K. Gesund. Amt. 1907, **26**, 384.)

A trace of H₂SO₄ has a considerable effect in reducing the solubility of PbSO₄ in H₂O. (Sehnal, C. R. 1909, **148**, 1395.)

Solubility in dil. H₂SO₄ + Aq at 20°.

(G. per l.)

H ₂ SO ₄	PbSO ₄	H ₂ SO ₄	PbSO ₄
0	0.082	0.0980	0.013
0.0098	0.051	0.4900	0.006
0.0196	0.025	0.9800	0

(Sehnal.)

Pptd. from solution in H₂SO₄ by HCl. (Bolley, A. **91**, 113.)

Not more insol. in dil. HC₂H₃O₂ + Aq than in H₂O. (Bischof.)

Solubility in other acids is prevented by great excess of H₂SO₄. (Wackenroder.)

Sol. in warm NH₄OH + Aq, separating on cooling. Completely sol. in warm KOH or NaOH + Aq.

Decomp by boiling with K_2CO_3 , Na_2CO_3 , and $(NH_4)_2CO_3 + Aq$.

Sol. in NH_4 salts + Aq, but reprecip. by $H_2SO_4 + Aq$ (Fresenius, A 59. 125.)

The best solvents of the NH_4 salts are the nitrate, citrate, and tartrate; the two latter should be strongly alkaline with $NH_4OH + Aq$ (Wackenroder)

Sol. in $NH_4Cl + Aq$ at 12.5–25°

Sl. decomp by $NaCl + Aq$ (Bley.)

1 l sat $NaCl + Aq$ dissolves 0.66 g. $PbSO_4$. (Becquerel.)

Sol in 100 pts. cold conc $NaCl + Aq$, and $PbCl_2$ is deposited after a few hours (Field)

Solubility of $PbSO_4$ in $NaCl + Aq$ at 18° (Millimols per l)

NaCl	$PbSO_4$
0 1N	0 546
0 2N	0 904

414 1	10 10	3 06

(Noyes and Whitcomb, J. Am Chem. Soc. 1905, 27. 756.)

Solubility in $KC_2H_3O_2 + Aq$ at 25°.

Solid phase, $PbSO_4 + PbK_2(SO_4)_2$.

Composition of the solutions

% $KC_2H_3O_2$	% $Pb(C_2H_3O_2)_2$	% $KC_2H_3O_2$	% $Pb(C_2H_3O_2)_2$
4 33	2 54	26 58	9 83
9 03	3 55	28 82	11 40
17 81	5 43	28 93	19 41
22.07	5 95		

(Fox, Chem. Soc. 1909, 95. 887.)

100 pts H_2O containing a drop of $HC_2H_3O_2$ and 2.05 pts. $NaC_2H_3O_2$ dissolve 0 054 pt. $PbSO_4$; containing 8 2 pts. $NaC_2H_3O_2$ dissolve 0 900 pt. $PbSO_4$; containing 41.0 pts. $NaC_2H_3O_2$ dissolve 11.200 pts. $PbSO_4$. (Dibbitts, Z. anal. 1874, 13. 139.)

Solubility in $NaC_2H_3O_2 + Aq$ at 25°.

Composition of the solutions

% Na acetate	% Pb acetate	% Na_2SO_4	% H_2O
6 69	0 78	0 34	92 19
11 76	2 73	1 26	84 25
16.90	5 70	2 49	74 91
19 92	8 24	3 60	63 24
21 51	10 75	4 68	63 10
6 95	0 81	0 35	91 90

The proportion of sulphate in solution in each case corresponded with the amount of Pb present, but was calculated to sodium sulphate, since $Na_2SO_4 + 10H_2O$ cryst. from the solutions on cooling. The solid phase in these solutions was $PbSO_4$.

(Fox, Chem. Soc. 1909, 95. 887.)

Sol. in $Mn(C_2H_3O_2)_2$, $Zn(C_2H_3O_2)_2$, $Ni(C_2H_3O_2)_2$, and $Cu(C_2H_3O_2)_2$, but not in $Hg(C_2H_3O_2)_2$ or $AgC_2H_3O_2 + Aq$.

Solubility in $KC_2H_3O_2 + Aq$ is not less than that in $NaC_2H_3O_2 + Aq$. (Dibbitts, Z anal. 13. 137)

Insol. in $Pb(C_2H_3O_2)_2 + Aq$. (Smith.)

Sol. in basic lead acetate + Aq, but not in neutral $Pb(C_2H_3O_2)_2 + Aq$. (Stammer, Z. anal. 23. 67.)

12.2 pts. $Ca(C_2H_3O_2)_2$ in very dil. solution dissolve 1 pt. $PbSO_4$. (Stadel, Z anal. 2. 180.)

*Sol. in $Al(C_2H_3O_2)_3 + Aq$. (Lennsen)

Very easily and abundantly sol in NH_4 tartrate + Aq (Wöhler, A. 34. 235)

Even when native, easily sol in NH_4 citrate + Aq (Smith)

Insol in alcohol (18%) and H_2SO_4 when NH_4 acetate, K tartrate, or NH_4 succinate are present. Insol in alcohol (18%) and H_2SO_4 or $(\text{NH}_4)_2\text{SO}_4$ when Na acetate, Na or NH_4 oxalate are present. Sol. in NH_4 citrate and K tartrate in presence of H_2SO_4 ; in NH_4 succinate and NH_4 acetate in presence of $(\text{NH}_4)_2\text{SO}_4$; and in NH_4 citrate in presence of H_2SO_4 or $(\text{NH}_4)_2\text{SO}_4$ (Storer, C N 21. 17)

Alcohol (59%) alone, or with ethylsulphuric acid or sugar, does not dissolve Pb by 3 months action. (Storer)

Insol in acetone (Naumann, B 1904, 37. 4329); methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Anglesite* Sol in cold citric acid + Aq. (Bolton, C N 37. 14)

Lead hydrogen sulphate, PbSO_4 , $\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$.

Decomp. by H_2O

Lead pyrosulphate, $\text{Pb S}_2\text{O}_7$.

Decomp. by H_2O . (Schultz.)

Lead potassium sulphate, PbSO_4 , K_2SO_4 .

When PbSO_4 is added to potassium acetate + Aq at 25° a double salt, $\text{PbK}_2(\text{SO}_4)_2$ is formed. This salt is insol. in the solution which contains only potassium acetate and lead acetate (Fox, Chem Soc 1909, 95. 882.)

Decomp. by H_2O . Stable only in solutions of K_2SO_4 containing at least 0.56% K_2SO_4 at 7° ; 0.62% at 17° ; 1.09% at 50° ; 1.37% at 75° ; 1.69% at 100° . (Barre, C. R. 1909, 149. 294)

Lead sulphate chloride, PbSO_4 , $2\text{PbCl}_2 + \text{H}_2\text{O}$.

Insol in H_2O or NaCl + Aq. (Becquerel, C. R. 20. 1523.)

Lead sulphate fluoride, PbSO_4 , 2PbF_2 .

Not decomp. by H_2SO_4 (Lonyet, C R. 24. 434.)

Lithium sulphate, Li_2SO_4 .

More sol. in cold than in hot H_2O .

100 pts H_2O dissolve 34.6 pts Li_2SO_4 at 18° (Wittstein.)

100 pts. H_2O dissolve pts. Li_2SO_4 at t°

t°	Pts. Li_2SO_4	t°	Pts. Li_2SO_4	t°	Pts. Li_2SO_4
0	35.34	45	32.38	100	29.24
20	34.36	65	30.3

(Kremers, Pogg. 95. 468.)

Sat. Li_2SO_4 + Aq contains at:

-20° -16° -15° -12°
18.4 22.5 22.6 24.4 % Li_2SO_4 .

-4° $+15^\circ$ $+90^\circ$
25.7 25.3 23.9 % Li_2SO_4 .

(Étard, A. ch. 1894, (7) 2. 547.)

Sat solution boils at 105° . (Kremers)

Sp. gr. of Li_2SO_4 + Aq at 19.5° containing:

6.5 7.4 12.5 15.3 % Li_2SO_4 ,
1.05 1.06 1.098 1.118

22.6 24.4 29.4 % Li_2SO_4 .

1.167 1.178 1.208

(Kremers, Pogg. 114. 47.)

Sp. gr of Li_2SO_4 + Aq at 15° containing 5% Li_2SO_4 = 1.0430; 10% Li_2SO_4 = 1.0877 (Kohlrausch, W. Ann 1879. 1.)

Sp. gr. of Li_2SO_4 + Aq at 25° .

Concentration of Li_2SO_4 + Aq	Sp. gr.
I—normal	1.0453
$\frac{1}{2}$ —	1.0234
$\frac{1}{4}$ —	1.0115
$\frac{1}{8}$ —	1.0057

(Wagner, Z. phys. Ch. 1890, 5. 38.)

Sp. gr. of Li_2SO_4 + Aq.

29 40	8 17	80 74	0
33.31	6.66	94.11	0

(Schreinemakers and van Dorp, Chem. Weekbl. 1906, **3**. 557.)

Insol. in methyl acetate (Naumann, B. 1909, **42**. 3790); ethyl acetate (Naumann, B. 1904, **37**. 3601); acetone. (Eidmann, C. C. **1899**, **11** 1014; Naumann, B. 1904, **37**. 4329.) + H_2O . Very sl. efflorescent. (Rammelsberg.)

Aq. solution contains 25.1% Li_2SO_4 at 30° . (Schreinemakers, C. C. **1910**, **I**. 1801); 24.3 g. at 50° . (Schreinemakers and Cocheret, Chem. Weekbl. 1905, **2**. 771.)

Lithium hydrogen sulphate, LiHSO_4 .Decomp. by H_2O .Cryst from H_2SO_4 . (Gmelin.)

$\text{LiH}_3(\text{SO}_4)_2$. Cryst from H_2SO_4 . (Schultz, Pogg **133**. 137.)

$\text{Li}_2\text{SO}_4, 7\text{H}_2\text{SO}_4$. (Bergius, Z. phys. Ch. **1910**, **72**. 355.)

Lithium potassium sulphate, $\text{Li}_2\text{SO}_4, \text{K}_2\text{SO}_4$.

This is the only compd of Li_2SO_4 and K_2SO_4 which exists below 100° . (Spielrein, C R. **1913**, **157**. 48.)

$\text{K}_4\text{Li}_2(\text{SO}_4)_3$. (Knobloch.) Has the formula $\text{K}_2\text{Li}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$, according to Rammelsberg.

Lithium sodium sulphate, $\text{Na}_3\text{Li}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$. $\text{Na}_4\text{Li}_2(\text{SO}_4)_3 + 9\text{H}_2\text{O}$. $\text{Na}_2\text{Li}_3(\text{SO}_4)_5 + 5\text{H}_2\text{O}$. (Rammelsberg.)

Do not exist. (Troost)

$\text{Li}_2\text{SO}_4, \text{Na}_2\text{SO}_4 + 5.5\text{H}_2\text{O}$. Exists from 0° – 16° .

+ $3\text{H}_2\text{O}$. Exists from 32° – 100° .

$\text{Li}_2\text{SO}_4, 3\text{Na}_2\text{SO}_4 + 12\text{H}_2\text{O}$. Exists from 16° – 24° .

$4\text{Li}_2\text{SO}_4, \text{Na}_2\text{SO}_4 + 5\text{H}_2\text{O}$. Exists from 24° – 32° .

(Spielrein, C. R. **1913**, **157**. 47.)Lithium thallic sulphate, $\text{LiTl}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.

(Meyer and Goldschmidt, C. C. **1903**, **I**. 495.)

Lithium titanium sulphate,

Less hygroscopic than K compound.
(Mazzuchelli and Pontanelli, C. C. 1909, II 420.)

Lithium uranyl sulphate, Li_2SO_4 , $\text{UO}_2\text{SO}_4 + 4\text{H}_2\text{O}$.

(de Coninck, Chem. Soc. 1905, 88. (2) 530)

Magnesium sulphate basic,

Sl sol in cold or hot H_2O

Sol in $\text{HCl} + \text{Aq}$ (Thugutt, Z. anorg 1892, 2. 150.)

Magnesium sulphate, MgSO_4 .

Anhydrous. Very slowly sol. in H_2O ; sol in hot conc H_2SO_4 , less in HCl , and $\text{HNO}_3 + \text{Aq}$

+ H_2O Min. *Kieserite* Easily sol. in warm, but slowly dissolved by cold H_2O .

100 g. sat. solution at 83° contain 40.2 g. MgSO_4 . (Geiger, Dissert. 1904.)

+ $6\text{H}_2\text{O}$, and + $7\text{H}_2\text{O}$ The latter exists in two modifications; (a) hexagonal, and (b) the ordinary or rhombic salt

$\text{MgSO}_4 + \text{Aq}$, which on cooling or keeping in closed vessels has deposited $\text{MgSO}_4 + 6\text{H}_2\text{O}$, always contains for 100 pts. H_2O at:

0°	10°	20°
40.75	42.23	43.87 pts. MgSO_4 .

If only hexagonal $\text{MgSO}_4 + 7\text{H}_2\text{O}$ has been deposited, then the mother liquor contains for 100 pts. H_2O at

0°	10°	20°
34.67	38.71	42.84 pts. MgSO_4 .

Solutions prepared from rhombic $\text{MgSO}_4 + 7\text{H}_2\text{O}$ contain for 100 pts. H_2O at:

0°	10°	20°
26.0	30.9	35.6 pts. MgSO_4 .
(Löwel.)		

These results may be given in tabular form as follows:

Temp	A sat aqueous solution of $\text{MgSO}_4 + 7\text{H}_2\text{O}$ (b) contains for 100 pts. H_2O	
	Anhydrous MgSO_4	$7\text{H}_2\text{O}$ (b) salt
0°	26 0	73.31
10°	30.9	93 75
20°	35.6	116.54

Temp	A sat aqueous solution of $\text{MgSO}_4 + 7\text{H}_2\text{O}$ (a) contains for 100 pts H_2O	
	Anhydrous MgSO_4	$7\text{H}_2\text{O}$ (a) sale
0°	34 67	111 74
10°	38 71	133 67
20°	42 84	159 61

Temp	A sat aqueous solution of $\text{MgSO}_4 + 6\text{H}_2\text{O}$ contains for 100 pts H_2O		
	Anhydrous MgSO_4	$6\text{H}_2\text{O}$ salt	$7\text{H}_2\text{O}$ salt
0°	40 75	122 22	146 02
10°	42 32	129 44	155 53
20°	43 87	137 72	167 97

It is seen from table that at the same temp the $6\text{H}_2\text{O}$ salt is more sol than the $7\text{H}_2\text{O}$ (b) salt, and the latter is more sol. than $7\text{H}_2\text{O}$ (a) salt; that the solubility of the $7\text{H}_2\text{O}$ (b) salt increases rapidly from 0° to 20° ; that the $6\text{H}_2\text{O}$ salt is not much more sol at 20° than at 0° , and at 20° the $7\text{H}_2\text{O}$ (b) salt is nearly as sol. as the $6\text{H}_2\text{O}$ salt (Löwel, A. ch. (3) 43. 405)

100 pts H_2O at t° dissolve pts MgSO_4 G L = according to Gay-Lussac (A. ch. (2) 11 311), T = according to Tobler (A. 95. 198)

t°	G L	T	t°	G L	T
0	25 8	24 7	50	49 7	52 8

36	43.7	73	61.0		

(Mulder, calculated from his own and other observations, Scheik. Verhandel 1864. 52).

100 pts. H_2O dissolve 72.4 pts $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at 0° , 178 pts. at 40° , and 212.6 pts. at 49° . (Tilden, Chem. Soc 45. 409.)

Supersat. $\text{MgSO}_4 + \text{Aq}$ is brought to crystallisation by addition of crystal of $\text{MgSO}_4 + 7\text{H}_2\text{O}$, or an isomorphous substance as $\text{ZnSO}_4 + 7\text{H}_2\text{O}$, $\text{NiSO}_4 + 7\text{H}_2\text{O}$, $\text{FeSO}_4 + 7\text{H}_2\text{O}$, or $\text{CoSO}_4 + 7\text{H}_2\text{O}$. (Thomson, Chem Soc 35. 199.)

Sat. $\text{MgSO}_4 + \text{Aq}$ contains at:

2° 7° 23° 67° 81°
20.9 22.5 26.0 35.6 38.6% MgSO_4 ,

94° 130° 145° 164° 188°
41.5 45.3 38.0 29.3 20.4% MgSO_4 .

Readily forms supersat. solutions.

(Étard, A. ch. 1894, (7) 2. 551.)

M.-pt. of $\text{MgSO}_4 + 7\text{H}_2\text{O}$ is 70° . (Tilden, Chem. Soc. 45. 409.)

$\text{MgSO}_4 + \text{Aq}$ with sp. gr. 1.30 contains 44.4 % MgSO_4 , sp. gr. 1.42, 39%, sp. gr. 1.30, 30% MgSO_4 (Dalton)

Sp. gr. of $\text{MgSO}_4 + \text{Aq}$ sat at $15^\circ = 1.275$ (Michel and Krafft), at $8^\circ = 1.267$ (Anthon), at $18.75^\circ = 1.293$ (Karsten)

(Lamb and Lee, J. Am. Chem. Soc. 1913, **35**, 1684.)

More sol in $\text{HCl} + \text{Aq}$ than in H_2O . (Rich-ter.)

In sat. $\text{HCl} + \text{Aq}$, anhydrous MgSO_4 is scarcely sol.; $\text{MgSO}_4 + 7\text{H}_2\text{O}$ dissolves, but is precipitated by a current of HCl gas. (Hens-gen, B. **10**, 259.)

Margueritte (C. R **43**, 50) denies the precipitation

For solubility in H_2SO_4 , see $\text{MgH}_2(\text{SO}_4)_2$.

Completely pptd. from $\text{MgSO}_4 + \text{Aq}$ by conc. $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ (Persoz.)

Somewhat sol. in sat. $\text{NH}_4\text{Cl} + \text{Aq}$ with separation of a double sulphate.

Rapidly sol in $\text{KCl} + \text{Aq}$ with separation of K_2SO_4 .

Sol. in sat. $\text{NaCl} + \text{Aq}$ without pptn. of the latter.

Easily sol in sat $\text{KNO}_3 + \text{Aq}$ without causing any pptn.

Sol. in sat. $\text{NaNO}_3 + \text{Aq}$ (Karsten.)

Rapidly sol. in sat. $\text{CuSO}_4 + \text{Aq}$; when saturation is reached, a double salt separates out. (Karsten.)

100 pts sat. $\text{MgSO}_4 + \text{NiSO}_4 + \text{Aq}$ at 18–20° contain 30.93 pts. of the two salts; 100 pts. sat. $\text{MgSO}_4 + \text{ZnSO}_4 + \text{Aq}$ at 18–20° contain 35.45 pts.; 100 pts. sat. $\text{MgSO}_4 + \text{NiSO}_4 + \text{ZnSO}_4 + \text{Aq}$ at 18–20° contain 35.62 pts. (v. Hauer, J. pr. **98**, 137.)

100 pts. H_2O dissolve 14.1 pts. MgSO_4 and 9.8 pts K_2SO_4 , if sat. $\text{MgSO}_4 + \text{Aq}$ is sat. with K_2SO_4 ; 32.4 pts. MgSO_4 and 8.2 pts. K_2SO_4 , if sat. $\text{K}_2\text{SO}_4 + \text{Aq}$ is sat with MgSO_4 , all at 15°. (Mulder, J. B. **1866**.)

100 pts H_2O dissolve 25.95 pts. MgSO_4 and 5.21 pts. Na_2SO_4 at 0°. (Diacon, J. B. **1866**, 62.)

100 pts H_2O dissolve 15.306 pts MgSO_4 and 13.086 pts Na_2SO_4 at 0° (Pfaff, A 99. 224)

See also under $\text{MgNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$

Solubility of mixtures of MgSO_4 and $\text{MgNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ at t° .

t°	g per 100 g H_2O	
	Na_2SO_4	MgSO_4
22	23 3	31 4
24 5	27 2	24 2
30	36 1	19 1
35	33 9	18 44

(Roozeboom, 1888, Z phys Ch. 2. 518)

See also under $\text{MgNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$

Slowly sol in sat. $\text{ZnSO}_4 + \text{Aq}$ without pptn. until saturation, when a double salt separates out.

Insol in liquid NH_3 (Franklin, Am. Ch. J. 1898, 20. 828)

100 pts. dil. alcohol containing at 15° :

10 20 40 % alcohol
contain 39 3 21 3 1.62% $\text{MgSO}_4 + 7\text{H}_2\text{O}$.
(Schiff, A. 118. 365.)

At higher temp the solubility increases proportional to the temp. (Gerardin, A. ch (4) 5. 145)

100 pts. absolute methyl alcohol dissolve 1.18 pts MgSO_4 at 18° (de Bruyn, Z phys Ch 10. 783)

100 pts absolute methyl alcohol dissolve 41 pts $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at 17° ; 100 pts absolute methyl alcohol dissolve 29 pts $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at $3-4^\circ$; 100 pts 93% methyl alcohol dissolve 97 pts $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at 17° ; 100 pts 50% methyl alcohol dissolve 41 pts $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at $3-4^\circ$ (de Bruyn, R t c. 11. 112)

100 pts. absolute ethyl alcohol dissolve 1.3 pts. $\text{MgSO}_4 + 7\text{H}_2\text{O}$ at 3° . (de Bruyn.)

Insol. in CS_2 (Arcetowski, Z anorg 1894, 6. 257.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790.); ethyl acetate (Naumann, B. 1910, 43. 314.); acetone. (Naumann, B 1904, 37. 4329)

100 g. 95% formic acid dissolve 0.34 g. MgSO_4 at 19° . (Aschan, Ch. Ztg. 1913, 37. 1117.)

100 g sat. solution of MgSO_4 and sugar in H_2O contains 46.52, g. sugar + 14.0 g. MgSO_4 , or 100 g H_2O dissolve 119.6 g. sugar + 36.0 g. MgSO_4 (Köhler, Z Ver. Zucker-ind, 1897, 47. 447)

Magnesium hydrogen sulphate, $\text{MgH}_2(\text{SO}_4)_2$.

Decomp by H_2O Sol. in H_2SO_4 . Insol. in methyl acetate. (Naumann, B 1909, 42. 3790.)

$\text{MgH}_2(\text{SO}_4)_2$ Boiling H_2SO_4 dissolves about 2% MgSO_4 , from which this compound crystallises (Schultz, Pogg 133. 137)

Magnesium pyrosulphate, MgS_2O_7 .

Decomp by H_2O .

Magnesium manganous sulphate, MgSO_4 , $2\text{MnSO}_4 + 15\text{H}_2\text{O}$

Min. *Fausserite*

Magnesium manganous zinc sulphate, MgSO_4 , MnSO_4 , $\text{ZnSO}_4 + 21\text{H}_2\text{O}$

Sol in H_2O (Vohl, A. 99. 124)

Magnesium nickel sulphate, MgSO_4 , $3\text{NiSO}_4 + 28\text{H}_2\text{O}$.

Sol in H_2O (Schiff)

Magnesium nickel potassium sulphate, MgSO_4 , NiSO_4 , $2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Vohl, A 94. 57)

Magnesium potassium sulphate, $\text{MgK}_2(\text{SO}_4)_2 + 6\text{H}_2\text{O}$.

100 pts H_2O dissolve 22.7 pts. anhydrous salt at 16.5° . (Mulder.)

100 pts. H_2O dissolve at

0°	10°	20°	30°	35°	
14 1	19 6	25 0	30 4	33 3	pts. anhydrous salt,
45°	55°	60°	65°	75°	
40 5	47 0	50 2	53 0	59 8	pts. anhydrous salt.

(Tobler, A. 95. 193.)

100 g. H_2O dissolve 30.52 g. $\text{MgK}_2(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ at 15° . (Lothian, Pharm. J. 1909, 82. 292.)

18 20 22% hydrous salt.

1.124 1.1388 1.1539
(Schiff, A. 113. 183, calculated by Gerlach,
Z. anal. 8. 287.)

Sp. gr. of $\text{MgK}_2(\text{SO}_4)_2 + \text{Aq}$ at 18°.

G-equiv of salt per l	Sp gr
1.0010	1.0633
0.8345	1.0531
0.6688	1.0427
0.3744	1.0243
0.0998	1.0040
0.02004	1.0015
0.01004	1.0004

These results lead the author to conclude that in dil. solutions the double salt is decomp. into its constituents. (McKay, Elektrochem. Zeit. 1899, 6. 115.)

Min. *Picromerite*
+4H₂O. (van der Heide, B. 26. 414.)
2MgSO₄, K₂SO₄. Min. *Langbeinite*
Deliquescent Absorbs 56.26% H₂O from air to form K₂SO₄, MgSO₄+6H₂O (Mallet, Chem. Soc. 1900, 77. 220.)
4MgSO₄, K₂SO₄+5H₂O. (van't Hoff and Kassatkin, B. A. B 1889. 951.)

Magnesium potassium zinc sulphate, MgSO₄, 2K₂SO₄, ZnSO₄+12H₂O.

Sol. in H₂O. (Vohl, A. 94. 57)

Magnesium potassium sulphate chloride, MgSO₄, K₂SO₄, MgCl₂+6H₂O.

Min *Kainite*

Magnesium rubidium sulphate, MgSO₄, Rb₂SO₄+6H₂O.

Sol. in H₂O. (Tutton, Chem. Soc. 63. 337.)
1 l. H₂O dissolves 202 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)
2MgSO₄, Rb₂SO₄. Deliquescent. (Mallet, Chem. Soc. 1900, 77. 223.)

Magnesium sodium sulphate, MgSO₄, Na₂SO₄+4H₂O.

Min. *Blöditte*, *Simonyite*.

Blöditte is efflorescent; Simonyite, deliquescent.

+5H₂O. Min. *Löwite*

+6H₂O. Decomp on air. Sol. in 3 pts. cold H₂O.

Na₂Mg(SO₄)₄. Min. *Vanthoffite*. (van't Hoff, B. A. B. 1902. 414.)

MgNa₂(SO₄)₂+4H₂O. Min. *Astrakanite*.

100 mols. H₂O hold mols. salt in solution at t°.

t°	MgSO ₄	Na ₂ SO ₄
22	4.70	2.95
24.5	3.68	3.45
30	3.60	3.60
35	3.69	3.69
47	3.60	3.60

(Roozeboom, R. t. c. 1887, 6. 333.)

Solubility of mixtures of MgNa₂(SO₄)₂+4H₂O and Na₂SO₄ at t°

t°	g per 100 g H ₂ O	
	Na ₂ SO ₄	MgSO ₄
18.5	43.0	45.5
22	35.2	48.9
24.5	32.5	50.3
30	25.9	55.0
35	23.5	59.4

(Roozeboom, Z. phys. Ch. 1888, 2. 518.)

See also under MgSO₄.

Magnesium thallous sulphate, MgSO₄, Tl₂SO₄+6H₂O.

Sol. in H₂O, but decomp. by repeated recrystallisations. (Werther.)

Magnesium uranyl sulphate,

MgSO₄, (UO₂)SO₄+5H₂O.

(de Coninck, Chem. Soc. 1905, 88. (2) 530.)

Magnesium zinc sulphate, MgSO₄, ZnSO₄+14H₂O

Sol. in H₂O. (Pierre, A. ch. (3) 16. 244.)

+10H₂O. (Pierre)

3ZnSO₄, 5MgSO₄+56H₂O (Schiff)

There are only two compounds, 2(MgSO₄, 7H₂O), ZnSO₄, 7H₂O and MgSO₄, 7H₂O, ZnSO₄, 7H₂O. (Hollmann, Z. phys. Ch. 1901, 37. 212, and 1902, 40. 577.)

Magnesium sulphate potassium chloride, MgSO₄, KCl+3H₂O or MgSO₄, K₂SO₄, MgCl₂+6H₂O.

Min. *Kainite*.

100 pts. H₂O dissolve 79.56 pts at 18°. (Krause, Arch. Pharm. (3) 6. 326.)

Not sol. in a mixture of abs. alcohol and ether, which dissolves out MgCl₂. (Lehmann, J. B. 1867. 416.)

Alcohol dissolves out MgCl₂, also little H₂O. Much H₂O dissolves completely. (Zincken, Miner. Jahrb. 1865. 310.)

Magnesium sulphate potassium chromate, 2MgSO₄, K₂CrO₄+9H₂O.

Sol. in H₂O. (Étard, C. R. 85. 443)

Manganous sulphate, basic, 3MnO , $2\text{SO}_3 + 3\text{H}_2\text{O}$

Insol. in H_2O , but slowly decomp thereby. (Gorgeu, C. R. **94**. 1425)

Manganous sulphate, MnSO_4 .

Anhydrous.

Absorbs H_2O from the air to form $\text{MnSO}_4 \cdot 4\text{H}_2\text{O}$
1 pt MnSO_4 is sol in pts H_2O at t°

t°	Pts H_2O	t°	Pts H_2O	t°	Pts H_2O
6 25	1 77	18 75	1 687	75	1 494
10	1 631	37 5	1 457	101 25	2 031

Or—

100 pts. H_2O dissolve pts MnSO_4 at t°

t°	Pts MnSO_4	t°	Pts MnSO_4	t°	Pts MnSO_4
6 25	56 49	18 75	60 00	75	66 95
10	61 29	37 5	68 63	101 25	49 33

(Brandes, Pogg **20** 575)

Sol. in 25 pts H_2O at 18.75° , at 62.5° it is difficult to dissolve 1 pt MnSO_4 in 3 pts H_2O , but the sat. solution at 62.5° does not become cloudy on heating to 100° . (Jahn)

100 pts $\text{MnSO}_4 + \text{Aq}$ sat at $11-14^\circ$ contain 37.5 pts. MnSO_4 (v Hauer, J pr **103**. 114.)

Sat. $\text{MnSO}_4 + \text{Aq}$ contains at:

-8°	-5°	+5°	18°	22°
30.0	31.0	34 1	38.3	38.2% MnSO ₄ ,
23°	32°	45°	52°	70°
39 1	41.7	44 2	36 4	41 1% MnSO ₄ ,
83°	110°	115°	123°	130° 140°
36.3	18.4	21.5	16.7	13.6 9.4% MnSO ₄ .

(Étard, A. ch. 1894, (7) **2**. 553.)

Solubility in H_2O increases from $0-55^\circ$, and decreases from $55-145^\circ$. The increasing solubility is that of $\text{MnSO}_4 + 5\text{H}_2\text{O}$, and $\text{MnSO}_4 + 2\text{H}_2\text{O}$ separates out at 35° , and is completely insol. at 145° . (Étard.)

If solubility $S = \text{pts anhydrous } \text{MnSO}_4$ in 100 pts. solution, $S = 30.0 + 0.2828t$ from -8° to 57° ; $S = 43.0 - 0.4585t$ from 57° to 150° .

Practically insol. in H_2O at 180° . (Étard, C. R. **106**. 208.)

Solubility varies according to the hydrate used. Above results of Étard show the solubility of $\text{MnSO}_4 + 7\text{H}_2\text{O}$ at 0° , and $\text{MnSO}_4 + 3\text{H}_2\text{O}$ at 57° . Anhydrous MnSO_4 is stable only above 117° . (Linebarger.)

100 pts. H_2O dissolve pts. anhydrous MnSO_4 at t° .

t°	Pts MnSO_4	t°	Pts MnSO_4	t°	Pts MnSO_4

Sp. gr of $\text{MnSO}_4 + \text{Aq}$ at 0° . S = pts MnSO_4 in 100 pts. solution.

S	Sp gr	S	Sp. gr
16 7450	1 1834	8 8295	1 0928
14 0462	1 1519	6 0172	1 0622
11 5804	1 1239	3 0865	1 0315

(Charpy, A. ch. (6) **29**. 26)

Sp. gr. of $\text{MnSO}_4 + \text{Aq}$ at room temp. containing:

11 45	18 8	22 08	% MnSO_4 .
1.1469	1.2513	1 3082	

(Wagner, W. Ann. 1883, **18**. 271.)

Sp. gr. of $\text{MnSO}_4 + \text{Aq}$ at 25° .

Concentration of $\text{MnSO}_4 + \text{Aq}$	Sp gr
1—normal	1.0728
$\frac{1}{2}$ —“	1.0365
$\frac{1}{4}$ —“	1.0179
$\frac{1}{8}$ —“	1.0087
$\frac{1}{16}$ —“	1.0041

(Wagner, Z. phys. Ch., 1890, **5**. 39.)

Sp. gr. at $16\frac{1}{4}^\circ$ of $\text{MnSO}_4 + \text{Aq}$. containing 30.819% $\text{MnSO}_4 = 1.36267$. (Schönrock, Z. phys. Ch. 1893, **11**, 731)

Sat. $\text{MnSO}_4 + \text{Aq}$ boils at 102.4° ; crust forms at 101.6° , and solution contains 48.7 pts. MnSO_4 to 100 pts. H_2O .

B.-pt. of $\text{MnSO}_4 + \text{Aq}$ containing pts. MnSO_4 to 100 pts. H_2O .

B-pt	Pts. MnSO_4	B-pt	Pts MnSO_4
100.5°	17.1	102.0°	58.9
101.0	32 1	102.4	68 4
101.5	46.2

(Gerlach, Z. anal. **26**. 434.)

Sol. in about 20 pts. boiling H_2SO_4 , and more sol. in boiling $\text{H}_2\text{SO}_4 + \text{Aq}$ of 1.6 sp. gr. (Schultz, Pogg **133**. 137)

Completely pptd from solution by $\text{HC}_2\text{H}_3\text{O}_2$. (Persoz)

For solubility in $(\text{NH}_4)_2\text{SO}_4$, see under $(\text{NH}_4)_2\text{SO}_4$.

$\text{MnSO}_4 + \text{Aq}$ sat at 10° , then sat. with K_2SO_4 at same temp. contains for 100 pts. H_2O 16.7 pts. MnSO_4 and 44.3 pts. K_2SO_4 (Mulder)

Solubility of $\text{MnSO}_4 + \text{Na}_2\text{SO}_4$ in H_2O at 35° .

(Schreinemakers and Provijs, Proc. Ak. Wet. Amsterdam, 1913, **15**. 326.)

Insol. in liquid NH_3 (Franklin, Am. Ch. J. 1898, **20**. 828.)

Anhydrous MnSO_4 in insol in absolute alcohol

1000 pts. alcohol of 0.872 sp. gr dissolve 6.3 pts. MnSO_4 .

Sol. in 50 pts. of 50% alcohol. Insol. in absolute alcohol. (Brandes, Pogg. **20**. 556.)

100 pts. solution saturated at 15° in dil. alcohol containing:

0	10	50	60	% alcohol, contain
56 25	51.4	2.0	0.66	pts. $\text{MnSO}_4 + 5\text{H}_2\text{O}$.

(Schiff, A. **118**. 365.)

When $\text{MnSO}_4 + 7\text{H}_2\text{O}$ is boiled with absolute alcohol none is dissolved, but $\text{MnSO}_4 + 3\text{H}_2\text{O}$ is formed.

When $\text{MnSO}_4 + 7\text{H}_2\text{O}$ is dissolved in 15–50% alcohol, the liquid separates into two layers, the lower containing less (12–14%) alcohol and more (47–49%) salt; the upper containing

more (50-55%) alcohol and less (1.3-2.2%) salt. If the alcohol has the above strength (15-50%) the separation takes place at ordinary temp., but with 13-14% or 60% or more alcohol, warming is necessary to effect the separation. (Schiff, A. 118. 363)

Solubility of $\text{MnSO}_4 + \text{H}_2\text{O}$ in alcohol + Aq at t° .

Composition of two layers sat. with the solid salt at t° .

*Also sat. with MnSO₄, 5H₂O.

(Schreinemakers and Deuss)

Insol. in absolute ether between 5° and 7°, and no crystal H₂O is removed thereby. Insol. in boiling oil of turpentine, but 1 mol. crystal H₂O is removed from MnSO₄+4H₂O (Brandes, Pogg. 20. 568)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.); ethyl acetate. Naumann, B. 1910, 43. 314; acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C.C. 1899, II. 1014.)

100 g. sat. solution in glycol contain 0.5 g. MnSO₄ (de Coninck, Bull. Ac. roy. Belg. 1905. 359.)

MnSO₄+7H₂O occurs as the min. *Mallardite*

Manganomanganic sulphate, MnO, MnO₂, 4SO₃+9H₂O.

Deliquescent. Decomp. by H₂O. Sol. in little dil. H₂SO₄+Aq. (Fremy, C. R. 82. 475.)

Manganic sulphate, Mn₂(SO₄)₃.

Extremely deliquescent. Sol. in H₂O with evolution of heat, and decomposition into a basic sulphate. Behaves similarly with dilute acids. Sol. in traces in cold conc. H₂SO₄. Insol. in cold conc. HNO₃+Aq. Sol. in conc. HCl+Aq. Decomp. by absolute alcohol. (Carius, A. 98. 53.)

Manganyl sulphate, MnO₂, SO₃.

Sol. in H₂SO₄ but solution decomp. if below 40–60° Baumé. Solubility in 40° Baumé acid = 15%. 55°, 4–5%. Solution can be heated to 60–80° without decomp. (Bad. Anilin u. Sodafabrik, C. C. 1905, II. 1398.)

Manganous hydrogen sulphate.

MnSO₄ is sol. in 20 pts. boiling conc. H₂SO₄; more sol. in boiling H₂SO₄+Aq. of 1.6 sp. gr. (Schultz.)

MnH₂(SO₄)₂, and +H₂O. Sol. in H₂O with decomp. (Schultz.)

MnH₃(SO₄)₄ Sol. in H₂O with decomp. (Schultz.)

Manganic hydrogen sulphate, Mn₂H₃(SO₄)₄+8H₂O.

Deliquescent. Decomp. by H₂O. Sol. in dil. H₂SO₄+Aq. (Francke, J. pr. (2) 36. 251.)

Manganous hydrazine sulphate, MnH₂(SO₄)₂, 2N₂H₄.

1 pt. is sol. in 60 pts. H₂O at 18°
Stable in the air at 100° (Curtius, J. pr. 1894, (2) 50. 331)

Manganous nickel potassium sulphate,

MnSO₄, NiSO₄, 2K₂SO₄+12H₂O. Sol. in H₂O (Vohl, A. 94. 57.)

Manganous potassium sulphate, K₂SO₄, MnSO₄+2H₂O.

+4H₂O Efflorescent. (Pierre, A. ch. (3) 16. 239.)

2MnSO₄, K₂SO₄ (Mallet, C. N. 1899, 80. 301)

Manganic potassium sulphate, K₂Mn₂(SO₄)₄+24H₂O.

Decomp. by dissolving in H₂O. (Mitscherlich)

Manganomanganic potassium sulphate, Mn₂(SO₄)₃, 5K₂SO₄=3Mn(SO₄)₂, 2MnSO₄, 5K₂SO₄.

Decomp. by much H₂O. Sol. in dil. or conc. H₂SO₄. Insol. in alcohol or ether (Francke, J. pr. (2) 36. 166.)

Manganous potassium zinc sulphate, MnSO₄, 2K₂SO₄, ZnSO₄+12H₂O.

Sol. in H₂O (Vohl.)

Manganous rubidium sulphate, MnSO₄, Rb₂SO₄+6H₂O.

Sol. in H₂O. (Tutton, Chem. Soc. 63. 337.)
1 l. H₂O dissolves 357 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)
+2H₂O. (Wyrouboff, Bull. Soc. Min. 1891, 14. 242.)

2MnSO₄, Rb₂SO₄. (Wyrouboff.)

Manganic rubidium sulphate, Mn₂(SO₄)₃, Rb₂SO₄+24H₂O.

Deliquescent. (Christensen, Z. anorg. 1901, 27. 333)

Manganous sodium sulphate, MnSO₄, Na₂SO₄, +2H₂O. Deliquescent in moist air. (Geiger.)

+4H₂O. Sol. in 1.2 pts. boiling H₂O. (Geiger.)

Manganous sulphate ammonia, MnSO₄, 4NH₃.
Decomp. by H₂O. (Rose, Pogg. 20. 148.)

Manganous sulphate cupric oxide, MnSO₄, 2CuO+3H₂O.

(Mailhe, A. ch. 1902, (7) 27. 392.)
MnSO₄, 3CuO+xH₂O. (Recours, C. R. 1901, 132. 1415.)

MnSO₄, 24CuO+xH₂O. (Recours.)

Manganous sulphate hydrazine, $\text{MnSO}_4 \cdot 2\text{N}_2\text{H}_4$.

Very unstable.

Somewhat sol in $\text{NH}_4\text{OH} + \text{Aq.}$ (Franzen, Z. anorg. 1908, **60**, 285.)**Manganous sulphate hydroxylamine, $\text{MnSO}_4 \cdot \text{NH}_2\text{OH} + 2\text{H}_2\text{O}$** Insol in H_2O . (Feldt, B. 1894, **27**, 405.)**Mercurous sulphate, basic, $2\text{Hg}_2\text{O} \cdot \text{SO}_3 + \text{H}_2\text{O}$.**Sol in 25,000 pts H_2O at 20° (Gouy, C. R. 1900, **130**, 1401.)**Mercurous sulphate, Hg_2SO_4 .**Sol. in 500 pts cold, and 300 pts hot H_2O (Wackenroder, A. **41**, 319.)Solubility in H_2O at $18^\circ = 7.8 \times 10^{-4}$ g. mol per liter. (Wilsmore, Z. phys. Ch 1900, **35**, 305.)1 l H_2O dissolves 11.71×10^{-4} g.-mol. Hg_2SO_4 at 25° (Drucker, Z. anorg 1901, **28**, 362.)Solubility in H_2O at t°

t°	In 100 pts of the solution	
	Hg_2SO_4	H_2SO_4
16.5	0.055	0.008
33	0.060	0.018
50	0.065	0.037
75	0.074	0.063
91	0.084	0.071
100	0.092	0.071

(Barre, A. ch. 1911, (8) **24**, 203.)

Solubility in H_2O at 25° is 20% greater than at 18° and $= 11.71 \times 10^{-4}$ g. mol. per l. By addition of increasing amts. of H_2SO_4 the solubility is somewhat, but not regularly, decreased, K_2SO_4 lowers solubility less than H_2SO_4 . (Drucker, Z. anorg. 1901, **28**, 362.)

Easily sol. in dil. $\text{HNO}_3 + \text{Aq.}$ from which solution it is separated by dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Wackenroder, A. **41**, 319.)

Abundantly sol. in hot, less sol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Berzelius.)

Solubility in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

H_2SO_4 normality	g.-mol. Hg_2SO_4 per litre
0.0400	8.31×10^{-4}
0.1000	8.78×10^{-4}
0.2000	8.04×10^{-4}

(Drucker, Z. anorg. 1901, **28**, 362.)

Partially decomp. by hot NH_4 salts + Aq. (Miahle, A. ch. (3) **5**, 179.)

5 times more sol. in sat. $\text{CdSO}_4 + \text{Aq}$ than in H_2O . (Hulett, Phys. Rev 1907, **25**, 16.)

Sat. ZnSO_4 or $\text{CdSO}_4 + \text{Aq}$ attack much less

than pure H_2O , yet the solubility of Hg_2SO_4 in these solutions is greater, i. e., 0.8 g. in 1 l. $\text{ZnSO}_4 + \text{Aq}$ and 1.1 g. in 1 l. $\text{CdSO}_4 + \text{Aq}$ at 20° (Gouy, C. R. 1900, **130**, 1402.)

Solubility in $0.2\text{N } \text{K}_2\text{SO}_4 + \text{Aq} = 9.05 \times 10^{-4}$ g. mol per l. at 25° (Drucker, Z. anorg. 1901, **28**, 362.)

Solubility of Hg_2SO_4 in $\text{K}_2\text{SO}_4 + \text{Aq.}$

	13.20	0.4610	0.2503
	17.30	0.6440	0.2225

(Barre, A. ch. 1911, (8) **24**, 202.)

About 3 times as sol in sat $\text{ZnSO}_4 + \text{Aq}$ as in distilled H_2O (Wright, Phil. Mag. (5) 1885, **19**, 29.)

Mercuric sulphate, basic, $2\text{HgO} \cdot \text{SO}_3$.(Mailhe, A. ch. 1902, (7) **27**, 394.) $3\text{HgO} \cdot \text{SO}_3$ (Mineral turpeth.)

Sol. in 2000 pts cold and 600 pts boiling H_2O (Fourcroy, A. ch. **10**, 307.)

Sol. in 43,478 pts H_2O at 16° when pptd. cold, and in 32,258 pts. at 16° when pptd. at 100° . (Cameron, Z. anal. **19**, 144.)

Sl. sol. in warm dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Rose.)

Solubility in H_2O is increased by addition of H_2SO_4 up to an acid content of 4.3 mol. SO_3 to 93.7 mols. H_2O . (Hoitsema, Z. phys. Ch. 1895, **17**, 665.)

Sol in warm conc. HCl or $\text{HBr} + \text{Aq.}$ (Ditte.)

Sol. in alkali chlorides + Aq. (Miahle.)

Sol. in dil. HNO_3 or in $\text{HCl} + \text{Aq.}$ More easily sol. in the warm acids. (Ray, Chem. Soc. 1897, **71**, 1099.)

$3\text{HgO} \cdot 2\text{SO}_3 + 2\text{H}_2\text{O}$. (Hoitsema, Z. phys. Ch. 1895, **17**, 659.)

$4\text{HgO} \cdot 3\text{SO}_3$. (Hopkins, Sill. Am. J. **18**, 364.)

Mercuric sulphate, HgSO_4 .

Decomp. by H_2O into $3\text{HgO} \cdot \text{SO}_3$, and a sol. acid salt. Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq.}$ Decomp. by all acids. (Berzelius.)

Sol in warm conc. HCl or HBr + Aq; very sl sol. in boiling conc HI + Aq. (Ditte, A ch (5) 17. 124)

Very sl sol in hot conc. HF (Ditte, A. ch. 1879, (5) 17. 125)

Sol in HCN + Aq (Mohr)

Sol with decomp. in NaCl + Aq (Miahle)

Insol. in liquid NH₃. (Franklin, Am. Ch J. 1898, 20. 829.)

Insol in conc. alcohol.

Insol in acetone (Naumann, B. 1904, 37. 4329); methyl acetate. (Naumann, B 1909, 42. 3790.); ethyl acetate. (Naumann, B 1910, 43. 314.)

Insol in benzonitrile. (Naumann, B 1914, 47. 1370)

Insol in pyridine (Schroeder, Dissert 1901.)

+H₂O. Decomp by H₂O. (Eisfeldt, Pharm. Centr. 1853. 812)

Mercuriomercuric sulphate, Hg₂O, 2HgO, SO₃.

Insol. in cold H₂O; not decomp. by boiling H₂O. Decomp. by HCl + Aq. (Brooke, Pogg 66. 63)

Hg₂SO₄, HgSO₄. (Baskerville, J. Am Chem. Soc. 1897, 19. 875.)

Mercuric hydrogen sulphate, HgH₂(SO₄)₂.

(Braham, C. N. 42. 163.)

Mercuric potassium sulphate, 3HgSO₄,

K₂SO₄ + 2H₂O.

Sol. in H₂O. (Hirzel, J. B. 1850. 332)

Mercuric sulphate chloride ammonium chloride, 2HgSO₄, HgCl₂, 2NH₄Cl.

Decomp. with H₂O. Ether dissolves out HgCl₂. (Kosmann, A. ch (3) 27. 238.)

Mercuric sulphate cyanide, HgSO₄, Hg(CN)₂ + 5H₂O.

Decomp by conc. or warm acids. (Rupp, Arch Pharm 1912, 250. 280)

Mercuric sulphate hydrazine, HgSO₄, N₂H₄.

Ppt. (Hofmann and Marburg, A. 1899, 305. 216.)

Mercuric sulphate hydrobromide, HgSO₄, 2HBr.

Sol. in H₂O without separation of basic sulphate. (Ditte, A. ch. (5) 17. 122.)

3HgO, SO₃, 6HBr. Sol in H₂O. (Ditte.)

Mercuric sulphate hydrochloride, HgSO₄, HCl.

Not attacked by HCl. Sl. sol. in HNO₃. (Baskerville, J. Am. Chem. Soc. 1901, 23. 895.)

HgSO₄, 2HCl. Sol. in H₂O without separation of a basic salt. Very sol. in warm H₂SO₄, solidifying on cooling if very conc., or crystallising if dil. (Ditte.)

Very deliquescent

Very sol in H₂O. (Baskerville, J. Am. Chem Soc 1901, 23. 895)

+H₂O. (Baskerville, J. Am. Chem. Soc. 1901, 23. 895)

3HgO, SO₃, 6HCl. Sol. in H₂O. (Ditte.)

Mercuric sulphate hydroxylamine, HgSO₄, 2NH₂OH + H₂O.

Decomp. by cold H₂O. (Adams, Am. Ch. J. 1902, 28. 209)

Mercuric sulphate iodate iodide, 6(3HgO, 2SO₃), 6HgI₂, Hg(IO₃)₂.

Decomp by H₂O and acids. (Brückner, M. 1907, 28. 961)

Mercuric sulphate iodide, basic, 3HgO, 2SO₃, HgI₂.

3(3HgO, 2SO₃), 2HgI₂ + 10H₂O.

2(3HgO, 2SO₃), HgI₂ + 10H₂O. Very sol. in hot conc. HNO₃

3HgO, 2SO₃, HgSO₄, HgI₂ + 10H₂O. (Ditte, C. R. 1905, 140. 1167)

Mercuric sulphate iodide, HgSO₄, HgI₂.

Decomp. by H₂O, not by alcohol or ether. (Riegel, J. B pr. Pharm 11. 396.)

3HgSO₄, HgI₂. Decomp. by cold or hot H₂O Sol in H₂SO₄ + Aq. (Ditte, C. R. 1905, 140. 1165)

4HgSO₄, HgI₂ + 15H₂O, and +18H₂O. Decomp. by cold or hot H₂O

Sol. in H₂SO₄ (Ditte)

Mercuric sulphate phosphide.

See Dimercuriophosphonium mercuric sulphate.

Mercuric sulphate sulphide, basic, 2HgO, SO₃, HgS.

Somewhat sol. in HCl, H₂SO₄ and HNO₃. (Jacobson, Pogg 1846, 68. 412.)

4HgO, 3SO₃, 2HgS + 4H₂O Sl sol. in H₂SO₄. (Estrup, Z anorg. 1909, 62. 169.)

Mercuric sulphate sulphide, 2HgSO₄, HgS.

Sl. sol. in hot HCl, H₂SO₄, or HNO₃ + Aq. Easily sol in hot aqua regia. (Jacobson, Pogg. 68. 410.)

2HgSO₄, HgS. (Palm, C. C. 1863. 122.)

HgSO₄, 2HgS (Barfoed, J. B. 1864. 282.)

Sol in aqua regia. (Denigès, Bull. Soc. 1915, (4) 17. 355.)

HgSO₄, 3HgS. Insol. in H₂O Easily sol. in aqua regia; decomp. by HNO₃ into—

3HgSO₄, HgS. Insol. in all acids except aqua regia. (Spring, A 199. 116.)

Molybdenum sesquisulphate (?).

Basic. Insol. in H₂O.

Neutral. Decomp. by H₂O into acid and basic salts.

Acid. Sol. in H₂O. (Berzelius.)

Molybdenum disulphate (?)Sol in H_2O **Molybdenum sulphate, $\text{Mo}_2\text{O}_5, 2\text{SO}_3$.**

Very slowly sol. in cold, more quickly sol in hot H_2O . (Bailhache, C. R. 1901, **132**, 476.)
 $7\text{MoO}_3, 2\text{MoO}_3, 7\text{SO}_3 + \text{Aq}$. (Péchar, C. R. 1901, **132**, 630.)

Molybdic sulphate, $\text{MoO}_3, \text{SO}_3$.

Deliquescent. Sol in H_2O (Schultz-Sellack, B. **4**, 14.)
 $\text{MoO}_3, 3\text{SO}_3 + 2\text{H}_2\text{O}$ Deliquescent Partially sol. in H_2O (Anderson, Berz. J. B. **22**, 161.)

Does not exist (Schultz-Sellack)

Molybdenum sulphate ammonia, $5\text{NH}_3, \text{MoO}_2\text{SO}_3, 7\text{MoO}_3 + 8\text{H}_2\text{O}$. $3\text{NH}_3, \text{MoO}_2\text{SO}_3, 7\text{MoO}_3 + 10\text{H}_2\text{O}$.

Both very sol. in water but less sol. in H_2O containing ammonium salts. (Péchar, C. R. 1901, **132**, 630.)

Neodymium sulphate, basic, $\text{Nd}_2\text{O}_3, \text{SO}_3$.Insol. in H_2O .

Nearly insol in dil acids. (Wöhler, B. 1913, **46**, 1730)

Insol in H_2O . (Matignon, C. R. 1902, **134**, 658.)

Neodymium sulphate, $\text{Nd}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.Solubility in 100 pts. H_2O at t° .

t°	pts. $\text{Nd}_2(\text{SO}_4)_3$
0	9.50
16	7.05
30	5.04
50	3.72
80	2.70
100	2.21

(Muthmann and Rolig, B. 1898, **31**, 1728.)**Neodymium hydrogen sulphate, $\text{Nd}(\text{SO}_4\text{H})_3$.**(Brauner, Z. anorg. 1904, **38**, 331)**Neodymium potassium sulphate.**

Cryst. modification more sol. in cold than in hot H_2O . (Boudouard, C. R. 1898, **126**, 901.)

Nickel sulphate, basic.Very sl. sol. in H_2O . (Berzelius.)

$6\text{NiO}, 5\text{SO}_3 + 4\text{H}_2\text{O}$. (Athanasesco, C. R. **103**, 271.)

$7\text{NiO}, 7\text{H}_2\text{O}, \text{SO}_3 + 3\text{H}_2\text{O}$. Nearly insol. in H_2O . (Habermann, M. **5**, 432.)

$5\text{NiO}, \text{SO}_3; 5\text{NiO}, 2\text{SO}_3; \text{and } 5\text{NiO}, 3\text{SO}_3$. (Pickering, Chem Soc. 1907, **91**, 1985.)

$6\text{NiO}, \text{SO}_3$. (Strömholm. C.C. **1906**, **1**, 1222.)

Nickel sulphate, NiSO_4 .100 pts H_2O dissolve pts NiSO_4 at t° .

2°	16°	20°	23°	31°
30.4	37.4	39.7	41	45.3 pts. NiSO_4 ,

41°	50°	53°	60°	70°
49.1	52	54.4	57.2	61.9 pts NiSO_4

(Tobler, A. **95**, 193)

100 pts of sat solution contain at $11-14^\circ$, 28.84, at $18-20^\circ$, 30.77 pts anhydrous salt (v. Hauer, W. A. B. **53**, 2 221)

100 pts H_2O at 112.5° dissolve 185.71 pts NiSO_4 .

(Griffiths)

$\text{NiSO}_4 + 7\text{H}_2\text{O}$ is sol. in 3 pts H_2O at 12.5° . (Tupputi.)

100 pts H_2O at 15.5° dissolve 75.6 pts. $\text{NiSO}_4 + 7\text{H}_2\text{O}$ Sat. $\text{NiSO}_4 + \text{Aq}$ contains at:

-3°	$+2^\circ$	5°	11°	17°	54°
21.7	22.7	23.1	25.2	26.6	33.6% NiSO_4 .

68°	74°	92°	97°	110°	117°	119°
38.2	38.7	42.4	44.2	46.5	48.8	49.4% NiSO_4 .

(Étard, A. ch. 1894, (7) **2**, 552.)

See also below under hydrated salts

Sp. gr. of $\text{NiSO}_4 + \text{Aq}$ containing g. $\text{NiSO}_4 + 7\text{H}_2\text{O}$ in 1000 g. H_2O at 23.5° .

140.5 g. ($= \frac{1}{2}$ mol.)	281	421.5	562

86	1.73	3.2	767	230
85	1.93	3.6	755	241

(de Bruyn, R. t. c. 1903, 22, 418.)

This salt is more sol. in ethyl alcohol than in methyl alcohol.

See also under hydrated salts.

For solubility of NiSO_4 in ethyl alcohol, see under hydrated salts.

100 g sat. solution in glycol contain 9.7 g. NiSO_4 at ord temp. (de Coninck, Bull. Ac. Roy. Belg. 1905, 359.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate, (Naumann, B. 1904, 37, 3602.)

Very sl. sol. in acetone. (Krug and M'Elroy.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

$+\text{H}_2\text{O}$. Very sl. sol. in abs. methyl alcohol. After standing in contact with it for 8-9 months, the solution contains 1.34% NiSO_4 . (de Bruyn, R. t. c. 1903, 22, 414.)

$+2\text{H}_2\text{O}$. Cryst. from sat. $\text{NiSO}_4 + \text{Aq}$ at 131° . (Steele and Johnson.)

$+4\text{H}_2\text{O}$. Solubility in methyl alcohol + Aq at 10° . Time = 24 hrs. P = % anhydrous salt in the sat. solutions.

Alcohol of 100% 80% 50% 20% water
P 7.38 0.66 1.43 14.8 25.1

(de Bruyn, R. t. c. 1903, 22, 414.)

$+6\text{H}_2\text{O}$. Two modifications. α -blue, tetragonal; β -green, monoclinic.

Solubility of α - $\text{NiSO}_4 \cdot 6\text{H}_2\text{O}$ in H_2O at t° .

Salt used	t°	g NiSO_4 in 100 g H_2O	Salt remaining

(de Bruyn, R. t. c. 1903, **22**, 411.)

100 g. absolute ethyl alcohol dissolve 1.3 g. NiSO₄ + 7H₂O at 4°, and 2.2 g. at 17°. (de Bruyn, Z. phys. Ch. **10**, 786.)
Min *Morenosite*

Nickel hydrazine sulphate, NiH₂(SO₄)₂, 2N₂H₄.

1 pt. is sol. in 275.5 pts. H₂O at 18°. Sl. sol. in hot H₂O. Sol. in HNO₃ with decomp.; insol. in HCl. Sol. in NH₄OH + Aq (Curtius, J. pr. 1894, (2) **50**, 331.)

Nickel potassium sulphate, NiSO₄, K₂SO₄ + 6H₂O.

Sol. in 8.9 pts. H₂O. (Tupputi.)

100 pts. H₂O dissolve at:

0° 10° 14° 20° 30°
5.3 8.9 10.5 13.8 18.6 pts. anhydrous salt,

36° 49° 55° 60° 75°
20.4 27.7 32.4 35.4 45.6 pts. anhydrous salt.

(Tobler, A. **95**, 193.)

Saturated solution contains at:

20° 40° 60° 80°
8.7 12.3 17.6 22.0% anhydrous salt.

(v. Hauer, J. pr. **74**, 433.)

1 l. H₂O dissolves 68.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, **27**, 459.)

Nickel potassium zinc sulphate, NiSO₄, 2K₂SO₄, ZnSO₄ + 12H₂O.

Sol. in H₂O. (Vohl, A. **94**, 51.)

Nickel rubidium sulphate, NiSO₄, Rb₂SO₄ + 6H₂O

Sol. in H₂O (Tutton, Chem. Soc. **63**, 337.)

1 l. H₂O dissolves 59.8 g. anhydrous salt at 25° (Locke, Am. Ch. J. 1902, **27**, 459.)

Nickel sodium sulphate, NiNa₂(SO₄)₂ + 4H₂O.

Solubility of NiNa₂(SO₄)₂ · 4H₂O in 100 g. H₂O at t°.

t°	grams NiSO ₄	grams Na ₂ SO ₄
20	29.31	26.87
25	27.33	25.33
30	24.64	22.58
35	23.66	21.67
40	21.88	20.65

(Koppel, Z. phys. Ch. 1905, **52**, 401.)

Solubility of NiNa₂(SO₄)₂ · 4H₂O + NiSO₄ · 7H₂O in 100 g. H₂O at t°.

t°	grams NiSO ₄	grams Na ₂ SO ₄	t°	grams NiSO ₄	grams Na ₂ SO ₄
18.5	30.70	25.805	30	34.98	19.825

18.5	26.14	29.455
20	24.07	31.365
25	18.81	37.13
30	9.87	44.25

(Koppel.)

Solubility of NiNa₂(SO₄)₂ · 4H₂O + Na₂SO₄ (anhydrous) in 100 g. H₂O at t°.

t°	grams NiSO ₄	grams Na ₂ SO ₄
35	7.13	49.595
40	7.245	49.03

(Koppel.)

Nickel thallium sulphate, NiSO₄, Tl₂SO₄ + 6H₂O.

Easily sol. in H₂O. Can be recryst. from little H₂O without decomp (Werther, J. pr. **92**, 132.)

1 l. H₂O dissolves 46.1 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, **27**, 459.)

Nickel zinc sulphate, NiSO₄, ZnSO₄ + 13H₂O.

Sol. in 3-4 pts. cold H₂O. Insol. in alcohol. (Tupputi, **1811**.)

Completely sol. in NH₄OH + Aq.
2NiSO₄, 2ZnSO₄, H₂SO₄. (Étard, C. R. **87**, 602.)

Nickel sulphate ammonia, $\text{NiSO}_4 \cdot 6\text{NH}_3$.

Sol. in H_2O with separation of hydroxide. (Rose, Pogg. 20. 151.)

$\text{NiSO}_4 \cdot 5\text{NH}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ Deliquescent. (André, C. R. 106. 936.)

$\text{NiSO}_4 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$. Easily sol. in H_2O . Can be recrystallized out of little H_2O . Insol even in dil alcohol. (Erdmann.)

Nickel sulphate cupric oxide, $\text{NiSO}_4 \cdot 2\text{CuO} + 6\text{H}_2\text{O}$.

(Mailhe, Bull. Soc. 1902, (3) 27. 172.)

$2\text{NiSO}_4 \cdot 3\text{CuO} + 10\text{H}_2\text{O}$, and $+12\text{H}_2\text{O}$. (Mailhe)

$5\text{NiSO}_4 \cdot 16\text{CuO} + x\text{H}_2\text{O}$. (Recoura, C. R. 1901, 132. 1415.)

$\text{NiSO}_4 \cdot 20\text{CuO} + x\text{H}_2\text{O}$. (Recoura)

Nickel sulphate, hydrazine, $\text{NiSO}_4 \cdot 3\text{N}_2\text{H}_4$.

Ppt. (Curtius, J. pr. 1894, (2) 50. 343.)

Nickel sulphate hydroxylamine, $\text{NiSO}_4 \cdot 6\text{NH}_2\text{OH}$.

Decomp. by H_2O . (Uhlenhut, A. 1899, 307. 334.)

Nitrosyl sulphate, $\text{H}(\text{NO})\text{SO}_4$.

See Nitrosulphonic acid.

Osmious sulphate.

Easily sol. in H_2O and alcohol.

Osmic sulphate.

Sol. in H_2O . (Berzelius)

Palladous sulphate, basic, $\text{PdSO}_4 \cdot 7\text{PdO} + 6\text{H}_2\text{O}$, and $10\text{H}_2\text{O}$.

Insol. in H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. (Kane.)

Palladous sulphate, $\text{PdSO}_4 \cdot 2\text{H}_2\text{O}$.

Deliquescent in moist air; very sol. in H_2O , but decomp. by much H_2O , with separation of a basic salt. (Kane.)

Phosphoryl sulphate, $(\text{PO})_2(\text{SO}_4)_2$ (?).

Possible composition of Weber's (B. 20. 86) $\text{P}_2\text{O}_5 \cdot 3\text{SO}_3$ (?).

$3\text{P}_2\text{O}_5 \cdot 2\text{SO}_3$. Immediately decomp by H_2O . (Adie, C. N. 1891, 63. 102.)

Platinic sulphate, $\text{Pt}(\text{SO}_4)_3$.

Deliquescent. Sol in H_2O , alcohol, or ether; also in H_3PO_4 , HCl , and $\text{HNO}_3 + \text{Aq}$. (Berzelius.)

$\text{H}_2\text{PtO}_4 \cdot \text{SO}_4$. Sol. in H_2O . (Blondel, A. ch. 1905, (8) 6. 109.)

$\text{PtO}_2 \cdot \text{SO}_3 + 4\text{H}_2\text{O}$. Ppt. Decomp. by H_2O . Sol. in H_2SO_4 .

$\text{PtSO}_4(\text{OH})_2$, $4\text{Pt}(\text{OH})_4 + 3\text{H}_2\text{O}$. Ppt.

(Prost, Bull. Soc. (2) 46. 156.)

$\text{Pt}_2\text{SO}_4\text{O}_{11} + 16\text{H}_2\text{O}$. As above. (Prost.)

Platinum hydroxylamine sulphate, $\text{Pt}(\text{NH}_2\text{OH})_4\text{SO}_4$.

Only sl. sol. in H_2O ; sol in dil $\text{H}_2\text{SO}_4 + \text{Aq}$. (Uhlenhut, A. 1900, 311. 123.)

Platinic potassium sulphate, basic.

Insol. in boiling H_2O , HNO_3 , H_2SO_4 , H_3PO_4 , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in boiling $\text{HCl} + \text{Aq}$. Sl. decomp by aqua regia (E. Davy.)

$\text{Pt}_{10}(\text{SO}_4)_2\text{O}_{10} \cdot 3\text{K}_2\text{SO}_4 + 34\text{H}_2\text{O}$ Insol in H_2O . (Prost, Bull. Soc. (2) 46. 156.)

$\text{Pt}_{18}(\text{SO}_4)\text{O}_{22} \cdot 5\text{K}_2\text{SO}_4 + 34\text{H}_2\text{O}$. As above. (Prost)

Platinum rubidium sulphate, $\text{Pt}_6\text{Rb}_6(\text{SO}_4)_4 + 17\text{H}_2\text{O}$.

Sol. in H_2O . (Prost, Bull. Soc. (2) 46. 156.)

Platinum sulphate sulphocarbamide, $\text{PtSO}_4 \cdot 4\text{CS}(\text{NH}_2)_2$.

Insol. in H_2O . Sol. in conc. H_2SO_4 without decomp. (Kurnakow. J. pr. 1894, (2) 50, 489.)

Potassium sulphate, K_2SO_4 .

Not hygroscopic in the ordinary sense of the word 100 pts K_2SO_4 over H_2O at $14-20^\circ$ absorb 58 pts. H_2O in 22 days, and finally deliquesce completely. (Mulder.)

12 pts. K_2SO_4 mixed with 100 pts. H_2O lower the temp. 3.3° . (Rüchhoff, B. 2. 68.)

100 pts H_2O dissolve with absorption of heat at 0° :

8.36 pts. K_2SO_4 . (Gay-Lussac.)

8.46 " (Mulder.)

8.5 " (Gerardin.)

7.31 " (Möller, Pogg. 117. 386.)

7.3-7.9 " (Nordenskiöld, Pogg. 136. 314.)

100 pts H_2O at 0° dissolve 8.36 pts K_2SO_4 , at 12.72° , 10.57 pts., at 49.08° , 16.91 pts., at 63.90° , 19.29 pts.; at 101.50° , 26.33 pts. (Gay Lussac, A. ch. (2) 11. 311.)

Solubility in 100 pts. H_2O at t° .

t°	Pts. K_2SO_4	t°	Pts. K_2SO_4
0	7.8	47.0	16.0
15 65	10.3	70.2	20.3
28 1	12.8	98.0	23.9

(Nordenskiöld, Pogg. 136. 341.)

100 pts. sat K_2SO_4 at 101.7° contain 17.5 pts. K_2SO_4 , or 100 pts. H_2O at 101.25° dissolve 21.212 pts. K_2SO_4 . (Griffiths)

100 pts H_2O at 102.8° dissolve 29 pts. K_2SO_4 (Penny); at 15° 7.3-6.25 pts. (Ure's Dict.), at 100° , 20 pts. (Ure's Dict.), at 100° , 24.2 pts. (Wenzel).

Sol. in 9.081 pts H_2O at 15° (Gerlach), in 16 pts at 15° , and 5 pts. at 100° (Bergmann), in 18 pts. cold, and 5 pts. boiling H_2O (Fourcroy), in 15 pts. cold, and 5 pts. boiling H_2O (Reid); in 12 pts H_2O at 0° , and 4 pts. boiling H_2O (M. R. and P.); in 12 pts. H_2O at 18.75° (Abt).

K_2SO_4 sat at 15° has sp. gr. = 1.0774, and contains 10.055 pts K_2SO_4 up 100 pts. H_2O . (Michel and Kraft, A. ch. (3) 41. 478.)

100 pts. H_2O dissolve 9.26 pts. K_2SO_4 at 15.6° , and sat. solution has sp. gr. = 1.177. (Page and Keightley, Chem. Soc. (2) 10. 566.)

Solubility in 100 pts H₂O at t°

t°	Pts. K ₂ SO ₄	t°	Pts. K ₂ SO ₄	t°	Pts. K ₂ SO ₄

31	45	1.0921	89	70	1.1194
42	75	1.1010	101	1*	1.1207

* = b.-pt.

(Berkeley, Phil. Trans. Roy. Soc. 1904, 203. A, 189.)

100 g. H₂O dissolve 0.133 gram-equivalent K₂SO₄ at 25° (Van't Hoff and Meyerhoffer, Z. phys. Ch. 1904, 49. 315)

1 l. sat K₂SO₄ + Aq at 25° contains 0.617 mols K₂SO₄. (Herz, Z. anorg. 1911, 73. 274.)

Solubility of K₂SO₄ in H₂O at t°.

t°	% K ₂ SO ₄
4.78	7.82
30.05	11.43
54.20	14.77
68.90	16.40

(Le Blanc and Schmandt, Z. phys. Ch. 1911, 77. 614.)

100 g. H₂O dissolve 12.10 g. K₂SO₄ at 25°. (Amadori, Rend. Acc. Linc. 1912, (5) 21. II. 667.)

Solubility of K₂SO₄ in H₂O at various pressures. Figures denote pts. K₂SO₄ contained in 100 pts. sat. K₂SO₄ + Aq at t° and A pressure in atmospheres.

A	0°	15°	15.5°	16.2°
1	6.81	9.14	9.24	9.35
20	7.14	..	9.44	9.54
30	7.14

(Möller, Pogg. 117. 386.)

Sat. K₂SO₄ + Aq boils at 101.5°, and contains 26.33 pts. K₂SO₄ to 100 pts. H₂O (Gay-Lussac); at 101.7°, and contains 21.2 pts. K₂SO₄ to 100 pts. H₂O (Griffiths); at 102.25°, and contains 26.75 pts. K₂SO₄ to 100 pts. H₂O (Mulder); boils at 103° (Kremers).

- Crust forms at 101.7° and solution contains 25.3 pts. K₂SO₄ to 100 pts. H₂O; highest

temp observed, 102.1°. (Gerlach, Z. anal. **26**. 426.)

B-pt of K_2SO_4 +Aq containing pts K_2SO_4 to 100 pts H_2O .

B-pt.	Pts K_2SO_4	B-pt	Pts K_2SO_4
100 5°	7	102°	30 0
101 0	14 5	102 1	31 6

0.0	4.809

(D'Ans and Schreiner, Z. anorg. 1910, 67. 438.)

Sol. in sat. $NH_4Cl + Aq$ without pptn. (See NH_4Cl .)

Sl. sol. in sat. $KCl + Aq$ without pptn. 100 g sat $KCl + Aq$ at 25° dissolve 0.0167 g. equiv. K_2SO_4 at 25° . (Van't Hoff and Meyerhoffer Z. phys. Ch. 1904. 49. 315.)

Sl. sol in sat. $KNO_3 + Aq$ without causing pptn.

1 l. of the solution contains 50.7 g. $K_2SO_4 + 216.5$ g. $KNO_3 = 267.2$ g. mixed salts at 15° . Sp. gr. $K_2SO_4 + KNO_3 + Aq = 1.165$.

1 l. of the solution contains 47.66 g. $K_2SO_4 + 308.5$ g. $KNO_3 = 356.2$ g. mixed salts at 25° . Sp. gr. of $K_2SO_4 + KNO_3 + Aq = 1.210$. (Euler, Z. phys. Ch. 1904, 49. 313.)

See also under KNO_3 .

Sol. in sat. $NaNO_3 + Aq$ without causing pptn. at first, but soon KNO_3 is pptd. (Karsten.) (See $NaNO_3$.)

Sol. in $(NH_4)_2SO_4 + Aq$ with pptn. of $(NH_4)_2SO_4$. (Rüddorf, B. 6. 485.) (See $(NH_4)_2SO_4$.)

More sol. in aqueous solutions of other salts, as Na_2SO_4 , $MgSO_4$, $CuSO_4$, etc., than in pure H_2O . (Pfaff, A. 99. 227.)

Sol. in sat. $Na_2SO_4 + Aq$, $MgSO_4 + Aq$, $NaCl + Aq$. (See $MgSO_4$ and $NaCl$.)

Solubility of K_2SO_4 in $Na_2SO_4 + Aq$.

Temp $= 34^\circ$		Temp $= 60^\circ$	
% Na_2SO_4	% K_2SO_4	% Na_2SO_4	% K_2SO_4
0	11.9	0	15.3
7.1	10.7	6.6	13.9
31.4	4.3	27.1	8.2
33.1	0	31.3	0

(Nacken, B. A. B. 1910. 1016.)

100 g. H_2O sat. with both K_2SO_4 and Li_2SO_4 dissolve:

4.74 g. $Li_2SO_4 + 10.3$ g. K_2SO_4 at 15° .
11.5 g. " + 16.4 g. " " 62° .
18.52 g. " + 26.2 g. " " 100° .

(Rabe, Z. anorg. 1902, 31. 156.)

Sl. sol. in sat. $ZnSO_4$ or $CuSO_4 + Aq$ with separation of double salt.

100 pts. H_2O dissolve 8.5 + 0.12 pts. K_2SO_4 . On addition of a K salt, K_2SO_4 is pptd. The amount of K_2SO_4 remaining in solution plus the amt. of K in the salt added is a constant. (Blarez, C. R. 112. 939.)

Solubility of $K_2SO_4 + Th(SO_4)_2$ at 16° .Solid phase, $Th(SO_4)_2$.

(Fox and Gage, Chem. Soc 1910, **97**. 381.)

Sol in 76 pts glycerine of 1 225 sp. gr at ordinary temp (Vogel, N Repert **16**. 557.)

Insol in acetone (Krug and M'Elroy; Eidman, C. C. **1899**, II. 1014)

Insol in CS_2 (Arcetowski, Z. anorg **1894**, **6**. 257); benzonitrile (Naumann, B **1914**, **47**. 1370); methyl acetate. (Naumann, B. **1909**, **42**, 3790); ethyl acetate (Naumann. B **1904**, **37**, 3602)

100 g H_2O dissolve 104 g. K_2SO_4 + 219.0 g sugar at 31 25°, or 100 g sat. solution contain 3.8 g K_2SO_4 + 66.74 g sugar (Kohler, Z. Ver. Zuckerind. **1897**, **47**. 447)

Min $G^{viserte}$.

+ $\frac{1}{2}H_2O$. 100 pts H_2O dissolve 9.82 pts (Ogier, C. R. **82**. 1055.)

Tripotassium hydrogen sulphate, $K_3H(SO_4)_2$.

Sol. in H_2O

Potassium hydrogen sulphate, $KHSO_4$.

1.07 pts. $KHSO_4$ (= 1 pt. $K_2S_2O_7$) dissolve.

at 0° in 2.95 pts. H_2O .

" 20° " 2.08 "

" 40° " 1.59 "

" 100° " 0.88 "

(Kremers, Pogg. **92**. 497.)

Sp. gr. of $KHSO_4$ + Aq at 15° containing:

5 10 15 % $KHSO_4$,
1.0354 1.0726 1.1116

20 25 27% $KHSO_4$.
1.1516 1.1920 1.2110

(Kohlrausch, W. Ann. **1879**. 1.)

Sat. solution boils at 105.5° (Griffiths); 108° (Kremers).

Alcohol dissolves out H_2SO_4 .

K_2SO_4 crystallises from dilute solutions.

100 g. 95% formic acid dissolve 14.6 g. $KHSO_4$ at 19.3°. (Aschan, Ch. Ztg. **1913**, **37**. 1117.)

Insol in methyl acetate (Naumann B. **1909**, **42**, 3790)

Min *Misnite*.

+ $5\frac{1}{2}H_2O$. Deliquescent (Senderens, Bull Soc (3) **2**. 278)

Potassium dihydrogen sulphate, $K_4H_2(SO_4)_3$.

Sol in H_2O (Phillips, Phil Mag **1**. 429.)

Composition is $4K_2O$, $7SO_3$ + $3H_2O$, according to Berthelot (A. ch (4) **30**. 442).

Potassium trihydrogen sulphate, $KH_3(SO_4)_2$.

Sol. in H_2O with rise of temperature.

(Schultz, Pogg **133**. 137)

+ $1\frac{1}{2}H_2O$. (Lescœur, C R. **78**. 1044.)

Potassium disulphate (pyrosulphate), $K_2S_2O_7$.

When dissolved in exactly the necessary amount of hot H_2O for solution, it crystallises on cooling without decomp. Decomp by excess of H_2O (Jacquelin, A. ch **70**. 311)

Insol in methyl acetate. (Naumann, B **1909** **42**. 3790.)

Potassium hydrogen disulphate, KHS_2O_7 .

Sol in fuming H_2SO_4 without decomposition.

Potassium octosulphate, $K_2S_8O_{25}$.

Decomp by H_2O (Weber)

Potassium praseodymium sulphate, $3K_2SO_4$, $Pr_2(SO_4)_3 + H_2O$.

Sl. sol. in H_2O .

Sol in conc HCl and HNO_3 (Von Scheele Z. anorg **1898**, **18**. 358)

Potassium rhodium sulphate, $3K_2SO_4$, $Rh_2(SO_4)_3$.

Does not exist (Lerdié, C. R. **107**. 234.)

K_2SO_4 , $Rh_2(SO_4)_3 + 24H_2O$. Very sol. in H_2O . (Piccini, Z. anorg. **1901**, **27**. 66.)

Potassium samarium sulphate, $9K_2SO_4$, $2Sm_2(SO_4)_3 + 3H_2O$.

Sl. sol. in H_2O .

Sl. sol. in sat K_2SO_4 + Aq

1 l. sat K_2SO_4 + Aq dissolves 0.5 g. Sm_2O_3 . (Cleve, Bull. Soc. (2) **43**. 166.)

Potassium scandium sulphate, $3K_2SO_4$, $Sc_2(SO_4)_3$.

Very slowly sol. in cold, more easily sol in warm H_2O Insol in sat K_2SO_4 + Aq.

Sol in H_2O and in dil K_2SO_4 + Aq (Meyer, Z. anorg. **1914**, **86**. 279)

$2K_2SO_4$, $Sc_2(SO_4)_3$. Sol. in K_2SO_4 + Aq. (Cleve.)

Does not exist. (Nilson.)

Potassium sodium sulphate, $3K_2SO_4$, Na_2SO_4 .

100 pts H_2O dissolve 40.8 pts. at 103.5°. (Penny, Phil Mag (4) **10**. 401.)

$5K_2SO_4$, Na_2SO_4 . 100 pts. H_2O at 100° dissolve 25 pts; at 12.7°, 10.1 pts; at 4.4°, 9.2 pts (Gladstone, Chem. Soc. **6**. 111.)

Potassium strontium sulphate, $K_2Sr_2(SO_4)_2$.

Decomp. by $(NH_4)_2CO_3 + Aq.$ (Rose, Pogg 93, 604.)

$K_2SO_4, SrSO_4$. This is the only double salt formed from these two components between 0° and 100° .

100 pts of the sat. solution in equilibrium with $SrSO_4$ and the double salt contain at:

17.5° 50° 75° 100°
1.27 1.88 2.71 3.9 pts. K_2SO_4 .

(Barre, C. R. 1909, 149, 292.)

Potassium tellurium sulphate, $KHSO_4, 2TeO_2, SO_3 + 2H_2O$.

(Metzner, A. ch. 1898, (7) 15, 203.)

Potassium terbium sulphate.

Easily sol. in H_2O . Sl. sol. in $K_2SO_4 + Aq.$ (Delafontaine, Zeit. Chem. (2) 2, 230.)

Potassium thallic sulphate, $KTI(SO_4)_2 + 4H_2O$.

Decomp. by H_2O . (Fortani, Gazz. ch. it. 1905, 35, (2) 453.)

$2K_2O, TI_2O_3, 4SO_3$. Insol. in H_2O . Very difficultly sol. in warm dil. $H_2SO_4 + Aq.$ (Strecker, A 135, 207.)

Potassium thorium sulphate, $K_2SO_4, Th(SO_4)_2 + 4H_2O$.

Sol. in hot H_2O containing a few drops HCl (Barre, A ch. 1911, (8) 24, 227.)

$2K_2SO_4, Th(SO_4)_2 + 2H_2O$. Slowly sol. in cold, easily and abundantly in hot H_2O , and is gradually decomp. by boiling. Easily sol. in acids. Insol. in alcohol. (Berzelius.)

$3.5K_2SO_4, Th(SO_4)_2$. Insol. in $K_2SO_4 + Aq$ of concentrations above 4.5%. (Barre.)

$4K_2SO_4, Th(SO_4)_2 + 2H_2O$. (Chydenius.)

Potassium tin (stannous) sulphate, $K_2SO_4, SnSO_4$.

(Marignac.)

Potassium tin (stannic) sulphate, $K_2Sn(SO_4)_2$.

Easily sol. in H_2O with decomp.

Sol. in HCl . (Weinland, Z. anorg. 1907, 54, 250.)

Potassium tin (stannous) sulphate chloride, $4K_2SO_4, 4SnSO_4, SnCl_2$.

Can be recrystallised from H_2O . (Marignac, Ann. Min. (5) 12, 62.)

Potassium titanium sulphate, $K_2SO_4, Ti(SO_4)_2 + 3H_2O$.

Difficultly sol. in H_2O or $HCl + Aq$. Decomp. by much H_2O . (Wallace, Pogg. 102, 453.)

Potassium ttranyl sulphate, $2K_2SO_4, 3TiO, SO_4 + 10H_2O$.

Very sol. in H_2O with decomp. Insol. in conc. H_2SO_4 . (Rosenheim, Z. anorg. 1901, 26, 251.)

$K_2SO_4, TiO_2SO_4 + 7H_2O$. Very hygroscopic and sol. in H_2O . (Mazzuchelli and Pontanelli, C. C. 1909, II, 420.)

$K_2SO_4, (TiO)SO_4$. (Spence, C. C. 1901, II, 747.)

Potassium uranous sulphate, $K_2SO_4, U(SO_4)_2 + H_2O$.

Very sl. sol. in H_2O . (Rammelsberg.)

Potassium uranyl sulphate, $K_2SO_4, (UO_2)SO_4 + 2H_2O$.

Sol. in 9 pts H_2O at 22° and in 0.51 pt. at 100° . Insol. in alcohol. (Ebelmen, A. ch. (3) 5, 211.)

100 pts. of aqueous solution sat. at 25° contain 10.5 pts. salt; at 70.5° contain 23.93 pts. salt (Rimbach, B. 1904, 37, 478.)

$+ 3H_2O$. (de Coninck, Chem. Soc. 1905, 88, (2) 394.)

$2K_2SO_4, (UO_2)SO_4 + 2H_2O$. Decomp. by H_2O

Cannot be cryst. from rather conc. H_2SO_4 , as it is completely decomp. by it. (Rimbach, B. 1905, 38, 1572.)

$K_2O, 2UO_3, 3SO_3$. Ppt. Identical with UO_2, OK, SO_3H of Scheller, (A. 1867, 144, 238.) (Kohlschütter, A., 1900, 311, 11.)

$2K_2SO_4, 3(UO_2)SO_4 + H_2O$. Sol. in H_2O . Insol. in alcohol. (Berzelius.)

Does not exist. (Ebelmen.)

Potassium vanadium sulphate, $K_3O, V_2O_5, 2SO_3 + 6H_2O = K(VO_2)SO_4 + 3H_2O$.

(Friedheim, B. 24, 1183.)

$= KVO_3, K_2SO_4, V_2O_5, 2SO_3 + 9H_2O$ of Münzing (Berlin, Dissert. 1889.)

$K_2SO_4, VSO_4 + 6H_2O$. Sol. in H_2O . (Piccini, Z. anorg. 1902, 32, 61.)

$K_2V_2(SO_4)_4 + 24H_2O$. 100 pts. H_2O dissolve 198.4 pts. salt. at 10° . Sp. gr. of sat. solution at $4^\circ/20^\circ = 1.782$. (Piccini, Z. anorg. 1897, 13, 446.)

Potassium vanadyl sulphate,

$K_2SO_4, (VO)_2(SO_4)_3$.

Very slowly sol. in H_2O , still less sol. in dil. alcohol. (Gerland.)

$K_2SO_4, VOSO_4 + 3H_2O$. Easily sol. in H_2O . Sol. in alcohol + conc. H_2SO_4 . (Koppel, Z. anorg. 1903, 35, 178.)

$K_2SO_4, 2VOSO_4$. Very hygroscopic. Very sol. in H_2O but goes into solution slowly. (Koppel and Behrendt, B. 1901, 34, 3935.) Easily sol. in H_2O . (Koppel, Z. anorg. 1903, 35, 174.)

Potassium yttrium sulphate, $4K_2SO_4, Y_2(SO_4)_3$.

Sol. in 16 pts. cold H_2O , and in 10 pts. sat. $K_2SO_4 + Aq$, and more abundantly if the latter solution contains ammonium salts or free acid. (Berlin.)

$3K_2SO_4, 2Y_2(SO_4)_3$. 100 cem. cold sat.

$K_2SO_4 + Aq$ dissolve an amount of this salt corresponding to 4.685 g. Y_2O_3 . (Cleve.)

Potassium zinc sulphate, K_2SO_4 , $ZnSO_4 + 6H_2O$.

Sol. in 5 pts. cold H_2O . (Bucholz, N J Pharm 9. 2. 26.)

100 pts. H_2O dissolve at:

0° 10° 15° 25° 36°
12.6 18.7 22.5 28.8 39.9 pts. hydrous salt,
45° 50° 58° 65° 70°
51.2 54.0 67.6 81.3 87.9 pts. hydrous salt.
(Tobler, A. 95. 193.)

100 pts H_2O at 15° dissolve 14.8 pts. K_2SO_4 , $ZnSO_4 + 6H_2O$; sp. gr. of sat. H_2O solution at 15° = 1.0939. (Schiff, A. 109. 326.)

1 l. H_2O dissolves 131.9 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Potassium zirconium sulphate, $2K_2O$, $6ZrO_2$, $7SO_3 + 9H_2O$.

Decomp. by H_2O .

$3K_2O$, $3ZrO_2$, $7SO_3 + 9H_2O$. Insol. in H_2O .
 $Zr_2O_3(KSO_4)_2 + 8H_2O$ Ppt. (Rosenheim, B. 1905, 38. 815.)

Potassium sulphate vanadate.

Very difficultly sol. in H_2O . Insol. in alcohol. (Berzelius.)

Potassium sulphate antimony trifluoride.

See Antimony trifluoride potassium sulphate.

Praseodymium sulphate, basic, $(PrO)_2SO_4$.

Insol. in H_2O . (Matignon, C R. 1902, 134. 660.)

Insol. in H_2O . Nearly insol. in dil. acids. (Wöhler, B. 1913, 46. 1730)

Praseodymium sulphate, $Pr_2(SO_4)_3$.

Sol. in H_2O ; very hygroscopic. 23.64 pts. are sol in 100 pts H_2O at 0° and 17.7 pts. at 20°. (von Scheele, Z. anorg. 1898, 18. 357-358.)

+5 H_2O . Sol. in H_2O (von Scheele, Z. anorg. 1898, 18. 357.)

Difficultly sol in H_2O . (Kraus, Zeit. Kryst. 1901, 34. 400)

1.50 pts. $Pr_2(SO_4)_3$ are sol. in 100 pts. H_2O at 85°; 1.45 pts. at 90°; and 1.02 pts. at 95°. (Muthmann and Rölzig, B. 1898, 31. 1729.)

+8 H_2O . (Kraus, Zeit. Kryst 1901, 34. 406.)

Sol. in H_2O . (von Scheele, Z. anorg. 1898, 18. 357.)

Solubility in H_2O at t°.

t°	Pts $Pr_2(SO_4)_3$
0	19.79
18	14.10
35	10.31
55	7.09
75	4.13

(Muthmann and Rölzig, B. 1898, 31. 1727.)

+15½ H_2O Sol. in H_2O (von Scheele, Z. anorg 1898, 18. 357.)

Praseodymium hydrogen sulphate, $Pr(SO_4H)_3$.

(Brauner, Z. anorg. 1904, 38. 330.)

Solubility in boiling conc. H_2SO_4 . 100 g. of the solution contain 1.02 g of the acid sulphate. (Matignon, C. R. 1902, 134. 659.)

Radium sulphate.

Less sol. in H_2O than corresponding Ba comp. (Curie, Dissert 1903.)

Rhodium sulphate, $Rh_2(SO_4)_3 + 12H_2O$.

Easily sol. in H_2O . (Berzelius.)

Sl. sol. in, but not decomp. by H_2O when not more than 16 pts. H_2O are present to 1 pt salt. Decomp. by hot H_2O to—
 $Rh_2(SO_4)_3$, Rh_2O_3 . Insol. in H_2O . (Leidié, C. R. 107. 234.)

Rhodium rubidium sulphate, $Rh_2(SO_4)_3$, $Rb_2SO_4 + 24H_2O$.

Sol. in H_2O ; m.-pt., 108-109°. (Piccini, Z. anorg. 1901, 37. 65)

Rhodium thallium sulphate, $Rh_2(SO_4)_3$, $Tl_2SO_4 + 24H_2O$.

Very sol. H_2O . (Piccini, Z. anorg. 1901, 37. 69.)

Rhodium sodium sulphate, $Rh_2Na_2(SO_4)_4$.

Insol. in H_2SO_4 or aqua regia. (Seubert and Kobbe, B. 23. 2560.)

Rubidium sulphate, Rb_2SO_4 .

100 pts. H_2O dissolve 42.4 pts. at 10°. (Bunsen.)

100 cc. H_2O at 17-18° dissolve 44.7 g. Rb_2SO_4 . (Tutton, Chem. Soc. 1894, 65. 632.)

Sat. $Rb_2SO_4 + Aq$ contains at:

3° 20°
27.4 32.5% Rb_2SO_4 .

37° 197° 170°
37.3 43.9 49.2% Rb_2SO_4 .

(Étard, A. ch. 1894, (7) 2. 550.)

These results seem to indicate that there is only one double salt formed by the union of $\text{Sm}_2(\text{SO}_4)_3$ with Na_2SO_4 . Formula of this salt is $2\text{Sm}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4, 6\text{H}_2\text{O}$.

(Keyes and James, J. Am. Chem. Soc. 1914, 36. 635.)

Samarium hydrogen sulphate, $\text{Sm}(\text{HSO}_4)_3$.

Sl. sol. in H_2O . (Matignon, C. R. 1905, 141. 1230.)

Ppt. (Brauner, Z. anorg. 1904, 38. 331.)

Samarium sodium sulphate, $\text{Sm}_2(\text{SO}_4)_3, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$.

Sl. sol. in sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ (Cleve, Bull. Soc. (2) 43. 166.)

$2\text{Sm}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4 + 6\text{H}_2\text{O}$. Only double salt formed at 25° (Keyes and James, J. Am. Chem. Soc. 1914, 36. 365.)

Scandium sulphate, basic, $\text{Sc}_2\text{O}(\text{SO}_4)_2$.

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium sulphate, $\text{Sc}_2(\text{SO}_4)_3$.

Anhydrous Easily sol. in H_2O .

+ $2\text{H}_2\text{O}$

+ $5\text{H}_2\text{O}$; 54.61 g. of pentahydrate are sol. in 100 cc. H_2O at 25° . (Wirth, Z. anorg. 1914, 87. 10.)

Solubility in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25°

$\text{H}_2\text{SO}_4 + \text{Aq.}$	g. $\text{Sc}_2(\text{SO}_4)_3$ in 100 g. of the solution
0.00	28.52
0.5-n	29.29
1.0-n	19.87
4.86-n	8.363
9.73-n	1.315

In 22.35-n H_2SO_4 the solid phase is $\text{Sc}_2(\text{SO}_4)_3, 3\text{H}_2\text{SO}_4$ and 100 g. sat. solution contain 0.484 g. $\text{Sc}_2(\text{SO}_4)_3$.

(Wirth, Z. anorg. 1914, 87. 10.)

+ $6\text{H}_2\text{O}$. Extremely sol. in H_2O , but not deliquescent.

Scandium hydrogen sulphate, $\text{Sc}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$.

(Wirth.)

Scandium sodium sulphate, $\text{Sc}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4 + 12\text{H}_2\text{O}$.

Sol. in H_2O . (Cleve.)

+ $10\text{H}_2\text{O}$. Sol. in H_2O and in excess of $\text{Na}_2\text{SO}_4 + \text{Aq.}$ (Meyers, Z. anorg. 1914, 86. 279.)

Silver (argentoargentic) sulphate, $\text{Ag}_2\text{SO}_4, \text{Ag}_2\text{SO}_4 + \text{H}_2\text{O}$.

Gradually sol. in conc., but not attacked by dil. $\text{HNO}_3 + \text{Aq.}$ Not attacked by hot conc. H_2SO_4 . (Lea, Sill. Am. J. 144. 322.)

Silver sulphate, Ag_2SO_4 .

Sol. in 200 pts. cold, and less than 100 pts. boiling H_2O . (Wittstein.)

Sol. in 88 pts. boiling H_2O (Schnaubart), in 87.25 pts. boiling H_2O (Wenzel), in 68.35 pts. H_2O at 100° (Kremers).

100 pts. H_2O at 15.5° dissolve 1.15 pts. Ag_2SO_4 . (Ure's Dict.)

Sol. in 160 pts. H_2O at 18.75° . (Abl.)

1 l. H_2O dissolves 2.57×10^{-2} g.-mol. Ag_2SO_4 at 25° . (Drucker, Z. anorg. 1901, 28. 362.)

1 l. H_2O dissolves 7.707 g. Ag_2SO_4 at 17° . (Euler, Z. phys. Ch. 1904, 49. 314.)

1 l. H_2O dissolves 0.0267 mol. Ag_2SO_4 at 25° . (Rothmund, Z. phys. Ch. 1909, 69. 539.)

1 l. H_2O dissolves 8.35 g. Ag_2SO_4 at 25° .

(Hill and Simmons, Z. phys. Ch. 1909, 67-603.)

1 l. H_2O dissolves 8.344 g. Ag_2SO_4 at 25° .
Sp. gr. of solution = 1.0052. (Harkins, J. Am. Chem. Soc. 1911, 33. 1812)

Solubility in H_2O at t° .

t°	Pts Ag_2SO_4 in 100 pts. of the solution
14.5	0.730
33	0.909
51.5	1.062
75	1.237
100	1.393

(Barre, A. ch. 1911, (8) 24. 211.)

More sol in $\text{H}_2\text{SO}_4 + \text{Aq}$ than in pure H_2O .
Still more sol in $\text{HNO}_3 + \text{Aq}$ and still more in conc. H_2SO_4 , from which it is pptd. by H_2O . (Schnaubart.)

Solubility in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

$\frac{1}{2}\text{H}_2\text{SO}_4 + \text{Aq}$. Normality	Solubility of Ag_2SO_4 g.-mol. per litre
0.02	2.60×10^{-2}
0.04	2.64×10^{-2}
0.10	2.71×10^{-2}
0.20	2.75×10^{-2}

(Drucker, Z. anorg. 1901, 28. 362.)

Solubility of Ag_2SO_4 in acids + Aq at 25° .

C = concentration of acid in acid + Aq in milliequivalents per l.

S = Solubility of Ag_2SO_4 in acid + Aq in milliequivalents per l.

Up to 33° , the solubility of Ag_2SO_4 in $Na_2SO_4 + Aq$ increases with the concentration of Na_2SO_4 ; above 33° the solubility of Ag_2SO_4 rises to a maximum at a certain concentration of Na_2SO_4 dependent on the temp. The

solubility curves for various temp all end at a concentration of 40% Na_2SO_4 , that is, the mixed crystals formed at this concentration are equally sol. at all temp.

(Barre, C. R. 1910, 150. 1323.)

(Rothmund, Z. phys. Ch. 1909, **69**. 539.)

Insol. in methyl acetate (Bezold, Dissert. 1906; Naumann, B. 1909, **42**. 3790); ethyl acetate (Naumann, B. 1904, **37**. 3801); liquid methylamine. (Franklin, J. Am. Chem. Soc. 1906, **28**. 1420); acetone. (Naumann, B. 1904, **37**. 4329; Eidmann, C. C. 1899, II. 1014.)

Very sol. in a hot mixture of H_2SO_4 and monobromobenzene, less sol. in cold. (Couper, A. ch. (3) **52**. 311.)

Silver hydrogen sulphate, AgHSO_4 .

Decomp. by H_2O ; sol. in H_2SO_4 . (Stas.) Ag_2O , $3\text{H}_2\text{O}$, $4\text{SO}_3 + 2\text{H}_2\text{O} = \text{AgH}_3(\text{SO}_4)_2 + \text{H}_2\text{O}$. As above. (Schultz, Pogg. **133**. 137.) $2\text{Ag}_2\text{O}$, $3\text{H}_2\text{O}$, $5\text{SO}_3 + 2\text{H}_2\text{O} = \text{Ag}_2\text{H}_4(\text{SO}_4)_3 + 2\text{H}_2\text{O}$. As above. (Schultz.)

Silver pyrosulphate, $\text{Ag}_2\text{S}_2\text{O}_7$.

Decomp. by H_2O . (Weber, B. **17**. 2497.)

Silver thallic sulphate, $\text{AgTl}(\text{SO}_4)_2$.

(Lepsius, Chem. Ztg. 1890. 1327.)

Silver tin (stannic) sulphate, $\text{Ag}_2\text{Sn}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.

Ppt. Decomp. by H_2O . Sol. in HCl . (Weinland, Z. anorg. 1907, **54**. 250.)

Silver sulphate acetylde, Ag_2SO_4 , $2\text{Ag}_2\text{C}_2$.

(Plimpton, Proc. Chem. Soc. 1892, **8**. 109.)

Silver sulphate ammonia, $\text{Ag}_2\text{SO}_4, 2\text{NH}_3$.

Completely sol. in H_2O . (Rose, Pogg. 20. 153)

$\text{Ag}_2\text{SO}_4, 4\text{NH}_3$. Easily sol. in H_2O or $\text{NH}_4\text{OH} + \text{Aq}$ without decomp. (Mitscherlich.)

Silver sulphate mercuric oxide, $\text{Ag}_2\text{SO}_4, \text{HgO}$.

Insol. in H_2O , but decomp. even in the cold. Sol. in HNO_3 and H_2SO_4 . (Finci, Gazz. ch. it. 1911, 41. (2) 548.)

Silver sulphate sulphide, $\text{Ag}_2\text{SO}_4, \text{Ag}_2\text{S}$.

Decomp. by hot H_2O or cold $\text{HCl} + \text{Aq}$. Sol. in boiling $\text{HNO}_3 + \text{Aq}$. (Poleck and Thümmel, B. 16. 2435)

Sodium sulphate, Na_2SO_4 .*Anhydrous.*

1 pt. Na_2SO_4 is sol. in 7.367 pts. H_2O at 15° (Gerlach), in 8.52 pts. H_2O at 13.3° (Poggendorf); in 10 pts. H_2O at 13° , and in 3.3 pts. H_2O at 62.2° (Wenzel).

100 pts. H_2O at 0° dissolve 5.155 pts. Na_2SO_4 (Pfaff, A. 99. 226); at 100.6° dissolve 45.985 pts. Na_2SO_4 (Griffiths).

See below for further data.

+ $7\text{H}_2\text{O}$. Efflorescent. Insol. in alcohol.

See below for further data.

+ $10\text{H}_2\text{O}$.

$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ is sol. in H_2O with absorption of heat; 20 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ mixed with 100 pts. H_2O at 12.5° lower the temperature 6.8° . (Rüdorff, B. 2. 68.)

Sol. in 2.33 pts. H_2O at 19° , or 100 pts. H_2O at 19° dissolve 42.8 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ (Schiff, A. 109. 326.)

100 pts. H_2O dissolve a pts. Na_2SO_4 and b pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ at t° .

t°	a	b	t°	a	b

(Brandes and Firnhaber, 1824.)

1 pt. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ is sol. in 6.1 pts. H_2O at 7.5° , 3.44 pts. at 12.5° , 2.41 pts. at 18.75° , and 1.724 pts. at 20° (Karsten)

1 pt. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ is sol. in 2.86 pts. cold, and 0.8 pt. boiling H_2O (Bergmann), in 3 pts. cold, and 0.5 pt. boiling H_2O (Wittstein), in 4 pts. cold, and 1 pt. boiling H_2O (Fourcroy), in 3 pts. H_2O at 18.75° (Abi)

100 pts. H_2O dissolve 12.494 pts. Na_2SO_4 or 35.492 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ at 15° , and sp. gr. of solution = 1.10847 (Michel and Krafft, A. ch. (3) 41. 478)

100 pts. H_2O dissolve 39.4 pts. cryst. salt at 15.5° ; 80 pts. cryst. salt at 100° (Ure's Dict)

100 pts. H_2O dissolve pts. Na_2SO_4 at t° .

t°	Pts. Na_2SO_4	t°	Pts. Na_2SO_4
0	4.53	24 1	25.92
17.9	16 28	33	50 81

(Diacon, J. B. 1866. 61.)

Solubility of Na_2SO_4 in H_2O at various pressures and temp. Pts. Na_2SO_4 contained in 100 pts. sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ at A pressure in atmos. and t° are given.

A	0°	15°	15.4°	A	15°
1	4 40	11 32	11.4	30	10.05
20	4.53	10.78	10 74	40	10.33

(Möller, Pogg. 117. 386.)

The solubility of $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ increases with the temperature from 0 to 34° . At 34° and above, it is converted into the anhydrous salt, the solubility of which is least at 103.17° , which is the boiling point of the saturated solution, and increases by cooling from that temp. down to $18-17^\circ$. Below the latter temperature the anhydrous salt cannot exist in the presence of H_2O , but is converted into $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$, or $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$. The solubility of $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ increases with the temperature from $0-28^\circ$, and at 27° it is converted into the anhydrous salt.

Thus there are two different rates of solubility for Na_2SO_4 for temperatures from $0-18^\circ$, three different rates from $18-26^\circ$, two from $26-34^\circ$, and only one above 34° .

1. By heating $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ to fusion and raising the heat until the liquid boils, placing in a closed vessel and cooling, the greater part of the anhydrous salt, which separates out on heating, redissolves on cooling, and the amount increases as the temp. falls until 18° is reached. Below 18° $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ is formed. Saturated $\text{Na}_2\text{SO}_4 + \text{Aq}$ thus obtained contains for 100 pts. HO at:

18° 20° 25° 26°
53.25 52.76 51.53 51.31 pts. Na_2SO_4 ,

30° 33° 34° 36°
50.37 49.71 49.53 49.27 pts. Na_2SO_4 .

2. By allowing the boiling saturated solution free from undissolved salt to cool to 0°

with exclusion of air until crystals of $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ are formed, then removing the greater part of the mother liquor with a warm pipette, and warming the rest of the mother liquor with the excess of crystals, the crystals dissolve in increasing quantity between 0° and $26-27^\circ$, so that at 27° the solution contains 56 pts. Na_2SO_4 to 100 pts. H_2O . The remaining undissolved crystals of $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ begin to melt very slowly at 27° , more quickly at higher temperatures, and cause the separation of anhydrous crusts, and thus the strength of the solution is gradually lowered to the normal. Saturated solutions prepared in this way contain for 100 pts. H_2O at:

0°	10°	13°
19.62	30.49	34.27 pts. Na_2SO_4
or 44.89	78.9	92.9 pts. $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$.
15°	16°	17°
37.43	38.73	39.99 pts. Na_2SO_4
or 105.8	117.4	111.0 pts. $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$,
18°	19°	20°
41.63	43.35	44.73 pts. Na_2SO_4
or 124.6	133.0	140.0 pts. $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$,
25°	26°	
52.94	54.97	pts. Na_2SO_4 .
or 188.5	202.6	pts. $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$.

3. Solutions obtained by shaking H_2O with $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ contain for 100 pts. H_2O at:

0°	10°	15°
5.02	9.00	13.20 pts. Na_2SO_4
or 12.16	23.04	35.96 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$,
18°	20°	25°
16.80	19.40	28.00 pts. Na_2SO_4
or 43.41	58.85	98.48 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$,
26°	30°	
30.00	40.00	pts. Na_2SO_4
or 109.81	184.1	pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$,
33°	34°	
50.76	55.0	pts. Na_2SO_4 .
or 323.1	412.2	pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$.

At 34° , $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ begins to melt in its crystal H_2O . As long as there is a considerable quantity of unchanged crystals present, the solution contains 55 pts. Na_2SO_4 for 100 pts. H_2O , but as the hydrous salt decreases in amount and becomes converted into the anhydrous salt, the solution becomes weaker and contains only 49.53 pts. Na_2SO_4 for 100 pts. H_2O after warming for 6 or 8 hours at 34° . In the same way temporary solutions can be obtained at $36-40^\circ$ with 55-56 pts. Na_2SO_4 to 100 pts. H_2O , but this amount sinks to the normal even more quickly than at 34° .

Na_2SO_4 dehydrated at $100-150^\circ$, after the addition of $1\frac{1}{2}-1\frac{1}{2}$ pts. H_2O , gives a solution between 0° and 32° of the same strength as $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$, but at 34° a solution with

55 pts. Na_2SO_4 to 100 pts. H_2O cannot be obtained, but one with 49.53 pts. is formed. (Löwel, A. ch. (3) 49. 32.)

4. Solubility of anhydrous salt. Above 34° , 100 pts. H_2O dissolve at:

35°	40°	45°	50°	55°	
50.2	48.8	47.7	46.7	45.9	pts. Na_2SO_4
60°	65°	70°	75°	80°	
45.3	44.8	44.4	44.0	43.7	pts. Na_2SO_4
85°	90°	95°	100°	103.5°	
43.3	43.1	42.8	42.5	42.2	pts. Na_2SO_4 .

(Mulder.)

(Wuite, Z. phys. Ch. 1913, 86. 364.)

Supersaturated solutions of Na_2SO_4 are easily formed; when $\text{Na}_2\text{SO}_4 + \text{Aq}$ sat. at its b.-pt. is hermetically sealed, no crystals are deposited on cooling (Löwel). Supersat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ may also be obtained by cooling hot sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ in flasks loosely stoppered with cotton wool (Schroeder, A. 109. 45), or by covering the containing vessel with a glass plate, watch-glass, card, etc., or by covering the liquid itself with a layer of oil, and then allowing to cool.

Hot $\text{Na}_2\text{SO}_4 + \text{Aq}$ containing 1 pt. H_2O to 1 pt. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ does not crystallise on slowly cooling or on being quickly cooled by immersion in cold water, if it is contained in a barometer tube freed from air by boiling, or in an exhausted well-closed vessel, or in an open vessel with a layer of oil of turpentine on it (Gay-Lussac); or in a vessel containing air, either well stoppered or furnished with a loose cover (Schweigger); or in an open vessel under a bell jar full of air and closed at the bottom with a water joint, or in open bottles placed in a quiet situation; or in an open glass enclosed in a stoppered vessel, containing air and some KOH for drying; in this case $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ effloresces from the solution, and when washed down again does not cause instant crystallisation, but redissolves.

The crystallisation of a solution cooled in this way may often be brought about instantaneously, or often again after a short time; (1) by agitation, when the solution has been cooled in an open vessel; (2) by access of air caused by opening the vessel, the crystallisation taking place the more rapidly the larger the opening. In this case the crystallisation begins at the top, where the solution, the vessel, and the air come in contact; when a particle of dust falls in the liquid the crystallisation begins a little under the surface. When the solution has been cooled in vacuo, a bubble of air, hydrogen, carbonic acid, or nitrous oxide is sufficient to set up the crystallisation; (3) by contact with a solid body. The latter do not cause crystallisation when cooled in contact with the liquid, nor (excepting a crystal of $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$) when they are moistened or warmed before contact with the solution.

Supersat. $\text{Na}_2\text{SO}_4 + \text{Aq}$ is brought to crystallisation by addition of a crystal of $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$, or an isomorphous substance as $\text{Na}_2\text{SeO}_4 + 10\text{H}_2\text{O}$, or $\text{Na}_2\text{CrO}_4 + 10\text{H}_2\text{O}$. Other crystals, as $\text{MgSO}_4 + 7\text{H}_2\text{O}$, etc., have no action. (Thomson, Chem. Soc. 35. 199.)

See also Hartley, Jones and Hutchinson, Chem. Soc. 1903, 93. 825, on "Spontaneous crystallisation of sodium sulphate solutions," and de Coppet (A. ch. 1907, (8) 10. 457) on same subject.

A more extended discussion of the phenomena and causes of supersaturation is not considered to be within the scope of this work.

$\text{Na}_2\text{SO}_4 + \text{Aq}$ sat. at 15° has sp. gr. 1.10847 (Michel and Krafft); at 15° has sp. gr. 1.119 (Stolba); at 16°

has sp. gr. 1.1162 (Stolba), at 10° contains 29 pts Na_2SO_4 to 100 pts H_2O (supersaturated?), and has sp. gr. 1.1259 (Karsten)

At 33° and above the values represent the solubility of Na₂SO₄ in NaCl + Aq. At 10° the solid phase in contact with the solution is probably Na₂SO₄ · 7H₂O. Between 17° and 33° the solid phase is either Na₂SO₄ · 10H₂O or Na₂SO₄. An inversion of Na₂SO₄ · 10H₂O to Na₂SO₄ takes place at various temp. below 33°, depending on the amount of NaCl contained in the solution in contact with the solid sodium sulphate

(Seidell, Am. Ch. J. 1902, 27. 55.)

Solubility in NaCl + Aq at 15°.

Composition of the sat. solution		Solid Phase
% by wt Na ₂ SO ₄	% by wt. NaCl	
11 5	0	Na ₂ SO ₄ + 10H ₂ O
7 86	5 42	"

0	26 3	"

(Schreinemakers and de Baat, Z. phys. Ch. 1909, 67. 554.)

Sol. in sat. NH₄NO₃ + Aq. (Margueritte, C. R. 33. 307.)

Sol. in sat. KNO₃ + Aq with pptn. after several hours. (Karsten.)

Na₂SO₄ + 10H₂O is sol. in sat. NaNO₃ + Aq without pptn., but if effloresced Na₂SO₄ is used, NaNO₃ is pptd. at first, and subsequently Na₂SO₄ + 7H₂O.

The presence of CaSO₄ does not affect the solubility of Na₂SO₄ in H₂O to any great extent. (Barre, A. ch. 1911, (8) 24. 160.)

More sol. in K₂SO₄, CuSO₄, MgSO₄ + Aq. than in H₂O. (Pfaff, A. 99. 226.)

100 pts. H₂O dissolve 20.7 pts. CuSO₄ and 15.9 pts. Na₂SO₄. (Rüdorff, B. 6. 484.)

Sol. in sat. MgSO₄, K₂SO₄, CuSO₄ + Aq, but if more Na₂SO₄ than can be dissolved is added to the CuSO₄ + Aq, a large quantity of a double sulphate separates out. (Karsten.)

The solubility of Na₂SO₄ in K₂SO₄ + Aq has been determined at 15°, 25°, 40°, 50°, 60°, 70° and 80°. From the results the conclusion is drawn that sodium and potassium sulphates form a double salt of the formula K₂Na(SO₄)₂. (Okada, Chem. Soc. 1915, 108. (2) 344.)

See also under CuSO₄, MgSO₄, and K₂SO₄. Slowly but abundantly sol. in sat. ZnSO₄ + Aq, with separation of a double salt after a few days.

(Barre, C R 1911, **150**. 155)

Solubility in Na acetate + Aq at 25° .

Solid phase, $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$.

Composition of the solutions

% Na acetate	% Na_2SO_4	% H_2O
0	21.9	78.10
4.10	17.72	78.18
7.71	16.48	75.81
12.58	13.50	73.92
16.26	11.50	72.24
20.63	8.10	71.27

(Fox, Chem. Soc. 1909, **95**. 888.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**. 829.)

Alcohol precipitates $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ from the cold saturated aqueous solution. (Brandes and Firnhaber.)

Insol. in alcohol of from 0.817 to 0.90 sp. gr. (Kürwan.)

1000 pts alcohol of 0.872 sp. gr dissolve 0.7 pt. Na_2SO_4 at $12.5-15^\circ$, of 0.905 sp. gr dissolve 3.8 pts. Na_2SO_4 at $12.5-15^\circ$.

Insol. in alcohol of 0.83-0.85 sp. gr. (Anthon.)

From supersaturated solution in alcohol, crystals with $7\text{H}_2\text{O}$ are formed. (Schiff, A. **106**. 11.)

100 pts. 10% alcohol at 15° contain 14.35 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$; 20% alcohol at 15° contain 5.6 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$; 40% alcohol at 15° contain 1.3% $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$. (Schiff, A. **118**. 365.)

Very sl. sol. in abs. alcohol at ord. temp.; somewhat more, though still exceedingly sparingly, sol. in abs. alcohol acidulated with H_2SO_4 . (Fresenius.)

Alcohol does not affect crystal H_2O of $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$.

Solubility of Na_2SO_4 in alcohol + Aq at t° .

Between certain concentrations of alcohol, the liquid separates into two layers at 25° , 36° and 45° , of the following composition.

t°	Upper Layer			Lower Layer		
	H_2O	alcohol	Na_2SO_4	H_2O	alcohol	Na_2SO_4
25	66.5	27.3	6.2	67.4	5.1	27.5
	68.1	23.9	8.0	68.5	6.0	25.5
	68.3	23.1	8.6	68.3	6.7	25.0
36	57.7	38.4	3.9	66.6	4.1	29.3
	65.0	28.3	6.7	68.8	5.9	25.3
	68.1	21.2	10.7	68.9	9.4	21.7
45	61.8	32.9	5.3	68.4	8.8	22.8
	65.8	25.3	8.9	68.6	10.1	21.3
	66.0	24.0	10.0			

(de Bruyn, Z. phys. Ch. 1900, **32**. 101.)

Solubility in alcohol + Aq at 25°.

Composition of the sat. solution			Solid phase
% by wt. H ₂ O	% by wt. alcohol	% by wt. Na ₂ SO ₄	
63.41	34.84	1.75	Na ₂ SO ₄ · 10H ₂ O
49.0	50.5	0.5	
46.6	53.0	0.4	Na ₂ SO ₄ · 10H ₂ O + Na ₂ SO ₄
34.9	64.95	0.15	

(Schreinemakers, Z. phys. Ch. 1909, **67**, 552.)

Solubility data for solution of NaCl in ethyl alcohol + Aq. at 15°, 25°, and 30° are given by Schreinemakers (Z. phys. Ch. 1909, **67**, 556).

Solubility in propyl alcohol + Aq at 20°.

% propyl alcohol	g Na ₂ SO ₄ per 100 g. solution	% propyl alcohol	g Na ₂ SO ₄ per 100 g. solution
42.20	1.99	56.57	0.55
49.77	1.15	60.64	0.44
55.65	0.72	62.81	0.38

(Linebarger, Am. Ch. J. 1892, **14**, 380.)

Sol. in glycerine.

Insol. in acetone. (Naumann, B. 1904 **37**, 4329; Eidmann, C. C. 1899, II, 1014.); benzonitrile. (Naumann, B. 1914, **47**, 1370) methyl acetate (Naumann, B. 1909, **42**, 7790); ethyl acetate. (Naumann, B. 1910, **43**, 314.)

100 g. H₂O dissolve 183.7 g. sugar + 30.5 g. Na₂SO₄ at 31.25°, or 100 g. sat. solution contain 52.2 g. sugar + 9.6 g. Na₂SO₄. (Köhler, Z. Ver. Zuckerind., 1897, **47**, 447.)

Min. Anhydrous, *Thenardite* + 10H₂O, *Mirabilite*

Sodium hydrogen sulphate, NaHSO₄.

Not deliquescent. Very sol. in H₂O with decomposition.

Sol. in 2 pts. H₂O at 0° (Link); 1 pt. H₂O at 100° (Schubarth). 100 pts H₂O at 15.5° dissolve 92.72 pts. Sol. in 2 pts. H₂O at 18.75° (Abl); decomp. by alcohol.

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, **20**, 829.)

+ H₂O. Deliquescent, and decomp. by the H₂O which it takes up.

NaHS(SO₄)₂ Decomp. by H₂O. (Schultz.)

Trisodium hydrogen sulphate, Na₃H(SO₄)₂.

Sol. in H₂O with decomp.

+ H₂O. (Rose.)

Sodium pyrosulphate, Na₂S₂O₇.

Sol. in fuming H₂SO₄ without decomp.

Sodium thallic sulphate, Na₂SO₄ · Tl₂(SO₄)₃.

Sol. in H₂O. (Strecker, A. **135**, 207.)

Sodium thorium sulphate, Na₂SO₄ · Th(SO₄)₂ + 6H₂O.

Sol. in H₂O. 100 pts. cold sat. Na₂SO₄ + Aq dissolve 4 pts. of this salt (Cleve.)

See also under Na₂SO₄ + ThSO₄

Sodium titanium sesquisulphate, Na₂Ti₂(SO₄)₄ + 5H₂O.

Sol. in H₂O (Spence, Chem. Soc. 1904, **86**, (2) 412.)

Insol. in alcohol (Knecht, B. 1903, **36**, 169.)

Sodium titanyl sulphate, Na₂TiO₂(SO₄)₂ + 10H₂O.

Hygroscopic. (Mazzuchelli and Pantanelli, C. C. 1909, II, 420.)

Sodium uranyl sulphate, Na₂(UO₂)(SO₄)₂ + 3H₂O.

(de Coninck, C. C. 1905, I, 919.)

Sodium vanadium sulphate, Na₂V₂(SO₄)₄ + 24H₂O.

Very sol. in H₂O. (Piccini, Z. anorg. 1897, **13**, 444.)

Sodium vanadyl sulphate, Na₂SO₄ · VOSO₄ + 4H₂O.

Easily sol. in H₂O and alcohol + conc. H₂SO₄. (Koppel, Z. anorg. 1903, **35**, 177.)

Na₂SO₄ · 2VOSO₄ + 2½H₂O. Slowly sol. in H₂O.

Can be cryst. from H₂SO₄ at 100°. (Koppel.)

Sodium yttrium sulphate, Na₂SO₄ · Y₂(SO₄)₃ + 2H₂O.

Quite sol. in H₂O. (Cleve.)

The only double salt capable of existing at 25°. (James and Holden, J. Am. Chem. Soc. 1913, **35**, 562.)

Sodium zinc sulphate, Na₂SO₄ · ZnSO₄ + 4H₂O.

Deliquescent in moist air.

Decomp. into constituents on dissolving in H₂O. (Graham, Phil Mag. **18**, 417.)

Solubility of Na₂Zn(SO₄)₂ + 4H₂O in 100 g. H₂O at t°.

t°	grams ZnSO ₄	grams Na ₂ SO ₄
25	26.32	23.40
30	26.475	23.445
35	26.365	23.525
40	26.68	23.63

(Koppel, Z. phys. Ch. 1905, **52**, 409.)

Solubility of $\text{Na}_2\text{Zn}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{ZnSO}_4$.
7H₂O in 100 g H₂O at t°.

t°	grams ZnSO ₄	grams Na ₂ SO ₄	t°	grams ZnSO ₄	grams Na ₂ SO ₄
10	45.79	11.24	25	56.155	7.215
15	48.81	10.175	30	60.55	6.34
20	52.34	8.625	35	65.25	5.64

(Koppel.)

Solubility of $\text{Na}_2\text{Zn}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{ZnSO}_4$.
6H₂O in 100 g H₂O at t°.

t°	grams ZnSO ₄	grams Na ₂ SO ₄
38	66.64	4.98
40	64.89	4.71

(Koppel.)

Solubility of $\text{Na}_2\text{Zn}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$.
10H₂O in 100 g H₂O at t°.

t°	grams ZnSO ₄	grams Na ₂ SO ₄
10	43.495	12.35
15	36.925	16.71
20	28.77	21.98
25	19.935	29.875
30	10.67	42.515

(Koppel.)

Solubility of $\text{Na}_2\text{Zn}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$
(anhydrous) in 100 g H₂O at t°.

t°	grams ZnSO ₄	grams Na ₂ SO ₄
35	8.725	46.61
40	9.16	43.835

(Koppel.)

Sodium sulphate fluoride, Na_2SO_4 , NaF.

Cryst. from H₂O without decomp. (Marignac, Ann. Min. (5) 15. 236.)

Sodium sulphate antimony trifluoride.

See Antimony trifluoride sodium sulphate.

Strontium sulphate, SrSO_4 .

Very sl. sol. in cold, and still less in boiling H₂O.

1 l. H₂O at 11–15° dissolves 0.066 g. SrSO_4 (Brandes and Silber); 0.145 g. SrSO_4 (Fresenius); 0.154–0.167 g. SrSO_4 (Marignac); 0.187 g. SrSO_4 (Kremers); 0.278 g. SrSO_4 (Andrews).

1 l. boiling H₂O dissolves 0.104 g. SrSO_4 (Fresenius); 0.282 g. SrSO_4 (Brandes and Silber).

When a Sr salt is precipitated by H₂SO₄, 1 pt. SrSO_4 remains dissolved in 700 pts. H₂O. (Marignac.)

Sol. in about 8000 pts H₂O. (Schweitzer, J. B. 1877. 1054.)

Calculated from electrical conductivity of the solution, SrSO_4 is sol. in 10,070 pts. H₂O at 16.1° and 10,090 pts. at 20.1°. (Holleman, Z. phys. Ch. 12. 131.)

1 l. H₂O dissolves 107 mg. SrSO_4 at 18° and not much more at higher temp. (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

100 g. H₂O dissolve

at t° 0°–5° 10°–12° 20° 30°
g. SrSO_4 0.0983 0.0994 0.1479 1.0600

at t° 50° 80° 90° 95–98°
g. SrSO_4 0.1629 0.1688 0.1727 0.1789

(Wolfmann, C. C. 1897, I. 632.)

1 l. H₂O dissolves 114 mg. SrSO_4 at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.); 114.3 mg at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Sol. in 6895 pts. cold, and 9638 pts. boiling H₂O; in 11,000–12,000 pts. H₂O containing H₂SO₄; in 474 HCl + Aq containing 8.5% HCl; in 432 pts HNO₃ + Aq containing 4.8 % N₂O₅; in 7843 pts. HC₂H₃O₂ + Aq containing 15.6% HC₂H₃O₂. (Fresenius.)

Or, 1 l. cold HCl + Aq of 8.5% dissolves 2.11 g SrSO_4 ; 1 l. cold HNO₃ + Aq of 4.8% N₂O₅ dissolves 2.31 g. SrSO_4 ; 1 l. cold HC₂H₃O₂ + Aq of 15.6% HC₂H₃O₂ dissolves 0.1275 g. SrSO_4 . (Fresenius.)

Solubility of SrSO_4 in HCl + Aq.

No. cc HCl + Aq containing 1 mg. equiv HCl	g. per 100 cc solution	
	HCl	SrSO_4
0.2	18.23	0.161
0.5	7.29	0.207
1.0	3.65	0.188
2.0	1.82	0.126
10.0	0.36	0.048

(Banthisch, J. pr. 1884, (2) 29. 54.)

Solubility of SrSO_4 in HNO₃ + Aq.

No. cc. HNO ₃ + Aq containing 1 mg. equiv. HNO ₃	g per 100 cc solution	
	HNO ₃	SrSO_4
0.2	31.52	0.381
0.5	12.61	0.307
1.0	6.30	0.217
2.0	3.15	0.138
10.0	0.63	0.049

(Banthisch, J. pr. 1884, (2) 29. 54.)

Sol. in conc. H₂SO₄. See under $\text{SrH}_2(\text{SO}_4)_2$. Insol. in NH₄Cl + Aq or conc. (NH₄)₂SO₄ + Aq. (Rose.)

Slowly but completely sol. in NaCl + Aq. (Wackenroder.)

H₂O containing Na₂SO₄ dissolves less SrSO_4 .

than pure H_2O ; H_2O containing H_2SO_4 still less. (Andrews, Phil. Mag. Ann. 7. 406)

Insol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$

Insol. in boiling conc. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$ (Rose, Pogg. 110. 292.)

Sol. in 16 949 pts. $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ (1:4). (Fresenius, Z. anal. 32. 195.)

Pptn. is hindered by alkali metaphosphates and citrates, but not by citric acid.

Decomp. at ord. temp., and more rapidly on boiling by alkali carbonates + Aq.

Sol. in MgCl_2 or $\text{KCl} + \text{Aq.}$, solubility increasing with strength of solution; sol in NaCl or $\text{CaCl}_2 + \text{Aq.}$, maximum solubility occurring when the solutions are of a medium concentration. The numerical results are as follows:

100 pts. of the salt solutions containing given pts. salt dissolve pts. SrSO_4 .

Salt	Pts. salt	Pts. SrSO_4
NaCl	22.17	0.1811
	15.54	0.2186
	8.44	0.1653
KCl	18.08	0.2513
	12.54	0.1933
	8.22	0.1925
MgCl_2	13.63	0.2419
	4.03	0.2057
	1.59	0.1986
CaCl_2	33.70	0.1706
	16.51	0.1853
	8.67	0.1756

(Virek, C. C. 1862. 402.)

Solubility in H_2O , and in solutions of the sulphates chlorides and nitrates of the alkalies and alkaline earths and in solutions of salts of the alkalies with strong organic acids has been determined. No data in abstract. (Wolfmann, Chem. Soc. 1893, (2) 74. 220.)

Solubility in H_2O is considerably decreased by the presence of K_2SO_4 . (Barre, A. ch. 1911, (8) 24. 175.)

Solubility of SrSO_4 in $\text{Ca}(\text{NO}_3)_2 + \text{Aq}$ at ord. temp.

G. per 100 cc. sat. solution.

$\text{Ca}(\text{NO}_3)_2$	SrSO_4	$\text{Ca}(\text{NO}_3)_2$	SrSO_4
0.5	0.0483	4	0.1489
1	0.0619	5	0.1689
2	0.1081	6	0.1955
3	0.1275

(Raffo and Rossi, Gazz. ch. it. 1915, 45. (1) 45.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

100 g. 95% formic acid dissolve 0.02 g. SrSO_4 at 18.5° . (Aschan, Chem. Ztg. 1913, 37. 1117.)

Insol. in absolute alcohol; scarcely sol. in dil. alcohol.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); acetone (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014)

Min. Celestite.

Strontium hydrogen sulphate, $\text{SrH}_2(\text{SO}_4)_2$.

100 pts H_2SO_4 dissolve 2.2 pts. SrSO_4 (Lies-Bodart and Jacquemin); 100 pts. H_2SO_4 dissolve 5.68 pts. (Struve, Z. anal. 9. 34); 100 pts. fuming H_2SO_4 dissolve 9.77 pts. (Struve).

1 g. SrSO_4 dissolves in 1256 g. 91% $\text{H}_2\text{SO}_4 + \text{Aq}$ (Varenne and Pauleau, C. R. 93. 1016); boiling H_2SO_4 dissolves about 15% SrSO_4 , and still more at 100° . (Schultz, Pogg. 133. 147.)

Sol. in 1519 pts. 91% H_2SO_4 (Varenne and Pauleau, C. R. 93. 1016)

100 pts. H_2SO_4 (sp. gr. 1.843) dissolve 14 pts SrSO_4 at 70° (Garside, C. N. 31. 245)

Decomp. by H_2O

100 pts. hot conc H_2SO_4 dissolve about 90 pts SrSO_4 . (Rohland, Z. anorg. 1910, 66. 206.)

10 ccm of sat $\text{SrSO}_4 + \text{absolute H}_2\text{SO}_4$ contain approx 2.17 g SrSO_4 (Bergius, Z. phys. Ch. 1910, 72. 355.)

+ H_2O Decomp. by H_2O

Strontium tin (stannic) sulphate, SrSO_4 , $\text{Sn}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in HCl (Weinland and Kühl, Z. anorg. 1907, 54. 249.)

Strontium titanium sulphate, SrSO_4 , $\text{Ti}(\text{SO}_4)_2$.

Ppt; decomp. by H_2O giving titanac acid. (Weinland and Kühl, Z. anorg. 1907, 54. 254.)

Tantalum sulphate, $3\text{Ta}_2\text{O}_5$, $\text{SO}_3 + 9\text{H}_2\text{O}$.

(Hermann, J. pr. 70. 201)

Tellurium sulphate, basic, TeO_2 , SO_3 .

Sol. in cold dil. H_2SO_4 . Decomp. by hot H_2O . (Klein, C. R. 99. 326.)

Terbium sulphate, $\text{Tr}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Sol. in H_2O

Sol. in H_2O ; pptd. by alcohol (Urbain, C. R. 1908, 146. 127.)

Thallous sulphate, Ti_2SO_4 .

1 pt. dissolves at t° in pts. H_2O , according to C=Crookes; L=Lamy:

15°	18°	62°	100°	101.2°
21.1	20.8	8.7	5.4	5.22 pts. H_2O .
C	L	L	C	L

Solubility of Th_2SO_4 in H_2O .

t°	% Th_2SO_4	t°	% Th_2SO_4
0	2.63	60	9.85
10	3.57	70	11.31
20	4.64	80	12.75
30	5.80	90	14.19
40	7.06	99 7*	15.57
50	8.44		

B.-pt. at 748 mm.
(Berkeley, Phil. Trans. Roy. Soc. 1904, 203.
A, 189; calc. by Landolt-Bornstein.)

100 g. H_2O dissolve 3.36 g. Th_2SO_4 at 6.5° ;
4.3 g. at 12° ; 19.14 g. at 100° . (Tutton, Proc.
Roy. Soc. 1907, 79. A, 351.)

1 l. H_2O dissolves 0.1928 equivalents
 Th_2SO_4 at 20° , or 48.59 g. in 1 l. of solution.
(Noyes, J. Am. Chem. Soc. 1911, 33. 1657.)

1 l. H_2O dissolves 0.1083 g. equiv. Th_2SO_4
at 25° , or 27.28 g. in 1 l. of solution. (Noyes.)

Solubility in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

Strength of $\text{H}_2\text{SO}_4 + \text{Aq}$ g. mols. per l.	g. mols. Th_2SO_4 per l.
0.0494	0.1172
0.0987	0.1249

(Noyes, J. Am. Chem. Soc. 1911, 33. 1662.)

1 l. $\text{TiClO}_3 + \text{Aq}$. containing 0.1058 equiv-
alents TiClO_3 , dissolves 0.1366 equivalents
 Th_2SO_4 at 20° . (Noyes.)

See also TiClO_3 .

Solubility in salts + Aq at 25° .

g. mols. per l.	g. mols. per l. Th_2SO_4 dissolved
0.0996 TiNO_3	0.08365
0.0497 Na_2SO_4	0.1080
0.1988 Na_2SO_4	0.1173
0.1010 NaHSO_4	0.1161

(Noyes.)

Thallous hydrogen sulphate; ThHSO_4 .

Sl. hygroscopic.

Solubility in $\text{H}_2\text{SO}_4 + \text{Aq}$ at 25° .

1000 g. of the solution contain:

Mols. H_2SO_4	Mols. Th_2SO_4
4.55	0.56
4.79	0.55
4.89	0.59
4.92	0.66
4.78	0.75
4.26	1.01
4.03	1.08

(D'Ans, Z. anorg. 1910, 65. 232.)

Th_2SO_4 , ThHSO_4 . Sol. in H_2O . (Storten-
becker, R. t. c. 1902, 21. 90.)

Thallous pyrosulphate, $\text{Th}_2\text{S}_2\text{O}_7$.

Decomp. by H_2O . (Weber, B. 17. 2502.)

Thallous octosulphate, $\text{Th}_2\text{S}_8\text{O}_{24}$.

Decomp. by H_2O . (Weber, B. 17. 2502.)

Thallic sulphate, basic, $\text{Th}_2\text{O}_3 \cdot 2\text{SO}_3 + 3\text{H}_2\text{O}$.

Sol. in H_2O

+ $5\text{H}_2\text{O}$. As above. (Willm, A. ch. (4) 5.
5.)

Thallic sulphate, $\text{Th}_2(\text{SO}_4)_3 + 7\text{H}_2\text{O}$.

Decomp. by cold H_2O with separation of
 $\text{TiO}(\text{OH})$ (Crookes.)

Thallothallic sulphate, $2\text{Th}_2\text{O} \cdot 3\text{Th}_2\text{O}_3 \cdot 12\text{SO}_3 + 25\text{H}_2\text{O}$.

Gradually efflorescent. (Willm.)

$\text{Th}_2(\text{SO}_4)_2$. (Lepsius, Chem. Ztg. 1890.
1327.)

$\text{Th}(\text{SO}_4)_2$. (Lepsius.)

Thallous uranyl sulphate, $\text{Th}_2(\text{UO}_2)(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.

Sl. sol. in cold H_2O .

Easily forms supersat. solutions. (Kohn,
Z. anorg. 1908, 59. 112.)

Thallium vanadium sulphate, $\text{Th}_2\text{V}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$.

100 pts. H_2O dissolve 11.06 pts. salt at 10° .

Sp. gr. of solution at $4^\circ/20^\circ = 2.342$.

Very sol. in hot H_2O . (Piccini, Z. anorg.
1897, 13. 446.)

256 g. anhydrous, or 433 g. hydrated salt,
or 0.573 g. mols. of anhydrous salt are sol. in
1 l. H_2O at 25° .

Melts in crystal H_2O at 48° . (Locke, Am.
Ch. J. 1901, 26. 175.)

Thallous zinc sulphate, $\text{Th}_2\text{Zn}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$.

1 l. H_2O dissolves 86 g. anhydrous salt
at 25° . (Locke, Am. Ch. J. 1902, 27. 459.)

Thallothallic sulphate bromide, $\text{Th}_2\text{Br}_2\text{SO}_4$.

Very sol. in cold H_2O . Decomp. by much
 H_2O . (Meyer and Goldschmidt, B. 1903, 36.
242.)

Thorium sulphate, basic, $3[\text{Th}(\text{SO}_4)_2 + 2\text{H}_2\text{O}]$,
 $\text{Th}(\text{SO}_4)_2\text{O} + 2\text{H}_2\text{O}$.

Insol. in H_2O ; very slowly attacked by dil.
acids. (Demarcay.)

$\text{ThO}(\text{SO}_4) + 2\text{H}_2\text{O}$. Stable in aq. solution
at 100° . (Hauser, B. 1910, 43. 2776.)

+ $5\text{H}_2\text{O}$. Somewhat sol. in hot conc.
 $\text{MgSO}_4 + \text{Aq}$. (Halla, Z. anorg. 1912, 79. 260.)

Thorium sulphate, $\text{Th}(\text{SO}_4)_2$.

Anhydrous. Easily sol. if brought into a
large amount of H_2O , but very slowly sol. if
only a little H_2O is added to the salt.

100 pts. H_2O dissolve about 4.86 pts. $\text{Th}(\text{SO}_4)_2$ at 0° . (Cleve.)

When heated, a hydrous salt separates out, which redissolves on cooling (Cleve)

Solubility of anhydrous salt cannot be determined, as it begins to separate out $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ before a saturated solution is reached. At 0° , 100 pts. H_2O dissolved 22.97 pts $\text{Th}(\text{SO}_4)_2$ in 15 minutes; at 25° , 27.00 pts $\text{Th}(\text{SO}_4)_2$ were dissolved in 5 minutes.

(Roozeboom, Z phys Ch. 5. 198.)

+ $2\text{H}_2\text{O}$. Shows same behaviour as anhydrous salt. 100 pts. H_2O dissolved 35.50 pts. $\text{Th}(\text{SO}_4)_2$ from this salt at 1° , but this is not the maximum solubility. (Roozeboom.)

+ $4\text{H}_2\text{O}$. Pptd. by alcohol from hot aqueous solution; also formed by heating $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ in aqueous solution above 60° .

100 pts. H_2O dissolve pts. $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$, calculated as $\text{Th}(\text{SO}_4)_2$, at t° . D=according to Demarcay (C. R. 96. 1860); R=according to Roozeboom (Z phys. Ch. 5. 202).

t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$
17	9.41 D	50	2.54 R	70	1.09 R
35	4.50 D	55	1.94 D	75	1.32 D
40	4.04 R	60	1.634 R	95	0.71 D

+ $6\text{H}_2\text{O}$. Behaves as the anhydrous salt, but action is much slower.

100 pts. H_2O dissolve pts. $\text{Th}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$, calculated as $\text{Th}(\text{SO}_4)_2$, at t° .

t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$
0	1.50	45	3.85
15	1.63	60	6.64
30	2.45		

(Roozeboom.)

This determination gives too low figures, especially at the higher temperatures. (Roozeboom.)

+ $8\text{H}_2\text{O}$.

100 pts. H_2O dissolve pts. $\text{Th}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$, calculated as $\text{Th}(\text{SO}_4)_2$, at t° .

t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$
0	1.00	25	1.85
15	1.38	44	3.71

(Roozeboom.)

100 g. $\text{Th}(\text{SO}_4)_2 + \text{Aq}$ sat. with $\text{Th}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ at 30° contain 2.152 g. anhydrous $\text{Th}(\text{SO}_4)_2$. (Koppel and Holzkampf, Z. anorg. 1910, 67. 274.)

100 g. H_2O dissolve 1.722 g. at 25° . (Barre, Bull. Soc. 1912, (4). 11.)

+ $9\text{H}_2\text{O}$. Pptd. by alcohol from cold

aqueous solution. Sol. in about 88 pts. H_2O at 0° . (Cleve) Extremely slowly sol. in H_2O .

100 pts. H_2O dissolve pts. $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$, calculated as $\text{Th}(\text{SO}_4)_2$, at t° .

t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$
0	0.88	30	1.85	50	4.86
10	1.02	40	2.83	55	6.5±
20	1.25				

Above 55° , $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ separates out.

(Demarcay C. R. 96. 1860, calculated by Roozeboom.)

100 pts. H_2O dissolve pts. $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$, calculated as $\text{Th}(\text{SO}_4)_2$, at t° .

t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$	t°	Pts. $\text{Th}(\text{SO}_4)_2$
0	0.74	30	1.995	51	5.22
10	0.98	40	2.998	55	6.76
20	1.38				

Above 60° , $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ separates out. (Roozeboom, Z. phys Ch. 5. 201.)

For further data, see Roozeboom (Z. phys. Ch. 5. 198), where there is a full discussion of the subject.

100 g. sat. solution of $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ in H_2O at 25° contain 1.593 g. anhyd. salt. (Wirth, Z. anorg. 1912, 76. 174.)

Solubility of $\text{Th}(\text{SO}_4)_2$ in $\text{H}_2\text{SO}_4 + \text{Aq}$ at t° .

(Koppel and Holzkampf, Z. anorg. 1910, 67. 274.)

The presence of phosphoric acid increases the solubility of thorium sulphate in HCl and HNO_3 . (Koppel and Holzkampf, Z. anorg. 1910, 67. 280.)

For solubility of $\text{Th}(\text{SO}_4)_2$ in $(\text{NH}_4)_2\text{SO}_4$, Li_2SO_4 , and K_2SO_4 , see respective sulphates. Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

Thorium hydrogen sulphate, $\text{ThH}_2(\text{SO}_4)_3$.

Hygroscopic.

Sol. in excess of hot H_2SO_4 ; insol. in cold H_2SO_4 . (Brauner, Z. anorg 1904, 38. 333.)**Thulium sulphate**, $\text{Tm}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$.

Insol. in alcohol. (James, J. Am. Chem. Soc. 1911, 33. 1343.)

Tin (stannic) sulphate, basic, $(\text{SnO})\text{SO}_4 + \text{H}_2\text{O}$.Easily sol. in cold H_2O , but quickly decomp. with separation of stannic hydroxide. (Ditte, C. R. 104. 178.)

3SnO , SO_3 . Easily sol. in dil. acids. (Ditte, A. ch. 1882, (5) 27. 159.)
 $+1\frac{1}{2}\text{H}_2\text{O}$. Not decomp. by cold H_2O . (Ditte.)

Tin (stannous) sulphate, SnSO_4 .Sol. in 5.3 pts. H_2O at 19° , and 5.5 pts. at 100° . (Marignac.) Solution soon decomposes with separation of a basic salt. Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Bouquet.)

Insol. in acetone. (Naumann, B 1904, 37. 4329.)

Tin (stannic) sulphate, $\text{Sn}(\text{SO}_4)_2 + 2\text{H}_2\text{O}$.Deliquescent. Easily sol. in H_2O ; decomp. by much H_2O . Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Slowly sol. in $\text{HCl} + \text{Aq}$. Decomp. by absolute alcohol. (Ditte, C. R. 104. 178.)**Titanium sulphate**, $\text{Ti}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$.Deliquescent; and sol. in H_2O . The aqueous solution is decomp. on boiling. (Glatzel, B. 9. 1833.)**Titanium sesquisulphate**, $\text{Ti}_2(\text{SO}_4)_3$.Very deliquescent, and easily sol. in H_2O . Aqueous solution is decomp. by boiling. (Ebelmen.)Insol. in H_2O , alcohol, ether and conc. H_2SO_4 . Slowly sol. in dil. H_2SO_4 and HCl . (Stähler, B 1905, 38. 2624.)

Not sol. in alcohol. (Knecht, B. 1903, 36. 169.)
 $+8\text{H}_2\text{O}$. Sol. in H_2O . (Glatzel, B. 9. 1833.)

Titanium hydrogen sesquisulphate, $3\text{Ti}_2(\text{SO}_4)_3 \cdot \text{H}_2\text{SO}_4 + 25\text{H}_2\text{O}$.Gradually sol. in H_2O .Insol. in 60% H_2SO_4 , alcohol, ether and glacial acetic acid. (Stähler, B. 1905, 38. 2621.)

Titanyl sulphate, (TiO)₂SO₄.

Decomp. by H₂O. Slowly sol in cold, rapidly in warm HCl + Aq. (Merz, J pr 99. 157.)

+2H₂O Sol. in H₂O. (Blondel, Bull Soc. 1899, (3) 21. 262.)

2TiO₂, 3SO₃+3H₂O. Sol in H₂O acidified with HCl (Blondel, Bull. Soc. 1899, (3) 21. 262.)

5TiO₂, SO₃+5H₂O. (Blondel.)

7TiO₂, 2SC₃+xH₂O. (Blondel.)

2TiO₂, SO₃+xH₂O. (Blondel.)

Uranous sulphate, basic, U(OH)₂SO₄+H₂O.

Insol. in H₂O. H₂O dissolves out H₂SO₄ (Ebelmen, A. ch. (3) 5. 217.)

+5H₂O. Sol. in alcohol.

Pptd by ether. (Rosenheim, Z. anorg. 1901, 26. 251.)

Uranous sulphate, U(SO₄)₂+4H₂O.

Sol. in H₂O with immediate decomp. Easily sol. in dil. H₂SO₄+Aq. (Kohl-schütter, B. 1901, 34. 3629.)

Decomp. by H₂O into insol basic, and sol. acid salt. Sol. in dil. H₂SO₄ or HCl + Aq. Difficultly sol. in conc. acids (Ebelmen, A. ch. (3) 5. 215.)

Solubility of U(SO₄)₂+4H₂O in H₂O at t°.

(de Coninck, A. ch. 1903, (7) **28**, 7.)1 pt. is sol. in 37.9 pts. alcohol (85°) at 16.7°; 38.6 pts at 15.8°. (de Coninck, A. ch 1903, (7) **28**, 8.)Very sl. sol. in formic and glacial acetic acids. (de Coninck, A. ch. 1903, (7) **28**, 9.)Completely pptd from (UO₂)SO₄ + Aq by HC₂H₃O₂. (Persoz.)**Uranyl hydrogen sulphate, (UO₂)SO₄ · H₂SO₄.**

Very deliquescent. (Schultz-Sellack.)

2(UO₂)SO₄ · H₂SO₄ + 5H₂O. Very deliquescent (Wyruboff, Bull. Soc. Min. 1909, **32**, 351.)**Uranyl pyrosulphate, (UO₂)S₂O₇.**Very deliquescent. Hisses with H₂O. (Schultz-Sellack.)**Uranouranyl sulphate, USO₄ · (UO₂)SO₄.**Sol. in H₂O. (Ebelmen.) Decomp. by boiling. (Berzelius.)Min *Voglianite*.**Uranyl sulphate ammonia, (UO₂)SO₄ · 2NH₃.**(v. Unruh, Dissert. **1909**.)(UO₂)SO₄ · 3NH₃ (v. Unruh.)(UO₂)SO₄ · 4NH₃. (v. Unruh.)**Vanadous sulphate, V₂O₃ · 4SO₃ + 9H₂O.**Sol. in H₂O. (Brierley, Chem. Soc. **49**, 882.)**Vanadium sulphate, V₂O₅ · 2SO₃ = (VO₂)₂S₂O₇.**Deliquescent. Easily sol. in H₂O.V₂O₅ · 3SO₃. Deliquescent. Sol. in H₂O and alcohol.+3H₂O. Deliquescent. Very sol. in H₂O, but decomp. by boiling. Sol. in alcohol. (Ditte, C. R. **102**, 757.)VSO₄ + 7H₂O. Decomp. by air; very unstable; sol. in H₂O. (Piccini, Z. anorg. **1899**, **19**, 204.)**Vanadium sesquisulphate, V₂(SO₄)₃.***Anhydrous.*Insol. in H₂O.Insol. in conc. H₂SO₄, but slowly sol. in boiling dil. H₂SO₄. Sol. in HCl.Insol. in alcohol and ether. (Stähler, B. **1905**, **38**, 3979.)

Vanadium hydrogen sulphate,
 $V_2(SO_4)_3, H_2SO_4 + 12H_2O$.

Sol in H_2O .
Sol. in HCl Insol in 60% $H_2SO_4 + Aq$,
alcohol, ether and acetic acid. (Stahler, B.
1905, **38**, 3978.)

Divanadyl sulphate, $V_2O_2(SO_4)_2$.

Insol. in H_2O , HCl , or $H_2SO_4 + Aq$, but
on heating to 400° becomes sol in H_2O if
heated to 130° therewith. (Gerland.)

+ $4H_2O$. Very slowly sol. in H_2O at 10° ,
quickly at 60° , and still more rapidly at 100° .
Deliquesces in warm moist air more quickly
than it dissolves in H_2O at 10° . Insol. in
absolute alcohol. Very sol. in alcohol of 0.833
sp. gr. (Berzelius.)

+ $5H_2O$. (Koppel and Behrendt, Z.
anorg. 1903, **35**, 168.)

+ $7H_2O$, and $10H_2O$.

+ $13H_2O$. Efflorescent. (Gerland.)
 $2V_2O_4, 5SO_3 + 18H_2O$. (Gain, C. R. 1906,
143, 1154.)

$V_2O_4, 3SO_3 + 10H_2O$. (G.)

$2V_2O_4, 7SO_3 + 20H_2O$. (G.)

$2V_2O_4, 9SO_3 + 22H_2O$. (G.)

$V_2O_4, 5SO_3 + 12H_2O$. (G.)

Divanadyl hydrogen sulphate,

$(V_2O_2)_2H_2(SO_4)_3 = V_2O_4, 3SO_3 + H_2O$.

+ $2H_2O$.

+ $3H_2O$. Deliquescent. Very slowly sol.
in cold H_2O or alcohol. Easily sol in hot H_2O .
(Gerland.)

+ $5H_2O$. Deliquescent. Insol. in ether
Scarcely sol in alcohol. Slowly sol. in cold,
easily in hot H_2O . (Crow.)

+ $14H_2O$. Easily sol in cold H_2O or dil
alcohol. (Gerland.)

$2VO_3, 3SO_3$. Sl. sol. in H_2O . (Koppell
and Behrendt, Z. anorg. 1903, **35**, 163.)

$2VO_3SO_4, H_2SO_4 + H_2O$. Very slowly sol.
in H_2O . (Koppel and Behrendt, Z. anorg.
1903, **35**, 163.)

$2VO_3SO_4, 3H_2SO_4 + 15H_2O$. (Gain, C. R.
1906, **143**, 1156.)

$2VO_3SO_4, 4H_2SO_4 + 16H_2O$. (G.)

$2VO_3SO_4, 5H_2SO_4 + 15H_2O$. (G.)

$2VO_3SO_4, 7H_2SO_4 + 15H_2O$. (G.)

$2VO_3SO_4, 8H_2SO_4 + 16H_2O$. (G.)

Ytterbium sulphate, $Yb_2(SO_4)_3 + 8H_2O$.

Quite slowly sol. in H_2O even at 100° .
Anhydrous salt is easily sol. in much H_2O ,
but if little H_2O is used the hydrous salt is
formed, which only slowly dissolves. Sol.
in $K_2SO_4 + Aq$.

100 pts. H_2O dissolve at:

0° 15.5° 35° 55° 60°
44.2 34.6 19.1 11.5 10.4 pts. $Yb_2(SO_4)_3$,
70° 80° 90° 100°
7.22 6.93 5.83 4.67 pts. $Yb_2(SO_4)_3$.

(Cleve, Z. anorg. 1902, **32**, 143.)

**Yttrium sulphate, basic, $Y_2O_3, SO_3 =$
 $(YO)_2SO_4$.**

Insol. in H_2O . (Berzelius.)

$2Y_2O_3, SO_3 + 10H_2O$ (Cleve.)

Yttrium sulphate, $Y_2(SO_4)_3$.

Anhydrous. More sol. in H_2O than the
hydrous salt, and more sol. in cold than hot
 H_2O . Solution sat. at 0° separates $Y_2(SO_4)_3 +$
 $8H_2O$ at 50° . 100 pts. H_2O dissolve 15.2 pts.
anhydrous salt. at ord temp.

5.38 pts. are sol. in 100 pts. H_2O at 25° .
(James and Holden, J. Am. Chem. Soc. 1913,
35, 561.)

Easily sol in large amount of sat. $K_2SO_4 +$
 Aq , from which $3K_2SO_4, 2Y(SO_4)_3$ is pptd. on
warming. (Cleve and Höglund, Sv. V. A.
H. Bih. 1. No 8.)

Solubility of $Y_2(SO_4)_3$ in $Na_2SO_4 + Aq$ at 25° .

Pts $Y_2(SO_4)_3$ per 100 pts H_2O	Pts. Na_2SO_4 per 100 pts H_2O	Solid phase

(James and Holden, J. Am. Chem. Soc. 1913,
35, 560.)

+ $8H_2O$. 100 pts. H_2O dissolve 9.3 pts. of
cryst salt at ord. temp., and 4.8 pts. at 100° .
(Cleve, Bull. Soc. (2) **21**, 344.)

Less sol. in H_2O containing H_2SO_4 than in
pure H_2O . (Berzelius.)

Completely pptd. by $HCl, H_2O_2 + Aq$. In-
sol. in alcohol.

Yttrium hydrogen sulphate, $Y_2(SO_4H)_3$.

(Brauner, Z. anorg. 1904, **38**, 332.)

Zinc sulphate, basic, $8ZnO, SO_3 + 2H_2O$.

Insol. in H_2O . (Schindler, Mag. Pharm.
31, 181.)

$6ZnO, SO_3 + 10H_2O$. Insol. in H_2O . (Kane,
A. ch. **72**, 310.)

$4ZnO, SO_3 + 2H_2O$. Scarcely sol. in hot
or cold H_2O . Sol. in $ZnSO_4 + Aq$. (Kühn,
Schw. J. **60**, 337.)

+3H₂O. (Werner, B. 1907, **40**. 4443.)
 +5H₂O Nearly insol. in H₂O. (Habermann, M. **5**. 432)
 +6H₂O. (Kraut, Z. anorg. 1897, **13**. 5.)
 +7H₂O. (Athanasesco, C. R. **103**. 271)
 +8H₂O. Extremely slowly decomp. by H₂O. (Reindel, J. pr 1869, (1) **106**. 373.)
 +10H₂O (Schindler.)
 3ZnO, SO₃. Insol. in cold, sl. sol. in hot H₂O (Vogel.)
 2ZnO, SO₃. (Athanasesco.)
 5ZnO, SO₃ (Pickering, Chem Soc 1907, **91**. 1986.)
 +4H₂O. (Moody, Am J. Sci. 1906, [4] **22**. 184.)
 9ZnO, 2SO₃+12H₂O. (Reindel, J. pr 1869, (1) **106**. 374.)

Zinc sulphate, ZnSO₄.

Sol. in H₂O with evolution of heat.
 Sol. in HCl+Aq.
 +H₂O. (Étard.)
 +2H₂O. Insol. in alcohol (Kühn)
 +3½H₂O (Anthon.)
 +5H₂O. Insol. in boiling alcohol of 0.86 sp. gr (Kuhn)
 +6H₂O. (Marignac.)
 +7H₂O. Slowly efflorescent
 M.-pt of ZnSO₄+7H₂O=50°. (Tilden, Chem. Soc. **45**. 409.)
 For solubility data on hydrated salts, see below.

Sol. in 2+ pts H₂O at ord. temp., and in less at 100°. (Bergmann)
 100 pts H₂O at 104.4° dissolve 81.81 pts. ZnSO₄. (Griffiths.)
 100 pts H₂O at ord. temp dissolve 140 pts ZnSO₄+7H₂O (Dumas)
 Sol. in 2.29 pts. H₂O at 18.75°. (Abl)
 100 pts H₂O at 15.56° dissolve 140 pts. ZnSO₄+7H₂O. Ure's Dict)
 100 pts. H₂O at 15° dissolve 140.53 pts. ZnSO₄+7H₂O, and has sp. gr.=1.4442. (Michel and Krafft)

1 pt. of the crystals dissolves in 0.923 pt. H₂O at 17.5°, and forms a solution of 1.4353 sp. gr. (Karsten.)

100 pts. ZnSO₄+Aq sat. at 18-20° contain 35.36 pts. ZnSO₄ (v. Hauer, J. B. **1866**. 59)

100 pts. H₂O dissolve at:
 0° 20° 50° 75°
 41.3 53.0 66.9 80.4 pts. ZnSO₄. (Tobler, J. B. **1855**. 309.)

100 pts. H₂O at 20.5° dissolve 163.2 pts. ZnSO₄+7H₂O. (Schiff, A. **109**. 336.)

100 pts. H₂O at t° dissolve pts. anhydrous ZnSO₄, and pts. ZnSO₄+7H₂O.

t°	Pts. ZnSO ₄	Pts. ZnSO ₄ +7H ₂ O	t°	Pts. ZnSO ₄	Pts. ZnSO ₄ +7H ₂ O

7.00	68 87
13.20	0.00

(Linebarger, J. Am. Chem. Soc. 1895, **17**, 360.)

Difficultly and slowly sol in sat $\text{NH}_4\text{Cl} + \text{Aq}$, with separation of a double sulphate

Sol in considerable quantity in sat. $\text{NaCl} + \text{Aq}$, without pptn at first, but finally Na_2SO_4 separates out See under NaCl .

Sol in sat $\text{NaNO}_3 + \text{Aq}$ as in $\text{NaCl} + \text{Aq}$. See under NaNO_3 .

Sol in sat. $\text{KNO}_3 + \text{Aq}$ with immediate pptn. of double sulphate. (Karsten) See under KNO_3 .

Very rapidly sol. in sat $\text{K}_2\text{SO}_4 + \text{Aq}$, with separation of a double salt (Karsten) See under K_2SO_4 .

Abundantly. in sat. $\text{CuSO}_4 + \text{Aq}$.

Slowly sol in sat $\text{MgSO}_4 + \text{Aq}$

Very rapidly and abundantly sol in sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$.

For solubility of $\text{ZnSO}_4 + \text{Na}_2\text{SO}_4$ see under Na_2SO_4 and $\text{Na}_2\text{Zn}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J 1898, **20**, 830.)

Insol. in alcohol of 0.88 sp. gr. ; 1000 pts. alcohol of 0.905 sp. gr. dissolve 2 pts. (Anthon.)

100 pts. of a saturated solution in 40% alcohol contain 3.48 pts. $\text{ZnSO}_4 + 7\text{H}_2\text{O}$; 20%, 39 pts.; 10%, 51.1 pts. (Schiff, J. B. **1861**, 87.)

100 pts. absolute methyl alcohol dissolve 0.65 pt. ZnSO_4 at 18° . (de Bruyn, Z. phys. Ch. **10**, 783.)

100 pts. absolute methyl alcohol dissolve 59 pts. $\text{ZnSO}_4 + 7\text{H}_2\text{O}$ at 17° .

100 pts. 50% methyl alcohol dissolve 15.7 pts. $\text{ZnSO}_4 + 7\text{H}_2\text{O}$ at 17° . (de Bruyn.)

Insol. in acetone. (Eidmann, C. C. **1899**, II. 1014, Naumann, B. 1904, **37**, 4329.)

100 pts glycerine dissolve 35 pts. ZnSO_4 at ord. temp. (Klever, Bull. Soc. 1872, (2) **18**, 372.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B 1904, **37**, 3601.)

Min. *Gosslarite*.

Zinc hydrogen sulphate, $\text{ZnH}_2(\text{SO}_4)_2 + 8\text{H}_2\text{O}$.

Somewhat difficultly sol. in cold, easily in hot H_2O . (v. Kobell, J. pr. **28**, 492.)

Zinc sulphate ammonia, basic, 4NH_3 , 4ZnO , $\text{SO}_3 + 4\text{H}_2\text{O}$.

Ppt. (Schindler.)

Zinc sulphate ammonia, ZnSO_4 , 2NH_3 .

$+ \text{H}_2\text{O}$. Decomp. by H_2O into basic zinc sulphate.

ZnSO_4 , $4\text{NH}_3 + 4\text{H}_2\text{O}$. Sol. in H_2O . (Kane, A. ch. **72**, 304.)

$+ 3\text{H}_2\text{O}$. (André, C. R. **100**, 241.)

ZnSO_4 , 5NH_3 . Sol. in H_2O with partial decomp. (Rose, Pogg **20**, 149.)

Zinc sulphate cupric oxide, ZnSO_4 , $2\text{CuO} + 5\text{H}_2\text{O}$.

(Mailhe, A. ch. 1902, (7) **27**, 169.)

ZnSO_4 , $3\text{CuO} + x\text{H}_2\text{O}$. (Reccara, C. R. 1901, **132**, 1415.)

+5H₂O.
 2ZnSO₄, 3CuO+12H₂O. (Mailhe, A. ch. 1902, (7) 27. 169.)
 7ZnSO₄, 24CuO+xH₂O. (Recoura, C. R. 1901, 132. 1415.)

Zinc sulphate hydrazine, ZnSO₄, 2N₂H₄.

Sol. in NH₄OH+Aq. (Franzen, Z. anorg. 1908, 60. 278.)

Sol. in NH₄OH+Aq without decomp. (Curtius, J. pr. 1894, (2) 50. 345.)

ZnH₂(SO₄)₂, N₂H₄ 1 pt. is sol. in 185 pts. H₂O at 12°. Sl sol. in dil. acids. Decomp. by conc. HNO₃ and by hot conc. H₂SO₄. Very sol. in NH₄OH+Aq. (Curtius, J. pr 1894, (2) 50. 331.)

Zirconium sulphate, basic, 3ZrO₂, 2SO₃.

Insol. in H₂O. Sol. in HCl+Aq. (Paykull, B. 12. 1719.)

4ZrO₂, 3SO₃+14H₂O. Ppt. Difficulty sol. in H₂O. (Hauser, B. 1904, 37. 2024.)

3ZrO₂, SO₃. Insol. in boiling H₂O. (Franz, B. 3. 58.)

7ZrO₂, 6SO₃. Insol. in H₂O. (Endemann, J. pr. (2) 11. 219.)

ZrO₂, SO₃. Sol. in very little H₂O. More H₂O decomp into 3ZrO₂, 2SO₃ and Zr(SO₄)₂. (Berzelius)

3ZrO₂, 4SO₃+15H₂O. Sol. in H₂O. (Paykull.)

6ZrO₂, 7SO₃+19H₂O. Sol. in H₂O (Paykull.)

Zirconium sulphate, Zr(SO₄)₂.

Anhydrous. Slowly but completely sol. in cold, quickly in hot H₂O.

Sol. in warm H₂SO₄, but separates on cooling. Precipitated from aqueous solution by alcohol.

+4H₂O. Easily sol. in H₂O.

100 pts. of the solution contain 59.3 pts. of the hydrated salt at 39.5°. (Hauser, B. 1904, 37. 2025.)

Solubility of Zr(SO₄)₂+4H₂O in H₂SO₄+Aq at t°.

100 g. of the solution contain:

t°	g. ZrO ₂	g. SO ₃
39.5	19.5	25.46
	19.3	25.6
	19.6	25.99
	19.3	26.5

	1.12	66.8
	0.96	68.4
22	0.80	66.4
	0.65	67.5
	0.60	68.1

(Hauser, Z. anorg. 1907, 54. 200.)

Persulphuric acid, HSO₄

See Persulphuric acid.

Pyrosulphuric acid and pyrosulphates.

See under Sulphuric acid and sulphates.

Sulphuric boric acid.

See Borosulphuric acid.

Sulphuric vanadic acid, V₂O₅, 3SO₃+3H₂O.

See Sulphate, vanadium.

Sulphurous acid, anhydrous, SO_2 .*See Sulphur dioxide.***Sulphurous acid, H_2SO_3 .**

Known only in aqueous solution, from which SO_2 is given off upon heating. Crystallizes in cold, with various amounts of water, forming compounds which approximate $\text{H}_2\text{SO}_3 + 8\text{H}_2\text{O}$ (Pierre, A. **68**. 228); $\text{H}_2\text{SO}_3 + 10\text{H}_2\text{O}$ (Döpping, Bull. Ac. St. Pétersb. **7**. 100); $\text{H}_2\text{SO}_3 + 14\text{H}_2\text{O}$ (Schönfeld, A. **95**. 22); $\text{H}_2\text{SO}_3 + 6\text{H}_2\text{O}$ (Roozeboom, R. t. c. **3**. 29, 59, 75, 84; Geuther, A. **224**. 218). Crystals are sol in 2 pts. H_2O at 10° . (Pierre.)

For sp gr. of solutions, etc., see sulphur dioxide.

Sulphites.

Normal. Only the alkali sulphites are sol in H_2O , and they are insol or only sl sol. in alcohol.

Insol. in liquid NH_3 . (Franklin, Am. ch. J. **1898**, **20**. 824.)

Acid. All the acid sulphites are sol in H_2O

In general it is rarely possible to determine whether the compd. described is a pure chemical compound or not. It is probable that many substances described by Svenssen and others are isomorphic mixtures whose composition depends upon the temp. and conc. of the solution in which it was pptd (Rosenheim, Z anorg. **1900**, **25**. 72.)

Aluminum sulphite, basic, $\text{Al}_2\text{O}_3, \text{SO}_2 + 4\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in $\text{H}_2\text{SO}_3 + \text{Aq.}$ (Fourcroy and Vauquelin.)

$6\text{Al}(\text{OH})_3, \text{Al}_2(\text{SO}_3)_3 + 9\text{H}_2\text{O}$ Ppt (Seubert, Z anorg. **1893**, **4**. 66.)

Ammonium sulphite, basic, $(\text{NH}_4)_2\text{SO}_3, \text{NH}_3 + \frac{3}{2}\text{H}_2\text{O}$.

Sol. in H_2O . Pptd. from aqueous solution by alcohol. (Muspratt)

Does not exist. (Marignac.)

Ammonium sulphite, $(\text{NH}_4)_2\text{SO}_3$.

Very hygroscopic. (Divers, Chem. Soc. **1900**, **77**. 336.)

Insol. in acetone (Eidmann, C.C. **1899**, II. 1014.)

$+\text{H}_2\text{O}$. Slowly sol. in H_2O . (Muspratt, A. **50**. 268.)

Sol. in 1 pt. H_2O at 12° . (Fourcroy and Vauquelin, Crell. Ann. **1800**. **2**. 415.)

More sol. in hot H_2O with evolution of NH_3 . Sl. sol. in absolute alcohol. (Muspratt)

Much more sol. in alcohol than K_2SO_3 (Pierre.)

Loses NH_3 in the air.

Sol. in H_2O . Conc. solution charged with NH_3 will deposit salt on evaporation over KOH . Dil. solution decomp. on evaporation (Divers, Chem. Soc. **1900**, **77**. 335.)

Insol in acetone (Naumann, B. **1904**, **37**. 4329)

Ammonium hydrogen sulphite, NH_4HSO_3 .

Insol. in acetone (Eidmann, C.C. **1899**, II. 1014, Naumann, B. **1904**, **37**. 4329.)

Ammonium pyrosulphite, $(\text{NH}_4)_2\text{S}_2\text{O}_5$.

Deliquescent. Very sol. in H_2O and alcohol Insol. in ether (Fock and Klüss, B. **23**. 3149.)

Very sol. in H_2O ; very hygroscopic. Aq. solution is sl. decomp. on evaporation. (Divers, Chem. Soc. **1900**, **77**. 336.)

Ammonium cadmium sulphite, $(\text{NH}_4)_2\text{SO}_3, \text{CdSO}_3$.

Nearly insol in H_2C . Partly sol. in excess of $\text{H}_2\text{SO}_3 + \text{Aq.}$, but separates out on boiling. (Schuler, A. **87**. 34.)

Ammonium cobaltous sulphite, $(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3 + x\text{H}_2\text{O}$.

Decomp. on air. (Berglund, B. **7**. 469)

Ammonium cobaltocobaltic sulphite.

See Cobaltisulphite, ammonium cobalt.

Ammonium cuprous sulphite, $(\text{NH}_4)_2\text{SO}_3, 2\text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

(Böttinger, A. **51**. 411.)

$(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3$. Insol. in cold, decomp. by boiling H_2O . (Rogojski, J. B. **1861**. 366.)

Decomp. by warming with H_2O , in which it is insol. Sol. in acids with evolution of SO_2 . (Rosenheim and Steinhäuser, Z. anorg. **1900**, **25**. 99.)

$+2\text{H}_2\text{O}$ (Commalle, J. B. **1867**. 300.)

$2(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 3\text{H}_2\text{O}$. Very sol. in H_2O . Solution decomp. on standing. Decomp. by acids. (Rosenheim and Steinhäuser.)

$5(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$. Decomp. on air. Sol. in H_2O with decomp. (Svensson.)

$6(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 4\text{H}_2\text{O}$. Easily decomp. (Rosenheim and Steinhäuser.)

$7(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 4\text{H}_2\text{O}$. Very sol. in H_2O . Solution soon decomp. (Rosenheim and Steinhäuser.)

$+10\text{H}_2\text{O}$. Decomp. on air. Sl. sol. in warm, less sol. in cold H_2O (de Saint-Gilles.)

$+14\text{H}_2\text{O}$. Decomp. on air. Sol. in H_2O , but solution decomp.

Very easily sol. in mother liquor. (Svensson, Acta Lund. **1899**. 13.)

Ammonium cuprocupric sulphite, $(\text{NH}_4)_2\text{SO}_3, 2\text{Cu}_2\text{SO}_3, \text{CuSO}_3 + 5\text{H}_2\text{O}$.

Insol. in H_2O and weak acids. Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (de Saint-Gilles, A. ch. **(3)** **42**. 31.)

$+6\frac{1}{2}\text{H}_2\text{O}$. Ppt. (Rosenheim and Steinhäuser, Z. anorg. **1900**, **25**. 98.)

Ammonium glucinum sulphite,
 $(\text{NH}_4)_2\text{O}, 2\text{GIO}, 3\text{SO}_2 + 4\text{H}_2\text{O}.$

Ppt Very unstable in the air. (Rosenheim, Z. anorg. 1897, **15**, 310.)

Ammonium gold (aurous) sulphite,
 $3(\text{NH}_4)_2\text{SO}_3, \text{Au}_2\text{SO}_3.$

Very easily sol. in H_2O . Insol. in alcohol (Haase, Z. Ch. **1869**, 535.)

Ammonium gold (aurous) sulphite ammonia,
 $(\text{NH}_4)_2\text{SO}_3, 3\text{Au}_2\text{SO}_3, 6\text{NH}_3 + \text{H}_2\text{O}.$

Decomp. by H_2O . Sol. in warm $\text{NH}_4\text{OH} + \text{Aq}$, but decomp. by boiling.

$(\text{NH}_4)\text{Au}_3(\text{SO}_3)_2, 3\text{NH}_3 + 4\text{H}_2\text{O}$. Decomp. by H_2O . (Rosenheim, Z. anorg. 1908, **59**, 201.)

Ammonium iridium sulphite.

See Iridosulphite, ammonium.

Ammonium iron (ferrous) sulphite,
 $(\text{NH}_4)_2\text{SO}_3, \text{FeSO}_3 + x\text{H}_2\text{O}.$
 (Berglund.)

Ammonium iron (ferric) sulphite sulphate,
 $\text{FeSO}_3\text{SO}_4\text{NH}_4 + \text{H}_2\text{O}$

Sl. sol. in cold H_2O . Decomp. by cold dil. HCl (Hofmann, Z. anorg. 1897, **14**, 287.)

Ammonium magnesium sulphite,
 $(\text{NH}_4)_2\text{Mg}_3(\text{SO}_3)_4 + 18\text{H}_2\text{O}.$

Very sl. sol. in H_2O (Fourcroy and Vauquelin.)

Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$.
 $+ 5\text{H}_2\text{O}$ Much more sol. in H_2O than MgSO_3 (Rammelsberg.)

Ammonium manganous sulphite, $(\text{NH}_4)_2\text{SO}_3,$
 $\text{MnSO}_3.$

Relatively easily decomp. by H_2O . (Berglund, Bull. Soc. (2) **21**, 213.)

Not easily decomp. (Gorgeu, C. R. **96**, 376.)

Ammonium mercuric sulphite, $(\text{NH}_4)_2\text{SO}_3,$
 $\text{HgSO}_3.$

Very easily sol. in H_2O , but H_2O solution gradually decomp., even in the cold.

Ammonium nickel sulphite, $(\text{NH}_4)_2\text{SO}_3,$
 $3\text{NiSO}_3 + 18\text{H}_2\text{O}.$

Sol. in H_2O . (Berglund, B. **7**, 469.)

Ammonium platinous sulphite.

See Platosulphite, ammonium.

Ammonium potassium sulphite, $10(\text{NH}_4)_2\text{SO}_3,$
 $\text{K}_2\text{SO}_3 + 11\text{H}_2\text{O}.$

Decomp. by H_2O , etc. (Hartog, C. R. **109**, 221.)

Ammonium scandium sulphate,
 $(\text{NH}_4)_2\text{SO}_3, \text{Sc}_2(\text{SO}_3)_3 + 7\text{H}_2\text{O}.$

Insol. in H_2O . Difficulty sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Meyer, Z. anorg 1914, **86**, 281.)

Ammonium silver sulphite, $(\text{NH}_4)_2\text{SO}_3,$
 $\text{Ag}_2\text{SO}_3.$

Insol. in H_2O , but gradually decomp. thereby (Svensson, B. **4**, 714.)

$6(\text{NH}_4)_2\text{SO}_3, \text{Ag}_2\text{SO}_3 + 19\text{H}_2\text{O}$. Sol. in H_2O without decomp. (Svensson.)

$3(\text{NH}_4)_2\text{SO}_3, 4\text{NH}_4\text{HSO}_3, \text{Ag}_2\text{SO}_3 + 18\text{H}_2\text{O}$. Easily sol. in H_2O , but decomp. by warming.

Ammonium sodium hydrogen sulphite,
 $\text{NH}_4\text{Na}_2\text{H}(\text{SO}_3)_2 + 4\text{H}_2\text{O}.$

Not deliquescent. (Marignac, Ann. Min. (5) **12**, 29.)

100 pts. H_2O dissolve 42.3 pts. salt at 12.4° , and 48.5 pts. at 15° . (Schwicker, B. **22**, 1732.)

$+ 5\text{H}_2\text{O} = 2\text{Na}_2\text{SO}_3, (\text{NH}_4)_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$. (Tauber, Techn. J. B. **1888**, 444.)

Ammonium tellurium sulphite, $(\text{NH}_4)_2\text{SO}_3,$
 $\text{TeSO}_3 + x\text{H}_2\text{O}.$

Sol. in H_2O . (Berglund, B. **7**, 469.)

Ammonium uranyl sulphite,
 $\text{NH}_4(\text{UO}_2)(\text{OH})\text{SO}_3$

Insol. in pure H_2O . More sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ than the K salt, and less than the Na salt (Scheller, A. **144**, 240.)

$(\text{NH}_4)_2\text{O}, 2\text{UO}_3, 3\text{SO}_2.$

$(\text{NH}_4)_2\text{O}, 4\text{UO}_3, 5\text{SO}_2.$

$(\text{NH}_4)_2\text{O}, 3\text{UO}_3, 2\text{SO}_2.$

$(\text{NH}_4)_2\text{O}, \text{UO}_3, 2\text{SO}_2$. (Kohlschütter, A. **1900**, **311**, 10.)

Ammonium vanadium sulphite.

See Vanadiosulphite, ammonium.

Ammonium vanadyl sulphite,

$(\text{NH}_4)_2\text{SO}_3, \text{VO}_2\text{SO}_3 + 2\text{H}_2\text{O}.$

Sol. in H_2O with decomp. (Koppel, Z. anorg. 1903, **35**, 184.)

$(\text{NH}_4)_2\text{O}, 3\text{VO}_2, 2\text{SO}_2 + \text{H}_2\text{O}$. Sol. in cold H_2O without decomp.

Easily sol. in mineral acids and alkalis.

Sl. sol. in alcohol and ether. (Koppel Z. anorg. 1903, **35**, 182.)

Ammonium zinc sulphite, $(\text{NH}_4)_2\text{SO}_3, \text{ZnSO}_3.$

Sol. in H_2O . (Berglund, B. **7**, 469.)

Ammonium sulphite mercuric chloride,

$2(\text{NH}_4)_2\text{SO}_3, \text{HgCl}_2.$

Sl. sol. in cold, decomp. by boiling H_2O . (de St-Giles, A. ch (3) **36**, 95.)

Antimony sulphite, $\text{Sb}_2\text{O}_3, 3\text{SO}_3(?)$.

Insol. in H_2O . (Berzelius.)

Could not be obtained. (Röhrig, J. pr. (2) **37**, 241.)

Barium sulphite, BaSO₃.

Very sl sol in H₂O. (Fourcroy and Vauquelin, A. ch. **24**. 301.)

Sol in about 46,000 pts H₂O at 16°. (Autenrieth, Z. anal. 1898, **37**. 294.)

Sol. in H₂SO₃+Aq.

Insol. in acetone (Naumann B. 1904, **37**. 4329); methyl acetate (Naumann, B. 1909, **42**. 3790.)

Solubility in sugar+Aq at t°.

Solvent	t°	100 cem. of solution contain g BaSO ₃
water	20	0 01974
sucrose+Aq 10° Brix		0 01040
" " 20° "		0 00968
" " 30° "		0 00782
" " 40° "		0 00484
" " 50° "		0 00298
(sat.) " 60° "		0 00223
water	80	0 00177
sucrose+Aq 10° Brix		0 00335
" " 20° "		0 00289
" " 30° "		0 00223
" " 40° "		0 00158
" " 50° "		0 00149
(sat) " 60° "		0 00112

(Rogowicz, C. C. **1905**, II. 1223.)

Barium cobaltic sulphite.

See Cobaltisulphate, barium.

Barium gold (aurous) sulphite, 3BaSO₃, Au₂SO₃+xH₂O.

Ppt. (Haase.)

Barium mercuric sulphite, BaSO₃, HgSO₃+H₂O.

Ppt. (Barth, Z. phys. Ch. **9**. 196.)

Barium mercuric sulphite chloride, BaSO₃, BaCl₂, 2HgSO₃+3½H₂O.

(Barth, Z. phys. Ch. 1892, **9**. 208.)

Bismuth sulphite, basic, Bi₂O₃, 3SO₃+5H₂O.

Insol. in H₂O, alcohol, or ether. Sl. sol. in H₂SO₃+Aq. (Röhrig, J. pr. (2) **37**. 241.)

(BiO)₂SO₃, 3(BiOH)SO₃+H₂O. (Seubert and Elten, Z. anorg. 1893, **4**. 72-5.)

2(BiO)₂SO₃, 3(BiOH)SO₃+2H₂O. (S. and E.)

3(BiO)₂SO₃, 7(BiOH)SO₃+10H₂O. (S. and E.)

4(BiO)₂SO₃, (BiOH)SO₃+5H₂O. (S. and E.)

9(BiO)₂SO₃, (BiOH)SO₃+2H₂O. (S. and E.)

Bismuth cobaltic sulphite.

See Cobaltisulphite, bismuth.

Cadmium sulphite, CdSO₃.

Difficultly sol. in H₂O. Easily sol. in dil. acids. (Rammelsberg, Pogg. **67**. 256.)

+2H₂O. Difficultly sol. in H₂O. Sol. in H₂SO₃+Aq. Sol. in NH₄OH+Aq. Insol. in alcohol. (Muspratt, Phil. Mag. (3) **30**. 414.)

Insol. in acetone (Naumann, B. 1904, **37**. 4329.)

Contains 2½H₂O. (Deniges, Bull. Soc. (3) **7**. 569.)

Cadmium sodium sulphite, 3CdSO₃, Na₂SO₃.

Sol. in H₂O. (Berglund, B. **7**. 469.)

Cadmium sulphite, ammonia, CdSO₃, NH₃.

Decomp. by H₂O. Sol without decomp. in hot NH₄OH+Aq (Rammelsberg, Pogg. **67**. 256.)

Cæsium sulphite, Cs₂SO₃.

Easily sol. in H₂O. Sl. sol. in alcohol. (Chabrié, C. R. 1901, **133**. 297.)

Cæsium hydrogen sulphite, CsHSO₃.

Easily sol. in H₂O. Sl. sol. in alcohol. (Chabrié, C. R. 1901, **133**. 297.)

Calcium sulphite, basic, Ca₈S₃O₁₈=6CaO, 5SO₃.

(Schott, Dingl. **202**. 52.)

Calcium sulphite, CaSO₃+2H₂O.

Slowly effloresces. Sol. in 800 pts. cold H₂O. (Berzelius.)

Insol. in H₂O. (Röhrig, J. pr. (2) **37**. 230.)

0.043 g. is sol. in 1 l. H₂O at 18°. (Weisberg, Bull. Soc. 1896, (3) **15**. 1249.)

CaSO₃ equiv. to 78 mg. CaO is sol. in 1 l. H₂O at 100°. (Robart, C. A. **1913**. 2500.)

Very sol. in H₂SO₃+Aq. See CaH₂(SO₃)₂.

Insol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, **20**. 827.)

CaSO₃ equiv. to 37 mg. CaO is sol. in 1 l. 12% cane sugar+Aq at 100°. (Robart, C. A. **1913**. 2500.)

0.0825 g. is sol. in 1 l. 10% sugar+Aq. at 18°; 0.0800 g. is sol. in 1 l. 30% sugar+Aq. at 18°. (Weisberg, Bull. Soc. 1896, (3) **15**. 1249.)

Insol. in acetone. (Krug and M'Elroy.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790; ethyl acetate. (Naumann, B. 1904, **37**. 3601.)

+½H₂O. (Rammelsberg.)

Calcium hydrogen sulphite, CaH₂(SO₃)₂.

Know only in solution.

100 cem. H₂O containing 9 g. SO₂ dissolve 0.553 g. CaSO₃ to form a solution of 1.06 sp. gr. (Gerland, J. pr. (2) **4**. 119.)

Calcium cobaltic sulphite.

See Cobaltisulphite, calcium.

Cerous sulphite, $\text{Ce}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$.

More sol. in cold than hot H_2O .
Solution gradually decomposes. (Berthier, A. ch. (3) 7. 77)

Chromous sulphite, CrSO_3 .

Precipitate. Insol in H_2O . (Moberg.)

Chromium sulphite, basic, $\text{Cr}_2\text{O}_3, \text{SO}_2$.

Colloidal modification. Sol. in H_2O .
 $2\text{Cr}_2\text{O}_3, \text{SO}_2$. Ppt. (Recoura, Bull. Soc. 1898, (3) 19. 169)

Chromic sulphite.

Known only in aqueous solution, which precipitates a basic salt on boiling.

$2\text{Cr}_2\text{O}_3, 3\text{SO}_2 + 16\text{H}_2\text{O}$. Precipitate. (Danson, Chem. Soc. 2. 205.)

Chromic potassium sulphite, $\text{K}_2\text{O}, \text{Cr}_2\text{O}_3, 2\text{SO}_2 + x\text{H}_2\text{O}$.

Precipitate. (Berglund, B. 7. 470.)

Cobaltous sulphite, basic.

Ppt. Decomp. by H_2O . (Berthier.)
 $\text{Co}(\text{OH})_2, 5\text{CoSO}_3 + 10\text{H}_2\text{O}$. Ppt. (Seubert and Elten, Z. anorg. 1893, 4. 89.)
 $\text{Co}(\text{OH})_2, 10\text{CoSO}_3 + 15\text{H}_2\text{O}$. (Seubert and Elten.)

Cobaltous sulphite, CoSO_3 .

+ $3\text{H}_2\text{O}$. Nearly insol. in H_2O . Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Rammelsberg.)
Partly sol. in $\text{NH}_4\text{OH} + \text{Aq}$.
+ $5\text{H}_2\text{O}$. Insol. in H_2O . Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ (Muspratt, A. 30. 282.)

Cobaltocobaltic sulphite.

See Cobaltisulphite, cobaltous.

Cobaltic sulphite with $3\text{M}_2\text{SO}_3$.

See Cobaltisulphite, M.

Cobaltous potassium sulphite, $\text{CoSO}_3, \text{K}_2\text{SO}_3, +x\text{H}_2\text{O}$.

Insol. in H_2O ; easily sol. in $\text{HCl} + \text{Aq}$. (Schultze, J. B. 1864. 270.)

Cobaltic potassium sulphite, $\text{Co}_2(\text{SO}_3)_3, \text{K}_2\text{SO}_3$.

Sl. sol. in H_2O ; easily sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ or $\text{HCl} + \text{Aq}$. (Schultze.)

Cobaltous sodium sulphite, $3\text{CoO}, \text{Na}_2\text{O}, 3\text{SO}_3$.

Insol. in H_2O . Easily sol. in $\text{HCl} + \text{Aq}$. (Schultze.)

Cobaltic sodium sulphite, $\text{Co}_2\text{O}_3, \text{Na}_2\text{O}, 3\text{SO}_3$.

Sl. sol. in H_2O . (Schultze.)

Cuprous sulphite, $\text{Cu}_2\text{SO}_3 + \text{H}_2\text{O}$.

(a) *Red.* Sl. sol. in H_2O . Sol. in NH_4OH or $\text{HCl} + \text{Aq}$. (Rogojski, J. B. 1851. 366.)

Could not be obtained by St. Gilles or Svensson (B. 4. 713).

Insol. in H_2O , alcohol, or ether. (Étard, C. R. 95. 38.)

Composition is $(\text{Cu}_2)_3\text{H}_{16}(\text{SO}_4)_8$, "Cuprous isosulphite," according to Étard.

+ $\frac{1}{2}\text{H}_2\text{O}$. Étard's formula, $\text{Cu}_2\text{SO}_3 + \text{H}_2\text{O}$ is incorrect.

The salt is almost colorless. (Ramberg Z. phys. Ch. 1909, 69. 512.)

(β) *White. Normal salt.* Insol. in H_2O , alcohol, or ether (Étard.)

Cupric sulphite, basic, $4\text{CuO}, \text{SO}_2 + 7\text{H}_2\text{O}$.

Insol. in H_2O , and decomp. by washing therewith (Millon and Commaillé.)

$7\text{CuO}, 4\text{SO}_2 + 8\text{H}_2\text{O}$. Sol. in dil. H_2SO_4 . (Seubert and Elten, Z. anorg. 1893, 4. 48.)

$3\text{CuO}, 2\text{SO}_2 + 1\frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in H_2O . (Newbury, Am. Ch. J. 14. 232.)

$7\text{CuO}, 4\text{SO}_2 + 8\text{H}_2\text{O}$, or $4\text{CuSO}_3, 3\text{Cu}(\text{OH})_2 + 5\text{H}_2\text{O}$. Sol. in dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. (Seubert and Elten, Z. anorg. 1893, 4. 50.)

Cuprocupric sulphite, $\text{CuSO}_3, \text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

Nearly insol. in cold H_2O . Decomp. by boiling.

Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$, HCl , or $\text{NH}_4\text{OH} + \text{Aq}$. (Berthier.)

Sol. in very dil. $\text{HNO}_3 + \text{Aq}$. (Döpping, J. B. 1851. 365)

Insol. in H_2SO_3 , $\text{HC}_2\text{H}_3\text{O}_2$, or Cu salts + Aq . (de St. Gilles.)

+ $5\text{H}_2\text{O}$. Insol. in H_2O . Easily sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$, $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, in cupric salts + Aq , $\text{NH}_4\text{OH} + \text{Aq}$, or $\text{HCl} + \text{Aq}$. (de St. Gilles, A. ch. (3) 42. 34.)

Composition is $(\text{Cu}_2)\text{Cu}_{10}^{\text{H}}(\text{SO}_4)_8 + 21\text{H}_2\text{O}$, "acid cuproscupric octosulphite." (Étard, C. R. 96. 1475.)

Cuprous ferroferric sodium sulphite, $\text{Cu}_2\text{O}, 2\text{FeO}, \text{Fe}_2\text{O}_3, \text{Na}_2\text{O}, 6\text{SO}_2 + 16\text{H}_2\text{O}$.

Sol. in about 1000 pts. H_2O .

Sol. in cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$; sol. in cold dil. $\text{HCl} + \text{Aq}$ with a residue of Cu_2Cl_2 . (Stromeyer, A. 109. 237)

Cuprous lithium sulphite, $\text{Cu}_2\text{SO}_3, \text{Li}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

Insol. in H_2O , but gradually decomp. thereby. (Étard, C. R. 95. 138.)

Cupric mercuric sulphite, $\text{CuSO}_3, \text{HgSO}_3$.

Sol. in H_2O in all proportions, but decomp. on boiling.

Cuprous potassium sulphite, $\text{Cu}_2\text{SO}_3, \text{K}_2\text{SO}_3$ (?).

(Vohl, J. pr. 95. 219.)

+ $2\text{H}_2\text{O}$. Sol. in H_2O with decomp.

(Rosenheim and Steinhauser, Z. anorg. 1890, 25. 96.)

Cu_2SO_3 , $2\text{K}_2\text{SO}_3$. (Chevreul, Graham, etc.)

Does not exist (Svensson)

Cu_2O , $3\text{K}_2\text{O}$, $6\text{SO}_2 + 7\text{H}_2\text{O} = 4\text{KHSO}_3$, K_2SO_3 , $\text{Cu}_2\text{SO}_3 + 5\text{H}_2\text{O}$ Decomp by H_2O (Svensson, B. 4. 713.)

Could not be obtained. (Rosenheim and Steinhauser.)

Cu_2O , $4\text{K}_2\text{O}$, $8\text{SO}_2 + 3\text{H}_2\text{O} = 6\text{KHSO}_3$, K_2SO_3 , Cu_2SO_3 Decomp by H_2O . (Svensson)

Could not be obtained. (Rosenheim and Steinhauser.)

Cu_2SO_3 , $8\text{K}_2\text{SO}_3 + 16\text{H}_2\text{O}$. Sol in H_2O with decomp. (Rammelsberg, Pogg 57. 391.)

Does not exist, according to Svensson.

Cuprocupric potassium sulphite, $3\text{Cu}_2\text{SO}_3$, $3\text{Cu}_2\text{SO}_3$, K_2SO_3

Properties as cuprous potassium sulphite (Rogojski, J. B. 1851. 367.)

$2\text{Cu}_2\text{SO}_3$, CuSO_3 , $\text{K}_2\text{SO}_3 + 5\text{H}_2\text{O}$. Insol in H_2O and weak acids. (de St-Gilles)

Cu_2SO_3 , 4CuSO_3 , $\text{K}_2\text{SO}_3 + 16\text{H}_2\text{O}$. Decomp. by H_2O . (Rosenheim and Steinhauser.)

Cuprous sodium sulphite, Cu_2SO_3 , Na_2SO_3 , $+2\text{H}_2\text{O}$ Decomp by H_2O . (Svensson, 1870.)

$+11\text{H}_2\text{O}$. Insol. in cold H_2O , but decomp. by excess. (Étard, C. R. 95. 138.)

$2\text{Cu}_2\text{SO}_3$, $3\text{Na}_2\text{SO}_3 + 29\text{H}_2\text{O}$. Insol. in H_2O . (Rosenheim and Steinhauser, Z. anorg 1900, 25. 94.)

Cu_2SO_3 , $5\text{Na}_2\text{SO}_3 + 38\text{H}_2\text{O}$. Decomp. by H_2O . (Svensson.)

Cu_2SO_3 , $7\text{Na}_2\text{SO}_3 + 19\text{H}_2\text{O}$. Completely sol. in H_2O , but solutions decomp. on standing. (Svensson.)

"Cuprous sodium octosulphite," $(\text{Cu}_2)_3\text{H}_{10}\text{Na}_{18}\text{S}_8\text{O}_{32} + 43\text{H}_2\text{O}$. (Étard.)

$5\text{Cu}_2\text{SO}_3$, $2\text{Na}_2\text{SO}_3 + 30\text{H}_2\text{O}$ Easily decomp. (Rosenheim and Steinhauser, Z. anorg. 1900, 25. 94.)

Cuprocupric sodium sulphite, Cu_2SO_3 , 2CuSO_3 , $2\text{Na}_2\text{SO}_3 + 6\text{H}_2\text{O}$.

Nearly insol. in cold, decomp. by hot H_2O . (Rosenheim and Steinhauser, Z. anorg. 1900, 25. 95)

$+8\text{H}_2\text{O}$. Decomp. by H_2O . (Rosenheim and Steinhauser.)

Cuprocupric sodium hydrogen sulphite, $\text{Na}_5\text{Cu}_{10}^{\text{H}}(\text{Cu})_2\text{H}_2(\text{SO}_4)_3, 6\text{H}_4(\text{SO}_4) + 5\text{H}_2\text{O}$.

Insol. in H_2O . (Étard, C. R. 94. 1422.)

$(\text{Cu})_2\text{Cu}_7\text{Na}_5\text{H}_{18}(\text{SO}_4)_8$. (Étard.)

Copper sodium sulphites.

Doubtless many of the compds described in this class are in reality isomorphous mixtures whose composition depends upon the temp. and conc. of the solution in which pptd.

(Rosenheim and Steinhauser, Z. anorg. 1900, 25. 92-95.)

Didymium sulphite, $\text{Di}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$, or $6\text{H}_2\text{O}$.

Precipitate Insol. in H_2O . Sol in $\text{H}_2\text{SO}_3 + \text{Aq}$, from which it is reprecipitated by heating, redissolving on cooling. (Marignac, A. ch. (3) 38. 167.)

Erbium sulphite, $\text{Er}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$.

Precipitate.

Glucinum sulphite, basic, 2GISO_3 , $9\text{GI}(\text{OH})_2 + 6\text{H}_2\text{O}$.

Ppt (Seubert, Z. anorg 1893, 4. 52.)

GISO_3 , GIO . Decomp by H_2O or alcohol. (K. and M.)

3GISO_3 , GIC . Sol. in alcohol. (K. and M.)

Glucinum sulphite, GISO_3 .

Decomp. by H_2O or alcohol. (Kruss and Moraht, B. 23. 734)

Glucinum potassium sulphite,

2GISO_3 , $\text{K}_2\text{SO}_3 + 9\text{H}_2\text{O}$.

Unstable in the air. (Rosenheim, Z. anorg 1897, 15. 310.)

Gold (aurous) potassium sulphite, Au_2SO_3 , $3\text{K}_2\text{SO}_3$.

Very sol in H_2O ; insol in alcohol. (Haase.)

Gold (auric) potassium sulphite, Au_2O_3 , $5\text{K}_2\text{O}$, $8\text{SO}_2 + 5\text{H}_2\text{O} = 5\text{K}_2\text{SO}_3$, $\text{Au}_2(\text{SO}_3)_3 + 5\text{H}_2\text{O}$.

Sol in H_2O with decomp.

Decomp. by acids; insol. in alkalis. (Fremy, A. 79. 46.)

Gold (auric) potassium sulphite,

$\text{Au}_2(\text{SO}_3)_3$, $5\text{K}_2\text{SO}_3 + 10\text{H}_2\text{O}$.

(Rosenheim and Hertzmann, Z. anorg. 1908, 59. 199.)

Gold (auric) potassium sulphite ammonia,

$\text{Au}_2(\text{SO}_3)_3$, $3\text{K}_2\text{SO}_3$, $4\text{NH}_3 + 4\text{H}_2\text{O}$.

As the corresponding NH_4 salt. (Rosenheim and Hertzmann, Z. anorg. 1908, 59. 202.)

Gold (aurous) sodium sulphite, Au_2SO_3 , $3\text{Na}_2\text{SO}_3 + 3\text{H}_2\text{O}$.

Sol. in less than 1 pt. H_2O . Insol. in alcohol (Haase.)

$+5\text{H}_2\text{O}$. (Himly.)

Gold (auric) sodium sulphite,

$\text{Au}_2(\text{SO}_3)_3$, $5\text{Na}_2\text{SO}_3 + 28\text{H}_2\text{O}$.

As K salt. (Rosenheim and Hertzmann, anorg. 1908, 59. 199.)

Gold (aurous) sulphite ammonia, $3\text{Au}_2\text{O}$, 4SO_2 , $8\text{NH}_3 + 4\text{H}_2\text{O}$.

Sl sol in H_2O with decomp. Decomp. by acids

Sl. sol. in cold, more easily in hot NH_4OH + Aq. Decomp. by boiling (Hasse, Zeit. Ch. 1869. 535)

Gold (auric) sulphite ammonia, $\text{Au}_3(\text{SO}_3)_2$, $4\text{NH}_3 + 4\text{H}_2\text{O}$.

Ppt. Decomp. in moist air and in neutral solution (Herzmann, Z. anorg. 1908, 59. 193)

Indium sulphite, $2\text{In}_2\text{O}_3$, $3\text{SO}_2 + 8\text{H}_2\text{O}$.

Insol in H_2O . (Bayer, A. 158. 372.)

Iridium sulphite, $\text{Ir}_2(\text{SO}_3)_3 + 6\text{H}_2\text{O}$.

Scarcely sol. in H_2O ; easily sol. HCl + Aq. (Birnbbaum, A. 136. 179.)

Iridyl sulphite, $(\text{IrO})\text{SO}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in HCl or H_2SO_4 + Aq. (Birnbbaum)

Iridous potassium sulphite, IrO , $3\text{K}_2\text{O}$, $5\text{SO}_2(?)$.

Sl sol. in H_2O , more sol. in KOH + Aq. Easily sol. in HCl + Aq. (Claus, J. pr. 42. 359)

Iridous sulphite potassium chloride.

See Iridosulphite, potassium.

Iridium sulphite with M_2SO_3 .

See Iridosulphite, M.

Iron (ferrous) sulphite, $\text{FeSO}_3 + 2\frac{1}{2}\text{H}_2\text{O}$.

Very sl. sol. in H_2O . Easily sol. in H_2SO_3 + Aq. Insol. in alcohol, but sol. therein in presence of SO_2 . (Muspratt.)

Iron (ferric) sulphite, Fe_2O_3 , $\text{SO}_2 + 6\text{H}_2\text{O}$.

Very sl. sol. in H_2O . Sol. in acids. (Koene.) $2\text{Fe}_2\text{O}_3$, 3SO_2 . Deliquescent; decomp. by H_2O into SO_2 and above comp. $3\text{Fe}_2\text{O}_3$, $\text{SO}_2 + 7\text{H}_2\text{O}$ Ppt.

Iron (ferroferric) potassium sulphite, FeSO_3 , $(\text{FeO})_2\text{SO}_3$, $2\text{K}_2\text{SO}_3$.

Ppt. (Berglund.)

Iron (ferric) potassium sulphite, K_2O , Fe_2O_3 , $3\text{SO}_3 + 2\text{H}_2\text{O}$.

Sol. in H_2SO_3 + Aq. (Koene, Pogg. 63. 453.)

Fe_2O_3 , $2\text{K}_2\text{O}$, $3\text{SO}_2 + 5\text{H}_2\text{O}$. Ppt. (Muspratt, Phil. Mag. (3) 30. 414.)

Iron (ferric) potassium sulphite sulphate, $\text{FeSO}_4\text{SO}_3\text{K}$.

Sl. sol. in cold H_2O .

Sol. in 20% HCl ; decomp. on boiling. (Hofmann, Z. anorg. 1897, 14. 286.)

$\text{Fe}(\text{SO}_3)_2\text{SO}_4\text{K}_3$. Almost insol. in cold H_2O . Decomp. by boiling with dil. acids. (Hofmann.)

$\text{Fe}_2(\text{SO}_3)_2\text{SO}_4\text{K}_4 + 5\text{H}_2\text{O}$. Insol. in cold H_2O ; sol. in cold 20% HCl + Aq, decomp. on boiling with H_2O . (Hofmann.)

Iron (ferric) sodium sulphite sulphate, $\text{Fe}(\text{SO}_3)_2\text{SO}_4\text{Na}_3 + 6\text{H}_2\text{O}$

Almost insol. in H_2O .

Decomp. by boiling with dil. acids. (Hofmann, Z. anorg. 1897, 14. 289.)

Iron (ferric) sodium hydrogen sulphite sulphate, $\text{FeSO}_4(\text{SO}_3)_2\text{H}_2\text{Na}_2 + 2\text{H}_2\text{O}$.

Only very sl. sol. in H_2O . (Hofmann.)

Lanthanum sulphite, $\text{La}_2(\text{SO}_3)_3 + 4\text{H}_2\text{O}$.

Precipitate. (Cleve.)

Lead sulphite, PbSO_3 .

Insol. in H_2O . Decomp. by acids. Sl. sol. in H_2SO_3 + Aq. (Röhrig, J. pr. (2) 37. 233.)

Lithium sulphite, $\text{Li}_2\text{SO}_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O ; precipitated from aqueous solution by abs. alcohol. (Danson, Chem. Soc. 2. 205.) Sol. in H_2SO_3 + Aq.

+ H_2O Sl. sol. in alcohol, and still less sol. in ether. (Röhrig, J. pr. (2) 37. 225.) + $2\text{H}_2\text{O}$. (Röhrig)

Lithium potassium sulphite, $\text{LiKSO}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Easily sol. in H_2O . (Röhrig, J. pr. (2) 37. 251.)

Lithium sodium sulphite, $6\text{Li}_2\text{SO}_3$, $\text{Na}_2\text{SO}_3 + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Röhrig.)

Magnesium sulphite, $\text{MgSO}_3 + 6\text{H}_2\text{O}$.

Sol. in 20 pts. cold, and in less hot H_2O . (Fourcroy and Vauquelin)

Sol. in 80 pts. cold, and in 120 pts. boiling H_2O (Hager, C. C. 1875. 135.)

More easily sol. in H_2SO_3 + Aq.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 828.)

Precipitated from aqueous solution by alcohol.

+ $3\text{H}_2\text{O}$. (Röhrig, J. pr. (2) 37. 234.)

Manganous sulphite, $\text{MnSO}_3 + 2\text{H}_2\text{O}$.

Insol. in H_2O , alcohol, or ether. Easily sol. in acids, also in H_2SO_3 + Aq.

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ $2\frac{1}{2}\text{H}_2\text{O}$. (Rammelsberg.)

+ $3\text{H}_2\text{O}$. Sol. in 10,000 pts. cold, and 5000 pts. hot H_2O ; more sol. in conc. Mn salts + Aq; sol. in 1000 pts. H_2CO_3 + Aq. 100 pts. H_2SO_3 + Aq dissolve 15-17 pts. (Gorgeu, C. R. 96. 341.)

Salt with $2\frac{1}{2}\text{H}_2\text{O}$ is the only one which exists (Röhrig, J. pr. (2) 37. 2.)

Manganous potassium sulphite, $2\text{MnSO}_3 \cdot \text{K}_2\text{SO}_3$.

Insol. in H_2O , even when boiling. (Gorgeu, C. R. 96. 376.)

MnSO_3 , K_2SO_3 . Sol. in H_2O . (Gorgeu.)

Manganous sodium sulphite, $\text{MnSO}_3 \cdot \text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$.

Insol. in hot H_2O , but decomp. by cold H_2O . (Gorgeu.)

4MnSO_3 , Na_2SO_3 . Insol in H_2O . (Gorgeu.)

Mercuric sulphite, 2HgO , SO_2 .

Insol. in H_2O . Sol in HCl , alkali sulphites with subsequent decomp., and in $\text{KCN} + \text{Aq.}$ (de St-Gilles, A. ch. (3) 36. 80.)

HgSO_3 . Decomp by cold H_2O . (de St-Gilles.)

Does not exist. (Divers and Shimidzu, Chem. Soc. 49. 553.)

HgO , $2\text{SO}_2 + \text{H}_2\text{O}$. Sol. in H_2O , but decomp. by boiling. (de St-Gilles.) Exists only in aqueous solution. (Divers and Shimidzu.)

Mercuriomercuric sulphite, $\text{Hg}_2(\text{SO}_3)_2 + 2\text{H}_2\text{O} = \text{Hg}_2\text{SO}_3$, HgSO_3 .

Very efflorescent. Insol. in H_2O . Decomp. by hot H_2O . Insol in dil. HNO_3 or $\text{H}_2\text{SO}_4 + \text{Aq.}$

$+4\text{H}_2\text{O}$. Very efflorescent.

Hypomercurosic sulphite, $\text{Hg}_4(\text{SO}_3)_2 + \text{H}_2\text{O}$.

Insol. in H_2O , but easily decomp on standing therewith. Almost absolutely insol. in dil. HNO_3 or $\text{H}_2\text{SO}_4 + \text{Aq.}$ (Divers and Shimidzu.)

Mercuric oxysulphite, $\text{Hg}(\text{SO}_2\text{OHgO})_2\text{Hg} + \text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by hot H_2O . Insol. in dil. HNO_3 or $\text{H}_2\text{SO}_4 + \text{Aq.}$ Sol. in $\text{H}_2\text{SO}_3 + \text{Aq.}$ (Divers and Shimidzu.)

Mercuric potassium sulphite, basic, K_2O , 2HgO , 2SO_2 .

(Barth, Z. phys. Ch. 1892, 9. 210.)

K_2O , 3HgO , 3SO_2 . Insol. in H_2O . Partly sol. in $\text{KOH} + \text{Aq.}$ (Barth.)

Mercuric potassium sulphite, HgSO_3 , $\text{K}_2\text{SO}_3 + \text{H}_2\text{O}$.

Sl. sol. in cold H_2O . Decomp. on boiling. (de St-Gilles, A. ch. (3) 36. 90.)

Mercuric potassium sulphite mercuric chloride, $\text{K}_2\text{Hg}(\text{SO}_3)_2$, HgCl_2 .

Decomp. by H_2O . (Barth, Z. phys. Ch. 1892, 9. 206.)

Mercuric silver sulphite, HgSO_3 , $\text{Ag}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

Decomp. rapidly; insol. in H_2O (Barth, Z. phys. Ch. 9. 195.)

Mercuric sodium sulphite, HgSO_3 , $\text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$.

Sol. in H_2O . (de St-Gilles.)

Sol in 25 pts cold H_2O , and decomp. on heating. (Divers and Shimidzu.)

$+2\text{H}_2\text{O} = \text{Na}_2(\text{SO}_3)_2\text{Hg} + 2\text{H}_2\text{O}$. (Barth, Z. phys. Ch. 9. 193.)

2HgSO_3 , $\text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$. Much more sol. in H_2O than the above comp. especially on heating. (de St-Gilles.)

Does not exist (Divers and Shimidzu.)

Mercuric strontium sulphite, HgSO_3 , $\text{SrSO}_3 + 2\text{H}_2\text{O}$.

Ppt. (Barth.)

Mercuric sulphite ammonium bromide,

HgSO_3 , NH_4Br .

As NH_4Cl comp. (Barth, Z. phys. Ch. 1892, 9. 215.)

Mercuric sulphite ammonium chloride,

HgSO_3 , NH_4Cl .

As K salt. (Barth.)

Mercuric sulphite potassium chloride,

HgSO_3 , KCl

Sol. in H_2O . (Barth.)

Mercuric sulphite sodium chloride, HgSO_3 , $\text{NaCl} + \text{H}_2\text{O}$.

Sol. in H_2O (Barth.)

Nickel sulphite, basic, 2NiSO_3 , $\text{Ni}(\text{OH})_2 + 6\text{H}_2\text{O}$.

Ppt. (Seubert and Elten, Z. anorg. 1893, 4. 91.)

Nickel sulphite, $\text{NiSO}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq.}$ with evolution of SO_2 . (Muspratt, A. 50. 259.)

$+6\text{H}_2\text{O}$. Insol. in H_2O . Sol. in $\text{H}_2\text{SO}_3 + \text{Aq.}$ (Rammelsberg, Pogg. 67. 391.)

Nickel sulphite ammonia, NiSO_3 , $3\text{NH}_3 + 3\text{H}_2\text{O}$.

Sol. in little H_2O . Decomp. by much H_2O or heat. (Rammelsberg, Pogg. 67. 245.)

Osmious sulphite, OsSO_3 .

Insol. in H_2O . Easily sol. in $\text{HCl} + \text{Aq.}$ without evolution of SO_2 . Very slowly decomp. by $\text{KOH} + \text{Aq.}$ (Claus.)

Osmious potassium sulphite, OsSO_3 , $2\text{K}_2\text{SO}_3$, $2\text{KHSO}_3 + 4\text{H}_2\text{O}$.

Nearly insol. in H_2O .

Osmious potassium sulphite chloride, OsO_3 , 2SO_2 , 6KCl .

Easily sol. in H_2O .

Palladous sodium sulphite, PdSO_3 , $3\text{Na}_2\text{SO}_3$ + $2\text{H}_2\text{O} = \text{Na}_6\text{Pd}(\text{SO}_3)_4 + 2\text{H}_2\text{O}$.

Sol. in hot H_2O . Sol. in $\text{NaOH} + \text{Aq}$ or $\text{H}_2\text{SO}_3 + \text{Aq}$. (Wöhler and Frerichs, A. 174. 199.)

Platinous sulphite, PtO_2 , 2SO_2 .

Easily sol in H_2O or alcohol. (Dobereiner, J. pr. 15. 315.)

Formula is PtSO_3 . (Gmelin.)

PtSO_3 , H_2SO_3 (Burnbaum, A. 139. 172.)

Platinic potassium sulphite, PtO_2 , SO_2 , $\text{K}_2\text{SO}_3 + \text{H}_2\text{O}$.

Sol. in $\text{KOH} + \text{Aq}$. (Birnbbaum, A. 139. 173.)

Platinic sodium sulphite, PtO_2 , SO_2 , $2\text{Na}_2\text{SO}_3$ + $2\text{H}_2\text{O}$.

Sol. in H_2O . (Birnbbaum.)

Platinous sulphite with M_2SO_3 .

See Platousulphite, M.

Platinum sulphite ammonium chloride.

See Chloroplatousulphite, ammonium.

Potassium sulphite, $\text{K}_2\text{SO}_3 + 2\text{H}_2\text{O}$.

Somewhat deliquescent. Sol. in 1 pt. cold, and still less hot H_2O . (Fourcroy and Vauquelin, A. ch. 24. 254.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Very slightly soluble in alcohol. Insol. in ethyl acetate. (Casaseca, C. R. 30. 821.)

Potassium hydrogen sulphite, KHSO_3 .

Sol. in H_2O . Insol. in absolute alcohol.

Potassium pyrosulphite, $\text{K}_2\text{S}_2\text{O}_5$.

Slowly sol. in H_2O . Very sl. sol. in alcohol; insol. in ether. (Muspratt, A. 50. 259.)

Potassium rhodium sulphite, $3\text{K}_2\text{SO}_3$, $\text{Rh}_2(\text{SO}_3)_3 + 6\text{H}_2\text{O}$.

See Rhodosulphite, potassium.

Potassium ruthenium sulphite, $\text{O}[\text{Ru}(\text{SO}_3)_4\text{K}_6]_2 + 2\text{H}_2\text{O}$.

Ppt. (Miolati, C. C. 1901, I. 501.)

Potassium sodium sulphite, KNaSO_3 .

Sol. in H_2O . (Spring, B. 7. 1161.)

+1, and $2\text{H}_2\text{O}$. (Schwicker, B. 22. 1731.)

Isomeric salts, KSO_3Na and NaSO_3K . (Barth, Z. phys. Ch. 9. 176.)

Potassium sodium hydrogen sulphite, $\text{KNa}_2\text{H}(\text{SO}_3)_2 + 4\text{H}_2\text{O}$.

Easily sol in H_2O ; 100 pts. H_2O dissolve 69 pts salt at 15° (Schwicker, B. 22. 1731.)

$\text{K}_2\text{NaH}(\text{SO}_3)_2 + 3\text{H}_2\text{O}$. (Schwicker.)

Potassium uranyl sulphite, $\text{K}(\text{UO}_2)(\text{OH})\text{SO}_3$.

Insol. in H_2O , but sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Scheller.)

K_2O , 2UO_3 , 3SO_2 . (Kohlschütter, A. 1900, 311. 10 *et seq.*)

K_2O , 4UO_3 , 5SO_2 . (K.)

K_2O , 3UO_3 , 2SO_2 . (K.)

K_2O , UO_3 , 2SO_2 . (K.)

Potassium vanadium sulphite.

See Vanadiousulphite, potassium.

Potassium vanadyl sulphite, K_2SO_3 , $\text{VO}_2\text{SO}_3 + 5\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O without decomp. and can be recryst. therefrom. (Koppel and Behrendt, B. 1901, 34. 3932.)

K_2O , 3VO_2 , 2SO_2 . Sol. without decomp. in cold and hot H_2O .

Insol. in alcohol and ether. (Koppel, Z anorg 1903, 35. 182.)

Potassium zinc sulphite, K_2SO_3 , $3\text{ZnSO}_3 + 7\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Berglund, Acta Lund. 1872.)

Rhodium sulphite, $\text{Rh}_2(\text{SO}_3)_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O . Insol. in alcohol. (Claus.)

Rhodium sodium sulphite.

See Rhodosulphite, sodium.

Ruthenium sulphite, $\text{Ru}_2(\text{SO}_3)_3$.

Colloidal substance, sol. in a large quantity of H_2O . (Lucchesi, Gazz. ch. it. 1900, 30. (2) 71.)

Ruthenium sodium sulphite, $\text{Na}_2\text{Ru}(\text{SO}_3)_3 + 2\text{H}_2\text{O}$.

Ppt. (Miolati, C. C. 1901, I. 501.)

Samarium sulphite, $\text{Sm}_2(\text{SO}_3)_3$.

Amorphous precipitate. (Cleve.)

Scandium sulphite, $\text{Sc}_2(\text{SO}_3)_3$.

Insol. in cold H_2O . Sl. sol. in hot H_2O . Sol. in excess of sodium sulphite when heated. (Crookes, Phil. Trans. 1910, 210. A. 363.)

+ $6\text{H}_2\text{O}$. Very sl. sol. in H_2O .

Decomp. by boiling with H_2O with separation of H_2SO_3 . (R. J. Meyer, Z. anorg. 1914, 86. 281.)

Selenium sulphite, SeSO_3 .

Correct composition for "selenium sulphoxide." (Divers, Chem. Soc. 49. 583.)

Silver sulphite, Ag_2SO_3 .

Very sl sol. in cold H_2O . Decomp on heating.

Solubility in H_2O is <1:20,000 (Baubigny, C. R. 1909, 149. 858.)

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ and alkali sulphites + Aq. Insol in $\text{H}_2\text{SO}_3 + \text{Aq.}$ Decomp. by strong acids, but not by acetic acid. (Berthier, A. ch (3) 7. 82)

Easily sol. in alkali thiosulphates + Aq. (Herschel)

Cold $\text{NaHSO}_3 + \text{Aq}$ dissolves a considerable amount of Ag_2SO_3 . (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 78)

Practically insol in $\text{HNO}_3 + \text{Aq}$ or dil. $\text{AgNO}_3 + \text{Aq.}$ also in $\text{H}_2\text{SO}_3 + \text{Aq}$ (Divers, Chem. Soc. 49. 579.)

Silver sodium sulphite, Ag_2SO_3 , $\text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$.

Decomp. by H_2O . (Svensson, B. 4. 714.)

Sodium sulphite, Na_2SO_3 .

100 pts dissolve at 0° , 14.1 pts.; at 20° , 25.8 pts; at 40° , 49.5° pts Na_2SO_3 (Kremers, Pogg. 99. 50.) Maximum solubility is at 33° (Mitscherlich)

Solubility in 100 pts. H_2O at t° .

t°	Pts Na_2SO_3
60 4	28 29
59 8	28 29
59 8	28 65
59 8	28.75
37 0	28.01
37.0	28 07
47 0	28.19
47 0	28.07
55 6	28 21
84 0	28.26

The temp at which $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$ changes into Na_2SO_3 is about 21.6° .

(Hartley and Barrett, Chem. Soc. 1909, 95. 1183.)

See also $+7\text{H}_2\text{O}$.

Sp. gr. of sat. solution at $15^\circ = 1.21$. (Greenish and Smith, Pharm. J. 1901, 66. 774.)

Insol. in liquid NH_3 . (Franklin, Am. Ch. J 1898, 20. 829.)

Insol. in alcohol.

Insol. in ethyl acetate. (Casaseca, C. R. 30. 821.); methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

$+7\text{H}_2\text{O}$. Decomp slowly on air.

Sol in 4 pts H_2O at 15° with absorption of heat (Dumas), and in 1 pt. boiling H_2O (Fourcroy)

Solubility in 100 pts H_2O at t° .

t°	Pts Na_2SO_3
37 2	44 08
33.5	39 64
29 0	34 99
23 5	29 92
18 2	25 31
10 6	20 01
5 9	17 61
2 0	14 82
-1 9	13 09

Supersolubility curves have also been plotted for ice and $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$.

(Hartley and Barrett, Chem. Soc. 1909, 95. 1181.)

$+10\text{H}_2\text{O}$. Efflorescent Somewhat less sol. than above salt. (Muspratt)

Sodium hydrogen sulphite, NaHSO_3 .

More difficulty sol in H_2O than NaHCO_3 , and is precipitated by alcohol from aqueous solution. (Muspratt.)

Insol in acetone. (Eidmann, C. C. 1899, II 1014, Naumann, B. 1904, 37. 4329) methyl acetate. (Naumann, B. 1909, 42. 3790)

$+4\text{H}_2\text{O}$ (Clark.)

Sodium pyrosulphite, $\text{Na}_2\text{S}_2\text{O}_5$.

Decomp gradually on the air.

Sodium uranyl sulphite, $\text{Na}(\text{UO}_2)(\text{OH})\text{SO}_3$.

Sl. sol. in H_2O More sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ than the K salt. (Scheller.)

Na_2O , 2UO_3 , 3SO_2 .

Na_2O , 3UO_3 , 2SO_2 (Kohlschütter, A. 1900, 311. 10 et seq.)

Sodium vanadyl sulphite, Na_2O , 2SO_2 , $\text{VO}_2 + 5\text{H}_2\text{O}$.

Sol. in H_2O with decomp.

Na_2O , 2SO_2 , $3\text{VO}_2 + 4\text{H}_2\text{O}$. Sol. in cold H_2O ; decomp on heating. (Koppel, B. 1901, 34. 3933.)

Sodium zinc sulphite, Na_2SO_3 , $3\text{ZnSO}_3 + 7\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O with decomp. (Berglund, Acta Lund, 1872.)

Sodium sulphite silver chloride, $3\text{Na}_2\text{SO}_3$, $\text{AgCl} + 21\text{H}_2\text{O}$.

Sol. in H_2O . (Svensson.)

Strontium sulphite, SrSO_3 .

Precipitate Almost insol in H_2O Sol in $\text{H}_2\text{SO}_3 + \text{Aq}$ (Muspratt)
Sol in about 30,000 pts. H_2O at 16–18°.
(Autenrieth, Z anal. 1898, **37**, 293)
Abundantly sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ (Röhrig.)

Tellurium sulphite, TeSO_3 .

Correct composition of "tellurium sulphoxide" (Divers, Chem Soc **49**, 583)

Thallous sulphite, Tl_2SO_3 .

Sl. sol. in cold, easily in hot $\text{H}_2\text{SO}_3 + \text{Aq}$.
(Rohrig, J. pr. (2) **37**, 229)
100 pts. H_2O dissolve 334 pts at 15°
Easily sol in hot H_2O ; insol. in alcohol.
(Seubert and Elten, Z anorg **2**, 434.)

Thallous vanadyl sulphite, $2\text{Tl}_2\text{SO}_3$,

(Gain, A. ch 1908, (8) **14**, 278.)

$\text{Tl}_2\text{SO}_3, 3\text{V}_2\text{O}_5\text{SO}_3 + 8\text{H}_2\text{O}$. (Gain.)

Thorium sulphite, $\text{Th}(\text{SO}_3)_2 + \text{H}_2\text{O}$.

Precipitate. (Cleve.)

Tin (stannous) sulphite, $5\text{SnO}, 2\text{SO}_2 + x\text{H}_2\text{O}$

Ppt Partly sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ (Röhrig,
J. pr (2) **37**, 249)
+ $20\text{H}_2\text{O}$. (Röhrig.)
 $8\text{SnO}, 2\text{SO}_2 + 20\text{H}_2\text{O}$.
 $11\text{SnO}, 2\text{SO}_2 + 20\text{H}_2\text{O}$. (Rohrig.)

Uranous sulphite, basic, $\text{U}(\text{OH})_2\text{SO}_3 + \text{H}_2\text{O}$.

Insol. in H_2O . Easily sol in acids Sol.
in $\text{H}_2\text{SO}_3 + \text{Aq}$, but is soon decomp. (Rammelsberg.)

**Uranyl sulphite, basic, $3\text{UO}_2(\text{OH})_2$,
 $5(\text{UO}_2)_2\text{SO}_3 + 10\text{H}_2\text{O}$.**

(Seubert and Elten, Z. anorg. 1893, **4**, 80.)

Uranyl sulphite, $(\text{UO}_2)_2\text{SO}_3 + 4\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$ or alcoholic solution of SO_2 . (Röhrig, J. pr. (2) **37**, 240.)

Vanadyl sulphite, $3\text{VO}_2, 2\text{SO}_2 + 4\frac{1}{2}\text{H}_2\text{O}$.

Decomp. slowly on standing.
Sol. in H_2O without apparent decomp.
(Koppel, Z. anorg 1903, **35**, 186.)
 $2\text{V}_2\text{O}_5, 3\text{SO}_2 + 10\text{H}_2\text{O}$. Sol. in H_2O ; aq.
sol decomp. on boiling giving off SO_2 and forming $\text{V}_2\text{O}_5, 2\text{H}_2\text{O}$. (Gain, C. R. 1906, **143**, 824.)

Vanadyl zinc sulphite, $\text{ZnO}, 3\text{VO}_2, 2\text{SO}_2$.

Decomp. slowly in the air.
Sol. in H_2O without decomp. (Koppel, Z.
anorg. 1903, **35**, 183.)

Ytterbium sulphite, $\text{Yb}_2(\text{SO}_3)_3 + 9\text{H}_2\text{O}$.

Insol. in H_2O . (Cleve, Z. anorg. 1902, **32**, 143.)

Yttrium sulphite, $\text{Y}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$.

Sl sol. in H_2O . (Cleve.)

Zinc sulphite, basic, $2\text{ZnSO}_3, 3\text{Zn}(\text{OH})_2$.

(Seubert, Arch. Pharm **229**, 321.)
 $\text{ZnSO}_3, \text{Zn}(\text{OH})_2 + \text{H}_2\text{O}$ (Seubert.)

Zinc sulphite, $\text{ZnSO}_3 + 2$, and $2\frac{1}{2}\text{H}_2\text{O}$.

Very sl. sol. in H_2O : 100 pts. H_2O dissolve
0.16 pt. $\text{ZnSO}_3 + 2\text{H}_2\text{O}$ (Henston and Tichborne, Brit. Med J. **1890**, 1063)
Easily sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Koene.)
Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.
Insol. in alcohol.
Decomp. into basic salt by boiling H_2O .
(Seubert, Arch. Pharm. **229**, 1.)

Zinc sulphite ammonia, $\text{ZnSO}_3, \text{NH}_3$.

Decomp by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$.
(Rammelsberg, Pogg. **67**, 255.)

Zirconium sulphite.

Insol. in H_2O . Somewhat sol in $\text{H}_2\text{SO}_3 + \text{Aq}$, from which it is reprecipitated on boiling. Sol. in $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$, from which Zr hydroxide is pptd on boiling (Berzelius.)
 $\text{Zr}(\text{SO}_3)_2 + 7\text{H}_2\text{O}$ Ppt (Venable, J Am. Chem. Soc. 1895, **17**, 449)

Sulphuryl bromide, SO_2Br_2 .

(Odling, Chem Soc. **7**, 2.)

Does not exist. (Sestini, Bull. Soc. **10**, 226; Melsens, C. R. **76**, 92; Michaelis.)

Sulphuryl chloride, SO_2Cl_2 .

Decomp. by H_2O and alcohol.

Decomp. by moist air, water, or abs. alcohol; more rapidly by alkalis, HCl , SO_2 , etc. (Schiff, A. **102**, 111.)
+ H_2O . Only sl. sol in H_2O at 0° with slow decomp. (Baeyer, B. 1901, **34**, 737.)
+ $15\text{H}_2\text{O}$. Sl sol in H_2O at 0° and stable therein for several hours. (Baeyer.)

Disulphuryl chloride (Pyrosulphuryl chloride), $\text{S}_2\text{O}_5\text{Cl}_2$.

Decomp. slowly with H_2O . (Rose, Pogg. **44**, 291)

Sol. in CCl_4 and CHCl_3 ; miscible with liquid SO_3 .

Sulphuryl hydroxyl chloride,

Decomp. on moist air, and violently with H_2O . Not miscible with CS_2 . Decomp. with alcohol.

Sulphuryl titanium chloride, $\text{SO}_2, \text{TiCl}_4 = \text{TiCl}_3\text{OSO}_2\text{Cl}$.

Slowly deliquescent. (Clausnitzer, B. **11**, 2011.)

Disulphuryl chloride stannic oxychloride,
 $5\text{S}_2\text{O}_5\text{Cl}_2, 4\text{SnOCl}_2.$

Sol. in a little H_2O , but decomp. by more H_2O . (Rose, Pogg. **44**. 320)

Sulphuryl fluoride, SO_2F_2 .

1 pt. is sol. in 10 pts. H_2O at 9° . 3 vol. are sol. in 1 vol. alcohol at 9° ; insol. in conc. H_2SO_4 at 66° ; sol. in aq. solution of KOH , $\text{Ca}(\text{OH})_2$, $\text{Ba}(\text{OH})_2$ and in alcoholic solution of alkalis. (Moissan, C. R. 1901, **132**. 377.)

Sulphuryl hydroxyl fluoride, HSO_2F .

Violently decomp. by H_2O . (Thorpe and Kirwan, Z. anorg. **3**. 63.)

Sulphuryl peroxide, SO_4 .

See Sulphur heptoxide.

Sulphydric acid.

See Hydrogen Sulphide.

Sulphhydroxyl.

See Sulphhydroxyl.

Tantalalic acid, $\text{H}_2\text{Ta}_2\text{O}_7$ (?)

Sol. in HF (Rose), and $\text{KH}_2(\text{C}_2\text{O}_4)_2 + \text{Aq}$ (Gahn, Schw. J. **16**. 437). At the instant of precipitation is sol. in various acids. (Rose.)

Aluminum tantalate.

Insol. in H_2O . (Berzelius.)

Ammonium hexatantalate, $(\text{NH}_4)_2\text{H}_7\text{Ta}_7\text{O}_{19} + \text{H}_2\text{O}$.

Somewhat sol. in H_2O . (Rose, Pogg. **102**. 57.)

Barium hexatantalate, $\text{Ba}_4\text{Ta}_6\text{O}_{18} + 6\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Rose.)

Cæsium tantalate, $4\text{Cs}_2\text{O}, 3\text{Ta}_2\text{O}_5 + 14\text{H}_2\text{O}$.

Completely sol. in a small amount of hot H_2O . (E. F. Smith, J. Am. Chem. Soc. 1908, **30**. 1666.)

$7\text{Cs}_2\text{O}, 6\text{Ta}_2\text{O}_5 + 38\text{H}_2\text{O}$. Pptd. from its aqueous solution by alcohol. (Smith.)

Ferrous tantalate, $\text{Fe}(\text{TaO}_3)_2$.

Min. *Tantalite*.

$5\text{FeO}, 4\text{Ta}_2\text{O}_5$. Min. *Tapolite*.

Magnesium hexatantalate, $\text{Mg}_4\text{Ta}_6\text{O}_{18} + 9\text{H}_2\text{O}$.

Ppt. (Rose, Pogg. **102**. 61.)

$4\text{MgO}, \text{Ta}_2\text{O}_5$. Insol. in H_2O . (Joly, C. R. **31**. 266.)

Mercurous tantalate, $5\text{Hg}_2\text{O}, 4\text{Ta}_2\text{O}_5 + 5\text{H}_2\text{O}$.

Decomp. by warm $\text{HNO}_3 + \text{Aq}$ (1.21 sp. gr.) with separation of Ta_2O_5 . (Rose, Pogg. **102**. 64.)

Potassium tantalate, KTaO_3 .

Insol. in H_2O . Sol. in $\text{KOH} + \text{Aq}$. (Marignac, A. ch. (4) **9**. 249.)

Potassium hexatantalate, $\text{K}_3\text{Ta}_6\text{O}_{19} + 16\text{H}_2\text{O}$.

Sol. without decomp. in moderately warm H_2O . Decomp. by boiling. (Marignac, A. ch. (4) **9**. 259.)

Rubidium tantalate, $4\text{Rb}_2\text{O}, 3\text{Ta}_2\text{O}_5 + 14\text{H}_2\text{O}$.

Sol. in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1908, **30**. 1666.)

Silver tantalate, $4\text{Ag}_2\text{O}, 3\text{Ta}_2\text{O}_5$.

Completely sol. in $\text{NH}_4\text{OH} + \text{Aq}$. $\text{HNO}_3 + \text{Aq}$ dissolves Ag_2O , and Ta_2O_5 separates out. (Rose, Pogg. **102**. 64.)

Sodium tantalate, NaTaO_3 .

Insol. in H_2O . (Rose.)

Sodium hexatantalate, $\text{Na}_3\text{Ta}_6\text{O}_{19} + 25\text{H}_2\text{O}$.

1 pt. salt. dissolves in 493 pts. H_2O at 13.5° , and in 162 pts. at 100° . Very slightly sol. in alcohol. Insol. in alkaline solutions. (Rose.)

Pertantalalic acid.

See Pertantalalic acid.

Tantalum, Ta.

Not attacked by HCl , HNO_3 , aqua regia, or hot conc H_2SO_4 . Easily sol. in a mixture of HNO_3 and HF (Berzelius, Pogg. **4**. 6; Rose). Also sol. in HF alone (Berzelius)

Not attacked by alkali hydrates + Aq .

Insol. in single acids and in aqua regia. Oxidized by a mixture of HF and aqua regia. (Moissan, C. R. 1902, **134**. 211)

Pure Ta is insol. in boiling H_2SO_4 , HNO_3 , HCl , aqua regia or mixtures of these acids; slowly sol. in $\text{HF} + \text{Aq}$. (v. Bolton, Zeit. Elektrochem. 1905, **11**. 45.)

Tantalum bromide, TaBr_5 .

Decomp. by H_2O . (Rose)

Tantalum dichloride, $\text{TaCl}_5 + 2\text{H}_2\text{O}$.

Sol. in H_2O when freshly prepared. (Chabrie, C. R. 1907, **144**. 805.)

Tantalum pentachloride, TaCl_5 .

Takes up H_2O from the air without deliquescing. Decomp. by H_2O Sol. in H_2SO_4 . Sol. in cold $\text{HCl} + \text{Aq}$ to a cloudy liquid, which gelatinises after a time. Not completely sol. in boiling $\text{HCl} + \text{Aq}$, and the solution does not gelatinise by the subsequent addition of water, but all goes into solution. Partly sol. in $\text{KOH} + \text{Aq}$. Insol. in $\text{K}_2\text{SO}_4 + \text{Aq}$. Sol. in absolute alcohol

Tantalum pentafluoride, TaF₅.

Very hygroscopic; sol. in H₂O. (Ruff, B. 1909, **42**, 494.)

Tantalum fluoride with MF.

See Fluotantalate, M.

Tantalum hydroxide, Ta₂O₅, xH₂O.

See Tantallic acid.

Tantalum nitride, TaN.

Not sol. in any acids, except a mixture of HF and HNO₃. (Rose, Pogg. **100**, 146.)
Ta₂N₅. (Joly, Bull. Soc. (2) **25**, 506.)

Tantalum dioxide, Ta₂O₃(?).

Sol. in HF with evolution of hydrogen. (Hermann, J. pr (2) **5**, 69.)

Tantalum tetroxide, Ta₂O₄.

Not attacked by any acid, not even a mixture of HNO₃ and HF. (Berzelius, Pogg. **4**, 20.)

Decomp. by HCl. (Smith, Z. anorg. 1894, **7**, 98.)

Tantalum pentoxide, Ta₂O₅.

Insol. in any acid, even boiling H₂SO₄ or in HF. (Berzelius.)

Sol. in fused KHSO₄, 10 pts. being necessary to dissolve 1 pt. Ta₂O₅.

Tantalum silicide, TaSi₂.

Insol. in most inorganic acids Sol. in HF and in HF+HNO₃.

Decomp. by fused alkali hydroxides. (Hönigschmid, M. 1907, **28**, 1027.)

Tantalum sulphide, Ta₂S₄.

Not attacked by HCl+Aq. Oxidised by boiling with HNO₃+Aq, more rapidly with aqua regia. Attacked by H₂SO₄ on heating. Not completely sol. in HF or a mixture of HF and HNO₃.

Telluretted hydrogen, TeH₂.

See Hydrogen telluride.

Telluric acid, H₂TeO₄.

Insol. in H₂O, cold conc. HCl, hot HNO₃, or boiling KOH+Aq, but when heated with H₂O is gradually converted into H₂TeO₄+2H₂O and dissolved.

+2H₂O. Very slowly sol. in cold H₂O, but sol. in hot H₂O in every proportion. Insol. in absolute alcohol; sol. in dil. alcohol according to the amount of H₂O present. Sol. in acids and alkalis. Insol. in alcohol or ether.

Insol. in alcohol; sol. in NaOH+Aq. (Mylius, B. 1901, **34**, 2216.)

Stable in the air.

Sol. in H₂O; pptd. by HNO₃. (Staudenmaier, Z. anorg. 1895, **10**, 191.)

Solubility in H₂O.

Solid phase	Temp	% H ₂ TeO ₄	Mols H ₂ O to 1 mol H ₂ TeO ₄	Mols H ₂ TeO ₄ to 100 mols H ₂ O
H ₂ TeO ₄ ·6H ₂ O	0°	13 92	66 2	1.51
"	5°	17 84	49.2	2.03
"	10°	26 21	30.2	3.31
"	15°	32 79	21 9	4.55
H ₂ TeO ₄ ·2H ₂ O	10°	25 29	31 7	3.15
"	18°	28 90	26 2	3.82
"	30°	33 36	21 4	4 67
"	40°	36 38	18 8	5 33
"	60°	43 67	14 2	7.04
"	80°	51 55	10 07	9 93
"	100°	60 84	6.89	14.52

(Mylius, B. 1901, **34**, 2211.)

+6H₂O. Obtained from solutions at 0°. (Staudenmaier, Z. anorg. 1895, **10**, 191.)

Allotelluric acid, H₂TeO₄.

Miscible with H₂O.

Sol. in alcohol; pptd. by NaOH+Aq but sol. in excess. (Mylius, B. 1901, **34**, 2216.)

Tellurates.

Neutral alkali salts are sol. in H₂O; the acid salts are only sl. sol. therein, but dissolve in HCl+Aq.

Aluminum tellurate.

Ppt. Sol. in excess of aluminum salts+Aq. (Berzelius.)

Ammonium tellurate, (NH₄)₂TeO₄.

Slowly but completely sol. in H₂O. Sl. sol. in NH₄OH+Aq or NH₄Cl+Aq. Sl. sol. in alcohol (Berzelius.)

(NH₄)₂O, 2TeO₃. Sl. sol. in H₂O, but more sol. than the corresponding K salt.

(NH₄)₂O, 4TeO₃. Very sl. sol. in H₂O. Insol. in alcohol. (Berzelius.)

Barium tellurate, BaTeO₄+3H₂O.

Sl. sol. in cold, more in boiling H₂O. Easily sol. in HNO₃+Aq. (Berzelius.)

BaH₂(TeO₄)₂+2H₂O. More sol. in H₂O than BaTeO₄. Decomp. by H₂O. (Berzelius.)

BaO, 4TeO₃. More sol. in H₂O than either BaTeO₄ or BaH₂(TeO₄)₂. (Berzelius.)

Bismuth tellurate, Bi₂TeO₆+2H₂O.

Min. *Montanite*. Sol. in HCl+Aq with evolution of Cl.

Cadmium tellurate, CdTeO₄.

Ppt. Sol. in HCl+Aq. (Oppenheim.)

Cæsium hydrogen tellurate, CsHTeO₄+½H₂O.

1 pt. is sol. in 30 pts. H₂O. (Norris, Am. Ch. J. 1901, **26**, 321.)

Calcium tellurate, CaTeO_4 .Ppt. Sol. in hot H_2O . (Berzelius)**Chromic tellurate, $\text{Cr}_2(\text{TeO}_4)_3$.**

Ppt. Sol. in excess of Cr salts + Aq

Cobaltous tellurate.

Ppt. (Berzelius)

Cupric tellurate, CuTeO_4 .

Ppt (Berzelius)

 CuO , 2TeO_3 Ppt (B) Cu_2TeO_6 . Insol. in H_2O .Sol in HCl , HNO_3 , NH_4OH , KCN and acetic acid. (Hutchins, J. Am. Chem. Soc. 1905, **27**. 1181)**Glucinum tellurate, GtTeO_4 .**Insol. in H_2O .**Iron (ferrous) tellurate, FeTeO_4 .**Ppt Min. *Ferrotellurate*.**Iron (ferric) tellurate, $\text{Fe}_2(\text{TeO}_4)_3$.**

Ppt Sol in ferric salts + Aq. (Berzelius.)

Lead tellurate, basic.Not completely insol. in H_2O .**Lead tellurate, PbTeO_4 .**Somewhat sol in H_2O . PbO , 2TeO_3 . More sol. than PbTeO_4 . PbO , 4TeO_3 Sl sol. in H_2O . Sol. in HNO_3 + Aq, less sol. in $\text{HC}_2\text{H}_3\text{O}_2$ + Aq. (Berzelius.)**Lithium tellurate, $\text{Li}_4\text{TeO}_6 + x\text{H}_2\text{O}$.**Sl. sol. in H_2O with decomp. (Mylius, B. 1901, **34**. 2209.)**Magnesium tellurate, MgTeO_4 .**Ppt. More sol in H_2O than the Ba, Sr. or Ca salts. MgTe_2O_7 More sol in H_2O than MgTeO_4 .**Manganous tellurate.**

Ppt.

Mercurous tellurate, basic, $3\text{Hg}_2\text{O}$, 2TeO_3 .Ppt. (Hutchins, J. Am. Chem. Soc. 1905, **27**. 1178.)**Mercurous tellurate, Hg_2TeO_4 .**Ppt. Min. *Magnolite*.**Mercuric tellurate, HgTeO_4 .**Ppt. Very easily decomp. by H_2O . (Hutchins, J. Am. Chem. Soc. 1905, **27**. 1179.)+ $2\text{H}_2\text{O}$. Slowly decomp. by cold H_2O .Rapidly decomp. by boiling H_2O . (Hutchins.) Hg_2TeO_6 . Insol in H_2O . Unchanged by boiling with H_2O .Sol in HNO_3 , but more readily sol. in HCl . (Hutchins)**Mercuric tellurate.**

Ppt (Berzelius.)

Mercurous hydrogen tellurate, $\text{HgHTeO}_4 + 3\text{H}_2\text{O}$.Stable in the air if protected from the light
Insol. in H_2O . Decomp by boiling H_2O or by an excess of cold conc. HgNO_3 + Aq
Sol. in dil. HNO_3 or dil acetic acid. (Hutchins, J. Am. Chem Soc 1905, **27**. 1177)**Nickel tellurate.**

Ppt.

Potassium tellurate, $\text{K}_2\text{TeO}_4 + 5\text{H}_2\text{O}$.Deliquesces. Sol in H_2O . Very sl. sol. in H_2O containing KOH .100 g. H_2O dissolve at:

0°	20°	30°
8.82	27.53	50.42 g. K_2TeO_4 .

(Rosenheim and Weinheber, Z. anorg. 1911, **69**. 264.)

Insol. in alcohol. (Berzelius.)

 K_2O , 2TeO_3 Insol. in H_2O , acids, or alkalies. (B.) $\text{KHTeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ Sl sol in cold, more sol. in hot H_2O . (Berzelius.) K_2O , $3\text{TeO}_3 + 5\text{H}_2\text{O}$. Much more sol. in hot than in cold H_2O . (Hutchins, J. Am. Chem. Soc. 1905, **27**. 1174.) K_2O , 4TeO_3 Insol. in H_2O , HCl , or HNO_3 + Aq. Sol. by long heating with conc. HNO_3 + Aq. KHTeO_4 , $\text{H}_2\text{TeO}_4 + \frac{1}{2}\text{H}_2\text{O}$. Sl. sol. in H_2O .**Rubidium tellurate, $\text{Rb}_2\text{TeO}_4 + 3\text{H}_2\text{O}$.**Sol. in about 10 pts. H_2O . (Norris, Am. Ch. J. 1901, **26**. 322.)**Rubidium hydrogen tellurate, $\text{RbHTeO}_4 + \frac{1}{2}\text{H}_2\text{O}$.**Sol in about 20 pts. cold H_2O . Sl. more sol. in hot H_2O . (Norris, Am. Ch. J. 1901, **26**. 320.)**Silver tellurate, $3\text{Ag}_2\text{O}$, TeO_3 .**Sol. in NH_4OH + Aq. $3\text{Ag}_2\text{O}$, 2TeO_3 Insol. in boiling H_2O . + $3\text{H}_2\text{O}$. Ppt. Unchanged by cold H_2O . Gradually decomp. by boiling H_2O . (Hutchins, J. Am. Chem. Soc. 1905, **27**. 1169.) Ag_2TeO_4 . Decomp. by H_2O into $3\text{Ag}_2\text{O}$, TeO_3 . Sol. in NH_4OH + Aq.+ $2\text{H}_2\text{O}$. Insol. in hot and cold H_2O . Sol. in NH_4OH , KCN , $\text{Na}_2\text{S}_2\text{O}_3$, HNO_3 , H_2SO_4 and $\text{HC}_2\text{H}_3\text{O}_2$ + Aq. Decomp. by conc. HNO_3 , H_2SO_4 or acetic acid. (Hutchins, J. Am. Chem Soc. 1905, **27**. 1165.)

Ag_2TeO_7 . Ppt.
 Ag_2O , 4TeO_3 . Ppt.
 Could not be obtained. (Hutchins, J. Am. Chem. Soc. 1905, **27**: 1168)

Sodium tellurate, $\text{Na}_2\text{TeO}_4 + 2\text{H}_2\text{O}$.

Very sl. sol. in hot or cold H_2O . When heated to drive off $2\text{H}_2\text{O}$ becomes insol. in H_2O , but sol. in dil $\text{HNO}_3 + \text{Aq}$. (Berzelius.)
 1 pt. is sol. in about 130 pts. H_2O at 18° ; 50 pts. H_2O at 100° .

+ $4\text{H}_2\text{O}$. 1 pt. is sol. in about 70 pts. H_2O at 18° ; 40 pts. H_2O at 50° . (Mylus, B. 1901, **34**: 2209.)

$\text{Na}_2\text{TeO}_7 + 4\text{H}_2\text{O} = \text{NaHTeO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$.
 Slowly but completely sol. in H_2O . Sl. sol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in alcohol. (Berzelius.)

Na_2O , 4TeO_3 . Insol. in H_2O , acids, or alkalies, except by long boiling with $\text{HNO}_3 + \text{Aq}$.

+ $\alpha\text{H}_2\text{O}$. (α) Slowly sol. in H_2O . (β) Insol. even in boiling H_2O .

$\text{Na}_4\text{TeO}_6 + 8\text{H}_2\text{O}$. Very sol. in H_2O but with decomp. (Mylus)

Strontium tellurates.

Resemble Ca salts.

Thallous tellurate, Tl_2TeO_4 .

Sl. sol. in H_2O . (Dennis, J. Am. Chem. Soc. 1898, **18**: 975)

Thorium tellurate.

Ppt. Insol in excess of thorium salts + Aq .

Uranium tellurate, $\text{U}_3(\text{TeO}_4)_8(?)$.

Ppt Insol in H_2O or $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$.

Yttrium tellurate.

Ppt. Insol. in H_2O or Yt salts + Aq .

Zinc tellurate, Zn_3TeO_6 .

Insol. in H_2O .

Sol. in HNO_3 , HCl , H_2SO_4 and acetic acid. (Hutchins, J. Am. Chem. Soc. 1905, **27**: 1181.)

Zirconium tellurate.

Ppt (Berzelius.)

Tellurium, Te.

Insol. in H_2O or $\text{HCl} + \text{Aq}$. Sl. sol. in hot conc. H_2SO_4 , but separates out on cooling. Sol. in boiling conc. H_2SO_4 . Easily oxidised by HNO_3 or aqua regia. Sol. in boiling very conc. $\text{KOH} + \text{Aq}$, separating out again on cooling.

Not attacked by boiling conc. $\text{HNO}_3 + \text{Aq}$, according to Hartung-Schwartzkoff (Ann. Min. (4) **19**: 345).

Sol. in warm conc. $\text{KCN} + \text{Aq}$.

Insol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**: 830.)

100 pts methylene iodide dissolve 0.1 pt. Te at 12° . (Retgers, Z. anorg. **3**: 343.)

$\frac{1}{2}$ cem. oleic acid dissolves 0.0014 g. Te in 6 days. (Gates, J. phys. Ch 1911, **15**: 143.)

A colloidal solution of Te in H_2O can be obtained. It exists in two modifications, a brown and a blue-gray. Both can be diluted with H_2O or concentrated by boiling without decomp. They are, however, decomp. by electrolytes, especially NH_4Cl . (Gutbier, Z. anorg. 1902, **32**: 53)

Tellurium dibromide, TeBr_2 .

Decomp. on air or by H_2O . (Rose, Pogg. **21**: 443)

Conc tartaric acid dissolves partly without decomp (Brauner, M 1891, **12**: 34)

Tellurium tetrabromide, TeBr_4 .

Sol. in a little, but decomp. by much H_2O . Completely sol. in tartaric acid + Aq (1:1). (Brauner, M. 1891, **12**: 34.)

Tellurium hydrogen bromide, $\text{TeBr}_4, \text{HBr} + 5\text{H}_2\text{O}$.

Fumes in the air. Deliquescent. Stable in an atmos of HBr (Metzner, C. R. 1897, **124**: 1951.)

Tellurium dichloride, TeCl_2 .

Decomp on air, or by H_2O or $\text{HCl} + \text{Aq}$. (Rose, Pogg. **21**: 443.)

Tellurium tetrachloride, TeCl_4 .

Extremely deliquescent. Decomp. by cold H_2O , with separation of oxychloride and tellurous acid. Sol in hot H_2O with decomp. Sol in dil $\text{HCl} + \text{Aq}$ without decomp. (Rose, Pogg. **21**: 443)

Insol in sulphur chloride and in CS_2 . (Lenher, J. Am. Chem. Soc 1902, **24**: 188.)

Tellurium hydrogen chloride, $\text{TeCl}_4, \text{HCl} + 5\text{H}_2\text{O}$.

Easily decomp (Metzner, C. R 1897, **125**: 24.)

Tellurium chloride with MCl .

See Chlorotellurate, M.

Tellurium tetrachloride ammonia, $\text{TeCl}_4, 3\text{NH}_3$.

Decomp. by H_2O . (Metzner, C. R. 1897, **124**: 33.)

$\text{TeCl}_4, 4\text{NH}_3$. Not deliquescent. Decomp. by H_2O . (Espenschied, J. pr. **80**: 480.)

Tellurium tetrachloride sulphur trioxide, $\text{TeCl}_4, \text{SO}_3$.

Ppt. ((Prandtl, Z. anorg. 1909, **62**: 247.) $\text{TeCl}_4, 2\text{SO}_3$. Decomp. by moisture. On heating at 120° , it gives $\text{TeCl}_4, \text{SO}_3$. (Prandtl.)

Tellurium tetrafluoride, TeF_4 .

(Metzner, C. R. 1897, **125**. 25.)
 $+\text{H}_2\text{O}$ (Högbom, Bull. Soc. (2) **35**. 60.)

Tellurium hexafluoride, TeF_6 .

Decomp. by H_2O slowly but completely.
 (Prideaux, Chem. Soc. 1906, **39**. 322.)

Tellurium zirconium fluoride,

See Fluozirconate, tellurium.

Tellurium diiodide, TeI_2 .

Insol. in H_2O . (Rose, Pogg. **21**. 443.)

Tellurium tetraiodide, TeI_4 .

Insol. in cold, decomp. by hot H_2O or alcohol. Sol. in HI , but only sol. in $\text{MI} + \text{Aq}$. (Berzelius)

Data on solubility of TeI_4 in $\text{HI} + \text{I} + \text{Aq}$ are given by Menke (Z. anorg. 1912, **77**. 283.)

Tellurium hydrogen iodide, TeI_4 , $\text{HI} + 8\text{H}_2\text{O}$, and $+9\text{H}_2\text{O}$.

Deliquescent. (Metzner, A. ch. 1898, (7) **15**. 203.)

Tellurium nitride,

Two forms.

a. Stable at ord. temp.

b. Unstable at ord. temp.

(Franz Fischer, B. 1910, **43**. 1472.)

TeN . Not attacked by H_2O or dil. acetic acid.

Insol. in liquid NH_3 . Decomp. by $\text{KOH} + \text{Aq}$. (Metzner, A. ch. 1898, (7) **15**. 203.)

Tellurium monoxide, TeO .

Sl. sol. in cold dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$. Easily oxidised by $\text{HNO}_3 + \text{Aq}$ or aqua regia. Decomp. immediately by boiling conc. $\text{HCl} + \text{Aq}$. Slowly decomp. by $\text{KOH} + \text{Aq}$ (Divers and Shimosé, Chem. Soc. **35**. 563.)

Tellurium dioxide, TeO_2 .

Very sl sol. in H_2O . Sl. attacked by acids. Sl. sol. in NH_4OH or alkali carbonates $+ \text{Aq}$. Easily sol. in NaOH or $\text{KOH} + \text{Aq}$. Not sol. in less than 150,000 pts. H_2O . Easily sol. in warm dil. $\text{HNO}_3 + \text{Aq}$. Sol. in warm $\text{H}_2\text{SO}_4 + \text{Aq}$. (Klein and Morel, Bull. Soc. (2) **43**. 203.)

20% $\text{H}_2\text{SO}_4 + \text{Aq}$. dissolves on warming about 0.7%; 30% $\text{H}_2\text{SO}_4 + \text{Aq}$, about 0.85%; 50% $\text{H}_2\text{SO}_4 + \text{Aq}$, about 4.4%.

These solutions are supersat. and TeO_2 separates from the more dil. acids on standing. (Brauner, M. 1891, **12**. 34.)

Min. *Tellurite*.

Tellurium dioxide hydrobromic acid, TeO_2 , 3HBr .

(Ditte, C. R. **83**. 336.)

Tellurium dioxide hydrochloric acid, TeO_2 , 2HCl .

(Ditte, C. R. **83**. 336.)
 TeO_2 , 3HCl . (Ditte.)

Tellurium trioxide, TeO_3 .

Insol. in cold or hot H_2O , cold $\text{HCl} + \text{Aq}$, or cold or hot $\text{HNO}_3 + \text{Aq}$. Insol. in moderately conc $\text{KOH} + \text{Aq}$, but, when the $\text{KOH} + \text{Aq}$ is very conc, is sol. if boiling.

Tellurium oxide, 2TeO_2 , TeO_3 .

"Tellurium tellurate."

(Metzner, A. ch. 1898, (7) **15**. 203.)

Tellurium oxybromide.

Insol. in H_2O . (Ditte, A. ch. (5) **10**. 82.)

Tellurium oxybromide sulphur trioxide, TeOBr_2 , 2SO_3 .

Deliquescent. (Prandtl, Z. anorg. 1909, **62**. 247.)

Tellurium oxychloride, TeOCl_2 .

Insol. in H_2O . (Ditte.)

Tellurium oxyfluoride, TeF_4 , $\text{TeO}_2 + 2\text{H}_2\text{O}$.

Sol. in H_2O containing HNO_3 . Decomp. by H_2O .

2TeF_4 , $3\text{TeO}_2 + 6\text{H}_2\text{O}$ Decomp. by H_2O . (Metzner, C. R. 1897, **125**. 25.)

Tellurium sulphide, TeS .

Insol. in CS_2 ; very unstable. (Snelling, J. Am. Chem. Soc. 1912, **34**. 802.)

Tellurium disulphide, TeS_2 .

Insol. in H_2O or dil. acids. Sol. in alkali hydrates or sulphides $+ \text{Aq}$.

CS_2 dissolves out S, so that the substance is probably a mixture. (Becker, A. **180**. 257.)

Tellurium trisulphide, TeS_3 .

Insol. in H_2O . Sol. in $\text{K}_2\text{S} + \text{Aq}$.

Tellurium sulphoxide, TeSO_3 .

Decomp. by H_2O . Sol. in H_2SO_4 . (Weber, J. pr. (2) **25**. 218.)

Is tellurium sulphite. (Divers, Chem. Soc. **49**. 583.)

Tellurous acid, H_2TeO_3 .

Appreciably sol. in H_2O and acids. Sol. in alkali hydrates or carbonates $+ \text{Aq}$.

Tellurites.

The neutral and acid tellurites of the alkali metals are sol. in H_2O . Ba, Sr, Ca, and Mg tellurites are sl. sol., and the other salts insol. in H_2O . Most tellurites are sol. in $\text{HCl} + \text{Aq}$.

Aluminum tellurite.

Ppt. Insol in Al salts + Aq. (Berzelius.)

Ammonium tellurite, $(\text{NH}_4)\text{HTeO}_3$, $\text{H}_2\text{TeO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$.

Sol. in H_2O , from which it is precipitated by NH_4Cl + Aq or alcohol. (Berzelius.)

Barium tellurite, BaTeO_3 .

Sl. sol. in H_2O when prepared in the moist way. (Berzelius.)

BaO , 4TeO_2

Cadmium tellurite.

Ppt. Sol. in HNO_3 , and HCl + Aq. (Oppenheim.)

Calcium tellurite, CaTeO_3 .

Sl. sol. in cold, more sol. in hot H_2O . (Berzelius.)

CaO , 4TeO_2 .

Chromium tellurite.

Ppt. Sol. in excess of chromic salts + Aq.

Cobaltous tellurite.

Ppt.

Cupric tellurite.

Insol. in H_2O . (Berzelius.)

Glucinum tellurite.

Insol. in H_2O .

Indium tellurite, $\text{In}_2(\text{TeO}_3)_3$, $2\text{In}(\text{OH})_3$.

Ppt. (Renz, Dissert. 1902.)

Ferrous tellurite.

Ppt.

Ferric tellurite.

Ppt.

Lead tellurite, PbTeO_3 .

Ppt. Easily sol. in acids. (Berzelius.)

Lithium tellurite, Li_2TeO_3 .

Sol. in H_2O . (Berzelius.)

Li_2O , 2TeO_2 . Decomp. by cold H_2O into Li_2TeO_3 and Li_2O , 4TeO_2 . (B.)

Li_2O , 4TeO_2 . Sol. in hot, much less in cold H_2O . (B.)

Magnesium tellurite, MgTeO_3 .

Precipitate. Much more sol. in H_2O than the Ba, Sr, or Ca salt. (Berzelius.)

Manganous tellurite.

Ppt.

Mercurous tellurite.

Ppt.

Mercuric tellurite.

Ppt.

Nickel tellurite.

Ppt

Potassium tellurite, K_2TeO_3 .

Not deliquescent. Slowly sol. in cold, more quickly in boiling H_2O (Berzelius.)

K_2O , 2TeO_2 . Completely sol. in boiling H_2O , from which K_2O , 4TeO_2 crystallises. (B.)

K_2O , $4\text{TeO}_2 + 4\text{H}_2\text{O}$. Decomp. by cold H_2O into K_2O , TeO_3 , and K_2O , 2TeO_2 , which dissolve, and H_2TeO_3 , which is insol. (B.)

Potassium hexatellurite, K_2O , $6\text{TeO}_2 + 2\text{H}_2\text{O}$.

Not decomp. by, but sl. sol. in H_2O . (Klein and Morel, C. R. 100. 1140.)

Silver tellurite, Ag_2TeO_3 .

Ppt Sol. in NH_4OH + Aq. (Berzelius.)

The freshly pptd. salt is insol. in H_2O ; sol. in HNO_3 , H_2SO_4 , acetic and tartaric acid; decomp. by HCl . (Lenher, J. Am. Chem. Soc. 1913, 35. 727.)

AgHTeO_3 . Insol. in H_2O . Sol. in HNO_3 + Aq. (Rose, Pogg. 18. 60.)

Sodium tellurite, Na_2TeO_3 .

Slowly sol. in cold, more quickly in hot H_2O . Precipitated from aqueous solution by alcohol (Berzelius.)

Na_2O , 2TeO_2 . Decomp. by H_2O as K salt. (B.)

Na_2O , $4\text{TeO}_2 + 5\text{H}_2\text{O}$. As above (B.)

Strontium tellurite, SrTeO_3 .

Resembles Ba salt.

$\text{SrH}_2\text{Te}_4\text{O}_{10}$. Very sl. sol. in H_2O , more easily in HNO_3 + Aq.

Thorium tellurite.

Precipitate. Insol. in H_2O or Th salts + Aq.

Stannous tellurite.

Pptd. in presence of 60,000 pts. H_2O . (Fischer.)

Uranium tellurite, $\text{U}_2(\text{TeO}_3)_3$.

Ppt. Insol. in U salts + Aq.

Yttrium tellurite.

Precipitate.

Zinc tellurite, ZnTeO_3 .

Ppt.

Zirconium tellurite.

Ppt.

Terbium, Tb.

Metal has not been isolated.

Has been decomp. into two or more elements by Krüss (Z. anorg. 4. 27).

Terbium chloride, $\text{TbCl}_3 + 6\text{H}_2\text{O}$.

Sol in H_2O ; very hygroscopic; sol in alcohol (Urban, C R 1908, **146**. 128)

Terbium hydroxide.

Sol in dilute acids Decomposes NH_4 salts + Aq

Terbium oxide, T_2O_3 .

Sol. in dil acids, even after ignition.

Terbium peroxide, Tb_4O_7 .

Sol in HNO_3 and in hot HCl . (Urban, C. R. 1907, **146**. 127)

Tetramine chromium compounds.

See—

Bromotetramine chromium compounds.

Chlorotetramine chromium compounds.

Iodotetramine chromium compounds.

Tetramine cobaltic compounds,

$\text{Co}(\text{NH}_3)_4\text{X}_3$.

Praseocobaltic compounds.

Roseotetramine cobaltic compounds. *

Sulphatotetramine cobaltic compounds.

See also under octamine cobaltic salts for many tetramine salts as yet unclassified.

Tetramine cobaltic nitrite with MnO_2 ,

$\text{Co}_2(\text{NH}_3)_4(\text{NO}_2)_6, 2\text{MnO}_2$.

See Diamine cobaltic nitrite.

Tetrathionic acid, $\text{H}_2\text{S}_4\text{O}_6$.

Known only in aqueous solution.

Dil. solution can be boiled without decomp. Conc solution decomp. by boiling.

Addition of H_2SO_4 or HCl makes solution more stable. (Fordos and Gélys, C. R. **15**. 920)

Tetrathionates.

Tetrathionates are all easily sol. in H_2O , but insol in alcohol

Barium tetrathionate, $\text{BaS}_4\text{O}_6 + 2\text{H}_2\text{O}$.

Very sol. in H_2O , but precipitated by addition of alcohol

Cadmium tetrathionate.

Deliquescent. Solution in H_2O gradually decomposes. (Kessler, Pogg. **74**. 249)

Cæsium tetrathionate, $\text{Cs}_2\text{S}_4\text{O}_6$.

(J Meyer, B 1907, **40**. 1361)

Cuprous tetrathionate, $\text{Cu}_2\text{S}_4\text{O}_6$.

Decomp. by H_2O . (Chancel and Diacon, C. R. 1863, **56**. 711.)

Cupric tetrathionate, CuS_4O_6 .

Sol in H_2O

Decomp. by long boiling. (Curtius and Henkel, J. pr. 1888, (2) **37**. 148)

Lead tetrathionate, $\text{PbS}_4\text{O}_6 + 2\text{H}_2\text{O}$.

Sol. in H_2O

Manganous hydrogen tetrathionate,

$\text{MnH}_2(\text{S}_4\text{O}_6)_2$

Deliquescent. Very sol. in H_2O and alcohol (Curtius and Henkel, J. pr (2) **37**. 148)

Nickel tetrathionate ammonia, $\text{NiS}_4\text{O}_6, 6\text{NH}_3$.

Ppt. Decomp. by H_2O . Insol. in alcohol. (Ephraim, B. 1913, **46**. 3109.)

Potassium tetrathionate, $\text{K}_2\text{S}_4\text{O}_6$.

Soluble in H_2O . Insol in alcohol.

Difficultly sol in H_2O . (Kessler, Pogg. **1847**, **74**. 254.)

Rubidium tetrathionate, $\text{Rb}_2\text{S}_4\text{O}_6$.

Not hygroscopic. (J. Meyer, B. 1907, **40**. 1356)

Sodium tetrathionate, $\text{Na}_2\text{S}_4\text{O}_6$.

Sol in H_2O Precipitated therefrom by a great excess of alcohol. (Kessler, J pr **95**. 13.)

+ $2\text{H}_2\text{O}$. (Berthelot, A. ch. (6) **17**. 450.)

Strontium tetrathionate, $\text{SrS}_4\text{O}_6 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Kessler, Pogg. **74**. 255.)

More sol. in H_2O than Ba salt

Zinc tetrathionate.

Sol. in H_2O . (Fordos and Gélys.)

Zinc hydrogen tetrathionate, $\text{ZnH}_2(\text{S}_4\text{O}_6)_2$.

Extremely sol. in H_2O and alcohol. (Curtius and Henkel, J pr. (2) **37**. 147.)

Zinc tetrathionate ammonia, $\text{ZnS}_4\text{O}_6, 3\text{NH}_3$.

Ppt. (Ephraim, B. 1915, **48**. 641.)

Thallic acid.**Potassium thallate.**

Known only in aqueous solution. (Carstanjen, J. pr. **101**. 55.)

Does not exist. (Lepsius, Chem. Ztg. **1890**, 1327.)

Thallium, Tl.

Not attacked by pure H_2O . Easily sol. in dil. H_2SO_4 or $\text{HNO}_3 + \text{Aq.}$ Difficultly sol. in $\text{HCl} + \text{Aq.}$ Absolute alcohol dissolves considerable quantity in a short time, also methyl alcohol, and acetic ether (Böttger.)

Not easily attacked by $\text{HF} + \text{Aq}$ (Kuhlmann.)

Insol. in liquid NH_3 (Franklin, Am. Ch. J. 1898, 20, 830)

$\frac{1}{2}$ ccm oleic acid dissolves 0.0424 g. Tl in 6 days (Gates, J. phys. Chem. 1911, 15, 143.)

Thallium arsenide, TlAs .

Decomp. by H_2SO_4 (Carstanjen)

Thalious azoimide, TlN_3 .

Sl. sol. in H_2O ,

0.1712 pt. is sol. in 100 pts. H_2O at 0° ;

0.1965 pt. is sol. in 100 pts. H_2O at 5° ;

0.3 pt. is sol. in 100 pts. H_2O at 16° .

Insol. in abs. alcohol and ether.

(Curtius, J. pr. 1898, (2) 58, 284.)

Thallothallic azoimide, TlN_3 , TlN_3 .

Explosive. Decomp. by hot H_2O and by acids (Dennis, J. Am. Chem. Soc. 1896, 18, 973)

Thalious bromide, TlBr .

Nearly insol in cold, sl. sol. in boiling H_2O . (Willm, Bull. Soc. (2) 2, 89.)

1 l. H_2O dissolves 0.00869 g. mol. TlBr at 68.5° . (Noyes, Z. phys. Ch. 6, 248.)

Sl. sol. in H_2O . 0.48×10^{-2} g. is dissolved in a liter of sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46, 603)

1 l. H_2O dissolves 420 mg. TlBr at 18° (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

238 mg. TlBr are contained in 1 l. sat. solution at 0.13° ; 289 mg. at 9.37° ; 423 mg. at 18° ; 579 mg. at 25.68° . (Kohlrausch, Z. phys. Ch. 1903, 64, 168.)

Solubility of TlBr in $\text{Ti}(\text{NO}_3)_3 + \text{Aq}$ at 68.5° .

g. mols. per l.		g. mols. per l.	
TiNO_3	TlBr	TiNO_3	TlBr
0	0.00869	0	2.469
0.0163	0.00410	4.336	1.164
0.0294	0.00289	7.820	0.821
0.0955	0.00148	25.400	0.420

(Noyes, Z. phys. Ch. 1890, 6, 248.)

Insol. in acetone (Naumann, B. 1904, 37, 4329); pyridine (Naumann, B. 1904, 37, 4610); acetone (Eidmann, C. C. 1899, II, 1014.)

Thallic bromide, TlBr_3 .

Deliquescent. Easily sol. in H_2O and alcohol. (Willm.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

$+ \text{H}_2\text{O}$. Very unstable. Sol. in H_2O ,

alcohol and ether (Meyer, Z. anorg. 1900, 24, 353)

$+ 4\text{H}_2\text{O}$. Very sol. in H_2O . (Thomas, C. R. 1902, 134, 546)

Thallothallic bromide, TlBr , TlBr_3 .

Decomp. by H_2O . (Meyer, Z. anorg. 1900, 24, 354.)

3TlBr , TlBr_3 . Decomp. by H_2O into TlBr and TlBr_3 .

Thallic hydrogen bromide, TlBr_3 , HBr

Very sol. in H_2O . (Thomas, C. R. 1902, 134, 546.)

Thallic bromide ammonia, TlBr_3 , 3NH_3 .

Decomp. by H_2O .

Thallium bromochloride, TlClBr .

Decomp. by H_2O . (Thomas, C. R. 1901, 132, 1489)

$\text{TlClBr}_2 + 4\text{H}_2\text{O}$. Ppt.

$\text{TlCl}_2\text{Br} + 4\text{H}_2\text{O}$. Ppt. Decomp. by H_2O . (Thomas, C. R. 1902, 134, 546)

$\text{Ti}_3\text{Cl}_2\text{Br}_4$. Decomp. by H_2O , H_2SO_4 or HNO_3 . (Thomas, C. R. 1900, 131, 894; C. R. 1901, 132, 1489)

$\text{Ti}_4\text{Cl}_3\text{Br}_3$. Sol. in H_2O . (Thomas, C. R. 1901, 132, 82.)

TiClBr_2 , 3TlCl . Cryst. from H_2O containing HNO_3 . (Cushman, Am. Ch. J. 1900, 24, 222)

TiCl_3 , 3TlBr . Sol. in H_2O without decomp. (Cushman.)

TlBr_3 , 3TiCl . Decomp. by H_2O . (Cushman)

TlBr_3 , TiCl . Sol. in H_2O with decomp. (Cushman)

TiCl_3 , 2TlBr , TiCl . Sol. in H_2O . (Meyer, Z. anorg. 1900, 24, 355-360.)

TlBr_3 , 2TiCl , TlBr . Ppt. Decomp. by H_2O (Meyer.)

$(\text{TiCl}_3, \text{TiCl})$, $2(\text{TlBr}_3, \text{TlBr})$. Ppt. (Meyer.)

$2(\text{TiCl}_3, \text{TiCl})$, $(\text{TlBr}_3, \text{TlBr})$. Ppt. Decomp. by hot H_2O . (Meyer.)

Thallium bromofluoride, TlFBr_2 .

Decomp. in moist air.

Sol. in abs. alcohol. (Gewecke, A. 1909, 366, 233.)

Thallium bromofluoride ammonia,

TlFBr_2 , 4NH_3 .

Decomp. by moisture.

Difficultly sol. in abs. alcohol. (Gewecke, A. 1909, 366, 234.)

Thalious chloride, TiCl .

Solubility in pts. H_2O at t° , according to $\text{H} = \text{Hebberling}$; $\text{C} = \text{Crookes}$; $\text{L} = \text{Lamy}$.

0°	15°	16°	16.5°
504	283.4	377	359 pts. H_2O ,
H	C	H	H
100°	100°	100°	
about 50	52.5	63 pts. H_2O .	
L	C	H	

1 l. H_2O dissolves 0.0161 g. mol. TiCl at 25° . (Noyes, Z. phys. Ch. 6. 249.)

3.26×10^{-2} grams are dissolved in 1 liter of sat. solution at 20° . (Bottger, Z. phys. Ch. 1903, 46. 603.)

1 l. H_2O at 25° dissolves 0.01606 g. mol. TiCl . (Geffcken, Z. phys. Ch. 1904, 49. 296.)

Solubility in H_2O at t° .

100 cc. sat. solution contain at:

t°	0°	10°	20°	30°	40°	50°
g. TiCl	0.17	0.24	0.34	0.46	0.60	0.80

t°	60°	70°	80°	90°	99.3°
g. TiCl	1.02	1.29	1.60	1.97	2.41

(Berkeley, Trans. Roy. Soc. 1904, 203, A, 208.)

1 l. H_2O dissolves 3.040 TiCl at 18° . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

2.27 g. are dissolved in 1 l. of sat. solution at 9.54° ; 3.05 g. at 17.7° ; 3.97 g. at 25.76° . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

0.01629 mol. is sol. in 1 l. H_2O at 25° . (Hill, J. Am. Chem. Soc. 1910, 32. 1385.)

0.01607 g. equiv. is sol. in 1 l. H_2O at 25° . (Bray and Winninghoff, J. Am. Chem. Soc. 1911, 33. 1665.)

Much less sol. in H_2O containing HCl or HNO_3 .

Solubility in $\text{HCl} + \text{Aq}$ at 25° . 1 l. dissolves g. mol. TiCl .

g. HCl added	TiCl	g. HCl added	TiCl
0	0.01610	0.1468	0.00316
0.0283	0.00836	1.000	0.00200
0.0560	0.00565	.	.

(Noyes, Z. phys. Ch. 6. 249.)

Solubility in $\text{HCl} + \text{Aq}$. at 25° .

(Hill, J. Am. Chem. Soc. 1910, 32. 1189.)

Insol. in pyridine. (Naumann, B. 1904, 37. 4610); acetone. (Naumann, B. 1904, 37. 4329.)

Thallic chloride, TiCl_3 .

Anhydrous.

Easily sol. in H_2O and in most ord. solvents.

In contact with moist air, it rapidly becomes hydrated. (Thomas, C. R. 1902, 135. 1053.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Very sol. in acetone. (Renz, B. 1902, 35. 1110.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+ H_2O . Deliquescent, and very easily sol. in H_2O . (Werther.)

Deliquescent, and very easily sol. in H_2O . (Werther.)

+ $4\text{H}_2\text{O}$. 86.2 pts. are sol. in 100 pts. H_2O at 17° . Sp. gr. of sat. aq. solution at $17^\circ = 1.85$. (Thomas, C. R. 1902, 135. 1052.)

Very hygroscopic. (Meyer, Z. anorg. 1900, 24. 336.)

Very sol. in alcohol and ether. (Meyer, Z. anorg. 1900, 24. 338.)

+ $7\frac{1}{2}\text{H}_2\text{O}$. Deliquescent. (Werther.)

Thallothallic chloride, 3TiCl_3 , TiCl_3 .

1 pt. dissolves in pts. H_2O at t° , according to C = Crookes; H = Heberling; L = Lamy.

15°	17°	100°	100°
380.1	346	52.9	20-25 pts. H_2O .
C	H	C	L

Sl. decomp. by dissolving. (Lamy.)

Thallic hydrogen chloride, TiCl_3 , HCl + $3\text{H}_2\text{O}$.

Very hygroscopic.

Decomp. by H_2O . (Meyer, Z. anorg. 1900, 24. 337.)

Thallium tungsten chloride, $\text{Ti}_2\text{W}_2\text{Cl}_6$.

Nearly insol. in H_2O .

Sol. in a hot mixture of equal pts. H_2O and conc. HCl .

Sl sol. in conc. HCl.
Nearly insol in most organic solvents
(Olsson, B. 1913, **46**. 575.)

Thallic zinc chloride, $2\text{TiCl}_3, \text{ZnCl}_2 + 6\text{H}_2\text{O}$.

Can be cryst. from H_2O . (Gewecke, A. 1909, **366**. 224.)

Thallic chloride ammonia, $\text{TiCl}_3, 3\text{NH}_3$.

Decomp. by H_2O . Sol. in $\text{HCl} + \text{Aq}$ (Willm.)

Thallium chlorofluoride, TlFCl_2 .

Very hygroscopic.

Decomp. by moist air.

Easily sol. in abs. alcohol. (Gewecke, A. 1909, **366**. 230.)

+ $3\text{H}_2\text{O}$. Not hygroscopic.

Decomp. by H_2O , alcohol and ether. (Gewecke.)

Thallium chlorofluoride ammonia, $\text{TlFCl}_2, 4\text{NH}_3$.

Decomp. by H_2O .

Difficultly sol. in abs. alcohol and in ether. (Gewecke, A. 1909, **366**. 232.)

Thallium chlorofluoride potassium chloride, $2\text{TlFCl}_2, \text{KCl}$.

Ppt. (Gewecke, A. 1909, **366**. 231.)

Thallic fluoride, TlF .

Sol. in $1\frac{1}{4}$ pts. H_2O at 15° , and in much less hot H_2O . Difficultly sol. in alcohol (Buchner, W. A. B. **52**. 2. 644.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Deliquescent. (Willm.)

Thallic fluoride, TlF_3 .

Insol. in H_2O and cold $\text{HCl} + \text{Aq}$. (Willm.)

Cannot be obtained in pure state. (Gewecke, A. 1909, **366**. 218.)

Thallic hydrogen fluoride, TlF, HF .

Sol. in 1 pt H_2O . (Buchner.)

Thallic tungstyl fluoride,

See Fluoxytungstate, thallic.

Thallic vanadium fluoride.

See Fluovanadate, thallic.

Thallic vanadyl fluoride.

See Fluoxyvanadate, thallic.

Thallic hydroxide, TlOH .

Sol. in H_2O and alcohol.

Solubility of TlOH in H_2O at t° .

t°	g equiv TlOH per l	Sp gr $15^\circ/4^\circ$
0	1 151	1 231
18.5	1 554	1 317
19.5	1 582	1 322
29	1 803	1 342
23 1	1 861	1 377
33.1	1 967	1 400
36	2 075	1 417

54 1	2 940	
59 4	3 281	
64 6	3 601	
78 5	4 673	
90 0	5 705	
99.2	6 708	

(Bahr, Z. anorg. 1911, **71**. 87.)

The solubility of Tl_2O in H_2O at these temperatures is the same as that of TlOH .
+ H_2O . (Willm, Bull. Soc. (2) **5**. 354.)

Thallic hydroxide, $\text{Tl}_2\text{O}_3, \text{H}_2\text{O} = \text{TlO}(\text{OH})$.

Insol. in H_2O . Sol. in dil. acids and ammonium salts + Aq . Insol. in caustic alkali solutions.

$\text{Ti}(\text{OH})_3$. Easily sol. in dil. HCl or H_2SO_4 + Aq . (Carnegie, C. N. **60**. 113.)

Thallic iodide, TlI .

Very sl. sol. in H_2O .

1 pt. TlI is sol. in pts. H_2O at t° . C=according to Crookes; H=according to Hebbeling; L=according to Lamy; W=according to Werther.

35°	15°	16°	16-17°	19.4°
20,000	4450	16,000	11,676	14,654
W	C	L	H	W

20°	23.4°	45°	100°	100°
11,954	10,482	5407	842	804
W	W	W	C	H

Sol. in 17,000 pts. H_2O at 20° . (Long, Z. anal. **30**. 342.)

Sat. solution at 20.15° contains 63.6 mg. or 1.92×10^{-4} g. mol TlI per l (Böttger, Z. phys. Ch. 1903, **46**. 603.)

1 l. H_2O dissolves 56 mg. TlI at 18° . (Kohrausch, Z. phys. Ch. 1904, **50**. 356.)

36.2 mg. are dissolved in 1 l. of sat. solution at 9.90° ; 56 mg. at 18.1° ; 84.7 mg. at 26° . (Kohrausch, Z. phys. Ch. 1908, **64**. 168.)

Solubility in H_2O at $25^\circ = 1.76 \times 10^{-4}$ mol. per litre. (Spencer, Z. phys. Ch. 1912, **80**. 708.)

Not decomp. by dil. H_2SO_4 , HCl , or alkalis + Aq . Decomp. by hot dil. HNO_3 + Aq , and cold conc. HNO_3 . Sol. in aqua regia.

Also less sol. in acetic acid than in H_2O . (Carstanjen.)

Insol in $\text{NH}_4\text{OH} + \text{Aq}$ (Werther) Not wholly insol in $\text{NH}_4\text{OH} + \text{Aq}$, and solubility is increased by presence of $(\text{NH}_4)_2\text{SO}_4$ or NH_4Cl (Baubigny, C. R. 113. 544.)

Sol in 13,000 pts. $\text{NH}_4\text{OH} + \text{Aq}$ ($6\frac{1}{2}$ or $2\frac{1}{2}\%$ NH_3). Sol. in 17,000 pts $\text{NH}_4\text{OH} + \text{Aq}$ ($1\frac{1}{4}\%$ NH_3) (Long)

Insol in dil $\text{KI} + \text{Aq}$ (1% KI) (Baubigny.)

Much more insol. in $\text{KI} + \text{Aq}$ than in H_2O ; 1 pt. dissolves in 75,000 pts. dil. $\text{KI} + \text{Aq}$. (Lamy.)

* Nearly insol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$, and absolutely insol therein in presence of Pb salts. (Werner, C. N. 53. 51)

Sol. in 56,336 pts. 85% alcohol at 13° . (Werther) Sol. in 18,934 pts 98% alcohol at 19° . (Hebberling)

When TII is shaken with alcohol of 78°B (1 vol. $\text{H}_2\text{O} + 3$ vols 98% alcohol) at 22° , and let stand with TII for 24 hours, and then evaporated to $\frac{1}{5}$ vol., there is shown no ppt by $\text{NH}_4\text{SH} + \text{Aq}$. (Baubigny.)

Sol in 260,000 pts. 90% alcohol, and 37,000 pts 50% alcohol at 20° (Long.)

Insol in methylene iodide (Retgers, Z anorg. 3. 343.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C., 1899, II. 1014.)

Insol. in pyridine. (Naumann, B. 1904, 37. 4601.)

Thallic iodide, TII_3 .

Sol. in alcohol.

Decomp. slowly in the air. (Wells, Z. anorg. 1894, 6. 313.)

Sol. in ether.

Thallothallic iodide, $\text{TI}_3\text{I}_4 = 5\text{TII}, \text{TII}_3$.

Sol. in H_2O . (Jørgensen, J. pr. (2) 6. 82.)

Thallium nitride.

Very unstable. (Franz Fischer, B. 1901, 43. 1470.)

Thalious oxide, TI_2O .

Deliquescent. Sol. in H_2O .

See Thalious hydroxide.

Thallic oxide, TI_2O_3 .

Insol. in H_2O . Not attacked by cold H_2SO_4 . Sol. in hot H_2SO_4 . Sol. in cold $\text{HCl} + \text{Aq}$.

Insol. in alkalis + Aq . (Werther, J. pr. 91. 385.)

Black modification.

Less sol. in dil. acids than the brown modification. Solution is accompanied by a slight reduction to thalious salt.

More sol. in 10% HCl than in 10% H_2SO_4 or HNO_3 .

More sol. in conc. than in dil. acids. (Rabe, Z. anorg. 1906, 43. 431.)

Brown modification

Easily sol. in dil. mineral acids on warming, with slight reduction to thalious salt.

More sol. in conc. acid. (Rabe.)

Thallium dioxide, TI_2O_3 .

Insol. in H_2O . (Piccini, Gazz. ch. it 17. 450.)

Thallic oxide ammonia, $\text{TI}_2\text{O}_3, 6\text{NH}_3$.

Decomp. by much H_2O . Insol. in alcohol. (Carstanjen.)

Thallic oxyfluoride, TIOF .

Insol. in H_2O . Slowly decomp. by boiling with H_2O .

Sol. in mineral acids. Almost insol. in HF . (Gewecke, A. 1909, 366. 226.)

Thallium phosphide (?).

Ppt. (Crookes.)

Thalious selenide, TI_2Se .

Insol. in H_2O . Scarcely attacked by cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, but dissolves when heated. (Carstanjen.)

Thallothallic selenide.

Not attacked by cold conc. or boiling dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Conc. H_2SO_4 decomposes. (Carstanjen.)

Thalious sulphide, TI_2S .

Insol. in H_2O , $(\text{NH}_4)_2\text{S} + \text{Aq}$, $\text{NH}_4\text{OH} + \text{Aq}$, $\text{KCN} + \text{Aq}$, and in alkali carbonates, and hydrates + Aq . Difficultly sol. in a solution of oxalic acid or acetic acid. (Crookes) Easily sol. in HNO_3 , and $\text{H}_2\text{SO}_4 + \text{Aq}$. Difficultly sol. in $\text{HCl} + \text{Aq}$. (Willm.)

Sl. sol. in H_2O .

0.21×10^{-4} g. is dissolved in 1 l. sat. solution at 20° . (Böttger, Z. phys. Ch. 1903, 46. 603.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Thallic sulphide, TI_3S_3 .

Insol. in H_2O . Insol. in cold, sol. in warm dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ without separation of S . Sol. in other dilute acids with separation of S . (Carstanjen.)

Thallium pentasulphide, TI_3S_5 .

Ppt. (Hofmann, B. 1903, 36. 3092.)

Thallothallic sulphide, $5\text{TI}_2\text{S}, 3\text{TI}_3\text{S}_3$.

Very slowly decomp. by cold dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

$\text{TI}_2\text{S}, \text{TI}_3\text{S}_3$. (Carstanjen.)

$\text{TI}_2\text{S}, 2\text{TI}_3\text{S}_3$. Decomp. by dil. acids. (Schneider, J. pr. (2) 10. 55.)

Thallium telluride, TI_2Te .

(Fabre, C. R. 105. 673.)

Thio-

For compounds with prefix thio-, see also under sulpho-.

Thioantimonic acid.

See Sulphantimonic acid.

Thioarsenic acid.

See Sulpharsenic acid.

Thiomolybdic acid.

See Sulphomolybdic acid.

Thionamic acid, $\text{NH}_2\text{SO}_2 = \text{NH}_2\text{SO}(\text{OH})$.

Very deliquescent, and sol. in H_2O .
 H_2O solution decomp. gradually. (Rose, Pogg. 33. 275; 42. 425.)

Ammonium thionamate, $\text{NH}_2\text{SO}(\text{ONH}_4)$.

Deliquescent. Sol. in H_2O ; easily decomp. when in solution. (Rose.)

Very sol. in alcohol with decomp. Sl. sol. in dry ether. (Divers and Ogawa, C. C. 1900, I. 1259.)

Dithionic acid.

See Dithionic acid.

Trithionic acid.

See Trithionic acid.

Tetrathionic acid.

See Tetrathionic acid.

Pentathionic acid.

See Pentathionic acid.

Thionyl bromide, SOBr_2 .

Unstable.

Decomp. by H_2O . (Besson, C. R. 1896, 122. 322.)

Thionyl bromochloride, SOClBr .

Decomp. slowly in the cold, rapidly at 115° .

Decomp. by H_2O . (Besson C. R. 1896, 122. 321.)

Thionyl chloride, SOCl_2 .

Sol. in CHCl_3 , and C_6H_6 . (Oddo, Gazz. ch. it. 1899, 29. (2) 318.)

Thionyl fluoride, SOF_2 .

Decomp. by H_2O .

Sol. in AsCl_3 , C_6H_6 , ether and oil of turpentine. (Moissan, C. R. 1900, 130. 1439.)

Thiophosphamic acid, $\text{H}_2\text{PNH}_2\text{O}_2\text{S}$ (?).

Known only in its salts. (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

Cadmium thiophosphamate, $\text{CdPNH}_2\text{O}_2\text{S}$.

Sol. in dil. acids, and $\text{NH}_4\text{OH} + \text{Aq.}$ (G. and H.)

Lead —, $\text{PbPNH}_2\text{O}_2\text{S}$.

Ppt. Sol. in dil. $\text{HNO}_3 + \text{Aq.}$ (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

Thiophosphodiamic acid, $\text{H}_2\text{PN}_2\text{H}_4\text{OS}$.

Known only in solution, which soon decomposes. (G. and H.)

Cadmium thiophosphodiamate,

$\text{Cd}(\text{PN}_2\text{H}_4\text{OS})_2$.

Insol. in H_2O ; sol. in dil. acids, and $\text{NH}_4\text{OH} + \text{Aq.}$ (G. and H.)

Cupric —, $\text{Cu}(\text{PN}_2\text{H}_4\text{OS})_2$.

Insol. in H_2O , dil. HCl , or $\text{NH}_4\text{OH} + \text{Aq.}$
Sol. in $\text{KCN} + \text{Aq.}$ (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

Lead —, $\text{Pb}(\text{PN}_2\text{H}_4\text{OS})_2$.

Insol. in H_2O . Sol. in dil. $\text{HNO}_3 + \text{Aq.}$

Nickel —, $\text{Ni}(\text{PN}_2\text{H}_4\text{OS})_2$.

Sol. in dil. acids, and $\text{NH}_4\text{OH} + \text{Aq.}$ (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

Zinc —, $\text{Zn}(\text{PN}_2\text{H}_4\text{OS})_2$.

Ppt. Sol. in dil. acids, and $\text{NH}_4\text{OH} + \text{Aq.}$ (Gladstone and Holmes)

Thiophosphonitrile, PSN .

Not decomp. by cold H_2O . Slowly decomp. by boiling H_2O . Easily decomp. by boiling dil. HCl . (Stock, B. 1906, 39. 1974.)

Thiophosphoric acid, $\text{H}_3\text{PSO}_3 = \text{PS}(\text{OH})_3$.

Known only in its salts.

Ammonium magnesium thiophosphate,

$\text{NH}_4\text{MgPSO}_3 + 9\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . (Kubierschky, J. pr. (2) 31. 100.)

Barium —, $\text{Ba}_3(\text{PSO}_3)_2$.

Insol. in H_2O . (Wurtz, A. ch. (3) 20. 473.)

Cobalt —.

Insol. in H_2O , but partially decomp. when boiled therewith. (Wurtz.)

Cupric —.

Insol. in H_2O ; very easily decomp. (Wurtz.)

Ferric —.

Insol. in H_2O . (Wurtz.)

Magnesium —, $\text{Mg}_3(\text{PSO}_3)_2 + 20\text{H}_2\text{O}$.

Sl. sol. in cold H_2O . (Kubierschky, J. pr. (2) 31. 99.)

Nickel thiophosphate.

Insol. in H_2O , but decomp. when boiled therewith. (Wurtz.)

Potassium —, K_2PSO_3 .

Very sol. in H_2O . Known only in aqueous solution. (Wurtz.)

Sodium —, $\text{Na}_2\text{PSO}_3 + 12\text{H}_2\text{O}$.

Easily sol. in boiling H_2O . Cryst. out on cooling. (Wurtz, A. ch. (3) 20. 472.)
Insol. in alcohol.

Strontium —.

Insol. in H_2O . (Wurtz.)

Dithiometaphosphoric acid.**Ammonium dithiometaphosphate, $\text{NH}_4\text{PS}_2\text{O}$.**

Decomp. by H_2O . (Stock, B. 1906, 39. 1990.)

Monothioorthophosphoric acid.**Monoammonium monothioorthophosphate, $\text{O:P}(\text{SNH}_4)(\text{OH})_2$.**

Sol. in H_2O .
Insol. in alcohol. (Stock, B. 1906, 39. 1990.)

Triammonium monothioorthophosphate, $\text{SNH}_4\text{PO}(\text{ONH}_4)_2$.

(Stock.)

Dithioorthophosphoric acid.**Ammonium dithiophosphate, $(\text{NH}_4)_2\text{PS}_2\text{O}_2 + 2\text{H}_2\text{O}$.**

Sl. efflorescent. Sol. in H_2O . (Kubierschky, J. pr. (2) 31. 93.)

Ammonium magnesium —, $\text{NH}_4\text{MgPS}_2\text{O}_2 + 6\text{H}_2\text{O}$.

Sl. sol. in cold, H_2O . (Kubierschky.)

Barium —, $\text{Ba}_3(\text{PS}_2\text{O}_2)_2 + 8\text{H}_2\text{O}$.

Precipitate. (Kubierschky, J. pr. (2) 31. 103.)
 $+18\text{H}_2\text{O}$. As the *trithio* compound. (Ephraim, B. 1910, 43. 287.)

Calcium —.

Very easily decomposed. (Kubierschky.)

Sodium —, $\text{Na}_3\text{PS}_2\text{O}_2 + 11\text{H}_2\text{O}$.

Very sol. in H_2O . (Kubierschky, J. pr. (2) 31. 93.)

Trithioorthophosphoric acid.**Ammonium trithioorthophosphate, $(\text{NH}_4)_3\text{PS}_3\text{O} + \text{H}_2\text{O}$.**

(Stock, B. 1906, 39. 1985.)

Barium trithioorthophosphate, $\text{Ba}_3(\text{PS}_3\text{O})_2 + 20\text{H}_2\text{O}$.

Decomp. by H_2O and dil. acids.

Sol. in conc. HNO_3 with oxidation of the sulphur to H_2SO_4 . (Ephraim, B. 1910, 43. 286.)

Magnesium —, $\text{Mg}_3(\text{PS}_3\text{O})_2 + 20\text{H}_2\text{O}$.

Decomp. by H_2O and dil. acids. (Ephraim.)

Thiophosphorous acid.**Ammonium thiophosphite (?), $(\text{NH}_4)_2\text{P}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}$**

Sol. in H_2O . (Lemoine, C. R. 98. 45.)
 $+6\text{H}_2\text{O}$.

Sodium thiophosphite (?), $\text{Na}_4\text{P}_2\text{S}_2\text{O}_3 + 5\text{H}_2\text{O} = \text{P}_2\text{O}_3, 2\text{Na}_2\text{S} + 5\text{H}_2\text{O}$.

Sol. in H_2O . (Lemoine, C. R. 98. 45.)
 $\text{Na}_6\text{P}_2\text{S}_2\text{O}_4 + 4\text{H}_2\text{O} = \text{P}_2\text{O}_3, 3\text{Na}_2\text{O}, 2\text{H}_2\text{S} + 2\text{H}_2\text{O}$. Sol. in H_2O . (Lemoine, l. c.)

Thiophosphoryl triamide, $\text{PS}(\text{NH}_2)_3$.

Rapidly decomp. by H_2O . Scarcely sol. in alcohol, ether, or CS_2 . (Chevrier, C. R. 66. 748.)

Metathiophosphoryl bromide, PS_2Br .

Decomp. by H_2O . Insol. in ether. (Michaëlis, A. 164. 9.)

Orthothiophosphoryl bromide, PSBr_3 .

Slowly decomp. by cold, rapidly by hot H_2O but volatile with only partial decomp. with steam. Easily sol. in ether, CS_2 , PCl_3 , PBr_3 . Decomp. by cold alcohol. Forms hydrate $\text{PSBr}_3 + \text{H}_2\text{O}$. (Michaëlis, A. 164. 9.)

Pyrothiophosphoryl bromide, $\text{P}_2\text{S}_2\text{Br}_4$.

Decomp. by H_2O and alcohol. Sol. in CS_2 and ether. (Michaëlis.)

Thiophosphoryl phosphorus bromide, $\text{PSBr}_3, \text{PBr}_3$.

Decomp. by H_2O into PSBr_2 . (Michaëlis.)

Thiophosphoryl dibromochloride, PSClBr_2 .

Decomp. by H_2O and alkalies.
Fumes in the air. (Besson, C. R. 1896, 122. 1059.)

Thiophosphoryl bromodichloride, PSCl_2Br .

Decomp. by H_2O and alkalies. Reacts violently with HNO_3 . (Besson, C. R. 1896, 120. 1058.)

Thiophosphoryl chloride, PSCl_3 .

Very slowly decomp. by H_2O , and may be distilled with steam without much decomp. Decomp. by alcohol. Miscible with CS_2 . (Baudrimont, J. pr. 87. 301.)
Sol. in CCl_4 and C_6H_6 . (Oddo, Gazz. ch. it. 1899, 29. (2) 318.)

Thiophosphoryl pentachloride, PS_2Cl_5 (?).

Decomp. by H_2O . Sol. in alkalis with residue of S. Attacked violently by HNO_3 , alcohol, ether, oil of turpentine. Miscible with CS_2 (Gladstone, Chem. Soc. 3. 5.)

Thiophosphoryl fluoride, PSF_3 .

Slowly sol. in H_2O with decomp. Sl. sol. in ether.

Insol. in H_2SO_4 , CS_2 , or benzene. (Thorpe and Rodger, Chem. Soc. 55. 306.)

More sol. in KOH or $\text{NaOH} + \text{Aq}$ than in H_2O .

Thiophosphoryl iodide, PSI_3 .

Very sol. in CS_2 . Unstable when heated. Fumes in the air. (Besson, C. R. 1896, 122. 1201.)

Thiosulphuric (formerly Hyposulphurous) acid, $\text{H}_2\text{S}_2\text{O}_3$.

Known only in aqueous solution, which is extremely unstable, and decomposes very quickly after its formation. The time before decomposition is exactly proportional to the ratio of the weight of H_2O to the weight of $\text{H}_2\text{S}_2\text{O}_3$ present; i. e., if one solution contains twice as much H_2O for a given amt. of $\text{H}_2\text{S}_2\text{O}_3$ as a second solution, the first solution will decompose in twice the length of time. The length of time is about 20 secs. at 10° , and 2 secs. at 50° for conc. solutions, to 120 secs. at 10° and 12 secs. at 50° for very dilute solutions. (See Landolt (B. 16. 2958) for further figures; also Winkelmann (B. 18. 406).)

Thiosulphates.

The thiosulphates of the alkalis and of Ca and Sr are easily sol. in H_2O ; Ba and Sr salts are sl. sol. and the other salts insol. The salts of the metals dissolve in alkali thiosulphates + Aq. All are insol. in alcohol.

Double Salts of Thiosulphuric acid. It is impossible to determine whether substances of this class are true chem. individuals. Many described by Svensson and others are doubtless isomorphous mixtures, whose comp. depends on the temp. and conc. of the solution in which pptd (Rosenheim, Z. anorg 1900, 25. 72.)

Ammonium thiosulphate, $(\text{NH}_4)_2\text{S}_2\text{O}_3$.

Very deliquescent. Very sol. in H_2O .

Not deliquescent (Fock and Klüss, B. 1889, 22. 3099.)

Crystallises with $\frac{1}{2}\text{H}_2\text{O}$. (Rammelsberg, Pogg. 56. 298.) Anhydrous. (Arppe, A. 96. 113.)

Insol. in alcohol. (Arppe.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium cadmium thiosulphate,

Can be recryst. from warm H_2O (Fock and Klüss, B. 23. 1758.)

+ H_2O . (F. and K.)

$(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{CdS}_2\text{O}_3$ (F. and K.)

Ammonium cuprous thiosulphate,

Less sol. in H_2O than $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 1\frac{1}{2}\text{H}_2\text{O}$. (Rosenheim and Steinhauser, Z. anorg. 1900, 25. 91.)

$2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 1\frac{1}{2}\text{H}_2\text{O}$. Very sol. in H_2O . Insol. in alcohol. (Rosenheim and Steinhauser.)

Ammonium cuprous thiosulphate cuprous iodide, $7(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3, 8\text{CuI} + 4\text{H}_2\text{O}$.

Insol. in H_2O . (Brun, C. R. 1892, 114. 668.)

Could not be obtained. (Rosenheim and Steinhauser, Z. anorg 1900, 25. 107.)

Ammonium cuprous sodium thiosulphate

Ppt. When dry is fairly stable in the air. Partially decomp. by H_2O .

Sol. in dil. H_2SO_4 or acetic acid (Shinn, J. Am. Chem. Soc 1904, 26. 948.)

Ammonium lead thiosulphate, $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Easily and completely sol. in cold H_2O , but deposits PbS_2O_3 by standing or warming. (Rammelsberg, Pogg 56. 312.)

Ammonium magnesium thiosulphate,

Very deliquescent, and sol. in H_2O . (Kessler, Pogg 74. 283.)

Not deliquescent (Fock and Klüss, B. 23. 540.)

Ammonium mercuric thiosulphate,

Sol. in H_2O , from which it is precipitated by alcohol. Extremely easily decomp. (Rammelsberg, Pogg. 56. 318.)

Ammonium potassium thiosulphate,

Sol. in H_2O . (Fock and Klüss, B. 23. 536.)

Ammonium silver thiosulphate, $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$.

Easily sol. in H_2O . Somewhat sol. in alcohol. (Herschel, Edinb Phil J. 1. 398.)

$(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$ Nearly insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$, from which it is reprecip. by an acid. (Herschel.)

<p>Ammonium zinc thiosulphate, $(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{ZnS}_2\text{O}_3 + \text{H}_2\text{O}.$ Very sol in H_2O. (Rosenheim and Davidsohn, Z anorg. 1904, 41. 238)</p>	<p>Ammonium thiosulphate cuprous iodide, $(\text{NH}_4)_2\text{S}_2\text{O}_3, 2\text{CuI} + \text{H}_2\text{O}.$ Insol in H_2O. (Brun, C. R. 1892, 114. 668.) Could not be obtained (Rosenheim and Steinhauser)</p>
<p>Ammonium thiosulphate ammonium cuprous bromide, $\text{CuBr}, \text{NH}_4\text{Br}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol in H_2O (Rosenheim, Z anorg 1900, 25. 107) The double salts of ammonium thiosulphate with silver and copper haloids are true chemical compounds and may be recryst. from H_2O without decomp. (Rosenheim, Z. anorg. 1900, 25. 100.)</p>	<p>Barium thiosulphate, $\text{BaS}_2\text{O}_3 + \text{H}_2\text{O}.$ Sl sol. in H_2O (Rose, Pogg. 21. 437.) Insol. in alcohol 1 pt. cannot be dissolved in 2000 pts. H_2O. Sol. in dil. $\text{HCl} + \text{Aq}$ without decomposition. (Herschel, 1819.) Pptd from $\text{BaS}_2\text{O}_3 + \text{Aq}$ by dil. alcohol. (Sobrero and Selmi, A. ch. (3) 28. 211.) Insol. in acetone (Naumann, B. 1904, 37. 4329.)</p>
<p>Ammonium thiosulphate ammonium silver bromide, $\text{AgBr}, \text{NH}_4\text{Br}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol in H_2O. (Rosenheim.)</p>	<p>Barium bismuth thiosulphate, $\text{Ba}_2[\text{Bi}(\text{S}_2\text{O}_3)_2]_2.$ Sol. in H_2O with decomp. (Hauser, Z. anorg 1903, 35. 9.)</p>
<p>Ammonium thiosulphate ammonium cuprous chloride, $\text{CuCl}, \text{NH}_4\text{Cl}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in H_2O and in $\text{NH}_4\text{OH} + \text{Aq}$. (Rosenheim.)</p>	<p>Barium cadmium thiosulphate, $2\text{BaS}_2\text{O}_3, \text{CdS}_2\text{O}_3 + 8\text{H}_2\text{O}.$ Sl. sol. in H_2O. (Fock and Klüss, B. 23. 1761.) $3\text{BaS}_2\text{O}_3, \text{CdS}_2\text{O}_3 + 8\text{H}_2\text{O}$. Sl sol. in H_2O.</p>
<p>Ammonium thiosulphate ammonium silver chloride, $\text{AgCl}, \text{NH}_4\text{Cl}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in cold H_2O and $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by boiling with H_2O and by dil. acids. (Rosenheim)</p>	<p>Barium cuprous thiosulphate. Easily sol. in hot, difficultly sol. in cold H_2O (Cohen, Chem Soc 51. 38.) $2\text{BaS}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 7\text{H}_2\text{O}$ Nearly insol. in H_2O (Vortmann, M. 9. 165.)</p>
<p>Ammonium thiosulphate ammonium cuprous cyanide. Composition not constant. (Rosenheim)</p>	<p>Barium gold thiosulphate. Sl sol. in H_2O. Insol. in alcohol. (Fordos and Gélys.)</p>
<p>Ammonium thiosulphate ammonium silver cyanide. Composition not constant. (Rosenheim.)</p>	<p>Barium lead thiosulphate. Difficultly sol. in H_2O. (Rammelsberg, Pogg. 56. 313.)</p>
<p>Ammonium thiosulphate ammonium cuprous iodide, $\text{CuI}, \text{NH}_4\text{I}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in H_2O. (Rosenheim.)</p>	<p>Barium thiosulphate chloride, $\text{BaS}_2\text{O}_3, \text{BaCl}_2 + 2\text{H}_2\text{O}.$ Sol. in H_2O. (Fock and Klüss, B. 23. 3001.)</p>
<p>Ammonium thiosulphate ammonium cuprous iodide, $4(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{NH}_4\text{I}, \text{CuI}.$ Very sol. in H_2O Decomp. by boiling. (Brun, C R 1892, 114. 668.)</p>	<p>Bismuth caesium thiosulphate, $\text{Cs}_2\text{Bi}(\text{S}_2\text{O}_3)_2.$ Sol. in H_2O. Insol. in alcohol. (Hauser, Z. anorg. 1903, 35. 8.)</p>
<p>Ammonium thiosulphate ammonium silver iodide, $\text{AgI}, \text{NH}_4\text{I}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in H_2O (Rosenheim.)</p>	<p>Bismuth potassium thiosulphate, $\text{K}_2\text{Bi}(\text{S}_2\text{O}_3)_2 + \frac{1}{2}\text{H}_2\text{O}.$ Solubility in H_2O. 100 cc. of the sat. solution contain 3.5 g. at 2°; 7.0 g at 18°. At 18° the solution decomposes. More sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ than in pure H_2O.</p>
<p>Ammonium thiosulphate ammonium cuprous sulphocyanide, $\text{CuSCN}, \text{NH}_4\text{SCN}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in H_2O. (Rosenheim.)</p>	<p>Insol. in alcohol. (Hauser, Z. anorg. 1903, 35. 5.) $+ \text{H}_2\text{O}$. Sol in H_2O Insol. in alcohol. (Carnot, C. R. 83. 390.)</p>
<p>Ammonium thiosulphate ammonium silver sulphocyanide, $\text{AgSCN}, \text{NH}_4\text{SCN}, 4(\text{NH}_4)_2\text{S}_2\text{O}_3.$ Sol. in H_2O. (Rosenheim.)</p>	

Bismuth rubidium thiosulphate,
 $\text{Rb}_3\text{Bi}(\text{S}_2\text{O}_3)_2 + \frac{1}{2}\text{H}_2\text{O}.$

Sol. in H_2O .
Insol. in acid alcohol (Hauser, Z anorg. 1903, 35. 7.)
+ H_2O . Sol. in H_2O (Hauser, Z anorg. 1903, 35. 8.)

Bismuth sodium thiosulphate,

Very sol. in H_2O , and also in alcohol. (Carnot, C. R. 83. 338.)

$\text{Na}_2\text{Bi}(\text{S}_2\text{O}_3)_2$. Decomp. by H_2O . Easily sol. in 50% alcohol (Hauser, Z anorg 1903, 35. 3.)

Cadmium thiosulphate, $\text{CdS}_2\text{O}_3 + 2\text{H}_2\text{O}.$

Sol. in H_2O . Insol. in alcohol. (Vortmann and Padberg, B. 22. 2638.)

Cadmium potassium thiosulphate, $3\text{CdS}_2\text{O}_3, 5\text{K}_2\text{S}_2\text{O}_3.$

Cannot be recryst. without decomp. * (Fock and Klüss, B. 23. 1753.)

$\text{CdS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$. Can be crystallised from H_2O without decomp. (F. and K.)

Cadmium sodium thiosulphate, $\text{CdS}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3 + 16\text{H}_2\text{O}.$

Not deliquescent. Sol. in H_2O . (Jochum, C. C. 1885, 642.)

+ $9\text{H}_2\text{O}$. (Vortmann and Padberg, B. 22. 2639.)

+ $3\text{H}_2\text{O}$. Deliquescent. (Fock and Klüss, B. 23. 1157.)

$2\text{CdS}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3 + 7\text{H}_2\text{O}$. (V. and P.)
 $3\text{CdS}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3 + 9\text{H}_2\text{O}$. (V. and P.)

Cadmium strontium thiosulphate, $\text{CdS}_2\text{O}_3, 3\text{SrS}_2\text{O}_3 + 10\text{H}_2\text{O}.$

(Fock and Klüss, B. 23. 1763.)

Cæsium thiosulphate, $\text{Cs}_2\text{S}_2\text{O}_3.$

Easily sol. in H_2O . (Chabrie, C. R. 1901, 133. 297.)

+ $2\text{H}_2\text{O}$. Very hygroscopic. (J. Meyer, B. 1907, 40. 1360.)

Cæsium cuprous thiosulphate, $\text{Cs}_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}.$

Easily sol. in H_2O with decomp. (J. Meyer, B. 1907, 40. 1361.)

Cæsium lead thiosulphate, $\text{Cs}_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 2\text{H}_2\text{O}.$

Not hygroscopic.
 $2\text{Cs}_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 3\text{H}_2\text{O}$. Hygroscopic. (J. Meyer.)

Cæsium magnesium thiosulphate, $\text{Cs}_2\text{S}_2\text{O}_3, \text{MgS}_2\text{O}_3 + 6\text{H}_2\text{O}.$

Easily sol. in H_2O . (Meyer.)

Cæsium silver thiosulphate, $2\text{Cs}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}.$

Not hygroscopic
Decomp by hot H_2O (J. Meyer)

Calcium thiosulphate, $\text{CaS}_2\text{O}_3 + 6\text{H}_2\text{O}.$

Sol in 1 pt H_2O at 3° .

Aqueous solution saturated at 10° has sp gr 1.300. Solution with sp. gr 1.11437 at 15° contains 0.2081 of its weight in CaS_2O_3 .

Decomp on heating. Insol. in alcohol (sp gr. 0.8234) (Herschel, A. ch. 14. 355.)

100 g. sat. solution contains 29.4 g. CaS_2O_3 at 9° , and 34.7 g. CaS_2O_3 at 25° . (Kremann and Rodemund, M. 1914, 35. 1065.)

Solubility of $\text{CaS}_2\text{O}_3 + \text{Na}_2\text{SO}_3$ in H_2O .

t°	% $\text{Na}_2\text{S}_2\text{O}_3$	% CaS_2O_3	Solid phase
9	0	29.4	$\text{CaS}_2\text{O}_3, 6\text{H}_2\text{O}$
	11.04	22.64	"
	25.21	15.84	" + $\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
	31.01	7.70	$\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
25	0	34.7	$\text{CaS}_2\text{O}_3, 6\text{H}_2\text{O}$
	9.24	29.69	"
	15.67	21.41	"
	18.34	25.18	"
	28.24	21.14	"
	30.19	20.33	" + $\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
	31.24	18.43	$\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
	35.04	11.61	"

(Kremann and Rodemund, M. 1914, 35. 1065.)

Calcium lead thiosulphate, $2\text{CaS}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 4\text{H}_2\text{O}.$

Decomp by H_2O . (Rammelsberg.)

Calcium potassium thiosulphate, $\text{CaS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_3 + 5\text{H}_2\text{O}.$

Sol in H_2O . (Fock and Klüss, B. 24. 3016.)

Calcium silver thiosulphate, $2\text{CaS}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}.$

Easily sol. in H_2O ; less sol. in alcohol.
 $\text{CaS}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$. Sl. sol. in H_2O , abundantly in $\text{NH}_4\text{OH} + \text{Aq}$. (Herschel, 1819.)

Calcium sodium thiosulphate nitrate,
 $\text{CaNa}_3(\text{S}_2\text{O}_3)_2\text{NO}_3 + 11\text{H}_2\text{O}.$

(Kremann and Rodemund, M. 1914, 35. 1065.)

Cobaltous thiosulphate, $\text{CoS}_2\text{O}_3 + 6\text{H}_2\text{O}.$

Sol. in H_2O . (Rammelsberg.)

Cobaltous sodium thiosulphate, $2\text{CoS}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_3 + 25\text{H}_2\text{O}.$

Efflorescent. Sol. in H_2O . (Jochum.)
Could not be obtained by Vortmann and Padberg.

$\text{CoS}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3 + 15\text{H}_2\text{O}$ Sol. in H_2O . (Vortmann and Padberg, B 22. 2641.)

Cuprous thiosulphate, $\text{Cu}_2\text{O}, 3\text{S}_2\text{O}_2 + 2\text{H}_2\text{O} = \text{Cu}_2\text{H}_4(\text{S}_2\text{O}_3)_2$.

Sl. sol. in H_2O Abundantly sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$, $\text{NH}_4\text{Cl} + \text{Aq}$, $\text{NH}_4\text{OH} + \text{Aq}$, or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Sol. in HCl or $\text{HNO}_3 + \text{Aq}$ (v. Hauer, W. A B 13. 443)

Cuprous hydrazine thiosulphate, $\text{Cu}_2\text{S}_2\text{O}_3, (\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3 + \frac{1}{2}\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in $\text{NH}_4\text{OH} + \text{Aq}$ and in dil. acids. (Ferratini, C. C. 1912, I. 1281.)

Cupric lead thiosulphate, $\text{Pb}(\text{CuS}_2\text{O}_3)_2 + 3\text{H}_2\text{O}$. (?)

Very sol. in H_2O and quickly decomp. (Girard, C. C. 1904, I. 253.)

Cuprous mercurous thiosulphate, $5\text{Cu}_2\text{S}_2\text{O}_3, 3\text{Hg}_2\text{S}_2\text{O}_3$.

Insol. or sl. sol. in cold, decomp. by boiling H_2O . $\text{HNO}_3 + \text{Aq}$ dissolves out Cu. (Rammelsberg, Pogg. 56. 319.)

Cuprous potassium thiosulphate, $\text{Cu}_2\text{S}_2\text{O}_3, \text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Sl. sol. in H_2O ; decomp. on heating with pptn. of CuS . Easily sol. in $\text{K}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Rammelsberg, Pogg 56. 321.)

$\text{Cu}_2\text{S}_2\text{O}_3, 2\text{K}_2\text{S}_2\text{O}_3$. Very sol. in cold H_2O ; insol. in $\text{K}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Cohen, Chem Soc 51. 39)

$+ 3\text{H}_2\text{O}$. Scarcely sol. in cold, sol. with sl. decomp. in hot H_2O Sol in $\text{HCl} + \text{Aq}$ with evolution of SO_2 .

$\text{Cu}_2\text{S}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}$. More sol. in H_2O than $\text{Cu}_2\text{S}_2\text{O}_3, \text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$. Solution is not decomp. by boiling. Sol. in excess of $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg.)

Cuprous rubidium thiosulphate, $\text{Rb}_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Ppt. (J. Meyer, B. 1907, 40. 1357.)
 $2\text{Rb}_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$. Ppt. (J. Meyer)
 $3\text{Rb}_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$. Ppt. (J. Meyer.)

Cuprous silver sodium thiosulphate ammonia, $\text{Cu}_2\text{S}_2\text{O}_3, 2\text{Ag}_2\text{S}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_3, 6\text{NH}_3$.

Ppt. Becomes dark when exposed to light. Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Shinn, J. Am. Chem. Soc. 1904, 26. 949.)

Cuprous sodium thiosulphate, $2\text{Cu}_2\text{S}_2\text{O}_3, 7\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Ppt. from aqueous solution by alcohol. (Jochum, C. C. 1885. 642.)

$+ 12\text{H}_2\text{O}$. Sol. in very dil. $\text{HCl} + \text{Aq}$. (Jochum.)

$\text{Cu}_2\text{S}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ Sol in H_2O ; insol. in alcohol. (Rammelsberg)

$+ 6\text{H}_2\text{O}$. (Jochum.)
 $3\text{Cu}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3 + 8\text{H}_2\text{O}$ Decomp by H_2C . (Vortmann)

$+ 5\text{H}_2\text{O}$ (Lenz, A. 40. 99) Formula according to Jochum is—

$5\text{Cu}_2\text{S}_2\text{O}_3, 4\text{Na}_2\text{S}_2\text{O}_3 + 8\text{H}_2\text{O}$ Insol. in H_2O or alcohol. Sol in $\text{HCl} + \text{Aq}$ without evolution of SO_2 , also in dil H_2SO_4 or $\text{HNO}_3 + \text{Aq}$. Sol in $\text{NH}_4\text{OH} + \text{Aq}$ (Jochum.)

$+ 6\text{H}_2\text{O}$. As above. (Jochum.)

$\text{Cu}_2\text{S}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ Insol. in H_2O ; sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ (Russell, Ch. 7tg. 9. 233)

$+ 2\text{H}_2\text{O}$ Insol in H_2O and alcohol.

Decomp. by dil. acids. (Rosenheim and Steinhauser, Z anorg 1900, 25. 84.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$. Sol. in H_2O . Pptd. by alcohol. (Bhaduri, Z. anorg. 1898, 17. 1.)

$+ 3\text{H}_2\text{O}$. Decomp. by H_2O . (Vortmann, M 1888, 9. 168.)

$3\text{Cu}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3$ (Gerard, C C. 1904, I. 253)

$+ 5\text{H}_2\text{O}$. Sol in 352 pts H_2O . (Russell, Ch Z 1885, 9. 223)

100 cc. 5% $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ dissolve 12.28 g.

" " 7.5% " " 17.46 g.

" " 10% " " 22.54 g.

(Russell, Ch. Z. 1885, 9. 223.)

$4\text{Cu}_2\text{S}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3 + 6\text{H}_2\text{O}$. Insol in H_2O and alcohol.

Decomp by dil. acids. (Rosenheim and Steinhauser, Z. anorg. 1900, 25. 84.)

$+ 9\text{H}_2\text{O}$. Sol. in H_2O . Pptd by alcohol. (Bhaduri, Z. anorg. 1898, 17. 1.)

$7\text{Cu}_2\text{S}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_3 + 16\text{H}_2\text{O}$. Decomp. by H_2O and by alcohol. (Bhaduri, Z anorg. 1898, 17. 1)

It is impossible to determine whether any of these compds. are complex or double salts. As a class they are not easily sol and decomp. in solution. They may therefore be mixtures whose comp. depended upon the temp. and conc. of the solution in which they were pptd. (Rosenheim, Z anorg. 1900, 25. 81)

Cuprocupric sodium thiosulphate ammonia, $\text{Cu}_2\text{S}_2\text{O}_3, \text{CuS}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3, 4\text{NH}_3$.

Insol. in, but decomp. by hot H_2O . Sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ or $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Schütte, C. R. 42. 1267.)

Cuprous sodium thiosulphate cuprous chloride, $\text{Cu}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3, 2\text{CuCl}$.

(Rosenheim and Steinhauser, Z. anorg. 1900, 25. 86.)

Cupric sodium thiosulphate cupric sulphide, $\text{Cu}_2\text{S}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3, \text{CuS} + 4\text{H}_2\text{O}$.

Sl. sol. in H_2O ; easily sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$, and $\text{NH}_4\text{OH} + \text{Aq}$; insol. in alcohol. (Lenz, A. 40. 99.)

$\text{Cu}_2\text{S}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3, 2\text{CuS}$. Sol. in H_2O or dil. $\text{HCl} + \text{Aq}$. (Kessel, B. 11. 1585.)

Cuprous sodium thiosulphate sodium chloride, $3\text{Cu}_2\text{S}_2\text{O}_3$, $2\text{Na}_2\text{S}_2\text{O}_3$, $4\text{NaCl} + 8\text{H}_2\text{O}$.

Sol in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ (Siewert, Zeit. ges. Naturwiss. **26**, 486)

Ppt. (Bhaduri, Z anorg 1898, **17**, 3)

Cupric thiosulphate ammonia, CuS_2O_3 , 4NH_3 .

100 pts. H_2O dissolve 21.79 pts at 25° (Pudschies, Dissert)

Cuprocupric thiosulphate ammonium chloride, Cu_2O , CuO , $3\text{S}_2\text{O}_3$, $2\text{NH}_4\text{Cl}$.

Sol in $\text{HNO}_3 + \text{Aq}$ with separation of S. (v. Hauer, W. A. B. **13**, 447)

Glucinum thiosulphate, $\text{GlS}_2\text{O}_3 + 11\text{H}_2\text{O}$.
(Faktor, C. C. **1901**, II, 878.)

Gold (aurous) hydrogen thiosulphate, $\text{Au}_2\text{S}_2\text{O}_3$, $3\text{H}_2\text{S}_2\text{O}_3$.

Known only in solution (Fordos and Gélis, A. ch. (3) **13**, 394)

Gold (aurous) sodium thiosulphate, $\text{Au}_2\text{S}_2\text{O}_3$, $3\text{Na}_2\text{S}_2\text{O}_3 + 4\text{H}_2\text{O}$.

Sol. in H_2O ; solution decomp. on heating. Insol. in absolute, sl. sol. in dil. alcohol (Fordos and Gélis)

$\text{Au}_2\text{S}_2\text{O}_3$, $6\text{Na}_2\text{S}_2\text{O}_3 + 10\text{H}_2\text{O}$ Very sol. in H_2O , but decomp. by boiling. (Jochum, C. C. **1885**, 642.)

Iron (ferrous) thiosulphate, $\text{FeS}_2\text{O}_3 + 5\text{H}_2\text{O}$.

† Deliquescent. Very sol. in H_2O or alcohol. (Koene, Pogg. **63**, 241)

Iron (ferrous) sodium thiosulphate, FeS_2O_3 , $3\text{Na}_2\text{S}_2\text{O}_3 + 8\text{H}_2\text{O}$.

Very sol. in H_2O , and easily decomp. (Vortmann and Padberg, B. **22**, 2641)

Lead thiosulphate, PbS_2O_3 .

† Sol. in 3266 pts. H_2O . Sol. in alkali thiosulphates $+ \text{Aq}$ (Rammelsberg, Pogg. **56**, 308.)

Lead lithium thiosulphate, PbS_2O_3 , $\text{Li}_2\text{S}_2\text{O}_3$.

Very hygroscopic. Decomp. by H_2O with separation of PbS . (J. Meyer, B. **1907**, **40**, 1355.)

Lead potassium thiosulphate, PbS_2O_3 , $3\text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Sol. in H_2O with partial separation of PbS_2O_3 . Sol. in $\text{K}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Rammelsberg, Pogg. **56**, 310.)

Lead rubidium thiosulphate, $2\text{Rb}_2\text{S}_2\text{O}_3$, $\text{PbS}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Difficultly sol. in cold H_2O . Decomp. by H_2O . (J. Meyer, B. **1907**, **40**, 1358.)

Lead sodium thiosulphate, PbS_2O_3 , $2\text{Na}_2\text{S}_2\text{O}_3$.

Sl. sol. in H_2O . Very easily sol. in $\text{NaC}_2\text{H}_3\text{O}_2$ and $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Lenz, A. **40**, 98)

Insol. in alcohol.

$2\text{PbS}_2\text{O}_3$, $5\text{Na}_2\text{S}_2\text{O}_3 + 60\text{H}_2\text{O}$. Easily decomp. (Jochum, C. C. **1885**, 642.)

PbS_2O_3 , $3\text{Na}_2\text{S}_2\text{O}_3 + 12\text{H}_2\text{O}$. Decomp. in boiling aqueous solution. (Vortmann and Padberg, B. **22**, 2637)

Lead strontium thiosulphate.

Sol. in H_2O . Precipitated as a syrup by alcohol. (Rammelsberg)

Lithium thiosulphate, $\text{Li}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O and absolute alcohol. (Fock and Klüss, B. **22**, 3099)

Lithium silver thiosulphate, $\text{Li}_2\text{S}_2\text{O}_3$, $\text{Ag}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$.

Hygroscopic.

Decomp. by boiling H_2O and by acids. (Meyer and Eggeling, B. **1907**, **40**, 1355.)

Magnesium thiosulphate, $\text{MgS}_2\text{O}_3 + 6\text{H}_2\text{O}$.

Very easily sol. in H_2O . Precipitated from conc. solution by alcohol. (Rammelsberg, Pogg. **56**, 303)

Magnesium potassium thiosulphate, $\text{MgK}_2(\text{S}_2\text{O}_3)_2 + 6\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O . Less sol. than $\text{K}_2\text{S}_2\text{O}_3$. (Rammelsberg, Pogg. **56**, 304.)

Not deliquescent. (Fock and Klüss, B. **23**, 539.)

Magnesium rubidium thiosulphate, MgS_2O_3 , $\text{Rb}_2\text{S}_2\text{O}_3 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . (Meyer, B. **1907**, **40**, 1358.)

Manganous thiosulphate, MnS_2O_3 .

Sol. in H_2O , from which it is pptd. by alcohol (Rammelsberg, Pogg. **56**, 305.)

$+ 5\text{H}_2\text{O}$ Decomp. very easily. (Vortmann and Padberg, B. **322**, 2641.)

Manganous sodium thiosulphate, MnS_2O_3 , $2\text{Na}_2\text{S}_2\text{O}_3 + 16\text{H}_2\text{O}$.

Sol. in H_2O . Insol. or but sl. sol. in alcohol. (Jochum, C. C. **1885**, 642.)

Mercuric potassium thiosulphate, $3\text{HgS}_2\text{O}_3$, $5\text{K}_2\text{S}_2\text{O}_3$.

Sol. in 10 pts. H_2O at 15° , and $\frac{1}{2}$ pt. at 100° . Aqueous solution decomp. on standing or heating.

Insol. in alcohol. (Kirchhoff, Scher. J. **2**, 30.)

HgS_2O_3 , $3\text{K}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}$. (Fock and Klüss, B. **24**, 1353.)

HgS_2O_3 , $5\text{K}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ (F. and K.)

Nickel thiosulphate, $\text{NiS}_2\text{O}_3 + 6\text{H}_2\text{O}$.

Permanent Sol. in H_2O . (Rammelsberg, Pogg. 56. 306)

Nickel sodium thiosulphate, $2\text{NiS}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_3 + 25\text{H}_2\text{O}$.

Efflorescent. Sol in H_2O . (Jochum.)

Nickel thiosulphate ammonia, $\text{NiS}_2\text{O}_3, 4\text{NH}_3 + 6\text{H}_2\text{O}$.

Decomp on air. Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg. 56. 306)

$\text{NiS}_2\text{O}_3, 5\text{NH}_3 + \text{H}_2\text{O}$. (Ephraim, B. 1913, 46. 3108.)

$\text{NiS}_2\text{O}_3, 6\text{NH}_3 + 3\text{H}_2\text{O}$ (Vortmann and Padberg, B. 22. 2641)

Platinous sodium thiosulphate.

See Platothiosulphate, sodium.

Potassium thiosulphate, $\text{K}_2\text{S}_2\text{O}_3 + 1/3, 1, 1 2/3\text{H}_2\text{O}$, and $2\text{H}_2\text{O}$.

Very deliquescent. Very sol. in H_2O with absorption of heat. Solution is stable on the air. Insol. in alcohol

100 pts H_2O dissolve pts. $\text{K}_2\text{S}_2\text{O}_3$ at t° .

t°	Pts $\text{K}_2\text{S}_2\text{O}_3$	Solid phase
0	96.1	$\text{K}_2\text{S}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$
17	150.5	$3\text{K}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$

70	255.2	"
75	268.0	"
78 3	292.0	$3\text{K}_2\text{S}_2\text{O}_3 \cdot \text{H}_2\text{O} + \text{K}_2\text{S}_2\text{O}_3$
80	293.1	$\text{K}_2\text{S}_2\text{O}_3$
85	298.5	"
90	312.0	"

(Inohiko Io, Mem. Coll. Sc. Kyoto, 1911, 3. 212.)

Sol. in dil. $\text{HCl} \cdot \text{H}_2\text{O}_2 + \text{Aq}$ without decomp. (Mathieu-Plessy, C. R. 101. 59.)

Insol. in ethyl acetate. (Casaseca, C. R. 30. 821.)

Potassium silver thiosulphate, $2\text{K}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3$.

Sol. in H_2O . (Cohen.)

$\text{K}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3$. Sl. sol in H_2O . (Herschel.)

$3\text{K}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ Rather sl. sol. in H_2O . (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 76)

Sl. sol. in H_2O . (Rosenheim.)

Potassium silver thiosulphate ammonia, $\text{KAgS}_2\text{O}_3, 2\text{NH}_3$.

Very sl sol in H_2O . Easily sol. in hot $\text{NH}_4\text{OH} + \text{Aq}$. (Schwicker, B. 22. 1735)

$5\text{K}_2\text{S}_2\text{O}_3, 3\text{Ag}_2\text{S}_2\text{O}_3, \text{NH}_3$. Difficultly sol. in H_2O with decomp.

Sol. in hot $\text{NH}_4\text{OH} + \text{Aq}$ with partial decomp. (J. Meyer, B. 1907, 40. 1359.)

Potassium sodium thiosulphate.

(a) $\text{KNaS}_2\text{O}_3 + 2\text{H}_2\text{O}$. Very sol in H_2O . 100 pts. H_2O dissolve 213.7 pts salt at 15° . (Schwicker, B. 22. 1733.)

(b) $\text{NaKS}_2\text{O}_3 + 2\text{H}_2\text{O}$. 100 pts. H_2O dissolve 205.3 pts. salt at 15° (Schwicker.)

Potassium strontium thiosulphate, $\text{K}_2\text{S}_2\text{O}_3, \text{SrS}_2\text{O}_3 + 5\text{H}_2\text{O}$.

Sol in H_2O . (Fock and Klüss, B. 24. 3017.)

Potassium zinc thiosulphate, $\text{K}_2\text{S}_2\text{O}_3, \text{ZnS}_2\text{O}_3 + \text{H}_2\text{O}$.

Very sol. in H_2O (Rosenheim and Davidsohn, Z. anorg. 1904, 41. 238.)

Potassium thiosulphate sodium chloride, $\text{K}_2\text{S}_2\text{O}_3, \text{NaCl}$.

Sol. in H_2O . (Pape, Pogg. 139. 238)

Rubidium thiosulphate, $\text{Rb}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Very hygroscopic; easily sol. in H_2O . (J. Meyer, B. 1907, 40. 1356)

Rubidium silver thiosulphate, $2\text{Rb}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$.

Ppt. Not hygroscopic. Difficultly sol. in cold H_2O Decomp. by warm H_2O . (J. Meyer.)

Rubidium silver thiosulphate ammonia, $\text{Rb}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3, \text{NH}_3$.

Ppt. (J. Meyer.)

$3\text{Rb}_2\text{S}_2\text{O}_3, 4\text{Ag}_2\text{S}_2\text{O}_3, \text{NH}_3$. Ppt. Decomp. in the air. (J. Meyer.)

Samarium thiosulphate.

(Cleve.)

Scandium thiosulphate, basic, $\text{Se}(\text{OH})\text{S}_2\text{O}_3$.

Ppt (R. J. Meyer, Z. anorg. 1914, 86. 282)

Silver thiosulphate, $\text{Ag}_2\text{S}_2\text{O}_3$.

Sl. sol. in H_2O . Sol. in NH_4OH or alkali thiosulphates + Aq . (Herschel, Edinb. Phil. J. 1. 26.)

Silver sodium thiosulphate, $\text{Ag}_2\text{S}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$.

Sl. sol. in H_2O . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq}$, also in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ to form—
 $\text{Ag}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$. Easily sol. in H_2O or $\text{NH}_4\text{OH} + \text{Aq}$; somewhat sol. in al-

cohol, especially if warm or dilute (Lenz, A 40. 94)

$\text{Ag}_2\text{S}_2\text{O}_3$, $6\text{Na}_2\text{S}_2\text{O}_3 + 21\text{H}_2\text{O}$ Sol in H_2O (Jochum, C C 1885. 642)

Silver sodium thiosulphate acetylde acetylene, $2\text{Na}_2\text{S}_2\text{O}_3$, $7\text{Ag}_2\text{S}_2\text{O}_3$, $18\text{Ag}_2\text{C}_2$, $32\text{C}_2\text{H}_2$.

Decomp. by H_2O Sol in $\text{NH}_4\text{OH} + \text{Aq}$

Insol. in alkalies (Bhaduri, Z. anorg. 1913, 79. 356.)

$7\text{Na}_2\text{S}_2\text{O}_3$, $5\text{Ag}_2\text{S}_2\text{O}_3$, $86\text{Ag}_2\text{C}_2$, $13\text{C}_2\text{H}_2$ (Bhaduri.)

Silver sodium thiosulphate ammonia,

NaAgS_2O_3 , NH_3 .

Very unstable (Schwicker, B. 22. 1736.)

Silver strontium thiosulphate, $\text{Ag}_2\text{S}_2\text{O}_3$, SrS_2O_3 .

Nearly insol. in H_2O . Very sl sol in $\text{SrS}_2\text{O}_3 + \text{Aq}$; easily sol in $\text{NH}_4\text{OH} + \text{Aq}$. (Herschel)

Sodium thiosulphate, $\text{Na}_2\text{S}_2\text{O}_3$ and +1, 2 and $5\text{H}_2\text{O}$.

100 pts. H_2O dissolve:

At 16° , 65 pts. $\text{Na}_2\text{S}_2\text{O}_3$.

(Young and Burke, J. Am. Chem. Soc. 1906, 28. 327.)

The solubility of the hydrates of $\text{Na}_2\text{S}_2\text{O}_3$ are exceedingly complicated. There are five groups of hydrates, (I) primary, (II) secondary, (III) tertiary, (IV) quaternary, and (V), quintary, and transitions occur between members of the same and different groups. $\text{Na}_2\text{S}_2\text{O}_3 + 5\text{H}_2\text{O}$ (I) is the commercial thiosulphate. The relations and solubility of the various hydrates is shown in the following table.

Solubility of $\text{Na}_2\text{S}_2\text{O}_3$ in H_2O at t° .

(Gerlach, Z anal. 26. 436.)

Moderately sol. in liquid NH₃. (Franklin, Am. Ch. J. 1898, 20. 829.)

100 pts. absolute ethyl alcohol dissolve at room temperature 2.5 mg. Na₂S₂O₃ (Böttker, Z. phys. Ch. 1897, 22. 410.)

100 pts. absolute ethyl alcohol dissolve at room temperature 3.4 mg. Na₂S₂O₃+5H₂O. (Böttker, Z. phys. Ch. 1897, 22. 510.)

Sol. in oil of turpentine (Edison, Am. Chemist, 7. 127). Insol. therein (Techn. J. B. 27. 1003).

Insol. in ethyl acetate. (Casaseca, C. R. 30. 821.)

Sodium thalious thiosulphate, 3Na₂S₂O₃, 2Tl₂S₂O₃+10H₂O.

Sol. in H₂O. (Werther)

+8H₂O (Jochum)

2Na₂S₂O₃, Tl₂S₂O₃+8H₂O (Vortmann and Padberg, B. 22. 2638)

Sodium zinc thiosulphate, Na₂S₂O₃, 2ZnS₂O₃, +23H₂O.

Sol. in H₂O. (Jochum, C. C. 1885. 642.)

3Na₂S₂O₃, 2ZnS₂O₃+10H₂O. Deliquescent (Vortmann and Padberg, B. 22. 2640)

Sodium thiosulphate mercuric iodide, 2Na₂S₂O₃, HgI₂.

Decomp by H₂O and by alcohol (Eder and Ulm, M. 1882, 3. 197.)

Strontium thiosulphate, SrS₂O₃+5H₂O.

Permanent Sol. in 6 pts cold H₂O (Gay-Lussac), in 4 pts. H₂O at 13°, and 1.75 pts. boiling H₂O (Herschel, 1819).

1 g. is sol in 37 cc. H₂O at room temp. (Antenrieth, Z anal 1898, 37. 293)

Gradually efflorescent. Insol in alcohol (Herschel.)

Thalious thiosulphate.

Ppt. Sl. sol in cold, easily sol in hot H₂O. (Crookes)

Easily sol. in Na₂S₂O₃+Aq. (Jochum.)

Tin thiosulphate (?).

Sol. in H₂O.

Uranyl thiosulphate, (UO₂)S₂O₃.

Ppt. (Faktor, C. C. 1901, II. 878.)

Zinc thiosulphate, ZnS₂O₃+xH₂O.

Very deliquescent, and very sol in H₂O and alcohol (Rammelsberg)

Zinc thiosulphate ammonia, ZnS₂O₃, 2NH₃.

Decomp by H₂O. Sol. in NH₄OH+Aq, from which it is pptd by alcohol. (Rammelsberg, Pogg 56. 62.)

Thiotriethiazyl bromide, N₃S₄Br.

Decomp. H₂O and alkalies.

Stable in the air. (Muthmann, B. 1897, 30. 630.)

Thiodithiazyl dichloride, S₂N₂Cl₂.

See Nitrogen sulphochloride.

Thiotriethiazyl chloride, S₄N₃Cl.

See Nitrogen sulphochloride.

Thiotriethiazyl iodide, N₃S₄I.

Decomp. spontaneously in the air. Very unstable. (Muthmann, B. 1897, 30. 631.)

Thiotriethiazyl nitrate, $S_4N_3NO_3$.

Sol in H_2O with decomp. Sol. in $HNO_3 + Aq.$ (Demarcay, C. R. **91**. 1066.)

Sol in cold H_2O with decomp.

Completely insol. in organic solvents, as CS_2 , $CHCl_3$, acetone, and acetic ether. (Muthmann and Seitter, B. 1897, **30**. 629.)

Thiotriethiazyl sulphate $(S_4N_3)HSO_4$.

Stable on air. Sol. in H_2O with decomp. (Demarcay, C. R. **91** **854**. 1066.)

Thiotriethiazyl sulphocyanide, N_3S_4CNS .

Stable in the air.

Sol. in benzene and chloroform. (Muthmann and Seitter, B. 1897, **30**. 631.)

Dithiotetrathiazyl dichloride, $S_6N_4Cl_2$.

See Nitrogen sulphochloride.

Thorium, Th.

Not oxidised by boiling H_2O .

Quickly sol. (Chydenius, Pogg. **119**. 43), very slowly sol. by long boiling (Berzelius, Pogg. **16**. 385) in $HNO_3 + Aq.$ Insol. in cold, easily sol. in warm dil $H_2SO_4 + Aq.$ Slowly sol. in cold, rapidly in hot $HCl + Aq.$ Easily oxidised by aqua regia. Insol. in $KOH + Aq.$ or $HF + Aq.$

Sl. sol. in dil. $H_2SO_4 + Aq.$; decomp. by conc. H_2SO_4 . Very sl. sol. in dil., and less in conc $HNO_3 + Aq.$ Easily sol. in conc. $HCl + Aq.$ and aqua regia (Nilson, B. **15**. 2521.)

Thorium B.

Somewhat sol. in hot H_2O , which dissolves 70% in an hour. More rapidly sol. in dil. acids or hot $KI + Aq.$ Somewhat sol. in organic solvents. Insol in CS_2 and in methylene iodide. (Hogley, Phil. Mag. 1913, (6) **25**. 331.)

Thorium C.

Somewhat sol. in hot H_2O . More rapidly sol. in hot $KI + Aq.$ and in dil acids. More sol. in organic solvents than thorium B. 20% sol. in CS_2 or methylene iodide in 10 minutes (Hogley, Phil. Mag. 1913, (6) **25**. 331.)

Thorium tetraboride, ThB_4 .

Sol. in cold conc. HNO_3 and HCl and in hot conc. H_2SO_4 . (Jassonneix, C. R. 1905, **141**. 192.)

Thorium hexaboride, ThB_6 .

Sol. in hot dil. or conc. HNO_3 ; insol. in H_2SO_4 , HCl , HF and aq. alkalies. (Jassonneix, C. R. 1905, **141**. 193.)

Thorium dibromide, $ThBr_2$.

Sol. in H_2O with partial decomp. (Troost and Ouvrard, A. ch. (6) **17**. 227.)

Thorium tetrabromide, $ThBr_4$.

Sol. in H_2O . (Berzelius.)

Very hygroscopic, and sol. in H_2O with partial decomp. (Troost and Ouvrard, A. ch. (6) **17**. 229.)

Sl. sol. in organic solvents. (Matthews, J. Am. Chem. Soc. 1898, **20**. 840.)

+7 H_2O . Sol. in alcohol. (Rosenheim, B. 1900, **33**. 979.)

+8 H_2O Very sol. in alcohol and H_2O Insol. in chloroform and light petroleum. (Lesinsky, Z. anorg. 1897, **15**. 82.)

Thorium tetrabromide ammonia, $ThBr_4 \cdot 3NH_3$.

Insol. in organic solvents (Matthews, J. Am. Chem. Soc. 1898, **20**. 840.)

Thorium carbide, ThC_2 .

Almost insol. in conc. acids; decomp. by H_2O and by dil. acids (Moissan, C. R. 1896, **122**. 577.)

Thorium tetrachloride, $ThCl_4$.

Anhydrous Extremely deliquescent, and sol. in H_2O with evolution of heat. Sol. in alcohol.

Sol. in ether (Matthews, J. Am. Chem. Soc. 1898, **20**. 824.)

+7 H_2O . Deliquesces in the air. Very sol. in H_2O and alcohol Insol in ether (Krüss, Z. anorg. 1897, **14**. 368.)

+8 H_2O . Hygroscopic. Easily sol. in H_2O and absolute alcohol Not pptd. from solution in alcohol by ether.

+9 H_2O . As above (Rosenheim, Z. anorg. 1903, **35**. 426.)

Thorium tetrachloride ammonia, $ThCl_4 \cdot 6NH_3$.

Insol. in ether. Decomp. by H_2O .

$ThCl_4 \cdot 8NH_3$. Fumes in moist air. Decomp. by H_2O . (Matthews, J. Am. Chem. Soc. 1898, **20**. 824.)

The compds. of $ThCl_4$ with NH_3 are of the type $ThCl_4 \cdot nNH_3$ and may be classified into three groups.

(1) $n=4, 6, 7, 12, 18$. Compds. are decomp. by H_2O .

(2) $n=4, 6, 7$. Compds. are not decomp. by H_2O .

(3) $n=6, 7, 12, 18$. The first two compds. of this series are identical with the last two of group (2).

$ThCl_4 \cdot 4NH_3$ of group (2) is the only one in the whole series stable above 120° . (Chauvenet, C. R. 1910, **151**. 387.)

Thorium fluoride, $ThF_4 \cdot 4H_2O$.

Insol. in H_2O or $HF + Aq.$

Thorium hydride, ThH_2 .

Decomp. by dil. $HCl + Aq.$ (Winkler, B. **24**. 873.)

Thorium hydroxide, $\text{Th}(\text{OH})_4$.

Insol. in H_2O .

Sol. in acids, except oxalic, molybdic, and hydrofluoric acids

Insol. in alkali hydroxides, but easily sol. in alkali carbonates + Aq. More sol. in $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ than in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ alone. (Berzelius) Not pptd. in presence of tartaric and citric acids (Chydenius, Pogg. 119. 43.)

$4\text{ThO}_2, \text{H}_2\text{O}$. Insol. in water and acids at boiling temp

Thorium hydroxybromide, $\text{Th}(\text{OH})_2\text{Br}_2 + 11\text{H}_2\text{O}$.

Sol. in alcohol (Rosenheim, B. 1900, 33. 979)

Thorium hydroxychloride, $(\text{OH})\text{ThCl}_3 + 11\text{H}_2\text{O}$.

Sol. in alcohol. (Rosenheim, B. 1900, 33. 978.)

$\text{Th}(\text{OH})_2\text{Cl}_2 + 5\text{H}_2\text{O}$. Slowly takes up H_2O from the air.

Sol. in H_2O without decomp

Sol. in alcohol Pptd from solution in alcohol by ether (Rosenheim, Z. anorg 1903, 35. 425)

$+8\text{H}_2\text{O}$ Hygroscopic; sol. in alcohol. (Rosenheim, B. 1900, 33. 978)

Thorium hydroxyiodide, $\text{Th}(\text{OH})\text{I}_3 + 10\text{H}_2\text{O}$.

Evolves iodine in the light. (Rosenheim, Z. anorg. 1903, 35. 430.)

Thorium iodide.

Sol. in H_2O

Thorium nitride, Th_3N_4 .

Decomp. by H_2O . (Matignon, C. R. 1901, 132. 37.)

Thorium oxide, ThO_2 .

When ignited is insol. in HCl , and $\text{HNO}_3 + \text{Aq}$. Sol. in H_2SO_4 by heating to boiling and subsequent addition of H_2O . Insol. in alkali hydrates or carbonates + Aq.

Thorium metoxide, $\text{Th}_2\text{O}_3 + \text{H}_2\text{O}$.

Sl. sol. in HCl . (Locke, Z. anorg. 1894, 7. 348.)

$+2\text{H}_2\text{O}$. Loses 1 H_2O at 100° . Sol. in H_2O ; insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Locke)

Metathorium oxide.

Sol. in H_2O after having been treated with conc HNO_3 or $\text{HCl} + \text{Aq}$, even if previously ignited

$\text{ThO}_2, x\text{Th}(\text{OH})_4$. Compare Th_2O_3 . (Locke) (Stevens, Z. anorg. 1901, 27. 42.)

Thorium peroxide, Th_2O_7 .

Precipitate. (Cleve, C. R. 100. 605.)

Thorium oxychloride.

Decomp. by H_2O into ThCl_4 and ThO_3 . ThOCl_2 . Sol. in H_2O .

Insol. in abs alcohol (Matignon, A. ch. 1907, (8) 10. 133.)

$+3\text{H}_2\text{O}$.

$+5\text{H}_2\text{O}$ (Matignon, A. ch. 1907, (8) 10. 135.)

Metathorium oxychloride, $\text{ThO}_3, x\text{ThCl}_4$.

Hygroscopic; sol. in H_2O ; insol. in abs. alcohol. (Stevens, Z. anorg. 1901, 27. 47.)

Thorium oxyfluoride, ThOF_2 .

Insol. in H_2O .

Sol. in H_2SO_4 with decomp. (Chauvenet, C. R. 1908, 146. 974)

Thorium oxysulphide, $\text{ThS}_2, 2\text{ThO}_2$.

(Chydenius)

Thorium phosphide.

Insol. in H_2O . (Berzelius.)

Thorium silicide, ThSi_2 .

Sol. in aq. min. acids; insol. in aq. alkalies. Decomp. by fusion with NaOH or KOH . (Hönigschmid, C. R. 1906, 142. 158)

Thorium sulphide, ThS_2 .

Insol. in warm H_2SO_4 . Very slightly attacked by HNO_3 or $\text{HCl} + \text{Aq}$ Sol. in hot aqua regia. (Berzelius)

Thoromolybdic acid.**Ammonium thoromolybdate,**

$(\text{NH}_4)_3\text{Th}(\text{Mo}_2\text{O}_7)_6 + 8\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in dil. acids. (Barbieri, C. A. 1913. 3724.)

$(\text{NH}_4)_6\text{H}_2\text{Th}(\text{Mo}_2\text{O}_7)_6 + 11\text{H}_2\text{O}$. Insol. in H_2O ; sol. in dil. acids. (Barbieri.)

Silver thoromolybdate, $\text{Ag}_3\text{Th}(\text{Mo}_2\text{O}_7)_6$.

Insol. in H_2O ; sl. sol. in $\text{HNO}_3 + \text{Aq}$, but nearly insol. in presence of AgNO_3 . (Barbieri.)

Sodium thoromolybdate, $\text{Na}_3\text{Th}(\text{Mo}_2\text{O}_7)_6 + 15\text{H}_2\text{O}$.

Insol. in H_2O ; sol. in dil. acids. (Barbieri.)

$\text{Na}_6\text{H}_2\text{Th}(\text{Mo}_2\text{O}_7)_6 + 17\text{H}_2\text{O}$. Insol. in H_2O ; sol. in dil. acids. (Barbieri.)

Thulium, Tm.**Thulium chloride, $\text{Tm}_2\text{Cl}_6 + 14\text{H}_2\text{O}$.**

Very sol. in H_2O and in alcohol. (James, J. Am. Chem. Soc. 1911, 33. 1342.)

Thulium hydroxide.

Easily sol. in dil. acids. (James, J. Am. Chem. Soc. 1911, 33. 1342.)

Thulium oxide, Tm_2O_3 .

Slowly sol. in hot conc. acids. (James, J. Am. Chem. Soc. 1911, **33**, 1342.)

Tin, Sn.

Insol in H_2O . Tin is not attacked by distilled H_2O when air is passed through it for a week.

Slowly sol. in dil cold HCl +Aq, but rapidly sol. if hot and conc. Slowly sol. in hot dil. H_2SO_4 +Aq, but decomp. by hot conc. H_2SO_4 .

Readily sol. in cold aqua regia. Attacked violently by conc. HNO_3 +Aq with pptn. of SnO_2 . Completely sol. in dil. cold HNO_3 +Aq (1 pt. HNO_3 : 1 pt. H_2O) at 22° . (Hay, C. N. **22**, 298.) Not attacked by pure conc. HNO_3 +Aq of 1.512–1.419 sp. gr., but violently attacked by less conc. acid. Also attacked by most conc. acid if it contains NO_2 . (Millon, A. ch. (3) **6**, 95.)

If Sn is placed in dil. HNO_3 +Aq of 1.15 sp. gr. it is sl. dissolved, but soon pptd. again as SnO_2 . If a small amt of NH_4Cl is added, the Sn remains permanently in solution; HCl +Aq has a similar action. (Ordway, Am. J. Sci. (2) **23**, 220.) Easily sol. in the cold in mixture of 1 vol. H_2SO_4 , 2 vols. HNO_3 , and 3 vols. H_2O . (Basset, C. N. **53**, 172.)

HNO_3 +Aq containing less than 12% HNO_3 attacks Sn and forms a stannous salt, which decomposes, giving a turbid solution. HNO_3 +Aq (12–45% HNO_3) completely dissolves Sn, but solution becomes turbid on standing. HNO_3 +Aq containing more than 45% HNO_3 does not dissolve Sn, but forms a white substance, which is sol. in H_2O if over 70% acid is used; this solution soon becomes turbid. (Montemartini, Gazz. ch. it. **22**, 384.)

Sn dissolves in HNO_3 +Aq at low temps. (0 – 21°). When very dil. HNO_3 +Aq (14% HNO_3) is used, the amount of stannous salt formed decreases only slightly with increase of temp. while with 30–40% acid it falls to zero at 21° . (Walker, J. Soc. Chem. Ind. **1893**, 845.)

In presence of Fe, Cr or Al, HNO_3 +Aq acts on Sn to form soluble products, from which conc. HNO_3 ppts. all Sn as meta-stannic acid. (van Leent, C. C. **1899**, I. 101.)

Much more sol. in acids when small quantities of metallic salts have been added. This is most noticeable when $PtCl_4$ or tartar emetic is added to HCl +Aq. HCl +Aq with tartar emetic exerts 11 times, and with $PtCl_4$ 13 times the action exhibited by pure acid. (Millon, C. R. **21**, 47.)

Sol. in 2N $HClO_4$ +Aq. (Hendrixson, J. Am. Chem. Soc. 1904, **26**, 755.)

Pyrosulphuric acid dissolves Sn on warming. (Divers, Chem. Soc. 1885, **47**, 639.)

Hot telluric acid attacks Sn. (Hutchins, J. Am. Chem. Soc. 1905, **27**, 1183.)

Sn is attacked by 17% HN_3 +Aq. (Cur-tius and Rissom, J. pr. 1898, (2) **58**, 299.)

Sol. in a solution of Na in liquid NH_3 .

(Kraus, J. Am. Chem. Soc. 1907, **29**, 1562.) Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 830.)

Sol. in boiling alum+Aq (1 pt. alum to 4 pts. H_2O).

Sol. in $KHSO_3$, NH_4Cl (1.4), and $K_2C_4H_4O_6$ +Aq. Sl. sol. in $KC_2H_3O_2$ +Aq, but not attacked by $MgSO_4$, K_2SO_4 , KNO_3 , or Na_2SO_4 +Aq. (Cludius, J. pr. **9**, 161.)

Sol. in alkalis+Aq.

Attacked easily by conc. $NaCl$, KCl , or NH_4NO_3 +Aq, not attacked by NH_4Cl +Aq. (Hallowell, Am. Ch. J. **6**, 52.)

Sol. in $Fe(NO_3)_3$ +Aq in presence of HNO_3 +Aq in proportion of 1 atom Sn to 1 atom Fe. (Lepéz and Storch, W. A. B. **98**, **2b**, 268.)

Solubility in dil. saline solutions.

100 ccm. H_2O containing 0.5 g. $NaCl$ or KCl dissolve 6 mg. Sn from 11.8 sq. cm. in one week when air without CO_2 is passed through the solution, but none at all when the air contains CO_2 .

100 ccm. H_2O containing 1 g. NH_4Cl dissolve 5 mg. Sn under above conditions without CO_2 , and none with CO_2 .

With 1 g. $MgCl_2$, 1 mg. Sn was dissolved without CO_2 , and none with CO_2 .

With 1 g. K_2SO_4 , 2 mg. Sn were dissolved without CO_2 , and none with CO_2 .

With 1 g. KNO_3 , 3 mg. Sn were dissolved without CO_2 , and 1 mg. with CO_2 .

With 1 g. Na_2CO_3 , 7 mg. Sn were dissolved without CO_2 .

With 1 g. $NaOH$, 220 mg. Sn were dissolved without CO_2 .

CaO_2H_2 +Aq did not dissolve. (Wagner, Dingl. **221**, 260.)

Not attacked by sugar+Aq. (Klein, C. R. **102**, 1170.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0134 g. Sn in 6 days (Gates, J. phys. Chem. 1911, **15**, 143.)

Tin antimonide, $SnSb$.

(Stead, J. Soc. Chem. Ind. 1897, **16**, 205.)

Tin arsenide, Sn_3As_2 .

(Stead, J. Soc. Chem. Ind. 1897, **16**, 206.)

Tin (stannous) bromide, $SnBr_2$.

Sol. in H_2O .

Sol. in pyridine. (Naumann, B. 1904, **37**, 4609.)

Mol. weight determined in pyridine and ethyl sulphide. (Werner, Z. anorg. 1897, **15**, 23.)

Tin (stannic) bromide, basic, $SrBr_2OH \cdot 3H_2O$.

Sol. in H_2O . Decomp. in aq. solution when warmed.

Sol. in ether, methyl alcohol, ethyl alcohol, acetone, acetic acid and esters of organic acids. Nearly insol. in benzene, ligroin and $CHCl_3$. (Pfeiffer, Z. anorg. 1914, **87**, 242.)

Tin (stannic) bromide, SnBr_4 .

Deliquescent. Sol in H_2O without evolution of heat. (Balard)

Decomp. by H_2O much more quickly than SnCl_4 . (Lorenz, Z. anorg. 1895, 9. 378.)

Easily sol. in AsBr_3 (Walden, Z. anorg. 1902, 29. 374.); PCl_3 , PBr_3 and S_2Cl_2 . (Walden, Z. anorg. 1900, 25. 217)

Sol in acetone (Naumann, B. 1904, 37. 4328.)

+ $4\text{H}_2\text{O}$. (Preis and Raymann, C. C. 1882. 773.)

Stannic hydrogen bromide, $\text{SnBr}_4 \cdot 2\text{HBr}$.

See Bromostannic acid.

Stannic bromide with MBr.

See Bromostannate, M.

Tin (stannic) bromochloride, SnClBr_3 .

Fumes in moist air; decomp. by H_2O . (Besson, C. R. 1897, 124. 685.)

SnCl_2Br_2 . Fumes in moist air. Decomp. by H_2O . (Besson.)

SnCl_3Br . Fumes in moist air. Decomp. by H_2O . (Besson.)

Tin (stannic) bromoiodide, SnBr_2I_2 .

Sol. in cold H_2O . Decomp. in aq. solution at 80° .

SnBr_3I .

SnBrI_3 (Lenormand, C. C. 1899, II. 521; J. Pharm. 1899, 10. 114.)

Tin (stannous) chloride, SnCl_2 , and + $2\text{H}_2\text{O}$.

Not deliquescent. 100 pts. H_2O dissolve 83.9 pts. SnCl_2 at 0° . (Engel, A. ch. (6) 17. 347.) 100 pts H_2O dissolve 269.8 pts. SnCl_2 at 15° , and sat. solution has sp. gr. 1.827. (Michel and Krafft, A. ch. (3) 41. 478.) Sol. in a certain amount of H_2O without decomp., but more H_2O causes pptn. of SnO , SnCl_2 .

$\text{SnCl}_2 + \text{Aq}$ absorbs O from air.

Melts in crystal H_2O at 46° . (Ordway.) Sat. solution boils at 121.7° .

Sp. gr. of $\text{SnCl}_2 + \text{Aq}$ at 15° containing:

5 10 15 20 % $\text{SnCl}_2 + 2\text{H}_2\text{O}$,
1.0331 1.0684 1.1050 1.1442

25 30 35 40 % $\text{SnCl}_2 + 2\text{H}_2\text{O}$,
1.1855 1.2300 1.2779 1.3298

45 50 55 60 % $\text{SnCl}_2 + 2\text{H}_2\text{O}$,
1.3850 1.4451 1.5106 1.5823

65 70 75 % $\text{SnCl}_2 + 2\text{H}_2\text{O}$.
1.6598 1.7452 1.8399

(Gerlach, Dingl. 186. 131.)

Solubility of SnCl_2 in $\text{HCl} + \text{Aq}$. $\frac{\text{SnCl}_2}{2} =$

$\frac{1}{2}$ molecules SnCl_2 in milligrammes in 10 ccm. solution, $\text{HCl} =$ molecules HCl in milligrammes in ditto; $\text{H}_2\text{O} =$ amt H_2O present in grammes.

$\frac{\text{SnCl}_2}{2}$	HCl	Sum of equiv	Sp gr of solution	H_2O
74	0	74	1.532	8.33
66.7	6.6	73.3	1.489	8.35
63.75	13.54	77.29	1.472	8.198
63.4	24.8	93.2	1.524	7.869
81.2	34.9	116.1	1.625	7.305
94.2	40.0	134.2	1.724	6.880
117.6	44	161.6	1.883	6.108
147.6	49.4	197.0	2.114	5.387
156.4	66	222.4	2.190	4.715
157	78	235	2.199	4.309

(Engel, A. ch. (6) 17. 347.)

Solubility is thus diminished by $\text{HCl} + \text{Aq}$, while there are less than 8-10 mols. HCl for 1 mol. SnCl_2 . When that limit is passed the solubility rapidly increases. (Engel)

Sol. in very dil. HCl or tartaric acid + Aq . Sol. in $\text{KOH} + \text{Aq}$. Sol. in conc. $\text{SnOCl}_2 + \text{Aq}$. (Gerlach.) Sol. in $\text{NH}_4\text{Cl} + \text{Aq}$.

Anhydrous SnCl_2 is partially sol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

Sol in absolute alcohol. Insol. in oil of turpentine.

11.41 pts. SnCl_2 are sol in 100 pts. ether at 0° .

11.38 pts. SnCl_2 are sol. in 100 pts. ether at 16° .

11.38 pts. SnCl_2 are sol. in 100 pts. ether at 35.5° . (Laszczyński, B. 1894, 27. 2286)

Anhydrous SnCl_2 is sol in ether. (de Jong, Z. anal. 1902, 41. 596)

1 g. anhydrous SnCl_2 is sol. in 1.8 g. acetone at 18° . Sp. gr. of sat. solution $18^\circ/4^\circ = 1.6$. (Naumann, B. 1904, 37. 4336.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Anhydrous SnCl_2 is sol. in methyl acetate to the extent of 15.7%. (Schröder and Steiner, J. pr. 1909, (2) 79. 63.)

31.20 pts. $\text{SnCl}_2 + 2\text{H}_2\text{O}$ are sol. in 100 pts. ethyl acetate at -2° .

35.53 pts. $\text{SnCl}_2 + 2\text{H}_2\text{O}$ are sol. in 100 pts. ethyl acetate at $+22^\circ$.

73.44 pts. $\text{SnCl}_2 + 2\text{H}_2\text{O}$ are sol. in 100 pts. ethyl acetate at 82° . (Laszczyński, B. 1894, 27. 2286.)

1 pt. anhydrous SnCl_2 is sol. in 22.40 pts. ethyl acetate at 18° . $D_{18^\circ/4^\circ} = 0.9215$. (Naumann, B. 1910, 43. 319.)

Insol. in ethyl amine (Shinn, J. phys. Ch. 1907, 11. 538); pyridine (Naumann, B. 1904, 37. 4609); benzonitrile (Naumann, B. 1914, 47. 1369.)

Insol in CS_2 . (Arctowski, Z. anorg. 1894, 6. 257.)

Sol in urethane. (Castoro, Z. anorg. 1899, 20. 61.)

Mol weight determined in pyridine and ethyl sulphide (Werner, Z. anorg. 1897, 15. 22)

Tin (stannic) chloride, basic, $\text{SnCl}_4\text{OH} \cdot 3\text{H}_2\text{O}$.

Hydroscopic.

Sol in H_2O .

Sol. in ether, alcohol, acetone, acetic acid. Nearly insol. in ligroin and benzene. (Pfeiffer Z. anorg. 1914, 87. 241.)

Tin (stannic) chloride, SnCl_4 .

(a) *Ordinary modification.*—Deliquescent. Sol. in H_2O . On diluting $\text{SnCl}_4 + \text{Aq}$ and boiling, SnO_2 separates out. $\text{SnCl}_4 + \text{Aq}$ is not pptd. by HNO_3 , HCl , or $\text{H}_2\text{SO}_4 + \text{Aq}$; $\text{H}_3\text{PO}_4 + \text{Aq}$ ppts. in a few days, and $\text{H}_3\text{AsO}_4 + \text{Aq}$ in a short time. No ppt is formed by K_2SO_4 , Na_2SO_4 , KCl , NaCl , NH_4Cl , KNO_3 , etc. + Aq .

Sp gr of $\text{SnCl}_4 + \text{Aq}$ at 15°

% SnCl_4 +5 H_2O	Sp gr	% SnCl_4 +5 H_2O	Sp gr	% SnCl_4 +5 H_2O	Sp gr

(Heermann, Ch. Z. 1907, 31. 680.)

Sol in S_2Cl_2 (Walden, Z. anorg. 1900, 25. 217.)

Easily sol. in PCl_3 and PBr_3 . (Walden, Z. anorg. 1900, 25. 211.)

Very sol. in liquid NH_3 (Gore, Am. Ch. J. 1899, 20. 830.)

Very sol. in absolute alcohol, from which it is pptd. by H_2O . Easily sol. in ether; decomp. by oil of turpentine. Miscible with CS_2 and Br_2 .

Sol in acetone (Naumann, B. 1904, 37. 4328.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014)

Sol in ethyl acetone. (Naumann, B. 1904, 37. 3601.)

Distribution of SnCl_4 between H_2O and xylene.

n=pts by wt of Cl in 100 pts of H_2O layer.

m=pts by wt. of Cl in 100 pts. of xylene layer

k=partition coefficient.

50 cc. xylene+60 g. $\text{SnCl}_4 \cdot 5\text{H}_2\text{O}$.

+2 H_2O . Sol. in H_2O .

+3 H_2O . Tr. pt. 83°. (Meyerhoffer, Bull. Soc. 1891 (3) 6, 85.)

+4 H_2O . Tr. pt. 63°. (Meyerhoffer.)

+5 H_2O . Very deliquescent, and sol in H_2O . Decomp. by alcohol. Sol. in $\text{HCl} + \text{Aq}$.

Tr. pt. 56°. (Meyerhoffer.)

+8 H_2O . More deliquescent than the 5 H_2O salt. Tr. pt. 19°. (Meyerhoffer.)

+9 H_2O . (Nöllner, Z. Ch. 1865. 45.)

(b) *Metastannic chloride*.—Sol. in cold H_2O ; solution coagulates on boiling. Conc. $\text{HCl} + \text{Aq}$ ppts from $\text{SnCl}_4 + \text{Aq}$. When solution does not contain HCl , the addition of $\text{HCl} + \text{Aq}$ causes a ppt., which dissolves in H_2O , HNO_3 , and $\text{H}_2\text{SO}_4 + \text{Aq}$ also ppt. K_2SO_4 , Na_2SO_4 , and $\text{NaCl} + \text{Aq}$ produce ppts. insol in H_2O , but sol in $\text{HCl} + \text{Aq}$. NH_4Cl or $\text{KCl} + \text{Aq}$ do not ppt. $\text{KNO}_3 + \text{Aq}$ ppts. slowly. (Rose.)

Tin (stannous) hydrogen chloride, SnCl_2 , $\text{HCl} + 3\text{H}_2\text{O}$.

Decomp. by H_2O .

Melts at -25° (Engel, C R 106. 1398)

Tin (stannic) hydrogen chloride.

See Chlorostannic acid.

Tin (stannous) hydrazine chloride, SnCl_2 , $2\text{N}_2\text{H}_4$, HCl .

Very hygroscopic.

Sol. in H_2O and abs. alcohol (Curtius, J. pr 1894, (2) 50. 341.)

Tin (stannic) chloride with MCl .

See Chlorostannate, M.

Tin (stannous) chloride ammonia, SnCl_2 , NH_3 .

(Berzelius.)

SnCl_2 , 4NH_3 . Ppt. (Naumann, B. 1904, 37. 4336)

Tin (stannic) chloride ammonia, SnCl_4 , 2NH_3 .

Sol. in cold H_2O without decomp., but decomposes by heating

Tin (stannous) chloride arsenate.

See Arsenate chloride, stannous.

Tin (stannic) chloride cyanhydric acid, SnCl_4 , 2HCN .

Decomp. on moist air or with H_2O (Klein, A. 74. 85.)

Tin (stannous) chloride hydrazine, SnCl_2 , $2\text{N}_2\text{H}_4$.

Decomp. by H_2O .

Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Franzen, Z. anorg. 1908, 60. 286.)

Tin (stannic) chloride nitrogen sulphide, SnCl_4 , $2\text{N}_4\text{S}_4$.

Insol in most solvents.

Decomp. by warm $\text{NH}_4\text{OH} + \text{Aq}$.

Decomposes in the air. (Wölbling, Z. anorg. 1908, 57. 284)

Decomp. by H_2O . (Davis, Chem. Soc. 1906, 89. 1576.)

Tin (stannic) chloride phosphine, 3SnCl_4 , 2PH_3 .

Decomp by H_2O (Rose, Pogg. 24. 159.)

Tin (stannous) chloride potassium stannous sulphate.

See Sulphate, potassium stannous stannous chloride.

Tin (stannic) chloride sulphur tetrachloride, SnCl_4 , 2SCl_4 .

Very hygroscopic.

Sol in CHCl_3 , ligroin, petroleum ether, CS_2 , POCl_3 ; very sol in completely dry absolute ether, in benzene, acetacetic ester and in SCl_2 (Ruff, B. 1904, 37. 4517.)

Tin (stannic) chloride sulphide, 2SnCl_4 , SnS_2 .

See Stannic sulphochloride.

Tin (stannic) chlorobromide, SnClBr_3 .

Decomp. by H_2O . (Ladenburg, A. suppl. 8. 60.)

SnCl_2Br_2 . Decomp. by H_2O . (Ladenburg.)

Tin (stannous) chloriodide, SnClI .

Decomp. immediately by H_2O . (Henry, Phil. Trans. 1845. 363.)

Tin (stannic) chloriodide, SrCl_2I_2 .

Fumes in the air.

Decomp by H_2O . (Lenormand, J. Pharm. 1898. 8.)

SnClI_3 . (Lenormand, J. Pharm. 1899, 10. 114.)

Tin (stannous) fluoride, SnF_2 .

Easily sol. in H_2O . (Berzelius, Pogg. 1. 34.)

Tin (stannic) fluoride, SnF_4 .

Very hygroscopic.

Sol. in H_2O . Slowly decomp. in aq. solution with separation of SnO_2 . (Ruff, B. 1904, 37. 681.)

Tin (stannic) fluoride with MF.

See Fluostannate, M.

Tin (stannous) hydroxide, 2SnO , H_2O .

Decomp. to SnO when boiled with H_2O . More easily sol. in acids than Sn or SnO . Sol. in NaOH , and $\text{KOH} + \text{Aq}$, even when dil. Insol. or very sl. sol. in NH_4OH , $(\text{NH}_4)_2\text{CO}_3$, and $\text{K}_2\text{CO}_3 + \text{Aq}$; sol. in cold CaO_2H_2 , and BaO_2H_2 with decomposition on boiling. (Fremy, A. ch. (3) 12. 460.) Only sl. sol. in $\text{NH}_4\text{Cl} + \text{Aq}$ hot or cold. (Brett.) Sl. sol. in $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Mercer.)

Solubility in NaOH+Aq.

(Rubenbauer, Z. anorg. 1902, 30. 335)

Not pptd. in presence of Na citrate. (Spiller.)

Sol. in water-glass +Aq. (Ordway.)

SnO_2H_2 . Solubility in 1 l H_2O = 0.0000135 g. mol at 25°. (Goldschmidt, Z. phys. Ch. 1906, 56. 389)

Tin hydroxide, SnO , $6\text{SnO}_2 + 5\text{H}_2\text{O}$.
+ $9\text{H}_2\text{O}$ (Schiff, A. 120. 153.)

Tin sesquihydroxide, Sn_2O_3 , $x\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in NH_4OH +Aq. (Fuchs, J. pr. 5. 318.)

Tin (stannic) hydroxide.

" α " modification.

Obtained by pptn. by alkali in stannic chloride solution

Freshly pptd. substance when air dried contains 73.5% H_2O ; when dried over H_2SO_4 or in a vacuum for 1 month 12.6% H_2O . Heated to glowing loses all H_2O and passes into the anhydride. The " α " form is capable of existing in all degrees of hydration. (Lorenz, Z. anorg. 1895, 9. 372-375.)

" α " stannic hydrate is a white amorphous substance which is very sol. in HNO_3 when moist; sol. in H_2SO_4 even dil.; sol. in HCl and not pptd. by an excess. Very sol. in NaOH +Aq. and is not pptd. by an excess.

A solution of α stannic acid in HCl is identical with a solution of freshly prepared aqueous stannic chloride and gives no ppt. with dil. HCl , H_2SO_4 , HNO_3 or arsenic acid even on long standing

" β " modification.

Obtained by oxidizing and dissolving Sn in HNO_3 , and from solution of sodium stannate by pptn. Freshly pptd. from HNO_3 when air dried contains 21.3% H_2O , and when dried over H_2SO_4 or in a vacuum 11.3%,—corresponding to $\text{Sn}(\text{OH})_4$ and $\text{SnO}(\text{OH})_2$ respectively.

Freshly pptd. from sodium stannate solution and air dried contains 22.5% H_2O and when dried over H_2SO_4 or in a vacuum contains 12.1%,—corresponding to $\text{Sn}(\text{OH})_4$ and $\text{SnO}(\text{OH})_2$. Passes into the anhydride when heated to glowing.

The " β " form is capable of existing in all degrees of hydration. It is a white amorphous substance which is insol. in HNO_3 ; in-

sol in H_2SO_4 even when conc; insol in HCl but changed by contact with the acid in that when the acid has been removed the ppt is readily sol in H_2O , though pptd. again from solution by addition of HCl . When freshly prepared the " β " form is sol. in NaOH +Aq. but is pptd. by an excess of NaOH .

A solution of " β " stannic acid in HCl behaves quite differently from an aq. solution of stannic chloride in that it ppts metastannic sulphate when treated with H_2SO_4 .

This ppt. dissolves when heated with dilute HNO_3 or HCl , but the solution on standing spontaneously forms another ppt. A solution of " β " stannic acid in HCl gives a ppt. when treated with arsenic acid (Lorenz, Z. anorg. 1895, 9. 372)

See also Stannic acid.

Tin hydroxyl chloride, $\text{SnO}(\text{OH})\text{Cl}$.

See Chlorostannic acid.

Tin (stannous) iodide, SnI_2 , and + $2\text{H}_2\text{O}$.

Sl sol. in cold, more abundantly in hot H_2O , without decomp.

 (Arcowski, Z. anorg. 1896, **11**, 274.)

Sol. in allyl mustard oil. (Mathews, J. phys. Ch. 1905, **9**, 647.)

Tin (stannous) hydrogen iodide, $\text{SnI}_2 \cdot \text{HI}$.

Not obtained in pure state. (Young, J. Am. Chem. Soc. 1897, **19**, 856.)

Tin (stannous) iodide ammonia, $\text{SnI}_2 \cdot 2\text{NH}_3$.
 (Ephraim and Schmidt, B. 1909, **42**, 3857.)
 $\text{SnI}_4 \cdot 8\text{NH}_3$. (Ephraim and Schmidt)

Tin (stannic) iodide ammonia, $\text{SnI}_4 \cdot 3\text{NH}_3$.

(Personne, C. R. **54**, 218.)
 $\text{SnI}_4 \cdot 4\text{NH}_3$. (Personne.)
 $\text{SnI}_4 \cdot 8\text{NH}_3$. (Rammelsberg, Pogg. **48**, 169.)

Tin iodosulphide,

See Tin sulphoxide.

Tin monoxide (Stannous oxide), SnO .

Insol. in H_2O . Sol. in acids. Very sl. sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq.}$ (Rose.) Insol. in NaOH or $\text{KOH} + \text{Aq.}$
 Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 830.)
 Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

Tin dioxide (Stannic oxide), SnO_2 .

Insol. in H_2O or conc acids except conc H_2SO_4 . Insol. in conc. alkalies or $\text{NH}_4\text{OH} + \text{Aq.}$
 Not absolutely insol. in dil. $\text{HNO}_3 + \text{Aq.}$ (Mulder.)
 Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**, 830.)
 Min. *Cassiterite* (Tin stone). Not attacked by acids.

Tin sesquioxide, Sn_2O_3 .

While moist, easily sol in $\text{NH}_4\text{OH} + \text{Aq}$. Sl. sol in dil., more easily in conc. $\text{HCl} + \text{Aq}$. (Berzelius.)

Tin (stannic) oxybromide, $\text{Sn}_2\text{Br}_2\text{O} + 12\text{H}_2\text{O}$.

Decomp. by H_2O into SnBr_2 and H_2SnO_3 . $\text{Sn}_2\text{Br}_2\text{O}_2$. As above (Preis and Raymann, C. C. 1882. 773.)

Tin (stannic) oxybromide nitrogen pentoxide, SnO_2 , 3Br_2 , N_2O_5 .

Decomp. by H_2O . (Thomas, C. R. 1896, 122. 33.)

Tin (stannous) oxychloride, SnO , $\text{SnCl}_2 + 3\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in HCl , $\text{HCl}_2\text{H}_3\text{O}_2$, and dil HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$ (J. Davy, Schw. J. 10. 325.)

$\text{Sn}_2\text{Cl}_4\text{O}_8 + 10\text{H}_2\text{O}$ Easily sol in H_2O or alcohol.

Can be recrystallized from alcohol but not from H_2O . (Tschermak, W. A. B. 44. 2. 736.)

3SnO_2 , $2\text{SnCl}_2 + 6\text{H}_2\text{O}$. Very sl. sol. in H_2O . Sol. in dil. acids. (Ditte, A. ch. 1882, (5) 27. 146.)

4SnO , $\text{SnCl}_2 + 6\text{H}_2\text{O}$. (Ditte)

Tin (stannic) oxychloride, SnO_2 , SnCl_4 .

Sol. in H_2O . (Scheurer-Kestner, A. ch. (3) 47. 6)

Tin (metastannic) oxychloride, 3SnO_2 , $\text{SnCl}_4 + 3\text{H}_2\text{O}$.

Sol. in little, decomp. by much H_2O . (Weber, Pogg. 122. 368.)

4SnO_2 , $\text{SnCl}_4 + 7\text{H}_2\text{O}$ (Weber.)

"Metastannyl chloride β ," $\text{Sn}_5\text{O}_7\text{Cl}_2$. Deliquescent. Sol. without decomp. in a small amount of H_2O or in a large amount of H_2O containing a few drops HCl .

Sol in abs. alcohol. (Engel, C. R. 1897, 124. 767.)

$+4\text{H}_2\text{O}$ and $+9\text{H}_2\text{O}$ Sol. in H_2O acidified with one drop of HCl . Pptd. by excess HCl . (Engel, C. R. 1897, 124. 768.)

"Parastannyl chloride," $\text{Sn}_5\text{O}_7\text{Cl}_2 + 2\text{H}_2\text{O}$. Decomp. by excess H_2O .

Sol in H_2O ; pptd. by HCl . (Engel, C. R. 1897, 125. 465.)

Tin (stannic) oxychloride nitrogen pentoxide, SnOCl_2 , 3SnCl_4 , N_2O_5 .

Hydroscopic; sol. in H_2O .

Decomp. by heat. (Thomas, C. R. 1896, 122. 32.)

Tin (stannous) oxyiodide, SnO , 3SnI_2 , 2SnO , 3SnI_2 , SnO , SnI_2 , and 2SnO , SnI_2 .

Decomp. by much H_2O . (Personne, C. R. 54. 216.)

Tin oxysulphide, $\text{Sn}_2\text{S}_2\text{O} + 11\text{H}_2\text{O}$.

Very sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$; slowly sol. in H_2O . (Schmidt, B. 1894, 27. 2739.)

Tin phosphide, Sn_2P .

(Ragg, C. C. 1898, II. 170.)

SnP . Sol. in $\text{HCl} + \text{Aq}$ Insol. in $\text{HNO}_3 + \text{Aq}$.

SnP_2 . Not attacked by HCl . Easily attacked by aqua regia. (Emmerling, B. 1879, 12. 155.)

SnP_3 . Insol. in HCl . Slowly attacked by dil. HNO_3 at 50° . Oxidized by fuming HNO_3 with ignition. (Jolibois, C. R. 1909, 148. 638.)

Sn_3P_2 . Insol. in mercury.

Decomp. by HCl . (Stead, J. Soc. Chem. Ind. 1897, 16. 206.)

Sn_4P_3 . Attacked by HCl , HNO_3 and alkalis. (Jolibois, C. R. 1909, 148. 637.)

The only true compounds are Sn_4P_3 and SnP_3 . (Jolibois, C. R. 1909, 148. 637.)

Tin phosphochloride, $\text{Sn}_3\text{P}_2\text{Cl}_4$.

(Mahn, Jena. Zeit. 5. 1660.)

Tin (stannous) selenide, SnSe .

Decomp. by boiling $\text{HCl} + \text{Aq}$. Slowly oxidised by boiling $\text{HNO}_3 + \text{Aq}$, and easily dissolved in aqua regia (Schneider, Pogg. 127. 624.) Easily sol. in alkalis + Aq (Uelsmann, A. 116. 122), or scarcely even on boiling (Schneider), according to method of preparation. Sol. in alkali sulphides or selenides + Aq

Tin (stannic) selenide, SnSe_2 .

Not attacked by H_2O or dil acids; scarcely attacked by boiling conc. $\text{HCl} + \text{Aq}$; gradually decomp. by hot $\text{HNO}_3 + \text{Aq}$; easily dissolved by warm aqua regia, and hot conc. H_2SO_4 .

Sol. in cold, more easily in warm KOH , NaOH , or $\text{NH}_4\text{OH} + \text{Aq}$. (Uelsmann, A. 116. 122.)

Tin (stannous) sulphide, SnS .

1 l. H_2O dissolves 0.14×10^{-6} mols. SnS at 18° . (Weigel, Z. phys. Ch 1907, 58. 294.)

Insol. in dil., sol. in conc. $\text{HCl} + \text{Aq}$. Sl. sol. in hot conc. $\text{HNO}_3 + \text{Aq}$ Insol. in $\text{KOH} + \text{Aq}$.

$+ \text{H}_2\text{O}$. Insol. in H_2O , $\text{H}_2\text{S} + \text{Aq}$, or dil. acids; sol. with decomp. in conc. acids; easily sol. in hot conc. $\text{HCl} + \text{Aq}$. Insol. in $\text{H}_2\text{SO}_3 + \text{Aq}$. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$. Insol. in NH_4Cl , or $\text{NH}_4\text{NO}_3 + \text{Aq}$. Scarcely sol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$, but easily sol. in the same on addition of S . (Rose.)

10% $\text{NaOH} + \text{Aq}$ dissolves SnS by violent boiling.

Insol. in cold, sl. sol. in hot $\text{Na}_2\text{SO}_3 + \text{Aq}$. (Materne, C. C. 1906, II. 557.)

Sol. in alkali polysulphides + Aq .

Insol. in acetone. (Eidmann, C. C. 1899,

II. 1014); (Naumann, B. 1904, **37**, 4329.); ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Tin (stannic) sulphide, SnS_2 .

Anhydrous. (*Mosaic gold.*) Insol in HCl or $\text{HNO}_3 + \text{Aq}$, but decomp. by aqua regia. Sol. in hot $\text{KOH} + \text{Aq}$ or $\text{K}_2\text{CO}_3 + \text{Aq}$; also in hot K_2S , $\text{Na}_2\text{S} + \text{Aq}$, and $(\text{NH}_4)_2\text{S} + \text{Aq}$. 1 l. H_2O dissolves 1.13×10^{-6} mols. SnS_2 at 18° . (Weigel, Z. phys. Ch. 1907, **58**, 294.) $+x\text{H}_2\text{O}$ Sl. sol in $\text{NH}_4\text{OH} + \text{Aq}$, but readily in KOH , K_2S , or $\text{Na}_2\text{S} + \text{Aq}$; also in hot conc. $\text{HCl} + \text{Aq}$. Decomp. by hot $\text{HNO}_3 + \text{Aq}$ Insol. in $\text{KHSO}_3 + \text{Aq}$ Sol in $\text{K}_2\text{CO}_3 + \text{Aq}$ Insol. in NH_4Cl , and $\text{NH}_4\text{NO}_3 + \text{Aq}$ (Brett.)

Pptd SnS_2 is insol in cold, sol. in hot $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$. Sol. in $\text{Na}_2\text{CO}_3 + \text{Aq}$. Very sol. in $\text{NaOH} + \text{Aq}$. (Materne, C. C. 1906, II, 557.)

Sol in boiling conc. $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. (Clarke, C. N. **21**, 124.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate (Naumann, B. 1910, **43**, 314.); acetone (Naumann, B. 1904, **37**, 4329; Eidmann, C. C. 1899, II, 1014)

Tin sesquisulphide, Sn_2S_3 .

Sol. in moderately conc. HCl . (Antony and Niccoli, Gazz. ch. it. 1892, **22**, (2) 408.)

Tin sulphochloride, $\text{SnS}_2, 2\text{SnCl}_4$.

H_2O dissolves out SnCl_4 . (Dumas, Schw. J. **66**, 409)

$\text{SnS}_2\text{Cl}_{12} = \text{SnCl}_4, 2\text{SnCl}_4$. Sol. in H_2O with separation of S.

Gradually sol. in dil. $\text{HNO}_3 + \text{Aq}$.

Sol. in POCl_3 . (Casselmann, A. **83**, 267.)

Tin sulphoiodide, SnS_2I_4 .

Decomp. by H_2O into SnO_2 , S, and HI, by cold conc. $\text{HCl} + \text{Aq}$ with separation of S, also by aqua regia, and $\text{HNO}_3 + \text{Aq}$.

Cold $\text{KOH} + \text{Aq}$ separates S and SnO_2 .

Completely sol. in hot $\text{KOH} + \text{Aq}$.

Sol. in cold, more easily in hot CS_2 or CHCl_3 .

Decomp. by alcohol. (Schneider, Pogg. **111**, 249.)

Tin sulphophosphide, $\text{Sn}_3\text{P}_2\text{S}$.

Insol. in HCl , HNO_3 and aqua regia

Sol. in aq. alkali hydroxides, containing Cl_2 or Br_2 in solution. (Granger, C. R. 1896, **122**, 322)

Tin (stannous) telluride, SnTe .

Not attacked by conc. $\text{HCl} + \text{Aq}$. (Ditte, C. R. **97**, 42.)

Titanic acid, $\text{TiO}_2, x\text{H}_2\text{O}$.

α -Titanic acid.—Insol. in H_2O or alcohol. When dried in the cold, is completely sol. in

acids, especially HCl , or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, but when the solution in acids is boiled, it is converted into β -titanic acid. Very sl. sol. even when moist in $\text{H}_2\text{SO}_3 + \text{Aq}$. (Berthier) Sl. sol. in alkali carbonates $+ \text{Aq}$. A complete solution in an alkali carbonate $+ \text{Aq}$ can only be obtained by adding a Ti salt drop by drop to the alkaline solution, and allowing the ppt to dissolve entirely before adding more Ti salt. On boiling the solution in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ (or in K_2CO_3 or $\text{Na}_2\text{CO}_3 + \text{Aq}$ with NH_4Cl) the titanic acid is pptd

Relatively easily sol. in mineral acids, decreasing in the following order HCl , HNO_3 , H_2SO_4 . Insol in perchloric acid (Landecker, Z. anorg 1909, **64**, 67)

Sol. in dil. H_2SO_4 40 g $\text{H}_2\text{O} + 70$ g. H_2SO_4 (sp. gr 1.145) dissolves 0.33 g. TiO_2 in 15 min. (Hall and Smith, Proc. Am. Phil Soc 1905, **44**, 193)

Insol in liquid NH_3 (Gore, Am. Ch. J. 1898, **20**, 830.)

β -Titanic acid, Melattianic acid.—Insol. in H_2O , acids except HF , or alkali hydrates or carbonates $+ \text{Aq}$. When digested with conc H_2SO_4 until acid is evaporated, the residue is sol in H_2O (Berzelius)

γ -Titanic acid—Sol in pure H_2O , but β -acid is pptd by boiling. (Knop, A. **123**, 351.)

Colloidal TiO_2 $x\text{H}_2\text{O} + \text{Aq}$ has been prepared by Graham (Chem. Soc. **17**, 325.)

Barium titanate, $2\text{BaO}, 3\text{TiO}_2$.

(Bourgeois, C. R. **103**, 141.)

Barium pertitanate peroxide.

See Pertitanate, barium peroxide.

Calcium titanate, CaTiO_3 .

(Ebelmen, C. R. **32**, 711.)

Min. *Perovskite*. Scarcely attacked by $\text{HCl} + \text{Aq}$ or other acids, except hot H_2SO_4 , which decomposes it.

$\text{CaO}, 2\text{TiO}_2$. Min. *Titanomorphate*. Partially decomp by $\text{HCl} + \text{Aq}$, completely by H_2SO_4 .

Cobaltous titanate, CoTiO_3 .

(Bourgeois, C. C. **1893**, I, 226)

Ferrous orthotitanate, Fe_2TiO_4 .

(Hautefeuille, C. R. **59**, 733.)

Ferroferric titanate, $\text{FeTiO}_3, x\text{Fe}_2\text{O}_3$.

Min. *Menaccanite*. Very sl. sol. in HCl or aqua regia with separation of TiO_2 .

Ferric titanate.

Not attacked by boiling H_2SO_4 or conc. $\text{HCl} + \text{Aq}$. (Wöhler and Liebig, Pogg. **21**, 578.)

Magnesium titanate, $MgTiO_3$.

Insol in H_2O and acids (Hautefeuille, A. ch. (4) 4. 169.)

Min. *Gekieselte*.

When finely powdered, is easily sol in hot HCl , or in cold HF in a few hours. (Dick, Miner, Mag 1894, 10. 146.)

Mg_2TiO_4 . Slowly decomp. by boiling with $HNO_3 + Aq$. (Hautefeuille, A. ch. (4) 4. 169.)

Potassium titanate, K_2TiO_3 .

Anhydrous. Decomp. with H_2O .

+ $4H_2O$. Deliquescent. Very sol. in H_2O . Precipitated from aqueous solution by alcohol. (Demoly, Compt chim 1849, 325.)

Potassium titanate, acid, $K_2O, 3TiO_2 + 2H_2O$

Insol in H_2O . (Demoly.)

$K_2O, 6TiO_2 + 2H_2O$. (Demoly.)

$K_2O, 3TiO_2 + 3H_2O$. Insol. in H_2O . Completely sol. in $HCl + Aq$ if only cold H_2O is used for washing. When heated to 100° , no longer completely sol in $HCl + Aq$ (Rose, Pogg 74. 563.)

$K_2O, 12TiO_2$. (Rose, Gilb. Ann. 73. 78.)

Sodium titanate, Na_2TiO_3 .

Anhydrous. Decomp. by H_2O into $NaOH$, and an acid titanate, insol. in H_2O

+ $4H_2O$. Deliquescent. Very sol. in H_2O .

Precipitated from aqueous solution by alcohol. (Demoly.)

Sodium titanate, acid, $2Na_2O, 9TiO_2 + 5H_2O$.

If not heated to 100° , is sol. in cold $HCl + Aq$. (Rose, Gilb. Ann. 73. 78.)

$2Na_2O, 3TiO_2$. Insol in H_2O ; slowly sol. in cold, easily in hot $HCl + Aq$ (Cormimbeuf, C. R. 115. 823.)

$Na_2O, 2TiO_2$. As above. (C.)

$Na_2O, 3TiO_2$. Insol. in H_2O , and nearly so in boiling $HCl + Aq$. (C.)

Strontium titanate, $2SrO, 3TiO_2$.

(Bourgeois, C. R. 103. 141.)

Zinc titanate, $ZnO, TiO_2(?)$.

(Lévy, A. ch. (6) 24. 456.)

$2ZnO, TiO_2(?)$. (Lévy.)

$3ZnO, 2TiO_2$. Slowly attacked by warm H_2SO_4 or $HNO_3 + Aq$, and by $H_2SO_4 + HF$. Wholly sol. in cold $HCl + Aq$ (Lévy.)

$4ZnO, 5TiO_2$. Not attacked by cold conc. acids, but sol. by boiling except in $HCl + Aq$. (Lévy.)

$ZnO, 3TiO_2$. Insol. in H_2O , alcohol, or ether. Dil. HNO_3 , H_2SO_4 , or $HCl + Aq$ do not attack even on boiling; boiling H_2SO_4 dissolves with difficulty; not attacked by conc boiling alkalis + Aq . (Lévy, A. ch. (6) 25. 471.)

Pertitanic acid.

See Pertitanic acid.

Titanium, Ti

Decomp. H_2O even under 100° (Wöhler); not attacked by H_2O under 500° . (Kern, C. N. 33. 57.)

Does not decomp. H_2O at 100° . (Schneider, Z anorg. 1894, 8. 85.)

Sol. in $HCl + Aq$ if warmed. Rapidly sol. in $HF + Aq$. Sol. in cold dil. $H_2SO_4 + Aq$, $HNO_3 + Aq$, or $HC_2H_3O_2 + Aq$. Dissolves almost instantaneously in $HF + Aq$. (Merz.)

Sol. in molten lead and iron; sol. in HCl , HNO_3 and aqua regia. (Moissan, C. R. 1895, 120. 293.)

Amorphous. Loses its spontaneous inflammability when left for a time in contact with H_2O . (Schneider, Z. anorg. 1895, 8. 85.)

Titanium amide, $Ti(NH_2)_4$.

Violently attacked by H_2O . (Stähler, B. 1905, 38. 2629.)

Titanium tribromide, $TiBr_3 + 6H_2O$.

Very hygroscopic. (Stähler, B. 1904, 37. 4409.)

Titanium tetrabromide, $TiBr_4$.

Deliquescent. Decomp. by H_2O . (Duppä, C. R. 42. 352.)

Sol. in absolute alcohol and in dry ether. (Rosenheim and Schutte, Z anorg 1900, 24. 238.)

Titanium bromonitride, $TiNBr$.

Decomp. by a small amount of H_2O . On addition of more H_2O , a part dissolves forming a solution which decomp. on warming with separation of titanic acid. It behaves similarly toward dil. HNO_3 , dil. HCl and dil. H_2SO_4 . Completely sol. in warm dil. H_2SO_4 . (Ruff, B. 1905, 41. 2262.)

Titanium carbide, TiC .

Sol. in $HNO_3 + Aq$ (Shmer, C. N. 55. 71.)

Insol. in HCl . Slowly sol. in aqua regia. (Moissan, C. R. 1895, 120. 295.)

Titanium carbide nitride, $Ti_{10}C_2N_8 = Ti(CN)_2, 3Ti_2N_3$.

Insol. in, and not attacked by boiling HNO_3 or H_2SO_4 (Wollaston), but sol. in $HNO_3 + HF$ (Berzelius).

Titanium dichloride, $TiCl_2$.

Very deliquescent. Decomposes H_2O with violence. Insol. in ether, CS_2 , or $CHCl_3$. Decomp. by 99.5% alcohol.

Titanium trichloride, $TiCl_3$.

Deliquescent. Sol. in H_2O with evolution of heat.

+ $4H_2O$. (Glatzel, B. 9. 1829.)

+ $6H_2O$. Very sol. in H_2O . (Polidori, Z. anorg. 1898, 19. 307.)

Titanium tetrachloride, TiCl_4 .

Anhydrous Sol in H_2O with evolution of much heat.

+ $5\text{H}_2\text{O}$. Deliquescent.

Titanium sulphuryl chloride, $\text{TiCl}_4\text{SO}_3 = \text{TiCl}_3\text{OSO}_2\text{Cl}$.

Deliquesces gradually in moist air (Clausnitzer, B. 11. 2011.)

Titanium chloride ammonia, $\text{TiCl}_4 \cdot 4\text{NH}_3$.

Deliquescent. Solution in H_2O is not quite clear. (Rose.)

According to Persoz (A. ch. 46. 315), is $\text{TiCl}_4 \cdot 6\text{NH}_3$.

$\text{TiCl}_4 \cdot 6\text{NH}_3$ and $\text{TiCl}_4 \cdot 4\text{NH}_3$

Both compds are unstable in moist air; insol in ether (Rosenheim, Z anorg 1901, 26. 245)

$\text{TiCl}_4 \cdot 8\text{NH}_3$. Violently decomp. by H_2O . (Stahler, B. 1905, 38. 2627.)

Titanium tetrachloride cyanobromide, $\text{TiCl}_3 \cdot \text{NCClBr}$.

(Schneider, Z. anorg 1894, 8. 92)

Titanium chloride cyanhydric acid, $\text{TiCl}_4 \cdot 2\text{HCN}$.

Deliquescent Sol. in H_2O with evolution of heat. (Wöhler, A. 73. 226.)

Titanium trichloride nitrogen sulphide, $2\text{TiCl}_3 \cdot \text{N}_4\text{S}_4$.

Decomp. rapidly in air. (Davis, Chem. Soc 1906, 89. (2) 1576.)

Titanium tetrachloride nitrogen sulphide, $\text{TiCl}_4 \cdot \text{N}_4\text{S}_4$.

Hydroscopic.

Decomp by H_2O , HNO_3 , HCl , KOH and alcohol. (Wölbling, Z. anorg. 1908, 57. 282.)

Titanium chloride phosphine.

Decomp. by H_2O , $\text{HCl} + \text{Aq}$, $\text{KOH} + \text{Aq}$, $\text{K}_2\text{CO}_3 + \text{Aq}$, or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Rose.)

Titanium tetrachloride phosphoryl chloride, $\text{TiCl}_4 \cdot 2\text{POCl}_3$.

(Ruff, B. 1903, 36. 1783.)

Titanium chloronitride, TiNCl .

Decomp. by small amount cold H_2O . On the addition of more H_2O it is only partially decomp. For complete solution, the addition of dil. HCl or a mixture of warm dil. H_2SO_4 and HF is necessary. Easily sol. in conc. HNO_3 and in conc. H_2SO_4 . (Ruff, B. 1908, 41. 2259.)

Titanium difluoride.

(Hautefeuille, C. R. 57. 151.)

Probably *sesquifluoride*.

Titanium sesquifluoride, Ti_2F_3 .

Appears to be two modifications, one sol. in H_2O , and the other insol. in H_2O . (Hautefeuille, C. R. 59. 189)

Insol. in H_2O . (Weber, Pogg. 120. 292.)

Titanium tetrafluoride, TiF_4 .

Decomp. by H_2O . (Unverdorben.)

Sol. in H_2O , but solution decomp. upon evaporation (Marignac, Ann. Min. (5) 15. 258.)

Sol. in H_2O . (Emich, M. 1904, 25. 910.)

Very hygroscopic.

Sol. in H_2O Sl. sol in conc. $\text{HF} + \text{Aq}$.

Sol in cold POCl_3 without decomp. Decomp in warm POCl_3 .

Sol in alcohol and dry pyridine

Insol. in ether, CS_2 , CCl_4 , SiCl_4 , SiBr_4 , SO_2Cl_2 , SOCl_2 , SCl_2 , AsCl_3 , SO_3 , CrO_3 , PCl_3 . (Ruff, B 1903, 36. 1780)

+ $2\text{H}_2\text{O}$. Sol. in H_2O . (Ruff, B 1903, 36. 1780.)

Titanium hydrogen fluoride, 2HF , $\text{TiF}_4 = \text{H}_2\text{TiF}_6$.

Sol. in H_2O with decomposition and separation of a basic salt Corresponds to fluosilicic acid, and may be considered as fluotitanic acid H_2TiF_6

Titanium fluoride with MF.

See Fluotitanate, M.

Titanium tetrafluoride ammonia, $\text{TiF}_4 \cdot 2\text{NH}_3$.

Sol. in H_2O , decomp. in aq. solution on boiling. (Ruff, B. 1903, 36. 1781.)

Titanium monohydroxide, TiO_2H_2 .

Ppt. (Wöhler, A. 73. 49.)

$\text{Ti}_2\text{O}_3\text{H}_2$. Not attacked by cold conc. acids; sl. attacked on warming. Insol. in cold or hot $\text{KOH} + \text{Aq}$. (Winkler, B. 1890, 23. 2659.)

Titanium sesquihydroxide, $\text{Ti}_2\text{O}_3 \cdot x\text{H}_2\text{O}$.

Decomposes very quickly with H_2O , forming titanium dihydroxide.

TiO_3H_3 . (Polidori, Z. anorg. 1899, 19. 306.)

Titanium dihydroxide.

See Titanic acid.

Titanium hydroxychloride, $\text{TiCl}_3(\text{OH})$.

Deliquescent. Easily sol. in H_2O and alcohol Sol in ether.

$\text{TiCl}_3(\text{OH})_2 + 1\frac{1}{2}\text{H}_2\text{O}$. Deliquescent. Sol. in H_2O , alcohol, and ether. Aqueous solution decomp. by boiling.

$\text{TiCl}(\text{OH})_3 + \text{H}_2\text{O}$. Nearly insol. in H_2O . Insol. in alcohol and ether. (König and v. der Pfordten, B. 21. 1708.)

See also Titanium oxychloride.

Titanium diiodide, TiI_2 .

Very hygroscopic; insol. in organic solvents; sol. in conc. HF and boiling HCl ; decomp. by

H₂O, alkalis, H₂SO₄ and HNO₃. (Defacqz, C. R. 1908, **147**. 66.)

Titanium triiodide, TiI₃+6H₂O.

Very hygroscopic. (Stahler, B. 1904, **37**. 4410.)

Titanium tetraiodide, TiI₄.

Fumes on air, and dissolves rapidly in H₂O with evolution of heat. Solution decomposes on standing (Weber.)

Titanium nitride, Ti₃N₄.

Difficultly sol. in warm HNO₃+Aq. More easily sol. in aqua regia. (Rose.)

Insol. in dil. acids. Decomp. by hot conc. H₂SO₄ and by conc. HNO₃, especially when HF is added, and by boiling KOH+Aq. (Ruff and Eisner, B. 1908, **41**. 2252.)

Decomp. by H₂O and dil. acids

Insol. in all ordinary indifferent organic solvents (Ruff, B. 1912, **45**. 1369.)

TiN₂ Insol. in H₂O (Wöhler.)

Is TiN, according to Guerin (C. R. **82**. 972.)

Titanium monoxide, TiO.

(Moissan, C. R. 1895, **120**. 290.)

Titanium sesquioxide, Ti₂O₃.

Insol. in HCl or HNO₃+Aq. Difficultly sol. in H₂SO₄. (Ebelmen, A. ch (3) **20**. 392.)

When moist, insol. in H₂O or NH₄OH+Aq, but quickly decomp. to TiO₂. Sol. in oxygen acids, but quickly decomp. (Berzelius.)

Titanium dioxide, TiO₂.

Amorphous. Insol. in H₂O, HCl, or dil. H₂SO₄+Aq, even when heated for a long time

Sol. in conc. H₂SO₄ by long digestion.

TiO₂, strongly ignited at 1000°, is practically insol. in conc. H₂SO₄ and HF.

When less strongly ignited (by heating ortho or metatitanic acid to 700°) it is easily sol. therein. (Bornemann and Schirrmeyer, C. C. **1910**, II. 1870.)

Ignited TiO₂ is very difficultly sol. in HF. (Pennington, J. Am. Chem. Soc. 1896, **18**. 56.)

The solubility of ignited TiO₂ in H₂SO₄ is helped by H₂O₂. (Weiss and Landecker, Z. anorg. 1909, **64**. 71.)

The solubility in H₂SO₄ is increased by addition of H₂O₂. H₂O₂ brings TiO₂ quickly and completely into solution in the presence of NH₄OH, NH₄Cl, NaOH, Na₂CO₃ and Na₂HPO₄. (Weiss and Landecker, Z. anorg. 1909, **64**. 71.)

Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, **20**. 830.)

Crystalline. Min. *Rutile*, *Brookite*, and *Anatase*. Solubility as above.

See also *Titanic acid*.

Titanium oxide, Ti₂O₃.

(Deville, C. R. **53**. 163.)

True formula is Ti₁₇O₁₂. (v. der Pfordten, A. **237**. 201.)

Titanium peroxide, TiO₃.

Sol. in acids. Solution in H₂SO₄ is very stable, but the HCl solution decomposes very easily. (Weber, B. **15**. 2599; Piccini, B. **15**. 2221; Classen, B. **21**. 370.)

Titanium oxychloride, TiO₂, TiOCl₂+8H₂O.

Sol. in much H₂O (Merz, Bull. Soc. **1867**. 401.)

Ti₂O₂Cl₂. Insol in H₂O. Sol. in NH₄OH+Aq with separation of TiO₂.

See also *Titanium hydroxychloride*.

Titanium oxyfluoride.

Insol in H₂O. (Berzelius.)

Titanium oxyfluoride with MF.

See *Fluoxypertitanate*, M.

Titanium phosphide, TiP.

Sl sol in boiling aqua regia.

Insol in dil or conc. acids and alkalis.

Sl. attacked by fuming HNO₃ in sealed tube at 250°-300°. (Gewecke, A. 1908, **361**. 84.)

Titanium phosphochloride.

See *Phosphorus titanium chloride*.

Titanium silicide, TiSi₂.

Sol in HF; insol in other min. acids.

Slowly sol. in 10% KOH+Aq (Hönigschmid, C. R. 1906, **143**. 226.)

Titanium monosulphide, TiS.

Insol. in alkalis. Difficultly sol. in nitric acid and aqua regia.

Insol. in HF. (v. der Pfordten, A. **234**. 257.)

Titanium disulphide, TiS₂.

Decomp. slowly on moist air. Insol. in HCl or dil. H₂SO₄+Aq. (Ebelmen.)

Sol. in aqua regia or HNO₃+Aq. Decomp. by KOH+Aq or NaOH+Aq. Insol in KSH+Aq. (Rose.)

Sol. in HF at 100°. (v. der Pfordten, A. **234**. 257.)

Titanium sesquisulphide, Ti₂S₃.

Insol. in caustic alkalis+Aq. Sol. in HF at a high temp. Insol. in aqua regia. (v. der Pfordten, A. **234**. 257.)

Titanomolybdic acid, TiO₂, 12MoO₃+22H₂O.

Very sol in H₂O.

Sol in ether. (Péchar, C. R. 1893, **117**. 790.)

Ammonium titanomolybdate,
 $2(\text{NH}_4)_2\text{O} \cdot \text{TiO}_2 \cdot 12\text{MoO}_3 + 10\text{H}_2\text{O}$.

Sol. in H_2O and acids; completely insol in solutions of ammonium salts (Pèchard.)

Potassium titanomolybdate,
 $2\text{K}_2\text{O} \cdot \text{TiO}_2 \cdot 12\text{MoO}_3 + 16\text{H}_2\text{O}$.

Efflorescent.

Sol in H_2O (Pèchard.)

Titanododecatungstic acid, $\text{H}_2\text{TiW}_{10}\text{O}_{38} + x\text{H}_2\text{O}$.

(Lecarme, Bull. Soc. (2) **36**. 17.)

Titanotungstic acid or Titanododecatungstic acid, $\text{H}_2\text{TiW}_{12}\text{O}_{42} + x\text{H}_2\text{O}$

(Lecarme, Bull. Soc. (2) **36**. 17.)

Titanous acid.**Sodium titanite,** $\text{Na}_2\text{TiO}_3 = 3\text{Na}_2\text{O} \cdot \text{Ti}_2\text{O}_3$.

Sol. in dil acids. (Koenig and v der Pfordten, B **22**. 2075.)

Titanyl compounds.

See Titanium oxy-compounds.

Triamine cobaltic compounds.

See Dichrocoaltic compounds.

Trithionic acid, $\text{H}_2\text{S}_3\text{O}_6$.

Known only in aqueous solution.

Solution in H_2O gradually decomposes in the cold, rapidly at 80° . Not decomp. if very dilute or in presence of acids, except HNO_3 , HClO_4 , and HIO_3 . (Fordos and Gélis, A. ch. (3) **28**. 451.)

Trithionates.

The trithionates are all sol. in H_2O , and very easily decomposed

Ammonium trithionate, $(\text{NH}_4)_2\text{S}_3\text{O}_6$.

Very deliquescent and unstable.

Very sol. in H_2O .

Insol in abs. alcohol. (Divers and Ogawa, Chem. Soc. 1900, **77**. 337.)

Barium trithionate, $\text{BaS}_3\text{O}_6 + 2\text{H}_2\text{O}$.

Very sol. in H_2O Precipitated from aqueous solution by large excess of alcohol. Aqueous solution is very unstable. (Kessler, Pogg **74**. 250.)

Lead trithionate, PbS_3O_6 .

Very sl. sol. in H_2O . Sol. in $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$. (Fogh, C. R. **110**. 524.)

Potassium trithionate, $\text{K}_2\text{S}_3\text{O}_6$.

Sol in H_2O . Insol. in alcohol. (Kessler, Pogg. **74**. 270.)

Sol. in H_2O with decomp.

Insol. in alcohol. (Langlois, A. 1841, **40**. 102.)

Sodium trithionate, $\text{Na}_2\text{S}_3\text{O}_6$.

Very sol. in H_2O

+ $3\text{H}_2\text{O}$ (Villiers, C. R. **106**. 1356.)

Thallous trithionate, $\text{Tl}_2\text{S}_3\text{O}_6$.

Sol in H_2O (Bevan, C. N. **38**. 294.)

Zinc trithionate.

Sol. in H_2O , but decomposes upon warming the solution. (Fordos and Gélis, C. R. **16**. 1070.)

Tungsten, W.

Metallic Not attacked by heating with fuming HNO_3 , aqua regia, or other acids, or by boiling $\text{KOH} + \text{Aq}$ Sol in $\text{KOH} + \text{Aq}$ and $\text{NaClO} + \text{Aq}$ (v. Usler, A **94**. 255.)

Not easily acted upon by moist air, if no CO_2 present Sol. in a mixture of HF and HNO_3 . Very slowly sol in H_2SO_4 , HCl and HF . (Moissan, C. R. 1896, **123**. 15.)

Very slowly attacked by HNO_3 , H_2SO_4 , HCl and even CrO_3 . A mixture of CrO_3 and H_2SO_4 dissolved 1.67 g. in 16 hrs from a fine wire and 1.36 g. in 14 hours (Fink, Met. Chem Eng 1910, **8**. 341.)

Compact tungsten is not attacked by dil., and only sl dissolved by conc. H_2SO_4 . Not attacked by dil or conc HCl . HNO_3 and $\text{HNO}_3 + \text{HCl}$ attack slowly by long heating, forming thin layer of WO_3 . Slowly sol in $\text{HNO}_3 + \text{HF}$. (Weiss, Z anorg. 1910, **65**. 339.)

Aluminothermic tungsten is insol in acids and in aqua regia. Sol. in fused KOH . (Stavenhagen, B 1899, **32**. 1515.)

Insol. in HCl of any concentration at room temp. and only very sl. sol. at 110° . After being in contact with hot conc. HCl (sp. gr. 1.15) for 175 hrs. the metal lost 0.5% of its weight. Sl. sol. in dil. HCl at 110° .

Insol. in conc. H_2SO_4 at room temp. and in dil. H_2SO_4 at 110° . Somewhat sol. in conc. H_2SO_4 at high temp.

Insol. in conc. HNO_3 , and hot or cold HF . Sl. sol. in aqua regia.

Very sol. in $\text{HF} + \text{HNO}_3$. (Ruder, J. Am. Chem. Soc. 1912, **34**. 387.)

Insol in aqua regia and acids; sol. in fused KOH . (Stavenhagen, B 1899, **32**. 1514.)

Insol. in $\text{KOH} + \text{Aq}$.

Sol. in fused KOH .

Slowly sol. in fused Na_2CO_3 , K_2CO_3 or mixture of the two.

Somewhat sol. in $\text{NaOCl} + \text{Aq}$. (Ruder, J. Am. Chem. Soc 1912, **34**. 388.)

Insol in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 830.)

Crystalline. Insol. in H_2O , HCl , or H_2SO_4 . Oxidised by HNO_3 or aqua regia. (D'Elhu-jar.)

Sol in boiling $\text{KOH} + \text{Aq}$ (Riche, A. ch. (3) **50**. 5.)

Amorphous. Easily oxidised by $\text{HNO}_3 + \text{Aq}$. (Zettnow.)

Tungsten amide.

See Tungsten nitride.

Tungsten arsenide, WAs_2 .

Insol. in H_2O and other solvents. Not attacked by boiling HF or HNO_3 . Sol. in cold $HF + HNO_3$ and in hot aqua regia. Not attacked by hot $KOH + Aq$ or $NaOH + Aq$. Decomp. by fused KOH or $NaOH$. (Defacqz, C. R. 1901, **132**. 139.)

Tungsten boride, WB_2 .

Slowly attacked by conc. acids; vigorously attacked by aqua regia. (Tucker and Moody, Chem Soc 1902, **81**. 16)

Tungsten dibromide, WBr_2 .

Partly sol in H_2O , the rest decomposing to WO_2 and HBr

Tungsten pentabromide, WBr_5 .

Decomp. by moist air or H_2O . Sol. in caustic alkalis + Aq

Very hygroscopic. Fumes in the air.

Decomp. by H_2O .

Sol in HF , or conc. HCl . Sl sol in fuming HBr . Decomp. by dil. HCl , conc HNO_3 , or dil H_2SO_4 . Readily attacked by fused alkalis or alkalis + Aq . Sol. in CCl_4 , $CHCl_3$, $CHBr_3$, abs. alcohol, ether, essence of terebenthine and benzene. (Defacqz, C. R. 1899, **128**. 1232.)

Tungsten hexabromide, WBr_6 .

Decomp. by H_2O and in the air.

Sol in $NH_4OH + Aq$. (Smith, J. Am. Chem. Soc. 1897, **18**. 1100.)

Tungsten bromochloride, WCl_5 , WBr_5 .

Decomp. by H_2O . Sol. in HF . Decomp. by HNO_3 or H_2SO_4 . Violently attacked by fused alkali or alkali + Aq . Sol in most organic solvents.

WCl_5 , $3WBr_5$. Properties like those of WCl_5 , WBr_5 . (Defacqz, C. R. 1899, **129**. 516.)

Decomp. by H_2O . Sol. in 40% $HF + Aq$. $22^\circ B$ $HCl + Aq$ gives a sl ppt. of WO_3 . Decomp. by HNO_3 and by H_2SO_4 . Sol. in abs. alcohol, ether, CS_2 , C_6H_6 and glycerine. Sol. in CCl_4 only on warming. Nearly insol. in oil of turpentine. (Defacqz.)

Tungsten bronze.

See—

Tungstate tungsten oxide, barium.

Tungstate tungsten oxide, barium potassium.

Tungstate tungsten oxide, barium sodium.

Tungstate tungsten oxide, calcium potassium.

Tungstate tungsten oxide, calcium sodium.

Tungstate tungsten oxide, lithium.

Tungstate tungsten oxide, lithium potassium.

Tungstate tungsten oxide, potassium.

Tungstate tungsten oxide, potassium sodium.

Tungstate tungsten oxide, potassium strontium.

Tungstate tungsten oxide, sodium.

Tungstate tungsten oxide, sodium strontium.

Tungsten carbide, WC .

Sol. in boiling HNO_3 ; very slowly acted upon by other acids. (Moissan, C. R. 1896, **123**. 16.)

WC . Insol in dil acids, only sl. sol. in H_2SO_4 and conc HNO_3 ; sol. in fused $KClO_3$ and KNO_3 . (Williams, C. R. 198, **126**. 1724)

Tungsten dichloride, WCl_2 .

Decomp. on the air or with H_2O . (Roscoe)

Tungsten tetrachloride, WCl_4 .

Deliquescent. Partly sol. in H_2O , with subsequent decomposition (Roscoe)

Tungsten pentachloride, WCl_5 .

Very deliquescent. Decomp. with H_2O with hissing and evolution of heat and separation of W_2O_5 .

Very sl. sol in CS_2 (Roscoe.)

Tungsten hexachloride, WCl_6 .

Not decomp. by moist air or H_2O . Decomp. by alcohol. Very sol in CS_2 . (Roscoe.)

Easily sol in PCl_5 (Teclu, A **187**. 255)

Tungsten chloride nitrogen sulphide, WCl_4 , N_4S_4 .

(Davis, Chem Soc 1906, **89**. (2) 1575.)

Tungsten chloroarsenide, W_2AsCl_5 .

Hygroscopic; decomp. by H_2O and acids; sol. in aq. solution of alkalis; insol. in anhydrous organic solvents. (Defacqz, C. R. 1901, **132**. 139.)

Tungsten chlorosulphide, $W_2S_7Cl_5$.

Decomp. by H_2O .

Sol. in S_2Cl_2 . (Smith and Oberholtzer, Z. anorg 1894, **5**. 68.)

WCl_5 , $3WS_5$. Decomp. by H_2O . Insol. in CS_2 , alcohol and C_6H_6 . (Defacqz, A. ch. 1901, (7) **22**. 266.)

Tungsten hexafluoride, WF_6 .

Fumes in the air.

Decomp. by H_2O . Easily sol in aq. alkalis. (Ruff, B 1905, **38**. 747.)

Tungsten diiodide, WI_2 .

Not decomp. by H_2O . (Roscoe, A. **162**. 366.)

Insol. in H_2O , CS_2 and alcohol. Decomp. by boiling H_2O , HNO_3 , H_2SO_4 and aqua regia; sol. in fused KOH , and alkali carbonates. (Defacqz, C. R. 1898, **126**. 936.)

Tungsten tetraiodide, WI_4 .

Insol. in H_2O , ether, chloroform and turpentine; sol in abs. alcohol, decomp when boiled with H_2O , sol with decomp in dil. HCl and H_2SO_4 , in HNO_3 and aqua regia, and in alkali hydroxides and carbonates fused or in aq. solution. (Defacqz, C. R. 1898, **127**, 511)

Tritungsten nitride, W_3N_2 .

(Uhrlaub.)

W_3N_2 Insol in HNO_3 , dil H_2SO_4 and $NaOH + Aq.$ (Rideal, Chem Soc 1889, **55**, 44.)

Tungsten nitride amide, $W_3N_2H_4 = 2WN_2, W(NH_2)_2$.

Not attacked by acids or caustic alkalis + $Aq.$ (Wöhler, A **73**, 191)

Tungsten nitride amide oxide, $W_7N_8H_4O_4 = 3WN_2, W_2(NH_2)_2, 2WO_2$.

Not attacked by acids or alkalis. (Wöhler)

Tungsten monoxide, WO .

Insol in H_2O Not attacked by HCl , HF , H_2SO_4 , or $KOH + Aq.$ $HNO_3 + Aq$ or aqua regia convert it into WO_3 (Headden, Sill. Am J. **145**, 280.)

Tungsten dioxide, WO_2 .

(a) When prepared in the dry way, is attacked only by aqua regia, which oxidises to WO_3 .

(b) When moist, is sol. in HCl or $H_2SO_4 + Aq.$ also in $KOH + Aq.$ Insol. in $NH_4OH + Aq.$ (Riche, A. ch. (3) **50**, 5.)

Cryst. Insol. in HCl , H_2SO_4 and conc. aq. alkalis; sol in HNO_3 . (Hallopeau, C. R. 1898, **127**, 135.)

Tungsten oxide, blue.

W_2O_5 (Riche, A. ch. (3) **50**, 33); W_3O_8 (v. Uslar); W_4O_{11} (Gmelin).

All are probably the same substance. Not attacked by boiling HNO_3 or aqua regia. Slowly sol in boiling $KOH + Aq.$

Tungsten trioxide, WO_3 .

Insol in H_2O or acids. Sl. sol. in dil $KOH + Aq.$, $NaOH + Aq.$, $Na_2CO_3 + Aq.$ or $H_2CO_3 + Aq.$ but easily sol. in conc. boiling solutions of same. $NH_4OH + Aq$ when boiling has a solvent action.

Insol. in conc. and dil. H_2SO_4 . (Desi, J. Am. Chem. Soc. 1897, **19**, 214.)

Min. Tungstite. Insol. in acids. Sol. in $NH_4OH + Aq$

Tungsten oxide, W_2O_5 .

Sol in alkalis. (Desi, J. Am. Chem. Soc. 1897, **19**, 214.)

W_3O_8 . Insol in acids and alkalis. (Desi, J. Am. Chem. Soc 1897, **19**, 228.)

+ H_2O . Like $W_5O_{14} + H_2O$. (Allen and Gottschalk, Am. Ch. J. 1902, **27**, 336.)

W_4O_9 . (Desi, J. Am. Chem. Soc 1897, **19**, 219)

W_5O_{10} (Desi.)

$W_5O_{14} + H_2O$. Insol in H_2O containing a little HCl

Slowly attacked by cold, conc. $MOH + Aq.$ (Allen and Gottschalk, Am Ch J. 1902, **27**, 333)

Tungsten trioxide ammonia, $WO_3, 3NH_3$.

(Rosenheim and Jacobsohn, Z. anorg. 1906, **50**, 306.)

Tungsten oxybromide, etc.

See Tungstyl bromide, etc.

Tungsten monophosphide, WP .

Not attacked by HF or HCl .

Sol in warm $HNO_3 + HF$. Slowly attached by hot HNO_3 .

Not attacked by $KOH + Aq$ or $NaOH + Aq.$ (Defacqz, C. R. 1901, **132**, 34.)

Tungsten diphosphide, WP_2 .

Insol in H_2O and in most organic solvents; insol. in HCl and HF , sol. in a mixture of HF and HNO_3 in the cold, and in aqua regia on warming. (Defacqz, C. R. 1900, **130**, 916.)

Tungsten phosphide, W_4P_2 .

Not attacked by any acid, not even by aqua regia. (Wöhler and Wright, A. **79**, 244.)

W_3P_4 . (Wöhler and Wright.)

Tungsten diselenide, WSe_2 .

(Uelsmann.)

Tungsten triselenide, WSe_3 .

Easily sol. in alkali sulphides or selenides + $Aq.$ (Uelsmann, Jahrb f Ch. **1860**, 92.)

Tungsten silicide.

Sol. in HF

Only very sl. sol. in other acids. (Warren, C. N. 1898, **78**, 319.)

WSi_2 . Not attacked by ordinary acids and scarcely by warm aqua regia, but violently attacked by $HNO_3 + HF$. Sl. attacked by 10% alkalis + $Aq.$ (Hönigschmid, M. 1907, **28**, 1017.)

Not attacked by dil. or conc. HCl , HF , HNO_3 or H_2SO_4 , nor by hot aqua regia.

Attacked by $HNO_3 + HF$ or by fused alkalis. (Defacqz, C. R. 1907, **144**, 850.)

WSi_4 . Violently attacked by $HNO_3 + HF$. Not attacked by HNO_3 , H_2SO_4 , HCl or HF . (Frlley, Rev. Mét. 1911, **8**, 509.)

W_2Si_3 . Insol. in acids including HF ; sol. in a mixture of HF and HNO_3 ; sol. in fused alkali hydroxides and carbonates. (Vigouroux, C. R. 1898, **127**, 394.)

Tungsten disulphide, WS₂.Oxidised by HNO₃+Aq (Berzelius)

Insol in min acids.

Sol. in a mixture of HF and HNO₃ and in fused alkalis and alkali carbonates. (Defacqz, C. R. 1899, 128. 611.)**Tungsten trisulphide, WS₃.**Somewhat sol. in cold, abundantly in hot H₂O, but separated out by the addition of salts, especially NH₄Cl, or acids. Sol in alkali sulphides, and hydrosulphides+Aq. Sol in caustic alkalis, and alkali carbonates+Aq. Slowly sol in NH₄OH+Aq in the cold.**Tungstic acid, H₂WO₄.**Insol. in H₂O. Sol in HF. Insol in tungstates+Aq.44.7% H₂WO₄ is sol in 50% HF+Aq at 25°.55.3% H₂WO₄ is sol in 50% HF+Aq at 50°.100 g. sat. H₂WO₄+HCl+Aq contain 0.68 g. H₂WO₄ at 80°.9.8% H₂WO₄ is sol. in sat. alcoholic HCl at 75°.

Insol in alcoholic solutions of HBr and HI. (Rosenheim, Chem. Soc. 1911, 100. (2) 402.)

Freshly pptd. tungstic acid dissolves in H₂O₂. (Kellner, Dissert. 1909.)Insol. in liquid NH₃. (Gore, Am. Ch. J. 1898, 20. 830.)H₂WO₅. Precipitate. Sl. sol in H₂O and aqueous solutions of the tungstates. Sol in 250-300 pts H₂O. When freshly pptd., sol. in alkali hydrates or carbonates+Aq. (Anthony, J. pr. 9. 6.)**Metatungstic acid, H₂W₄O₁₃+9H₂O.**Sol. in H₂O. Solution may be boiled and evaporated to a syrupy consistency, when it suddenly gelatinises and ordinary tungstic acid is precipitated.Sol. in H₂O. When heated to 50°, it becomes insol. in H₂O. (Soboleff, Z. anorg. 1896, 12. 28.)**Solubility in H₂O at t°.**

t°	100 cem. H ₂ O dissolve g. of the cryst. acid	Sp. gr. of the solution
0	41.46	1.6025
22	88.57	2.5239
43.5	111.87	3.6503

(Soboleff.)

Sp. gr. of solution of metatungstic acid at 17.5° containing:

2.79 12.68 27.61 43.75% WO₃.

1.0257 1.1275 1.3274 1.6343

(Scheibler, J. pr. 83. 273.)

Sp. gr. of aqueous solution calculated by M=Mendeleeff, and G=(Gerlach (Z. anal. 27. 300), containing:

	5	10	15	20	25% WO ₃
M	1.047	1.098	1.153	1.214	1.285

7.8	88.389
18.2	99.66
24.3	110.76

(Soboleff, Z. anorg. 1896, 12. 32.)

Colloidal. Sol. in H₂O. Not precipitated by acids or alcohol. Can be evaporated to dryness and heated to 200°, and still remains sol in H₂O. Sol. in ¼pt of H₂O.

Sp gr. of aqueous solution containing:

	5	20	50	66.5	79.8% WO ₃
	1.0475	1.2168	1.8001	2.596	3.243

(Graham, Chem. Soc. 17. 318.)

Perhaps *paratungstic acid*, H₁₀W₁₂O₄₁. (Klein, Bull. Soc (2) 36. 547)**Tungstates.**Few normal tungstates are sol. in H₂O, even some of the K and NH₄ salts are very sl. sol. Most of the metatungstates, however, are easily sol. in H₂O.Tungstates insol. in H₂O are usually insol. in dil. acids.**Aluminum tungstate, Al₂(WO₄)₃+8H₂O.**Precipitate. Insol. in H₂O and Na₂WO₄+Aq. Sol. in (NH₄)₂Al₂(SO₄)₄+Aq, NaOH+Aq, NH₄OH+Aq.Easily sol. in H₃PO₄, H₂C₂O₄, and H₂C₄H₄O₆+Aq. (Lotz, A. 83. 65.)Sol. in 1500 pts. H₂O at 15°. (Lefort, C. R. 87. 748.)Al₂O₃, 4WO₃+9H₂O. Sol. in 400 pts. H₂O at 15°. (Lefort, C. R. 87. 748.)Al₂O₃, 5WO₃+6H₂O. Sol. in H₂O, from which it is pptd. by alcohol. (Lefort.)Formula according to Lefort is Al₂O₃, 3WO₃+3H₂O, 2WO₃.See also *Aluminicotungstic acid*.**Aluminum paratungstate, 5Al₂O₃, 36WO₃+46H₂O=Al₂O₃, 7WO₃+9H₂O (?).**

Easily sol. in an alum solution. (Lotz, A. 83. 65.)

Aluminum ammonium tungstate, 3(NH₄)₂O, Al₂O₃, 9WO₃+4H₂O.Sol. in conc. HNO₃ and in conc. HCl. (Balke and Smith, J. Am. Chem. Soc. 1903, 25. 1230.)

Aluminum ammonium antimony tungstate.

See *Aluminicoantimoniotungstate, ammonium*.

Aluminum antimony tungstate.

See *Aluminicoantimoniotungstic acid*.

Aluminum zinc tungstate, Al_2O_3 , ZnO , 9WO_3 , $+20\text{H}_2\text{O}$.

Very sol. in H_2O . (Daniels, J. Am. Chem. Soc. 1908, **30**, 1850.)

$2\text{Al}_2\text{O}_3$, 3ZnO , $18\text{WO}_3+16\text{H}_2\text{O}$. Sol. in much H_2O .

Sol. in very dil. mineral acids or in acetic acid. (Daniels)

Ammonium tungstate, $(\text{NH}_4)_2\text{WO}_4$.

Known only in solution.

$(\text{NH}_4)_2\text{W}_6\text{O}_{11}+3\text{H}_2\text{O}=2(\text{NH}_4)_2\text{O}$, $3\text{WO}_3+3\text{H}_2\text{O}$. Sol. in H_2O with decomp. Decomp. on air with evolution of NH_3 , and formation of *paratungstate*. Sol. in $\text{NH}_4\text{OH}+\text{Aq}$. (Marignac, A. ch. (3) **69**, 23)

$(\text{NH}_4)_2\text{W}_6\text{O}_{17}+5\text{H}_2\text{O}=2(\text{NH}_4)_2\text{O}$, $5\text{WO}_3+5\text{H}_2\text{O}$. Sol. at ordinary temp. in 26-29 pts. H_2O with partial decomposition. (Marignac.) $+2\frac{1}{2}\text{H}_2\text{O}$, $+3\text{H}_2\text{O}$, $+4\text{H}_2\text{O}$, $+4\frac{1}{2}\text{H}_2\text{O}$, and $+5\text{H}_2\text{O}$. (Pinagel, Dissert, 1904.)

$(\text{NH}_4)_2\text{W}_6\text{O}_{27}+8\text{H}_2\text{O}=3(\text{NH}_4)_2\text{O}$, $8\text{WO}_3+8\text{H}_2\text{O}$. Sol. in H_2O . (Marignac.)

Colloidal. $(\text{NH}_4)_2\text{O}$, 6WO_3+4 or $6\text{H}_2\text{O}$. Miscible with water in nearly all proportions. (Taylor, J. Am. Chem. Soc. 1902, **24**, 632.)

Ammonium metatungstate, $(\text{NH}_4)_2\text{W}_4\text{O}_{13}$.

$+6\text{H}_2\text{O}$. (Marignac, A. ch. (4) **3**, 74.)

$+8\text{H}_2\text{O}$. Efflorescent. Very sol. in H_2O .

1 pt. dissolves at 15° in 0.84 pt. H_2O . (Lotz.) 1 pt. dissolves at ordinary temp. in 0.35 pt. H_2O . (Riche.)

Solubility increases rapidly with the temperature.

Saturated solution at 40° is solid on cooling. Sl. sol. in ordinary, insol. in absolute alcohol. (Lotz.) Insol. in ether. (Riche.)

$[(\text{NH}_4)_2\text{W}_6\text{O}_{16}+5\text{H}_2\text{O}$ of Margueritte.]

$(\text{NH}_4)_2\text{W}_{16}\text{O}_{51}+17\text{H}_2\text{O}=3(\text{NH}_4)_2\text{O}$, $16\text{WO}_3+17\text{H}_2\text{O}$. Very efflorescent. Decomp. by dissolving in pure H_2O . (Marignac, A. ch. (4) **3**, 75.)

Ammonium paratungstate, $(\text{NH}_4)_{10}\text{W}_{12}\text{O}_{41}=5(\text{NH}_4)_2\text{O}$, 12WO_3 .

(Marignac, A. ch. (3) **69**, 25.)

According to Lotz (A. **91**, 49) and Scheibler (J. pr. **80**, 208), formula is $(\text{NH}_4)_8\text{W}_7\text{O}_{24}=3(\text{NH}_4)_2\text{O}$, 7WO_3 .

$+5\text{H}_2\text{O}$. (Scheibler, J. pr. **48**, 232.)

$+11\text{H}_2\text{O}$. Sol. in 25-28 pts. cold H_2O . (Anthon.)

Sol. in 26.1 pts. H_2O at 10.7° , and 5.8 pts. at 100° . (Lotz.)

Sol. in 33.3 pts. cold H_2O , and 9.6 pts. at 100° . (Riche.)

Sol. in 22-38 pts. H_2O at $15-18^\circ$. The solution gradually decomposes, with the formation of a more soluble salt. (Marignac.)

Not much more sol. in $\text{NH}_4\text{OH}+\text{Aq}$ than in H_2O . Insol. in alcohol. (Anthon.)

Sol. in H_2O_2 . (Kellner, Dissert, 1909.)

Ammonium bismuth tungstate.

See *Bismuthicotungstate, ammonium*.

Ammonium cadmium paratungstate,

$3(\text{NH}_4)_2\text{O}$, 12CdO , $35\text{WO}_3+35\text{H}_2\text{O}$.

Ppt. Sol. in H_2O acidulated with HNO_3 (Lotz, A. **91**, 49.)

Ammonium cerium tungstate.

See *Cericotungstate, ammonium*.

Ammonium cobaltous tungstate, $8(\text{NH}_4)_2\text{O}$,

2CoO , $15\text{WO}_3+3\text{H}_2\text{O}$.

(Carnot, C. R. **109**, 147.)

Ammonium hydroxylamine tungstate,

$\text{NH}_4\text{OWO}_4\text{NH}_4$.

Sol. in H_2O . (Hofmann, Z. anorg. 1898, **16**, 465.)

Ammonium iron (ferric) tungstate, $5(\text{NH}_4)_2\text{O}$,

Fe_2O_3 , $5\text{WO}_3+5\text{H}_2\text{O}$.

Sol. in H_2O (Borek.)

Ammonium lanthanum tungstate.

See *Lanthanicotungstate, ammonium*.

Ammonium magnesium paratungstate,

$2(\text{NH}_4)_2\text{O}$, 3MgO , $12\text{WO}_3+24\text{H}_2\text{O}$.

Very slightly sol. in H_2O . (Marignac, A. ch. (3) **69**, 58.)

$(\text{NH}_4)_2\text{O}$, 2MgO , $7\text{WO}_3+10\text{H}_2\text{O}$. Very sl. sol. in H_2O ; sol. in H_2O acidulated with HNO_3 (Lotz.)

Ammonium mercuric tungstate, $(\text{NH}_4)_2\text{WO}_4$,

$\text{HgWO}_4+\text{H}_2\text{O}$.

Insol. in H_2O . Decomp. by acids or alkalis. (Anthon.)

Ammonium neodymium tungstate.

See *Neodymicotungstate, ammonium*.

Ammonium nickel tungstate.

See *Nickelicotungstate, ammonium*.

Ammonium potassium paratungstate,

$5\text{K}(\text{NH}_4)_2\text{O}$, $12\text{WO}_3+11\text{H}_2\text{O}$.

Sol. in boiling H_2O ; sl. sol. in cold H_2O . (Hallopeau, C. R. 1896, **123**, 180.)

Ammonium potassium sodium paratungstate,

$5(\text{K}, \text{Na}, \text{NH}_4)_2\text{O}$, $12\text{WO}_3+13\text{H}_2\text{O}$, where $\text{K}:\text{Na}:\text{NH}_4=3:3:4$.

$10(\text{K}, \text{Na}, \text{NH}_4)_2\text{O}$, $24\text{WO}_3+26\text{H}_2\text{O}$, where $\text{K}:\text{Na}:\text{NH}_4=3:3:14$. (Laurent.)

Ammonium sodium paratungstate, $4(\text{NH}_4)_2\text{O}$, Na_2O , $12\text{WO}_3 + 5\text{H}_2\text{O}$.

Can be crystallised from H_2O without decomp. (Lotz, A. 91. 57)

+ $14\text{H}_2\text{O}$. Sol. in warm H_2O . (Hallopeau, C. R. 1896, 123. 181.)

$(\text{NH}_4)_2\text{O}$, $4\text{Na}_2\text{O}$, $12\text{WO}_3 + 25\text{H}_2\text{O}$. Sl. sol in H_2O (Hallopeau, C. R. 1895, 120. 1344)

$5\text{Na}_2\text{O}$, $15(\text{NH}_4)_2\text{O}$, $48\text{WO}_3 + 48\text{H}_2\text{O}$. (Marignac, A. ch. (3) 69. 53)

$2\text{Na}_2\text{O}$, $3(\text{NH}_4)_2\text{O}$, $12\text{WO}_3 + 15\text{H}_2\text{O}$. (Marignac.)

$3(\text{NH}_4)_2\text{O}$, $2\text{Na}_2\text{O}$, $12\text{WO}_3 + 15\text{H}_2\text{O}$.

$3(\text{NH}_4)_2\text{O}$, $3\text{Na}_2\text{O}$, $16\text{WO}_3 + 22\text{H}_2\text{O}$. Sol. in H_2O without decomp. (Hallopeau, C. R. 1896, 123. 181.)

$3\text{Na}_2\text{O}$, $4(\text{NH}_4)_2\text{O}$, $16\text{WO}_3 + 18\text{H}_2\text{O}$ (Gibbs, Am Ch J 7. 236.)

Is $2\text{Na}_2\text{O}$, $3(\text{NH}_4)_2\text{O}$, $12\text{WO}_3 + 13\text{H}_2\text{O}$, according to Knorre (B. 19. 823).

Very sol. in hot H_2O . (Knorre, B. 1886, 19. 823.)

$(\text{NH}_4)_2\text{O}$, $3\text{Na}_2\text{O}$, $16\text{WO}_3 + 38\text{H}_2\text{O}$. (Wyrouboff, Bull. Soc. Min. 1892, 15. 85)

$6(\text{NH}_4)_2\text{O}$, $2\text{Na}_2\text{O}$, $20\text{WO}_3 + 24\text{H}_2\text{O}$. Can be cryst. from boiling H_2O . (Baragiola, Disser., 1902.)

$4\text{Na}_2\text{O}$, $16(\text{NH}_4)_2\text{O}$, $50\text{WO}_3 + 50\text{H}_2\text{O}$. Sl. sol. in cold H_2O . (Gibbs, Proc. Am. Acad. 15. 12.)

Ammonium zinc paratungstate, $(\text{NH}_4)_2\text{O}$, 2ZnO , $7\text{WO}_3 + 13\text{H}_2\text{O}$.

Sl. sol. in boiling H_2O , but more easily on addition of oxalic, tartaric, phosphoric, or dil. nitric acids, or of ammonium tungstate. (Lotz, A. 91. 49.)

Ammonium zirconium tungstate.

See Zirconotungstate, ammonium.

Ammonium metatungstate nitrate.

See Nitrate metatungstate, ammonium.

Ammonium tungstate vanadate.

See Vanadotungstate, ammonium.

Antimony tungstate, Sb_2O_3 , $5\text{WO}_3 + 4\text{H}_2\text{O}$.

Sol. in H_2O without decomp. (Lefort.)

Sb_2O_3 , $6\text{WO}_3 + 8\text{H}_2\text{O}$. Ppt.

See also Antimoniotungstic acid.

Barium tungstate, BaWO_4 .

Anhydrous. Insol. in H_2O . Decomp. by boiling $\text{HNO}_3 + \text{Aq.}$ (Geuther and Forsberg, A. 120. 270.)

+ $\frac{1}{2}\text{H}_2\text{O}$. Insol. in H_2O or boiling $\text{H}_3\text{PO}_4 + \text{Aq.}$ Sol. in boiling, less sol. in cold $\text{H}_3\text{C}_2\text{O}_4 + \text{Aq.}$ (Anthon.)

+ $2\frac{1}{2}\text{H}_2\text{O}$. Insol. precipitate. (Scheibler.) Pptd. BaWO_4 is attacked by dil. acids.

More sol. in $\text{NH}_4\text{NO}_3 + \text{Aq.}$ than in H_2O . (Smith and Bradbury, B. 24. 2930.)

Barium ditungstate, $\text{Ba}_2\text{W}_2\text{O}_7 + \text{H}_2\text{O}$ (?).

Nearly insol. in H_2O . 100 ccm. H_2O dissolve about 0.05 g. at 15° . (Lefort, A. ch. (5) 15. 325.)

Barium tritungstate, $\text{Ba}_3\text{W}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?).

Sol. in about 300 pts. H_2O at 15° . Decomp. by boiling H_2O into an insol. salt. (Lefort, C. R. 88. 798.)

+ $6\text{H}_2\text{O}$. (Scheibler.)

Barium metatungstate, $\text{BaW}_4\text{O}_{13} + 9\text{H}_2\text{O}$.

Efflorescent. Quite sol. in hot H_2O . Partly decomp. by cold H_2O into $\text{BaW}_3\text{O}_{10}$ and WO_3 , which recombine on heating. (Scheibler, J. pr. 80. 204.)

Barium tungstate, $\text{BaW}_6\text{O}_{25} + 8\text{H}_2\text{O}$.

Insol. in H_2O or $\text{HCl} + \text{Aq.}$ (Zettnow.) $\text{BaW}_6\text{O}_{15}$. *Barium bronze.* (Hallopeau, A. ch. 1900, (7) 19. 121.)

Barium paratungstate, $\text{Ba}_2\text{W}_{12}\text{O}_{41} + 14\text{H}_2\text{O}$, or $\text{Ba}_2\text{W}_7\text{O}_{24} + 8\text{H}_2\text{O}$.

Insol. in cold H_2O ; when freshly pptd. is sl. sol. in $\text{HNO}_3 + \text{Aq.}$ (Lotz, A. 91. 60.) Sol. in $\text{NH}_4\text{Cl} + \text{Aq.}$ (Wackenroder) + $27\text{H}_2\text{O} = \text{Ba}_2\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$ Insol. in cold, sl. sol. in hot H_2O . (Knorre, B. 18. 327.)

Barium potassium tungstate tungsten oxide, $\text{BaW}_4\text{O}_{12}$, $5\text{K}_2\text{W}_4\text{O}_{12}$.

(Engels, Z. anorg. 1903, 37. 136.)

Barium silver metatungstate.

(Scheibler.)

Barium sodium paratungstate, 2BaO , $3\text{Na}_2\text{O}$, $12\text{WO}_3 + 24\text{H}_2\text{O}$. (Marignac), or BaO , $2\text{Na}_2\text{O}$, $7\text{WO}_3 + 14\text{H}_2\text{O}$ (Scheibler).

Insol. in H_2O .

Barium sodium tungstate tungsten oxide, $2\text{BaW}_4\text{O}_{12}$, $3\text{Na}_2\text{W}_5\text{O}_{15}$.

$\text{BaW}_4\text{O}_{12}$, $5\text{Na}_2\text{W}_5\text{O}_{15}$. (Engels, Z. anorg. 1903, 37. 131.)

Bismuth tungstate, Bi_2O_3 , $6\text{WO}_3 + 8\text{H}_2\text{O}$.

Very sol. in H_2O with decomp. Pptd. by alcohol from aqueous solution. (Lefort, C. R. 87. 748.)

Cadmium tungstate, CdWO_4 .

Anhydrous.

+ H_2O . Sol. in about 2000 pts. H_2O . (Lefort.)

+ $2\text{H}_2\text{O}$. Insol. in H_2O . Sol. in hot phosphoric or oxalic acids, or in $\text{NH}_4\text{OH} + \text{Aq.}$ (Anthon, J. pr. 9. 341.)

Sol. in $\text{KCN} + \text{Aq.}$ (Smith and Bradbury, B. 24. 2390.)

Cadmium ditungstate, $\text{CdW}_2\text{O}_7 + 3\text{H}_2\text{O}$ (?).

Sol in about 500 pts. H_2O at 15° . (Lefort, A. ch. (5) 15. 346.)

Cadmium tritungstate, $\text{CdW}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?). (Lefort)**Cadmium metatungstate**, CdO , $4\text{WO}_3 + 10\text{H}_2\text{O}$.

Not efflorescent. (Scheibler, J. pr. 83. 273.)
Somewhat less sol in H_2O than the Mn salt.
(Wyrouboff. Bull Soc Min 1892, 15. 84.)

Cadmium paratungstate, $\text{Cd}_3\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$.

Ppt (Gonzalez)
Insol. in H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$, and
hot H_3PO_4 , $\text{H}_2\text{C}_2\text{O}_4$, or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

Cadmium sodium paratungstate, 2CdO , Na_2O , $7\text{WO}_3 + 18\text{H}_2\text{O}$.

Difficultly sol in cold H_2O . (Knorre, B. 19. 824.)

Calcium tungstate, CaWO_4 .

Insol. in H_2O or dil. acids. Sol. in about 500 pts H_2O . (Lefort.)

Decomp. by $\text{KOH} + \text{Aq}$. (Anthon.)
When freshly pptd, sol. in $\text{NH}_4\text{Cl} + \text{Aq}$.
(Wackenroder)

Sol. in Mg , and NH_4 salts, also $\text{Na}_2\text{WO}_4 + \text{Aq}$. (Sonstadt, C. N. 11. 97.)

Min. *Scheelite*. Decomp. by HCl or $\text{HNO}_3 + \text{Aq}$, with separation of WO_3

Calcium ditungstate, $\text{CaW}_2\text{O}_7 + 3\text{H}_2\text{O}$ (?).

Sol. in 30 pts. H_2O at 15° . (Lefort, A. ch. (5) 15. 328.)

Calcium tritungstate, $\text{CaW}_3\text{O}_{10} + 6\text{H}_2\text{O}$ (?).

Sol. in cold H_2O (Lefort.)

Calcium metatungstate, $\text{CaW}_4\text{O}_{13} + 10\text{H}_2\text{O}$.

Easily sol. in H_2O (Scheibler.)

Calcium paratungstate, $\text{Ca}_3\text{W}_7\text{O}_{24} + 18\text{H}_2\text{O}$ (or $\text{Ca}_5\text{W}_{12}\text{O}_{41} + 30\text{H}_2\text{O}$).

Much more sol. than Sr or Ba salt. (Knorre B. 18. 328.)

Easily sol. in H_2O_2 . (Knorre, B. 1885, 18. 326.)

Calcium potassium tungstate tungsten oxide, $\text{CaW}_4\text{O}_{12}$, $5\text{K}_2\text{W}_4\text{O}_{12}$.

(Engels, Z. anorg. 1903, 37. 149.)

Calcium sodium paratungstate, 2CaO , $3\text{Na}_2\text{O}$, $12\text{WO}_3 + 3\text{H}_2\text{O}$.

(Gonzalez, J. pr. (2) 36. 44)

Calcium sodium tungstate tungsten oxide, $\text{CaW}_4\text{O}_{12}$, $5\text{Na}_2\text{W}_4\text{O}_{12}$.

Engels, Z. anorg. 1903, 37. 145.)

Cerium tungstate, $\text{Ce}_2(\text{WO}_4)_3 + \text{H}_2\text{O}$.

Precipitate. (Cossa and Zecchino, Gazz. ch. it. 10. 225.)

Cerium metatungstate, Ce_2O_3 , $12\text{WO}_3 + 30\text{H}_2\text{O}$.

Permanent Sol in H_2O . (Scheibler.)

Cerium sodium tungstate, $\text{Ce}_2\text{Na}_8(\text{WO}_4)_7$.

Insol. in H_2O Slowly sol. in dil acids, easily in $\text{HCl} + \text{Aq}$. (Hogbom, Bull. Soc. (2) 42. 2.)

$\text{Ce}_2(\text{WO}_4)_3$, $3\text{Na}_2\text{WO}_4$ (Didier, C. R. 102. 823)

Cerium tungstate chloride, $3\text{Ce}_2(\text{WO}_4)_3$, 2CeCl_3 .

(Didier, C. R. 102. 823.)

Chromic tungstate, basic, Cr_2O_3 , $2\text{WO}_3 + 5\text{H}_2\text{O}$.

Sol in 400 pts. H_2O at 15° . (Lefort, C. R. 87. 748.)

Chromic tungstate, $\text{Cr}_2(\text{WO}_4)_3 + 7$, and $13\text{H}_2\text{O}$.

Sol. in $\text{CrCl}_3 + \text{Aq}$, and in phosphoric, oxalic, or tartaric acids + Aq . (Lotz.)

$+ 3\text{H}_2\text{O}$. (Lefort, C. R. 87. 748)

Cr_2O_3 , $4\text{WO}_3 + 6\text{H}_2\text{O}$ Sol. in about 50 pts. H_2O at 15° . (Lefort.)

Cr_2O_3 , 5WO_3 . Not attacked by aqua regia.

(Smith and Oberholtzer, Z. anorg. 5. 63.)

Chromic paratungstate, $\text{Cr}_2\text{W}_7\text{O}_{24} + 9\text{H}_2\text{O}$.

Insol in H_2O or NH_4 paratungstate + Aq ; sol. in $\text{CrCl}_3 + \text{Aq}$ (Lotz.)

Cobaltous tungstate, CoWO_4 .

Anhydrous. Insol. in H_2O and acids.

$+ 2\text{H}_2\text{O}$ Insol. in H_2O and cold $\text{HNO}_3 + \text{Aq}$ Sl. sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. Completely sol.

in warm H_3PO_4 , $\text{HC}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{OH} + \text{Aq}$. (Anthon, J. pr. 9. 344.)

Sol in about 500 pts. H_2O . (Lefort.)

Cobaltous ditungstate, CoW_2O_7 (?).

$+ 3\text{H}_2\text{O}$. Insol. in H_2O . Sl. sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ Completely sol. in H_3PO_4 ,

$\text{HC}_2\text{H}_3\text{O}_2$, or $\text{NH}_4\text{OH} + \text{Aq}$ (Anthon.)

$+ 5\text{H}_2\text{O}$ Sol in about 100 pts. H_2O . (Lefort.)

$+ 8\text{H}_2\text{O}$ (?). (Lefort.)

Cobaltous tritungstate, $\text{CoW}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?).

Sol in H_2O . (Lefort, C. R. 88. 798.)

Cobaltous metatungstate, $\text{CoW}_4\text{O}_{13} + 9\text{H}_2\text{O}$.

Sol. in H_2O . (Scheibler, J. pr. 83. 317.)

Cobaltous paratungstate, $\text{Co}_3\text{W}_7\text{O}_{24} + 25\text{H}_2\text{O}$.

(Gonzalez, J. pr. (2) 36. 44.)

- Cobaltous sodium paratungstate**, 2CoO , $3\text{Na}_2\text{O}$, $12\text{WO}_3 + 30\text{H}_2\text{O}$.
(Gonzalez.)
- Cupric tungstate**, CuWO_4 .
+ $2\text{H}_2\text{O}$ Insol. in H_2O . Sol. in H_3PO_4 , $\text{H}_2\text{C}_2\text{O}_4$, or $\text{NH}_4\text{OH} + \text{Aq}$ Insol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. (Anthon.)
100 ccm. H_2O at 15° dissolve 0.1 g. (Lefort.)
- Cupric ditungstate**, CuW_2O_7 (?).
+ $4\text{H}_2\text{O}$ Insol. in H_2O and HNO_3 . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Anthon, J pr 9. 346.)
+ $5\text{H}_2\text{O}$ Sol. in about 300 pts. H_2O . (Lefort.)
- Cupric metatungstate**, $\text{CuW}_4\text{O}_{13} + 11\text{H}_2\text{O}$.
Sol. in H_2O . (Scheibler.)
- Cupric paratungstate**, $\text{Cu}_3\text{W}_7\text{O}_{24} + 19\text{H}_2\text{O}$.
Insol. in H_2O . (Knorre, B. 19. 826.)
- Cuprocupric tungstate**, Cu_2WO_4 , 2CuWO_4 .
Insol. in H_2O . (Zettnow, Pogg. 130. 255.)
- Cupric sodium paratungstate**, $\text{Cu}_3\text{Na}_5(\text{W}_7\text{O}_{24})_2 + 32\text{H}_2\text{O}$.
Ppt (Knorre, B. 19. 826)
 CuO , $4\text{Na}_2\text{O}$, $12\text{WO}_3 + 32\text{H}_2\text{O}$. Ppt. (Gonzalez, J pr. (2) 36. 52.)
- Cupric tungstate ammonia**, CuWO_4 , $2\text{NH}_3 + \text{H}_2\text{O}$.
(Schriff, A 123. 39.)
 CuWO_4 , 4NH_3 . Gives off NH_3 at ord. temp. Sol. in H_2O . Sol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Briggs, Chem. Soc. 1904, 85. 676.)
 CuO , 4WO_3 , $6\text{NH}_3 + 8\text{H}_2\text{O}$. Insol. in H_2O . Nearly insol. in dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Briggs, Chem Soc. 1904, 85. 676.)
- Didymium tungstate**, $\text{Di}_2(\text{WO}_4)_3$.
Precipitate. (Frerichs and Smith, A. 191. 355.)
- Didymium metatungstate**.
Sol. in H_2O . (Scheibler.)
- Didymium sodium tungstate**, $\text{DiNa}_3(\text{WO}_4)_3$.
Insol. in H_2O . Slowly sol. in dil. acids. Sol. in conc. $\text{HCl} + \text{Aq}$.
 $\text{DiNa}(\text{WO}_4)_2$. As above. (Högbom, Bull. Soc. (2) 42. 2.)
- Erbium sodium tungstate**, $\text{Na}_3\text{Er}_4(\text{WO}_4)_3$.
Insol. in H_2O . (Högbom.)
- Glucinum metatungstate**.
Very sol. in H_2O .
- Indium tungstate**, $\text{In}_2(\text{WO}_4)_3 + 8\text{H}_2\text{O}$.
Insol. in H_2O . Decomp. by acids. (Renz, Dissert. 1902.)
- Iron (ferrous) tungstate**, FeWO_4 .
Min. *Ferberite*, *Rennite*.
+ $3\text{H}_2\text{O}$. Insol. in H_2O . Sol. in cold H_2SO_4 , HCl , or $\text{HNO}_3 + \text{Aq}$. Decomp. by boiling acids with separation of WO_3 . Sol. in boiling $\text{H}_3\text{PO}_4 + \text{Aq}$ or warm $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. (Anthon, J. pr. 9. 343.)
+ $x\text{H}_2\text{O}$. Very unstable. (Lefort, A. ch. (5) 15. 314.)
- Iron (ferrous) ditungstate**, FeW_2O_7 (?).
Insol. in H_2O . Sol. in hot $\text{H}_3\text{PO}_4 + \text{Aq}$ or $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. Decomp. by dil. $\text{HCl} + \text{Aq}$ or by $\text{KOH} + \text{Aq}$. (Ebelmen, C. R. 17. 1198.)
+ $x\text{H}_2\text{O}$. Very unstable. (Lefort.)
- Iron (ferrous) tritungstate**, $\text{FeW}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?).
Ppt. Decomp. by cold, more rapidly by hot H_2O . (Lefort.)
- Iron (ferrous) metatungstate**.
Sol. in H_2O . (Scheibler, J pr. 83. 315.)
- Iron (ferric) tungstate, basic**, Fe_2O_3 , $2\text{WO}_3 + 4\text{H}_2\text{O}$.
Sol. in about 50 pts. H_2O . (Lefort.)
 $2\text{Fe}_2\text{O}_3$, $3\text{WO}_3 + 6\text{H}_2\text{O}$ Sol. in about 300 pts. H_2O at 15° . (Lefort.)
- Iron (ferric) tritungstate** (?), Fe_2O_3 , $4\text{WO}_3 + 4\text{H}_2\text{O} = \text{Fe}_2\text{O}_3$, $3\text{WO}_3 + \text{WO}_3$, $4\text{H}_2\text{O}$ (?).
Sol. in H_2O without decomp. (Lefort.)
- Iron (ferric) metatungstate**.
Sol. in H_2O . (Scheibler, J. pr. 83. 273.)
- Iron (ferrous) manganous tungstate**, 7FeWO_4 , MnWO_4 .
(Geuther and Forsberg, A. 120. 277.)
 4FeWO_4 , MnWO_4 . (G. and F.)
 3FeWO_4 , MnWO_4 . Partially sol. in conc. $\text{HCl} + \text{Aq}$. (G. and F.)
 3FeWO_4 , 2MnWO_4 . (G. and F.)
 FeWO_4 , MnWO_4 . (Zettnow, Pogg. 130. 250.)
 FeWO_4 , 2MnWO_4 . (G. and F.)
 FeWO_4 , 7MnWO_4 . (G. and F.)
 $x\text{FeWO}_4$, $y\text{MnWO}_4$. Min. *Wolframite*. Sol. in $\text{HCl} + \text{Aq}$, and boiling $\text{H}_3\text{PO}_4 + \text{Aq}$.
- Lanthanum tungstate**, $\text{La}_2(\text{WO}_4)_3$.
Precipitate.
- Lanthanum metatungstate**.
Sol. in H_2O . (Scheibler.)
- Lanthanum silver tungstate**.
See *Lanthanicotungstate*, silver.
- Lanthanum sodium tungstate**, $\text{Na}_3\text{La}_2(\text{WO}_4)_7$.
Insol. in H_2O . Slowly sol. in dil. acids. Sol. in $\text{HCl} + \text{Aq}$.
 $\text{La}_2\text{Na}_5(\text{WO}_4)_9$. As above. (Högbom, Bull. Soc. (2) 42. 2.)

Lead tungstate, PbWO_4 .

Insol. in H_2O or cold $\text{HNO}_3 + \text{Aq}$. Sol. in $\text{KOH} + \text{Aq}$. Decomp. by hot $\text{HNO}_3 + \text{Aq}$. (Anthon, J. pr. 9. 342.)

Sol. in about 4000 pts. H_2O . (Lefort)
Min. *Scheeleite*, *Stolzite*. Sol. in $\text{KOH} + \text{Aq}$; decomp. by HNO_3 .

Absolutely insol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$. (Smith and Bradbury, B. 24. 2930)

Lead ditungstate, $\text{PbW}_2\text{O}_7 + 2\text{H}_2\text{O}$ (?).

Sol. in about 80 pts. H_2O at 15° . (Lefort.)

Lead tritungstate, $\text{PbW}_3\text{O}_{10} + 2\text{H}_2\text{O}$ (?).

Ppt. (Lefort.)

Lead metatungstate, $\text{PbW}_4\text{O}_{18} + 5\text{H}_2\text{O}$.

Sl. sol. in cold, more in hot H_2O . Sol. in hot $\text{HNO}_3 + \text{Aq}$. (Scheibler, J. pr. 83. 318.)

Lead paratungstate, $\text{Pb}_3\text{W}_7\text{O}_{24}$.

Insol. in H_2O , dil. $\text{HNO}_3 + \text{Aq}$, $(\text{NH}_4)_2\text{WO}_4 + \text{Aq}$, or $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$. Sol. in $\text{NaOH} + \text{Aq}$ or boiling $\text{H}_3\text{PO}_4 + \text{Aq}$. (Lotz, A. 91. 49.)

Lead sodium paratungstate, PbO , $4\text{Na}_2\text{O}$, $12\text{WO}_3 + 28\text{H}_2\text{O}$.

(Gonzalez)

Lithium tungstate, Li_2WO_4 .

Rather easily sol. in H_2O . (Gmelin.)

Lithium metatungstate, $\text{Li}_2\text{W}_4\text{O}_{18}$.

Insol. in H_2O . (Knorre, J. pr. (2) 27. 94.)
 $+ x\text{H}_2\text{O}$. Syrup. (Scheibler.)

Lithium paratungstate, $\text{Li}_{10}\text{W}_{12}\text{O}_{41} + 33\text{H}_2\text{O}$ (or $\text{Li}_5\text{W}_7\text{O}_{24} + 19\text{H}_2\text{O}$).

According to Scheibler, more sol. than the paratungstates of the other alkali metals

Lithium tungstate tungsten oxide, $\text{Li}_2\text{W}_5\text{O}_{15}$.

Lithium bronze. Insol. in H_2O .

Lithium potassium tungstate tungsten oxide, $\text{Li}_2\text{W}_5\text{O}_{15}$, $3\text{K}_2\text{W}_4\text{O}_{12}$.

Lithium potassium bronze. Insol. in H_2O . (Feit, B. 21. 135.)

Lithium sodium tungstate, $\text{Li}_2\text{WO}_4 + 3\text{H}_2\text{O}$, $3(\text{Na}_2\text{WO}_4 + 3\text{H}_2\text{O})$.

(Traube, N. Jahrb. Miner, 1894, I. 190.)

Magnesium tungstate, MgWO_4 .

Anhydrous. Insol. in H_2O . Gradually decomp. by boiling conc. $\text{HNO}_3 + \text{Aq}$. (Geuther and Forsberg, A. 120. 272.)

$+ 3\text{H}_2\text{O}$. Very sol. in H_2O ; nearly insol. in alcohol. (Lefort, A. ch. (5) 16. 329.)

$+ 7\text{H}_2\text{O}$. Slowly sol. in cold, very easily in hot H_2O . (Ullik, W. A. B. 56. 2. 152.)

Magnesium ditungstate, $\text{MgW}_2\text{O}_7 + 8\text{H}_2\text{O}$ (?).

Sol. in about 100 pts. H_2O . (Lefort.)

Magnesium tritungstate, $\text{MgW}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?).

Easily sol. in H_2O with gradual decomp. (Lefort)

Magnesium metatungstate, $\text{MgW}_4\text{O}_{18} + 8\text{H}_2\text{O}$.

Sol. in H_2O (Scheibler.)

Magnesium paratungstate, $\text{Mg}_3\text{W}_7\text{O}_{24} + 24\text{H}_2\text{O}$.

Very difficultly sol. in cold, somewhat sol. in hot H_2O (Knorre, B. 19. 825.)

Magnesium potassium tungstate, MgWO_4 , K_2WO_4 .

$+ 2\text{H}_2\text{O}$ Very sl. sol. in H_2O . (Ullik.)
 $+ 6\text{H}_2\text{O}$ Precipitate.

Magnesium potassium paratungstate, $5(2/3\text{K}_2\text{O}$, $1/3\text{MgO}$), $12\text{WO}_3 + 24\text{H}_2\text{O}$.

Insol. in cold, sol. in hot H_2O . (Hallepeau, C. R. 1898, 127. 621.)

Magnesium sodium paratungstate, 3MgO , $3\text{Na}_2\text{O}$, $14\text{WO}_3 + 33\text{H}_2\text{O}$.

Nearly insol. in H_2O . (Knorre, B. 19. 825.)

Manganous tungstate, MnWO_4 .

Min. *Hübnerite*. Partially sol. in $\text{HCl} + \text{Aq}$.

$+ 2\text{H}_2\text{O}$. Insol. in H_2O ; sol. in warm H_3PO_4 and $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$; sl. sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Insol. in cold $\text{HCl} + \text{Aq}$. (Anthon.)
 $+ \text{H}_2\text{O}$ Sol. in about 2500 pts. H_2O at 15° . (Lefort.)

Manganous ditungstate, $\text{MnW}_2\text{O}_7 + 3\text{H}_2\text{O}$ (?).

Sol. in about 450 pts. H_2O at 15° . (Lefort, A. ch. (5) 15. 333.)

Manganous tritungstate, $\text{MnW}_3\text{O}_{10} + 5\text{H}_2\text{O}$ (?).

Decomp. by H_2O into MnW_2O_7 and $\text{MnW}_4\text{O}_{13}$. (Lefort, A. ch. (5) 17. 480.)

Manganous metatungstate, $\text{MnW}_4\text{O}_{18} + 10\text{H}_2\text{O}$.

Very sol. in H_2O . (Wyrouboff, Bull. Soc. Min. 1892, 15. 82.)

Manganous paratungstate, 5MnO , $12\text{WO}_3 + 34\text{H}_2\text{O}$.

(Gonzalez, J. pr. (2) 36. 44.)

$\text{Mn}_3\text{W}_7\text{O}_{24} + 11\text{H}_2\text{O}$. When recently pptd., sol. in a small amt. of H_2O acidulated with HNO_3 . (Lotz.)

Manganous potassium tungstate, 2MnO , $3\text{K}_2\text{O}$, $12\text{WO}_3 + 16\text{H}_2\text{O}$.

Completely insol. in H_2O . (Hallepeau, Bull. Soc. 1898, (3) 19. 955.)

Manganous sodium paratungstate, $3\text{Na}_2\text{O}$, 3MnO , $14\text{WO}_3 + 36\text{H}_2\text{O}$.

Sol. in H_2O . (Knorre, B. **19**. 826.)

Manganic sodium tungstate.

See Permanganotungstate, sodium.

Mercurous tungstate, Hg_2WO_4 .

Insol. in H_2O . (Anthon.)

Impossible to obtain pure, as it is decomp. into—

$2\text{Hg}_2\text{O}$, $3\text{WO}_3 + 8\text{H}_2\text{O}$. Sol. in 100 pts H_2O at 15° . (Lefort.)

Mercurous metatungstate, $\text{Hg}_2\text{W}_4\text{O}_{13} + 25\text{H}_2\text{O}$.

Ppt. (Scheibler, J. pr. **83**. 319.)

Mercuric tungstate, HgWO_4 .

Sl. sol. in H_2O and very unstable (Lefort, A. ch. (5) **15**. 356.)

3HgO , 2WO_3 . Insol. in H_2O . (Anthon.)

2HgO , 3WO_3 . Insol. in H_2O . (Anthon.)

3HgO , $5\text{WO}_3 + 5\text{H}_2\text{O}$. Sol. in about 250 pts. H_2O at 15° . (Lefort.)

2HgO , $5\text{WO}_3 + 7\text{H}_2\text{O}$. Decomp. by hot or cold H_2O . (Lefort, C. R. **88**. 798.)

Mercuric tritungstate, $\text{HgW}_2\text{O}_{10} + 7\text{H}_2\text{O}$ (?).

Sol. in about 120 pts. H_2O at 15° (Lefort, A. ch. (5) **15**. 360.)

Molybdenum tungstate.

Easily sol. in H_2O Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$ or in alcohol of 0.87 sp. gr. (Berzelius)

Neodymium tungstate, $\text{Nd}_2(\text{WO}_4)_3$.

Very sl. sol. in H_2O . 1 pt. is sol. in 52830 pts H_2O at 22° ; 59580 pts. at 65° ; 66040 pts. at 98° (Hitchcock, J. Am. Chem. Soc. 1895, **17**. 532.)

Nickel tungstate, NiWO_4 .

$+3\text{H}_2\text{O}$. Sol. in about 1000 pts. H_2O at 15° . (Lefort.)

$+6\text{H}_2\text{O}$. Insol. in H_2O or $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. Sol. in boiling $\text{H}_3\text{PO}_4 + \text{Aq}$, $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, or in warm $\text{NH}_4\text{OH} + \text{Aq}$. (Anthon.)

Nickel ditungstate, $\text{NiW}_2\text{O}_7 + 5\text{H}_2\text{O}$ (?).

Sol. in about 250 pts. H_2O . (Lefort.)

Nickel tritungstate, $\text{NiW}_3\text{O}_{10} + 4\text{H}_2\text{O}$ (?).

Sol. in H_2O . Pptd. by alcohol. Decomp. by cold or warm H_2O after above pptn. (Lefort.)

Nickel metatungstate, $\text{NiW}_4\text{O}_{13} + 8\text{H}_2\text{O}$.

Sol. in H_2O . (Scheibler, J. pr. **83**. 273.)

Nickel paratungstate, $\text{Ni}_3\text{W}_7\text{O}_{24} + 14\text{H}_2\text{O}$.

Insol. in H_2O . Sl. sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$. Completely sol. in warm H_3PO_4 or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Anthon.)

Potassium tungstate, K_2WO_4 .

Anhydrous. Rather deliquescent Easily sol in H_2O .

$+ \text{H}_2\text{O}$. Easily sol in H_2O . Insol. in alcohol

$+ 2\text{H}_2\text{O}$. Very sol in H_2O with absorption of heat.

1 pt. dissolves in 1.94 pts cold, and 0.66 pt. boiling H_2O Alcohol does not mix with conc. aq. solution, but slowly separates out the salt from it. Acids, even H_2SO_3 , $\text{HC}_2\text{H}_3\text{O}_2$ or $\text{H}_2\text{C}_2\text{O}_4$, separate out WO_3 from solution. (Riche, A. ch. (3) **50**. 45.)

Potassium ditungstate, $\text{K}_2\text{W}_2\text{O}_7 + 2\text{H}_2\text{O}$.

Sol. in about 8 pts H_2O at 15° , but on heating is converted into—

$+ 3\text{H}_2\text{O}$. 100 pts H_2O dissolve only 2-3 pts. at 15° . (Lefort, A. ch. (5) **9**. 102.)

Potassium tritungstate, $\text{K}_2\text{W}_3\text{O}_{10} + 2\text{H}_2\text{O}$.

Sol. in 5-6 pts. H_2O at 15° Can be recryst. from hot H_2O (Lefort, A. ch. (5) **9**. 105.)

Potassium metatungstate, $\text{K}_2\text{W}_4\text{O}_{13} + 5\text{H}_2\text{O}$.

Not efflorescent Easily sol. in H_2O . (Marignac.)

$(\text{K}_4\text{W}_5\text{O}_{17} + 8\text{H}_2\text{O})$ of Margueritte.)

$+ 8\text{H}_2\text{O}$. Extremely efflorescent. (Scheibler.)

Potassium octotungstate, $\text{K}_2\text{W}_8\text{O}_{26}$.

Insol in H_2O (Knorre, J. pr (2) **27**. 49.)

Potassium tungstate, $\text{K}_8\text{W}_{10}\text{O}_{34} + 9\text{H}_2\text{O} = 4\text{K}_2\text{O}$, $10\text{WO}_3 + 9\text{H}_2\text{O}$.

Properties resemble the *paratungstate* (Gibbs, Proc Am Acad **15**. 11.)

$+ 8\text{H}_2\text{O} = \text{K}_4\text{W}_5\text{O}_{17} + 4\text{H}_2\text{O}$. Sol. in 15 pts. H_2O at 15° , but decomposed by heating into $\text{K}_2\text{W}_2\text{O}_7$ and $\text{K}_2\text{W}_3\text{O}_{10}$. (Lefort, A. ch. (5) **9**. 104.)

$\text{K}_{10}\text{W}_{14}\text{O}_{47}$. Very difficulty sol. in cold, appreciably sol. in hot H_2O , probably with decomposition. (Knorre.)

Potassium paratungstate, $\text{K}_{10}\text{W}_{12}\text{O}_{41} + 11\text{H}_2\text{O}$ (or $\text{K}_8\text{W}_7\text{O}_{24} + 6\text{H}_2\text{O}$, according to Lotz and Scheibler.)

Much more sol. in hot than cold H_2O (Anthon.)

Sol in 100 pts. H_2O at 16° , in 8.5 pts. at 100° . (Anthon.)

Sol. in 48.5 pts. cold, and 15 15 pts boiling H_2O . (Riche)

By shaking the crystals several days at 20° , 1 pt dissolves in 71 pts. H_2O . If the salt is treated with boiling water, more goes into solution the longer it is boiled, until after several days' boiling 1 pt of the salt dissolved in 5 52 pts. H_2O at 18° Kept in a closed flask, this solution contained after 26 days 1 pt. of salt to 11.9 pts. H_2O ; after 153 days, 1 pt. of salt to 15.6 pts. H_2O ; after 334 days, 1 pt. of salt to 15.6 pts. H_2O . Insol. in alcohol. (Marignac.)

$+ 8\text{H}_2\text{O}$.

Potassium sodium tungstate, K_2WO_4 , $2Na_2WO_4 + 14H_2O$.

Easily sol. in hot and cold H_2O (Ullik, W A B. **56**, **2**, 150)

Deliquescent Sol in 1 pt. cold, and $\frac{1}{2}$ pt hot H_2O . (Anthon)

Potassium sodium paratungstate, Na_2O , $4K_2O$, $12WO_3 + 15H_2O$.

Sol. in H_2O (Marignac)

$\frac{8}{11}Na_2O$, $\frac{3}{11}K_2O$, $12WO_3 + 25H_2O$. Sol in H_2O . (Marignac.)

Potassium strontium tungstate tungsten oxide, $5K_2W_4O_{12}$, SrW_4O_{12} .

(Engels, Z anorg. 1903, **37**, 143)

Potassium uranous tungstate.

See Uranosotungstate, potassium.

Potassium zirconium tungstate.

See Zirconotungstate, potassium.

Potassium tungstate tungsten oxide, K_2WO_4 , W_2O_5 .

Potassium tungsten bronze. (Scheibler, J pr. **83** 321.)

Formula is $K_2W_4O_{12}$ Not attacked by acids, and only very sl by alkalis. (Knorre, J. pr. (2) **27**, 49.)

K_2WO_4 , $4WO_3$ Not attacked by acids, even HF , or by alkalis + Aq. Insol in alcohol. (Zettnow, Pogg, **130**, 262.)

Does not exist (Knorre.)

Potassium sodium tungstate tungsten oxide, $5K_2W_4O_{12} + 2Na_2W_5O_{15}$.

Potassium sodium tungsten bronze. Properties as potassium bronze

$3K_2W_4O_{12}$, $2Na_2W_5O_{15}$. As above. (Knorre, J. pr. (2) **27**, 49.)

Praseodymium tungstate, $Pr_2(WO_4)_3$.

Very sl. sol. in H_2O .

Insol in H_2O at 20° ; at 75° , 1 pt. is sol. in 23,300 pts. H_2O . (Hitchcock, J. Am. Chem. Soc. 1895, **17**, 529.)

Rubidium metatungstate, Rb_2O , $4WO_3 + 8H_2O$.

Sol. in about 10 pts. cold H_2O .

Moderately sol. in warm H_2O . (Wyroutboff, Bull. Soc. Min. 1892, **15**, 69.)

Rubidium pentatungstate, $Rb_2W_5O_{18}$.

Almost insol. in hot H_2O . When finely powdered, it is sol. in alkali carbonates + Aq. (Schaeffer, Z. anorg. 1904, **38**, 163.)

Rubidium octotungstate, $Rb_2W_8O_{28}$.

Insol. in H_2O , acids, and alkalis. (Schaeffer, Z anorg. 1904, **38**, 103.)

Rubidium paratungstate, $5Rb_2O$, $12WO_3 + 18H_2O$.

Verv sl. sol. in H_2O . (Schaeffer, Z. anorg. 1904, **38**, 173.)

Samarium metatungstate, Sm_2O_3 , $12WO_3 + 35H_2O$.

Easily sol in H_2O . (Cleve.)

Samarium sodium tungstate, $Na_5Sm_4(WO_4)_9$.

Insol in H_2O Slowly sol in dil. acids, easily in conc HCl + Aq. (Högbom, Bull. Soc. (2) **42**, 2.)

Silver (argentous) tungstate, Ag_2O , $2WO_3$.

HNO_3 + Aq separates WO_3 . KOH + Aq dissolves out WO_3 and separates Ag_2O . (Wöhler and Rautenberg, A. **114**, 120.)

Does not exist. (Muthmann, B. **20**, 983.)

Silver tungstate, Ag_2WO_4 .

Sol in about 2000 pts H_2O at 15° . Easily decomp. by $NaCl$ + Aq or HNO_3 + Aq. (Lefort.)

$Ag_2W_2O_7$. Insol in H_2O . Nearly insol. in HCl , H_2O_2 or H_3PO_4 + Aq. More sol. in KOH , NH_4OH + Aq, or $H_2C_2O_4$ + Aq. (Anthon, J. pr. **9**, 347.)

+ H_2O Sol in about 5000 pts. H_2O at 15° (Lefort.)

Silver metatungstate, $Ag_2W_4O_{13} + 3H_2O$.

Sl. sol in H_2O (Scheibler, J. pr. **83**, 318.)

Nearly insol. in H_2O . (Rosenheim, Z. anorg. 1911, **69**, 250.)

Silver paratungstate, $Ag_{10}W_{12}O_{41} + 8H_2O$.

(Gonzalez, J. pr. (2) **36**, 44)

Silver tungstate ammonia, Ag_2WO_4 , $4NH_3$.

Sol. in H_2O with rapid decomp. (Widmann, Bull. Soc. (2) **20**, 64.)

Sodium tungstate, $Na_2WO_4 + 2H_2O$.

Sol. in 4 pts. cold, and 2 pts. boiling H_2O . (Vauquelin and Hecht.)

Sol in 1 l pts. cold, and 0.5 pt. boiling H_2O . (Anthon.)

Sol. in 2.44 pts. H_2O at 0° ; 1.81 pts. at 15° ; 0.81 pt. at 100° . (Riche.)

Solubility in H_2O at t° .

t°	% Na_2WO_4	Mols H_2O to 1 mol. Na_2WO_4	Mols. of anhydrous salt to 100 mols. H_2O

1.48595	38 43	43 14

(Pawlewski, B. 1900, 33. 1224)

$\text{Na}_2\text{WO}_4 + \text{Aq}$ is pptd. by HCl , HNO_3 , or $\text{H}_2\text{SO}_4 + \text{Aq}$, but not by H_2SO_3 , HI , HCN , oxalic, or tartaric acids + Aq , but pptn. by the former acids is not prevented by presence of the latter, but when heated with $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, or in presence of $\text{H}_3\text{PO}_4 + \text{Aq}$, mineral acids cause no ppt. (Zettnow, Pogg, 130. 16.)

Much more sol. in H_2O_2 than in H_2O . (Kellner, Dissert, 1909.)

Sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol. (Riche, A. ch (3) 50. 52.)

Insol. in methyl acetate. (Naumann, B 1909, 42. 3790.)

+10 H_2O .Solubility in H_2O at t° .

t°	% Na_2WO_4	Mols H_2O to 1 mol. Na_2WO_4	Mols anhydrous salt to 100 mols H_2O
-5	30 60	37 04	2 70
-4.0	31 87	34 92	2 86
-3 5	32 98	33 19	3.01
-2 0	34.52	30 90	3.23
0.0	36.54	28.37	3.52
+3.0	39.20	25 33	3.95
+5 0	41 02	23.48	4.26

(Funk, B. 1900, 33. 3701.)

Sodium ditungstate, $\text{Na}_2\text{W}_2\text{O}_7$.

Sol. in H_2O by heating several hours at $130-150^\circ$. (Knorre, J. pr. (2) 27. 80.)
+6 H_2O Sol. in 13 pts. H_2O at 15° . (Lefort, C. R. 88. 798.)

Sodium tritungstate, $\text{Na}_2\text{W}_3\text{O}_{10} + 4\text{H}_2\text{O}$.

Sol. in 1 pt. H_2O . Decomp. on standing into sol. tetraungstate and insol. ditungstate. (Lefort, C. R. 88. 798.)

Neither this nor the other tritungstates of Lefort exist, according to Knorre (J. pr. (2) 27. 49.)

Sodium metatungstate, $\text{Na}_2\text{W}_4\text{O}_{13}$.

Anhydrous. Insol. in H_2O .
+10 H_2O . Sol. at 13° in 0.935 pt. H_2O to form a solution of 3.02 sp. gr. (Scheibler.)
Sol. at 19° in 0.195 pt H_2O . (Forcher.)
Precipitated by alcohol.

Sodium pentatungstate, $\text{Na}_2\text{W}_5\text{O}_{16}$.

Sl. sol. in H_2O by heating 3 hours at 150° . (Knorre, J. pr. (2) 27. 49)

Sodium octotungstate, $\text{Na}_2\text{W}_8\text{O}_{25}$.

Insol. in H_2O . Very difficultly attacked by acids and alkalies (Knorre.)
+12 H_2O . Easily sol. in cold H_2O , and can be recryst without decomp. (Ullik, W. A. B. 56. 2. 157.)

3 Na_2O , 8 WO_3 + 17 H_2O . Very efflorescent. Very sol. in hot H_2O . (Wells, J. Am. Chem. Soc. 1907, 29. 112.)

Sodium tungstate, $\text{Na}_2\text{W}_7\text{O}_{27}$ (?).

+16 H_2O (?) (Marignac, A. ch. (3) 69. 51.)

+21 H_2O (?). Much more sol and much more rapidly than the paratungstate (Marignac)

$\text{Na}_4\text{W}_3\text{O}_{11} + 7\text{H}_2\text{O}$ (?). Mixture of $\text{Na}_2\text{W}_4\text{O}_{13}$ and Na_2WO_4 . (Knorre, J. pr. (2) 27. 49.)

$\text{Na}_4\text{W}_5\text{O}_{17} + 11\text{H}_2\text{O}$. Efflorescent. Sol. in H_2O . (Marignac.)

100 pts H_2O dissolve 16 pts at 15° . (Lefort, A. ch. (5) 9. 97.)

Formula is 4 Na_2O , 10 WO_3 + 23 H_2O , according to Gibbs (Proc. Am. Acad. 15. 5.)

Sodium paratungstate, $\text{Na}_{10}\text{W}_{12}\text{O}_{41} + 21\text{H}_2\text{O}$.
 $+25\text{H}_2\text{O}$
 $+28\text{H}_2\text{O} = 3\text{Na}_6\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$, according to Lotz and Scheibler.

Sol. in 8 pts cold H_2O (Anthon), in 12.6 pts at 22° . (Forcher)

Sol. in about 12 pts. H_2O . (Marignac.)
 The aqueous solution saturated at $35-40^\circ$ contained to 1 pt. of the salt, after:

1	12	77	227	410 days,
at 18°	18°	18°	16°	20°
9.25	11.26	10.92	11.90	11.74 pts. H_2O .

The solution saturated by very long boiling, after a part of the salt had crystallised out, contained, after:

1	2	12 days,
0.68	0.91	2.59 pts. H_2O to 1 pt. salt,
72	222	405 days,
6.88	9.75	8.80 pts. H_2O to 1 pt. salt.

(Marignac.)

Decomp. by boiling with H_2O (Knorre, B. 18. 2362.)

Sodium strontium paratungstate, Na_2O ,
 4SrO , $12\text{WO}_3 + 29\text{H}_2\text{O}$.
 (Gonzalez, J pr (2) 36. 44.)

Sodium strontium tungstate tungsten oxide,
 $5\text{Na}_2\text{W}_5\text{O}_{15}$, $\text{SrW}_4\text{O}_{12}$.
 $12\text{Na}_2\text{W}_5\text{O}_{15}$, $\text{SrW}_4\text{O}_{12}$. (Engels, Z. anorg 1903, 37. 133.)

Sodium thorium tungstate, $\text{Na}_4\text{Th}(\text{WO}_4)_4$.

Insol. in H_2O . Slowly sol. in dil. acids, easily in conc. $\text{HCl} + \text{Aq}$. (Högbom, Bull. Soc. (2) 42. 2.)

Sodium ytterbium tungstate, Yb_2O_3 , $9\text{Na}_2\text{O}$,
 12WO_3 .

Insol. in H_2O . (Cleve, Z. anorg 1902, 32. 154.)

$2\text{Yb}_2\text{O}_3$, $4\text{Na}_2\text{O}$, 7WO_3 . Ppt. (Cleve.)

Sodium yttrium tungstate, $\text{Na}_3\text{Y}_2(\text{WO}_4)_7$.

Insol. in H_2O , and very slowly attacked by dil. acids (Högbom, Bull. Soc. (2) 42. 2.)

Sodium zinc paratungstate, Na_2O , 2ZnO ,
 $7\text{WO}_3 + 15\text{H}_2\text{O}$.

Difficultly sol. in cold, more sol. in hot H_2O (Knorre, B. 19. 823)
 $+21\text{H}_2\text{O}$. (Knorre.)

Sodium tungstate tungsten oxide, Na_2WO_4 ,
 W_2O_5 .

Yellow tungsten bronze. Gradually deliquesces on air. Not decomp. by any acid, even aqua regia, except HF , or by alkalis. (Wöhler, Pogg. 2. 350.)

Correct formula is $\text{Na}_5\text{W}_6\text{O}_{18}$, according to Phillip (B. 15. 499).

Sol in ammoniacal silver solution with separation of Ag. Easily sol. in boiling alkaline potassium ferricyanide + Aq (Phillip, B. 12. 2234.)

Na_2WO_4 , $2\text{W}_2\text{O}_5$. *Blue tungsten bronze*. Not attacked by acids or alkalis. (Scheibler.)

Correct formula is $\text{Na}_2\text{W}_5\text{O}_{15}$, according to Phillip (B. 15. 506).

Sol. in ammoniacal silver solution with separation of Ag.

$\text{Na}_4\text{W}_5\text{O}_{15}$. Properties as above. (Phillip, B. 15. 499.)

$\text{Na}_2\text{W}_3\text{O}_9$. Properties as above (Phillip.)

Strontium tungstate, SrWO_4 .

Precipitate (Schultze.)

Sol. in about 700 pts. H_2O . (Lefort.)

Strontium ditungstate, $\text{SrW}_2\text{O}_7 + 3\text{H}_2\text{O}$ (?).

100 ccm. H_2O dissolve 0.35 g. at 15° . (Lefort, A. ch. (5) 15. 326)

Strontium tritungstate, $\text{SrW}_3\text{O}_{10} + 5\text{H}_2\text{O}$ (?).

Sol. in H_2O with decomp. into SrW_2O_7 and $\text{SrW}_4\text{O}_{13}$. (Lefort, A. ch. (5) 17. 477.)

Strontium metatungstate, $\text{SrW}_4\text{O}_{13} + 8\text{H}_2\text{O}$.

Solubility as calcium metatungstate. (Scheibler.)

Extraordinarily sol. in H_2O . (Wyrouboff, Bull. Soc. Min. 1892, 15. 63)

Strontium paratungstate, $\text{Sr}_3\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$,
 or $\text{Sr}_5\text{W}_{12}\text{O}_{41} + 27\text{H}_2\text{O}$.

Insol. in cold, sl. sol. in hot H_2O . (Knorre, B. 18. 327.)

Thallous tungstate, Tl_2WO_4 .

Very sl sol. in H_2O . Sol. in hot $\text{Na}_2\text{CO}_3 + \text{Aq}$ (Flemming, J. B. 1868. 250)

Thallous metatungstate, $\text{Tl}_2\text{W}_4\text{O}_{13} + 3\text{H}_2\text{O}$.

Nearly insol. in H_2O . (Rosenheim, Z. anorg. 1911, 69. 251.)

Thallous paratungstate, $5\text{Tl}_2\text{O}$, 12WO_3 .

Insol. in H_2O .

Sol. in $\text{Na}_2\text{CO}_3 + \text{Aq}$. and $\text{KOH} + \text{Aq}$. decomposed by mineral acids. (Schaeffer, Z. anorg. 1904, 38. 171.)

Thallous hydrogen tungstate, TlHWO_4 .

Insol. in H_2O . Difficultly sol. in $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in boiling alkali carbonates or hydrates + Aq (Oettinger, J. B. 1864. 254.)

Thorium tungstate.

Precipitate. (Berzelius.)

Insol. in H_2O .

Tin (stannous) tungstate, $\text{SnWO}_4 + 6\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in oxalic acid and in $\text{KOH} + \text{Aq}$. Slowly sol. in hot $\text{H}_3\text{PO}_4 + \text{Aq}$. (Anthon, J pr. 9. 341.)

Tin (stannic) tungstate, $9\text{SnO}_2, 13\text{WO}_3$.

Insol. in ammonium tungstate + Aq. Sol. in tin salts + Aq, also in phosphoric, oxalic, or tartaric acids + Aq. (Lotz, A. 91. 49.)

Tungsten tungstate, $\text{WO}_2, \text{WO}_3 = \text{W}_2\text{O}_5$.

See Tungsten oxide, W_2O_5 .

Uranous tungstate, $\text{UO}_2, 3\text{WO}_3 + 6\text{H}_2\text{O}$.

Decomp. by NaOH + Aq or HNO_3 + Aq. Sol. in HCl + Aq, but not in H_2SO_4 . (Ram-melsberg)

Uranyl tungstate, $\text{UO}_3, \text{WO}_3 + 2\text{H}_2\text{O}$.

Sol. in about 100 pts H_2O . (Lefort, C. R. 87. 748.)

$\text{UO}_3, 3\text{WO}_3 + 5\text{H}_2\text{O}$ (?). Sol. in about 200 pts H_2O . (Lefort)

Vanadium tungstate.

Sl. sol. in H_2O .

Ytterbium tungstate basic, $(\text{YbO})_2\text{WO}_4$.

Ppt. (Cleve, Z. anorg. 1902, 32. 153.)

Ytterbium metatungstate, $\text{Yb}_2\text{O}_3, 12\text{WO}_3 + 35\text{H}_2\text{O}$.

Very sol. in H_2O . (Cleve)

Yttrium tungstate, $\text{Y}_2(\text{WO}_4)_3 + 6\text{H}_2\text{O}$.

Very sl. sol. in H_2O , but more sol. in Na_2WO_4 + Aq. (Berlin)

Zinc tungstate, ZnWO_4 .

Insol. in H_2O . (Geuther and Forsberg, A. 120. 270.)

+ H_2O . Sol. in 500 pts. H_2O .

Zinc ditungstate, $\text{ZnW}_2\text{O}_7 + 3\text{H}_2\text{O}$ (?).

Sol. in 10 pts. H_2O at 15° , but solution soon decomposes. (Lefort.)

Zinc tritungstate, $\text{ZnW}_3\text{O}_{10} + 5\text{H}_2\text{O}$.

Insol. in boiling H_2O . Sol. in ZnSO_4 + Aq, or $\text{Na}_4\text{W}_3\text{O}_{17}$ + Aq. (Gibbs.)

Zinc metatungstate, $\text{ZnW}_4\text{O}_{13} + 10\text{H}_2\text{O}$.

Easily sol. in H_2O . Loses crystal H_2O by ignition, and becomes insol. in H_2O . (Scheibler, J. pr. 83. 273.)

+ $8\text{H}_2\text{O}$. More sol. in H_2O than magnesium comp. (Wyrouboff, Bull Soc Min 1892, 15. 72.)

Zinc tungstate, $\text{Zn}_4\text{W}_{10}\text{O}_{34} + 18\text{H}_2\text{O} = 4\text{ZnO}, 10\text{WO}_3 + 18\text{H}_2\text{O}$.

Insol. in H_2O . Sol. in excess of zinc sulphate or of sodium tungstate + Aq. (Gibbs, Proc. Am. Acad. 15. 14.)

+ $29\text{H}_2\text{O}$. (Gibbs.)

Zinc paratungstate, $5\text{ZnO}, 12\text{WO}_3 + 37\text{H}_2\text{O}$.

(Gonzalez, J. pr. (2) 36. 44.)

Zinc tungstate, $\text{Zn}_9\text{W}_{22}\text{O}_{75} + 66\text{H}_2\text{O} = 9\text{ZnO}, 22\text{WO}_3 + 66\text{H}_2\text{O}$.

Insol. in H_2O (Gibbs.)

Zinc tungstate ammonia, $\text{ZnWO}_4, 4\text{NH}_3 + 3\text{H}_2\text{O}$.

Decomp. in the air (Briggs, Chem Soc. 1904, 85. 677)

Pertungstic acid.

See Pertungstic acid.

Tungstoarsenic acid.

See Arseniotungstic acid.

Tungstoboric acid.

See Borotungstic acid.

Tungstocyanhydric acid, $\text{H}_4\text{W}(\text{CN})_8 + 6\text{H}_2\text{O}$.

Hydroscopic.

Sol. in H_2O and abs. alcohol. Insol. in ether, benzene etc. (Olsson, Z. anorg. 1914, 88. 71)

Ammonium tungstocyanide, $(\text{NH}_4)_4\text{W}(\text{CN})_8$.

Easily sol. in H_2O . Aqueous solution decomp. slowly.

Insol. in organic solvents. (Olsson, Z. anorg 1914, 88. 62)

Cadmium tungstocyanide, $\text{Cd}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$.

Nearly insol. in H_2O . Sl. sol. in dil. HCl . Sol. in conc. NH_4OH + Aq. Insol. in organic solvents. (Olsson, Z. anorg. 1914, 88. 63.)

Cæsium tungstocyanide, $\text{Cs}_4\text{W}(\text{CN})_8$.

Easily sol. in H_2O forming stable solutions. Insol. in alcohol and other organic solvents (Olsson.)

Calcium tungstocyanide, $\text{Ca}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$.

Easily sol. in H_2O . Aqueous solution decomp. slowly.

Insol. in organic solvents. (Olsson)

Lead tungstocyanide, $\text{Pb}_2\text{W}(\text{CN})_8 + 4\text{H}_2\text{O}$.

Sol. in H_2O . Solution decomp. after short time

Insol. in organic solvents. (Olsson.)

Magnesium tungstocyanide, $\text{Mg}_2\text{W}(\text{CN})_8 + 6\text{H}_2\text{O}$.

Easily sol. in H_2O . Aqueous solution decomp. on heating.

Insol. in organic solvents. (Olsson.)

Manganous tungstocyanide, $\text{Mn}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$.

Insol. in H_2O and in acids.

Insol. in organic solvents. (Olsson.)

Potassium tungstocyanide, $K_4W(CN)_8 + 2H_2O$.

Easily sol. in H_2O from which it can be cryst. 10 ccm. H_2O dissolve 13-14 g. salt at 18°.

Insol. in alcohol, ether and other organic solvents. (Olsson.)

Rubidium tungstocyanide, $Rb_4W(CN)_8 + 3H_2O$.

Easily sol. in H_2O . Can be cryst. from H_2O . Insol. in alcohol and other organic solvents. (Olsson.)

Silver tungstocyanide, $Ag_4W(CN)_8$.

Insol. in H_2O

Insol. in acids. Decomp. by dil. HCl .

Sol. in hot conc. $NH_4OH + Ag$.

Insol. in organic solvents. (Olsson.)

Sodium tungstocyanide, $Na_4W(CN)_8 + 2\frac{1}{2}H_2O$.

Hydroscopic

Easily sol. in H_2O .

Insol. in organic solvents. (Olsson.)

Strontium tungstocyanide, $Sr_2W(CN)_8 + 8H_2O, +9H_2O$.

Easily sol. in H_2O . Aqueous solution decomp. on standing.

Insol. in organic solvents. (Olsson.)

Thallium tungstocyanide, $Tl_4W(CN)_8$.

Difficultly sol. in cold H_2O , more sol. in hot H_2O .

Insol. in organic solvents. (Olsson.)

Zinc tungstocyanide, $Zn_2W(CN)_8 + 4H_2O$.

Insol. in H_2O , and acids.

Sol. in conc. $NH_4OH + Aq$. (Olsson.)

Metatungstioiodic acid.

Ammonium metatungstioiodate, $2(NH_4)_2O, 2I_2O_5, 4WO_3 + 12H_2O$.

Very sl. sol. in H_2O (Chrétien, A. ch. 1898, (7) 15. 431.)

Potassium tungstioiodate, $K_2H_3WIO_8$.

(Blomstrand, J. pr. (2) 40. 327.)

$2K_2O, 2I_2O_5, 4WO_3 + 8H_2O$.

5.13 g. are sol. in 1 l. H_2O at 15°; 8.25 g. at 100°. (Chrétien, A. ch. 1898, (7) 15. 431.)

Tungstoperiodic acid.

Ammonium sodium tungstoperiodate, $2(NH_4)_2O, Na_2O, I_2O_7, 2WO_3 + 16H_2O$.

Ppt. (Rosenheim, A. 1899, 308. 64.)

Barium tungstoperiodate, $5BaO, I_2O_7, 12WO_3 + 12H_2O$.

Ppt. (Rosenheim.)

Potassium tungstoperiodate, $5K_2O, I_2O_7, 12WO_3 + 8H_2O$.

Sol. in H_2O . (Rosenheim.)

Sodium tungstoperiodate, $3Na_2O, I_2O_7, 2WO_3 + 4H_2O$.

Ppt.

$5Na_2O, I_2O_7, 12WO_3 + 16H_2O$.

Sol. in H_2O (Rosenheim.)

Strontium tungstoperiodate, $5SrO, I_2O_7, 12WO_3 + 28H_2O$.

Sol. in H_2O . (Rosenheim.)

Tungstophosphoric acid,

See Phosphotungstic acid.

Tungstosilicic acid,

See Silicotungstic acid.

Tungstotungstic acid.

Lithium tungstotungstate, $Li_2O, WO_3 + WO_2, 3WO_3$.

Insol. in boiling H_2O and conc. HCl . (Hallopeau, C. R. 1898, 127. 514.)

Potassium tungstotungstate, $K_2O, WO_3 + WO_2, 3WO_3$.

Insol. in hot H_2O , and conc. HCl . (Hallopeau, Bull. Soc. 1899, (3) 21. 267.)

Tungstous acid.

Sodium tungstite, $Na_2W_2O_5$.

See Tungstate tungsten oxide, sodium.

Tungstovanadic acid.

See Vanadiotungstic acid.

Tungstyl dibromide, WO_2Br_2 .

Not decomp. by cold H_2O . (Roscoe.)

Tungstyl tetrabromide, $WOBr_4$.

Extremely deliquescent. Decomposes at once in moist air or with H_2O .

Tungstyl dichloride, WO_2Cl_2 .

Not decomp. by cold, and but slowly by boiling H_2O . Sol. in alkalies and ammonia.

Tungstyl tetrachloride, $WOCl_4$.

Easily decomp. by H_2O or moist air.

Very sol. in CS_2 and S_2Cl_2 . Sl. sol. in benzene (Smith, J. Am. Chem. Soc. 1899, 21. 1008.)

Tungstyl tetrafluoride, WOF_4 .

Sol. in H_2O with decomp. Very hydroscopic.

Insol. in carbon tetrachloride.

Sl. sol. in carbon bisulphide, dry benzene and ether.

Easily sol. in chloroform and absolute alcohol (Ruff, Z. anorg. 1907, **52**. 265)

Tungstyl tetrafluoride ammonia, $2\text{WOF}_4 \cdot \text{NH}_3$.

Sol. in H_2O with decomp.

Insol. in liquid NH_3 . (Ruff, Z. anorg. 1907, **52**. 266.)

Ultramarine blue, $2\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_8 \cdot \text{Na}_2\text{S}_2$ (?)

Not attacked by solutions of alkalis or $\text{NH}_4\text{OH} + \text{Aq}$. Decomp. by acids or acid salts + Aq. Decomp. by alum + Aq.

Ultramarine green, $\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_8 \cdot \text{Na}_2\text{S}$ (?)

Decomp. by mineral acids. Not attacked by alkalis. Decomp. by alum + Aq.

Ultramarine white, $2\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_8 \cdot \text{Na}_2\text{S}$ (?)

Uranic acid, H_2UO_4 .

Insol. in H_2O . Sol. in acids. Very sol. in cold dil. $\text{HNO}_3 + \text{Aq}$. Sl. sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$. Insol. in KOH , NaOH , or $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in $(\text{NH}_4)_2\text{CO}_3$, KHCO_3 , and $\text{NaHCO}_3 + \text{Aq}$; less in $\text{K}_2\text{CO}_3 + \text{Aq}$. (Ebelmen.)

Easily sol. in malic and tartaric acids to form complex compds. (Itzig, B. 1901, **34**. 3822.)

H_4UO_5 . Insol. in H_2O ; sol. in acids. (Ebelmen.)

Uranates.

Insol. in H_2O ; sol. in acids.

Ammonium uranate.

Sl. sol. in pure H_2O ; insol. in H_2O containing NH_4Cl or NH_4OH .

Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. (Pelgot, A. ch. (3) **5**. 11.)

$(\text{NH}_4)_2\text{O}$, $4\text{UO}_3 + 7\text{H}_2\text{O}$. (Grubler, Disert, 1908.)

$(\text{NH}_4)_2\text{O}$, $6\text{UO}_3 + 10\text{H}_2\text{O}$. Insol. in cold and hot H_2O and alkalis + Aq. Very sol. in H_2SO_4 , HCl and acetic acid + Aq. (Zehenter, M. 1900, **21**. 235.)

Barium uranate, BaUO_4 .

Insol. in H_2O . Sol. in dil. acids.

$\text{Ba}_2\text{U}_2\text{O}_7$. As above. (Ditte, C. R. **95**. 988.)

$\text{BaU}_2\text{O}_{10} + 4\frac{1}{2}\text{H}_2\text{O}$. Nearly insol. in H_2O , $\text{KOH} + \text{Aq}$. and alcohol.

Easily sol. in cold dil. HCl or HNO_3 and in hot acetic acid. (Zehenter, M. 1904, **25**. 200.)

$\text{Ba}_2\text{U}_2\text{O}_{17} + 8\text{H}_2\text{O}$. Nearly insol. in hot or cold H_2O , $\text{KOH} + \text{Aq}$. and alcohol.

Easily sol. in cold dil. HCl or HNO_3 and in hot acetic acid. (Zehenter.)

$\text{Ba}_2\text{U}_7\text{O}_{23} + 11\text{H}_2\text{O}$. Same properties as $\text{BaU}_5\text{O}_{16}$. (Zehenter.)

Bismuth uranate, $\text{Bi}_2\text{O}_3 \cdot \text{UO}_3 + \text{H}_2\text{O}$.

Min. *Uranosphaerite*.

Calcium uranate, CaUO_4 .

Insol. in H_2O ; sol. in dil. acids (Ditte, C. R. **95**. 988.)

CaU_2O_7 . Insol. in H_2O ; sol. in dil. acids. (Ditte.)

Cobalt uranate.

Insol. in H_2O ; sol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. (Persoz, J. pr. **3**. 216.)

Sol. in $\text{HNO}_3 + \text{Aq}$; insol. in $\text{KNO}_3 + \text{Aq}$. (Ebelmen, A. ch. (3) **5**. 222.)

Cupric uranate, CuU_2O_7 .

Insol. in H_2O . (Debray, A. ch. (3) **61**. 451.)

Lead uranate, PbUO_4 .

If ignited, very difficultly sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Wertheim, J. pr. **29**. 228.)

Insol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$. (Persoz.) 3PbO , 2UO_3 . Sol. in dil. $\text{HNO}_3 + \text{Aq}$. (Ditte, A. ch. (6) **1**. 338.)

$\text{PbU}_2\text{O}_{10}$. Insol. in H_2O . Sol. in HNO_3 . Insol. in $\text{KOH} + \text{Aq}$, NH_4OH and cold acetic acid. Sol. in hot acetic acid. (Zehenter, M. 1904, **25**. 215.)

$\text{Pb}_4\text{U}_5\text{O}_{19} + 4\text{H}_2\text{O}$. Insol. in hot or cold H_2O . Sol. in HNO_3 . Insol. in $\text{KOH} + \text{Aq}$, NH_4OH , alcohol and ether. Sl. sol. in cold, more easily sol. in hot acetic acid. (Zehenter.)

Lithium uranate, Li_2UO_4 .

Insol. in H_2O , but decomp. thereby. Sol. in dil. acids.

Magnesium uranate, MgUO_4 .

Insol. in H_2O . Nearly insol. in cold $\text{HCl} + \text{Aq}$. Slowly sol. in $\text{HCl} + \text{Aq}$ on warming, and more rapidly by addition of a little $\text{HNO}_3 + \text{Aq}$. (Ditte.)

MgU_2O_7 . Ppt. (Berzelius.)

Neodymium uranate, $\text{Nd}_2(\text{U}_2\text{O}_7)_3 + 18\text{H}_2\text{O}$.

Ppt. (Orloff, Ch. Z. 1907, **31**. 1119.)

Potassium uranate, K_2UO_4 (?)

Insol. in H_2O ; sol. in dil. acids; etc., exactly as Na_2UO_4 . (Ditte.)

$\text{K}_2\text{U}_2\text{O}_7 + 6\text{H}_2\text{O}$. Insol. in H_2O . Sol. in dil. acids, even acetic acid. (Zimmermann, B. **14**. 440.)

Insol. in $\text{K}_2\text{CO}_3 + \text{Aq}$, but easily sol. in alkali hydrogen carbonates + Aq. Sol. in $\text{HCl} + \text{Aq}$. (Ebelmen, A. ch. (3) **5**. 220.)

K_2O , $4\text{UO}_3 + 5\text{H}_2\text{O}$. (Zehenter, M. 1900, **21**. 235.)

K_2O , $6\text{UO}_3 + 6\text{H}_2\text{O}$. Insol. in H_2O . (Drenckmann, Zeit. ges. Nat. **17**. 113.)

$+ 10\text{H}_2\text{O}$. Nearly insol. in cold and hot H_2O . Easily sol. in hot acetic acid, dil. H_2SO_4 , HCl and HNO_3 . Insol. in $\text{KOH} + \text{Aq}$, alcohol and ether. (Zehenter, M. 1900, **21**. 235.)

Potassium hydroxylamine uranate,
 $\text{UO}_4(\text{NH}_2\text{O})(\text{NH}_2\text{OK}) + \text{H}_2\text{O}.$

Sl. sol. in H_2O , insol. in alcohol. (Hofmann, A. 1899, **307**, 318.)

Rubidium uranate, RbUO_4 .

Insol. in H_2O . (Ditte, A. ch. (6) **1**, 338.)

Silver uranate, Ag_2UO_4 .

Insol. in H_2O . Easily sol. in acids (Alibegoff, A. **233**, 117.)

Sodium uranate, Na_2UO_4 (?).

Insol. in H_2O ; sol. in dil. acids Sol in alkali carbonates + Aq. (Ditte.)

$\text{Na}_2\text{U}_2\text{O}_7 + 6\text{H}_2\text{O}$. Insol. in H_2O . Sol. in dil. acids. (Stolba, Z. anal. **3**, 74.)

Na_2O , 3UO_3 . Insol. in H_2O . Easily sol. in very dil. acids. (Drenckmann.)

Na_2O , $5\text{UO}_3 + 5\text{H}_2\text{O}$. Insol. in H_2O , alcohol, NH_4OH , KOH + Aq. Sol. in HCl , HNO_3 , H_2SO_4 . Sl. sol. even on boiling in conc. acetic acid. (Zehenter, M. 1900, **21**, 235.)

Sodium hydroxylamine uranate,
 $\text{UO}_4(\text{NH}_2\text{O})(\text{NH}_2\text{ONa}) + \text{H}_2\text{O}.$

Sol. in H_2O (Hofmann, A. 1899, **307**, 319.)
 $\text{UO}_4(\text{NH}_2\text{ONa})_2 + 6\text{H}_2\text{O}$. Very sol. in H_2O . (Hofmann.)

Strontium uranate, SrUO_4 .

Insol. in H_2O . Sol. in dil. acids
 SrU_2O_7 . As above. (Ditte, C. R. **95**, 988.)
Very sl. sol. in H_2O . Sol. in all acids especially oxalic.

+ H_2O . Very sl. sol. in H_2O . Sol. in all acids especially oxalic. (J. C. C. **1896**, II, 512.)

Thallous uranate.

Ppt. (Bolton, Am. Chemist, **1872**, **2**, 456.)

Zinc uranate.

Insol. in H_2O ; sol. in $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2$ + Aq. (Persoz, J. pr. **3**, 216.) Sol. in HNO_3 + Aq, insol. in KNO_3 , and NH_4NO_3 + Aq. (Ebelmen. A. ch. (3) **5**, 221.)

Peruranic acid.

See Peruranic acid.

Uranium, U.

Not attacked by H_2O . Slowly decomp. by cold dil. H_2SO_4 + Aq, rapidly on warming. Easily sol. in dil. or conc. HCl + Aq. Fused U is slightly attacked by conc. or fuming HNO_3 , or conc. H_2SO_4 . Amorphous U, however, is easily attacked thereby. Not attacked by acetic acid, KOH , NaOH , or NH_4OH + Aq. (Zimmermann, B. **15**, 849.)

When finely divided, it is decomp. by H_2O slowly at ordinary temps. and rapidly at 100° . (Moissan, C. R. **1896**, **122**, 1091.)

Uranium antimonide, U_3Sb_2 .

Violently attacked by conc. HNO_3 . (Colani, C. R. **1903**, **137**, 583.)

Uranium arsenide, U_3As_2 .

Violently attacked by conc. HNO_3 . (Colani, C. R. **1903**, **137**, 583.)

Uranium boride, UB_2 .

Sol. in HNO_3 and HF . Decomp. by fused alkalis (Wedekind, B. **1913**, **46**, 1204.)

Uranium tribromide, UBr_3 .

Very hygroscopic. Sol. in H_2O with hissing. (Alibegoff, A. **233**, 117.)

Uranium tetrabromide, UBr_4 .

Anhydrous. Very deliquescent. Sol. in H_2O with hissing. (Hermann.)

Insol. in alcohol. (v. Unruh, Dissert. **1909**.)

Sol. in acetone (Eidmann, C. C. **1899**, II, 1014); methyl acetate (Naumann, B. **1909**, **42**, 3790); ethyl acetate. (Naumann, B. **1904**, **37**, 3601.)

+ $8\text{H}_2\text{O}$. Very deliquescent, and sol. in H_2O . (Rammelsberg.)

Uranium carbide, UC_2 .

(Ruff and Heinzelmann, Z. anorg. **1911**, **71**, 72.)

Attacked slowly by H_2O . Slowly attacked by cold dil. HCl , H_2SO_4 or HNO_3 + Aq. Conc. acids, except HNO_3 , react sl. in the cold, violently on heating. (Moissan, Bull. Soc. **1897**, (3) **17**, 12.)

Sol. in fused KNO_3 and KClO_3 ; sol. in dil. acids in the cold and in conc. acids on heating; decomp. by H_2O (Moissan, C. R. **1896**, **122**, 276.)

Uranium trichloride, UCl_3 .

Very sol. in H_2O . (Peligot.)

Very unstable (Zimmermann.)

Very hygroscopic. Sol. in H_2O with decomp. Sol. in conc. HCl and solution is much more stable than aqueous one. (Rosenheim and Loebel, Z. anorg. **1908**, **57**, 234.)

Uranium tetrachloride, UCl_4 .

Anhydrous. Extremely deliquescent.

Sol. in H_2O with evolution of heat. Decomp. on boiling. Sol. in NH_4Cl + Aq without decomp.

HCl increases its solubility in H_2O . (Aloy, Dissert. **1901**.)

Sol. in alcohol, acetone, acetic ether, benzoic ether. Insol. in ether, CHCl_3 and C_6H_6 . (Loebel.)

Sol. in ethyl acetate. (Naumann, B. **1904**, **37**, 3601.)

Uranium pentachloride, UCl_5 .

Deliquescent. Sol. in H_2O with evolution of heat and decomposition. (Roscoe, B. **7**, 1131.)

Sol. in acetic acid, acetic ether, benzaldehyde, glycerine, benzyl alcohol (trace), nitrobenzene (trace), xylydine and p-toluidine (on warming).

Insol. in aniline, ligroin, pyridine, quinoline, thioethyl ether, thioamyl ether and CS_2 (Pimmer, Dissert. 1904.)

Sol. in abs. alcohol. Insol in ether, C_6H_6 , nitrobenzene, ethylene bromide. Sl sol in CCl_4 and CHCl_3 . Sol in benzoic ether, acetone and trichloroacetic acid. Best solvents are ethyl acetate and benzonitrile. Sol in many organic compounds containing oxygen (Loebel, Dissert. 1907.)

Uranium difluoride, $\text{UF}_2 + 2\text{H}_2\text{O}$.

Ppt (Gholliti and Agamennone, C. C. 1905, I. 1130)

Uranium tetrafluoride, UF_4 .

Insol in H_2O . Very sl. sol in dil. acids. Sol in hot conc. H_2SO_4 , and slowly in warm conc. $\text{HNO}_3 + \text{Aq}$ (Bolton, J. B. 1866. 209)

Uranium hexafluoride, UF_6 .

Very sol in H_2O . (Ditte, A. ch. (6) 1. 339.)

Fumes in the air.

Very hygroscopic; sol. in H_2O (Ruff, B 1909, 42. 495)

Very hygroscopic. Sol. in H_2O . Nearly insol. in CS_2 . Insol. in paraffine oil. Sol. in symmetrical tetrachlorethane (best solvent), CHCl_3 , CCl_4 , and nitrobenzene. (v Unruh, Dissert. 1909.)

Decomp. by H_2O , alcohol and ether. Nearly insol. in CS_2 .

Sol in CHCl_3 , CCl_4 , nitrobenzene and $\text{C}_2\text{H}_5\text{Cl}_4$. (Ruff, Z anorg. 1911, 72. 81.)

Uranium hydrogen fluoride, $\text{UF}_6 \cdot 8\text{HF}$ (?).

Sol in H_2O . (Ditte)

Is $\text{UO}_2\text{F}_2 \cdot \text{HF} + \text{H}_2\text{O}$. (Smithells)

Uranous hydroxide, $\text{UO}_2 \cdot x\text{H}_2\text{O}$.

Easily sol in dil. acids.

Insol. in alkali hydrates and carbonates + Aq. (Berzelius.)

Sol. in alkali carbonates + Aq. (Rammelsberg.)

$\text{U}(\text{OH})_4$. Sol. in dil. acids. (Aloy, Bull. Soc. 1899, (3) 21. 613.)

Uranouranic hydroxide, $\text{U}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$ (?).

Easily sol. in acids.

Decomp. by $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$, which dissolves out UO_3 . (Berzelius.)

Uranic hydroxide.

See Uranic acid.

Uranium tetraiodide, UI_4 .

Sol. in H_2O . (Guichard, C. R. 1907, 145. 921.)

Uranium iodide.

Sol. in ethyl acetate.. (Naumann, B. 1904 37. 3601.)

Uranium nitride, U_3N_4 .

(Colani, C. R. 1903, 137. 383.)

Uranium suboxide, UO (?).

(Guyard, Bull. Soc. (2) 1. 89.)

Does not exist. (Zimmermann, A. 213. 301.)

U_2O_3 (?). Ppt. Decomp. by H_2O and in the air. (Peligot.)

Uranium dioxide (Uranous oxide), UO_2 .

Insol in dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$

Sol. in conc. H_2SO_4 , and easily in $\text{HNO}_3 + \text{Aq}$ (Peligot.)

Insol. in $\text{NH}_4\text{Cl} + \text{Aq}$. (Rose.)

Only sl sol. in H_2SO_4 , but a considerable amount is converted into the sulphate which is nearly insol. in H_2SO_4 .

Slowly sol. in HCl , the amount dissolved in a given time varying widely with the method of preparation of the oxide. (Colani, C. R. 1912, 155. 1251.)

Sl. more sol. in HNO_3 than in aqua regia. (Raynaud, Bull. Soc. 1912, (4) 11. 802.)

Very sol in conc. HNO_3 ; less sol. in dil. HNO_3 . 1 gram is sol in 3100 grams HCl (1.17) at 17° ; 4650 grams HBr (1.52) at 17° ; 2200 grams H_2SO_4 (1.79) at 17° ; 12,000 grams acetic acid at 19° . (Raynaud, C. R. 1911, 153. 1481.)

Sl attacked by liquid NH_3 . (Gore, Am. Ch J 1898, 20. 830.)

Min. *Uraninite*. Easily sol. in warm $\text{HNO}_3 + \text{Aq}$. Not attacked by $\text{HCl} + \text{Aq}$.

Uranium trioxide (Uranic oxide), UO_3 .

Sol. in $\text{HNO}_3 + \text{Aq}$. (Peligot)

Insol. in boiling K tartrate + Aq (Kahlenberg and Hillyer, Am. Ch. J. 1894, 16. 102.)

Sol. in oleic acid. (Gibbons, Arch. Pharm 1883, 221. 621.)

See Uranic acid.

Uranium tetroxide, UO_4 .

Decomp. by $\text{HCl} + \text{Aq}$. (Fairley, Chem. Soc. 31. 133.)

+ $2\text{H}_2\text{O}$. Very hygroscopic. (Zimmermann.)

+ $3\text{H}_2\text{O}$.

Uranium pentoxide, U_2O_5 .

Sol. in acids. (Peligot.)

Mixture of UO_3 and U_3O_8 (Rammelsberg, Pogg. 59. 5.)

Mixture of UO_2 and U_3O_8 . (Zimmermann, A. 232. 273.)

Uranouranic oxide, U_2O_5 .

Green uranium oxide. Very slowly and slightly sol. in dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$; more easily when conc. Completely sol. in boiling H_2SO_4 . Easily sol. in $\text{HNO}_3 + \text{Aq}$.

Uranous oxychloride, $\text{UO}_2, \text{UCl}_4 + \text{H}_2\text{O}$.

Moderately sol. in H_2O . (Aloy, Dissert 1901.)

$2\text{UO}_2, \text{UCl}_4 + \text{H}_2\text{O}$. Very sol. in H_2O and alcohol (Orloff, C. C. 1903, II 484) + $13\text{H}_2\text{O}$. Very sol. in H_2O and alcohol (Orloff)

$4\text{UO}_2, \text{UCl}_4$. Very sol. in H_2O and alcohol. (Orloff)

$5\text{UO}_2, \text{UCl}_4 + 10\text{H}_2\text{O}$. Insol. in H_2O (Aloy, Dissert, 1901.)

Uranous oxyfluoride, $\text{UOF}_2 + 2\text{H}_2\text{O}$.

(Giolitti and Agamennone, C. C. 1905, I 1130)

Uranous oxysulphide, $\text{U}_3\text{O}_2\text{S}_4 = \text{UO}_2, 2\text{US}_2$.

Slightly attacked by dil. easily by conc. $\text{HCl} + \text{Aq}$. Sol. in cold $\text{HNO}_3 + \text{Aq}$. (Hermann, J. B. 1861. 258.)

Uranic oxy-compounds.

See Uranyl compounds.

Uranium phosphide, U_3P_2 .

Violently attacked by conc. HNO_3 . (Colani, C. R. 1903, 137. 383)

U_3P_4 . Slowly attacked by H_2O , not by dil $\text{HCl} + \text{Aq}$. More easily attacked by conc. $\text{HCl} + \text{Aq}$. Quickly decomp. by boiling conc HNO_3 and $\text{HNO}_3 + \text{HCl}$. (Colani, A. ch. 1907, (8) 12. 59)

Uranium selenide, USe .

Spontaneously inflammable. Sol. in fuming HNO_3 . (Colani, C. R. 1903, 137. 383)

USe_2 . As US_2 . (Colani, C. C. 1903, II 707.)

U_2Se_3 (Colani)

Uranium disilicide, USi_2 .

Sol. in cold or hot conc HF , insol. in HCl , HNO_3 , H_2SO_4 and aqua regia. (Defacqz, C. R. 1908, 147. 1051.)

Uranium monosulphide, US .

(Alibegoff, A. 233. 117)

Uranium sesquisulphide, U_2S_3 .

Not attacked by HCl or dil $\text{HNO}_3 + \text{Aq}$. Oxidised by fuming H_2SO_4 or aqua regia. (Alibegoff, A. 233. 117)

Uranium disulphide, US_2 .

Insol. in cold or boiling dil. $\text{HCl} + \text{Aq}$. Sol. in cold conc. $\text{HCl} + \text{Aq}$. Decomp. by $\text{HNO}_3 + \text{Aq}$. (Hermann, J. B. 1861. 258.)

Uranium telluride, U_4Te_3 .

Violently attacked by conc. HNO_3 . (Colani, C. R. 1903, 137. 383.)

Uranosotungstic acid.

Potassium uranosotungstate, $9\text{K}_2\text{O}, 6\text{UO}_2, 8\text{WO}_3 + 34\text{H}_2\text{O}$.

Insol. in H_2O and in HCl . (Gibbs, Am. Ch. J. 1895, 17. 175.)

Sodium uranosotungstate, $12\text{Na}_2\text{O}, 6\text{UO}_2, 8\text{WO}_3 + 25\text{H}_2\text{O}$.

Insol. in cold H_2O . (Gibbs)

Uranyl bromide, UO_2Br_2 .

Sol. in H_2O . (de Coninck, C. C. 1903, I 693.)

Sol. in ether (v. Unruh, Dissert. 1909) + $7\text{H}_2\text{O}$. Deliquescent. Sol. in H_2O .

Uranyl bromide ammonia, $\text{UO}_2\text{Br}_2, 2\text{NH}_3$.

(v. Unruh, Dissert 1909.)

$\text{UO}_2\text{Br}_2, 3\text{NH}_3$ (v. Unruh)

$\text{UO}_2\text{Br}_2, 4\text{NH}_3$. (v. Unruh)

Uranyl chloride, UO_2Cl_2 .

Anhydrous. Very deliquescent. Sol. in H_2O , alcohol, and ether.

Very sol. in H_2O .

Sp. gr. of $\text{UO}_2\text{Cl}_2 + \text{Aq}$ at t° .

t°	% UO_2Cl_2	Sp. gr.
14.6	1	1.0056
16.3	2	1.0112
13.7	3	1.0161
13.1	4	1.0215
14.2	5	1.0260
15.2	6	1.0313
14.3	7	1.0366
14.5	8	1.0418
15.0	9	1.0469
14.8	10	1.0517

(de Coninck, A. ch. 1904, (8) 3. 500)

Sol. in conc. HCl , conc. HNO_3 and in selenic acid.

Decomp. by H_2SO_4 . (de Coninck, A. ch. 1904, (8) 3. 504)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790); acetone. (Naumann, B. 1904, 37. 4328.)

+ H_2O . Sol. in H_2O , alcohol, and ether + $3\text{H}_2\text{O}$. Deliquescent.

Very sol. in H_2O . 1 pt. is sol. in 0.134 pts. H_2O at 18° and solution, which is saturated, contains 76.2% UO_2Cl_2 or 88.2% $\text{UO}_2\text{Cl}_2 + 3\text{H}_2\text{O}$. Sp. gr. of solution = 2.740. The solubility increases with rise in temp.

Sol. in alcohol and in ether. (Mylius and Dietz, B. 1901, 34. 2775.)

Uranyl hydrogen chloride, $\text{UO}_2\text{Cl}_2, \text{HCl} + 2\text{H}_2\text{O}$.

Cryst. at -10° from sat. solution of UO_2Cl_2 in $\text{HCl} + \text{Aq}$.

Fumes in the air. (Aloy, Bull. Soc. 1901, (3) **25**. 154.)

Uranyl chloride ammonia, $\text{UO}_2(\text{NH}_3\text{Cl})_2$.

Decomp by H_2O . (Regelsberger, A. **227**. 119.)

$\text{UO}_2(\text{NH}_3\text{NH}_3\text{Cl})\text{NH}_3\text{Cl}$. Decomp. by H_2O . (Regelsberger.)

$\text{UO}_2(\text{NH}_3\text{NH}_3\text{Cl})_2$. Decomp. by H_2O . (Regelsberger.)

Uranyl fluoride, UO_2F_2 .

Very sol in H_2O . (Smithells, Chem. Soc **43**. 125.)

Insol in H_2O or dil acids. Very sl. sol. in $\text{HF} + \text{Aq}$. Sol. in $\text{H}_2\text{SO}_4 + \text{aqua regia}$ (Ditte, A. ch. (6) **1**. 339)

Insol. in ether and amyl alcohol. (v. Unruh, Dissert, **1909**.)

UOF_4 Very sol in H_2O . (Ditte, C. R. **91**. 115)

True composition is UO_2F_2 . (Smithells)

Uranyl hydrogen fluoride, $\text{UO}_2\text{F}_2 \cdot \text{HF} + \text{H}_2\text{O}$.

Very sol. in H_2O (Smithells, Chem. Soc. **43**. 131.)

Uranyl fluoride ammonia, $\text{UO}_2\text{F}_2 \cdot 2\text{NH}_3$.

(v. Unruh, Dissert. **1909**.)

$\text{UO}_2\text{F}_2 \cdot 3\text{NH}_3$ (v. Unruh.)

$\text{UO}_2\text{F}_2 \cdot 4\text{NH}_3$ (v. Unruh)

Uranyl iodide, UO_2I_2 .

Ppt. Deliquescent. (Aloy, A. ch. 1910, (7) **24**. 417.)

Deliquescent.

Sol in alcohol, ether and benzene (Aloy, Dissert, **1901**.)

Sol. in acetone. (Eidmann, C. C. **1899**, II. 1014, Naumann, B. 1904, **37**. 4328); methyl acetate. (Naumann, B 1909, **42**. 3790.)

Uranyl iodide ammonia, $\text{UO}_2\text{I}_2 \cdot 2\text{NH}_3$.

(Aloy, Dissert **1901**.)

$\text{UO}_2\text{I}_2 \cdot 3\text{NH}_3$. (Aloy)

$\text{UO}_2\text{I}_2 \cdot 4\text{NH}_3$. (Aloy.)

Uranyl selenide, UO_2Se .

Very slowly decomp. by H_2O

Easily sol. in cold HCl . Violently attacked by cold HNO_3 . Not attacked by dil alkalis (Milbauer, Z. anorg. 1904, **42**. 450.)

Uranyl sulphide, UO_2S .

Sl. sol. in pure H_2O . Sol in dil, insol in absolute alcohol. Sol. in conc. $\text{HCl} + \text{Aq}$, also in dil. acids. Decomp. by caustic alkalis + Aq . Partly sol. in $(\text{NH}_4)_2\text{S} + \text{Aq}$.

Metavanadic acid, HVO_3 .

Insol. in H_2O ; sol in acids and alkalies.

Insol. in liquid NH_3 (Gore, Am Ch J. **1898**, **20**. 830.)

+ $\frac{1}{2}\text{H}_2\text{O}$.

See **Vanadium pentoxide**.

Pyrovanadic acid, $\text{H}_4\text{V}_2\text{O}_7$.

Insol. in H_2O . Sol in acids and alkalies.

Vanadates.

The alkali, Ba, and Pb metavanadates are sl. sol in H_2O , the others are more easily sol. Insol. in alcohol

Aluminum metavanadate.

Very sl sol. in H_2O . (Berzelius.)

Aluminum divanadate.

Very sl sol. in H_2O . (Berzelius)

Ammonium metavanadate, $(\text{NH}_4)\text{VO}_3$.

(a) Very slowly and sparingly sol. in cold H_2O . Easily sol. in hot H_2O . (Berzelius.)

Easily sol. in H_2O at about 70° . Very sl sol at above and below that temperature. (Guyard, Bull. Soc (2) **25**. 355)

10 g. dissolve in 1 litre cold, and 63 g in 1 litre hot H_2O with partial decomp. (Ditte, C. R. **102**. 918.)

Solubility in H_2O at t° .

t°	Solubility, mol. per litre
18	0.03715
25	0.05189
35	0.08980

(Meyer, Z. Elektrochem, 1909, 15. 267.)

Insol. in alcohol. (v. Hauer.)

(b) Sol. in cold H_2O , from which it is pptd. by alcohol. (Berzelius.)

Ammonium divanadate, $(\text{NH}_4)_2\text{V}_4\text{O}_{11} + 4\text{H}_2\text{O}$.

Sol. in H_2O , from which it is precipitated by sat. NH_4Cl + Aq or alcohol. (v. Hauer, W. A. B. 21. 337.)

Correct formula is $(\text{NH}_4)_3\text{V}_7\text{O}_{10} + 2\text{H}_2\text{O}$, according to Rammelsberg (B. A. B. 1883. 3.) + $3\text{H}_2\text{O}$. Very sol. in H_2O . (Ditte, C. R. 102. 918.)

Ammonium trivanadate, $(\text{NH}_4)_3\text{V}_6\text{O}_{18}$.

Anhydrous. Nearly insol. in hot or cold H_2O . (Norblad, B. 8. 126.)

1.5 g. dissolve in 1 litre of boiling H_2O (Ditte, C. R. 102. 918.)

+ $5\text{H}_2\text{O}$ Very sl. sol. in H_2O . (Ditte.) + $6\text{H}_2\text{O}$ (?). Very sol. in H_2O . (v. Hauer, W. A. B. 39. 455.)

Could not be obtained. (Norblad; also Rammelsberg, B. A. B. 1883. 3.)

Ammonium vanadate, $(\text{NH}_4)_3\text{V}_7\text{O}_{10} + 2\text{H}_2\text{O}$.

Correct formula of v. Hauer's divanadate, according to Rammelsberg (B. A. B. 1883. 3.)

Sl. sol. in H_2O .

Ammonium sesquivanadate, $(\text{NH}_4)_4\text{V}_6\text{O}_{17} + 4$ or $6\text{H}_2\text{O}$.

Very sol. in H_2O . (Ditte, C. R. 102. 918.)

Ammonium pentavanadate, $(\text{NH}_4)_4\text{V}_{10}\text{O}_{27} + 10\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg, B. A. B. 1883. 3.)

Ammonium hydroxylamine vanadate, $\text{VO}_2\text{N}_3\text{H}_{10}$.

Rapidly decomp. by H_2O (Hofmann and Kohlschütter, Z. anorg 1898, 16. 472.)

HVO_3 , $3\text{NH}_3\text{O}$, $2\text{NH}_3 = \text{VO}_2\text{N}_3\text{H}_{10}$. Rapidly decomp. by H_2O . (Hofmann and Kohlschütter)

Ammonium potassium vanadate, $\text{K}_2\text{V}_4\text{O}_{11}$, $(\text{NH}_4)_4\text{V}_6\text{O}_{17} + 9\text{H}_2\text{O}$.

Sol. in H_2O (Ditte, C. R. 104. 1844.)

Ammonium sodium vanadate, $\text{Na}_2\text{V}_4\text{O}_{11}$, $(\text{NH}_4)_4\text{V}_6\text{O}_{17} + 15\text{H}_2\text{O}$.

Sol in H_2O . (Ditte, C. R. 104. 1841.)

Ammonium uranyl vanadate, $(\text{NH}_4)_2\text{O}$, 2UO_3 , $\text{V}_2\text{O}_5 + \text{H}_2\text{O}$.

Insol. in H_2O , NH_4OH + Aq, or dil. $\text{HC}_2\text{H}_3\text{O}_2$ + Aq (Carnot, C. R. 104. 1850.)

Barium metavanadate, $\text{Ba}(\text{VO}_3)_2 + \text{H}_2\text{O}$.

Somewhat sol. in H_2O before ignition
Sol in conc. H_2SO_4 . (Berzelius)

Barium pyrovanadate, $\text{Ba}_2\text{V}_2\text{O}_7$.

Somewhat sol. in H_2O . (Roscoe.)

Barium vanadate, $\text{Ba}_3\text{V}_6\text{O}_{17} + 14\text{H}_2\text{O}$.

(Ditte, C. R. 104. 1705.)

$\text{Ba}_3\text{V}_{10}\text{O}_{28} + 19\text{H}_2\text{O}$. 1 pt. is sol. in 5200 pts. H_2O at 20-25°. Much more sol. in hot, but decomp. by boiling H_2O (v. Hauer, W. A. B. 21. 344.)

Sol. in about 5000 pts H_2O . (Manasse, C. C. 1886. 773.)

$\text{Ba}_4\text{V}_{10}\text{O}_{28} + 2\text{H}_2\text{O}$. (Norblad.)

Bismuth vanadate, $\text{Bi}_2(\text{VO}_4)_2$.

Min. *Pucherite*. Sol in HCl + Aq with evolution of Cl .

Cadmium vanadate, $\text{Cd}(\text{VO}_2)_2$.

(Ditte, C. R. 102. 918.)

$\text{CdV}_6\text{O}_{18} + 24\text{H}_2\text{O}$. Sl. sol. in H_2O . (Ditte, C. R. 104. 1705.)

Cadmium potassium vanadate, $\text{CdK}_2\text{V}_6\text{O}_{17} + 9\text{H}_2\text{O}$.

(Radau, A. 251. 148.)

$\text{Cd}_3\text{V}_{10}\text{O}_{28}$, $\text{K}_6\text{V}_{10}\text{O}_{28} + 27\text{H}_2\text{O}$ 1000 pts. H_2O dissolve 5.4 pts. at 18°. (Radau.)

Cadmium vanadate bromide, $3\text{Cd}_3(\text{VO}_4)_2$, CdBr_2 .

Very sol. in dil. acids. (de Schulten, Bull. Soc. 1900, (3) 23. 160.)

Cadmium vanadate chloride, $3\text{Cd}_3(\text{VO}_4)_2$, CdCl_2 .

Very sol. in dil. acids. (de Schulten, Bull. Soc. 1900, (3) 23. 159.)

Cæsium metavanadate, CsVO_3 .

(Chabré, A. ch. 1902, (7) 26. 228.)

Calcium metavanadate, $\text{Ca}(\text{VO}_3)_2 + 4\text{H}_2\text{O}$.

Much more sol than $\text{Sr}(\text{VO}_3)_2$, and solution is not precipitated by alcohol. (Berzelius)

+ $3\text{H}_2\text{O}$ Sol. in H_2O_2 ; insol in alcohol (Scheuer, Z. anorg. 1898, 16. 304)

Calcium pyrovanadate, $\text{Ca}_2\text{V}_2\text{O}_7 + 5\text{H}_2\text{O}$.

Precipitate.

+ $2\text{H}_2\text{O}$ Very sol. in dil. acids. (Ditte C. R. 104. 1705)

+ $2\frac{1}{2}\text{H}_2\text{O}$. (Roscoe.)

Calcium divanadate, $\text{CaV}_2\text{O}_{11} + 9\text{H}_2\text{O}$.

Easily sol. in H_2O (v. Hauer.)

When fused is nearly insol in H_2O (v. Hauer.)

+ $6\text{H}_2\text{O}$ (Manasse, A. 240. 23)

Calcium trivanadate, $\text{CaV}_3\text{O}_{17} + 12\text{H}_2\text{O}$.

Very sol in H_2O . (Ditte, C. R. 104. 1705)

Calcium vanadate, $\text{Ca}_3\text{V}_8\text{O}_{23} + 15\text{H}_2\text{O}$.

Sol in H_2O . (Manasse, A. 204. 23.)

$\text{Ca}_3\text{V}_{14}\text{O}_{38} + 7\text{H}_2\text{O}$ (?). Sl. sol. in H_2O . Probably a mixture. (Manasse, A. 240. 23.)

$\text{Ca}_3\text{V}_{16}\text{O}_{43} + 26\text{H}_2\text{O}$. Sol. in H_2O . (Manasse, A. 240. 23.)

Calcium copper vanadate, $(\text{Ca}, \text{Cu})_4\text{V}_2\text{O}_9 + \text{H}_2\text{O}$.

Min. *Volborthite* Sol in $\text{HNO}_3 + \text{Aq}$.

Calcium potassium vanadate, $\text{CaK}_3\text{V}_{20}\text{O}_{55} + 22\text{H}_2\text{O}$.

Sol. in H_2O (Manasse, A. 240. 23)

Calcium vanadate chloride, $\text{Ca}_3(\text{VO}_4)_2, \text{CaCl}_2$. (Hautefeuille, C. R. 77. 896.)**Chromium vanadate**, CrVO_4 .

Absolutely insol. in H_2O containing $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ and $\text{HC}_2\text{H}_3\text{O}_2$. (Carnot, C. R. 104. 1850.)

Cobaltous metavanadate, $\text{Co}(\text{VO}_3)_2 + 3\text{H}_2\text{O}$.

Easily sol. in H_2O . (Ditte, C. R. 104. 1705.)

Cobaltous potassium vanadate, $\text{CoKV}_2\text{O}_{14} + 8\text{H}_2\text{O}$.

, 1000 pts. H_2O dissolve 4.8 pts. of this salt. (Radau, A. 251. 140.)

$\text{Co}_3\text{K}_2\text{V}_{14}\text{O}_{39} + 21\text{H}_2\text{O}$. (Radau.)

Cupric metavanadate.

Sol. in H_2O . (Berzelius.)

Cupric pyrovanadate, $\text{Cu}_2\text{V}_2\text{O}_7 + 3\text{H}_2\text{O}$.

Sol. in hot H_2O . (Ditte, C. R. 104. 1705.)

Could not be obtained. (Radau, A. 251. 150.)

Cupric lead vanadate, $5(\text{Cu}, \text{Pb})\text{O}, \text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$.

Min. *Moitramite*.

$3\text{CuO}, \text{V}_2\text{O}_5, 3(3\text{PbO}, \text{V}_2\text{O}_5), 6\text{CuO}_2\text{H}_2 + 12\text{H}_2\text{O}$ Min. *Petitacumite*.

Cupric potassium vanadate, $\text{CuKV}_2\text{O}_{24} + 17\text{H}_2\text{O}$.

Moderately sol. in warm H_2O 100 pts. H_2O dissolve 11 l pts. at 18° . (Radau, A. 251. 151.)

Didymium vanadate, $\text{Di}_2(\text{VO}_4)_2$.

Precipitate. (Cleve.)

$\text{Di}_2\text{V}_{10}\text{O}_{30} + 28\text{H}_2\text{O}$. Precipitate. (Cleve, Bull. Soc. (2) 43. 365.)

Glucinum metavanadate (?).

Difficultly sol in H_2O . (Berzelius.)

Glucinum divanadate (?).

Difficultly sol. in H_2O . (Berzelius)

Indium metavanadate, $\text{In}(\text{VO}_3)_2 + 2\text{H}_2\text{O}$.

Ppt. (Renz, Dissert. 1902.)

Iron (ferrous) metavanadate.

Ppt. Sol. in $\text{HCl} + \text{Aq}$. (Berzelius.)

Iron (ferric) metavanadate.

Somewhat sol. in H_2O . (Berzelius.)

Lead metavanadate, $\text{Pb}(\text{VO}_3)_2$.

Sl. sol. in H_2O . Easily sol. in warm dil. $\text{HNO}_3 + \text{Aq}$. Not completely decomp. by H_2SO_4 or by boiling with $\text{K}_2\text{CO}_3 + \text{Aq}$. (Berzelius.)

Min. *Dechenite*. Easily sol. in dil. $\text{HNO}_3 + \text{Aq}$, and decomp. by $\text{HCl} + \text{Aq}$.

Lead pyrovanadate, basic, $2\text{Pb}_2\text{V}_2\text{O}_7, \text{PbO}$.

Insol. in boiling H_2O or $\text{HC}_2\text{H}_3\text{O}_2$. De-comp. by $\text{HNO}_3 + \text{Aq}$ with separation of V_2O_5 , which dissolves on warming. (Roscoe)

Lead pyrovanadate, $\text{Pb}_3\text{V}_2\text{O}_7$.

Sol. in warm dil $\text{HNO}_3 + \text{Aq}$ (Ditte, C. R. 104. 1705.)

Min. *Descloizite*. Sol. in cold dil. $\text{HNO}_3 + \text{Aq}$.

Lead divanadate, $\text{PbV}_4\text{O}_{11}$.

(Ditte, C. R. 104. 1705.)

Lead orthovanadate, $\text{Pb}_3(\text{VO}_4)_2$.

Insol. in H_2O . (Roscoe, A. suppl. 8. 109.)

Lead zinc orthovanadate, $4\text{Pb}_3(\text{VO}_4)_2$,

$3\text{Zn}_3(\text{VO}_4)_2$.

Min. *Eusynchite*. Easily sol. in $\text{HNO}_3 + \text{Aq}$.

Lead zinc vanadate, $(\text{Pb}, \text{Zn})_4\text{V}_2\text{O}_8 + \text{H}_2\text{O}$.

Min. *Descloizite*. Sol in excess of $\text{HNO}_3 + \text{Aq}$.

Lead vanadate chloride, $3\text{Pb}_3(\text{VO}_4)_2, \text{PbCl}_2$.

Min. *Vanadinite*. Easily sol. in $\text{HNO}_3 + \text{Aq}$.

Lithium vanadate, basic, $\text{Li}_3\text{V}_2\text{O}_8 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. 104. 1168.)
 $\text{Li}_3\text{V}_2\text{O}_8 + \text{H}_2\text{O}$, and $14\text{H}_2\text{O}$ Sol. in H_2O (Ditte.)

Lithium metavanadate, LiVO_3 .

Easily sol. in H_2O . (Berzelius.)
 $+2\text{H}_2\text{O}$. Quite easily sol. in H_2O . (Rammelsberg, B. A. B. 1883. 3.)

Lithium divanadate, $\text{Li}_2\text{V}_4\text{O}_{11} + 9\text{H}_2\text{O}$.

Very sol in H_2O (Norblad.)
 Correct formula is $\text{Li}_3\text{V}_5\text{O}_{14} + 12\text{H}_2\text{O}$. (Rammelsberg)
 $+8$, or $12\text{H}_2\text{O}$. (Ditte, C. R. 104. 1168.)

Lithium orthovanadate, Li_3VO_4 .

Insol. in H_2O . (Rammelsberg, B. A. B. 1883. 3.)

Lithium pyrovanadate, $\text{Li}_4\text{V}_2\text{O}_7 + 4\text{H}_2\text{O}$.

Very sol. in H_2O . (Rammelsberg, B. 16. 1676.)
 $+3\text{H}_2\text{O}$. (Ditte, C. R. 104. 1168.)

Lithium vanadate, $\text{Li}_3\text{V}_5\text{O}_{14} + 7\text{H}_2\text{O}$.

Difficultly sol. in H_2O . (Rammelsberg.)
 $+12\text{H}_2\text{O}$. Very efflorescent Correct formula for v. Hauer's divanadate. (Rammelsberg.)

$\text{Li}_4\text{V}_5\text{O}_{17} + 16\text{H}_2\text{O}$. Sol. in H_2O (Ditte, C. R. 104. 1168)

$+15\text{H}_2\text{O}$ (Rammelsberg.)

$+11\text{H}_2\text{O}$. (R.)

$+3\text{H}_2\text{O}$. (R.)

$\text{Li}_5\text{V}_4\text{O}_{13} + 15\text{H}_2\text{O}$. Not very easily sol. in H_2O . (Rammelsberg.)

$\text{Li}_5\text{V}_8\text{O}_{23} + 12\text{H}_2\text{O}$. Moderately sol. in H_2O . (Rammelsberg.)

$\text{Li}_{10}\text{V}_{12}\text{O}_{35} + 30\text{H}_2\text{O}$ Efflorescent. Very sol. in H_2O . (Rammelsberg.)

Magnesium metavanadate, $\text{Mg}(\text{VO}_3)_2$.

Very easily sol. in H_2O (Berzelius.)
 $+6\text{H}_2\text{O}$. Very sol. in H_2O . (Ditte, C. R. 104. 1705.)

Magnesium divanadate, $\text{MgV}_4\text{O}_{11} + 8\text{H}_2\text{O}$.

Difficultly sol. in H_2O , but much more sol. than barium divanadate. (v. Hauer.)
 $+9\text{H}_2\text{O}$. (Ditte, C. R. 104. 1705.)

Magnesium trivanadate, $\text{Mg}_3\text{V}_6\text{O}_{17} + 4\frac{1}{2}\text{H}_2\text{O}$.

Very sl. sol. in H_2O . (Manasse, A. 240. 23)

Magnesium vanadate, $\text{Mg}_3\text{V}_{10}\text{O}_{28} + 28\text{H}_2\text{O}$.

Sol. in H_2O . (Sugurra and Baker, Chem. Soc. 35. 715.)

Manganous metavanadate, $\text{Mn}(\text{VO}_3)_2 + 4\text{H}_2\text{O}$.

Very sl. sol in cold, somewhat more sol. in hot H_2O . Easily sol in dil acids. (Radau, A. 251. 125.)

Sl sol in H_2O_2 ; insol. in alcohol. (Scheuer, Z. anorg 1898, 16. 304)

Manganous pyrovanadate, $\text{Mn}_2\text{V}_2\text{O}_7$.

Sl. sol. in hot dil. $\text{HNO}_3 + \text{Aq}$. (Ditte, C. R. 96. 1048.)

Manganous potassium vanadate, $\text{MnKV}_5\text{O}_{14} + 8\text{H}_2\text{O}$.

100 pts. H_2O dissolve 1.7 pts. salt at 18° . Easily sol. in acids. (Radau, A. 251. 129.)

$3\text{Mn}_2\text{V}_5\text{O}_{23}$, $\text{K}_5\text{V}_5\text{O}_{23} + 54\text{H}_2\text{O}$. (Radau.)

$7\text{Mn}(\text{VO}_3)_2$, $2\text{KVO}_3 + 25\text{H}_2\text{O}$. (Radau.)

$11\text{Mn}(\text{VO}_3)_2$, $2\text{KVO}_3 + 48\text{H}_2\text{O}$. (Radau.)

Mercuric vanadate.

Sl sol. in H_2O

Nickel vanadate, $\text{Ni}(\text{VO}_3)_2$.

Sol. in H_2O (Ditte, C. R. 104. 1705.)

Nickel orthovanadate, $\text{Ni}_3(\text{VO}_4)_2$.

Insol in H_2O , sol in $\text{HNO}_3 + \text{Aq}$. (Ditte, C. R. 96. 1049.)

Nickel divanadate, $\text{NiV}_4\text{O}_{11} + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. 104. 1705.)

Nickel potassium vanadate, $5\text{Ni}(\text{VO}_3)_2$, $2\text{KVO}_3 + 25\text{H}_2\text{O}$.

$\text{Ni}_3\text{K}_2\text{V}_{10}\text{O}_{29} + 17\text{H}_2\text{O}$. Very sl. sol. in hot H_2O .

$\text{NiKV}_5\text{O}_4 + 8\text{H}_2\text{O}$.

$2\text{Ni}_4\text{V}_{14}\text{O}_{39}$, $\text{K}_8\text{V}_{14}\text{O}_{39} + 69\text{H}_2\text{O}$. 1000 pts. H_2O dissolve 1.7 pts. of salt at 17.5° . (Radau, A. 251. 137.)

Potassium vanadate, basic, $\text{K}_8\text{V}_2\text{O}_9 + 20\text{H}_2\text{O}$.

Sol. in H_2O . (Ditte, C. R. 104. 902.)

Potassium metavanadate, KVO_3 .

Anhydrous. Slowly sol. in cold, more easily in hot H_2O . Insol. in alcohol. (Berzelius)

Completely sol. in a little cold H_2O . (Norblad.)

$+ \text{H}_2\text{O}$. Sol in H_2O . (Rammelsberg.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$. (Ditte.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$. (Ditte.)

$+ 2\text{H}_2\text{O}$. (Ditte.)

$+ 3\text{H}_2\text{O}$. (Ditte, C. R. 104. 902.)

$+ 7\text{H}_2\text{O}$. (Rammelsberg.)

Potassium divanadate, $K_2V_2O_{11} + 4H_2O$.

Sol in cold or lukewarm H_2O . Decomp. by hot H_2O . (Rammelsberg.)

+3 H_2O . (Berzelius.)

+3½ H_2O . Sol. in warm H_2O . (Norblad.)

+8 or 10 H_2O . (Ditte, C. R. **104**. 902)

+6 H_2O . (Ephraim, Z. anorg. 1903, **35**. 76.)

Potassium trivanadate, $K_2V_3O_{16}$.

Anhydrous. Nearly insol in H_2O . (Norblad.)

+6 H_2O . Insol in cold or hot H_2O . (Norblad.)

+1, and 5 H_2O . (Ditte, C. R. **104**. 902)

Potassium orthovanadate, $K_3VO_4 + 4\frac{1}{2}$ or 6 H_2O .

Deliquescent. Sol. in H_2O . (Ditte, C. R. **104**. 902)

Decomp. by H_2O into $K_4V_2O_7$ and KOH. (Rammelsberg, B. A. B. **1883**. 3)

Potassium pyrovanadate, $K_4V_2O_7 + 3H_2O$.

Deliquescent. Easily sol in H_2O . Insol. in alcohol. (Norblad.)

+4 H_2O . (Ditte, C. R. **104**. 902.)

Potassium vanadate, $K_3V_5O_{14} + 5H_2O$.

100 pts. H_2O dissolve 19.2 pts. at 17.5°. (Radau, A. **251**. 120)

+4½ H_2O . (Radau)

$K_4V_6O_{17} + 2H_2O$. Slowly sol. in H_2O (Rammelsberg)

+6 H_2O . (Ditte, C. R. **104**. 902.)

+7 H_2O . (Friedheim, B. **23**. 1526.)

$K_4V_{10}O_{27} + 12H_2O$. Very sol. in H_2O . (Manasse, A. **240**. 42.)

$K_{10}V_8O_{25} + 7H_2O$. Sol in H_2O . (Rammelsberg)

$K_2V_5O_{21} + 1\frac{1}{2}H_2O$. Very sl. sol. in H_2O . (Ephraim, Z. anorg. 1903, **35**. 75.)

$K_4V_{18}O_{47}$. (Ephraim, Z. anorg. 1903, **35**. 78.)

Potassium sodium vanadate, $2(2K_2O, 3V_2O_5), 3(2Na_2O, 3V_2O_5) + 30H_2O$.

(Friedheim, Z. anorg. 1894, **5**. 442.)

$2K_2O, 3V_2O_5, 4(2Na_2O, 3V_2O_5) + 35H_2O$. Efflorescent. (Friedheim, Z. anorg. 1894, **5**. 441.)

Potassium strontium vanadate, $K_2Sr_3V_{14}O_{39} + 20H_2O$.

Sol in H_2O . (Manasse, A. **240**. 23.)

$K_2Sr_3V_{14}O_{39} + 30H_2O$. As above. (Manasse.)

$K_4Sr_2V_{14}O_{39} + 18H_2O$. As above. (Manasse.)

Potassium zinc vanadate, $KZnV_5O_{14} + 8H_2O$.

1000 pts. H_2O dissolve 4.1 pts of the salt. (Radau, A. **251**. 145.)

$2K_8V_{14}O_{39}, 3Zn_4V_{14}O_{39} + 90H_2O$. (Radau.)

Potassium vanadate cyanide, $K_4V_2O_7, 4KCN + 14H_2O$.

Easily decomp.

Insol. in alcohol. (Petersen, Z. anorg. 1904, **38**. 343.)

Samarium vanadate, $Sm_2O_3, 5V_2O_5 + 28H_2O$.

(Cleve.)

+24 H_2O . (Cleve.)

Samarium orthovanadate.

Precipitate.

Silver metavanadate, $AgVO_3$.

Sol. in HNO_3 or dil. $NH_4OH + Aq$. (Berzelius)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 829.)

Silver orthovanadate, Ag_3VO_4 .

Ppt. Easily sol. in HNO_3 or $NH_4OH + Aq$. (Roscoe, Proc. Roy. Soc. **18**. 316.)

Silver pyrovanadate, $Ag_4V_2O_7$.

Ppt. (Roscoe.)

Sol. in $NH_4OH + Aq$ (Ditte, C. R. **104**. 1705.)

Silver vanadate, $Ag_5V_4O_{13}$.

Sol. in 21,414 pts H_2O at 14°, and 13,617 pts. at 100°. (Carnelley, A. **166**. 155.)

Silver vanadate ammonia, $6AgVO_3, 4NH_3 + 8H_2O$.

(Ditte, C. R. **104**. 1705.)

Sodium vanadate, basic, $Na_8V_2O_9 + 26$ or 30 H_2O .

Very sol. in H_2O . (Ditte.)

Sodium metavanadate, $NaVO_3$.

Anhydrous. Slowly sol. in cold, very easily in hot H_2O (Norblad)

100 g. H_2O dissolve at:

25° 40° 60° 75°

21.10 26.23 32.97 38.83 g. $NaVO_3$.

(McAdam and Pierle, J. Am. Chem. Soc. 1912, **34**. 606.)

+2 H_2O . Easily sol in H_2O .

100 g. H_2O dissolve at:

25° 40° 60°

15.23 29.93 68.36 g. $NaVO_3$.

At 75° a value was obtained which showed that the solid phase had changed into the less sol. modification. (McAdam and Pierle, J. Am. Chem. Soc. 1912, **34**. 607.)

+½ H_2O . (Ditte, C. R. **104**. 1061)

+3, 4, and 5 H_2O . (Ditte.)

Sodium divanadate, $Na_2V_4O_{11}$.

Anhydrous. Sl. sol. even in warm H_2O , but easily sol. on addition of acids.

+9H₂O. Easily sol. in cold H₂O Insol. in alcohol (Norblad)
 +5H₂O. (Ditte, C. R. 104. 1061)
 Not obtained by Rammelsberg (B. A. B. 1883. 3.)

Sodium trivanadate, Na₂V₃O₁₈+9H₂O.

Insol in cold or hot H₂O. (Norblad.)
 Composition is Na₆V₁₈O₄₃+24H₂O. (Rammelsberg)
 +3H₂O. (Ditte, C. R. 104. 1061.)

Sodium orthovanadate, Na₃VO₄+16H₂O.

Easily sol. in H₂O, but decomp. into Na₄V₂O₇ and KOH. Precipitated by an excess of alcohol. (Roscoe, A. suppl. 8. 102)
 +7H₂O. (Hall, Chem Soc 51. 96.)
 +10, and 12H₂O. Less sol in dil NaOH +Aq than in H₂O. (Baker, A. 229. 286.)

Sodium pyrovanadate, Na₄V₂O₇+18H₂O.

Easily sol. in H₂O. Insol. in alcohol (Norblad.)
 Sol in alcohol. (Ditte, C. R. 104. 1061.)
 +8H₂O (Ditte.)

Sodium sesquivanadate, Na₄V₃O₁₇.

Anhydrous. Insol. in H₂O or NH₄OH +Aq (Rammelsberg.)
 +10H₂O. (Norblad.)
 +16H₂O Efflorescent. (Rammelsberg.)
 +18H₂O. (Ditte)

Sodium pentavanadate, Na₄V₁₀O₂₇+3½H₂O.

Scarcely sol. in H₂O. (Rammelsberg.)

Sodium vanadate, Na₆V₄O₁₈+6H₂O.

Difficultly sol. in cold H₂O. (Carnelley, A. 166. 155)

+2H₂O (Carnelley.)
 Na₆V₁₆O₄₃+24H₂O. Correct formula for Norblad's trivanadate. (Rammelsberg.)
 Na₄O, 4V₂O₅+7½H₂O. (Baragiola, Dissert. 1902.)

+8½H₂O. (Baragiola.)
 3Na₂O, 5V₂O₅+22H₂O. (Prandtl and Lustig, Z. anorg. 1907. 53. 405.)
 4Na₂O, 7V₂O₅+33H₂O. (Friedheim, Z. anorg. 1894. 5. 443.)
 5Na₂O, 8V₂O₅+39H₂O. Sol. in H₂O. (Friedheim, Z. anorg. 1894. 5. 441.)

Sodium vanadate fluoride, 2Na₃VO₄, NaF+19H₂O.

Sol. in H₂O. (Rammelsberg, W. Ann. 20. 928)

Strontium metavanadate, Sr(VO₃)₂+4H₂O.

Difficultly sol. in cold H₂O. (Norblad.)

Strontium divanadate, SrV₄O₁₁+9H₂O.

Sl. sol. in H₂O, but much more sol. than barium divanadate. (v. Hauer.)

Sol. in H₂O₂+Aq free from H₂SO₄. Insol in alcohol. (Scheuer, Z. anorg. 1898, 16. 303.)

Strontium trivanadate, SrV₃O₁₈+14H₂O.

Sol. in H₂O, but decomposes slowly on boiling. Easily sol in hot H₂O acidified with HC₂H₃O₂, and crystallizes therefrom without decomp. (v. Hauer, J. pr. 76. 156)

Strontium tetravanadate, SrV₄O₂₁+11H₂O.

Sol in hot H₂O with partial decomposition. (Manasse, A. 240. 34)

Strontium vanadate, Sr₃V₈O₂₈+14H₂O.

Sol in H₂O. (Manasse, A. 240. 23.)
 Sr₄V₁₄O₃₉+30H₂O Sol in H₂O. (Norblad.)

Thallous metavanadate, TlVO₃.

Sol. in 11,534 pts. H₂O at 11°, and 4756 pts. at 100° (Carnelley)

Thallous orthovanadate, Tl₃VO₄.

Sl sol. in H₂O. Sol. in 999 pts H₂O at 15°, and 574 p.s. at 100°. (Carnelley, Chem. Soc (2) 11. 323.)

Thallous pyrovanadate, Tl₄V₂O₇.

Sol. in 4996 pts. H₂O at 14°, and 3840 pts. H₂O at 100°. (Carnelley.)

Thallous vanadate, Tl₁₂V₈O₂₆.

Sol in 3406 pts. H₂O at 14°, and 533 pts. at 100° (Carnelley.)

Tl₁₂V₁₀O₃₁. Sol in 9372 pts. H₂O at 11°, and 3366 pts. at 100°. (Carnelley)

Tl₁₂V₁₄O₄₁ Ppt (Carnelley)

Thorium vanadate, Th₃O₁₂(VO)₄, 16V₂O₅+24H₂O (?).

Sol in H₂O. (Cleve.)
 ThO₂, V₂O₅+6H₂O. Sol. in acids. (Volck, Z. anorg. 1894 6. 167.)

Uranyl vanadate, 2UO₃, V₂O₅, (UO₂)₂V₂O₇.

Insol. in H₂O. (Carnot, C. R. 104. 1850.)

Vanadium vanadate, 2VO₂, V₂O₅=V₄O₉.

Insol. in H₂O. Sol. in dil. H₂SO₄ or HNO₃ +Aq. (Rammelsberg)

Slowly oxidised by HNO₃+Aq. Slowly sol. in NH₄OH+Aq. Easily sol. in HCl+Aq (Ditte, C. R. 101. 1487)

+2½H₂O. (Brierley.)
 2VO₂, 2V₂O₅+8H₂O. Insol. in H₂O. (Brierley, Chem. Soc. 49. 31.)

Ytterbium vanadate, 3Yb₂O₃, 5V₂O₅+3H₂O.

Yb₂O₃, 15V₂O₅ Ppt. (Cleve, Z. anorg. 1902, 32. 150.)

Yttrium vanadate.

Precipitate. (Berzelius.)

Zinc vanadate, $\text{Zn}(\text{VO}_3)_2 + 2\text{H}_2\text{O}$.

Sol in H_2O (Ditte, C. R. 104. 1705.)

Zinc pyrovanadate, $\text{Zn}_2\text{V}_2\text{O}_7$.

Appreciably sol. in H_2O . (Ditte, C. R. 96. 1048)

Pervanadic acid.

See Pervanadic acid.

Vanadicotungstic acid.

Ammonium vanadicotungstate,

Very sol. in H_2O .

Insol. in organic solvents (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1227.)

Vanadicoxovanadic acid.

Ammonium vanadicoxovanadate, $(\text{NH}_4)_2\text{O}$, 2VO_2 , $4\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$.

Sl. sol. in cold and warm H_2O (Gibbs, Am. Ch. J. 7. 209)

$(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_4$, $2\text{V}_2\text{O}_5 + 14\text{H}_2\text{O}$. Sol in H_2O . (Brierley, Chem. Soc. 49. 30.)

$3(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_4$, $4\text{V}_2\text{O}_5 + 6\text{H}_2\text{O}$. Insol. in H_2O . (Brierley.)

Potassium —, $2\text{K}_2\text{O}$, $2\text{V}_2\text{O}_4$, $\text{V}_2\text{O}_5 + 6\text{H}_2\text{O}$.

Sol. in hot H_2O . (Brierley, Chem. Soc. 49. 30.)

$5\text{K}_2\text{O}$, $2\text{V}_2\text{O}_4$, $4\text{V}_2\text{O}_5 + \text{H}_2\text{O}$. Insol. in H_2O . (Brierley.)

K_2O , V_2O_4 , $8\text{V}_2\text{O}_5$. Insol. in H_2O .

Sol. in conc. H_2SO_4 . (Prandtl, B. 1905, 38. 660.)

Sodium —, $2\text{Na}_2\text{O}$, $2\text{V}_2\text{O}_4$, $\text{V}_2\text{O}_5 + 13\text{H}_2\text{O}$.

Easily sol. in H_2O . Insol. in conc. solutions of salts, especially acetate (Brierley, Chem. Soc. 49. 30)

$2\text{Na}_2\text{O}$, V_2O_4 , $5\text{V}_2\text{O}_5$. Insol. in H_2O . Sol. in conc. H_2SO_4 . Not attacked by boiling with conc. HNO_3 . Slowly attacked by hot dil. $\text{NH}_4\text{OH} + \text{Aq}$. (Prandtl, B. 1905, 38. 659.)

Vanadioarsenic acid.

See Arseniovanadic acid.

Vanadioiodic acid.

See Iodovanadic acid.

Vanadiomolybdic acid, 8MoO_3 , $\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$.

Very sl. sol. in H_2O , and sl. sol. in boiling $\text{HNO}_3 + \text{Aq}$. (Ditte, C. R. 102. 757.)

Could not be obtained. (Friedheim, B. 24. 1173.)

Ammonium vanadiomolybdate,

Nearly insol. in H_2O . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $2\text{MoO}_3 + 8\text{H}_2\text{O}$. Nearly insol. in H_2O . (Friedheim and Castendyck.)

$2(\text{NH}_4)_2\text{O}$, V_2O_5 , $3\text{MoO}_3 + 6\text{H}_2\text{O}$. (Euler-Chelpin, Dissert, 1895.)

$(\text{NH}_4)_2\text{O}$, V_2O_5 , $3\text{MoO}_3 + 17\text{H}_2\text{O}$. (Euler-Chelpin.)

$2(\text{NH}_4)_2\text{O}$, V_2O_5 , $4\text{MoO}_3 + 7\text{H}_2\text{O}$ and $+ 8\text{H}_2\text{O}$. (Euler-Chelpin.)

$3(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $4\text{MoO}_3 + 7\text{H}_2\text{O}$. (Milch, Dissert. Berlin, 1887.)

$+ 9\text{H}_2\text{O}$. Sol. in H_2O . (Ditte, C. R. 102. 1019.)

$+ 11\text{H}_2\text{O}$. Easily sol. in H_2O . Correct composition of above compounds is $= (\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5 + 2[(\text{NH}_4)_2\text{O}, 2\text{MoO}_3] + 11\text{H}_2\text{O}$. (Friedheim, B. 24. 1173.)

Moderately sol. in H_2O and can be recryst. therefrom. (Euler-Chelpin, Dissert, 1895.)

$2(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $4\text{MoO}_3 + 11\text{H}_2\text{O}$. Nearly insol. in H_2O . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$2(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, 5MoO_3 . Nearly insol. in cold H_2O . (Euler-Chelpin, Dissert. 1895.)

$+ 8\text{H}_2\text{O}$. Nearly insol. in H_2O (Friedheim and Castendyck, B. 1900, 33. 1615.)

$3(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 8\frac{1}{2}\text{H}_2\text{O}$. Very easily sol. in H_2O (Liebert, Dissert. 1891.)

$4(\text{NH}_4)_2\text{O}$, $12\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 24\text{H}_2\text{O}$. Practically insol. in H_2O . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$2(\text{NH}_4)_2\text{O}$, V_2O_5 , $6\text{MoO}_3 + 5\text{H}_2\text{O}$. Sol. in a large amount of H_2O . (Gibbs, Am. Ch. J. 5. 361)

$+ 6\text{H}_2\text{O}$. Rather sl. sol. in H_2O .

Easily sol. in acids. (Liebert, Dissert, 1891.)

Composition is double the above formula, or—

$4(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 12\text{H}_2\text{O}$. Rather difficultly sol. in H_2O . Composition is $(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5 + 3[(\text{NH}_4)_2\text{O}, 4\text{MoO}_3]$. (Friedheim)

$3(\text{NH}_4)_2\text{O}$, V_2O_5 , $6\text{MoO}_3 + 7\text{H}_2\text{O}$. (Isenburg, Dissert, 1901.)

$5(\text{NH}_4)_2\text{O}$, $4\text{V}_2\text{O}_5$, $6\text{MoO}_3 + 12\text{H}_2\text{O}$ and $+ 14\text{H}_2\text{O}$ (Euler-Chelpin, Dissert, 1895.)

$5(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $7\text{MoO}_3 + 13\text{H}_2\text{O}$ and $+ 16\text{H}_2\text{O}$. Sol. in H_2O and can be recryst. therefrom. (Toggenburg, Dissert, 1902.)

$5(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $8\text{MoO}_3 + 14\text{H}_2\text{O}$. (Stamm, Dissert, 1905.)

$5(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 10\text{H}_2\text{O}$. Quite easily sol. in H_2O . Composition is $(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5 + 4[(\text{NH}_4)_2\text{O}, 3\text{MoO}_3] + 10\text{H}_2\text{O}$.

$6(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 21\text{H}_2\text{O}$. Sol. in H_2O . Composition is $(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5 + 5(\text{NH}_4)_2\text{O}$, 12MoO_3 . (F.)

$8(\text{NH}_4)_2\text{O}$, $4\text{V}_2\text{O}_5$, $13\text{MoO}_3 + 21\text{H}_2\text{O}$. Sol. in H_2O . (Isenburg, Dissert, 1901.)

$8(\text{NH}_4)_2\text{O}$, V_2O_5 , $18\text{MoO}_3 + 15\text{H}_2\text{O}$. Decomp. by hot H_2O . (Gibbs.) Could not be obtained. (Friedheim.)

$10(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $24\text{MoO}_3 + 10\text{H}_2\text{O}$. Sol. in H_2O . (Milch.) Could not be obtained. (Friedheim.)

Ammonium barium vanadiomolybdate,
 $5(\text{NH}_4)_2\text{O}$, 15BaO , $6\text{V}_2\text{O}_5$, 36MoO_3 .

(Milch.)

$(\text{NH}_4)_2\text{O}$, BaO , V_2O_5 , $\text{MoO}_3 + 6\text{H}_2\text{O}$.

(Euler-Chelpin, Dissert, 1895.)

$3(\text{NH}_4)_2\text{O}$, BaO , $3\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 9\text{H}_2\text{O}$.

Sl. sol. in cold and hot H_2O (Euler-Chelpin)

Ammonium potassium —, $(\text{NH}_4)_2\text{O}$, $3\text{K}_2\text{O}$,
 $2\text{V}_2\text{O}_5$, $4\text{MoO}_3 + 5\text{H}_2\text{O}$.

Decomp. by H_2O . (Euler-Chelpin.)

$(\text{NH}_4)_2\text{O}$, $3\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 9\text{H}_2\text{O}$

(Euler-Chelpin.)

$\frac{1}{2}(\text{NH}_4)_2\text{O}$, $3\frac{1}{2}\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 16\text{H}_2\text{O}$. Sol. in H_2O . (Jacoby, Dissert. 1900.)

Ammonium sodium —, $(\text{NH}_4)_2\text{O}$, Na_2O ,
 $2\text{V}_2\text{O}_5$, $6\text{MoO}_3 + 12\text{H}_2\text{O}$.

(Euler-Chelpin, Dissert, 1895.)

Barium —, BaO , V_2O_5 , $\text{MoO}_3 + 7\text{H}_2\text{O}$.

(Euler-Chelpin.)

Barium —, 3BaO , $2\text{V}_2\text{O}_5$, 6MoO_3 .

(Milch.)

$+ 8\text{H}_2\text{O}$. (Euler-Chelpin.)

5BaO , $4\text{V}_2\text{O}_5$, $6\text{MoO}_3 + 28\text{H}_2\text{O}$. Sol. in hot H_2O . (Euler-Chelpin)

3BaO , V_2O_5 , $8\text{MoO}_3 + 2\text{BaO}$, H_2O , V_2O_5 , $8\text{MoO}_3 + 28\text{H}_2\text{O}$. Sol. in hot H_2O . (Gibbs, Am. Ch. J. 5. 361)

7BaO , $3\text{V}_2\text{O}_5$, $18\text{MoO}_3 + 16\text{H}_2\text{O} = \text{BaO}$, $3\text{V}_2\text{O}_5 + 6(\text{BaO}$, $3\text{MoO}_3) + 16\text{H}_2\text{O}$. Sl. sol. in H_2O .

$+ 36\text{H}_2\text{O}$ and $+ 48\text{H}_2\text{O}$. (Liebert, Dissert. 1891.)

Potassium —, K_2O , V_2O_5 , $3\text{MoO}_3 + 15\text{H}_2\text{O}$.

Nearly insol. in cold H_2O . (Euler-Chelpin, Dissert, 1895.)

$3\text{K}_2\text{O}$, $2\text{V}_2\text{O}_5$, $4\text{MoO}_3 + 8\text{H}_2\text{O} = \text{K}_2\text{O}$, $2\text{V}_2\text{O}_5 + 2(\text{K}_2\text{O}$, $2\text{MoO}_3) + 8\text{H}_2\text{O}$.

Very sol. in H_2O . (Friedheim.)

$+ 7\text{H}_2\text{O}$. Easily sol. in cold H_2O . (Euler-

Chelpin.)

$+ 9\text{H}_2\text{O}$. Easily sol. in cold H_2O . (Euler-Chelpin.)

$2\text{K}_2\text{O}$, $2\text{V}_2\text{O}_5$, $5\text{MoO}_3 + 10\text{H}_2\text{O}$. Nearly insol. in cold, very sl. sol. in hot H_2O . (Euler-Chelpin.)

$3\text{K}_2\text{O}$, V_2O_5 , $6\text{MoO}_3 + 5\text{H}_2\text{O}$. (Euler-Chelpin.)

$2\text{K}_2\text{O}$, V_2O_5 , $6\text{MoO}_3 + 6\text{H}_2\text{O}$. Very sl. sol. in cold, easily sol. in hot H_2O . (Liebert.)

$4\text{K}_2\text{O}$, $2\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 12\text{H}_2\text{O} = \text{K}_2\text{O}$, $2\text{V}_2\text{O}_5 + 3(\text{K}_2\text{O}$, $4\text{MoO}_3) + 12\text{H}_2\text{O}$. Sl. sol. in H_2O . (Friedheim.)

$5\text{K}_2\text{O}$, $2\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 12\text{H}_2\text{O} = \text{K}_2\text{O}$, $2\text{V}_2\text{O}_5 + 4(\text{K}_2\text{O}$, $3\text{MoO}_3) + 12\text{H}_2\text{O}$. Rather sl. sol. in H_2O . (Friedheim.)

Sl. sol. in cold, easily sol. in hot H_2O . (Liebert, Dissert, 1891.)

$3\text{K}_2\text{O}$, V_2O_5 , $12\text{MoO}_3 + 15\text{H}_2\text{O}$. (Liebert)

Potassium sodium vanadiomolybdate, K_2O ,
 $4\text{Na}_2\text{O}$, $2\text{V}_2\text{O}_5$, $12\text{MoO}_3 + 18\text{H}_2\text{O}$.

(Euler-Chelpin, Dissert 1895.)

Sodium —, $2\text{Na}_2\text{O}$, V_2O_5 , $6\text{MoO}_3 + 16\text{H}_2\text{O}$.

(Euler-Chelpin, Dissert, 1895.)

Vanadiophosphoric acid.

See Phosphovanadic acid.

Vanadioselenious acid, $3\text{V}_2\text{O}_5$, $4\text{SeO}_2 + 4\text{H}_2\text{O}$.

$+ 6\text{H}_2\text{O}$. Difficultly sol. in H_2O . Can be cryst. from H_2O .

$+ 10\text{H}_2\text{O}$. Difficultly sol. in H_2O . Can be cryst. from H_2O . (Prandtl, B. 1905, 38. 1307.)

Ammonium vanadioselenite,

$4(\text{NH}_4)_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 13\text{H}_2\text{O}$.

Sl. sol. in H_2O . Decomp. by boiling H_2O .

$3(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $6\text{SeO}_2 + 2\text{H}_2\text{O}$. Ppt. (Prandtl, B. 1905, 38. 1309.)

$(\text{NH}_4)_2\text{HV}_6\text{O}_{17}$, $12\text{SeO}_2 + 2\text{H}_2\text{O}$. Ppt. $+ 4\text{H}_2\text{O}$ Ppt (Prandtl, Z. anorg. 1911, 73. 231.)

Ammonium silver —, $2\frac{2}{3}(\text{NH}_4)_2\text{O}$, $1\frac{1}{3}\text{Ag}_2\text{O}$,
 $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 12\text{H}_2\text{O}$, $+ 16\text{H}_2\text{O}$ and $+ 22\text{H}_2\text{O}$.

(Prandtl, Z. anorg. 1907, 53. 402.)

Lithium —, $4\text{Li}_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 30\text{H}_2\text{O}$.

Very sol. in H_2O . (Prandtl)

Potassium —, $4\text{K}_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 13\text{H}_2\text{O}$.

$3\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, 6SeO_2 . (Prandtl, B. 1905, 38. 1309.)

Sodium —, $4\text{Na}_2\text{O}$, $6\text{V}_2\text{O}_5$, $5\text{SeO}_2 + 20\text{H}_2\text{O}$.

Very. sol. in H_2O . (Prandtl, Z. anorg. 1907, 53. 403.)

Vanadiousulphuric acid, V_2O_5 , $3\text{SO}_3 + 3\text{H}_2\text{O}$.

Deliquescent. Sol. in H_2O , but is decomp. by boiling. (Ditte, C. R. 102. 757)

See Sulphate, vanadium.

Vanadiousulphurous acid.

Ammonium vanadiousulphite,

$3(\text{V}_2\text{O}_4\text{SO}_3)$, $(\text{NH}_4)_2\text{O}$, $\text{SO}_2 + 4\text{H}_2\text{O}$.

(Gain, C. R. 1907, 144. 1158.)

Cæsium —, $(\text{V}_2\text{O}_4\text{SO}_3)$, $3(\text{Cs}_2\text{O}\text{SO}_2) + 8\text{H}_2\text{O}$.

(Gain.)

Lithium —, $(\text{V}_2\text{O}_4\text{SO}_3)$, $5(\text{Li}_2\text{O}\text{SO}_2) + 8\text{H}_2\text{O}$.

(Gain.)

101 23 1009

Potassium vanadiosulphite, $3\text{SO}_2(\text{V}_2\text{O}_5)$,
 $\text{SO}_2(\text{K}_2\text{O}) + 5\text{H}_2\text{O}$.
 (Gain)

Rubidium —, $(\text{V}_2\text{O}_5, \text{SO}_2)$, $2(\text{Rb}_2\text{O}, \text{SO}_2) + 2\text{H}_2\text{O}$.
 (Gain)

Sodium —, $5(\text{V}_2\text{O}_5, \text{SO}_2)$, $(\text{Na}_2\text{O}, \text{SO}_2) + 2\text{H}_2\text{O}$.
 (Gain.)

Thallium —, $3(\text{V}_2\text{O}_5, \text{SO}_2)$, $(\text{Tl}_2\text{O}, \text{SO}_2) + 8\text{H}_2\text{O}$.
 (Gain.)

Vanadotungstic acid, $6\text{H}_2\text{O}$, V_2O_5 , $10\text{WO}_3 + 16\text{H}_2\text{O}$.

Very sl. sol. in cold, more easily in hot H_2O .
 (Gibbs, Am. Ch. J. 5. 361.)

$6\text{H}_2\text{O}$, V_2O_5 , $16\text{WO}_3 + 30\text{H}_2\text{O}$. Readily sol. in H_2O . (Gibbs.)

$17\text{H}_2\text{O}$, $4\text{V}_2\text{O}_5$, $16\text{WO}_3 + 24\text{H}_2\text{O}$. Sl. sol. in cold, easily in hot H_2O . (Rosenheim, A. 251. 228)

Aluminum sodium vanadotungstate, $7\text{Al}_2\text{O}_3$, $27\text{Na}_2\text{O}$, $36\text{V}_2\text{O}_5$, $144\text{WO}_3 + 504\text{H}_2\text{O} = 3(\text{Al}_2\text{O}_3, 9\text{Na}_2\text{O}, 48\text{WO}_3)$, $4(\text{Al}_2\text{O}_3, 9\text{V}_2\text{O}_5) + 504\text{H}_2\text{O}$.
 Sol. in H_2O (Rothenbach, B. 23. 3055)

Ammonium —, $(\text{NH}_4)_2\text{O}$, $3\text{V}_2\text{O}_5$, $\text{WO}_3 + 6\text{H}_2\text{O}$.

Sol. in H_2O . (Rammelsberg, B. 1. 158)
 $2(\text{NH}_4)_2\text{O}$, V_2O_5 , $4\text{WO}_3 + 4\text{H}_2\text{O}$. (Friedheim and Löwy, Z. anorg. 1894. 6. 24.)

$4(\text{NH}_4)_2\text{O}$, $2\text{H}_2\text{O}$, V_2O_5 , $5\text{WO}_3 + 11\text{H}_2\text{O}$.
 Sol. in H_2O . (Gibbs, Am. Ch. J. 5. 361.)

$2(\text{NH}_4)_2\text{O}$, V_2O_5 , $5\text{WO}_3 + 10\text{H}_2\text{O}$. Sol. in H_2O . (Ditte, C. R. 102. 1019)

$31(\text{NH}_4)_2\text{O}$, $14\text{V}_2\text{O}_5$, $60\text{WO}_3 + 58\text{H}_2\text{O} = 5[5(\text{NH}_4)_2\text{O}, 12\text{WO}_3]$, $2[3(\text{NH}_4)_2\text{O}, 7\text{V}_2\text{O}_5]$
 Sol. in H_2O . (Rothenbach, B. 23. 3051)

$7(\text{NH}_4)_2\text{O}$, $4\text{V}_2\text{O}_5$, $14\text{WO}_3 + 16\text{H}_2\text{O}$. Sol. in H_2O . (Rosenheim, A. 251. 197.)

$8(\text{NH}_4)_2\text{O}$, $4\text{V}_2\text{O}_5$, 16WO_3 , $9\text{H}_2\text{O} + 4\text{H}_2\text{O}$. Efflorescent. Very sol. in H_2O . (Rosenheim, A. 251. 216)

Barium —, 19BaO , $10\text{V}_2\text{O}_5$, $36\text{WO}_3 + 94\text{H}_2\text{O} = 3(5\text{BaO}, 12\text{WO}_3)$, $2(2\text{BaO}, 5\text{V}_2\text{O}_5) + 94\text{H}_2\text{O}$.

Sl. sol. in H_2O . (Rothenbach, B. 23. 3052.)
 8BaO , $4\text{V}_2\text{O}_5$, 16WO_3 , $9\text{H}_2\text{O} + 44\text{H}_2\text{O}$.

Efflorescent. Not very sol. in H_2O . (Rosenheim, A. 251. 218.)

Composition is 6BaO , 12WO_3 , $3\text{V}_2\text{O}_5 + 39\text{H}_2\text{O}$. (Friedheim, A. 251. 218.)

6BaO , $3\text{V}_2\text{O}_5$, $12\text{WO}_3 + 34\text{H}_2\text{O}$. Not easily sol. in H_2O . (Friedheim and Löwy, Z. anorg. 1894. 6. 18.)

4BaO , $4\text{V}_2\text{O}_5$, $12\text{WO}_3 + 44\text{H}_2\text{O}$. Less sol.

than preceding salt. Decomp. by boiling or by mineral acids. (Rosenheim.)

Composition is 4BaO , 12WO_3 , $3\text{V}_2\text{O}_5 + 30\text{H}_2\text{O}$. (Friedheim.)

Calcium vanadotungstate, 2CaO , V_2O_5 , $2\text{WO}_3 + 12\text{H}_2\text{O}$.

(Friedheim and Löwy, Z. anorg. 1894. 6. 20.)

Magnesium sodium —, MgO , $6\text{Na}_2\text{O}$, $3\text{V}_2\text{O}_5$, $12\text{WO}_3 + 42\text{H}_2\text{O} = 5\text{Na}_2\text{O}$, $12\text{WO}_3 + \text{MgO}$, Na_2O , $3\text{V}_2\text{O}_5 + 42\text{H}_2\text{O}$.

Sol. in H_2O . (Rothenbach, B. 23. 3054.)

Potassium —, $4\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $12\text{WO}_3 + 30\text{H}_2\text{O}$.

Sol. in H_2O .

Composition is potassium *metatungstate* vanadate, $3(\text{K}_2\text{O}, 4\text{WO}_3) + \text{K}_2\text{O}$, $3\text{V}_2\text{O}_5 + 30\text{H}_2\text{O}$. (Friedheim, B. 23. 1515.)

$8\text{K}_2\text{O}$, $4\text{V}_2\text{O}_5$, 16WO_3 , $9\text{H}_2\text{O} + 24\text{H}_2\text{O}$. Very efflorescent. Easily sol. in H_2O . (Rosenheim, A. 251. 214.)

Formula is $6\text{K}_2\text{O}$, 12WO_3 , $3\text{V}_2\text{O}_5 + 24\text{H}_2\text{O}$, which is a double salt, $5\text{K}_2\text{O}$, $12\text{WO}_3 + \text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$. (Friedheim, B. 23. 1505.)

Potassium sodium —, $(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3 + 22\text{H}_2\text{O})$, $4(5\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3 + 22\text{H}_2\text{O})$ or Na_2O , $4\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $6\text{WO}_3 + 22\text{H}_2\text{O}$.

(Friedheim and Löwy, Z. anorg. 1894. 6. 22.)

$4(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3 + 24\text{H}_2\text{O})$, $3(5\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3 + 24\text{H}_2\text{O})$. (Friedheim and Löwy.)

$5(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3 + 24\text{H}_2\text{O})$, $5\text{K}_2\text{O}$, $3\text{V}_2\text{O}_5$, $6\text{WO}_3 + 24\text{H}_2\text{O}$. (Friedheim and Löwy.)

Silver —, $8\text{Ag}_2\text{O}$, $4\text{V}_2\text{O}_5$, 16WO_3 , $9\text{H}_2\text{O}$.

Somewhat sol. in cold H_2O , more easily upon addition of little HNO_3 . Decomp. by warm H_2O . (Rosenheim, A. 251. 224.)

$3\text{Ag}_2\text{O}$, $2\text{V}_2\text{O}_5$, $6\text{WO}_3 + 3\text{H}_2\text{O}$. Nearly insol. in cold H_2O . Decomp. by addition of HNO_3 or upon warming. (Rosenheim.)

Sodium —, $5\text{Na}_2\text{O}$, $3\text{V}_2\text{O}_5$, $6\text{WO}_3 + 36\text{H}_2\text{O}$.

Sol. in H_2O .

Composition is $3(\text{Na}_2\text{O}, 2\text{WO}_3) + 2(\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5) + 36\text{H}_2\text{O}$. (Friedheim, B. 23. 1527.)
 $+ 38\text{H}_2\text{O}$. Sol. in 1.25 pts. H_2O at 13.8° . (Friedheim and Löwy.)

$2\text{Na}_2\text{O}$, $2\text{V}_2\text{O}_5$, $3\text{WO}_3 + 20\text{H}_2\text{O}$. Very sol. in H_2O .

Composition is Na_2O , $3\text{WO}_3 + \text{Na}_2\text{O}$, $2\text{V}_2\text{O}_5 + 20\text{H}_2\text{O}$, double salt of sodium *tritungstate* and *divanadate*. (Friedheim, B. 23. 1523.)

$4\text{Na}_2\text{O}$, $3\text{V}_2\text{O}_5$, $12\text{WO}_3 + 38\text{H}_2\text{O} = 3(\text{Na}_2\text{O}, 4\text{WO}_3) + \text{Na}_2\text{O}$, $3\text{V}_2\text{O}_5 + 38\text{H}_2\text{O}$. Sol. in H_2O . (Rothenbach, B. 23. 3050.)

$8\text{Na}_2\text{O}$, $4\text{V}_2\text{O}_5$, 16WO_3 , $9\text{H}_2\text{O} + 48\text{H}_2\text{O}$.

Efflorescent Easily sol in H_2O . (Rosenheim, A 251. 210.)

Formula is $6Na_2O, 12WO_3, 3V_2O_5 + 42H_2O$, and is a double salt of sodium *paratungstate*, $5Na_2O, 12WO_3$, and sodium *trivanadate*, $Na_2O, 3V_2O_5$. (Friedheim, B. 23. 1505.)

$7Na_2O, V_2O_5, 12WO_3 + 29H_2O$ Easily sol. in H_2O . (Friedheim and Löwy, Z. anorg. 1894, 6. 15.)

$8Na_2O, V_2O_5, 14WO_3 + 60H_2O$ and $+66H_2O$ (Friedheim and Löwy.)

Strontium vanadiotungstate, $19SrO, 36WO_3, 10V_2O_5 + 122H_2O = 3(5SrO, 12WO_3, 2(2SrO, 5V_2O_5) + 122H_2O$.

Sol. in H_2O . (Rothenbach, B 23. 3053.)

Vanadious acid.

See Hypovanadic acid.

Vanadiovanadicomolybdc acid.

Ammonium vanadiovanadicomolybdate,

$11(NH_4)_2O, 4V_2O_5, VO_3, 28MoO_3 + 48H_2O$.

Sl. sol in cold, sol in hot H_2O without decomp. (Gibbs, Am. Ch. J. 5. 391.)

Barium —, $14BaO, 2V_2O_5, 3VO_3, 30MoO_3 + 48H_2O$.

Precipitate. Very sl. sol. in cold, decomp by hot H_2O . (Gibbs)

Vanadiovanadicotungstic acid.

Ammonium vanadiovanadicotungstate,

$6(NH_4)_2O, 2V_2O_5, 3VO_3, 12WO_3 + 12H_2O$.

Sol. in H_2O . (Gibbs, Am. Ch. J. 5. 391.)

Silver —, $6Ag_2O, 2V_2O_5, 3VO_3, 12WO_3 + 8H_2O$.

Precipitate. Very sl. sol. in cold, sol. in much warm H_2O . (Gibbs)

Sodium —, $6Na_2O, 2V_2O_5, 3VO_3, 12WO_3$.

Very sol. in H_2O . (Gibbs.)

Vanadium, V.

Insol. in H_2O , HCl , dil. $H_2SO_4 + Aq$, and cold conc. H_2SO_4 . Sol. in hot conc. H_2SO_4 . Slowly sol in $HF + Aq$. Easily sol. in dil. or conc. $HNO_3 + Aq$. Not attacked by hot or cold $NaOH$ or $KOH + Aq$. (Roscoe, A. suppl 7. 85.)

Does not alter in the air; not acted upon by HCl and very slowly by H_2SO_4 . (Moissan, C. R. 1896, 122. 1299.)

Vanadium boride, VB.

Sol. in HF and HNO_3 . Decomp. by fused alkalis. (Wedekind, B. 1913, 46. 1203.)

Vanadium tribromide, VBr_3 .

Very deliquescent; quickly decomposes. (Roscoe, A. suppl 8. 99.)

$+6H_2O$. Sol. in H_2O with decomp. (Locke and Edwards, Am. Ch. J. 1898, 20. 600.)

Sol in H_2O , alcohol and ether Insol. in HBr . (Piccini, Z. anorg. 1899, 19. 398.)

Vanadium carbide, VC.

Insol in HCl and H_2SO_4 .

Sol in HNO_3 in the cold, and in fused KNO_3 and $KClO_3$ (Moissan, C. R. 1896, 122. 1300.)

Vanadium dichloride, VCl_2 .

Very deliquescent. Sol. in H_2O , alcohol, and ether. (Roscoe, A. suppl. 7. 79.)

Vanadium trichloride, VCl_3 .

Deliquescent Sol. in H_2O , absolute alcohol, and ether

$+6H_2O$. Sol. in H_2O ; sl. sol. in conc. $HCl + Aq$.

Sol. in alcohol and ether (Piccini, Z. anorg 1899, 19. 395.)

Vanadium tetrachloride, VCl_4 .

Sol. with decomp. in H_2O , alcohol, and ether. (Roscoe.)

Sol. in H_2O with decomp.

Sol. in fuming HCl with decomp.

Sol in anhydrous $CHCl_3$ or glacial acetic acid apparently without chemical change. (Koppel, Z. anorg 1905, 45. 346.)

Vanadium difluoride, VF_2 .

Sol. in HF with evolution of H_2 and formation of VF_3 . (Manchot, A. 1907, 357. 135.)

Vanadium trifluoride, VF_3 .

Nearly insol. in H_2O and organic solvents. (Ruff, B. 1911, 44. 2544.)

$+3H_2O$. Efflorescent Easily sol. in cold, extremely sol. in hot H_2O with decomp. Can be recryst. from $HF + Aq$. Insol. in strong alcohol. (Petersen, J. pr (2) 40. 48.)

Vanadium tetrafluoride, VF_4 .

Very hygroscopic

Easily sol. in H_2O .

Difficultly sol. in SO_2Cl_2 and $SiCl_4$.

Sol. in $POCl_3$ with evolution of gas

Sol in acetone and acetic acid.

Difficultly sol. in alcohol and $CHCl_3$. (Ruff, B. 1911, 44. 2545.)

Vanadium pentafluoride, VF_5 .

Easily sol. in H_2O .

Easily sol. in alcohol, $CHCl_3$, acetone, and ligroin. Insol. in CS_2 . Decomp. toluene and ether. (Ruff, B. 1911, 44. 2549.)

Vanadium trifluoride with MF .

See Fluovanadate, M.

Vanadium hydride,

Stable. Does not react with boiling H_2O .
Not attacked by boiling HCl , but oxidized by hot H_2SO_4 .
Sol. in boiling HNO_3 . (Muthmann, A. 1907, **355**. 86.)

Vanadium dihydroxide, $\text{VO}, x\text{H}_2\text{O}$.

Insol. in KOH or $\text{NaOH} + \text{Aq}$.
 $\text{V}(\text{OH})_2$. Sol. in HCl . (Locke and Edwards, Am. Ch. J. 1898, **20**. 598.)

Vanadium trihydroxide, $\text{V}_2\text{O}_3, x\text{H}_2\text{O}$.

Easily sol. in all acids. (Petersen, J. pr. (2) **40**. 49.)

Vanadium tetrahydroxide (Hypovanadic hydroxide), $\text{V}_2\text{O}_2(\text{OH})_4 + 5\text{H}_2\text{O}$.

Easily sol. in acids or alkalis. (Crow, Chem. Soc. **30**. 453)

Vanadium triiodide, $\text{VI}_3 + 6\text{H}_2\text{O}$.

Very hygroscopic; sol. in H_2O . Only sl sol. in cold conc $\text{HI} + \text{Aq}$.
Sol. in alcohol. (Piccini, Z. anorg. 1899, **19**. 399)

Vanadium nitride, V_2N .

Insol. in H_2O , HCl , and $\text{KOH} + \text{Aq}$. Sol in $\text{HNO}_3 + \text{H}_2\text{SO}_4$.
Decomp. by fusing with KOH (Muthmann, A. 1907, **355**. 93.)
Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, **20**. 830.)
 VN (Roscoe, A. suppl. **6**. 114.)
 VN_2 Not attacked by cold $\text{HNO}_3 + \text{Aq}$. (Uhrlaub, Pogg **103**. 134.)

Vanadium dioxide, VO .

Insol. in H_2O ; easily sol in dil acids. (Roscoe, A. suppl. **6**. 95)

Vanadium trioxide, V_2O_3 .

Oxidized in H_2O in contact with air and then dissolves. Insol. in acids, except HNO_3 , and in alkalis + Aq . (Roscoe, A. suppl. **6**. 99.)
Easily sol. in HF . (Petersen, J. pr. (2) **40**. 48)

Vanadium tetroxide, VO_2 .

Sol. in acids and alkalis + Aq .

Vanadium pentoxide, V_2O_5 .

Sol. in about 1000 pts. H_2O . (Berzelius.)
Sol. in acids, alkali hydrates, and carbonates + Aq . Insol. in absolute, very sl. sol. in dil. alcohol.
Insol. in glacial HCl .
Sol. in conc. $\text{KF} + \text{Aq}$. (Ditte, C. R. **105**. 1067.)
Sol. in $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ and alkali oxalates + Aq . (Halberstadt, Z. anal. **22**. 1.)
Three modifications.—(a) Forms hydrates

with 2, and $5\text{H}_2\text{O}$. Sol. in H_2O . 1 l. of sat. solution contains 8 g. V_2O_5 .

(β) $\text{V}_2\text{O}_5, 2\text{H}_2\text{O}$. Very sl. sol. in H_2O . 1 l. of sat. solution contains 0.5 g. V_2O_5 .

(γ) $\text{V}_2\text{O}_5, 5\text{H}_2\text{O}$. Less sol. in H_2O than β 1 l. H_2O contains 0.05 g. V_2O_5 when saturated. (Ditte, C. R. **101**. 698.)

See Vanadic acid.

Vanadium oxide, $\text{V}_4\text{O}_{13} = 2\text{VO}_2, \text{V}_2\text{O}_5$.

See Vanadate, vanadium.

$\text{V}_2\text{O}_4, \text{V}_2\text{O}_5 + \frac{1}{3}\text{H}_2\text{O}$. (Brierley, Chem. Soc. **49**. 30)

See also Vanadiovanadic acid.

$\text{V}_2\text{O}_4, 2\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$

See Vanadate, vanadium.

Vanadium pentoxide with MF.

See Fluoxyvanadate, M.

Vanadium oxy compounds.

See Vanadyl compounds.

Vanadium silicide, V_2Si .

Insol. in H_2O
Not attacked by HCl , HNO_3 or H_2SO_4 .
Readily attacked by HF .
Not attacked by $\text{KOH} + \text{Aq}$, $\text{NaOH} + \text{Aq}$ or NH_4OH . Decomp. by fused KOH .
Insol. in alcohol, ether and benzene. (Moissan, C. R. 1902, **135**. 496.)
 VSi_2 . Sol. in HF ; insol. in acids and alkalis.

Decomp. by fused KOH . (Moissan, C. R. 1902, **135**. 78.)

Vanadium disulphide, V_2S_2 .

Insol. in boiling dil. or conc. HCl , dil. $\text{H}_2\text{SO}_4 + \text{Aq}$, or cold conc. H_2SO_4 . Easily sol. in hot dil. or conc. $\text{HNO}_3 + \text{Aq}$, or in boiling conc. H_2SO_4 . Insol. in alkalis + Aq . Sl. sol. in $\text{KSH} + \text{Aq}$; sol. in $\text{NH}_4\text{SH} + \text{Aq}$. (Kay, Chem. Soc. **37**. 728.)

Vanadium trisulphide, V_2S_3 .

Insol. in cold HCl or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. Very sl. sol. in hot HCl or dil. $\text{H}_2\text{SO}_4 + \text{Aq}$. More sol. in $\text{HNO}_3 + \text{Aq}$ or conc. H_2SO_4 . Sl. sol. in NaOH or $\text{NH}_4\text{OH} + \text{Aq}$. Easily sol. in $(\text{NH}_4)_2\text{S}$ or $\text{NH}_4\text{SH} + \text{Aq}$, also in $\text{K}_2\text{S} + \text{Aq}$. (Kay, Chem. Soc. **37**. 728.)

Vanadium pentasulphide, V_2S_5 .

Sl. attacked by hot conc. HCl or hot dil. $\text{H}_2\text{SO}_4 + \text{Aq}$; sol. in hot conc. H_2SO_4 . Sol. in hot dil. $\text{HNO}_3 + \text{Aq}$. Sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$, but easily dissolved by $\text{NaOH} + \text{Aq}$. Sl. sol. in $\text{Na}_2\text{S} + \text{Aq}$. Sol. in $\text{NH}_4\text{SH} + \text{Aq}$. (Kay.)

Vanadium sulphochloride sulphur chloride, $4\text{VSCl}_2, \text{S}_2\text{Cl}_2$.

Decomp. in the air. (Koppel, Z. anorg. 1905, **45**. 357.)

Vanadous acid.**Ammonium vanadite, basic, $2(\text{NH}_4)_2\text{O}$, V_2O_4 .**

Sl. sol. in cold, easily in hot H_2O . (Ditte, C. R. 102. 1310)

Ammonium vanadite, $(\text{NH}_4)_2\text{V}_4\text{O}_9 + 3\text{H}_2\text{O}$.

Sol. in H_2O . (Crow, Chem. Soc. 30. 460.)

+ $x\text{H}_2\text{O}$. Sol. in H_2O .

Insol. in alcohol, ether and ammonia. (Koppel, Z. anorg. 1903, 36. 297.)

+ $3\text{H}_2\text{O}$. Easily sol. in H_2O . (Mawrow, Z. anorg. 1907, 55. 150.)

Barium vanadite, $\text{BaV}_4\text{O}_9 + 4\text{H}_2\text{O}$.

Ppt. (Koppell, Z. anorg. 1903, 36. 300)
+ $5\text{H}_2\text{O}$. Precipitate. Easily sol. in HNO_3 ,
or $\text{HCl} + \text{Aq}$. (Crow, Chem. Soc. 30. 460.)

Lead vanadite, PbV_4O_9 .

Ppt. (Crow.)

Potassium vanadite, $\text{K}_2\text{V}_4\text{O}_9 + 4\text{H}_2\text{O}$.

Sol. in H_2O .

Insol. in alcohol, ether and ammonia. (Koppel, Z. anorg. 1903, 36. 300)

+ $7\text{H}_2\text{O}$. Easily sol. in H_2O . Insol. in cold, sol. in hot $\text{KOH} + \text{Aq}$. Insol. in alcohol. (Crow.)

+ H_2O . (Ditte, C. R. 102. 1310.)

Silver vanadite, $\text{Ag}_2\text{V}_4\text{O}_9$.

Ppt. (Crow.)

Sodium vanadite, $\text{Na}_2\text{V}_4\text{O}_9 + 4\text{H}_2\text{O}$.

Sol. in H_2O .

Insol. in alcohol, ether and ammonia. (Koppel, Z. anorg. 1903, 36. 299.)

+ $7\text{H}_2\text{O}$. Easily sol. in H_2O . (Crow, Chem. Soc. 30. 459.)

Vanadosotungstic acid.**Ammonium vanadosotungstate, $5(\text{NH}_4)_2\text{O}$, $2\text{V}_2\text{O}_5$, $14\text{WO}_3 + 13\text{H}_2\text{O}$.**

Very sol. in H_2O . (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1228.)

Vanadous acid.

See Hypovanadic acid.

Vanadovanadic acid.

See Vanadicovanadic acid.

Vanadyl bromide, VOBr .

Very sl. sol. in H_2O , acetic anhydride, ethyl acetate, and acetone.

Insol. in alcohol, ether, acetic acid, CHCl_3 , toluene and CCl_4 . (Ruff, B. 1911, 44. 2537.)

Vanadyl dibromide, VOBr_2 .

Very deliquescent, and sol. in H_2O . (Roscoe.)

Vanadyl tribromide, VOBr_3 .

Very deliquescent, and quickly decomposes in moist air. Sol. in H_2O . (Roscoe.)

Vanadyl bromide, $\text{V}_2\text{O}_5\text{Br}_2$, $2\text{HBr} + 7\text{H}_2\text{O}$.

Very deliquescent. (Ditte, C. R. 102. 1310.)

Vanadyl semichloride, $\text{V}_2\text{O}_5\text{Cl}$.

Insol. in H_2O . Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Roscoe, A. suppl. 6. 114.)

Vanadyl monochloride, VOCl .

Insol. in H_2O . Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Roscoe.)

Vanadyl dichloride, VOCl_2 .

Deliquescent. Slowly decomp. by H_2O . Easily sol. in $\text{HNO}_3 + \text{Aq}$. (Roscoe.)

Vanadyl trichloride, VOCl_3 .

Deliquescent. Sol. in H_2O and alcohol with decomp. (Bedson, A. 180. 235.)

Sol. in ether with combination.

Divanadyl chloride, $\text{V}_2\text{O}_5\text{Cl}_2 + 5\text{H}_2\text{O}$.

Deliquescent, and sol. in H_2O , fuming HCl , or alcohol. (Crow, Chem. Soc. 30. 457.)

Vanadyl chloride, $\text{V}_2\text{O}_5\text{Cl}_2 + 4\text{H}_2\text{O}$.

Very deliquescent. (Ditte, C. R. 102. 1310)

Vanadyl platinum chloride.

See Chloroplatinate, vanadyl.

Vanadyl trichloride ammonia, VOCl_3 , $x\text{NH}_3$.

Decomp. by H_2O . (Roscoe.)

Vanadyl difluoride, VOF_2 .

Insol. in H_2O . Insol. in alcohol, ether, CHCl_3 . Sl. sol. in acetone. (Ruff, B. 1911, 44. 2546.)

Vanadyl trifluoride, VOF_3 .

Very hygroscopic. Easily sol. in H_2O . Sol. in POCl_3 with evolution of gas. Difficultly sol. in PCl_5 and AsCl_3 . Sol. in hot CHCl_3 and acetic anhydride. (Ruff, B. 1911, 44. 2547.)

Vanadyl fluoride with MF.

See Fluoxyvanadate, and Fluoxhypovanadate, M.

Vanadyl iodide, $\text{V}_2\text{O}_5\text{I}_2$, $3\text{HI} + 10\text{H}_2\text{O}$.

Very deliquescent, and sol. in H_2O . (Ditte, C. R. 102. 1310.)

$\text{V}_2\text{O}_5\text{I}_2$, $2\text{HI} + 8\text{H}_2\text{O}$. As above.

Vanadyl sulphide, VOS (?)

(a) Insol. in H_2O , alkalis, alkali-sulphides + Aq . Sol. in acids except nitric acid and aqua regia. (Berzelius.)

(b) Sol. in alkalis, alkali carbonates, and sulphides + Aq Insol. in acids. (Berzelius.)

Water, H₂O.

Water is the most universal solvent. It absorbs all gases, usually with an increase of volume, seldom, as in the case of NH₃, with a diminution of volume. It dissolves almost all solids in greater or less quantity, and mixes with or dissolves considerable amounts of many liquids.

Miscible with alcohol. Sol. in 36 pts. ether.

Sol. in 30-33 vols. ethyl acetate. (Becker.)

Sol. in 5 vols. iodhydric.

Sl. sol. in most of the fatty oils.

Solubility in organic solvents at t°.

(Groschuff, Z Elektrochem, 1911, 17. 350.)

White precipitate, fusible.

See Mercuridiammonium chloride.

White precipitate, infusible.

See Mercuric chloramide.

Xanthochromium bromide,

Sol. in H₂O. Resembles the chloride. (Christensen, J. pr. (2) 24. 74.)

Carbonate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{CO}_3$

Easily sol. in H₂O. (Christensen)

Xanthochromium chloride,

More sol. in H₂O than the roseo, but less than the purpureo salt.

Solution decomp. by light or boiling. Decomp. by dil. acids Sol in NaOH + Aq and in NH₄OH + Aq (sp. gr. 0.91) Insol. in alcohol. (Christensen, J. pr. (2) 24. 74)

— chloroplatinate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{PtCl}_6$.

Insol in pure H₂O, but sol. when warmed with H₂O containing HCl, with formation of a new double salt. (Christensen)

— mercuric chloride, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{Cl}_2$, 2HgCl₂.

Precipitate. Decomp by long contact with H₂O (Christensen)

— chromate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{CrO}_4$.

Difficultly sol. in H₂O. (Christensen.)

— dichromate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{Cr}_2\text{O}_7$.

Difficultly sol. in H₂O. (Christensen.)

— dithionate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{S}_2\text{O}_8$.

Insol. in cold H₂O. (Christensen)

— hydroxide, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5(\text{OH})_2$.

Known only in solution. (Christensen.)

— iodide, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{I}_2$.

Quite difficultly sol. in H₂O. (Christensen.)

— nitrate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_3)_2$.

Sol. in about 150 pts. H₂O (Christensen.)

— sulphate, $\text{Cr}(\text{NO}_2)(\text{NH}_3)_5\text{SO}_4 + \text{H}_2\text{O}$.

Sol. in H₂O and (NH₄)₂SO₄ + Aq. (Christensen.)

Xanthocobaltic bromide,

Easily sol. in cold H₂O. (Werner and Miolati, Gazz. ch. it 23, 2. 140)

— bromonitrate, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_3)\text{Br}$.

Sl. sol. in cold, more easily in hot H₂O. (Gibbs)

— chloride, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{Cl}_2$.

Sl. sol in cold H₂O, and decomp. by boiling therewith. Insol. in HCl + Aq and alkali chlorides + Aq. Easily decomp. by boiling with acids, even dilute. (Gibbs and Genth.)

Sol. in 50 pts. cold H₂O (Jørgensen, Z. anorg. 5. 172.)

— mercuric chloride, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{Cl}_2$, 2HgCl₂ + H₂O.

Insol. in cold, sl. sol. in hot H₂O without decomp. More sol. in acidified H₂O. (Gibbs and Genth.)

Xanthocobaltic chloraurate,

Can be easily crystallised out of hot H_2O (Gibbs and Genth, Sill. Am. J. (2) **24**, 90.)

— **chloronitrate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)\text{Cl}$
Sl. sol in cold, more easily in hot H_2O

— **chloronitrate gold chloride**,
 $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)\text{Cl}$, AuCl_3 .

— **chloronitrate platinum chloride**,
 $2\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)\text{Cl}$, PtCl_4 .

— **chloroplatinate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{Cl}_2$,
 $\text{PtCl}_4 + \text{H}_2\text{O}$.

Scarcely sol. in hot or cold H_2O . Can be recryst. from dil. $\text{HNO}_3 + \text{Aq}$. Sol in hot dil. $\text{HCl} + \text{Aq}$ (Gibbs and Genth, Sill. Am. J. (2) **24**, 91.)

— **chromate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{CrO}_4 + \text{H}_2\text{O}$
Very sl. sol in cold, and but slightly sol. in hot H_2O . (Gibbs.)

— **dichromate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{Cr}_2\text{O}_7$.
Easily sol. in hot H_2O .

— **ferrocyanide**, $[\text{Co}(\text{NO}_2)(\text{NH}_3)_5]_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$.
Nearly insol. in cold, decomp. by warm H_2O
 $+ 6\text{H}_2\text{O}$ (Braun, A. **132**, 47.)

— **iodide**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{I}_2$.
Sol. in H_2O . (Gibbs.)

— **iodosulphate**,
 $[\text{Co}(\text{NO}_2)(\text{NH}_3)_5]_2(\text{SO}_4)_2\text{I}_2$
Sol. in H_2O .

— **periodosulphate**,
 $[\text{Co}(\text{NO}_2)(\text{NH}_3)_5]_2(\text{SO}_4)_2\text{I}_4$.
Easily decomp. by hot H_2O .

— **nitrate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)_2$.
Sl. sol. in cold, moderately sol. in hot H_2O .
Decomp. by boiling. Much less sol. than NH_4Cl or $(\text{NH}_4)_2\text{SO}_4$ in cold H_2O . Insol. in HNO_3 . (Gibbs and Genth.)

— **nitrite**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)_2 + 2\text{H}_2\text{O}$.
Sol. in H_2O . (Gibbs.)

— **cobaltic nitrite**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5(\text{NO}_2)_2 + 2\text{H}_2\text{O}$.
Sl. sol. in H_2O . (Gibbs, Proc. Am. Acad. **11**, 8.)
Is nitratopurpureocobaltic cobaltic nitrite,

$[(\text{NO}_2)\text{Co}(\text{NH}_3)_5]_3[\text{Co}(\text{NO}_2)_5]_2 + 2\text{H}_2\text{O}$ (Jørgensen, Z. anorg. **5**, 175.)
 $[\text{Co}(\text{NO}_2)(\text{NH}_3)_5]_3[\text{Co}(\text{NO}_2)_5]_2$. Not so difficultly sol. as the luteo salt (Jørgensen.)

Xanthocobaltic tetramine cobaltic nitrite,

Can be recryst. from hot H_2O (Gibbs, Proc. Am. Acad. **11**, 8.)
 $= (\text{NO}_2)\text{Co}(\text{NH}_3)_5[(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2]_2$.
Xanthocobaltic tetramine cobaltic nitrite.
Very sl. sol in cold H_2O . (Jørgensen, Z. anorg. **5**, 180.)

— **oxalate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{C}_2\text{O}_4$.

Nearly insol. in cold, sl. sol. in hot H_2O .

— **sulphate**, $\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{SO}_4$.

Moderately sol. in hot, much less in cold H_2O . Sol without decomp. in $\text{H}_2\text{SO}_4 + \text{Aq}$ (Gibbs and Genth.)
Sol. in 25 pts hot H_2O acidified with $\text{HC}_2\text{H}_3\text{O}_2$. (Jørgensen, Z. anorg. **5**, 172.)
 $4\text{Co}(\text{NO}_2)(\text{NH}_3)_5\text{SO}_4, 3\text{H}_2\text{SO}_4$. Decomp. by H_2O , not by absolute alcohol. (Jørgensen.)

Xanthorhodium bromide,

Moderately sol. in H_2O . (Jørgensen, J. pr. (2) **34**, 394.)

— **chloride**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{Cl}_2$.

Much more sol. in H_2O than the nitrate.

— **chloroplatinate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{PtCl}_6$.

Ppt. Extremely sl. sol in cold H_2O

— **dithionate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{S}_2\text{O}_6 + \text{H}_2\text{O}$.

Nearly insol. in H_2O .

— **fluosilicate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{SiF}_6$.

Ppt.

— **hydroxide**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5(\text{OH})_2$.

— **nitrate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5(\text{NO}_3)_2$.

Moderately sol. in cold, easily in hot H_2O . Insol. in alcohol. Less sol in conc $\text{NH}_4\text{OH} + \text{Aq}$ than in H_2O .

Insol in dil $\text{HNO}_3 + \text{Aq}$; sol. in $\text{HNO}_3 + \text{Aq}$ of 1.4 sp. gr.

— **oxalate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{C}_2\text{O}_4$.

Nearly insol. in cold H_2O . Very sl. sol. in warm H_2O . Easily sol. in dil. $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$.

— **sulphate**, $(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{SO}_4$.

Slowly sol. in cold, quite easily in hot H_2O .
 $4(\text{NO}_2)\text{Rh}(\text{NH}_3)_5\text{SO}_4, 3\text{H}_2\text{SO}_4$. Sl. sol. in cold, easily in hot H_2O . Can be recrystallized from dil. $\text{H}_2\text{SO}_4 + \text{Aq}$.

Xenon, Xe.Absorption by H_2O at t° .

50	0.0878

(Antropoff, Roy. Soc. Proc. 1910, **83**, A, 480.)**Ytterbium, Yb.****Ytterbium bromide, $\text{YbBr}_3 + 8\text{H}_2\text{O}$.**Very sol in H_2O . Hygroscopic (Cleve, Z. anorg. 1902, **32**, 135.)**Ytterbium chloride, $\text{YbCl}_3 + 6\text{H}_2\text{O}$.**Very sol. in H_2O . (Cleve, Z. anorg. 1902, **32**, 134.)Mpt $150-155^\circ$. Anhydrous salt is sol. in H_2O and in alcohol. (Matignon, A. ch. 1906, (8) **8**, 442.)**Ytterbium oxide, Yb_2O_3 .**Slowly attacked by cold or warm acids, but easily sol. at 100° .**Ytterbium oxychloride, YbOCl .**Ppt. (Cleve, Z. anorg. 1902, **32**, 135.)**Yttrium, Y.**Decomposes H_2O . (Cleve, Bull. Soc. (2) **21**, 344.) Decomp. H_2O slightly at ord temp., more rapidly by boiling. Easily sol in dil acids, even acetic acid. Slightly acted upon by conc H_2SO_4 . Decomposes hot $\text{KOH} + \text{Aq}$ and cold $\text{NH}_4\text{Cl} + \text{Aq}$. Not attacked by $\text{NH}_4\text{OH} + \text{Aq}$ (Popp, A. **131**, 179.)

Popp's yttrium contained erbium.

Yttrium bromide, YBr_3 .Sol. in H_2O with evolution of heat. (Duboin, C. R. **107**, 243.) $+9\text{H}_2\text{O}$. Deliquescent. Easily sol. in H_2O and alcohol. Insol. in ether. (Cleve.)**Yttrium carbide, YC_2 .**Decomp. by H_2O and by dil acids; very slowly attacked by conc. acids. (Moissan, C. R. 1896, **122**, 575.)Decomp. by H_2O and dil. acids. (Pettersson, B. 1895, **28**, 2421.)**Yttrium chloride, YCl_3 .**Anhydrous. Sol. in H_2O with evolution of heat. (Cleve.) $+6\text{H}_2\text{O}$. Deliquescent. Very sol. in H_2O . Sl. sol. in alcohol. Insol. in ether. (Cleve.)Mpt. $156-160^\circ$; sol. in alcohol.60.1 grams anhydrous salt are sol. in 100 grams of abs. alcohol at 15° .6.5 grams are sol. in 100 grams pyridine. (Matignon, A. ch. 1906, (8) **8**, 437.)**Yttrium fluoride, $\text{YF}_3 + \frac{1}{2}\text{H}_2\text{O}$.**

Nearly insol in dil acids. (Cleve.)

Yttrium hydroxide, Y_2O_3 , $6\text{H}_2\text{O}$ or $\text{Y}_2\text{O}_3\text{H}_6 + 3\text{H}_2\text{O}$.Insol. in H_2O .Insol in KOH or $\text{NaOH} + \text{Aq}$. Easily sol. in acids. Sol. in alkali carbonates $+ \text{Aq}$. When freshly pptd, easily sol. in $\text{NH}_4\text{Cl} + \text{Aq}$.**Yttrium iodide, YI_3 .**Very deliquescent. Easily sol in H_2O and alcohol.

Sl. sol in ether. (Cleve.)

Yttrium oxide, Y_2O_3 .Insol. in H_2O . Sl. sol. in cold HCl , HNO_3 , or dil $\text{H}_2\text{SO}_4 + \text{Aq}$, but gradually completely sol. on warming. Insol. in NH_4OH and sl. sol. in $\text{KOH} + \text{Aq}$. Sol. in $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$. Somewhat sol in $\text{K}_2\text{CO}_3 + \text{Aq}$.**Yttrium peroxide, Y_4O_9 .**(Cleve, Bull. Soc. (2) **43**, 53.)**Yttrium oxychloride, $\text{Y}_2\text{O}_2\text{Cl}_2$.**Insol. in H_2O . (Popp.)**Yttrium sulphide, Y_2S_3 .**Not prepared in pure state. Impure is insol in H_2O , and partially decomp. thereby. Easily sol. in acids with decomp. (Popp.)**Zinc, Zn.**Not attacked by pure cold H_2O . Slowly oxidised by boiling H_2O . Pure H_2O free from O dissolved nothing from 2500 sq. mm. Zn. Presence of air containing CO_2 caused a solution of 3.5 mg. Zn, which maximum was reached in 2 days. Air without CO_2 also caused a slight action. (Snyders, B. **11**, 936.)100 ccm. distilled H_2O dissolved 14 mg. Zn from 11.8 sq. cm in one week, during which air free from CO_2 was passed through the liquid, and 19 mg. when air containing CO_2 was used (Wagner, Dingl. **221**, 260.)Filtered rain water was found to contain 20 mg. Zn per l (Burg, Isis, **1873**, 119.)Very pure H_2O , when conducted through a great length of galvanized iron pipe, contained 1.7 pts. Zn to 100,000 pts. H_2O . (Davies, J. Soc. Chem. Ind. 1899, **18**, 102.)Action of H_2O on Zn in galvanized pipes is caused by electrolysis. (Smetham, C. N. 1879, **39**, 236.)All kinds of H_2O attack Zn, rain water the least.In distilled H_2O exposed to air Zn is abun-

dantly coated with ZnCO_3 , $2\text{ZnO} + 3\text{H}_2\text{O}$. By allowing 32 g. Zn to stand in 270 cc. distilled H_2O in a flask loosely stoppered with filter paper, 1.2 pts. Zn to 100,000 pts. H_2O was found in solution in 1-2 days. (Smith, J. Soc. Chem. Ind. 1904. **23**. 475)

Sol in all acids Very slowly sol. in dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$ in glass vessels if Zn is pure. According to Jacquelin, 24 hours were necessary to dissolve 6 g. pure zinc. When fused at the lowest possible temperature, it is much more slowly sol. than when heated to a red heat. In both cases it is much more rapidly dissolved if cooled quickly. (Bolley, A. **95**. 294; Rammelsberg.)

Dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ dissolves given % zinc in the same length of time (B=according to Bolley, R=according to Rammelsberg)

	Slowly cooled		Rapidly cooled	
	B	R	B	R
Cast at the melting point	42.5	74.1	13.0	0.9
Cast at a red heat	100.0	69.4	85.5	9.5

50 cc. $\text{H}_2\text{SO}_4 + \text{Aq}$ dissolved in 2 hours the following amts. from 1 sq. cm. Zn at t° .

t°	Strength of acid	Grms. dissolved
20	H_2SO_4	0.000
130	"	0.075
150	"	0.232
20	$\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$	0.002

(Calvert and Johnson, Chem. Soc. **19**. 437)

C. P. zinc is more quickly sol in dil acids in vacuo than under normal pressure, the ratio being about 1:6.5. The rate of solubility increases slowly with rise of temp. from 0° to 98° , when it amounts to about 4 times that at 0° , but from 98° – 100° the increase is thirteenfold. Thus, as an average of 6 experiments, dil. $\text{H}_2\text{SO}_4 + \text{Aq}$ (1:20) dissolves in 30 minutes 2.1 mg. Zn at 0° ; 4.9 mg. at 20° ; 7.4 mg. at 60° ; 9.3 mg. at 98° ; but 122.1 mg. at 100° . If, however, the acid was prevented from boiling by increasing the pressure, the sudden increase between 98° and 100° does not take place.

The rate of solubility in dil $\text{H}_2\text{SO}_4 + \text{Aq}$ (1:20) is also increased 175 times by the addition of CrO_3 , and 306 times by the addition of H_2O_2 . The above phenomena are explained by assuming the formation of a condensed hydrogen atmosphere around the metal, which prevents the further action of the acid (Weeren, B. **24**. 1785)

Not attacked by $\text{HNO}_3 + \text{Aq}$ of 1.512 to 1.419 sp. gr. at a temp. of -18° or less, but violently attacked if temp. is raised. $\text{HNO}_3 + \text{Aq}$ of 1.419–1.401 sp. gr. does not attack Zn at temp. of a freezing mixture, but violently at 0° . More dil. $\text{HNO}_3 + \text{Aq}$ attacks Zn even at -20° . (Millon, A. ch. (3) **6**. 99.)

Sol. in $\text{H}_2\text{CO}_3 + \text{Aq}$ (Berzelius)
Solubility of Zn in acids is very much affected by the presence of small quantities of various metallic salts. Small amts. of $\text{PtCl}_4 + \text{Aq}$ accelerated the action of $\text{H}_2\text{SO}_4 + \text{Aq}$ 149 times, and As_2O_3 123 times. HgCl_2 has a strong retarding action owing to pptn. of Hg on the Zn.

The rate of solution of Zn in acids and the effect of changes in concentration and temperature and of the presence of inorganic salts and organic substances on this rate has been studied. 26 Tables are given. (Ericson-Aurén, Z. anorg. 1901, **27**. 209–253.)

Speed of solution in H_2SO_4 and in HCl (Centnerszwer, Z. phys. Ch. 1914, **87**. 692.)

Various saline solutions have a strong solvent power in presence of PtCl_4 , i. e. KCl , NaCl , Na_2SO_4 , K_2SO_4 , $\text{MgSO}_4 + \text{Aq}$. PtCl_4 also causes Zn to decompose distilled H_2O . CuSO_4 has a similar but less energetic effect.

In all the above cases the disengagement of hydrogen is slower in the dark than in the light. (Millon, C. R. **21**. 37.)

According to Barreswill (C. R. **21**. 292) the above reactions are all caused by galvanic action due to pptd. metal, and a piece of Pt in contact with the Zn causes the same action as the PtCl_4 in solution.

Easily sol. in alkalis + Aq, even $\text{NH}_4\text{OH} + \text{Aq}$, especially when the Zn is in contact with Fe. Sol. in $\text{NaCl} + \text{Aq}$ with pptn. of ZnO . (Siersch, J. B. **1867**. 257)

Sol. in sat. alkali and alkali-earth chlorides + Aq. (Post, **1872**.)

Sol. in NH_4 salts + Aq. (Lorin, J. B. **1865**. 124.)

Sol. in sat. Na_2SO_4 , K_2SO_4 , MgSO_4 , NaNO_3 , KNO_3 , $\text{Ba}(\text{NO}_3)_2$, CaCl_2 , MgCl_2 , and $\text{NH}_4\text{NO}_3 + \text{Aq}$. Chlorides and sulphates (especially Na_2SO_4 and MgCl_2) have strongest action, MgSO_4 and nitrates the least. The action was greatly increased by heat. (Snyders, B. **11**. 936.)

Sol. in boiling $\text{NH}_4\text{Cl} + \text{Aq}$. Sol. in neutral $\text{FeCl}_2 + \text{Aq}$ with pptn. of Fe, especially easily at 100° . (Capitaine, C. R. **9**. 737.)

Sol. in $\text{NiSO}_4 + \text{Aq}$ with pptn. of NiO . (Tupputi.)

Sol. in conc. hot $\text{ZnCl}_2 + \text{Aq}$, but Zn oxy-

chloride is pptd. on diluting (Ordway, Am. J. Sci. (2) **23**, 222)

Sol. in $\text{H}_2\text{SO}_4 + \text{Aq}$. (Debray) —

Solubility of Zn in dilute solutions of salts: 100 ccm of solutions of the given salts were allowed to act one week on 11.8 sq cm. Zn while a current of air with or without CO_2 was passed through the solution.

Salt	G salt in 100 ccm. solution	Mg Zn dissolved without CO_2	Mg Zn dissolved with CO_2
NaCl or KCl	0 5	7	38
NH_4Cl	1 0	51	36
MgCl_2	0 83	18	54
K_2SO_4	1 0	30	53
KNO_3	1 0	9	37
Na_2CO_3	1 0	13	
NaOH	0.923	60	
CaO_2H_2	Sat	3	

(Wagner, Dingl. **221**, 260)

Action of dil. salt solutions (1%) on Zn. The following amts. of Zn in mg. were dissolved from 2500 sq. mm. Zn in 14 days by 400 ccm 1% solution of the given salts:

Salt	Mg. Zn	Salt	Mg. Zn
NaCl	11 2	NaNO_3	6
KCl	14 8	$\text{Ba}(\text{NO}_3)_2$	8
CaCl_2	15 2	NH_4Cl	24.0
MgCl_2	17.2	$(\text{NH}_4)_2\text{SO}_4$	31.6
BaCl_2	13 2	NH_4NO_3	26.0
K_2SO_4	12 0	NaHCO_3	0
MgSO_4	8.8	K_2CO_3	0
KNO_3	6 8	Na_2CO_3	0

Sl. attacked by H_2O at 80° by hot conc NH_4OH ; attacked by H_3PO_4 or $\text{NaCl} + \text{Aq}$; very sl. attacked by $\text{NaNO}_3 + \text{Aq}$ or $\text{KNO}_3 + \text{Aq}$ at 100° . (Smith, J. Soc. Chem. Ind. 1904, **23**, 476.)

$\frac{1}{2}$ ccm. oleic acid dissolves 0.0240 g. Zn in 6 days. (Gates, J. phys. Chem. 1911, **15**, 143.)

Attacked by cane sugar + Aq at 115° . (Klein and Berg, C R. **102**, 1170.)

Zinc amide, $\text{Zn}(\text{NH}_2)_2$.

Decomp. by H_2O and alcohol. Insol. in ether. (Frankland, Phil. Mag. (4) **15**, 149.)

Zinc antimonide, ZnSb .

Does not decomp. boiling H_2O except slightly. Not attacked by dil. mineral acids, but decomp. by conc. HCl or $\text{HNO}_3 + \text{Aq}$. (Cooke, Proc. Am. Acad. **5**, 348.)

ZnSb_2 . Decomp. H_2O rapidly at 100° .

Violently decomp. by dil. HCl or $\text{H}_2\text{SO}_4 + \text{Aq}$, also by $\text{HNO}_3 + \text{Aq}$. Completely sol. in $\text{HCl} + \text{Aq}$ mixed with a little HNO_3 . (Cooke)

Zinc azoimide, basic, $\text{Zn}(\text{OH})\text{N}_3$.

Very sl. sol. in H_2O . Decomp. by hot H_2O . (Curtius, J. pr. 1898, (2) **58**, 293.)

Zinc azoimide ammonia, $\text{ZnN}_3 \cdot 2\text{NH}_3$.

Insol. in H_2O , but gradually decomp. thereby. (Dennis, J. Am. Chem. Soc. 1907 **29**, 20.)

Zinc bromide, ZnBr_2 .

Very deliquescent, and sol. in H_2O .

Sat. $\text{ZnBr}_2 + \text{Aq}$ contains at:

-20° $+4^\circ$ 22° 97°
66.3 68.8 77.5 83.6% ZnBr_2 ,

107° 170° 210° 375° (mpt.)
83.8 85.0 89.3 100% ZnBr_2 .

(Étard, A. ch. 1894, (7) **2**, 541.)

Solubility in H_2O .

100 g. of the sat. solution contain at:

35° 40° 60° 80° 100°
85.45 85.53 86.08 86.57 87.05 g. ZnBr_2 .

(Dietz, Z. anorg. 1899, **20**, 250.)

See also below under hydrated salts.

Sp. gr. of $\text{ZnBr}_2 + \text{Aq}$ at 19.5° containing

18.3 31.7 43.2 % ZnBr_2 ,
1.1849 1.3519 1.5276

52.6 59.1 68 % ZnBr_2 .
1.7082 1.8525 2.1027

(Kremers, Pogg. **108**, 117.)

Sp. gr. of $\text{ZnBr}_2 + \text{Aq}$ at 19.5° .

% ZnBr_2	Sp. gr.	% ZnBr_2	Sp. gr.	% ZnBr_2	Sp. gr.
5	1.045	25	1.265	45	1.560
10	1.093	30	1.330	50	1.650
15	1.196	35	1.400	55	1.755
20	1.204	40	1.475	60	1.875

(Kremers, calculated by Gerlach, Z. anal. **8**, 285.)

Sol. in conc HCl or $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$, also in $\text{NH}_4\text{OH} + \text{Aq}$.

Sol. in AlBr_3 . (Isbekow, Z. anorg. 1913, **84**, 27.)

Very sl. sol. in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 830.)

Sol. in alcohol and ether. (Berthelot, J. Pharm. **14**, 610.)

Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

More sol in anhydrous ether than in abs. alcohol. Insol. in CS_2 . (Hampe, Ch. Z. 1887, 11. 846.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Mol. weight determined in pyridine (Werner, Z. anorg. 1897, 15. 22.)

+ H_2O . (Lescoeur, A. ch. 1894, (7) 2. 78) + $2\text{H}_2\text{O}$. Very hygroscopic.

Solubility in H_2O .

100 g. of the sat. solution contain at:

—8° 0° 13° 25° 30° 37° (mpt.)
79.06 79.55 80.76 82.46 84.08 86.20 g. ZnBr_2 .

(Dietz, Z. anorg. 1899, 20. 250.)

+ $3\text{H}_2\text{O}$. Solubility in H_2O .

100 g. of the sat. solution contain at:

—15° —10° —5° (mpt.)
77.13 78.45 80 64 g. ZnBr_2 .

(Dietz, Z. anorg. 1899, 20. 250.)

Zinc bromide ammonia, $\text{ZnBr}_2 \cdot 2\text{NH}_3$.

Decomp. by H_2O . Sl. sol in cold, more easily in warm $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg, Pogg. 55. 240.)

+ $\frac{1}{3}\text{H}_2\text{O}$. Decomp. by H_2O with separation of ZnO . (André, C. R. 96. 703.)

+ H_2O . Above salt of Rammelsberg's has this composition. (André.)

$3\text{ZnBr}_2 \cdot 8\text{NH}_3 + 2\text{H}_2\text{O}$. Decomp. by H_2O . (André.)

$3\text{ZnBr}_2 \cdot 10\text{NH}_3 + \text{H}_2\text{O}$. Decomp. by H_2O . (André.)

$2\text{ZnBr}_2 \cdot 10\text{NH}_3$. Efflorescent. Decomp by H_2O . (André.)

Zinc bromide cupric oxide, $\text{ZnBr}_2 \cdot 3\text{CuO} + 2\text{H}_2\text{O}$.

+ $4\text{H}_2\text{O}$. (Mailhe, C. R. 1901, 133. 227)

Zinc bromide hydrazine, $\text{ZnBr}_2 \cdot 2\text{N}_2\text{H}_4$.

Decomp. by H_2O .

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Franzen, Z. anorg. 1908, 60. 277.)

Zinc chloride, ZnCl_2 .

Very deliquescent, and sol. in H_2O .

Sol. in 0.333 pt H_2O at 18.75°. Abl)

$\text{ZnCl}_2 + \text{Aq}$ sat at 12.5° contains 78.5% ZnCl_2 . (Hassenfratz, A. ch. 28. 291.)

Solubility in H_2O .

100 g. of the sat. solution contain at:

15° 20° 41° 60° 100°
79.12 81.19 82.21 83.51 86.01 g. ZnCl_2 .

(Dietz, Z. anorg. 1899, 20. 245.)

$\text{ZnCl}_2 + \text{Aq}$ containing 1 pt ZnCl_2 in 1.8205 pts. H_2O at 18° has sp. gr. = 1.3666. (Hit-
torf, Z. phys. Ch. 1902, 39. 628.)

Solubility in H_2O .

100 g. of the sat. solution contain at:

-5°	0°	+7° (mpt.)
64.5	67.58	71.57 g. ZnCl_2 .

(Dietz, Z. anorg. 1899, 20. 245.)

Zinc hydrogen chloride, $2\text{ZnCl}_2, \text{HCl} + 2\text{H}_2\text{O}$.

Deliquescent. (Engel, C. R. 102. 1068.)

$\text{ZnCl}_2, \text{HCl} + 2\text{H}_2\text{O}$. (Engel.)

Zinc hydrazine chloride, $\text{ZnCl}_2, \text{N}_2\text{H}_4, \text{HCl}$.

Very hygroscopic.

Sol. in H_2O . (Curtius, J. pr. 1894, (2) 50. 338.)

ZnCl_2 , $2(\text{N}_2\text{H}_4, \text{HCl})$ Hydrosopic; very sol. in H_2O

Sol. in hot alcohol and $\text{NH}_4\text{OH} + \text{Aq.}$ (Curtius, J pr 1894, (2) 50. 338.)

Zinc chloride ammonia, $\text{ZnCl}_2, 5\text{NH}_3 + \text{H}_2\text{O}$.

Easily sol in little, but decomp. by much H_2O . Still more sol. in $\text{ZnCl}_2 + \text{Aq}$ with decomp (Divers, C. N. 18. 13)

$\text{ZnCl}_2, 4\text{NH}_3 + \text{H}_2\text{O}$. (Kane.)

$\text{ZnCl}_2, 2\text{NH}_3$. Not completely sol. in H_2O ; can be recryst. from hot $\text{NH}_4\text{Cl} + \text{Aq}$ (Ritt-hausen, J. pr. 60. 473.)

Insol in H_2O . Sol in NH_4Cl or $\text{NH}_4\text{OH} + \text{Aq.}$ (Thomas, B. 20. 743.)

$\left. \begin{array}{l} + \frac{1}{4}\text{H}_2\text{O} \\ + \frac{2}{5}\text{H}_2\text{O} \\ + \frac{1}{2}\text{H}_2\text{O} \\ + \text{H}_2\text{O} \end{array} \right\}$ Decomp. by H_2O .

(André, C. R. 1882, 94. 964.)

$\text{ZnCl}_2, \text{NH}_3$. Decomp. by H_2O . (Kane, A. ch. 72. 290)

Zinc chloride cupric oxide, $\text{ZnCl}_2, 3\text{CuO} + 4\text{H}_2\text{O}$.

(Mailhe, C. R. 1901, 134. 226)

Zinc chloride hydrazine, $\text{ZnCl}_2, 2\text{N}_2\text{H}_4$.

Ppt. (Franzen, Z anorg 1908, 60. 275.)

$\text{ZnCl}_2, 2\text{N}_2\text{H}_4$ Insol in H_2O .

Easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Curtius, J. pr. 1894, (2) 50. 345.)

Zinc chloride hydroxylamine, $\text{ZnCl}_2, 2\text{NH}_2\text{OH}$.

Sl. sol in cold, somewhat more in warm H_2O . Very sol. in $\text{NH}_2\text{OH} + \text{Aq}$ Very sl. sol. in alcohol and other organic solvents. (Crismer, Bull. Soc. (3) 3. 116.)

1 pt is dissolved in 100 pts aq. solution sat. at 20° . (Antonoff, C. C. 1906, II. 810.)

Zinc fluoride, ZnF_2 .

Sl. sol. in cold, more easily in hot H_2O . Insol in 95% alcohol. Sol. in boiling HNO_3 , HCl , or H_2SO_4 . (Poulenc, C. R. 116. 581.)

Contrary to older statements, ZnF_2 is quite sol. in H_2O . (Kohlrausch, Z. phys. Ch. 1903, 44. 213.)

Insol. in liquid NH_3 . (Gore, Am. Ch. J. 1898, 20. 830.)

Insol. in methyl acetate. (Naumann, B 1909, 42. 3790.)

$+4\text{H}_2\text{O}$. Difficultly sol. in H_2O . Somewhat more sol. in H_2O containing HF , HCl , or HNO_3 . Easily sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Berzelius, Pogg. 1. 26.)

1 l. H_2O dissolves 16 g. at 18° . (Dietz)

Zinc hydrogen fluoride.

Known only in solution.

Zinc zirconium fluoride.

See Fluozirconate, zinc.

Zinc hydrophosphide, $\text{Zn}_2\text{H}_2\text{P}_2$.

Decomp. by cold H_2O and by dil. $\text{HCl} + \text{Aq.}$ (Drechsel and Finkelstein, B. 1871, 4. 353.)

Zinc hydroxide, ZnO_2H_2 .

Insol in H_2O Sol. in acids. Sol. in KOH , NaOH , NH_4OH , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$

1 l. H_2O dissolve 0.01 g. ZnO_2H_2 at 25° . (Bodlander, Z. phys. Ch. 1898, 27. 66)

Solubility in H_2O is calculated to be 2.6×10^{-5} g. mols. per l. (Herz, Z. anorg. 1900, 23. 227.)

1 l. H_2O dissolves 0.0042 g. ZnO_2H_2 at 18° . (Dupre and Bialas, Z. angew. Ch. 1903, 16. 55.)

See also Zinc oxide.

Solubility in $\text{NH}_4\text{OH} + \text{Aq}$ at 25° .

ZnO_2H_2 used	NH_3 norm.	G ZnO per l.
prepared from ZnSO_4	1 287	7.28

0 6670	0 1771
0 9660	0 9630
1.4951	0 2481
2 9901	0 3700

When zinc hydroxide is treated with alkali, more dissolves at first than corresponds with the true equilibrium under the prevailing conditions, for such solutions spontaneously deposit more or less zinc hydroxide according to the concentration (Rubenbauer, Z. anorg. 1902, **30**, 333.)

Solubility of ZnO_2H_2 in $\text{NaOH} + \text{Aq}$ at 25° .

G. mol per l	
Na	Zn
0.2636	0 00311
0.3871	0 0057
0 5414	0 0129
0.9280	0 0425

(Wood, Chem. Soc. 1910, **97**, 884.)

Freshly pptd ZnO_2H_2 is easily sol in $\text{KOH} + \text{Aq.}$ but it gradually goes over into a stable form which is difficultly sol in $\text{KOH} + \text{Aq.}$ (Herz, Z. anorg. 1901, **28**, 474.)

Freshly pptd. ZnO_2H_2 is sol. in dil. salt solutions (1 %) as follows. The given amts in mg (calculated as Zn) were dissolved per l. at t° .

Salt	Mg Zn	t°
NaCl	51	18
KCl	43	20
CaCl_2	57.5	16
MgCl_2	65	16
BaCl_2	38	18
K_2SO_4	37 5	20
MgSO_4	27	21
KNO_3	17 5	15
NaNO_3	22	15
$\text{Ba}(\text{NO}_3)_2$	25	21
K_2CO_3	0	15
NH_4Cl	95	20
NH_4NO_3	77	20
$(\text{NH}_4)_2\text{SO}_4$	88	20

(Snyders, B. **11**, 936.)

+ H_2O .

See also Zinc oxide.

Zinc hydrosulphide, $\text{Zn}(\text{SH})_2$.

Very unstable. Decomp. by H_2O . (Zotta, M. **10**, 807.)

Sol. in $\text{NaSH} + \text{Aq.}$ (Thomsen, B. **11**, 2044.)

$\text{Zn}_3\text{H}_2\text{S}_4$. (Zotta.)

Zinc iodide, ZnI_2 .

Deliquescent Easily sol. in H_2O

Sat. $\text{ZnI}_2 + \text{Aq}$ contains at:

-18°	-5°	$+17^\circ$	47°	62°	73°
70 9	74 0	80 4	80.3	81.3	81 2%
97°	100°	107°	138°	140°	
82 1	83 0	82 6	83.8%	ZnI_2 .	

(Étard, A. ch. 1894, (7) **2**, 544.)

Solubility in H_2O .

100 g. of the sat. solution contain at:

0°	18°	40°	60°	80°	100°
81.11	81 20	81.66	82.37	83.05	83.62 g.
					ZnI_2 .

(Dietz, Z. anorg. 1899, **20**, 251.)

See also under $+2\text{H}_2\text{O}$.

Sp. gr. of $\text{ZnI}_2 + \text{Aq}$ at 19.5° containing:

23 1	42 6	56 3	63.5	76 0%	ZnI_2 .
1.2340	1 5121	1 7871	1 9746	2 3976	

(Kremers, Pogg. **111**, 61.)

Sp. gr. of $\text{ZnI}_2 + \text{Aq}$ at 19.5° containing:

5	10	15	20	25	% ZnI_2 .
1 045	1 091	1 140	1.196	1 255	
30	35	40	45	50	% ZnI_2 .
1 368	1 390	1.420	1 560	1.650	
55	60	65	70	75	% ZnI_2 .
1.754	1 875	2 020	2 180	2 360	

(Kremers, calculated by Gerlach, Z. anal. **8**, 285.)

Sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$

Moderately sol. in liquid NH_3 . (Franklin, Am Ch. J. **1898**, **20**, 830.)

Sol. in alcohol.

100 pts glycerine dissolve 40 pts at ord. temp. (Klever, Bull. Soc. 1872, (2) **18**, 372.)

100 g. glycerol dissolve 40 g. ZnI_2 at 15.5° . (Ossendowski, Pharm. J. 1907, **79**, 575.)

More sol. in anhydrous ether than in abs. alcohol. Insol. in CS_2 . (Hampe, Ch. Z. **1887**, **11**, 846.)

Sol. in methyl acetate (Naumann, B. **1909**, **42**, 3790); acetone. (Eidmann, C. C. **1899**, II. 1014; Naumann, B **1904**, **37**, 4328.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. **1906**, **51**, 236.)

Mol weight determined in methyl sulphate (Werner, Z. anorg. **1897**, **15**, 25.)

+ $2\text{H}_2\text{O}$. Solubility in H_2O .

100 g. of the sat. solution contain at:

-10°	-5°	0°	$+10^\circ$	22°	27° (mpt.)
80.50	80.77	81.16	82.06	83.12	89.52 g.
					ZnI_2 .

(Dietz, Z. anorg. **1899**, **20**, 251.)

+ $4\text{H}_2\text{O}$ (Lubarski, Z. anorg. **1898**, **18**, 387.)

Zinc tetraiodide, ZnI_4 .

Known only in aqueous solution. (Baup, Report. **14**, 412.)

Sol. in fenchone. (Rimini and Olivari, C. C. **1907**, II. 241.)

Zinc iodide ammonia, $\text{ZnI}_2, 4\text{NH}_3$.

Decomp by cold H_2O . Easily sol in acids and $\text{NH}_4\text{OH} + \text{Aq}$ (Rammelsberg, Pogg 48. 152)

$\text{ZnI}_2, 5\text{NH}_3$. Decomp. by cold H_2O . Sol in $\text{NH}_4\text{OH} + \text{Aq}$. (Rammelsberg)

$3\text{ZnI}_2, 5\text{NH}_3 + 3\text{H}_2\text{O}$. (Tassily, C. R. 1896, 122. 324)

Zinc iodide hydrazine, $\text{ZnI}_2, 2\text{N}_2\text{H}_4$.

Decomp by H_2O .

Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Franzen, Z. anorg. 1908, 60. 277.)

Zinc nitride, Zn_3N_2 .

Decomp. by H_2O with the greatest violence. (Frankland, Phil. Mag. (4) 15. 149.)

Easily decomp. by H_2O when finely powdered. (Rossel, C. R. 1895, 121. 942.)

Sol. in HCl . (Fischer, B. 1910, 43. 1468)

Zinc oxide, ZnO .

Insol. in H_2O . Some preparations of ZnO are sl. sol. in H_2O , never, however, in less than 1 million pts. H_2O . (Bineau, C. R. 41. 510)

Calculated from electrical conductivity of $\text{ZnO} + \text{Aq}$ 1 pt. ZnO is sol. in 236,000 pts. H_2O at 18° . (Dupre and Bialas, Zeit. angew. Ch. 1903, 16. 55.)

See also Zinc hydroxide.

Easily sol. in acids, even after ignition. Easily sol. in acids, even H_2SO_4 , or $\text{H}_2\text{CO}_3 + \text{Aq}$.

Solubility of ZnO in $\text{CrO}_3 + \text{Aq}$ at 25° .

1 l of the solution contains:

G. CrO_3	G. ZnO	G. CrO_3	G. ZnO
0.010	0.013	101	44.9
0.010	0.013	151	66.1
0.010	0.013	192	83.8
0.604	0.409	192	83.6
2.14	1.16	285	123
4.19	2.24	392	168
11.4	5.84	450	193
11.5	5.89	461	196
22.2	10.7	463	197
31.4	14.9	475	202
43.1	20.1	574	240
57.5	26.7	660	274
66.5	30.3	769	318
66.7	30.4	879	354
70.6	32.2	970	389
93.3	41.5

(Gröger, Z. anorg. 1911, 70. 136.)

When moist is easily sol. in KOH , NaOH , and $\text{NH}_4\text{OH} + \text{Aq}$, but only sl. sol. therein after ignition. Partially reprecipitated from solution in $\text{NH}_4\text{OH} + \text{Aq}$ by dilution with H_2O .

Anhydrous ZnO is insol. in dil., but sol. in conc. alkali hydrates + Aq , but the hydroxide is easily sol., even in dil. alkalis + Aq (Fremy, A. ch. (3) 23. 390.)

Very sl. sol. in $\text{NH}_4\text{OH} + \text{Aq}$. After igni-

tion its solubility is greatly increased by traces of K and NH_4 salts. Phosphates have the strongest action, then, in the following order: arsenates, chlorides, sulphites, nitrates, acetates, carbonates, tartrates, citrates, and sulphates. Succinates and benzoates increase the solubility in $\text{NH}_4\text{OH} + \text{Aq}$, only when it is very dil.; borates, iodides, chlorates, arsenites, gallates, and oxalates do not increase the solubility. (Schindler)

ZnO is sol. in $\text{NH}_4\text{OH} + \text{Aq}$ only in presence of NH_4 salts. (Brandhorst, Zeit. angew. Ch. 1904, 17. 513)

Solubility in KOH , NaOH , and $\text{NH}_4\text{OH} + \text{Aq}$.

An excess over 4 mols. KOH to 1 mol. ZnO is necessary for solution, but that excess may be neutralised after solution, until only 4 mols are left, without pptn of ZnO . Solution is pptd by addition of 12 vols H_2O . $\text{KOH} + \text{Aq}$ containing 16.5 g. KOH to a litre H_2O is the weakest solution which will dissolve ZnO . Three times as much alkali are necessary for solution at 50° as at $16-17^\circ$. Less excess of NaOH than of KOH is necessary. 3 mols. NH_4OH will dissolve 1 mol. ZnO , and the temp. and dilution are in this case of little influence. (Prescott.)

100 cc of 20% $\text{NaOH} + \text{Aq}$ dissolve in many hours at most 2.97 g ignited ZnO . Pptd. ZnO is more quickly dissolved but the action becomes very slow after 100 cc. of the solution contain 3.87 g. of Zn (Fürster and Günther, Z. Elektrochem 1900, 6. 301.)

Solubility of ignited ZnO in $\text{NaOH} + \text{Aq}$ gradually decreases (Kunschert, Z. anorg. 1904, 41. 343)

Sol in hot $\text{NH}_4\text{Cl} + \text{Aq}$, either when moist or dry.

Somewhat less sol. in $\text{NH}_4\text{NO}_3 + \text{Aq}$.

Somewhat sol. in water glass + Aq (Ordway)

Slowly sol in cold, easily in hot $\text{NaCl} + \text{Aq}$. (Siersch, J. B. 1867. 255)

Solubility of ZnO in $\text{ZnCl}_2 + \text{Aq}$ at room temp.

G. ZnCl_2 per 100 g. H_2O	G. ZnO per 100 g. H_2O
8.22	0.0137
23.24	0.138
45.95	0.497
51.50	0.604
56.90	0.723
62.85	0.884
96.00	1.792
124.70	3.213
144.80	2.640
203.00	1.590

The solubility curve has a maximum at a point corresponding to about 125 g. ZnCl_2 per 100 g. H_2O . On the first branch of the curve the solid phase in equilibrium with the solution is $\text{ZnCl}_2, 4\text{ZnO}, 6\text{H}_2\text{O}$; on the second branch it is $\text{ZnCl}_2, \text{ZnO}, 1.5\text{H}_2\text{O}$.

(Driot, C. R. 1910, 150. 1427.)

Sol. in boiling $\text{Fe}(\text{NO}_3)_3$, and $\text{Pb}(\text{NO}_3)_2$ + Aq with pptn. of oxides Not attacked by $\text{Co}(\text{NO}_3)_2$, $\text{Ni}(\text{NO}_3)_2$, and $\text{Ce}(\text{NO}_3)_3$ + Aq. (Persoz.)

Sol in boiling KCN + Aq.

Insol in boiling K tartrate + Aq. (Kahlenberg and Hillyer, Am. Ch. J. 1894, **16**, 101.)

Insol in liquid NH_3 . (Franklin, Am. Ch. J. 1898, **20**, 830.)

Tartaric acid somewhat hinders the pptn. of ZnO_2H_2 .

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol in acetone. (Naumann, B. 1904, **37**, 4329; Ehdmann, C. C. 1899, II. 1014.)

Sol. in methyl amine, but insol. in amyl amine + Aq. (Wurtz.)

1 l. solution containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.24 g ZnO . (Bodenbender, J. B. 1865, 600.)

Min. *Zincite*. Sol. in acids.

Zinc peroxide.

1 pt. sol. in 45,000 pts. H_2O .

Very sol in acids (Foregger and Philipp, J. Soc Chem. Ind. 1906, **25**, 300.)

ZnO_2 (?). Ppt. Decomp. by acids with evolution of H_2O_2 . (Haass, B. 17, 2249.)

ZnO , H_2O , H_2O_2 . (de Forcrand, A. ch. 1902, (7) **27**, 58.)

3ZnO , $2\text{H}_2\text{O}_2$. (de Forcrand.)

3ZnO , H_2O , $2\text{H}_2\text{O}_2$. (de Forcrand.)

4ZnO , H_2O , $3\text{H}_2\text{O}_2$. (de Forcrand.)

ZnO_2 , ZnO_2H_2 . Insol. in NH_4OH + Aq. (Kouriloff, A. ch. (6) **23**, 431.)

3ZnO_2 , $\text{Zn}(\text{OH})_2$. Sol. in NaOH + Aq with evolution of O . (Eijkman, C. C. 1905, I. 1628.)

Zn_2O_7 , 3ZnO + $4\text{H}_2\text{O}$. Completely sol. in dil. H_2SO_4 . (de Forcrand.)

10ZnO_2 , 4ZnO + $5\text{H}_2\text{O}$. Ppt. (Teletow, C. C. 1911, I. 1799.)

Zinc oxybromide, ZnBr_2 , ZnO + $13\text{H}_2\text{O}$.

ZnBr_2 , 4ZnO + 10, 13, and $19\text{H}_2\text{O}$. Decomp. by H_2O into—

ZnBr_2 , 6ZnO + $35\text{H}_2\text{O}$. (André.)

ZnBr_2 , 5ZnO + $6\text{H}_2\text{O}$. (André.)

All oxybromides are sol. in KOH and NH_4OH + Aq. (André, C. R. **96**, 703.)

Zinc oxybromide ammonia, ZnBr_2 , 3ZnO , 2NH_3 + $5\text{H}_2\text{O}$.

Decomp. by H_2O . (André, C. R. **96**, 703.)

Zinc oxychloride, ZnO , 3ZnCl_2 + H_2O .

Decomp. by H_2O .

Very sol in dil. acids. (Ephraim, Z. anorg 1908, **59**, 67.)

+ $4\text{H}_2\text{O}$. Sl. sol. in H_2O ; more sol. in ZnCl_2 + Aq.

Easily sol. in acids, or NH_4OH , or KOH + Aq. (Schindler, Mag. Pharm. **36**, 45.)

+ $5\text{H}_2\text{O}$ and $8\text{H}_2\text{O}$. (André, A. ch. (6) **3**, 94.)

ZnO , ZnCl_2 + $1\frac{1}{2}\text{H}_2\text{O}$. (Driot, C. R. 1910, **150**, 1427.)

3ZnO , ZnCl_2 + $2\text{H}_2\text{O}$. Sl. sol. in H_2O , more easily sol in ZnCl_2 + Aq. Easily sol. in acids and in NH_4OH or KOH + Aq. (Schindler, Mag. Pharm. **36**, 45.)

+ $3\text{H}_2\text{O}$ (Werner, B. 1907, **40**, 4443.)

+ $5\text{H}_2\text{O}$ (Mailhe, A. ch. 1902, (7) **27**, 367.)

3ZnO , 2ZnCl_2 + $11\text{H}_2\text{O}$ (André, C. R. 1888, **106**, 854.)

4ZnO , ZnCl_2 + $6\text{H}_2\text{O}$. (André, C. R. 1888, **106**, 854.)

+ $11\text{H}_2\text{O}$. (André, A. ch. (6) **3**, 94.)

5ZnO , ZnCl_2 + $6\text{H}_2\text{O}$. (Perrot, Bull. Soc. 1895, (3) **13**, 976.)

+ $8\text{H}_2\text{O}$. (André, C. R. 1882, **94**, 1524.)

5ZnO , 2ZnCl_2 + $26\text{H}_2\text{O}$. Sol. in KOH or NH_4OH + Aq. Decomp. by H_2O into—

5ZnO , ZnCl_2 + $26\text{H}_2\text{O}$. Sol. in KOH or NH_4OH + Aq. Decomp. by H_2O into—

6ZnO , ZnCl_2 + $6\text{H}_2\text{O}$. Insol. in H_2O . (Kane, A. ch. **72**, 296.)

8ZnO , ZnCl_2 + $10\text{H}_2\text{O}$. (Mailhe, A. ch. 1902, (7) **27**, 367.)

9ZnO , ZnCl_2 + $3\text{H}_2\text{O}$. Insol. in H_2O . Less sol in NH_4OH + Aq than ZnCl_2 , 3ZnO + $2\text{H}_2\text{O}$, but easily sol. in $14\text{H}_2\text{O}$.

9ZnO , 2ZnCl_2 + $12\text{H}_2\text{O}$. Insol. in hot or cold H_2O . (Habermann, M. **5**, 432.)

Zinc oxychloride ammonia, 6ZnCl_2 , ZnO , 12NH_3 + $4\text{H}_2\text{O}$.

Decomp. by H_2O and boiling alcohol. (André, A. ch. (6) **3**, 90.)

ZnCl_2 , 3ZnO , 2NH_3 + $5\text{H}_2\text{O}$ Decomp. by H_2O . (André.)

ZnCl_2 , 2ZnO , 2NH_3 + $3\text{H}_2\text{O}$. (André.)

6ZnCl_2 , 3ZnO , 10NH_3 + $13\text{H}_2\text{O}$. (André.)

4ZnCl_2 , ZnO , 8NH_3 + $2\text{H}_2\text{O}$. (André.)

Zinc oxyiodide, ZnI_2 , 3ZnO + $2\text{H}_2\text{O}$.

Insol. in cold, sl. sol. in boiling H_2O . (Muller, J. pr. **26**, 441.)

ZnI_2 , 9ZnO + $24\text{H}_2\text{O}$. Insol. in cold H_2O .

ZnI_2 , 5ZnO + $11\text{H}_2\text{O}$. Decomp. by H_2O . (Tassully, C. R. 1896, **122**, 324.)

Zinc oxyphosphide, ZnP_2O .

(Renault, A. ch. (4) **9**, 162.)

Probably is a mixture of zinc phosphate and phosphorus. (Vigier, Bull. Soc. **1861**, 5.)

Zinc oxysulphide, ZnO , ZnS .

Sol. in HCl + Aq. (Arfvedson, Pogg. **1**, 59.)

4ZnS , ZnO . Not decomp. by boiling $\text{HC}_2\text{H}_3\text{O}_2$ + Aq. (Kersten, Schw. J. **57**, 186.)

Min. *Volzite*. Sol. in HCl + Aq.

Zinc phosphide, ZnP .

Less easily attacked by HCl + Aq than Zn_3P_2 .

ZnP_2 . Not attacked by hot HCl + Aq. (Hvoslef, A. **100**, 99.)

ZnP_4 . Insol. in dil. HCl + Aq (Renault.)

Zn_3P_2 Insol in H_2O . Sol in dil. HCl , H_2SO_4 , or $\text{HNO}_3 + \text{Aq}$, with evolution of PH_3 . (Renault, A. ch. (4) 9. 162)

Zn_3P_4 . Insol in $\text{HCl} + \text{Aq}$ (Renault.)

Zinc selenide, ZnSe .

Cold dil $\text{HNO}_3 + \text{Aq}$ dissolves out Zn , and Se separates out, which dissolves on warming as H_2SeO_3 . (Berzelius)

$+x\text{H}_2\text{O}$. Insol in H_2O . (Berzelius)

Zinc sulphide, ZnS .

Anhydrous. Insol. in H_2O . Sol. in $\text{HCl} + \text{Aq}$; insol in $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$. (Ebelmen, A. ch. (3) 25. 97.)

Sol. in $\text{H}_2\text{S} + \text{Aq}$ under pressure in a sealed tube (Senarmont, A. ch. (3) 32. 168)

Min. *Blende*, *Sphalerite*. Sl. attacked by acids, expecting aqua regia.

1 l. H_2O dissolves 6.65×10^{-6} mols. zinc blende at 18° .

1 l. H_2O dissolves 6.63×10^{-6} mols. artificial crystal ZnS at 18° (Wiegel, Z. phys. Ch. 1907, 58. 294.)

Sol. in an alkaline solution of NaClO (Sadtler, Trans. Am. Electrochem. Soc. 1902, 1. 142)

Insol. in liquid NH_3 (Franklin, Am. Ch. J. 1898, 20. 830.)

$+1/2, 2/3$, or $1\text{H}_2\text{O}$.

Pptd. ZnS .

1 l. H_2O dissolves 70.60×10^{-6} mols. pptd. ZnS at 18° . (Wiegel, Z. phys. Ch. 1907, 58. 294.)

Insol. in alkali hydrates, carbonates, and sulphides + Aq . Insol. in NH_4OH , HCl , or $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$. Easily sol. in very dil. HCl and $\text{HNO}_3 + \text{Aq}$, but H_2S ppts. ZnS in presence of very dil. $\text{HCl} + \text{Aq}$, or $\text{H}_2\text{SO}_4 + \text{Aq}$ (Eliot and Storer.)

More easily sol. in $\text{HNO}_3 + \text{Aq}$ than in $\text{HCl} + \text{Aq}$. (Fresenius)

Only sl. sol. in acetic acid. (Wackenroder)

When still moist is sol. in $\text{H}_2\text{SO}_3 + \text{Aq}$.

Insol. in NH_4Cl or $\text{NH}_4\text{NO}_3 + \text{Aq}$.

$\text{K}_2\text{S} + \text{Aq}$ when added to $\text{ZnSO}_4 + \text{Aq}$ produces a ppt in presence of 10,000 pts H_2O , and a slight opalescence with 20,000 pts. (Lassaigne.)

Slowly sol. in conc. $\text{KCN} + \text{Aq}$. (Halm, J. B. 1870. 1008)

Sl. sol. in $\text{Na}_2\text{S} + \text{Aq}$; sol. in $\text{NaSH} + \text{Aq}$ (Becker, Sill. Am. J. (3) 33. 199.)

Zinc pentasulphide, ZnS_5 .

Sol. in acids, with separation of S . (Schiff, A. 115. 74.)

Zinc sulphosilicide, ZnSiS .

Decomp. by acids and by alkalis. (Fraenkel, Metall, 1909, 6. 683.)

Zinc telluride, ZnTe .

Decomp. by acids. Sol. in $\text{Br}_2 + \text{Aq}$. (Fabre, C. R. 105. 277.)

Zincic acid.

Zinc hydroxide shows weak acid properties, and forms the following salts

Ammonium zincate, 3ZnO , $4\text{NH}_3 + 12\text{H}_2\text{O} = 3\text{ZnO}$, $2(\text{NH}_4)_2\text{O} + 10\text{H}_2\text{O}$.

Decomp by much H_2O .

Barium zincate, $\text{BaH}_2\text{Zn}_2\text{O}_4 + 7\text{H}_2\text{O}$.

Decomp by H_2O . (Bertrand, C. R. 115. 939)

Calcium zincate, $\text{CaH}_2\text{Zn}_2\text{O}_4 + 4\text{H}_2\text{O}$.

Decomp. by H_2O . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$. (Bertrand, C. R. 115. 939.)

Cobaltous zincate, $x\text{CoO}$, $y\text{ZnO}$.

Rumman's green Sol. in acids. $\text{H}_2\text{CO}_3 + \text{Aq}$ dissolves out ZnO . (Corney.)

Potassium zincate, ZnO , K_2O .

Easily sol. in H_2O , but decomp. by boiling. (Laux, A. 9. 183)

2ZnO , K_2O . Decomp. immediately by cold H_2O . (Fremy, C. R. 15. 1106.)

Sodic zincate, Na_2O , $2\text{ZnO} + 8\text{H}_2\text{O}$, or $2\text{NaHZnO}_2 + 7\text{H}_2\text{O}$.

Decomp. by H_2O or alcohol. (Corney and Jackson, Am. Ch. J. 11. 145.)

$+7\text{H}_2\text{O}$. (Forster and Günther, Z. Elektrochem. 1899, 6. 301.)

$2\text{Na}_2\text{O}$, $3\text{ZnO} + 18\text{H}_2\text{O}$ or $\text{Zn}_3\text{O}_5\text{Na}_4\text{H}_2 + 17\text{H}_2\text{O}$. Decomp by H_2O or alcohol. Insol. in ether. (Corney and Jackson.)

Strontium zincate, $\text{SrH}_2\text{Zn}_2\text{O}_4 + 7\text{H}_2\text{O}$.

Decomp by H_2O . (Bertrand.)

Zirconic acid.

See Zirconium hydroxide.

Barium zirconate, BaZrO_3 .

Insol. in acids. (Ouvrard, C. R. 113. 80.)

Calcium zirconate, CaZrO_3 .

Insol. in acids. (Ouvrard, C. R. 113. 80.)

Calcium zirconate, acid.

Insol. in H_2O or $\text{HCl} + \text{Aq}$. (Hiordthal, A. 137. 237.)

Calcium potassium zirconate, $(\text{Ca}, \text{K})\text{LaO}_3$ (small quantity of CaO substituted by K_2O).

Sol. in HCl . (Venable, J. Am. Chem. Soc. 1896, 18. 444.)

Cupric zirconate.

(Berthier, A. ch. 59. 195.)

Lithium zirconate, Li_2ZrO_3

Easily attacked by acids. (Ouvrard, C. R. 112. 1444.)

Magnesium zirconate.

Insol. in H_2O or $\text{HCl} + \text{Aq.}$ (Hiordthal, C. R. 61. 215)

Potassium zirconate.

Decomp. by $\text{HCl} + \text{Aq.}$ (Knop, A. 159. 44.)

Sodium zirconate, Na_2ZrO_3 .

Decomp. by H_2O .

Na_4ZrO_4 . Decomp. by $\text{HCl} + \text{Aq.}$ and is dissolved by subsequent addition of H_2O . Na_2O , $8\text{ZrO}_2 + 12\text{H}_2\text{O}$. (Hiordthal.)

Strontium zirconate, SrZrO_3 .

As CaZrO_3 . (Ouvrard.)

Zirconium, Zr.

Crystallized. Attacked by conc. $\text{HCl} + \text{Aq.}$ above 50° , but very slowly even at 100° ; rapidly by hot aqua regia. Sol. in cold conc. $\text{HF} + \text{Aq.}$ (Troost, C. R. 61. 109.)

Very violently attacked by a mixture of HNO_3 and HF . (Berzelius, Pogg 4. 117.)

Amorphous. Slowly attacked by boiling aqua regia, H_2SO_4 , or conc. $\text{HCl} + \text{Aq.}$ (Berzelius.)

Easily sol. in HF or $\text{HNO}_3 + \text{HF}$.

Zirconium bromide, ZrBr_4 .

Very hygroscopic. Violently decomp. by H_2O to form oxybromide. (Melliss, Zeit Ch. (2) 6. 296.)

Sl. sol. in organic solvents (Matthews, J. Am. Chem. Soc. 1898, 20. 840)

Zirconium bromide ammonia, $\text{ZrBr}_4 \cdot 4\text{NH}_3$.

Ppt. Insol. in organic solvents. (Matthews, J. Am. Chem. Soc. 1898, 20. 840.)

$\text{ZrBr}_4 \cdot 10\text{NH}_3$. Very hygroscopic

Decomp. by H_2O . (Stahler, B. 1905, 38. 2612)

Zirconium carbide, ZrC .

Insol. in H_2O and $\text{NH}_4\text{OH} + \text{Aq.}$ and HCl Aq even when heated. Sol. in HNO_3 , H_2SO_4 and fused alkali nitrates, chlorates, or hydroxides. (Moissan, C. R. 1896, 122. 653.)

Zirconium chloride, ZrCl_4 .

Sol. in H_2O with evolution of much heat to form ZrOCl_2 . Sol. in alcohol. (Hinsberg, A. 239. 253.)

Very unstable.

Probably substances so described in the literature by Nylander and others were oxychlorides. (Venable, J. Am. Chem. Soc. 1894, 16. 471.)

Sol. in ether. (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

Zirconium chloride ammonia, $\text{ZrCl}_4 \cdot 2\text{NH}_3$.

Fumes in the air. Decomp. by H_2O . (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

$\text{ZrCl}_4 \cdot 3\text{NH}_3$. (Stahler, B. 1905, 38. 2611.)

$\text{ZrCl}_4 \cdot 4\text{NH}_3$. Decomp. by H_2O . (Paykull.)

Unstable. Decomp. by H_2O . (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

$\text{ZrCl}_4 \cdot 8\text{NH}_3$. Stable in the air. Decomp. by H_2O . Insol. in ether (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

Very hygroscopic. Decomp. by H_2O . (Stahler, B. 1905, 38. 2611.)

Zirconium fluoride, ZrF_4 .

Anhydrous. Insol. in H_2O and acids (Deville, A. ch (3) 49. 84)

Only sl. sol. in H_2O .

1.388 g. dissolve in 100 cc. H_2O without hydrolysis. On warming the solution, zirconium hydrate begins to ppt. out at about 50° . (Wolter, Ch. Z. 1908, 32. 606.)

+ $3\text{H}_2\text{O}$. Sol. in H_2O , but solution decomposes on diluting, with pptn. of an insol. basic salt. Sol. in dil. $\text{HF} + \text{Aq.}$ (Berzelius.)

Zirconium fluoride ammonia, $5\text{ZrF}_4 \cdot 2\text{NH}_3$.

(Wolter, Ch. Z. 1908, 32. 607.)

Zirconium hydride, ZrH_2 .

Not attacked by acids (Winkler, B. 24. 873.)

Zirconium hydroxide, $\text{Zr}(\text{OH})_4$.

Insol. in H_2O or alcohol. Sol. in 5000 pts. H_2O . (Melhss.)

Sol. in acids, even oxalic or tartaric acid, when precipitated cold. If precipitated hot, it is slowly dissolved upon heating with conc. acids

Sol. in dil. or conc. min. acids except HI . Readily sol. in oxalic, only sl. sol. in acetic acid.

Much less sol. when pptd. from hot solution than when pptd. from cold solution. (Venable, J. Am. Chem. Soc. 1898, 20. 274.)

Sl. sol. in $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ Insol. in K_2CO_3 and $\text{Na}_2\text{CO}_3 + \text{Aq.}$ Insol. in NaOH , KOH , and $\text{NH}_4\text{OH} + \text{Aq.}$

Sol. in $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + \text{NH}_4\text{OH} + \text{Aq.}$ Insol. in NH_4 salts + Aq.

Zirconium iodide, ZrI_4 .

Fumes in the air.

Sol. in H_2O and acids with violent reaction.

Decomp. by alcohol. Sol. in abs. ether.

Sl. sol. in benzene and CS_2 . (Stahler, B. 1904, 37. 1137.)

Insol. in H_2O , HNO_3 , HCl , aqua regia, and CS_2 .

Sol. in H_2SO_4 with decomp; unchanged by boiling H_2O . (Dennis, J. Am. Chem. Soc. 1896, 18. 678.)

Zirconium iodide ammonia, $\text{ZrI}_4 \cdot 6\text{NH}_3$, $\text{ZrI}_4 \cdot 7\text{NH}_3$; $\text{ZrI}_4 \cdot 8\text{NH}_3$; $\text{ZrI}_4 \cdot 10\text{NH}_3$.

All above comps. are hygroscopic and lose NH_3 in the air. (Stahler, B. 1905, **38**. 2615.)

Zirconium nitride.

Scarcely attacked by acids, aqua regia, and caustic alkalis. Slowly decomp. by long contact with H_2O . (Mallet, Sil Am J. (2) **28**. 346.)

Zr_2N_3 . Decomp. when heated in the air; sol. in HF; insol in other min. acids (Matthews, J. Am. Chem. Soc. 1898, **20**. 844.)

Zr_3N_5 . Decomp. when heated in the air. Sol. in HF; insol. in other min. acids (Matthews, J. Am. Chem. Soc. 1898, **20**. 844.)

Zirconium oxide, ZrO_2 .

When ignited, is insol. in all acids except HF and H_2SO_4 . Sl. sol. in HF; sol. in H_2SO_4 only when very finely powdered and heated with a mixture of 2 pts H_2SO_4 and 1 pt. H_2O until the H_2SO_4 volatilises. (Berzelius.)

Zirconium peroxide, ZrO_3 .

(Cleve, Bull. Soc. (2) **43**. 53), or Zr_2O_5 according to Bailey (Chem. Soc. **49**. 150).

Not attacked by cold dil. H_2SO_4 +Aq (Bailey.)

Zirconium silicon oxide.

Min. *Zircon*. See Silicate, zirconium.

Zirconium oxy-compounds.

See Zirconyl compounds.

Zirconium phosphide, ZrP_2 .

Insol. in dil or conc. acids and alkalis.

Sl. sol. in aqua regia (Gewecke, A. 1908, **361**. 85.)

Zirconium silicide, ZrSi_2 .

Sol. in HF, insol. in other min. acids.

Not acted upon by 10% KOH +Aq or NaOH +Aq.

Decomp. by fusion with KOH . (Honigsmid, C. R. 1906, **143**. 225.)

Zirconium sulphide.

Insol. in H_2O . Sol. in HF; slowly sol. in aqua regia. Insol. in HNO_3 , HCl , H_2SO_4 , or KOH +Aq. (Berzelius.)

Insol in dil. acids. Sol in conc. HNO_3 +Aq (perhaps an oxysulphide). (Fremy.)

Zirconomolybdic acid.

Ammonium zirconomolybdate, $2(\text{NH}_4)_2\text{O}$, ZrO_2 , 12MoO_3 + $10\text{H}_2\text{O}$.

Sol. in H_2O . (Pechard, C. R. 1893, **117**. 790.)

Potassium zirconomolybdate, $2\text{K}_2\text{O}$, ZrO_2 , 12MoO_3 + $18\text{H}_2\text{O}$.

Sol. in H_2O . (Pechard.)

Zirconotungstic acid.

Ammonium zirconodecatungstate, $3(\text{NH}_4)_2\text{O}$, ZrO_2 , 10WO_3 + $13\text{H}_2\text{O}$.

Very sol. in H_2O .

Efflorescent (Hallopeau, Bull. Soc. 1896, (3) **15**. 921.)

$3(\text{NH}_4)_2\text{O}$, H_2O , ZrO_2 , 10WO_3 + $13\text{H}_2\text{O}$. Sol in H_2C , unstable; effloresces in the air. (Hallopeau.)

Potassium zirconotungstate, $4\text{K}_2\text{O}$, ZrO_2 , WO_3 + $20\text{H}_2\text{O}$.

Sol. in hot H_2O . (Hallopeau.)

$4\text{K}_2\text{O}$, ZrO_2 , 10WO_3 + $15\text{H}_2\text{O}$ More sol. in hot than in cold H_2O

Sol. in fused alkali carbonates. (Hallopeau.)

Potassium dizirconodecatungstate, $4\text{K}_2\text{O}$, 2ZrO_2 , 10WO_3 + $20\text{H}_2\text{O}$.

More sol in hot than in cold H_2O .

Sol. in fused alkali carbonates. (Hallopeau.)

Zirconyl bromide, ZrOBr_2 + $3\text{H}_2\text{O}$.

Deliquescent. Decomp. in moist air. Very sol in H_2O . (Venable, J. Am. Chem. Soc. 1898, **20**. 324.)

+ $7\text{H}_2\text{O}$. Sol in H_2O . (Meliss.)

+ $8\text{H}_2\text{O}$. Deliquescent. Decomp. in moist air. Very sol. in H_2O . (Venable, J. Am. Chem. Soc. 1898, **20**. 324.)

+ $13\text{H}_2\text{O}$. Deliquescent. Decomp. in moist air.

Very sol. in H_2O (Venable.)

+ $14\text{H}_2\text{O}$. Deliquescent. Decomp. in moist air (Venable.)

Very sol in H_2O . (Venable.)

$\text{ZrBr}(\text{OH})_3$ + H_2O , and + $2\text{H}_2\text{O}$. Deliquescent, and decomp. in moist air. (Venable.)

Zirconyl chloride, ZrOCl_2 .

Sol in H_2O ; insol. in HCl (Venable, J. Am. Chem. Soc. 1894, **16**. 475.)

+ $2\text{H}_2\text{O}$. (Chauvenet, C. R. 1912, **154**. 822.)

+ $3\text{H}_2\text{O}$. Sol in H_2O . (Venable.)

+ $3\frac{1}{2}\text{H}_2\text{O}$. (Chauvenet, C. R. 1912, **154**. 822.)

+ $6\text{H}_2\text{O}$ (Chauvenet.)

Sol. in H_2O .

Insol. in HCl . (Venable.)

+ $4\frac{1}{2}\text{H}_2\text{O}$, $6\frac{1}{2}\text{H}_2\text{O}$, and $8\text{H}_2\text{O}$.

Efflorescent. Easily sol. in H_2O and alcohol. Very sl. sol. in conc. HCl +Aq. (Berzelius.)

+ $8\text{H}_2\text{O}$. Sol. in H_2O . (Venable, J. Am. Chem. Soc. 1898, **20**. 321.)

Effloresces in the air.

Sol. in H_2O . Less sol. in HCl +Aq. and nearly insol. in conc. HCl (Chauvenet, C. R. 1912, **154**. 822.)

Zr_2OCl_2 . Sol. in H_2O and alcohol. (Endemann, J. pr. (2) **11**. 219.)

Not decomp. by H_2O

Sol. in dil HCl . (Chauvenet, C. R. 1912, **154**. 1236.)

+ H_2O . (Chauvenet, C. R. 1912, **154**. 1236.)

+3 H_2O . Decomp. by H_2O . Sol. in dil HCl . (Chauvenet.)

$8ZrO_2$, 7 HCl . Sol. in H_2O . (E.)

Zr_2OCl_6 . (Troost and Hautefeuille, C. R. **73**. 563.)

$Zr_2OCl_4 = ZrCl_4$, 2 ZrO_2 . Insol. in H_2O (Hermann)

Zirconyl iodide, $ZrOI_2 + 8H_2O$.

Very sol. in H_2O and alcohol.

Very hygroscopic. ((Stahler, B. 1904, **37**. 1138)

$ZrI(OH)_3 + 3H_2O$. Easily sol. in H_2O . (Hinsberg, A. **239**. 253.)

Ppt. Sl. sol. in HI +Aq. (Venable, J. Am. Chem Soc. 1898, **20**. 328.)

Zirconyl sulphide (?)

Decomp. by HNO_3 with separation of S. (Freymy, A. ch. (3) **38**. 326)

APPENDIX

FORMULÆ FOR CONVERTING AREOMETER DEGREES INTO
SPECIFIC GRAVITY.

n = no. of degrees on the areometer scale; sp. gr. = specific gravity.

Areometer	Temp	Liquids heavier than H ₂ O	Liquids lighter than H ₂ O
<p>1. Baumé. (a) According to Baumé's original directions. For liquids heavier than H₂O Sp. gr. of a solution of 15 pts NaCl dissolved in 85 pts. H₂O at 12.5° ($d_{12.5}^{12.5} = 1.1118988$) = 15°; H₂O = 0°. For liquids lighter than H₂O. Sp. gr. of 10% NaCl + Aq. at 12.5° ($d_{12.5}^{12.5} = 1.0737665$) = 0°; H₂O = 10°.</p> <p>(b) Old Form. Liquids heavier than H₂O, 10% NaCl + Aq at 15° ($d_{15}^{15} = 1.073350$) = 10°; H₂O = 0°. Liquids lighter than H₂O, 10% NaCl + Aq = 0°; H₂O = 10°.</p> <p>(c) New Form. So-called "Rational Scale." Liquids heavier than H₂O, H₂SO₄ + Aq $\frac{15}{15} = 1.842 = 66°$; H₂O = 0°.</p>	<p>15°</p> <p>12.5°</p> <p>15°</p> <p>17.5°</p> <p>15°</p>	<p>Sp. gr. = $\frac{149.05}{149.05 - n}$</p> <p>Sp. gr. = $\frac{145.88}{145.88 - n}$</p> <p>Sp. gr. = $\frac{146.3}{146.3 - n}$</p> <p>Sp. gr. = $\frac{146.78}{146.78 - n}$</p> <p>Sp. gr. = $\frac{144.3}{144.3 - n}$</p>	<p>Sp. gr. = $\frac{145.56}{135.56 + n}$</p> <p>Sp. gr. = $\frac{145.88}{135.88 + n}$</p> <p>Sp. gr. = $\frac{146.3}{136.3 + n}$</p> <p>Sp. gr. = $\frac{146.78}{136.78 + n}$</p>
<p>2. Beck. H₂O = 0°; liquid of 0.850 sp. gr. ($\frac{12.5}{12.5}$) = 30°. Scale continued above and below.</p>	12.5°	Sp. gr. = $\frac{170}{170 - n}$	Sp. gr. = $\frac{170}{170 + n}$
<p>3. Twaddle. H₂O = 0°. Each degree corresponds to an increase of 0.005 in the sp. gr.</p>	Given on the instrument	Sp. gr. = $1.000 + 0.005n$	

TABLES FOR THE CONVERSION OF BAUMÉ DEGREES INTO SP. GR.

Since the original directions of Baumé there have been many slight modifications suggested, so that there are several varieties of Baumé hydrometers with somewhat varying readings, tables for the two principal ones of which are here-given.

1. According to Baumé's original directions.

For liquids heavier than H₂O. Sp. gr. of 15 % NaCl+

$$Aq \left(\frac{12.5^\circ}{12.5^\circ} \right) = 1.1118988 = 15^\circ; H_2O = 0^\circ.$$

Calculated according to the formula, sp. gr. = $\frac{149.05}{149.05 - n}$.
